Subject: SEPTEMBER 24TH ACTC Meeting: TEP Amendment - Support for Valley Link

September 23, 2020

The Honorable Pauline Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Cutter:

Subject: Support for ACTC Approval of Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

As a business within the jurisdiction of the Alameda County Transportation Commission (ACTC), supporting a work force of more than **6,900 hospitality employees**, I write to strongly support approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to amend the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley to advance rail connectivity to Livermore and support our economy by providing our Bay Area work force with a chance to have safe and affordable choices about where they can live and work.

The Tri-Valley is a thriving Bay Area job center - with two national labs and it is the headquarter location of more than 450 technology companies. It has a regional gross domestic product (GDP) of an estimated $42 billion. The quality of life it affords its residents is considered to be a large part of its competitive advantage – but growing congestion and skyrocketing Bay Area housing costs put this all at risk. An estimated 93,400 Bay Area workers are now living in Northern San Joaquin County, commuting daily through the Altamont in their cars. This includes those delivering essential services to the Bay Area - firefighters, police, nurses and teachers, many of whom have been priced out of the communities they serve by rising housing costs. Pre-

pandemic, these commuters faced an average 78-minute commute each way and already there is evidence that this congestion is rapidly returning.

Valley Link will provide an estimated 33,000 daily rides on the 42-mile, 7-station system in 2040. This will result in the reduction of over 99.4 million Vehicle Miles Traveled (VMT) and the reduction of an estimated 32,220 to 42,650 metric tons of greenhouse gas emissions per year. In addition, through the Board-adopted TOD Policy, Valley Link will support the advancement of transit-oriented development adjacent to its stations, which will further reduce VMT and greenhouse emissions within the station environs. The Transit Oriented Development policy mirrors the MTC policy with a corridor average threshold requirement of 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space. The proposed Isabel Neighborhood Plan is an example of how this may happen throughout the system.

Valley Link will link our Northern California Megaregion's workforce to affordable housing, provide opportunities for compact transit-oriented development and will have a significant impact on the reduction of greenhouse gas emissions. It will also provide an estimated 22,000 jobs during construction and when operational support 400 jobs per year with labor income of over $19 million per year and $69 million in business sales annually. In short, it is vital to our environment and the quality of life in our communities – and now even more vital to our economy given the recovery needs we are now facing.

We urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will ensure that this vital project moves forward and that commitments to the Tri-Valley are long last met.

Sincerely,

Tracy Farhad

Re: September 24, 2020 Meeting: Items 7.1 (TEP Amendment) & 11.3 (Exec. Dir. Salary)

Dear Chair Cutter and Commissioners:

If your Commission approves the $400 million TEP Amendment today, then "geographic equity" must be addressed as a condition of approving any amendment. By Alameda CTC's and MTC's own admissions, "Valley Link" is an interregional project – it is not a Tri-Valley project, especially because no station will be in Alameda County east of Greenville Road.

The Measure BB Transportation Expenditure Plan states on page 22, "Twenty percent of net revenues will be allocated to local cities and the county based on a formula that includes **population and road miles for each jurisdiction, weighted equally**, consistent with the 2000 Measure B formula. The formula will be revisited within the first five years of the plan to ensure overall geographic equity in the Plan." (Emphasis added.)

The fact is that the Measure BB Local Streets funding formula shortchanges the Tri-Valley, apparently to partially compensate for the $400 million "BART to Livermore" project, the largest single project in Measure BB. Tri-Valley cities receive far less than their "fair share" of Local Streets funds based on their population and road miles. If "BART to Livermore" is eliminated from the TEP, then the Tri-Valley cities deserve to be given their "fair share" of Local Streets funds based on their population and road miles.

The attached e-mail string contains my correspondence with senior Alameda CTC administrators, especially now-Executive Director Tess Lengyel, during the final days of the Measure BB campaign, October 30, 2014 through Election Day, November 4, 2014 about geographic inequity in the 2000 Measure B and 2014 Measure BB Local Streets funding formula. Ms. Lengyel and other senior Alameda CTC administrators concealed this geographic equity from voters.

On October 30, 2014, just before the November 2014 Measure BB election, I asked Alameda CTC to provide this "formula" through an e-mail at 2:02 p.m. The only person who replied within a few hours was the then-Watchdog Committee chair James Paxson, who replied, "I spoke with Art Dao today and he will be replying to your requests for information. I have also asked that this issue be agendized for discussion at our next committee meeting so that it can be assigned for study and review via one of our Ad Hoc Committees." (The so-called Watchdog Committee took no action at its January 2015 meeting, despite pleas from Chair Paxson.)

On October 31, 2014, Communications Manager Heather Barber told me by telephone that the Local Streets funding formula was based exclusively on population and road miles. That afternoon I personally appeared at Alameda CTC headquarters and demanded to see the formula. After spending 45 minutes waiting in the lobby (4:00 – 4:45 p.m.), I left empty-handed. Tess Lengyel, then Deputy Director of Planning & Policy, was the purported "neutral" provider of public information about Measure BB. While I waited in the lobby, Ms. Lengyel sent an e-mail at 4:28 p.m. that touted benefits that Alameda CTC supposedly provides to the Tri-Valley, but did not provide the formula. I did not see Ms. Lengyel's (non)answer until I returned home that evening. I replied with another e-mail on October 31, 2014 at 6:44 p.m. No one at Alameda CTC replied to that e-mail. I sent another e-mail to Alameda CTC senior administrators on Tuesday, November 4, 2014 (Election Day) at 2:20 p.m. requesting the Local Streets formula before polls closed at 8:00 p.m. The only reply that I received to that e-mail was from Tess Lengyel, the purported "public information" officer for Measure BB: "I will be out of the office and unable to check messages on November 3 and 4. I will get back to you when I return."

On December 11, 2014, the Wendel Rosen law firm sent a letter to me at long last acknowledge-ing my Public Records Act request. I later learned that Wendel Rosen also was the Yes on Measure BB campaign headquarters. Wendel Rosen law firm, Alameda CTC's counsel and also the host of the Yes on BB campaign, was complicit with Ms. Lengyel in this stonewalling.

I did not receive the Local Streets funding formula for Measures B and BB until around December 29, 2014, nearly two months after my initial request and more than six weeks after the election.

The documents belatedly provided by Alameda CTC confirmed my suspicions that the Measure BB Local Streets funding formula shortchanges the Tri-Valley and southern Alameda County cities:

(1) Livermore - 5.3% of county population; 8.2% of county road miles; just 3.6% of funds
(2) Pleasanton - 4.7% of county population; 5.5% of county road miles; just 2.8% of funds
(3) Dublin - 3.0% of county population; 1.9% of county road miles; just 1.4% of funds
(4) Union City - 4.6% of county population; 4.4% of county road miles; just 2.5% of funds
(5) Fremont - 14% of county population; 14% of county road miles; just 8% of funds
(6) Newark - 2.8% of county population; 2.9% of county road miles; just 1.6% of funds

Tess Lengyel did not faithfully perform her Alameda CTC "public information" job during the final days of the Measure BB campaign. She refused to provide to the public timely, accurate information about the Measure BB Local Streets funding formula, as evidenced by her evasive October 31, 2014 e-mail and her complete disappearance from her Alameda CTC office during the days leading up to the election. Ms. Lengyel engaged in a pattern of duplicity and stonewalling about a $1.5 billion pot of Measure BB funds. She should not be rewarded for such misconduct with a $300,000 annual salary. She should be required to provide a public explanation as her pattern of behavior as part of the performance evaluation today.

Sincerely,

Jason A. Bezis

Thu, Oct 30, 2014 at 2:02 PM

To Executive Director Arthur Dao, the staff of the Alameda County Transportation Commission and the ACTC Citizens Watchdog Commission (led by chair James Paxson of Hacienda Business Park):

The existing Alameda County Transportation Commission allocation of funding to local streets and roads appears to be extremely shortchanging the communities of eastern Alameda County (Livermore, Pleasanton, Dublin) for the benefit of Oakland.

This is to serve as a demand for an immediate explanation from any and all ACTC staff who have knowledge of your Local Street & Fund Funding formula, especially whether or not Measure BB remedies or perpetuates this inequity. This e-mail also is to serve as to a request to the Citizens Watchdog Committee for an investigation as soon as possible. I am requesting that ACTC staff provide an explanation as soon as possible – no later than close of business on Friday, October 31, as your answer has bearing on next Tuesday's election.

The ACTC has published its FY2013/14 Program Distributions. See:
http://www.alamedactc.org/files/managed/Document/14365/FY13-14_Sales_Tax_Year_Total_r8.18.14.pdf
According to these numbers, Livermore ($950,000) receives 10% of Oakland's ($9.8 million) local street and road funding. Dublin ($385,000) receives 4% of Oakland's funding and Pleasanton ($730,000) receives 7% of Oakland's funding. "Alameda Co.-East" ($406,000) receives 4% of Oakland's funding. Collectively, the four eastern Alameda County funding pots receive $2.47 million, 25% of Oakland's local street and road funding.

The Measure B expenditure plan (2000) says on page 18, "Local transportation funds within a geographic sub-area will be allocated to the jurisdictions within that sub-area based on a formula weighted 50% by the population of the jurisdiction within the sub-area and 50% on the number of road miles within the sub-area. The allocations may change in the future based on changes in population and road mile figures."

According to the 2010 census, Livermore (80,968) has 21% of Oakland's population (391,000), Dublin (46,000) has 12% of Oakland's population and Pleasanton (70,000) has 18% of Oakland's population. Livermore, Pleasanton and Dublin collectively (197,000) have more than 50% of Oakland's population.

WHY IS EASTERN ALAMEDA COUNTY RECEIVING JUST HALF OF OAKLAND'S PER CAPITA LOCAL STREET AND ROAD FUNDING? IN OTHER WORDS, WHY IS THE ALAMEDA COUNTY CTC COUNTING OAKLAND'S POPULATION TWICE IN ALLOCATING LOCAL STREET AND ROAD FUNDING? WHY IS THE ALAMEDA COUNTY CTC TREATING A RESIDENT OF LIVERMORE, PLEASANTON OR DUBLIN AS ONE-HALF OF AN OAKLAND RESIDENT IN TERMS OF ALLOCATING LOCAL STREET AND ROAD FUNDING?

The Caltrans publication "2011 California Public Road Data" shows the "2011 Maintained Mileage" of Alameda County cities. See Table 6 on p. 14:
http://www.dot.ca.gov/hq/tsip/hpms/hpmslibrary/prd/2011prd/2011prd.pdf

According to that publication, Livermore (279 miles) has 33% of the road miles of Oakland (826 miles), Dublin (66 miles) has 8% of the road miles of Oakland and

Pleasanton (187 miles) has 23% of the road miles of Oakland. The three cities collectively (532 miles) have 64% of Oakland's 826 road miles, yet eastern Alameda County receives just 25% of Local Street & Road funding as Oakland from the Alameda CTC.

WHY IS THE ALAMEDA CTC NOT PAYING LIVERMORE, PLEASANTON AND DUBLIN THEIR "FAIR SHARE" OF LOCAL STREET & ROAD FUNDING BASED ON PROPORTIONATE ROAD MILES IN EACH CITY? WHY DOES A MILE OF ROAD IN EASTERN ALAMEDA COUNTY RECEIVE LESS THAN ONE-HALF THE FUNDING AS A MILE OF ROAD IN OAKLAND?

Finally, in 2012, Livermore collected $9.8 million in Measure B sales tax revenues. Dublin collected $7.4 million and Pleasanton collected $9.2 million. The three eastern Alameda County cities collected $26.5 million in Measure B sales taxes in 2012. Oakland collected just $20.9 million. Livermore, Dublin, and Pleasanton respectively collected 47%, 36% and 44% of Oakland's total Measure B tax collection that year. The three Alameda County cities collected 127% of Oakland's Measure B tax collection.

HOW IS IT FAIR TO THE CITIZENS OF LIVERMORE, PLEASANTON AND DUBLIN THAT THEIR CITIES COLLECT 127% OF OAKLAND'S MEASURE B TAX TOTAL, YET EASTERN ALAMEDA COUNTY RECEIVES A MERE 25% OAKLAND'S "LOCAL STREET & ROAD" ALLOCATION?

The expenditure plan for the proposed Measure BB says, "Twenty percent of net revenues will be allocated to local cities and the county based on a formula that includes population and road miles for each jurisdiction, weighted equally, consistent with the 2000 Measure B formula. The formula will be revisited within the first five years of the plan to ensure overall geographic equity in the Plan." (Page 22, Local Streets Maintenance and Safety).

PLEASE EXPLAIN WHAT MEASURE BB WOULD ACTUALLY DO FOR LOCAL STREET AND ROAD FUNDING. HOW SPECIFICALLY WILL IT ALLOCATE LOCAL STREETS AND ROAD FUNDING "TO LOCAL CITIES AND THE COUNTY"? WHAT IS MEANT BY "WEIGHTED EQUALLY"? DOES "CONSISTENT WITH THE 2000 MEASURE B FORMULA" MEAN THAT OAKLAND WILL CONTINUE TO REAP MORE THAN ITS "FAIR SHARE" OF LOCAL STREET AND ROAD FUNDING, IN EXCESS OF ITS ACTUAL "POPULATION AND ROAD MILES" IN PROPORTION TO EASTERN ALAMEDA COUNTY? WILL MEASURE BB ENSURE THAT LIVERMORE, PLEASANTON AND DUBLIN ACTUALLY RECEIVE THEIR "FAIR SHARE" OF MEASURE BB LOCAL STREET AND ROAD FUNDING, PROPORTIONATE TO OAKLAND'S "POPULATION AND ROAD MILES"?

I await the immediate reply of your staff. I also, again, request that the ACTC Citizens Watchdog Committee be provided with this comunication for investigation and action as soon as possible.

Sincerely,

Jason-

I wanted to acknowledge your calls and your e-mail. I spoke with Art Dao today and he will be replying to your requests for information. I have also asked that this issue be agendized for discussion at our next committee meeting so that it can be assigned for study and review via one of our Ad Hoc Committees. Please note that while your comments concern both the existing measure and the proposed measure on the ballot, our committee's purview is only the existing measure as per the terms of the current Measure B and we will only be able to entertain discussion on that aspect of your concerns.

With that said, we would welcome your participation at one of our meetings as there is always a portion of the agenda devoted to public comment. Please consult the agency's web site for details: www.alamedactc.org.

Regards

James Paxson

Hello Mr. Bezis,

Thank you for your inquiry about the Alameda County Transportation Sales Tax Program. The Alameda County Transportation Commission investments in our transportation system go beyond investments for maintaining local streets and roads, especially, in any one particular area of the County. The Alameda County 2000 Measure B Transportation sales tax program has brought significant transportation improvements to the County, relieving traffic congestion, improving mobility and promoting economic development, particularly in the Tri-Valley.

Over the 20 years of the current (2000 voter approved) transportation sales tax program, it is presently projected that $2.1 billion of local sales tax revenue will be collected. In addition to the formula allocations of sales tax funding for local streets and road, bicycle and pedestrian safety improvements, paratransit, there has been approximately $646 million invested in transportation improvements in the Tri-Valley, on major capital projects such as the construction of the new Isabel Avenue/I-580 Interchange, widening of Route 84, widening of southbound I-680, widening of I-580 to add carpool lanes and auxiliary lanes, improvements to Vasco Road, and upgrades to the Livermore and Pleasanton stations for the Altamont Commuter Express train. There has also been funding allocated for LAVTA's bus operations.

Furthermore, those major transportation expenditures in the Tri-Valley mentioned above were made on top of the 1986 Measure B sales tax program, which brought BART from Bayfair to Dublin and Pleasanton, reconstructed the I-580/I-680 interchange, reconstructed the Airway Boulevard, and constructed the first phase of Isabel Avenue.

The Tri-Valley has received extensive funding that has resulted in better access and choices for people traveling in the Tri-Valley and has contributed to economic growth in the area.

Tess

Fri, Oct 31, 2014 at 6:44 PM

Attn: Art Dao, Executive Director, Alameda County Transportation Commission & senior staff of ACTC & ACTC Citizens Watchdog Committee:

You have failed to answer my questions concerning the funding formula for the Measure BB Local Streets Maintenance and Safety Program (more than than $1.5 billion) on next Tuesday's Measure BB ballot. I posed these questions to you by e-mail yesterday, Oct. 30, and requested an answer by close-of-business today. Ms. Lengyel's reply of 4:28 p.m. today was a "non-answer." Your staff is physically barring public access to the public documents containing answers to my questions, as detailed below, in contravention of Govt. Code 6253(a).

Earlier today I spoke on the phone with your in-house consultant Heather Barber. She was not very informative about the funding formula. In fact, she was giving me incomplete and misleading information, claiming that it weights all jurisdictions in Alameda County equally based on (1) population and (2) road mileage in each jurisdiction. I told her that she was wrong. She agreed to report back to me later Friday with an answer.

I also told Ms. Barber that the total local street funding on your city-level fact sheets confirmed my concern. Measure BB is forcing the residents and taxpayers of eastern Alameda County to subsidize local streets in Oakland. You are counting a Tri-Valley resident as 1/2 of a person compared to an Oakland resident in per capita funding. You are funding a road-mile in Oakland at more than twice the rate of a road-mile in the Tri-Valley. Therefore, I was even more determined to see with my own eyes the formula that yields such inequitable, disparate results.

As 3:30 p.m. passed, I realized that I was being stonewalled by ACTC staff and your consultants. I feared that you would fail to provide the local streets funding formula to me by close-of-business today. A little after 4 p.m. I arrived at your office at 1111 Broadway, 8th Floor (a bit too palatial for a public agency; your office really belongs in Hayward in close proximity to the Alameda County Public Works office, in more cost-effective and useful office space. Our precious tax dollars "at work"!). Pursuant to the Public Records Act, I demanded immediate access to the funding formula proposed under Measure BB. The receptionist told me that I could visit your website in lieu of talking to staff. I found that extremely insulting.

I again demanded to see the public records containing the full and complete funding formula for the Local Streets (20%) portion of Measure BB. Then the receptionist retrieved a woman (I think that her name is Vanessa Lee) who handles public requests.

Eventually I was handed a Public Records request form. I was told that I could fill it out and someone would reply. I eventually filled it out and submitted it before I left the office, but I said that the normal 10 day period is inadequate.

I arrived at your office just after 4 p.m., well before your 5 p.m. closing time. I had a right to immediate provision of such a standard document. I quote from California Government Code sec.

6253(a):

6253. (a) Public records are open to inspection at all times during the office hours of the state or local agency and every person has a right to inspect any public record, except as hereafter provided.
Any reasonably segregable portion of a record shall be available for inspection by any person requesting the record after deletion of the portions that are exempted by law.

You have failed to answer my questions concerning the funding formula for the Measure BB Local Streets Maintenance and Safety Program (more than than $1.5 billion) on next Tuesday's Measure BB ballot. I posed these questions to you yesterday, Oct. 30, and requested an answer by close-of-business today.

Earlier today I spoke on the phone with your in-house consultant Heather Barber. She was not very informative about the funding formula. In fact, she was giving me incomplete and misleading information, claiming that it weights all jurisdictions in Alameda County equally based on (1) population and (2) road mileage in each jurisdiction. I told her that she was wrong. She agreed to report back to me later Friday with an answer.

I believe that the ACTC and its employees and agents have denied the public access to important information on the eve of a major election. Mr. Dao, you and your staff, and your consultants seem bent on keeping this local street funding formula a secret. You do not want the public to know that it treats a Livermore, Dublin and Pleasanton resident as 1/2 of an Oakland resident. You don't want the public to know that your Measure BB funds a mile of road in Oakland at more than twice the rate of a mile of road in the Tri-Valley. Shame on you. Shame on your staff for misleading the public.

Tess Lengyel claims to be the "Deputy Director of Planning and Policy." She should have been able to supply a clear answer to me questions posed in my e-mail yesterday. Yet she gave me nothing more than P.R. gobbly-gook in ACTC's reply at 4:28 p.m. She did NOT answer ANY of my questions about the funding formula.

I was told around that time that Ms. Lengyel was in a meeting until 6 p.m. I hereby demand documentary proof (under the Public Records Act) that Ms.Lengyel was in fact in a meeting at that time. I suspect that she and other senior ACTC staff were hiding from my request.

I demand immediately that any and all staff responsible for replying to my inquiry be subject to disciplinary procedures, including Mr. Dao. It is unconscionable that neither you nor your staff have answered my simple questions. It is outrageous that you do not make your records available for inspection pursuant to Govt. Code 6253(a). I demand an immediate answer from Mr. Dao as to why ACTC staff failed to comply with Govt. Code 6253(a) between 4-5 p.m. on 10/31/14. Mr. Dao needs to explain to me precisely how ACTC will fulfill its state constitutional mandate to provide public access to its documents.

I also demand that Heather Barber follow through on her promise and get an answer for me about the local street funding formula. She seemed utterly ignorant of how the $1.5 billion actually is allocated. She needs to be educated if she is to properly fulfill her duties to you and to the public.

I repeat my demand for an answer to my e-mail of 10/30/14 ASAP. I demand documentation showing the exact formula for the Measure BB Local Streets Maintenance and Safety Program allocations to specific cities and unincorporated area in Alameda County.

Sincerely,
JASON A. BEZIS

Attn: Mr. Arthur Dao
Executive Director
Alameda County Transportation Commission

Ms. Tess Lengyel
Deputy Director of Planning and Policy
Alameda County Transportation Commission

Ms. Vanessa Lee
Clerk of the Commission (custodian of ACTC documents)
Alameda County Transportation Commission

Citizens Watchdog Committee
Alameda County Transportation Commission (please direct this communication to members)

To all Alameda County Transportation Commission staff members and consultants who possess information concerning the "Local Streets" component of Measure BB on today's Alameda County ballot:

I hereby repeat my request for the actual formula used to allocate the $1.548 billion Measure BB Local Streets Maintenance and Safety Program funds to individual cities and jurisdictions in Alameda County. I make this request pursuant to the California Public Records Act (Gov't Code sec. 6250, et seq.) and other laws that require disclosure. I ask that this information be disclosed to me IMMEDIATELY as it is a matter on the ballot today in Alameda County and it should be readily available to your staff members and consultants.

The Measure BB Expenditure Plan says on page 22:
"Twenty percent of net revenues will be allocated to local cities and the county based on a formula that includes population and road miles for each jurisdiction, weighted equally, consistent with the 2000 Measure B formula. The formula will be revisited within the first five years of the plan to ensure overall geographic equity in the Plan."

I request the 2014 Measure BB Local Streets "formula" referred to in the excerpt above. I request the formula that determines how the $1.5 billion in local street funds would be allocated to each of Alameda County's cities and unincorporated areas.

This repeats a request that I have made in e-mails and telephone messages left with numerous ACTC staff on October 30, October 31 and November 3.

On October 31, I spoke by phone with Heather Barber, a consultant working for ACTC. She assured me that population and road miles were the sole basis of the Measure BB local streets funding. I said that I thought

that she was wrong, that I did not believe that the funding formula (whatever it is -- which is why citizens deserve to see it BEFORE voting on Measure BB) actually weighted a road-mile in Oakland the same as a road-mile in Livermore, that a person in Oakland was treated the same in local street funding as a person in Dublin. I requested the actual Measure BB Local Streets funding formula. Ms. Barber promised to get an answer to my question when I last spoke to her on the afternoon of Oct. 31. On Nov. 3, I left a phone message with Tamara Halbritter, Senior Project Manager of Acumen, who is apparently Ms. Barber's supervisor. Ms. Halbritter also has refused to reply. I am still waiting for a reply as of 2 p.m. today, six hours before polls close.

As I realized that I was being "stonewalled" by ACTC staff and consultants about the actual content of Measure BB last Friday, I visited the ACTC office in Oakland during regular business hours on October 31 from 4 to 4:45 p.m. I requested this same information during that visit to Ms. Linda Adams at your front desk and to Ms. Vanessa Lee, Clerk of the Commission, whom Ms. Adams summoned. As the clerk, the custodian of public records for the ACTC, Ms. Lee failed to fulfill her legal duty under Government Code sec. 6253(a), "Public records are open to inspection at all times during the office hours of the state or local agency and every person has a right to inspect any public record, except as hereafter provided. Any reasonably segregable portion of a record shall be available for inspection by any person requesting the record after deletion of the portions that are exempted by law." I repeatedly requested to Ms. Lee, Ms. Adams and to all ACTC staff who passed through the lobby that I be provided access to the Measure BB local streets funding formula, yet no one complied with my request. I requested to speak with Executive Director Arthur Dao and to Tess Lengyel and to anyone else who could provide me with this information. I left phone messages for Mr. Dao and Ms. Lengyel as I waited in the lobby.

As I was waiting in the lobby, at 4:28 p.m. on Oct. 31, ACTC Deputy Director of Planning and Policy Tess Lengyel sent an e-mail to me. Ms. Lengyel's e-mail failed to comply to my request for the Measure BB local street funding formula. She continues to refuse to communicate with me since her evasive, noncompliant answer on Oct. 31. Ms. Lengyel has not provided the Measure BB Local Streets funding formula to me as of 2 p.m. on Election Day.

Article I, section 3 of the California Constitution says in part, "The people have the right of access to information concerning the conduct of the people's business, and, therefore, the meetings of public bodies and the writings of public officials and agencies shall be open to public scrutiny. A statute, court rule, or other authority ... shall be broadly construed if it furthers the people's right of access, and narrowly construed if it limits the right of access."

This is a shameful episode in ACTC's history. ACTC and its staff are intentionally keeping secret the basis for allocating $1.5 billion of Measure BB funds, in clear contravention of the law. ACTC staff and consultants are engaging in blatant, self-interested political action in refusing to divulge the Measure BB local streets funding formula. If Measure BB passes, it means more funds would become available to compensate ACTC staff and consultants (as the 1% administration funding ceiling would be lifted in absolute dollar terms with the tax increase). The failure of ACTC to comply with my reasonable request for public documents directly related to the contents of Measure BB appears to be deliberate, calculated conduct in order to undermine opposition to Measure BB. ACTC staff members and consultants who fail to uphold their agency's constitutional and statutory duties should be subjected to disciplinary action, up to and including termination from employment.

I again repeat my demand for immediate disclosure of the "formula" used to allocate Measure BB Local Streets funding to Alameda County cities. I have attempted just about every means possible to obtain this information - e-mail requests, phone message requests, live phone requests and in-person visit to your office. The conduct of ACTC staff and consultants is inexcusable. I demand an answer to my request.

Just as I have requested on Oct. 30, Oct. 31 and Nov. 3, please turn over the Measure BB Local Streets funding formula IMMEDIATELY. You may e-mail it to this e-mail address: jbezis@yahoo.com. You also may phone me on my cell phone at (925) 708-7073 if you insist on my physical presence at your office to view it; I would do my best to come to your office this afternoon to view it.

Sincerely,
Jason Bezis

Tess Lengyel <tlengyel@alamedactc.org>
To:jbezis@yahoo.com
Tue, Nov 4, 2014 at 2:23 PM

Hello, I will be out of the office and unable to check messages on November 3 and 4. I will get back to you when I return.

Thank you.

Tess

1. **Call to Order**

2. **Roll Call**
A roll call was conducted. All members were present with the exception of Commissioners Freitas, Mei and Miley.

Commissioner Freitas attended the meeting; however, he experienced audio problems for the duration of the meeting.

Commissioner Cox attended as an alternate for Commissioner Chan.

Subsequent to the roll call:
Commissioner Mei arrived during item 4. Commissioner Miley arrived during item 7.1. Commissioners Carson and Valle left during item 8.5.

3. **Public Comment**
Public comments were heard by the following:

A public comment was made by Jason Bezis questioning where previous meeting recordings can be found on the Alameda CTC website. Vanessa Lee, Clerk of the Commission, responded that video and audio recordings of the Commission Meetings are made available upon request. Chair Cutter requested that staff place the meeting recordings on the website.

A public comment was made by Karl Wente thanking the elected officials and the staff of Alameda County municipalities for serving their communities.

4. **Chair and Vice Chair Report**
Vice Chair Bauters provided instructions to the Commission regarding technology procedures including instructions on administering public comments during the meeting.

5. **Executive Director Report**
Tess Lengyel stated that Alameda CTC is celebrating its 10-year anniversary in September and she congratulated the Commission. Ms. Lengyel highlighted progress and key efforts made by staff for projects that are currently in construction and/or moving into the construction phase. She mentioned that Alameda CTC received an award for excellence in financial reporting from the Government Finance Officers Association for Alameda CTC's Comprehensive Annual Financial Report, which represents the highest level of recognition in government accounting and financial reporting.

6. **Consent Calendar**
   - **6.1.** Approve July 23, 2020 Commission Meeting Minutes
   - **6.2.** FY2019-20 Third Quarter Report of Claims Acted Upon Under the Government Claims Act
   - **6.3.** Approve Alameda CTC FY19-20 Year-End Unaudited Investment Report
   - **6.4.** Award Request for Proposal R20-0008 for the Dublin Boulevard-North Canyons Parkway Extension Project
   - **6.5.** Approve Contract Amendment for San Pablo Avenue Multimodal Corridor Project and funding agreement with Contra Costa County Transportation Authority and West Contra Costa Transportation Advisory Committee
   - **6.6.** Approve actions necessary to facilitate project advancement into the construction phase for the I-80 Gilman Interchange Improvement Project and adopt a Resolution in support of right-of-way acquisition for the I-80 Gilman Interchange Improvement Project
   - **6.7.** Congestion Management Program (CMP): Summary of the Alameda CTC's Review and Comments on Environmental Documents and General Plan Amendments
   - **6.8.** Approve issuance of a Request for Proposals for Paratransit Coordination Services

   Commissioner Marchand moved to approve the Consent Calendar. Commissioner Bauters seconded the motion. The motion passed with the following roll call votes:

Yes:	*Arreguin, Bauters, Carson, Cox, Cutter, Dutra-Vernaci, Ezzy Ashcraft, Haggerty, Halliday, Haubert, Kaplan, Marchand, McBain, Mei, Ortiz, Pilch, Saltzman, Thao, Thorne, Valle*
No:	*None*
Abstain:	*None*
Absent:	*Freitas, Miley*

7. **Planning, Policy and Legislation Committee**
   - **7.1 Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment**

     Chair Cutter stated that extensive discussion of this item was had at the September 14, 2020 Planning, Policy and Legislation Committee (PPLC). Commissioner Bauters noted that over 20 public comments were heard at the PPLC meeting and he briefly summarized the discussion. Commissioner Bauters stated that the discussion resulted in including clarifying language to the proposed Transportation Expenditure Plan (TEP) Amendment that would address concerns with San Joaquin County's financial contribution in the project and interest in ensuring an initial operating segment that provides significant benefits to the Tri-Valley.

     Carolyn Clevenger presented the staff recommendation that the Commission approve the Tri-Valley San Joaquin Valley Regional Rail Authority (TVSJVRRA) request for an amendment to the 2014 Measure BB TEP to: 1) acknowledge TVSJVRRA as a new agency in Alameda County that can be an eligible recipient of Measure BB funds; 2) remove the BART to Livermore project and associated $400 million Measure BB funding; 3) add the Valley Link project with $400 million in

Measure BB funding; and 4) make associated technical amendments. Ms. Clevenger reviewed the discussion and outcome of the PPLC meeting, the Committee's clarification of the proposed TEP Amendment language, and outlined the comment period and the action required by the Commission. Michael Tree, Executive Director of the TVSJVRRA provided background on the project, the project status and current funding. Ms. Clevenger stated that approval of the item requires 2/3 of the Authorized vote per the Implementing Guidelines of the 2014 TEP.

Vanessa Lee, Clerk of the Commission, informed the Commission that 17 public comment letters were received subsequent to the mail-out of the Commission packet. Ms. Lee noted that Attachment G, containing the 17 letters, was emailed to the Commission in advance of the meeting and placed on the Alameda CTC website. She stated that the letters of support focused on the importance of the project, the quality of life and the economy of the Tri-Valley and the benefits of the project. The letters of opposition focused on the amendment process, insufficient alternative considerations and lack of benefits for the project.

Letters of support were received from:

- Building Industry Association
- Cerro Vista Land & Development
- Lawrence Livermore National Laboratory
- Lehman Insurance Agency
- Livermore Valley Joint Unified School District
- Livermore Valley Winegrowers Association
- Stanford Health Care - ValleyCare
- Steve Lanza, Innovation Tri-Valley Leadership Group and Lam Research and Tri-Valley Advising
- Sunset Development
- Tri-Valley Chamber of Commerce Alliance
- Visit Tri-Valley
- Wente Family

Letters of opposition were received from:

- Law Offices of Jason A. Bezis on behalf of Transportation Solutions Defense and Education Fund (TRANSDEF)
- Dasen American Academy
- Doug Mann
- Sherman Lewis
- TRANSDEF

Vanessa Lee read a public comment that was received via email from John Sesba in support of staff's recommendation.

The following public comments were heard during the meeting:

- Val Menotti, Chief Development Officer at BART– Support staff's recommendation

- Jerry Pentin, City of Livermore Councilmember – Support staff's recommendation
- Linda Smith, City Manager for the City of Dublin – Support staff's recommendation
- Steve Dunbar, Livermore resident – Support staff's recommendation
- David Kent, Tri-Valley Conservancy – Support staff's recommendation
- James Paxton, Hacienda Homeowners Association – Support staff's recommendation
- Mike Wallace, candidate for BART Board, District 5 – Support staff's recommendation
- David Schonbrunn, TRANSDEF – Oppose staff's recommendation
- Evan Branning, Teacher in Tri-Valley – Support staff's recommendation
- Jas Barring – Support staff's recommendation
- Noel Varela, Local 202 – Support staff's recommendation
- Gerald Cauthen, Bay Area Transportation Working Group – Oppose staff's recommendation
- Adrian Anderson-Kelly, Los Positas Community College – Support staff's recommendation
- Dan Levitt, San Joaquin Regional Rail Commission – Support staff's recommendation
- Antonio Munoz, Field Representative of Northern California Carpenters – Support staff's recommendation
- Catharine Baker, former California State Assembly Member – Support staff's recommendation
- Guisselle Nunez, public relations, and on behalf of the Chancellor of Chabot Los Positas Community College – Support of staff's recommendation
- Jason Bezis – Oppose staff's recommendation
- Laura Mercier, Tri-Valley Conservancy – Support of staff's recommendation
- Rafael Gonzalez, Laborers Union 304 – Support of staff's recommendation
- Matt Williams, Sierra Club – Oppose staff's recommendation
- John Belperio, The Building and Construction Trades Council of Alameda County – Support Staff's recommendation
- Steven Spedowfski, Alameda County resident – Support Staff's recommendation
- Martin Espinoza Jr., field representative of Pile Drivers Union Local 34 – Support staff's recommendation
- Karl Wente – Support Staff's recommendation
- Jim Schmidt – Oppose staff's recommendation
- Tim Sbranti, Innovation Tri-Valley Leadership Group – Support Staff's recommendation

Commissioner Bauters noted that BART had an opportunity to implement and operate the BART to Livermore Project in the original Expenditure Plan and they voted to not select a preferred alternate to move the project forward. He noted that the $400 million doesn't cover the full cost of the project, but will be used to leverage additional funding.

Zack Wasserman, General Counsel at Wendel Rosen responding to the legal questions raised in a letter provided to the Commission by Jason Bezis:

- Mr. Bezis questioned if the notice was communicated to the City Councils and the Board of Supervisors as required: Mr. Wasserman stated that the amendment was communicated to the Mayor, City Managers or Administrators of each city in Alameda County. Mr. Wasserman stated that all of the cities are represented on the Alameda CTC Commission and all of the members of the Alameda County Board of Supervisors are also represented on the Commission. He stated the cities received full and sufficient notice.
- Mr. Bezis noted that the language added by the Committee regarding going to Mountain House was a substantial change: Mr. Wasserman stated that the clarification to the proposed language is not significant, rather, it clarifies the project.
- Mr. Bezis noted there is some inconsistency on what vote is required and because of the inconsistencies the Commission can't vote on this item: Mr. Wasserman stated that the TEP and staff's recommendation states that a vote of 18 affirmative votes by weight is needed to approve the item.
- Mr. Bezis alleged that AB 758 allows the project to be completed in the Tri-Valley and not in San Joaquin: Mr. Wasserman stated that this statement is incorrect and the title of the bill is Tri-Valley-San Joaquin Valley Regional Rail Authority.
- Mr. Bezis noted that Valley Link does not benefit people in Alameda County: Mr. Wasserman stated that Alameda CTC staff provided sufficient feedback on this concern describing the benefits of the project to the County.
- Mr. Bezis noted that geographic balance is required and this amendment would upset the balance: Mr. Wasserman stated that Valley Link is consistent with the geographic balance that was part of the initial measure.
- Mr. Bezis cited the City of Hayward Planning Area Case: Mr. Wasserman stated the referenced case is dealing with State Route 238 and a question of eminent domain and has no relevance to Valley Link.
- Mr. Bezis noted that Valley Link conflicts with the county's Measure D: Mr. Wasserman stated that if that were a problem, then it needs to be addressed by the sponsor of Valley Link; however, Measure D has an exemption for rail projects.
- Mr. Bezis noted that alternatives have not been thoroughly reviewed: Mr. Wasserman stated that BART reviewed alternatives in the EIR and that Valley Link is reviewing alternatives in its subsequent CEQA review, which is a normal part of the process.
- Mr. Bezis noted that several of the elected officials are up for re-election and should not be allowed to vote on the item. Mr. Wasserman stated that any current member of the Commission is lawfully and fully entitled to vote on this item.

Commissioner Pilch asked if the $400 million can be used for BART congestion issues that may arise from the offloading of Valley Link train. Ms. Lengyel stated that direct

project impacts and mitigation is allowed as part of Measure BB. BART and the TVSJVRRA are working on a MOU that will outline how impacts are addressed.

Commissioner Bauters expressed concern about the precedent it would set, if completing an Environmental Impact Report (EIR) was required for inclusion in the TEP. He noted that each project has seven years from the first year of revenues to complete an EIR and there are 22 capital projects in the 2014 TEP, and seven of the projects do not have an EIR completed. To require Valley Link to complete the EIR before approving the amendment would be holding Valley Link to a higher standard than other Measure BB projects.

Commissioner Saltzman asked what determines a direct project impact and mitigation. Ms. Lengyel stated that this would be outlined in the MOU between Valley Link and BART. She noted that the $400 million is not the only funding needed for this project and other funds will need to be utilized to fully fund the project and address the impacts of the project.

Commissioner Arreguin stated that he supports staff's recommendation and he noted that it's important to reduce single occupancy vehicle trips and greenhouse gas emissions, and this project will accomplish this. Commissioner Arreguin noted this project is important to the region and it was moved to Tier 1 in Plan Bay Area 2050 because of its transformative benefits.

Commissioner Ezzy Ashcraft asked staff to comment on if there is an option to eliminate diesel trains to reduce emissions. Mr. Tree stated that the EIR is evaluating multiple technologies for the trains, including hybrid diesel electric, electric and electric battery for zero-emission trains. He noted that they are also evaluating the potential for hydrogen.

Commissioner Marchand commented on equity and connectivity, transit-oriented development and affordable housing and he noted that Valley Link meets these categories and he expressed his support for staff's recommendation.

Commissioner Pilch moved to delay this item until the EIR is released. Commissioner Saltzman seconded the motion.
Commissioner Valle then made a substitute motion to approve staff's recommendation. Commissioner Haggerty seconded the motion. The motion passed with the following roll call votes:

Yes:	*Arreguin, Bauters, Carson, Cox, Cutter, Dutra-Vernaci, Ezzy Ashcraft, Haggerty, Halliday, Haubert, Kaplan, Marchand, McBain, Mei, Miley, Thao, Thorne, Valle*
No:	*Ortiz, Saltzman*
Abstain:	*Pilch*
Absent:	*Freitas*

Commissioner Haggerty expressed his appreciation to staff, and the Commission Chair and Vice Chair for their efforts in moving this process forward.

8. Public Hearing of I-580 Express Lanes Toll Enforcement Ordinance

8.1. Open Public Hearing

Commission Chair Cutter opened the the public hearing.

8.2. Presentation of the I-580 Express Lanes Toll Enforcement Ordinance

The Commission went into Closed Session pursuant to California Government Code section 54956.9 (d)(4) and California Government Code sections 54956.9(d)(2).

Liz Rutman recommended that the Authority waive the reading and introduce an ordinance for the administration of tolls and enforcement of toll violations for the I-580 Sunol Express Lanes via incorporation of Article 4, Chapter 1, Division 17 of the Vehicle Code. Ms. Rutman stated that to communicate to the public, a certified copy of the Toll Ordinance was posted at both Alameda CTC offices. In advance of this meeting, a public hearing notice was published twice in a newspaper of general circulation in both Alameda County. The public hearing notice was also published in Chinese and Spanish on two occasions in a Chinese-language and two Spanish-language publications. Ms. Rutman stated that the purpose of the Toll Ordinance is to establish civil penalties for the evasion of those tolls or noncompliance with other policies set forth the Ordinance. This ordinance is an important aspect of the I-580 Sunol Express Lanes operations.

8.3 Public Comments

A public comment was heard from Jason Bezis who expressed concerns that the Valley Link project will use express lanes revenues.

Ms. Lengyel stated that the Commission adopted an I-580 Expenditure Plan, which details where the revenues go for the express lanes in the corridor.

8.4 Close Public Hearing

Commission Chair Cutter closed the public hearing.

8.5 Waive Reading Beyond the Title and Adopt the I-580 Express Lanes Toll Enforcement Ordinance

Commissioner Haggerty moved to approve this item. Commissioner Marchand seconded the motion. The motion passed with the following votes:

Yes:	*Arreguin, Bauters, Cox, Cutter, Dutra-Vernaci, Ezzy Ashcraft, Haggerty, Halliday, Haubert, Kaplan, Marchand, McBain, Miley, Ortiz, Pilch, Saltzman, Thao, Thorne*
No:	*None*
Abstain:	*None*
Absent:	*Carson,* Freitas, *Mei, Valle*

9. Planning, Policy and Legislation Committee

9.1. Federal, state, regional, and local legislative activities update

Carolyn Clevenger gave an update on federal, state, regional, and local legislative activities. Ms. Clevenger stated that regarding the state items, the Governor may sign any bills submitted by the legislature by September 30, 2020 and staff will provide a report of the results of this session to the Planning, Policy and Legislation

Committee in October. Regarding the federal items, a continuing resolution is moving forward that will keep the government in operation and it includes an extension of the Fixing America's Surface Transportation Act or "FAST Act," which means the transportation authorization bill will be extended until mid-December. In terms of COVID-19 federal relief it's not clear if anything will get done in the current environment in Washington D.C. and staff will continue to monitor this and report back to the Commission with any updates.

Commissioner Saltzman requested staff to discuss at a future meeting the action that the Metropolitan Transportation Commission (MTC) took on requiring 60 percent of their office workers to work from home and the impact of this action on transit agencies.
This is an information item.

10. Finance and Administration Committee

10.1. FY2019-20 Sales Tax Revenues Update

Patricia Reavey provide the Commission with an update on FY2019-20 sales tax revenues due to the effect of COVID-19 and the resulting shelter-in-place order. Ms. Reavey stated that due to the conservative manner in which Alameda CTC budgets for sales tax revenues, revenues for FY2019-20 came in only slightly under budget by 3.0 percent as a result of COVID-19 and the resulting shelter-in-place order on sales in Alameda County. Ms. Reavey noted that this is a 7.1 percent decrease from FY2018-19 sales tax revenue collections and the agency is in good shape for the current fiscal year. Ms. Reavey stated that pandemic is not expected to have an effect on the agency's ability to deliver projects and programs outlined in the Transportation Expenditure Plans and staff will continue to seek additional funding to ensure the delivery of the 2014 Measure BB program.

There was a public comment from Jason Bezis, who stated that Measure C and Measure W will increase taxes in several cities in Alameda County, which will impact Alameda CTC's revenues.

Commissioner Pilch asked if the agency has data regarding the percentage of sales tax from online sales. Ms. Reavey stated that the California Department of Tax and Fee Administration (CDTFA) has a new database that provides this information and staff will begin analyzing the data. Ms. Lengyel noted that the agency will continue to monitor the sales tax closely and will keep the Commission updated on sales tax revenue.

This item is for information only.

11. Closed Session

11.1. Pursuant to Government Code Section 54957: Public Employee Performance Evaluation: Executive Director

The Commission opted to not convene the Closed session.

11.2. Report on Closed Session

The Commission did not convene for a Closed session.

11.3. Approve the annual performance evaluation of the Executive Director for 2020, objectives for 2021, and a salary adjustment pursuant to the approved contract

There was a public comment made by Jason Bezis stating that the staff report did not state the salary increase for the Executive Director and he made disparaging comments about the current Executive Director.

Commissioners Bauters, Dutra-Vernaci, Ortiz and Haggerty stated that the public comment was out of line, that the Executive Director's salary was below her counterparts, and she has done an exceptional job during her time in the job. Commissioner Halliday asked what the proposed 3-percent increase equated to. Mr. Wasserman stated that approval of the item will increase the Executive Director's salary to $304,252.

Commissioner Bauters moved to approve the item. Commissioner Dutra-Vernaci seconded the motion. The motion passed with the following roll call vote:

Yes:	*Arreguin, Bauters, Cox, Cutter, Dutra-Vernaci, Ezzy Ashcraft, Haggerty, Halliday, Kaplan, Marchand, Mei, Miley, Ortiz, Pilch, Saltzman, Thao, Thorne*
No:	*None*
Abstain:	*None*
Absent:	*Carson,* Freitas, *Haubert, McBain, Valle*

Ms. Lengyel thanked the Commission and noted that it's been an honor and privilege to serve the Commission.

12. Commission Member Reports

Commissioner Pilch requested a future agenda item to discuss increasing the agency's public meeting transparency and outreach.

13. Adjournment

The next meeting is Thursday, October 22, 2020 at 2:00 p.m.

This page intentionally left blank

Attorney for Plaintiffs-Petitioners

IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA
IN AND FOR THE COUNTY OF ALAMEDA

ALAMEDA COUNTY TAXPAYERS' ASSOCIATION, INC., *et al.*, Petitioners and Plaintiffs, vs. TRI-VALLEY-SAN JOAQUIN VALLEY REGIONAL RAIL AUTHORITY *et al.*, Respondents and Defendants.	Case No.: RG21110126 Assigned for all purposes to the Hon. Michael M. Markman Department 14 TRANSCRIPT OF THE ALAMEDA COUNTY TRANSPORTATION COMMISSION MEETING OF SEPTEMBER 24, 2020 AGENDA ITEM 7.1

Chair Cutter: Okay, we're moving into item 7, 7.1, Approve the Tri-Valley San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. I'm sure – I don't know if – let me start over. We have as our community reports about two weeks ago, we had a very extensive discussion about this, over two hours long, really good conversation with answering the questions coming up and answering and I've asked our vice-chair if he will kind of summarize that – you know, the conversation, not that we're not going to still have questions or comments but just kind of give us a jumping off point to start discussing the item.

Ms. Lee: For the record, before you go into this item, I just want to note that I did not receive any public comments on the consent calendar.

Chair Cutter: Oh, thank you. Yeah. I assumed you'd tell me if you did but –

Ms. Lee: Yeah.

Chair Cutter : But you know what happens when you assume things, so –

Ms. Lee: [laughs]

Chair Cutter : Alright. Thank you so much. So Vice-Chair Bauters, if you would like to give us a short synopsis?

Vice-Chair Bauters: Thank you, Madame Chair. The committee, as the Chair mentioned, for about two and a half hours on the – what is Item 7.1 today. We had a lengthy conversation. There were over 20 members of the public who commented on it and the commission and staff went through these questions in great detail, addressing and answering comments or concerns that had been raised and I'm going to forego going into those in detail. If they are revived in public comment today, we can discuss them again as necessary. But suffice it to say that in the end, there was clarifying language proposed to the amendment which will be part of the staff presentation today, which just further defines the initial operating segment.

This has implications on the project by essentially requiring by essentially requiring that San Joaquin County have a financial contribution to the project, as staff can

explain later in their presentation. By requiring San Joaquin County to have a financial contribution, by also providing clarity as to which part of the EIR will be studied at a minimum in order to ensure maximum GHG reduction in transit ridership, and to also address several other concerns that were raised, and that was approved by the committee. So our hope today would be to provide a summary of that in providing the presentation as well. Thank you.

Commissioner Haggerty: Madame Chair?

Chair Cutter: Yes, Commissioner –

Commissioner Haggerty: I just want [unintelligible: 16:47]. Supervisor Miley texted me and says he is stuck in the attendees and needs to be moved over.

Chair Cutter: Okay, thank you. We'll note that and Vanessa will do her magic. Okay. With that, Tess, can you –

Ms. Lengyel: Yeah, thank you, Madame Chair. As has been noted, there was a very lengthy discussion at PPLC and we'll have a presentation that summarizes some of that. Carolyn Clevenger will provide that presentation and Michael Tree, who's the executive director of the Tri-Valley San Joaquin Valley Regional Rail Authority, will also provide some background on the project. I do want to note that there are responses to comments received as of the mail-out in the packet, and they are very detailed in Attachment D. So with that, Carolyn, why don't you go ahead and go over the presentation?

Ms. Clevenger: Thank you. While Vanessa pulls up the slides, we can go ahead and jump to Slide 3, Vanessa, when it comes up. [pause] So as was mentioned, there is extensive discussion of the September PPLC meeting with nearly 100 comments submitted, either in writing or verbally at the meeting, and PPLC voted to recommend approval of the TEP Amendment to the full commission. Next slide.

This slide details the proposed amendment. Blue text denotes language that was added to the TEP language and red denotes language that would be removed from the TEP. The phrase highlighted in yellow is the one that was just referenced by Commissioner

Bauters that was added by the commission at PPLC to provide clarity of what the initial operating segment would be. Next slide.

Rail service and connectivity in the Tri-Valley has been under discussion for a long time and voters have made long-standing commitments that include funding for transit and rail in the Tri-Valley, dating back to the 1986 Alameda County Measure. Next slide.

BART was, for a long time, the lead on the project. Between 2010 and 2018, BART advanced significant amount of planning and environmental work, including analysis of multiple station sites and alignments as well as different rail technologies and express bus alternatives. That work culminated in May 2018 with BART Board certifying a project-level EIR. After extensive discussion and debate, the BART Board finalized the EIR without selection of a preferred project to advance. Next slide.

In 2017, the State Legislature approved AB 758, which created the Tri-Valley San Joaquin Valley Regional Rail Authority. When the BART Board voted not to advance the project, the Authority as defined by AB 758 assumed responsibility to advance the project. The Authority utilized significant amount of work that had already been completed by BART as well as ACE to jump-start their work and Michael Tree will provide a quick overview of the project. Next slide.

Mr. Tree: Great. Well, good afternoon. It's a pleasure to have the opportunity to provide you with that great description and update on the Valley Link project. This first slide that I have is provided by the Bay Area Council Economic Institute. In the slide, you can see the three primary commute sheds in the Bay Area. You'll note that the commute from the northern San Joaquin Valley, including the Tri-Valley, is the Bay Area's largest commute shed. In fact, it's more than twice the volume of the other commute sheds and it's growing at a higher rate. An update to this slide's coming soon. You'll note that's 2017 data. In 2019, the data shows that that commute shed has grown to nearly a hundred thousand commuters a day and so it's a busy commute shed. It's about to get a lot

worse. The Bay Area Council anticipates that this commute shed will grow 75 percent between 2016 and 2040 and what's more, truck traffic, much of it going to the Port of Oakland, will increase 58 percent during the same time period. Next slide.

So here's a map of the Valley Link system. The first phase of the Valley Link project is from the Dublin-Pleasanton BART station to the planned ACE North Lathrop station. A second future phase extends to Stockton. The first phase is 42 miles long and features seven stations. You know, as you look at the map, it's easy to break up the first phase of Valley Link into three segments or rights-of-way, all of which are in transportation corridors, so we can have a quicker, more efficient project delivery. The first phase, starting on the left, is from Dublin-Pleasanton BART station to the Greenville station, which is just short of climbing into the Altamont, if you are familiar with the geography in the area. Within this eleven and a half mile section, Valley Link will travel at grade in the 580 median.

The second section is the twelve and a half mile Altamont section and in this section, Valley Link will operate on the former Southern Pacific Railroad right-of-way, which is part of the original transcontinental railroad, and now owned by Alameda County. And then the third section is from the Mountain House station to the planned ACE North Lathrop station. This seventeen and a half mile long section is within the Union Pacific Railroad right-of-way. Important to note is that the Valley Link trains are planned to operate throughout the day with a 12-minute headway in the Tri-Valley during commute times, and so they'll meet every BART train and they will have 36 minute headways during the off-peak.

Briefly speaking, but really important, the Valley Link board is looking at three different types of technology for the Valley Link trains: hybrid diesel battery technology, also electric battery with catenary linings providing electric power in the Altamont, and onboard batteries providing power for the trains in the 580 segment and also the San Joaquin sections. And the board is also studying hydrogen technology, which is a

really promising zero-net emission technology. So it's anticipated that the board will select a zero-emissions technology as they more fully explore that, electric battery, and emerging hydrogen technology. Next slide.

So this slide shows the many project benefits to Alameda County with the Valley Link project. Of the 33,000 riders a day estimated in 2040, more than 10,000 are riders in the Tri-Valley segment. Additionally, Valley Link has a benefit of reducing between 33,880 and 42,650 metric tons of greenhouse gas emissions in 2040, and that depending on the technology of the train that's selected. Further GHG reductions will happen as the communities continue to engage in transit-oriented development around the Valley Link stations and in sum, on average, there's a weekday reduction of 570,000 vehicle-miles traveled that's attributable to the Valley Link project in 2040. Next slide.

So this is my second-to-last slide that I'll share. It includes the potential project phasing of Valley Link. We've already discussed that Phase I is from the Dublin-Pleasanton BART station to the ACE North Lathrop station. There are also opportunities to do an early Phase I, what's known as an Initial Operating Segment, or an IOS, and the most likely Initial Operating Segment is from Dublin-Pleasanton BART station to the Mountain House station. This IOS would provide 11,101 rides per day in the initial year of service and GHG reductions of up to 7,172 annual metric tons with a capital cost of just over $2 billion. Next slide.

So this slide shows the funding sources that are a high probability for the Valley Link project. The Measure BB funds that you are considering today are listed. Regional bridge toll funding allocated to the corridor and this project, $80 million in developer fees from the city of Livermore and Tri-Valley Transportation Council, and the 200-acre property from the city of Livermore – city of Tracy that's valued at $40 million, where the operations and maintenance facility will go adjacent to that Mountain House station. So as you can see, in total, about a third of the project cost is already identified. In regard to San Joaquin County, they've been really active in identifying potential funding

sources for Valley Link. In addition to the $40 million property to be provided by the city of Tracy for the O and M facility, they are planning for a potential transportation sales tax in 2022 that could include the Valley Link project. The city of Lathrop is considering $86 million in developer fees, tax increment funding for the project, and finally, I think it's important to note that San Joaquin COG, the Council of Governments there, has included Valley Link in their congested corridors planning which could result in significant State funding, and other potential significant State funding sources, in addition to that congested corridors program, would include the Transit And Intercity Rail Capital Improvement Program, also known as the TIRCIP program.

So I just have one final thought. An economic impact report of Valley Link was recently completed by PGH Wong using a model from the American Public Transit Association. It found that 22,000 jobs are created in the region during the construction of Valley Link with an economic impact of $3.5 billion and during revenue operations, which could be as early as 2028, 400 jobs are created with an economic impact of $69 million a year. So it's significant for our region, especially as we turn the corner on a COVID environment. And with that, I'll conclude my thoughts and turn the time back to Tess and Carolyn.

Ms. Clevenger: Thank you. Next, Vanessa? And I'm going to walk us through the comment period and today's proposed action.

Following the commission's vote on May 28th to initiate the comment period, notice was sent to the Mayor and City Managers or their equivalents of all cities, the county, and the transit operators in Alameda County who are represented on the commission. Comments received by September 11th are include in the summary matrix of comments and responses, which is Append-, Attachment D, with the full comment letters included in attachments E and F, and all comments that were received by last evening were distributed to the commission as a handout, Attachment G, and posted to the Alameda CTC

website; and the Clerk also emailed around one additional comment letter than came in mid-morning. Next slide.

The support letters highlighted the benefits of the project and the need for rail in the Tri-Valley. The benefits cited included reduction in vehicle miles travelled and greenhouse gas emissions, support for transit-oriented development, protection of open space, support for businesses in the Tri-Valley, and job creation during construction. Next slide.

Comments opposing the Amendment focused on timing and noticing procedures, insufficient alternatives analysis, lack of benefits to Alameda County residents, how an Initial Operating Segment would be decided, and concerns around sprawl and geographic equity. Next slide.

So to summarize today's action, next slide, all of the standard TEP project requirements would apply to the Valley Link projects. That includes specific strict project deadlines. Seven years after approval of an amendment, Valley Link would need to have received environmental clearance approvals and have a full funding plan in place. All recipients of funds through the Expenditure Plan must include – must sign a Master Funding Agreement, which includes local hiring requirements, and no expenditures are allowed outside of Alameda County. Next slide.

This slide again details the proposed Amendment before you today. Next slide.

So it is recommended that the Commission approve the Rail Authority's request for a TEP Amendment, as detailed here. This is an action item that requires two-thirds vote of the authorized vote at the full Commission. And that concludes our presentation and I'll turn it back over to the chair.

Chair Cutter: Okay, thank you. So that is the presentation for this. I would like to first take some commissioner – if there are clarifying questions or so forth, and then I would to get into public comments, after which commissioners will have a chance to make

some comments whether, you know, agreeing to the project and so forth. So I'm looking at our commissioners and I'm not seeing any hands raised. And so with that, let us just get right into the public comment section. So if you'll help with that, Vanessa?

Ms. Lee: Sure. For the record, following a mail-out of the Commission packet, 17 comment letters were received. A supplemental handout includes the full text of the letters that was distributed to the commissioners this morning as well as posted on the Alameda CTC website. The letters of support focused on the importance of the project to the quality of life and economy of the Tri-Valley and the benefits of the project. Letters of opposition focused on the Amendment process, insufficient alternative considerations, and lack of benefits for Alameda County residents. Letters of support for the project were submitted by the Building Industry Association, Cerro Vista Land and Development, Lawrence Livermore National Laboratory, the Lehman Insurance Agency, Livermore Valley Joint Unified School District, Livermore Valley Wine Growers Association, Stanford Healthcare, Valley Care, Steve Lanza, Innovation Tri-Valley Leadership Group and Lam Research and Tri-Valley Advising, Sunset Development, Tri-Valley Chamber of Commerce Alliance, Visit Tri-Valley, and Wente family.

Letters of opposition were submitted by Law Office of Jason A. Bezis on behalf of Transportation Solutions, Defense in Education Fund, TRANSDEF, Dasen American Academy, Sherman Lewis, Doug Mann, and TRANSDEF. We also received a public comment and I'm going to read it. It is a support comment from John Sensiba, managing partner of Sensiba San Filippo**.** The comment is very similar to the comments received in the support letters. And it looks like you also have 13 hands raised for public comment. If you'd like, I can go ahead and start calling some of those.

Chair Cutter: If you would, please.

Ms. Lee: Sure.

Chair Cutter: And we are going to have our public comments at two minutes each so if you'll show the clock for people. Thank you.

Ms. Lee: Sure. The first comment is from Val Menotti

Mr. Menotti: Hi. Good afternoon. This Val Menotti, Chief Planning Development Officer with BART. In your package, you have a letter from BART General Manager Bob Powers. It's important to note that these are BART staff comments since the full BART board has not taken a formal position. BART staff supports the proposed amendment which will acknowledge the Tri-Valley Authority and Valley Link as an eligible recipient of the 400 million dollars from the BART to Livermore category. BART is working in partnership with Valley Link team. It's essential that we consider the customer experience as they travel through Valley Link on to BART in many cases and to their final destination, so we want to make sure to create a safe and seamless and comfortable travel experience. It'll be important that the project make investments to create an elegant transfer at the Dublin-Pleasanton BART station and ensure that the normally crowded BART can accommodate these new travelers in Alameda County. So we intend to continue to partner with Valley Link and ensure a successful project, and as Michael Tree may have noted, we're working with him an MOU to address the capacity needs, funding, and other matters.

I did have a question I'm hoping staff can address, which is, can you confirm that the Measure BB funds will remain eligible for use by the Valley Link project to fund BART capacity improvements in Alameda County that may be identified in a BART-Valley Link MOU? Thank you for your time.

Ms. Lee: The next public comment is from Jerry Pentin.

Mr. Pentin: Thank you. I'd like to thank the Alameda County Transportation Commission for the opportunity to speak today. I'm Pleasanton Councilmember Jerry Pentin. I'm also a board member with LAVTA, but I'm only representing my city today. I did provide a letter of support which will – which echoes my comments I'm going to make.

I'd like to express my strong support for the Tri-Valley San Joaquin Valley Regional Rail Authority's request to amend the 2014 Measure BB TEP. An approval from

ACTC will directly benefit the taxpaying residents of the Tri-Valley. It will connect our Alameda County service workforce and, more importantly, it will help create new jobs as this project progresses. It will also support TOD plans currently underway at proposed stations, adding affordable housing units where they are needed most; and very important to the residents of the Tri-Valley, it will also reduce congestion and improve safety on Interstate 580, ranked as one of the Bay Area's most congested goods movement corridors that serves the Port of Oakland.

With the loss of BART to Livermore, the Valley Link project is vital to Tri-Valley and this TEP amendment is critical to Valley Link. I would also like to note that this request has overwhelming support throughout Alameda County from impacted cities, agencies, and residents. Please approve the Tri-Valley San Joaquin Valley Regional Rail Authority request for a 2014 Measure BB Transportation Expenditure Plan Amendment. Thank you.

Commissioner Haggerty: Madame Chair.

Chair Cutter: Yes.

Commissioner Haggerty: I'm sorry to interrupt. If I just make a comment to those that are speaking, there's a lot of speakers and I'm – to those that are in favor of Valley Link, I'd appreciate it if you would be as brief as possible so that I can make sure that we get to the vote.

Chair Cutter: Right now have somewhere upwards of 20 hands, at least, so thank you for that comment. Alright. Let's continue on.

Ms. Lee: The next public comment is by Linda Smith.

Ms. Smith: Good afternoon. My name is Linda Smith. I am the city manager in the city of Dublin. The city is in full support of the staff recommendation. Valley Link is necessary and will result in considerable benefits to the region. It will remove congestion off 580; it will improve our local economy. It is environmentally-friendly and folks, we are in a housing crisis and this will help the city of Livermore develop two TOD developments

at stations that are likely to create a number of housing units that we desperately need. This, of course, is also helpful in our GHG emission reductions. Again, I support the staff recommendation and I hope you will, as well. Valley Link is a feasible project that we will see in our lifetime. Thank you.

Ms. Lee: The next public comment is by Steven Dunbar.

Mr. Dunbar: Hello. Can you hear me?

Chair Cutter: Yes, we can.

Mr. Dunbar: Excellent. Good afternoon. My name is Steven Dunbar. I wear many hats but today, I am only representing myself. To make it as brief as possible, I'll just say this, because a lot has already been covered. You all know that BART to Livermore [unintelligible: 38:09. Wind interference]. Since that time, the equity situation has really improved. The city of Livermore staff and the LAVTA staff and Valley Link staff have been making serious strides in affordable housing, in station design access, and the stations will also serve low-income populations of Livermore, so I ask for your approval. Thank you.

Ms. Lee: Thank you. The next public comment is by David Kent.

Mr. Kent: Thank you. My name's David Kent. I've been a wine grower in Alameda County for the past 25 years and I'm currently the chairman of the Tri-Valley Conservancy. I think a future speaker is our executive director, who will speak about the letter that TVC has sent in support of Valley Link, so I just wanted to reinforce a point about how Valley Link will protect our urban growth boundaries. Urban growth boundaries need two things to survive. They need infill development, especially around transit centers, and they need mass transit, which allows people to travel between urban centers without destroying open space. And Valley Link is really the key for that in protecting our critical east Alameda County rural farmlands, and we need Valley Link, not urban sprawl, that threatens our urban growth boundaries. Thank you.

Ms. Lee: The next comment is by Hacienda Owners Association. Can you please state your first and last name for the record?

Mr. Paxson: Certainly – can you hear me okay?

Ms. Lee: Yes, we can.

Mr. Paxson: Great. Thank you, Chair Cutter and commission members. My name is James Paxson. I'm the general manager for Hacienda in Pleasanton. I wanted to thank you for this opportunity to speak. We full support the staff recommendation and want to commend staff on the really excellent work that they did in the staff report and again, urge the commission's approval of this item. We have submitted a letter, which you'll find attached in the report, and I won't repeat it; but I did want to kind of emphasize two themes that we had presented in the letter.

First, we're a large, mixed use development in Pleasanton with over 700 employers, and one of the things that we find every time that we talk to employer, when we talk to their employees, when we talk to the residents within our development, or when we talk to our owners and investors, is the importance of mobility. And I can't emphasize that it's not just general mobility. It's being able to have mobility choices and mobility that's both efficient and effective. Valley Link delivers that, and this is an important, key consideration for keeping the economic vitality going in both Hacienda, Pleasanton, and the Tri-Valley as a whole.

The second point I wanted to make is the urgency of this. The time is now to move forward on this project. As Michael Tree pointed out in his presentation, the need for this is growing every day. So with that, thank you for the opportunity again to speak and we do urge the commission's approval of the staff recommendation. Thank you very much.

Ms. Lee: The next –

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Mike Wallace.

Mr. Wallace: Oh, hello. Thank you, commissioners. I'm Mike Wallace. I'm a candidate for the BART Board District 5, and I just wish to express my support for the staff recommendation to approve this Measure BB Transportation Expenditure Plan Amendment. Appreciate all your work; you've done a great job. There's a lot more work to be done and I look forward to working with you as we move forward on it. I'll keep it short, as Mr. Haggerty asks, and wish you the best. Thank you.

Ms. Lee: The next public commend is from David Schrombarn [sic]?

Mr. Schonbrunn: Yup. David Schonbrunn. Are you hearing me?

Ms. Lee: Yes, we are, thank you.

Mr. Schonbrunn: I'm president of the Transportation Solutions Defense and Education Fund. We're transit advocates and long-time supporters of the improved rail transit in the Alameda corridor. However, we oppose this project. Roughly half of the correspondence in today's packet is composed of our arguments, both on a policy level and on a legal level, why this vote should not take place today.

I note that today's presentation is a rehash of what's in the Board packet and offers no response to our comments. It's on you if you choose to proceed today without providing a reasoned response. I further note the similarity between this process and the Supreme Court vacancy. Both are occurring shortly before a general election. CTC's membership will change significantly after the election with all of the Tri-Valley mayors retiring. For the same reason, the vast majority of the public believes the court vacancy should only be filled by the newly-elected president, we believe a decision of this magnitude should be left to the next set of commissioners.

We urge this vote be deferred. We have provided a list of what we believe are the predicate steps that need to be taken before a responsible decision can be reached. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next comment is from Evan Branning.

Mr. Branning: Hello. Thank you very much for having me. Most of you know me. I've worn a lot of hats and been involved in this process for a while. I actually have a few things I wanted to say but first, I just wanted to address the last commenter's comments about this being a rushed process. I have been involved in it since before AB 758 was even a thing, and AB 758 is three years old now. That means that this process started three years ago, so this has definitely, in my opinion, been a long and deliberative process.

However, the main thing I would like to talk about is that I am a teacher in the Tri-Valley. I'm fortunate enough to live in the Tri-Valley as well as teach here. However, most of my co-workers are not so fortunate, and I'm seeing more and more, as new teachers come into the valley, that they're unable to be – afford living in this area. The price of housing, as we know, in Alameda is unsustainable for teachers as well as other first responders and many others in the service industry. This project is an absolute must, and I strongly, strongly encourage you, please, to move forward on this. It will help provide affording housing, transit-oriented affordable housing, for teachers, first responders, and our service industry at the two sites located in Livermore. It will also connect people, who are unable to afford to teach and work in Oakland and the other parts of Alameda County, who are forced to move farther away, a quicker commute. So I implore you, please do move forward on this. It is absolutely the right thing to do and it is absolutely a moral imperative of this board to help those of us who are struggling. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Jas Barring.

Ms. Barring: Hi! Thank you for having me. My name is Jas Barring. I'm a recent college graduate and can relate to the need for affordable transportation options. So I'm a big supporter of the Valley Link project because it will provide an important connection to BART and ACE and really expand the public transit network in the Bay Area and the region. And so Valley Link will also reduce the number of cars on 580 and other roads and highways, which is good for the environment, and I also think it's great that

Valley Link is being planned as a zero-emission train. And thank you again for giving me the opportunity to comment, and I would like to conclude be asking the commissioners to please approve this action. Thank you so much.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment a phone number ending in 4681. Can you please state your name for the record?

Mr. Varela: My name is Noel Varela. Can you hear me?

Chair Cutter: Yes, we can.

Mr. Varela: Good afternoon, commissioners. Thank you for the time for me to speak. I am a field representative of Millwrights Local 102. I support the approval of the 2014 Measure BB TEP Amendment for the Valley Link rail. A little about me: I moved to the San Joaquin County in 2007 and I've travelled over the Altamont into Alameda County for work almost every day. I know a lot of people do this. I felt that I was forced to move to the Central Valley for the affordable housing. Two cars, two trucks later, over a decade has passed with very little done. As the Valley's population grows, the commute gets worse, our environment's condition is worse, the time I spend with my family is less. It's a big problem that many people are facing in the valley. It's a big problem but we have a solution. This solution will help decrease the commuting time. This solution will bring jobs to the valley, and these are head-of-household jobs with an apprenticeship that provides a clear career pathway for our youth. This solution will help the environment. Please be a part of the solution! Approve this amendment! Thank you for your time.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Gerald Cauthen.

Chair Cutter: Mr. Cauthen, it looks like you need to unmute yourself.

Mr. Cauthen: How's that? Can you hear me now?

Chair Cutter: Yes, we can.

Mr. Cauthen: Okay. I am speaking for BATWG, the Bay Area Transportation Working Group, and we have sent a letter to you talking about the issues that cause us to believe this should be delayed. I'm not going to repeat the content. Each of you should have received a copy. However, as of September 9th, 2020 we – many of us watched the presentation very closely on TV and we found that a lot of things are still in a state of flux. Now, most of the letters of support you got came in May of this year. The changes going on on the 9th of September were still major. And our analysis is based not only on that study but also on the feasibility report on the BART to Livermore EIR and several other documents of importance.

Suffice to say, not enough is known about the Valley Link proposal at this time. The ridership projections have not been verified. In fact, because of COVID, it's pretty obvious that they're probably no longer valid. The right – the costs, operating costs especially, but also the capital costs, have not been verified. We heard a lot of confused talk about capital costs on the 9th of September. Nor has there been enough consideration given to at least three alternatives that would better serve the Tri-Valley area than Valley Link would, and I would be happy to go into detail on those, but not here, because I don't have the time. Well, let's see. So I think ACTC should keep its options open. Not to say we're necessarily saying it can't eventually turn out to be okay, but they need to do – ascertain and quantify its value and its costs very carefully and take another hard look at the ridership statistics before 400 million dollars is given to that project all the way up at the front of it. It's been going on for three years, but we're still in the early conceptual engineering phase. So I would say until all the costs are known and available for all to see, and the other uncertainties, we should not approve it now. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Adria Anderson-Kelly.

Ms. Anderson-Kelly: Thank you very much. My name is Adria Anderson-Kelly and I am an administrative assistant at Las Positas College in the student life office. I

want to thank the Livermore-Amador Valley Transit Authority for their partnership with Las Positas College and specifically, the Las Positas College student government regarding the assistance of the LPC students regarding the transit pass. Your assistance reduces the concerns and boundaries for our students' financial hardships to find transportation to campus to further their education. As an LPC staff member and transit resident, I agree with Evan Branning's and other public comments regarding the benefits of Valley Link to students, educators, and employees commuting from San Joaquin County to Alameda County. Valley Link will benefit numerous students and staff commuting to LPC from San Joaquin County. The Valley Link will reduce absentee rates due to economic hardships and traffic delays while increasing our students' safety and productivity. Additionally, Valley Link will be invaluable to the commitment to reduce emissions. I ask for the support of the Alameda County CTC commissioners to approve the Measure BB Transportation Expenditure Plan Amendment. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public is from Dan Leavitt.

Mr. Leavitt: Yes. Thank you. Dan Leavitt with the San Joaquin Regional Rail Commission and I'm going to keep my comments really, really brief. The San Joaquin Regional Commission is the owner-operator of the ACE rail service. We support the Valley Link program. We support this amendment. We believe that Valley Link and ACE are very complementary services and we are working in partnership together. This action would ensure that the Valley Link project moves forward and supports the Altamont Corridor Vision our agencies are working jointly to advance, so we encourage your action today.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Antonio Muñoz

Mr. Muñoz: Good afternoon. My name is Antonio Muñoz. I am a field representative for the Northern California Carpenters. I am calling today in support of the Valley Link project. As carpenters, we travel all over the Bay Area and northern California

to work on projects to provide for our families. You know, we build the schools to educate our children, the bridges to help get people to work, and the hospitals to provide care for those in need. Fortunately [sic], you know, many of our members along with thousands of other folks that once lived in the Bay Area have moved to the valley because of the high prices on homes. People are spending more time stuck in traffic and less time with their families. You know, many of my co-workers I have worked with have shared their stories of how they need to be on the road before 5 AM just to make sure they're at work on time. You know, after their 8-hour shift, they get home, maybe have enough time to have dinner, take a shower, spend about a hour or so with their families. And there are thousands of people that are making this sacrifice every day for their loved ones.

The Valley Link would help reduce traffic for those that make that daily commute. It would create good paying jobs that will provide folks with benefits for workers and their families, and it would create opportunities for apprentices, which is going to be the workforce of the future. So as home prices remain high in the Bay Area, and more and more people are being pushed out, traffic's only going to get worse in the coming years. So please take this opportunity to make a difference and support staff recommendation in funding the Valley Link. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Catharine Baker.

Ms. Baker: Thank you, Chair Cutter and commissioners. Thank you for your thoughtful consideration and for the very thorough and balanced work that the staff has done; and you've already committed to this issue. I am former State Assemblymember Catharine Baker. I had the honor of representing the 16th Assembly District, including major parts of Alameda County, and I was the author, not only of the language in the bridge toll money that goes towards Valley Link, but of AB 758, which you've heard about today.

First, I just want to completely echo and endorse the merits that have been identified in the staff report that you've heard again and again from other public

commenters today, and I think those reasons alone make this a very smart and appropriate decision and good investment for Alameda County. But I want to highlight two quick points that have not been covered yet. One is that the AB 758, which was a very bipartisan bill – my co-author was a Democratic member from the Central Valley, Susan Eggman. It was supported by members of all parties at local and county and state level and, of course, Governor Brown. It specifically had language in it, in Section 13258, contemplating that funds that would not be able to go to BART for an extension into Livermore would go to Valley Link, so that what Valley Link is, which is a successor project to that original plan to have BART go into Livermore, would continue and succeed. And so it's very consistent with the legislation that garnered so much support and that supports Valley Link; and I think it's also the intent behind Measure BB and the voters who supported it to have a connection or rail connection like this that Valley Link makes possible. And so by honoring the voters who originally passed BB and the legislation that created Valley Link, I think this is a very good decision and I urge adoption of the staff report, and thank you again for your very thoughtful approach to this.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Guisselle Nunez.

Ms. Nunez: Hi. Thank you so much. Can you hear me?

Chair Cutter: Yes, we can.

Ms. Nunez: Thank you so much. My name is Guisselle Nunez. I'm the Director of Public Relations, Marketing, and Government Relations for Chabot-Las Positas Community College District. I would like to submit our public comment on behalf of our chancellor and our board of trustees. Again, to also say what others have already said, that we are in – that we continue to be in support of Valley Link and most importantly, of the Measure BB amendment that is at hand today. As a reminder, our Community College District serves 29,000 students and counting. Our employees and students use public transportation to get to and from their places of work and homes. Our research shows that

our public transportation usage averages 10,000 individual rides per month and nearly 500 students take the bus each business day. Twenty percent of our students take classes at both campuses as well, in Hayward and in – at the Las Positas College Campus in Livermore. We again thank you for your thoughtful consideration of this project and we urge you to support the amendment to this – to the Valley Link. Thank you so much.

Ms. Lee: The next public comment in the queue is from Jason Bezis.

Mr. Bezis: Good afternoon.

Chair Cutter: Hello?

Mr. Bezis: I'm waiting for this clock to start.

Chair Cutter: Yes.

Mr. Bezis: But in any case –

Chair Cutter: Yes. We can hear you.

Mr. Bezis: First of all, I am requesting that you postpone action on this TEP amendment today and I also want to call to your attention, I did submit another letter at 1:45 PM that I want in the record concerning geographic equity. The issue – TEP amendments are very rare. I believe only have been two done since 1986. This is the largest project and keep in mind, this is the marquee project of Measure BB. The letter that I submitted yesterday elaborates issues that must be addressed today if you're going to take action, must be addressed. The amendment text today for the TEP amendment differs substantially from the amendment text that your body considered on May 28, and I should point out, too, that we had difficulty, because the PPLC meeting from November – I mean, September 14th, there are no minutes on line, there's no recording on line. We couldn't tell exactly where this text came from today about the inter- – the initial operating segment. But regardless, we believe this violates PUC 180207 and also implementing Guideline #4 of BB, because a copy of the proposed amendments, of what you're voting today, was not supplied to the all the cities. It's been changed.

Second of all, the vote today has to be two-thirds of the total voting power. In other words, your administrative code section 4.2 – 4.2.7 is invalid. It is inconsistent with the 2010 JPA, so the vote today has to be the total voting power.

Third, AB 758 talks about a connection in the Tri-Valley. If you go with the Southfront station, that's not in the Tri-Valley. Your sponsor actually lacks legal authority to build the project. Benefitting Alameda County, the Altamont Pass segment does not benefit Alameda County. We also point your attention to the *HAPA* case, which your predecessor agency lost in one of your TEP processes and we believe alternatives need to be on the table. The *Save Tara* case needs to be considered, as does the implications for 20 – 2000 Measure D.

And so those are many issues, and I agree – just as with the Supreme Court vacancy, lame ducks shouldn't be voting on this. You have lame ducks in the mayors of the Tri-Valley cities and Mr. Haggerty. Let the next commissioner decide, the next commissioners decide. Thank you.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from phone number ending in 6510. [pause] Phone number ending in 6510, if you could please state your name for the record. [pause] I'm going to go ahead and move on to the next comment. The next comment is from phone number ending in 3508. Phone number ending in 3508? If you could state your name for the record?

Ms. Mercier: Good afternoon. This is Laura Mercier, Tri-Valley Conservancy Executive Director. Tri-Valley Conservancy strongly supports the approval of Measure BB Expenditure Plan Amendment. Your vote will fulfill a commitment made to the Tri-Valley to advance the rail connectivity to Livermore and support the economy by providing our Bay Area workforce with a chance to have safe and affordable choices about where they can live and work. That's already been pushed before you. In addition, there'll be a reduction in the vehicle miles travelled, greenhouse gas emissions, and smart growth

will be – this will include a catalyst for smart growth that protects open space, such as like that proposed Isabel Neighborhood Plan is an example. In short, it is vital to our environment, open space, and the quality of life in our community that you approve your staff's recommendations. Thank you.

Chair Cutter: Thank you for your comment.

Ms. Lee: The next public comment is from Rafael Gonzalez.

Mr. Gonzalez: Good afternoon, and thank you all for your time. My name is Rafael Gonzalez, president of Laborers Union Local 304, representing over 15,000 who live and work in the area impacted by the Valley Link and I'm here to speak on behalf of the funding of the project. Aside from the thousands or – I'm sorry. Aside from the environmental benefits, hundreds if not thousands of jobs will be created. We've been already impacted very deeply by the pandemic. California is facing a $54 billion deficit. Many jobs funded by the public funds are in jeopardy. Without the funding from the amendment, Valley Link will be in jeopardy and Valley Link will ensure that the economy keeps moving forward. And I guess that's it. [laughs] Sorry. [laughs] Thank you very much for your time and I urge you to vote in favor of the amendment.

Chair Cutter: Okay. Thank you so much for your comments.

Mr. Gonzalez: Thank you.

Ms. Lee: The next public comment is by a member with the first name, Jim. Can you please state your last name for the record? [pause] First name, Jim, can you please state your last name for the record. [pause] Okay, I'm going to go on to the next comment. The first name is Matt. Can you please state your last name for the record?

Mr. Williams: Williams.

Ms. Lee: Okay. Matt Williams.

Mr. Williams: Good afternoon. My name is Matt Williams, of course. I'm Chair of the Transportation Compact Growth committee of the San Francisco Bay Chapter of the Sierra Club. Before that, among other things, I was a board member of the Alameda

County Congestion Management Agency, the CMA. The Sierra Club remains deeply concerned about the proposed action today and again urges you not to approve it. We have asked you multiple times to conduct a full, fair, and comprehensive study of what would be the highest and best use of 400 million dollars in Alameda County taxpayer funds. The action before you is simply the wrong approach.

Voters approved BART to Livermore as part of the Measure BB package because they knew what it meant. Now you are proposing to override any other options, to just hand over $400 million to an untested organization for a still-undefined project that would primarily benefit residents of San Joaquin County and would degrade transit service to our own Alameda County local riders. This is not fair and it's not wise. SB 375 says people should be able to live and work in their own metropolitan area, here in the San Francisco Bay Area, to cut down on greenhouse gas emissions by, for example, not facilitating inter-regional commuting. The amendment added at the recent PPLC meeting has done nothing to ensure any financial commitment by San Joaquin County to mitigate what Valley Link will do to Alameda County BART riders. Your fiduciary and moral obligation is supposed to be on behalf of Alameda County residents and taxpayers. Please follow through. Again, please reject the recommended action before you today and simply do the right thing. Thank you very much for your consideration. Good afternoon.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from John Belperio.

Mr. Belperio: Hi, good afternoon, Chair Cutter and Commissioners. My name is John Belperio with Nor. Cal. Carpenters Regional Council. I'm speaking today, though, wearing my other hat as an executive board member of Alameda County Building and Construction Trades Council. The Construction Trades Council represents thousands and thousands of members in Alameda County as well as in the much larger region. Many of those members work here in Alameda County and a lot of them live here. Even more commute here and those that do live here are being pushed out, due to, you know, the rising

costs in housing. This project is a win-win for everybody. You know, I think our brothers at the Carpenters and Laborers have already made a lot of comments, as well as other electeds have made a lot of comments supporting this, and we support it as well. We want to thank you for all your commissioners' tireless efforts and we believe that you guys have done an amazing job at looking through all of this very carefully and that you're making the right decision supporting the TEP Amendment, and you're doing the right thing. We just want to thank you for that. That's all.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Stephen Spedofwinsky [phonetic]. Stephen Spedofsky [phonetic].

Mr. Spedowfski: Oh, there we go. Can you hear me?

Ms. Lee: Yes.

Chair Cutter: Yes, we can.

Mr. Spedowfski: There we go. Nice try at the last name, very close. My name is Stephen Spedowfski, and today, I'm speaking as a fourth-generation Alameda County resident. I grew up in the San Leandro-Oakland Area. Bayfair BART was my gateway to the Bay Area, so I know the importance of a rail connection to a community. I now live in Livermore and a rail extension to Livermore has been in the works since I was three. That was about 44 years ago. It's time.

I agree with everything that everyone else has said in support and I would appreciate your support for this project. Thank you very much.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Martin Espenoza, Jr.

Mr. Espenoza, Jr.: Good afternoon, everyone. My name is Martin Espenoza, Jr. I'm a union field representative for Piledrivers Local 34 out here in Oakland, California. I'm also a resident of San Joaquin County, so every day, I make that commute over the

Altamont into the Alameda County, day in and day out, five days a week, so I know first hand how bad the traffic can get on a daily basis for us commuters.

So I can only think of positive things that could come from this project, one of them being the quality time you can spend with your family as opposed to being stuck on the Altamont for two to three hours a day. Also, the reduction of emissions, that is going to be a big key going in the future, especially while Governor Newsom was proposing earlier today about the use of gasoline vehicles.

Other things that are very crucial to this project, it's going to bring a lot of great jobs to a lot of our membership. Our membership are the guys that are out there and the gals that are building these bridges, that are going to be driving the pilings, the carpenters that are going to be assembling, and the laborers. A lot of crafts, a lot of membership will be working together, many of which who reside in Alameda County and do that commute every single day. So Local 34 is definitely in favor of this project and I urge you guys to vote in favor of the project as well. Thank you for your time this evening. Have a great day.

Ms. Lee: The next public comment is from Karl Wente.

Mr. Wente: Thank you, Commissioners. Thank you, staff, for Mr. Scott Haggerty. These are my comments. Full support. Full stop.

Chair Cutter: Thank you for your comments.

Ms. Lee: The next public comment is from Timothy Sbranti. [pause] Timothy Sbranti? I'm going to go ahead to the next comment. First name, Jim. There's no last name. If you'd like, can you please state your last name for the record?

Mr. Schmidt: Thank you. My last name is Schmidt. And I want to start with the notion that the discussion today is not on target. It is not a vote for Valley Link. It is a vote on whether the Commission should commit 400 million dollars of Alameda County taxpayer money to this project at this time. And I would address the ladies on the Commission. Everybody knows they're smarter than the rest of us: they're more logical;

better reasoners; better decision-making. If you're going into a dress shop to get an elegant gown, you don't pick the first piece of garment that you see on the rack without knowing its size, its design characteristics. You want to understand what you're buying. That's the case here.

As recently as the early part of this month, this project went through significant changes: change in the alignment, a change in the station locations, in the cost estimates, in the station lengths, uncertainty about whether electric or diesel unit cars, uncertainty about freight relationships and implications of Federal Railway Administration regulation, revised ridership, and revised train lengths. In short, it's way too early to commit money in this state of flux.

So again, I'll speak to the women. They know how to protect their purse as they lock it over their shoulder to prevent theft. You were asked to put up $400 million now with no companion work from your other partners. It's not needed now. The work as funding is going on. Nothing in money – putting this money forward will advance the project now.

Finally, the ridership. You have a single-trick pony in the way the ridership looks. Almost everyone's going to BART. You're not getting any service in San –

Chair Cutter: Thank you for your comments, sir.

Ms. Lee: And the final comment is from Tim Sbranti.

Mr. Sbranti: Yes, hi. I'm sorry about that earlier. Speaking in support on behalf of the Innovation Tri-Valley Leadership Group. We submitted a letter with East Bay EDA and the East Bay Leadership Council. All three organizations see the benefit to Alameda County. As someone who have had privilege of serving on the BB Steering Committee. I want to reiterate that one of the foundational principles of the measure was equity. It has not only included promoting equity and improving service to the underserved, but this also included an equitable distribution of projects across the four planning areas,

including the Tri-Valley. Tri-Valley leaders identified this as a project deserving of support and we hope the Commission will support it today.

We've heard some commenters saying that now is not the time and more study is needed. But for someone insists on talking about study, particularly of bus alternatives, it's worth noting that countless studies have already been conducted over the years, all the way back through the 1990s, of alternatives in this corridor. Particularly buses, which were studied in the original BART to Livermore EIR. Buses and other alternatives significantly underperform in relation to Valley Link. Valley Link has proven to be the superior option with the most riders at 33,000 per day and has the greatest GHG reduction. I'm also happy to note, Valley Link train being planned is a zero-emission train, so it's the superior environmental alternative, in addition to the congestion relief.

Bottom line is this: 30 years of study have been done, drawn out delays. The time for more study is over. The time to act is now. This project facilitates our ability to meet regional targets for providing more affordable housing and is consistent with both the State Rail Plan and the MTC Plan Bay Area 2050. I respectfully request the Commission support the staff and PPLC recommendation and approve the BB Expenditure Plan Amendments. Thank you.

Chair Cutter: Thank you for your comment.

Ms. Lee: That was your last public comment.

Chair Cutter: Okay. Thank you. Well, this, as promised, is an issue that very many people are concerned and are really supportive or have more questions about. However, it's time to take some questions and comments from our colleagues on the board, the fellow commissioners, and just to make sure that we all understand, because this has been an ongoing process as are all things when you're in a planning stage. As you move along, you get more information on different things, and that is really what this is all about, is being able to make sure that we have set up and in place, so more information can come

so we can make sure it is the project that we want, and that is why the money has been safeguarded to make sure that things fall in place before construction can begin.

So with that, I'd like to call on Commissioner Bauters to start off this conversation. Commissioner Bauters?

Commissioner Bauters: Thanks, Madame Chair. I actually, listening to the public comment today, as we mentioned at the outset, there was a considerable amount of written comment addressing – raising concerns. A couple of those things we heard again today and if there are commissioners who have specific questions about those things, I think those things we could address, but I will – I gave a kind of a ten-minute overview last time and we don't need to necessarily revisit all of that unless there are specific questions. I will just say, to a couple of comments about – especially to this last speaker, Mr. Sbranti. I agree with him in that the time to study things has ended on this front. There – BART was provided the opportunity to have this project and – implement and operate this project in the original expenditure plan. They voted that down. They also voted down the alternative, which is what brought Valley Link into this picture in the first place. And to the comments that you don't need to allocate or expend the 400 million dollars now, you actually do in order to draw down other money and have matched; to have a commitment that there's funding here to help bring other types of funding in that's necessary.

The 400 million dollars doesn't cover the cost of this project. It's used to match other funding. It's essentially an opportunity to leverage other sources of money, and so by not having that commitment, that's really foreclosing on the opportunity to do that. I would also note that if it's in the expenditure plan, that provides a seven-year clock to do those things. And so without starting the clock, we just continue to extend the lifespan on this – the project being in front of us as an alternative. There's state legislation that authorizes the Authority to come in and after BART and do this, and that's what they did.

I think there were some legal questions that were raised, and I would defer to Mr. Wasserman, perhaps, to address those, if he is interested.

Mr. Wasserman: The Vice-Chair thinks I should be interested? I am most certainly interested. Yes, thank you. I would appreciate the opportunity, in particular, to respond to Mr. Bezis' letter that was submitted today, I believe. He raises a number of issues in that. I will try to briefly respond to them.

One, he questions whether the notice was actually communicated to the city councils and the board of supervisors, as required. The Amendment was communicated to the mayor and city manager or administrator of each of the cities, which is the normal way of communicating with the cities. I think all of them got that and, of course, all of the cities are represented on this Commission and all of the members of the Board of Supervisors are represented on this Commission. So I think they got full and sufficient notice.

Second, he raises that the language that was added by the committee regarding going to Mountain House as a substantial change. We had looked at that previously. We have looked at it again. It is not a substantial change. It is simply a clarification of what that initial phase was and is fully consistent with the notice that was provided.

Second, he raises a point I must admit I don't fully understand, but that there is some inconsistency on what vote is required and because there is an inconsistency, you can't vote today. I disagree with that. The vote today does require 18 affirmative votes by weighted vote, based on the language of the TEP itself. There is a little bit of inconsistency with the current Administrative Code that the TEP provides and you do need the 18.

Third, he has an excessively convoluted analysis of AB 758, essentially alleging it can only provide something in the Tri-Valley area and not something in San Joaquin. I'm sorry, I suggest that has no basis in law or logic. The name of the Act is the Tri-Valley San Joaquin Valley Regional Rail Authority, and as one of the authors of that has testified to you earlier this aft- [connection freezes.]

Chair Cutter: Zack, you're frozen right now. There you go.

Mr. Wasserman: Sorry. His – I'm unfrozen. Did you hear the analysis on his comments on AB 758?

Chair Cutter: No. Could you repeat those, please.

Mr. Wasserman: Sure. Sorry. He goes into a very complex analysis that I think has no basis in the language or in logic that – but the project can only really be done in the Tri-Valley area. I would note, one, the title of the Authority created by that Act is the Tri-Valley San Joaquin Valley Regional Rail Authority and as you heard earlier this afternoon, one of the authors of that state law clearly expected and the legislature expected that the line would connect to San Joaquin. That was the purpose of creating the Authority.

Third, he raises that the line does – Valley Link does not benefit people in Alameda County. You've heard from staff that's clearly not the case. He's factually wrong.

His fourth item is that geographic balance is as required being reevaluated, and that's a true statement. You'll get analysis by the end of this year. But that does not require you to stop. You've heard from a variety of sources this afternoon, you've heard from staff: this Valley Link is completely consistent with the geographic balance that was part of the initial measure. So again, I think it has no validity.

His next point goes back to the Hayward Planning Area case, which has no relevance at all. That was a case involving Route 238. It was a question of eminent domain and voluntary transfer of property in advance of CEQA being completed. The Court actually concluded it should be done, but that allowed the process to go ahead. But most importantly, it has no relevance to what's happening here.

His next issue is that County Measure D conflicts with or Valley Link conflicts with Measure D. If that were a problem, then it needs to be addressed by the sponsor of Valley Link, the rail agency. But Measure D has an exemption for rail projects, so there is no problem.

His next issue is that alternatives have been reviewed but need to be reviewed farther. BART reviewed them in the EIR. To the extent there are alternatives that

may have to be reviewed in any supplemental CEQA review applying to Valley Link that is different from the EIR that was certified by BART, that will be done; but as you've heard repeatedly, that's a normal part of the process after you approve the kind of amendment represented in what's before you today.

I promise to restrain myself on his last issue, that there are some people who are not standing for re-election and the comparison to choosing a Supreme Court Justice. I will not comment on the comparison. I will simply note that you are lawfully sitting and fully entitled to vote on this amendment. I'm happy to answer any questions.

Chair Cutter: Okay, thank you for that legal synopsis. Right now, we have Commissioner Haggerty. [pause] Who will need to – there you go.

Commissioner Haggerty: I'm getting there. Thank you, Madame Chair. Trying to turn my video on. I'm sure you all want to see me.

I just wanted to just take a second. I'm really not going to like take a lot of time. A lot has been said. I want to first of all thank the committee that this went through earlier and all the supporters in moving this forward. I want to thank all the staff work that's been done. It's been excellent staff work. It's been very methodical and it's been planned to make sure that we don't get in trouble and that everything we do is proper, and I think between our staff and our attorneys, I think that case has been made. And lastly, for me, I just want to thank the Chair and the Vice-Chair. They have spent probably more hours on this item in the last two months than they have governing their own city. And for that, I apologize, because I know how hard you work, but I also want to extend my gratitude to you for that. It's been a lot of work and I know you put a lot of work into this and I just want to say, thank you very much. And with that, when the motion comes up, if I don't hit the second, I would like to at least, you know, be able to ask for your aye vote. Thank you.

Chair Cutter: Okay. Thank you. Commissioner Pilch, please. You'll need to unmute.

Commissioner Pilch: The old double-mute. Thank you.

Chair Cutter: There you go.

Commissioner Pilch: Yeah. Thank you also to the staff and everyone who so worked on this. Appreciate the long hours that have been put in.

I first wanted to address a question that came from the BART staff member – I think a Mr. Menotti – about whether or not any of the $400 million could be used for, I believe I'm probably not going to represent this correctly, but BART congestion issues that might arise from the off-loading of Valley Link trains onto BART, so if staff could answer that one.

Ms. Lengyel: Madame Chair, if I may, as with all projects that we have in our Transportation Expenditure Plan, direct project impacts and mitigations to direct project impacts are allowable as part of Measure BB. So there has to be a direct connection to an impact for the funds to be able to be utilized. As has been mentioned, BART and the San Joaquin Valley – Tri-Valley San Joaquin Valley Regional Rail Authority are working on an MOU to address how those can be identified and addressed.

Commissioner Pilch: So I think the answer is that, yes, if there's a direct impact the – some of the 400 can be used for BART congestion mitigation.

Ms. Lengyel: If it's a direct project impact and you can have the direct – and it's a direct mitigation for the direct project impact, yes.

Commissioner Pilch: Okay. Alright. Thank you for that clarification. I'm going to go ahead and stick my neck out here and talk about some of the concerns I have. First of all, I want to clarify that my concerns are not regionalist. I am looking at this as a project and the merits are the issues with the project itself, not where it's located. But there are land use issues that come up with this.

In the PPLC meeting, I did bring up the fact that I'm concerned about enabling the mega-commute. But as was pointed out by my fellow commission members, there's already the mega-commute and one of the issues here is to off-load the freeways onto the train so we can remove that congestion, because as was pointed out, the freeway is

not only used for commuters, but it's used for goods movement, it's used for people in the Tri-Valley area and I al- – and so I want to put aside that objection for now. It's still a concern, but it's been lowered – the concern's been lowered in my mind. I mean, I do think that to the extent we need to build housing in the Bay Area, yes, we still need to do that and, yes, I think all of our cities are trying to do that. I'm actually leading the charge in my city. We had to remove a voter initiative that passed in the 1970s that six parking spaces per housing unit. We had to remove that by ballot measure. Now, we're going through a specific plan to raise height limits and increase density so that hopefully, we can do our part and more to build housing in my city. I think we're all trying to do that. I don't think our problem with housing and mega-commutes is going to go away any time soon. So I'm going to put away – put aside that concern for now, although I, you know, I think sprawl is a problem and mega-commutes are a problem, and I don't want to have – I don't want anyone to have to make a mega-commute because they have no other choice because they can't afford housing in an area. But that's a complex problem.

I do want to remind people that this does lock us in for many years, until the project either goes forward or does not go forward, and I don't know how many years that could be: five, ten, 15 years. So that is another one of my concerns. I don't have an idea of where the rest of the funding is coming from or if it can come. We – I don't hear a commitment to not use diesel trains. That still is one of the options that was presented, although there were two other hydrogen electric options presented, but I would really like to see diesel taken off, considering the current environment, considering the Governor's recent actions. And I do think it looks bad for this commission that the public cannot easily access previous recordings of our deliberations, and I'm going assume this either is a clerical oversight or this is just a continuation of past practices that I think we ought to change. I think that this commission needs to do more to be – to make that stuff available online, and I'm going to bring that up, I'm going to bring that up again in our meetings.

So I feel that I'm having a difficult time with my yes vote on this, due to my concerns and due to the fact that I don't feel that there is a time rush. The project is moving forward. There's an EIR about to come out, and the – our action tonight will not affect the – it's for construction, which is a long way away, so it will not affect the project moving forward. The project will continue to move forward. Importantly, the EIR will come out and so I'm going to have a real problem with my yes vote if there is not – well, put it this way. I'm going to move – I'm going to make a motion that we delay this vote until the EIR is available. So I'll put that motion on the table and that ends my remarks for now.

Chair Cutter: Okay, thank you. Is there a second for that?

Commissioner Saltzman: I second.

Chair Cutter: Okay, so we do have a motion and a second on the floor. Any more comment? And one thing I just wanted to say Commissioner Pilch, one small bit of your comment was the vote today would start a seven-year clock. That means it wouldn't go on forever, but it's finite at that, and which is one of the reasons you'll hear people starting to talk about it, that we need to do something about it. That's, I know, just a small concern of yours but at least, that one's [unintelligible: 1:35:43],

So, with that, please –

Commissioner Pilch: You're right.

Chair Cutter: Okay. Commissioner Salzman, if you'd like, you have the floor now.

Commissioner Saltzman: Yeah. I'd like to first associate myself with the comments that Commissioner Pilch made and I won't – don't worry, I won't repeat them. You know, I can't vote for this project today but that doesn't mean I'm against this project ever moving forward. I just – I agree, it's not time yet and there really is no urgency, and there's a lot of things still to come on the project. We're not asking for additional studies, but they already have to do studies, and I just want to see the outcome of those, so I think it's appropriate to delay this vote.

I did want to address something that a couple of public commenters brought up, just because, you know, being on the BART Board, I obviously am very familiar with all of the studies that happened with BART to Livermore, all the alternatives, all the discussions we had. And this concept that the bus alternative was inferior, I don't find to be true at all. It's true we couldn't get a majority of the board to vote for that alternative, although there also weren't a majority of the board to vote for the BART alternative, so we were – you know, we were a split board. But to me, it was actually a very good alternative. I wasn't planning to bring it up here today, but since others brought it up and, you know, at the BART board meeting when we decided, we had dozens, maybe 50 or more people show up with anti-bus signs in our crowd and hold them up for hours, and it was really disheartening. One of my more disheartening moments on the BART board.

So just really don't want to disparage other ways of transit. Busses are very important. Bus rapid transit's very important. It's exciting we finally have some in our county and I know we'll be successful and hopefully we can replicate it elsewhere. So that concludes my comments.

Chair Cutter: Okay. Thank you so much. Councilmember – Commissioner Haubert, please.

Commissioner Marchand: Mute!

Commissioner Haubert: Yes. Thank you very much. Thank you very much. With all due respect to my colleagues, I would disagree. The comments made by so many speakers is that this funding is meant to be seed funding to attract additional funding, so it's the perfect opportunity to move ahead. This is a project that has the support of the Tri-Valley for money that is earmarked and deemed for this purpose. I would reiterate comments made by Commissioner Bauters, by Commissioner Haggerty, and I'm sure others on the panel agree, it's time to move ahead. Let's make this happen. Thank you.

Chair Cutter: Okay. Thank you so much for your comment. Vice-Chair Bauters.

Vice-Chair Bauters: Thank you, Madame Chair. I just want to respond to a couple of the comments that have been made. Unusual, maybe, situation to – normally, I'm aligned with my friends from the transit agencies and my fellow environmental conscientious folks like Commission Pilch, and I appreciate their perspective on this.

As I said at the committee, we don't hold any other – we didn't hold any other projects in the Expenditure Plan to the requirement that they had to have an EIR completed or approved prior to being in the plan. In fact, all but – or 19 of the 22 had no EIR. They have seven years to have a fully-vetted and approved environmental clearance and to have a full funding plan. I would note that seven of the 22 items in the Measure BB Plan still do not, five years later, have that. That includes BART's 90 million dollars. They have not done an EIR, they have not come up with an expenditure plan. So to tell a project after the process that was set forth that you've just declined to implement the project and you have voted down as a board the alternatives, and then there is state law that says an approved agency may come in and request this, to then move the needle and say, "We have to wait for your EIR, we have to wait for more time to pass." I think that sets a very dangerous precedent, because at the end of the seven years, an item in the Transit Expenditure Plan that has not completed the things that are required, has to come to this commission and seek a discretionary extension of time of a year. And I just would caution that I think that setting standards that are not in the law out for this amendment is a dangerous precedent, because I'm not quite sure how the agencies would react to being asked why they should get additional time after seven years have passed if they want to have these things be hurdles and clearances now that don't exist in the law and were not approved by the voters as requirements.

Chair Cutter: Okay, thank you. We have another comment by Commissioner Saltzman.

Commissioner Saltzman: Just – I had one clarifying question, but now I have another comment, which is that, you know, we don't amend the Transportation Expenditure

Plan all the time, so this is kind of a unique process anyway. So – but my question is, there was the discussion that Commissioner Pilch brought up and Val Menotti had brought up before, about the BART costs and I just wanted to know – you know, the response was that if there's a direct cost, that that could be paid for. What determines whether it's a direct cost? Does that need to be identified in the EIR? How does that determination get made?

Ms. Lengyel: That is something that will be outlined in the MOU around the development of the project. There will have to be a lot of work between BART and the Valley Link Board to determine how the projects interline and to identify what sort of impacts or implications there are on the project. Those wouldn't – the EIR is not going to get to that level of detail. You have to get down to design level analyses to be able to look at the actual direct impacts for affecting the BART system. So similar to all other projects that have to mitigate the impacts, this project will also be required to mitigate impacts.

Commissioner Saltzman: So what is laid out in the MOU and agreed to between BART and Valley Link, the commission staff would see that as direct costs or is – I'm just trying understand if there's another hurdle. Or is that –?

Ms. Lengyel: That has not been figured out yet. BART and Valley Link are working on that MOU right now.

Commissioner Saltzman: I understand that.

Ms. Lengyel : They don't have it established.

Commissioner Saltzman: I'm very aware of that. I talk to staff about it frequently.

Ms. Lengyel: Mm-hmm.

Commissioner Salzman: I'm trying to understand how the Transportation Commission staff is going to interpret what a direct cost is.

Ms. Lengyel: We're going to look at what the project is. There's a lot of detail that needs to be done. So for example, moving the express lanes is a direct impact on the express lanes in this project. Whatever the effect is in bringing BART and Valley Link

together in terms of an infrastructure effect will need to be identified and addressed through the engineering process. And so that is – we'll have to go through that process to identify what those effects are. And I'll note that the $400 million is not the only funding that will be needed for this project. There will be other funds that will be needed. As you saw for even the initial operating segment, it costs $2 billion and so Measure BB funds certainly wouldn't even be able to fund that full initial operating segment. So it's not only BB funds but it would be other funds that would need to be utilized to address impacts of the project.

Commissioner Saltzman: Alright, thank you.

Chair Cutter: Alright, thank you. Commissioner Pilch, please.

Commissioner Pilch: Yeah, thanks. I just want to quickly clarify my intention here. It's not my intention and I'm not stating that this project has to wait for the EIR for our approval. But I'm suggesting, since I've been told the EIR's just around the corner, that we postpone the vote for the month or two in order for that to be available so that we can be more comfortable, and I also want to clarify that I don't oppose the project, but my motion to delay for a short time. Thank you.

Chair Cutter: Okay, thank you, Commissioner. Commissioner Arreguin.

Commissioner Arreguin: Thank you very much. Well, I want to put this into context, and these were comments I had made at the PPLC. Fortunately today, our skies are blue and we don't have ash falling from the sky, but it wasn't too long ago that the skies were orange and ash was falling from the sky. And that is a direct result of climate change, and we know that fire season is not just a few months in the summer. It's year round. The best play for us to combat climate change is to get cars off the road, to get people on transit, to reduce vehicle miles travelled, and reduce greenhouse gas emissions.

We also have regional goals, which we must meet. Under SB 375, our region must achieve a 19 percent reduction in GHG, and this is a critical project for our region to achieve our GHG reduction goals. The slide that Mr. Tree had presented showing the significant increase in trips over the Altamont into Alameda County, I think just indicates

the benefits of getting those cars off the road, getting them onto Valley Link, making those connections so people can get to and from job centers in the East Bay to San Joaquin Valley.

We have to recognize that with rising housing costs, more people are moving out of our region and we have to plan for the mega-region, and this is also a very critical corridor for goods movement, which is important for our counties' economic goals, as well. As president of ABAG, I want to emphasize that this project isn't going to be included in the Regional Transportation Plan and was actually moved to the first phase, because this project is already well-positioned for funding and moving forward with the first phase.

I want to thank Commissioner Bauters and Chair Cutter for their work over the past few months in crafting this amendment to the Expenditure Plan, to make it clear that this is for a specific segment that is going to serve Alameda County, and to be clear about what segment is.

And just in closing, you know, as was noted, over the past few decades, the voters in the Tri-Valley have voted for tax measures with hopefully the promise of having rail to serve the Tri-Valley. And BART to Livermore is not happening. This is a way to fulfill that goal of achieving rail to the Tri-Valley, to further connect our region, to further get cars off the road, and to address our broader environmental goals.

I'm from Berkeley. I'm not from the Tri-Valley. But I see the overall regional benefit that this project has economically, and also to achieve our climate goals. And that's why I support the project and I look forward to voting for the motion. Thank you.

Chair Cutter: Okay, thank you. Commissioner Valle, please.

Commissioner Valle: Thank you, Madame Chair. I'd like to make a substitute motion that we move the staff recommendation to amend the Measure BB Transportation Expenditure Plan and add Valley Link.

Commissioner Haggerty: Second.

Chair Cutter: Okay. Thank you. Okay, so we do have a second motion, but I'd like to go ahead and – oops, there is our last commenter, just – so any more comments from the commission? And I'm not seeing any, so that means we vote on our second motion – oop, Marilyn, are you waiting?

Commissioner Ezzy-Ashcraft: Yes. [chuckles] Because the quickest thing I could do while I unmuted. Just as part of discussion of Commissioner Valle's motion: to the point that Commissioner Pilch raised about eliminating diesel as one of the options for the trains, can staff comment on that? Please?

Ms. Lengyel: I'd like to ask Michael Tree, who's the executive director of Valley Link, to address the technology proposed for the project.

Commissioner Ezzy-Ashcraft: Thank you.

Mr. Tree: So the technology being evaluated in the EIR includes hybrid diesel, electric, and it also includes electric battery, which was the catenary line in the Altamont, and then battery power in the 580 section and in the San Joaquin section, so a zero-emission train. And then likewise, we're working really diligently behind the scenes to see the potential for hydrogen. So in the EIR is being studied zero-emission with the catenary battery option.

Commissioner Ezzy-Ashcraft: And with what you know to date, Mr. Tree, are any of these options, you know, gaining traction ahead of others? Is there a favored alternative or is it too early to say?

Mr. Tree: I think it's too early to determine which, but it's absolutely obvious from the board's direction and from the work that we've done at the staff level, that we're looking for a zero-emission train.

Commissioner Ezzy-Ashcraft: Thank you.

Chair Cutter: Okay. I believe our last commenter would be Commissioner Marchand.

Vice-Chair Bauters: You're on mute.

Commissioner Marchand: Okay, great. Thank you. I've been on this commission for over eight years and one of the things that I've heard over and over again are the w- – the concepts of equity and connectivity. More recently, we've heard about transit-oriented development and affordable housing. I can't think of any project we've considered over the last eight years that meets all of those objectives more than Valley Link. We've heard from commuters, from elected officials, from leaders in medicine and education. We've heard from the Bay Area Council, who originally conceived of BART and now, the Bay Area Council supports Valley Link. We've heard from chambers of commerce, entrepreneurs, employers, business leaders, people that are looking for workers. We've just heard from Lawrence Livermore National Laboratory and they've been called the smartest square mile on earth. They support Valley Link. Collectively, they represent hundreds of thousands of people and they support Valley Link.

Fifty years ago, Livermore voters were promised rail transit in the Tri-Valley, and Livermore residents have been paying for it ever since. We've never gotten it. We agree: the time has come, and I urge my fellow commissioners to keep the promise that was made to the voters back in 1962 and again in 2014. Move the 400 million dollars into Valley Link rail transit along the 580 corridor so that we can stop talking about congestion along 580 and finally solve it.

So thank you, thank you for your support and let's move this ahead.

Chair Cutter: Okay. Thank you. So I see that was my last commenter on the subject. We will now entertain the substitute motion that was made by Commissioner Valle, seconded by Commissioner Haggerty, to accept the staff approval as is. Can we have a roll call vote on that?

Ms. Lee: Yes. Commissioner Arreguin.

Mr. Arreguin: Yes.

Ms. Lee: That is a yes from Commissioner Arreguin. Commissioner Carson.

Commissioner Carson: Yes.

Ms. Lee: That is a yes from Commissioner Carson. Commissioner Cox.

Commissioner Cox: Yes.

Ms. Lee: That is a yes from Commissioner Cox.

Commissioner Dutra-Vernaci.

Commissioner Dutra-Vernaci: Aye.

Ms. Lee: It's an aye from Commissioner Dutra-Vernaci.

Commissioner Ezzy Ashcraft.

Commissioner Ezzy-Ashcroft: Aye.

Ms. Lee: It's an aye from Commissioner Ezzy-Ashcroft. Commissioner Freitas has not joined the call. Commissioner Haggerty.

Commissioner Haggerty: Yes.

Ms. Lee: That's a yes from Commissioner Haggerty.

Commissioner Halliday.

Commissioner Halliday: Yes.

Ms. Lee: It's a yes from Commissioner Halliday. Commissioner Haubert.

Commissioner Haubert: Yes.

Ms. Lee: That's a yes from Commissioner Haubert. Commissioner Kaplan.

Commissioner Kaplan: Yes.

Ms. Lee: That is a yes from Commissioner Kaplan.

Commissioner Marchand.

Commissioner Marchand: Yes.

Ms. Lee: It's a yes from Commissioner Marchand. Commissioner McBain.

Commissioner McBain: Yes.

Ms. Lee: It's a yes from Commissioner McBain. Commissioner Mei.

Commissioner Mei: Yes.

Ms. Lee: It's a yes from Commissioner Mei. Commissioner Miley.

Commissioner Miley: Yes.

Ms. Lee: It's a yes from Commissioner Miley. Commissioner Ortiz.

Commissioner Ortiz: The AC Transit Board directed me to vote no. So I'm voting no.

Commissioner Haggerty: They'll love ya.

Commissioner Ortiz: [laughs] I do, too. [laughs]

Ms. Lee: That is a no from Commissioner Ortiz. Commissioner Pilch.

Commissioner Pilch: Abstain.

Ms. Lee: That is one abstention from Commissioner Pilch.

Commissioner Saltzman.

Commissioner Saltzman: No.

Ms. Lee: It's a no from Commissioner Saltzman. Commissioner Thao.

Commissioner Thao: Yes.

Ms. Lee: It's a yes from Commissioner Thao. Commissioner Thorne.

Commissioner Thorne: Yes.

Ms. Lee: It's a yes from Commissioner Thorne. Commissioner Valle.

Commissioner Valle: Yes.

Ms. Lee: That's a yes from Commissioner Valle.

Commission Vice-Chair Bauters.

Vice-Chair Bauters: Aye.

Ms. Lee: It's an aye from Vice-Chair Bauters. Commission Chair Cutter.

Chair Cutter: Aye.

Ms. Lee: That's an aye from Commission Chair Cutter, and the motion passes.

Commissioner Marchand: Yes! Thank you all.

Chair Cutter: Thank you.

Commissioner Marchand: Thank you! Well done! [clapping] Great work!

Chair Cutter: I appreciate both everybody's just really attention to this item, keeping it – the attention on the item and not drifting far afield, and I'm just really trying for everyone to do their homework and learn about it and so forth. So with that, I'm sure this isn't the last we're going to hear about this and as more information comes, we'll make sure that we share that promptly. So thank you for this item. And then I sometimes take over the clerk's job in moving us right along, but I'll let her do it.

Commissioner Haggerty: Madame Chair, again, I just want to thank everybody. I want to thank you and, you know, I think that we, we kind of hijacked Bauters' [sic] motion but I can't thank him enough for the work that he's done along with you in getting this right. So just, sorry, I just want to thank y'all.

Chair Cutter: As long as you're thanking me, Scott, I'll take it. So, alright. Let's move on.

END OF CONSIDERATION OF ITEM 7.1

CERTIFICATION

I, Jason Mundstuk, certify the following: I am a professional transcriptionist with 20 years experience that includes legal, medical and forensic transcriptions. I have extensive experience in preparing deposition summaries. I am a citizen of the United States. I am over 18 years of age. My business address is 5500 College Avenue, Oakland, CA 94618 dba Randy Black & Associates. This transcript was prepared from the video recording posted on the official site of the governing body.

I declare under penalty of perjury that I have truly, accurately, and completely transcribed the recording provided to me to the best of my ability and that the transcript is provided above. I further guarantee the confidentiality of this material.

Electronically signed on this day, the 28th of December, 2022, in the County of Alameda, California.

Alameda CTC Commission Agenda
Thursday, April 22, 2021, 2:00 p.m.

Due to the statewide stay at home order and the Alameda County Shelter in Place Order, and pursuant to the Executive Order issued by Governor Gavin Newsom (Executive Order N-29-20), the Commission will not be convening at its Commission Room but will instead move to a remote meeting.

Members of the public wishing to submit a public comment may do so by emailing the Clerk of the Commission at vlee@alamedactc.org by 5:00 p.m. the day before the scheduled meeting. Submitted comments will be read aloud to the Commission and those listening telephonically or electronically; if the comments are more than three minutes in length the comments will be summarized. Members of the public may also make comments during the meeting by using Zoom's "Raise Hand" feature on their phone, tablet or other device during the relevant agenda item, and waiting to be recognized by the Chair. If calling into the meeting from a telephone, you can use "Star (*) 9" to raise/ lower your hand. Comments will generally be limited to three minutes in length, or at the discretion of the Chair.

Chair:	Pauline Russo Cutter, Mayor City of San Leandro	Executive Director:	Tess Lengyel
Vice Chair:	John Bauters, Councilmember City of Emeryville	Clerk of the Commission:	Vanessa Lee

To request accommodation or assistance to participate in this meeting, please contact Vanessa Lee, the Clerk of the Commission, at least 48 hours prior to the meeting date at: vlee@alamedactc.org

Meeting Agenda

1. Call to Order

2. Roll Call

3. Public Comment

4. Chair and Vice Chair Report

5. Executive Director Report

6. Consent Calendar **Page/Action**

Alameda CTC standing committees approved all action items on the consent calendar, except Item 6.1.

6.1.	Approve March 25, 2021 Commission Meeting Minutes	1	A
6.2.	I-580 Express Lanes Operations Update	7	I
6.3.	Southern Alameda County Rail Study (SoCo Rail) Update	27	I
6.4.	South Bay Connect Project Update	31	I
6.5.	Approve Measure B, Measure BB and Vehicle Registration Fee Programs Update and Interim Policy Updates	39	A
6.6.	Approve Contract Amendment for E. 14th St./Mission Blvd. and Fremont Blvd. Multimodal Corridor Project	51	A
6.7.	Approve actions associated with the Construction Phase of the I-80 Gilman Interchange Improvements Project	67	A
6.8.	Congestion Management Program (CMP): Summary of the Alameda CTC's Review and Comments on Environmental Documents and General Plan Amendments	79	I
6.9.	Approve the Professional Services Agreement (A21-0025) with Nelson\Nygaard Consulting Associates for Paratransit Coordination Services	85	A
6.10.	Approve administrative amendment to Alameda CTC agreement (A16-0027) in support of the Alameda CTC Affordable Student Transit Pass Program (STPP)	89	A
6.11.	Approve the State Transit Assistance (STA) County Block Grant Program Distribution Formula for Fiscal Years 2021-22 and 2022-23	93	A

7. Community Advisory Committee Written Reports (Report Included in Packet)

7.1.	Paratransit Advisory and Planning Committee	103	I

8. Planning, Policy and Legislation Committee Meeting

The Planning, Policy and Legislation Committee approved the following action item, unless otherwise noted in the recommendations.

8.1.	Affordable Student Transit Pass Program Update	117	I
8.2.	Federal, state, regional, and local legislative activities update	121	I/A

9. Zero-Emission Drayage Truck and Infrastructure Pilot Program

9.1.	Approve Grant Matching Funds for Hydrogen Fuel Drayage Trucks and Fueling Pilot Program	131	A

10. Commission Member Reports

11. Adjournment

Next Meeting: May 27, 2021

Notes:

- All items on the agenda are subject to action and/or change by the Commission.
- To comment on an item not on the agenda, submit an email to the clerk or use the Raise Hand feature or if you are calling by telephone press *9 prior to or during the Public Comment section of the agenda. Generally public comments will be limited to 3 minutes.
- Call 510.208.7450 (Voice) or 1.800.855.7100 (TTY) five days in advance to request a sign-language interpreter.
- If information is needed in another language, contact 510.208.7400.
- Call 510.208.7400 48 hours in advance to request accommodation or assistance at this meeting.
- Meeting agendas and staff reports are available on the website calendar.

ALAMEDA County Transportation Commission

1111 Broadway, Suite 800, Oakland, CA 94607 • 510.208.7400 • www.AlamedaCTC.org

Memorandum 6.5

DATE:	April 15, 2021
TO:	Alameda County Transportation Commission
FROM:	Vivek Bhat, Director of Programming and Project Controls John Nguyen, Principal Transportation Planner
SUBJECT:	Approve Measure B, Measure BB and Vehicle Registration Fee Programs Update and Interim Policy Updates

Recommendation

It is recommended that the Commission approve the Measure B, Measure BB, and Vehicle Registration Fee Programs and Interim Policy Updates.

Summary

Alameda CTC is responsible for administering local funds collected from the 2000 Measure B and 2014 Measure BB transportation sales tax programs, and the 2010 Vehicle Registration Fee (VRF) Program. The programs generate over $320 million annually to support capital transportation improvements, roadway maintenance, transit, and paratransit operations within Alameda County.

Alameda CTC distributes Measure B/BB/VRF funds through two categorical types:

1) Direct Local Distributions (DLDs) - Monthly formula allocations distributed to eligible local jurisdictions and transit agencies.
2) Grant funded Reimbursements - Payments made on a reimbursement basis after work is performed; i.e. capital projects and discretionary funded improvements.

This is a DLD and discretionary programs status update that includes a discussion on the DLD program historical revenues, geographic funding equity distribution methodologies, and staff recommendations to modify DLD policies and implementation guidelines to respond to the Coronavirus (COVID-19) impacts on Alameda County's transportation needs. Alameda CTC staff recommends a one-year extension to the DLD timely use of funds policy requirements, and temporary modification to the Seniors and People with Disabilities (Paratransit) implementation guidelines to expand expenditure eligibilities on essential transportation services.

Background

Direct Local Distributions (DLD) Programs Update

The Measure B and Measure BB sales tax, and Vehicle Registration Fee (VRF) Programs provide a significant funding stream for transportation improvements throughout Alameda County. Over half of all revenues generated are distributed to the local cities, transit agencies, and the county as "Direct Local Distributions" (DLD) to be used for locally identified and prioritized transportation improvements.

From the start of the 2000 Measure B, 2010 VRF, and 2014 Measure BB programs through the end of Fiscal Year (FY) 2019-20, Alameda CTC distributed approximately $1.6 billion in DLD funds to local recipients. Alameda CTC estimates an additional $157 million in DLD funds for FY 2020-21 (Attachment A – Historical Direct Local Distributions by Fund Program).

The DLD funds are distributed to eligible jurisdictions per a prescribed formula in the respective voter approved Transportation Expenditure Plans. DLD recipients include the fourteen incorporated cities in Alameda County, County of Alameda, and five transit agencies (Alameda-Contra Costa Transportation Authority, Bay Area Rapid Transit District, Livermore Amador Valley Transportation Authority, San Francisco Water Emergency Transportation Authority, and the San Joaquin Regional Rail Commission).

Measure B/BB DLDs are flexible funding sources that allow Alameda CTC and local jurisdictions to address a variety of countywide transportation needs from traditional roadway maintenance, infrastructure repair, bicycle/pedestrian enhancements, transit operations, to the implementation of large capital improvement projects.

Alameda CTC requires DLD recipients to submit separate annual Audited Financial Statements and Program Compliance Reports that summarize the DLD recipients' fiscal year's financials, expenditures, fund balances, and program achievements to monitor program compliance. The reports for the FY 2019-20 reporting period (July 1, 2019 through June 30, 2020) were due at the end of December 2020 and are currently under review by Alameda CTC staff and the Independent Watchdog Committee (for Measure B/BB programs). In June 2021, the Commission will receive a full Annual Program Compliance Summary Report that includes the summary of recipient expenditures and accomplishments.

Measure BB DLD Distribution Analysis

The 2014 Measure BB Transportation Expenditure Plan (2014 TEP) requires Alameda CTC to perform a periodic geographic equity analysis to ensure Measure BB funds are distributed in accordance with TEP requirements. The Measure BB DLD program represents 53.55% of the annual net revenues generated from the sales tax program.

Per the 2014 TEP, the DLD funding formula is to be consistent with the 2000 Measure B Transportation Expenditure Plan distribution formula methodology for each DLD program as follows:

1. Transit Program: TEP identified percentages to each transit agency.

2. Local Streets/Roads: Jurisdiction's (50%) population and (50%) lane miles share within their respective planning area.

3. Bicycle/Pedestrian: Jurisdiction's population share of the total population.

4. Paratransit: TEP identified percentages to AC Transit and BART, and city shares based on the jurisdiction's eligible age population share within their respective planning area.

The DLD distribution formula parameters takes into consideration the diverse population spread within Alameda County, and each program formula parameter is derived based on commonly used industry formula factors.

The Measure BB DLD programs represents the majority of entire 2014 TEP investments, and serves to maintain the overall 2014 TEP distributions to all jurisdictions by planning area population. Alameda CTC will continue to distribute Measure BB DLD program funds based on the TEP formulas, to maintain the distribution balance and to provide DLD recipients the immediate ability to address their local community's transportation needs.

Interim DLD Policy Updates Recommended Due to Coronavirus Impact

The COVID-19 pandemic has altered the sales tax and VRF program revenues, available local staff resources, and reshaped near-term transportation needs. In response, on June 25, 2020 the Commission approved interim policy changes to DLD program requirements that granted an extension to the DLD Timely Use of Funds requirements and expanded expenditure eligibilities for the Seniors and People with Disabilities (Paratransit) Program through June 30, 2021. In consideration of the continuing COVID-19 impact in Alameda County and the need for essential transportation services, staff recommends extending the previously approved provisions, and expanding the Paratransit DLD program use of funds eligibilities, as described in detail below.

- Timely Use of Funds: Staff recommends a one-year extension of the current timely use of funds policy requirements to provide DLD recipients additional time to draw down their fund balances. Under the current policy, Alameda CTC monitors fund balances against the current Alameda CTC's Timely Use of Funds Policy in which the policy states that DLD recipients shall not carry an ending fund balance greater than 40 percent of their DLD funds received for

that year, for four consecutive years, starting with FY 2016-17. DLD recipients originally had to meet this policy with FY 2019-20 ending balances until the Commission granted an additional year (FY 2020-21) last June due to the COVID-19 impacts.

At this juncture, all recipients are currently in compliance with this policy, however, given the past year of recipients reprioritizing resources during the COVID-19 environment, staff recommends a second one-year extension. This would provide recipients the opportunity to strategize expenditures to meet the policy requirements with FY 2021-22 ending balances. Alameda CTC will continue to review potential modifications to Timely Use of Funds Policy to ensure the policy is feasible and effective at achieving the intended goal of encouraging the expeditious use of DLD funds.

- Meal Delivery Program Cost Eligibilities: Staff recommends a continued one-year extension of meal delivery program eligibility under the Seniors and People with Disabilities (Paratransit) Program Implementation Guidelines for FY 2021-22. Last June, the Commission approved an interim change to the Implementation Guidelines to allow any DLD Paratransit fund recipient the option to use their DLD funds for transportation costs related to meal delivery program operations for FY 2020-21. Previously, the Implementation Guidelines limited eligibility to DLD recipients with previously established programs.

  This extension will allow all DLD recipients the option to use their DLD Paratransit funds for transportation costs related to meal delivery program operations, which have become a critical service priority for seniors and people with disabilities within Alameda County.

- Same-Day Transportation Services and Specialized Accessible Van Service Cost Eligibilities: Staff recommends an additional interim change to the Seniors and People with Disabilities (Paratransit) Program's Implementation Guidelines to reduce the minimum age eligibility requirement from 70 to 60 years old for Same-Day Transportation Services and Specialized Accessible Van Service for trips to receive the COVID-19 vaccine for all programs. Some programs had grandfathered clauses allowing the 60-year age requirement. This change would allow this eligibility across all city-based programs. This change expands the transportation service options to COVID-19 vaccination sites for a larger at-risk age group and population who may be experiencing mobility limitations due to age and disability during COVID. DLD use of fund eligibility for this age group and transportation services are recommended with an effective date of March 1, 2021 through June 30, 2022 to coincide with recent rollouts of the vaccination program.

Staff will bring forward additional recommendations to modify or extend these policies beyond FY 2021-22 as required.

Discretionary Programs

Alameda CTC also distributes discretionary Measure B, Measure BB, and VRF funds for bicycle/pedestrian, transit, paratransit, freight, technology, and community development related projects. Discretionary funds are awarded to Project Sponsors on a competitive basis. Successful applicants are required to enter into project funding agreements with Alameda CTC and funds are paid on a reimbursement basis upon successful completion of the agreed upon scope of work.

To streamline the programming and allocation of discretionary program funds, Alameda CTC consolidated the programming of all Alameda CTC administered funds into one single process and document known as the Comprehensive Investment Plan (CIP). A CIP covers a five-year programming horizon with the first two-years of funding allocated and available for immediate use by the Project Sponsors. Alameda CTC's programming and allocation process considers project sponsor's readiness, leveraging of external funds, project needs, performance, and equity across Alameda's CTC administered funds.

Since the last Commission approved CIP in May 2020, the Alameda CTC released several funding opportunities that will be consolidate and recommended for inclusion to the 2022 CIP expected this May 2021. This includes:

1. Measure B Bicycle/Pedestrian COVID-19 Rapid Response Grant Program
   On November 19, 2020, the Commission approved $904,000 In Measure B Bicycle/Pedestrian Countywide Discretionary funds to support thirteen (13) transportation access improvements projects to business and community areas. Recipients are required to complete the quick-build projects by the end of March 31, 2021.

2. 2022 CIP Measure B, VRF, TFCA Call for Projects
   On December 7, 2020, Alameda CTC released the 2022 CIP call for projects with a total programming capacity of $26M consisting of $23M from Measure B and VRF funds, and $3M from the Transportation for Clean Air Program. Available funding will be prioritized towards bicycle/pedestrian and transit improvements that can be implemented and/or demonstrate construction readiness within the first two years of the 2022 CIP (FY 2021-22 and 2022-23).

   On February 1, 2021, Alameda CTC received thirty-five (35) applications requested approximately $38M for range of bicycle/pedestrian and transit improvements (Attachment B – 2022 CIP Application Summary). Alameda CTC staff is currently reviewing and evaluating the applications.

3. Safe Routes to School Mini-Grant Program
   On February 4, 2021, Alameda CTC released a non-competitive, formula-based call for projects for the Alameda CTC's Safe Routes to Schools (SR2S) Mini-Grant Program. The program includes $1.7M in Measure B/Congestion

Management Agency Transportation Improvement Program (CMATIP) funds for the implementation of recommended improvements from School Site Assessments. The aim is to enhance the travel conditions for pedestrians, cyclists, and transit riders traveling to and from school in Alameda County. Alameda CTC received eleven (11) applications requesting approximately $1.5M, which are currently under review to confirm program eligibility (Attachment C – SR2S Mini-Grant Application Summary).

In May 2021, Alameda CTC will present the 2022 CIP to the Commission which will include the consolidation of approved programming actions since the last CIP update, and additional programming recommendations from the 2022 CIP and SR2S funding opportunities. No action is required at this time related to the discretionary programs update.

Fiscal Impact: There is no fiscal impact from the requested actions.

1111 Broadway, Suite 800, Oakland, CA 94607 • PH: (510) 208-7400 • www.AlamedaCTC.org

1. **Call to Order**

2. **Roll Call**
   A roll call was conducted. All members were present with the exception of Commissioners Mei, Miley, Thao, and Valle.

   Commissioner Duncan attended as an alternate for Commissioner Dutra-Vernaci. Commissioner McQuaid attended as an alternate for Commissioner Carson.

   Subsequent to the roll call:
   Commissioner Thao arrived during item 4. Commissioner Mei and Miley arrived during item 5.

3. **Public Comment**
   A public comment was made by Robert Daulton, from Niles for Environmentally Safe Trains, regarding items 6.3 and 6.4 on the Consent Calendar. He requested that the Commission pause the current Environmental Impact Report (EIR) process for the South Bay Connect project, evaluate alternatives for the project, and rethink the scoping process to include the concerns of his community.

4. **Chair and Vice Chair Report**
   Chair Cutter stated that Alameda CTC continues to deliver projects and implement programs despite the pandemic. She noted that the Commission will continue to do its part in the economic recovery by getting projects into construction and keeping a continued focus on project development and program delivery for ongoing investments throughout the County. Chair Cutter announced that Alameda CTC is looking forward to celebrating Bike Month in May and stated that as part of Alameda CTC's Bike Month celebration, the Alameda County Safe Routes to Schools Program (SR2S) is planning a remote encouragement event entitled Bike to the Moon Week.

   Chair Cutter noted that earlier in the month, both she and Vice Chair Bauters, along with Alameda CTC Executive Director, Tess Lengyel, and staff held legislative meetings with the State Transportation Legislative Policy Committee Chairs to discuss legislative priorities for Alameda CTC. Alameda CTC priorities were shared with Senator Lena A. Gonzales, Chair of the Senate Transportation Committee, and Assemblywoman Laura Friedman, Chair of the Assembly Transportation Committee who is the author of AB 43. The group also met with leaders of the West Oakland Environmental Indicators Project, Ms. Margaret Gordon and Brian Beveridge, to discuss the 7th Street Grade Separation project.

Commissioner Cutter shared a video of herself, Vice Chair Bauters, and Ms. Lengyel riding their bikes on the Doyle Street Bike & Ped path in the City of Emeryville and she noted that this is one of the projects funded by the COVID-19 Rapid Response Bicycle and Pedestrian Grant Program that was implemented in March 2021.

Vice Chair Bauters noted that the City of Emeryville deliberately chose Doyle Street as the project to be implemented through the quick-build grant program, which allowed Emeryville to fulfill a permanent connector to the greenway. He thanked Bike East Bay for a story in their newsletter about the Doyle Street Bike Path. Vice Chair Bauters proposed a friendly challenge to support the SR2S Bike to the Moon event sponsored by Alameda CTC by initiating a Commissioner Bike to the Moon challenge that encourages the Commissioners to also log moon miles during the week. He concluded by providing instructions regarding technology procedures including instructions on administering public comments during the meeting.

5. Executive Director Report

Tess Lengyel congratulated Chair Cutter and Vice Chair Bauters for the Doyle Street quick-build project. She noted that it is both a safe project and a beautiful corridor to ride.

Ms. Lengyel noted that Alameda CTC is fully committed to continuing to support the promise to the voters for high-quality planning and project delivery and for helping with economic recovery and access. Ms. Lengyel highlighted the progress and key efforts made by staff on various projects and programs and stated that the key initiatives set last year included safety, equity, clean and sustainable transportation, and accountability. Ms. Lengyel noted that Alameda CTC invested $900,000 in the quick-build program and noted that both City and County partners matched that amount, which resulted in approximately $1.8 million worth of bicycle and pedestrian investments. She announced that on May 20, 2021, Alameda CTC and Caltrans are jointly sponsoring a virtual groundbreaking celebration to announce the start of construction on the I-80/Gilman Street Interchange Improvement Project. Ms. Lengyel also noted that Alameda CTC staff has participated in diversity, equity and inclusion training and a draft statement was developed that she will bring before the Commission. She stated that Alameda CTC submitted a request to Congressman Swalwell to support a study that integrates AC Transit, LAVTA, and Contra Costa County Transit to look at hydrogen fuel uses and workforce development. Lastly, Ms. Lengyel noted that Assemblymember Friedman stated that she is interested in visiting the Bay Area and riding all transit systems in the area including in Alameda County.

Commissioner Saltzman stated that she would be happy to work with Alameda CTC to coordinate a ride of the County's public transit systems at Assemblymember Friedman's request.

Commissioner Kaplan stated that she appreciates the outreach to Assemblymember Friedman and noted that AB 43 will allow local jurisdictions the flexibility in setting their speed limits. She noted that the Commission should support this bill.

Commissioner Ezzy Ashcraft stated that she wants to extend an invitation to Assemblymember Friedman to ride from the Seaplane Lagoon Ferry terminal in Alameda.

Commissioner Halliday commented on the quick-build bicycle and pedestrian grant program, noting that she is working with Bike East Bay to make the City of Hayward more bicycle-friendly. She stated that Hayward recently implemented a bicycle lane on a busy street that was not received favorably by the community so she wanted to know if there are available resources to help Hayward in this effort.

Commissioners Bauters stated that he is willing to speak with the City of Hayward staff to assist with creating an enhanced bicycle community and he suggested that the Commission receive a technical presentation regarding best practices for advancing bicycle and pedestrian initiatives.

Commissioner Mei commented she attended the bike safety class at Bike East Bay. She noted how cycling has increased during the time of COVID and it would be helpful to have additional talking points around active transportation to share with her community.

A public comment was made by Dave Campbell, Bike East Bay, who stated that the Emeryville quick build project was a good project. He noted that Hayward is working to make Patrick Avenue in South Hayward a safer bicycle street for a protected bike lane. He noted that it is not uncommon for a city implementing its first bicycle project to struggle and it will become easier with the second facility.

Ms. Lengyel stated that in May Alameda CTC will give a technical presentation to the Alameda County Technical Advisory Committee on a safe systems approach, which looks at how jurisdictions can incorporate safety in all aspects of street designs for bicycle, pedestrian, transit and motorist needs. She noted that if there is an interest in having safety information shared at the full Commission meeting, staff will do that as well.

6. Consent Calendar

- **6.1.** Approve March 25, 2021, Commission Meeting Minutes
- **6.2.** I-580 Express Lanes Operations Update
- **6.3.** Southern Alameda County Rail Study (SoCo Rail) Update
- **6.4.** South Bay Connect Project Update
- **6.5.** Approve Measure B, Measure BB and Vehicle Registration Fee Programs Update and Interim Policy Updates
- **6.6.** Approve Contract Amendment for E. 14th St./Mission Blvd. and Fremont Blvd. Multimodal Corridor Project
- **6.7.** Approve actions associated with the Construction Phase of the I-80 Gilman Interchange Improvements Project
- **6.8.** Congestion Management Program (CMP): Summary of the Alameda CTC's Review and Comments on Environmental Documents and General Plan Amendments

6.9. Approve the Professional Services Agreement (A21-0025) with Nelson\Nygaard Consulting Associates for Paratransit Coordination Services

6.10. Approve administrative amendment to Alameda CTC agreement (A16-0027) in support of the Alameda CTC Affordable Student Transit Pass Program (STPP)

6.11. Approve the State Transit Assistance (STA) County Block Grant Program Distribution Formula for Fiscal Years 2021-22 and 2022-23

Commissioner Halliday moved to approve all items on the consent calendar with the exception of Item 6.4, which she pulled for further consideration. Commissioner Ortiz seconded the motion. The motion passed with the following roll call votes:

Yes:	*Bauters, Brown, Cavenaugh, Cutter, Droste, Duncan, Ezzy Ashcraft, Freitas, Halliday, Haubert, Hernandez, Kaplan, McQuaid, Mei, Miley, Nason, Ortiz, Saltzman, Thao, Woerner*
No:	*None*
Abstain:	*None*
Absent:	*Chan, Valle*

In regard to Item 6.4, Commissioner Halliday stated that she is concerned about the South Bay Connect Project, which has a lot of opposition from the public. She noted that the letter from the Mayors in that corridor is attached to the staff report and documents the cities concerns regarding the EIR. She noted that the full Commission has not had an opportunity to discuss the pros and cons of this project.

Commissioner Bauters noted that Alameda CTC does not have a role in the determination of the EIR; however, the agency has funding earmarked for the project. He suggested that several members of Alameda CTC could meet to address questions raised related to the project and Alameda CTC's role.

Commissioner Mei stated that this item was presented to the Multi-Modal Committee at the April 12, 2021 meeting. At the meeting, she encouraged Capital Corridor to have more interaction and outreach to the cities that are directly impacted by the project.

Commissioner Saltzman suggested staff bring updates for item 6.4 to the full commission for discussion. Ms. Lengyel stated that we will be sure to bring it to the full Commission at a future time.

Neal Parish, legal counsel at Wendel Rosen, noted that Item 6.4 was an informational item, so a separate vote on the item was not needed.

7. Community Advisory Committee Written Reports

7.1. Paratransit Advisory and Planning Committee Summary Minutes

Tess Lengyel stated that the written report was included in the packet.

8. Planning, Policy and Legislation Committee

8.1. Affordable Student Transit Pass Program Update

Tess Lengyel stated that this presentation is an update on how the agency will move forward with the Affordable Student Transit Pass Program (STPP) in the coming year, and in particular recognizing the impact that COVID-19 has had on Alameda CTC's transit partners. Ms. Lengyel introduced Kate Lefkowitz, who provided the update.

Ms. Lefkowitz noted that the report included an update on the STPP 2019-2020 evaluation report, program implementation for the current 2020-2021 school year, and STPP program plans for fall 2021. Given the uncertainties for school districts in Alameda County during the COVID-19 pandemic, the STPP has been actively working with schools to support students and families, modify program offerings, and proactively prepare for the evolving developments of the school year. The program now serves 14 school districts and 84 schools within Alameda County. Key programmatic changes that have been implemented due to COVID-19 impacts include the transition to an online application for the STPP. Ms. Lefkowitz noted that as a result of significant COVID-19 impacts on school districts and transit agencies in Alameda County, the STPP team recommends continuing the program as previously approved and not expanding further in fall 2021. The STPP team will continue to implement the Commission-approved program and look to expand to the remaining ~56 eligible schools in the county by the 2023-2024 school year. An update on any future expansions would come before the Commission in 2022.

Commissioner Brown asked if there is a photo of each student on the STPP card. Ms. Lefkowitz stated that the STPP card is a clipper card. If the student loses the card it will be deactivated and replaced.

Commissioner Brown asked what is the process to prevent a person from selling their card or allowing someone else to use it. Commissioner Cutter stated that there have not been reports of fraud or misuse in the program.

Commissioner Ortiz stated that the STPP clipper card is also used by students to go to work, the library, attend afterschool activities, and weekend jobs.

Commissioner Ezzy Ashcraft stated that the continuation school students in Alameda participate in the program, which is a great way for students to get to afterschool programs and jobs and cuts down on the need for parents to drop off students.

8.2. Federal, state, regional, and local legislative activities update

Tess Lengyel stated that staff will provide an update on the federal and state activities and focus on several bill positions. Ms. Lengyel introduced Carolyn Clevenger and Maisha Everhart to provide the updates. Ms. Clevenger gave an overview on the Climate Action Plan for Transportation Infrastructure (CAPTI), which will influence future state transportation funding, including funding programs that are derived from Senate Bill (SB) 1 funds. She stated that this effort is led by the California State Transportation Agency (CalSTA). Ms. Clevenger noted that CAPTI is a

statewide high-level policy document that is being developed by CalSTA to establish a framework detailing how the state can advance the Governor's executive orders related to climate change. The comment period was extended to May 19, 2021, with the final plan submitted to the governor and legislature this summer.

Maisha Everhart stated that staff is in the process of reviewing over 2,000 bills that were submitted and evaluating them to see if they are in alignment with Alameda CTC's Legislative Program. The following bills will support the Commission's goal of enhancing multimodal transportation and safety:

AB 43 (Friedman) - Support	AB 550 (Chiu) - Support
AB 455 (Bonta) - Support and seek amendment	AB 917 (Bloom) - Support
	SB 18 (Skinner) - Support

Commissioner Kaplan thanked staff for support of AB 43 and AB 550 and she noted that the City of Oakland endorsed AB 550.

Commissioner Halliday expressed her disappointment in AB 550 and asked if Alameda CTC could get results from the original pilot program. She asked if Alameda CTC can lobby for a stronger bill and eliminate some of the ways AB 550 has been amended to weaken the effects.

Ms. Lengyel explained the distinction between AB 43 and AB 550. She noted that AB 43 is Assemblymember Friedman's bill, which will enable both Caltrans and local jurisdictions to have more authority to reduce speed limits. Ms. Lengyel stated that AB 550 is the pilot program and the jurisdictions that are listed in the bill currently are Los Angeles, Oakland, San Jose, the city and county of San Francisco, and two other cities in Southern California. She noted that the bill addresses automated speed enforcement and the pilot program is until 2027 and a report will be generated once the pilot is complete.

Commissioner Ortiz noted that AC Transit is a co-sponsor of AB 917 and it was voted on by their Privacy Committee on April 22, 2021.

Commissioner Bauters shared that he spoke with Assemblymember Friedman and asked her what are the opposition points to AB 550. She noted that there is opposition to this bill for various reasons, which is why it was amended. Assemblymember Friedman noted that if the Commissioners or cities are in support of AB 550 to call the Transportation Committee by April 26, 2021, and express their concerns. He noted that the American Civil Liberties Union is opposed to this bill because of language regarding data privacy.

Commissioner Cutter requested Alameda CTC staff to provide the Commissioners with the Assembly Transportation Committee contact information so they may reach out stating their support position.

Commissioner Ortiz moved to approve the recommended bill positions. Commissioner Kaplan seconded the motion. The motion passed with the following roll call votes:

Yes:	*Bauters, Brown, Cavenaugh, Cutter, Droste, Duncan, Ezzy Ashcraft, Freitas, Halliday, Haubert, Hernandez, Kaplan, McQuaid, Mei, Miley, Nason, Ortiz, Saltzman, Thao, Woerner*
No:	*None*
Abstain:	*None*
Absent:	*Chan, Valle*

9. Zero-Emission Drayage Truck and Infrastructure Pilot Program

9.1. Approve Grant Matching Funds for Hydrogen Fuel Drayage Trucks and Fueling Pilot Program

Ms. Lengyel stated that Vivek Bhat will present this item and Jaimie Levin from the Center for Transportation and the Environment (CTE) is available to answer questions. Mr. Bhat recommended that the Commission approve the following actions associated with the Hydrogen Fuel Drayage Trucks and Fueling Pilot Program:

1. Approve allocation of $3.64 million Measure BB Countywide Freight Corridors funds (TEP-27) as grant matching funds, and
2. Authorize Executive Director or designee to execute all necessary agreements.

Mr. Bhat stated that over the past several months, Alameda CTC staff has been working closely with the CTE on a Hydrogen Fuel Drayage Trucks and Fueling Pilot Program grant application that involves deploying 30 fuel cell trucks in Northern California. The project will also install a high-capacity hydrogen fueling station near the Port of Oakland. This project will provide Alameda County, the City of Oakland, and the West Oakland neighborhood the opportunity to take on a leadership role in advancing zero-emission truck technology to reduce emissions that are impacting disadvantaged communities. In February 2021, the CTE applied for a $21.8 million statewide competitive grant administered jointly by the California Air Resources Board (CARB) and the California Energy Commission. The application included a local match of $7 million with the Bay Area Air Quality Management District (BAAQMD) and Alameda CTC as funding partners.

Commissioner Kaplan expressed her appreciation for the work done on this project. She noted that it will benefit the region to cut the emissions from trucks.

Commissioner Cutter commented that BAAQMD talked about this item at their Mobile Source Committee meeting, and she requested Mr. Levin to provide comments on this effort.

Mr. Levin thanked the Commission and Alameda CTC staff for supporting this effort. He noted that having the agency's support was critical to CTE winning a much larger grant from CARB. He noted that this is the first commitment of state funds at

this scale in Northern California and it puts Alameda County and Oakland at the forefront of this developing technology. He stated that another aspect is workforce training. CTE is partnering with NorCal Kenworth, which is a major truck service repair center in San Leandro for workforce training for local technicians and mechanics.

Commissioner Kaplan moved to approve the item. Commissioner Halliday seconded the motion. The motion passed with the following roll call votes:

Yes:	*Bauters, Brown, Cavenaugh, Cutter, Droste, Duncan, Ezzy Ashcraft, Freitas, Halliday, Haubert, Hernandez, Kaplan, McQuaid, Mei, Miley, Nason, Ortiz, Saltzman, Woerner*
No:	*None*
Abstain:	*None*
Absent:	*Chan, Thao, Valle*

10. Commission Member Reports

Commissioner Ortiz invited Commissioners to join AC Transit on Transit Talks. April 26 through May 31, 2021.

11. Adjournment

The next meeting is Thursday, May 27, 2021, at 2:00 p.m.

Alameda CTC

SECTION 1: INTRODUCTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for the planning, programming, and allocation of local, regional, State and federal funding for transportation improvements throughout Alameda County.

Alameda CTC maintains programming and allocation authority for federal, State, regional and local transportation funding programs, such as the local, voter-approved measures (Measure B, Measure BB, and Measure F Vehicle Registration Fee), Transportation Fund for Clean Air (TFCA), State Transportation Improvement Program (STIP), and federal One Bay Area Grant Program (OBAG). Since 2016, Alameda CTC consolidates the programming and allocation for the funds sources under Alameda CTC's purview ("Alameda CTC Administered Funds") into a single programming and allocation document known as the Alameda CTC Comprehensive Investment Plan (CIP).

The CIP programming and allocations recommendations, in any given CIP cycle, demonstrates Alameda CTC's investment commitment to projects and programs that maintain and enhance the countywide transportation system based the current Commission's priorities at the time of the programming and allocation action(s).

The CIP contains programming and allocation policies, guidelines and procedures that guide Alameda CTC's investment decisions, programming and allocation processes, and the subsequent funding administration.

The CIP is updated annually to capture programming and allocations made since the last approval of the CIP, and to document programming and allocations adjustments including new programming requests, proposed adjustments by Project Sponsors, and technical adjustments as required by the CIP and funding administration policies.

The CIP contains a document structure of:

- Purpose, Background, strategic objectives, and an overview of programming principles for all programming through Alameda CTC.
- Appendices include
    - Technical summaries of adjustments to the prior programming and a summary with the final programming record.
    - Programming and Allocation Guidelines for future programming
    - Policies and Procedures for Alameda CTC's programming and funding administration

ACTC_AR3338

SECTION 2: PURPOSE OF COMPREHENSIVE INVESTMENT PLAN

The CIP is a programming and allocation document that establishes a financial investment strategy of funding under Alameda CTC's purview to deliver projects and programs ("projects") that allows the countywide transportation system to be more efficient and effective. The CIP identifies transportation funds from various sources expected to be available over a five-year programming horizon and targets them for transportation priorities in Alameda County.

The main objectives of the CIP are summarized as follows:

1. Translate long-range plans into short-range implementation
   The CIP transitions long-range plans into focused project/program delivery over a five-year programming window with a two-year allocation plan.

2. Serve as the Strategic Plan
   The CIP serves as Alameda CTC's Strategic Plan and satisfies public reporting requirements required by these funding programs.

   The revenue and expenditure assumptions for each fund source are confirmed periodically, and serve as the basis for the financial management of each funding program. Funding commitments to individual projects identified in the voter-approved transportation expenditure plans are confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans.

3. Establish a consolidated programming and allocation plan
   The CIP is a decision-making programming document that is used to program fund sources under Alameda CTC's responsibility for capital improvements, program operations, and maintenance projects. Integrating all fund sources into one programming document permits Alameda CTC to coordinate the programming and allocation of multiple fund sources to ensure that the investments of funds from the individual sources are joined to maximize the effectiveness of the overall investments in the Alameda County transportation system.

   The CIP includes a two-year allocation plan for funds allocated by Alameda CTC. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors

ACTC_AR3339

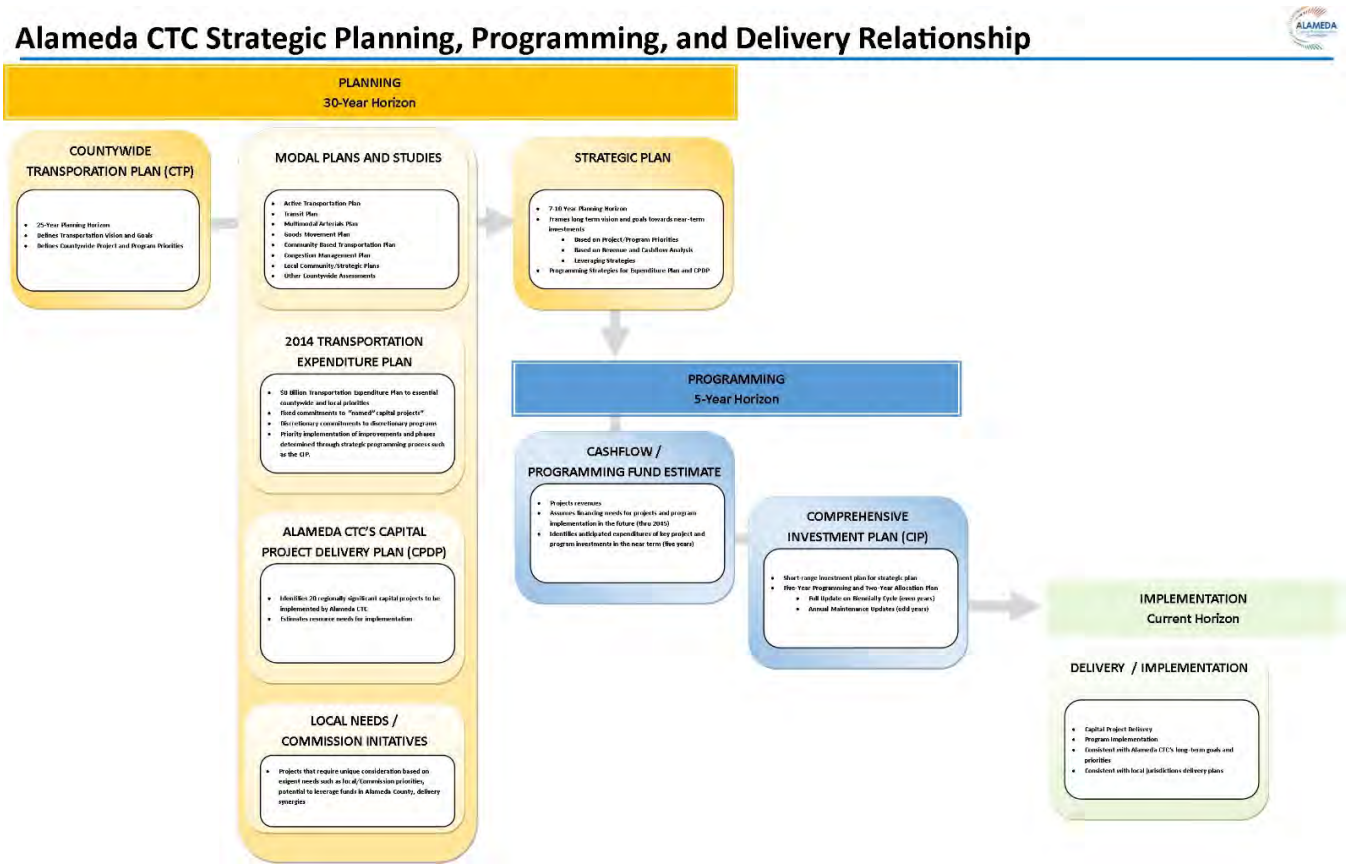
and implementing agencies, and for contracts and costs related to projects implemented directly by Alameda CTC.

The CIP will be updated on an annual and biennial basis, as needed, to reflect updates to Alameda CTC's programming and allocations. The annual updates are intended to include technical updates to confirm commitments and programming and allocation actions occurring outside the regular CIP process. A biennial update of the CIP will include a more robust update that shifts the five-year programming and allocation horizon, and allows for additional projects to be nominated and programmed into the CIP against the newly available programming capacity granted by the horizon shift.

The CIP guides investments to projects that provide demonstrate significant public benefit, advance project implementation, and support leveraging of local, regional, State and federal dollars for Alameda County's transportation priorities.

SECTION 3: RELATIONSHIP WITH PLANNING

The CIP's purpose is to strategically program available funds towards transportation investments that support long-range vision and goals established in Alameda CTC's Countywide Transportation Plan (CTP), multi-modal plans, and voter-approved transportation expenditure plans.



To be considered eligible to receive programming and allocation of Alameda CTC's Administered Funds, candidate projects are required to have a direct nexus to the Alameda CTC's CTP, Alameda CTC's multi-modal plans (Transit, Goods Movement, and Arterials), and other local planning efforts. This ensures candidate projects are consistent in coordination with local, countywide, and regional transportation priorities. The development of these planning documents also satisfies the public outreach requirements of the certain regional, State, and federal fund sources when they are required of by the funding programs.

For Alameda CTC implemented projects, the CIP incorporates the delivery recommendations included in the Measure BB Capital Project Delivery Plan (CPDP) as approved in March 2016. The CPDP addresses projects implemented directly by Alameda CTC and identifies projects posed for local, regional, State and Federal funding. The CIP incorporates the CPDP programming recommendations, policy and procedures, and project delivery assumptions in their entirety as it makes programming and allocation recommendations to projects contained in the CPDP.

Projects demonstrating a nexus to countywide planning efforts and transportation priorities formulate the eligible candidate pool. These projects may submit

ACTC_AR3340

programming and allocation applications through the Alameda CTC's Call for Projects and request for allocation processes. Project selection and prioritization for the CIP is based, in part, on priorities identified in adopted planning documents and studies, Strategic Plan Guiding Principles, but also considers other Commission approved project selection criteria.

SECTION 4: FUND SOURCES AND REVENUE ESTIMATES

Alameda CTC has programming and allocation authority for a number of transportation fund sources at the county level, and programming authority for the Alameda County shares of certain federal and State funding. Alameda CTC acts on behalf of Alameda County at the regional, State, and federal levels for matters pertaining to transportation funding from federal, State, and regional sources, including infusions of funding such as stimulus programs and proceeds from bond sales.

The CIP includes the fund sources listed below grouped according to the category federal, State, Regional and local funding.

ACTC_AR3341

Federal Program	
Fund Source	**Description**
Surface Transportation Program	Alameda CTC, as Alameda County's congestion management agency (CMA), is responsible for soliciting and prioritizing projects in Alameda County to receive a portion of the federal Surface Transportation Program (STP) funding. The STP is provided through funding from reauthorization of the federal funding for surface transportation by which Alameda CTC receives federal monies. The Metropolitan Transportation Commission (MTC) approves the programming of the STP funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.
Congestion Mitigation & Air Quality Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for a portion of the federal Congestion Mitigation & Air Quality Program (CMAQ) in the same fashion as the STP funding. The CMAQ is provided through funding from the reauthorization of federal funding for surface transportation by which Alameda CTC receives federal monies. The CMAQ funds are used on projects that will provide an air quality benefit. MTC approves the programming of the CMAQ funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.

State and Regional Programs	
Fund Source	**Description**
State Transit Assistance	State Transit Assistance is the State's flexible transit funding program which may be used for capital or operating purposes. The statewide STA program is split equally between a Revenue-based program (Public Utilities Code 99314) and a Population-based program (Public Utilities Code 99313). Under MTC Resolution 4321, Congestion Management Agencies (CMAs) are charged with playing a coordinating role in the development of a STA Population-Based distribution program within their county. MTC Resolution 4321 replaced MTC Resolution 3837 with a new transit-focused, One Bay Area Grant (OBAG)-style STA County Block Grant for 70 percent of the STA Population-Based funds received by MTC, with the remaining 30 percent directed towards MTC's Regional STA Program. MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program.
Regional Measure 2 and Future Regional Measures	In 2004, voters passed Regional Measure 2 (RM2) raising the toll on the seven state-owned toll bridges in the San Francisco Bay Area by $1. This extra dollar funds various transportation projects within the region determined to reduce congestion or to make improvements to travel in the toll bridge corridors, as identified in Senate Bill 916 (Chapter 715, Statutes of 2004). Specifically, RM2 establishes the Regional Traffic Relief Plan and identifies specific transit operating assistance, and capital projects eligible to receive RM2 funding.
State Transportation Improvement Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for the Alameda County Share of the State Transportation Improvement Program (STIP). Programming for each "County Share," of the Regional Improvement Program (RIP) portion of the STIP, is recommended by the CMA for each county (i.e., by Alameda CTC for Alameda County). The STIP is updated by the California Transportation Commission (CTC) on a two-year cycle with new STIP cycles approved every even year. The CTC adopts a fund estimate for each STIP cycle during the year before the even-numbered year in which the STIP cycle is adopted. The fund estimate provides the amounts for each of the County Shares that comprise the RIP portion of the STIP cycle. The STIP programming horizon is a five-fiscal-year window with two new fiscal years added each STIP cycle. Most programming capacity added in a given STIP cycle is in the two new, outer fiscal years of the STIP programming horizon. The funds programmed in the STIP are subject to the STIP Timely Use of Funds Provisions prescribed in the STIP Guidelines typically adopted with each STIP cycle.
Transportation Fund for Clean Air Program	State law permits the Bay Area Air Quality Management District (BAAQMD) to collect a fee of $4 per vehicle per year to reduce air pollution from motor vehicles. The fee provides the revenues for the Transportation Fund for Clean Air (TFCA) which is distributed by the BAAQMD at the regional and county levels. Sixty percent of the funding is programmed by the BAAQMD at the regional level. The

ACTC_AR3342

State and Regional Programs	
	remaining 40 percent is allocated annually by the BAAQMD for programming and allocation by the Program Manager for each county. Alameda CTC is the TFCA Program Manager for Alameda County. The Alameda County Program Manager funds are split 70 percent to the cities and the County; and 30 percent to transit-related projects.

Local Programs	
Fund Source	**Description**
1986 Measure B	In November 1986, voters passed the 1986 Measure B, a 15-year measure expected to generate more than $990 million through a half-cent transportation sales tax to fund local streets and roads improvements, bus and paratransit services, and other transportation infrastructure projects. The 1986 Transportation Expenditure Plan guides the use of those funds. Sales tax collection authorized by the 1986 Measure B ended in 2002, but several projects from the 1986 Measure B Capital Program are still underway. The 1986 Measure B generated more than $353 million for transportation programs and $864 million for highway, roadway and transit improvements. The sales tax collection for the 1986 Measure B ended in 2002, and no additional revenues are assumed.
2000 Measure B	Alameda County voters approved the 2000 Measure B Transportation Expenditure Plan (2000 TEP) which authorized a 20-year half-cent sales tax to be used for the transportation purposes identified in the 2000 TEP. Alameda CTC administers the 2000 Measure B Program to deliver essential transportation improvements and services. The 2000 TEP guides the expenditures of the 2000 Measure B funds. The collection of 2000 Measure B funds began on April 1, 2002 and will continue through March 31, 2022. The 2000 Measure B funds are divided as prescribed in the 2000 TEP between funds allocated directly to the jurisdictions and transit operators, and the funding available for the programs and capital projects named in the Measure. The 2000 Measure B funds are distributed as follows: *Direct Local Distributions*: The direct local distribution (DLD) funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2000 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages of net revenues used for the distributions are prescribed in the 2000 TEP as follows: • Mass Transit Operations (21.22 percent) • Local Streets Maintenance and Safety (22.34 percent) • Bicycle and Pedestrian Safety (3.75 percent) • Special Transportation for Seniors and People with Disabilities (9.02 percent) *Discretionary Programs*: The 2000 TEP includes a number of commitments to the following discretionary programs that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2000 TEP: • Express Bus Service Countywide (0.7 percent) • Bicycle and Pedestrian Safety (1.25 percent) • Special Transportation for Seniors and People with Disabilities - Coordination and Gaps in Service Grants (1.43 percent) • Transit Center Development Funds (0.19 percent) *Capital Projects*: The 2000 TEP includes commitments to individual capital projects. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding

ACTC_AR3343

Local Programs	
	agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
2010 Vehicle Registration Fee	Alameda County voters approved the Alameda County Vehicle Registration Fee (VRF) Program in 2010. The funds made available by the VRF are distributed as follows: *Direct Local Distributions*: The DLD portion of the VRF funding is distributed as follows: • Local Road Improvement and Repair Program (60 percent) • Local Transportation Technology (10 percent) o On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to the Alameda CTC.. *Discretionary Programs*: A portion of the VRF funding is distributed for the following grant sub-programs on a reimbursement basis: • Transit for Congestion Relief (25 percent) • Pedestrian and Bicyclist Access and Safety Program (5 percent)
2014 Measure BB	Alameda County voters approved the 2014 Transportation Expenditure Plan (2014 TEP) as part of Measure BB in November 2014. Measure BB authorized the augmentation and continuation of the voter-approved 2000 Measure B sales tax with a second half-cent sales tax through the end of the 2000 Measure B collection period, i.e. March 31, 2022, followed by a one-cent sales tax authorizes from April 1, 2022 through March 31, 2045. The 2014 Measure BB funds are allocated as follows: *Direct Local Distributions*: The 2014 Measure BB DLD funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2014 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages used for the distributions are prescribed in the 2014 TEP as follows: • Transit Operations, Maintenance, and Safety Program (21.55 percent) • Local Streets Maintenance and Safety (20 percent) • Bicycle and Pedestrian Infrastructure and Safety (3 percent) • Affordable Transit for Seniors and People with Disabilities (9 percent) *Discretionary Programs*: The 2014 TEP includes a number of commitments to the following discretionary programs available that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2014 TEP: • Affordable Student Transit Pass Program ($15 million) • Affordable Transit for Seniors and People with Disabilities/Coordination and Service Grants (1 percent) • Bicycle and Pedestrian Program (2 percent) • Community Investments That Improve Transit Connections to Jobs and Schools (4 percent) • Congestion Relief, Local Bridge Seismic Safety ($639 million) • Freight and Economic Development Program (1 percent) • Technology, Innovation and Development Program (1 percent) • Transit Innovation Program (2.24 percent) *Capital Projects*: The 2014 TEP includes commitments to individual capital projects and to groups, or categories, of capital projects as described in the 2014 TEP. Alameda CTC distributes sales tax funds for

ACTC_AR3344

Local Programs	
	capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
Local Exchange Program/CMA Transportation Improvement Program	Alameda CTC administers a local fund exchange program to exchange State and federal funds for local monies, giving Project Sponsors the flexibility to streamline and expedite project delivery. The local funds also allow agencies to begin projects earlier than would otherwise be possible due to the uncertain timing of the availability of State and federal funds in any given funding cycle. Based on State and federal economic conditions, the availability of State and federal funds is often delayed to beyond the year in which the funds were originally programmed. Such delays are unilateral from the State and/or federal levels and put a strain on timely implementation of projects. The local fund exchange program allows local monies exchanged for the State and federal funds to be available earlier, and on a more dependable timeline, than the State and federal funds in many cases. Exchanges are approved on a case-by-case basis, as opportunities present themselves.

SECTION 5: PROGRAMMING REQUIREMENTS

Projects must satisfy the following programming requirements to be considered for programming and allocation by Alameda CTC.

1. Projects must be included in, and be consistent with the most current adopted Regional Transportation Plan and Alameda CTC's Countywide Transportation Plan.
2. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.
3. Projects must be publicly accessible and provide direct benefits to public transportation infrastructure and operations.
4. Projects must meet the goals and objectives of the funding sources and programs that are ultimately recommended by Alameda CTC.
5. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF must be consistent with requirements and priorities of their respective expenditure plans.

Funds are programmed from a specific fund source(s), in a given fiscal year to a specific phase(s) of a project. The expected outcome of the total project, or of implementing any phase of the project, with funds programmed in the CIP, shall be consistent with the goals and objectives of the CTP, and any applicable fund source specific requirements.

Programming and allocations requests must at minimum contain the following:

- Project scope, cost, schedule,
- Description of benefits to determine the expected outcome and whether or not the outcome is consistent with the CTP and fund source goals and objectives.
- Funding breakdown by phase. Cost estimates for all phases are required for projects requesting programming or allocations for phases beyond environmental approval.

ACTC_AR3345

SECTION 6: PROGRAMMING PRINCIPLES AND GUIDELINES

Alameda CTC's programming and allocation decisions shall be based on a project's ability to achieve the following five fundamental policy principles that serve as a guide for the CIP development and project selection.

1. Implementing Alameda County's adopted vision
   All funding decisions will support implementation of Alameda CTC's long-range transportation vision for Alameda County as adopted in its long-range Countywide Transportation Plan.

2. Balanced strategic program across project delivery phase
   Alameda CTC strategically invests financial resources to optimize transportation planning, project delivery and performance analysis. The CIP will identify investments in all stages of project development. Striking a balance between project development and capital phases is desired to support a combination of project development phases that will utilize the available programming capacity and to position the county to leverage federal, State and regional funding sources as they become available. This will include considering the delivery status of projects to optimize competitiveness for future grant opportunities.

   Alameda CTC uses the following project or program delivery phases:
   - Planning/Scoping/Conceptual Engineering
   - Preliminary Engineering/Environmental Studies
   - PS&E/Final Design
   - Right-of-Way Acquisition and Engineering
   - Construction Capital and Support
   - Equipment/Rolling Stock Acquisition
   - Operations (includes Safe Routes to School, paratransit programs, transit-related operations)
   - Post-Construction Activities
   - Project Closeout

   The CIP will also include countywide program/operational investments including, but not limited to, the Safe Routes to Schools Program, senior travel training/mobility management, and system performance-monitoring efforts.

4. Maximizing transportation investments
   Alameda CTC will work with local agencies to program funds to projects that are implementation ready, have a credible funding plan, meet the requirements of the fund source and provide transportation benefits. The CIP will examine opportunities

ACTC_AR3346

to leverage the local fund sources to the maximum extent possible. In addition, Alameda CTC will use the CIP to identify co-benefits between projects, when practical and feasible.

5. Investments in all modes and areas within Alameda County
   The CIP strives to identify investments in all modes of transportation, project phases, and geographic areas in Alameda County. The CIP is constrained to the revenue projected to be available for the five-year programming. Alameda CTC will use the CIP to monitor geographic equity and modal equity investments over time.

6. Delivering solutions while ensuring accountability
   Alameda CTC will require timely and cost-effective project delivery, and will monitor implementation to ensure Project Sponsors are accountable for their projects. The CIP will promote the timely delivery of projects, leveraging of local funds and minimizing cost increases due to delays. Projects funded through the CIP will be subject to the requirements of each fund source used to implement the project. Timely use of funds provisions will apply to all funds programmed and/or allocated in the CIP.

Programming Principles and Guidelines

Programming and allocations decisions shall be based on a CIP Programming Principles and Guidelines included in the CIP's appendices. This describes the complete framework for programming and allocation decisions made by Alameda CTC, including defining eligible projects, eligible Project Sponsors, eligible costs, funds sources, funding guidelines and requirements.

Key project merits will be considered (in no particular order) such as:

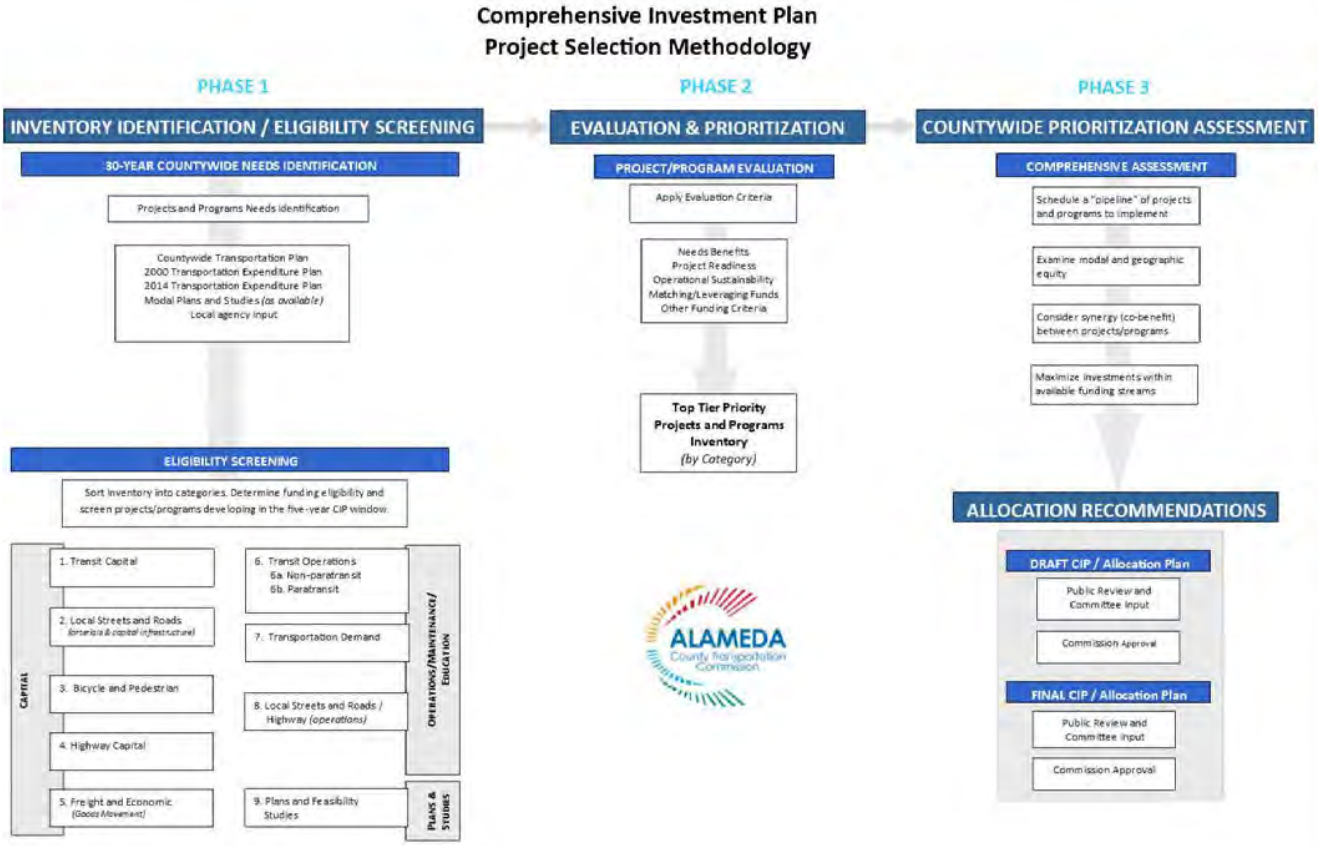
- Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.

- State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.

- Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.

- Safety and Connectivity: Project's ability to foster a safe, connected, accessible transportation system for multimodal movement of goods and people.

ACTC_AR3347



- Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to inform the uniform consolidation of historically separate programming practices, where applicable, to more effectively coordinate funding towards beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

Programming Guidelines are described in detail by program in the CIP's appendices.

SECTION 7: PROJECT SELECTION METHODOLOGY

The project selection methodology for the CIP is based on three step/phased approach as described below and illustrated in CIP Project Selection Methodology Diagram shown here.

ACTC_AR3348

Phase 1: Project Identification and Screening

Alameda CTC will identify project inventories from the CTP, countywide modal plans, short- and long-range transportation plans and other local planning documents. The inventory will be screened for eligible projects that are ready to be implemented within the five-year CIP window based on schedule, a credible funding plan and local prioritization. Alameda CTC may also initiate a Call for Project to gather updated project information to inform project selection decisions for CIP programming and allocations.

Alameda CTC will separate projects into modal categories based on the type of project (bicycle/pedestrian, roadway, etc. Projects will be assessed for eligible funding sources to ensure they meet funding requirements. The CIP Programming Principles and Guidelines located in the CIP's appendices provides a summary of the categories and sample project types included in the CIP.

The goal of Alameda CTC's funding recommendations will be to fund a project phase by phase, as applicable, so that the project can progress from development to construction and project delivery. Projects outside the five-year period will be considered for future implementation in subsequent funding cycles and CIP updates.

Phase 2: Project Evaluation

Based on the list developed in Phase 1, Alameda CTC will prioritize projects relative to each other in defined category types. Projects will be evaluated against the same category of projects (i.e., transit projects will be evaluated against transit projects, road projects against road projects, etc.). This approach will provide a balanced prioritization process that compares similar project types to one another. Projects specifically named in expenditure plans will be separated from those seeking discretionary funding and will be prioritized independent of the discretionary projects. Based on their scoring assessment, projects will be evaluated and arranged into three tiers within their respective categories (high, medium and low priority). This sorted list will then move into the third phase of evaluation.

Alameda CTC will evaluate eligible projects using the programming criteria adopted as part of the CIP, and other Commission actions, as the basis for programming and allocation decisions.

Phase 3: Countywide Prioritization Assessment

The final step in the project selection process will examine the top tiers of each category from the Phase 2 scoring, to strategically program available funding, to achieve countywide goals and priorities. Alameda CTC will perform a systematic examination across all of the categories to identify financial strategies, geographic and modal equity, and co-benefits between proposed improvements as part of the CIP update process

ACTC_AR3349

every two years, when the five-year programming window is shifted two years into the future.

Alameda CTC will examine opportunities to promote the timely delivery of projects, and leveraging of local funds. Programming recommendations will be constrained by the total available programming within the five-year CIP window, and by fund source eligibilities of projects.

Projects outside Alameda CTC's programming availability in the five-year CIP will be considered for inclusion in future funding cycles and CIP updates.

Project Selection Criteria

The CIP project selection criteria as approved and incorporated in the CIP updates, includes traditional programming criteria used previously by the Alameda CTC. The CIP uses four categories of criteria to score each project:

1. Readiness Delivery Criteria
   The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the agency has the ability to coordinate among internal and external agencies, as applicable.

2. Needs and Benefits Criteria
   The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, supporting well-maintained transportation facilities/equipment (as applicable); promotes innovation and a multimodal system; improves safety; supports a clean environment; and strengthens the economy.

3. Matching and Leveraging Funds Criteria
   The project has secured funding from other sources or demonstrates how it will leverage other funds for use on the project.

4. Other Funding Features
   As applicable, other requirements mandated by other funding sources/programs.

Alameda CTC will, to the extent possible, implement the above project selection process using the CIP programming principles identified in Section 6: Programming Principles and Guidelines for programming and allocation decisions.

ACTC_AR3350

SECTION 8: BASIS OF PROJECT COST SHARING

The investments of funding programmed in the CIP considers the overall project cost/funding picture and expected outcomes. The baseline for cost sharing is typically the proportional share of Alameda CTC Administer Funds against the total project costs at completion.

Project Sponsors are required to request Alameda CTC Administered Funds by phase and to provide matching funds to such request by phase. This ensures during any given CIP programming cycle the Commission's requirement for a minimum level of project cost sharing is achieved.

In the event, Alameda CTC funds are required in an earlier phase to increase the competitiveness of a project to leverage other funds sources, Alameda CTC, may at its discretion, make a programming recommendation to a phase without a match, that considers the project cost sharing overall.

A risk sharing arrangement shall be included in any funding agreement which obligates funding allocated by Alameda CTC in advance of its proportional share (based on the total funding) for project phases beyond environmental approval, especially for projects that do not have funding identified for all phases of implementation.

The following principles shall be the basis of cost sharing considered for programming and allocations approved by Alameda CTC:

- Complete Project Information
  Request for allocations through the CIP process and subsequent funding agreement packages shall include a summary of estimated total costs segregated by phase; a corresponding milestone schedule showing begin and end dates for each phase (and any significant delivery milestones within each phase); and the anticipated funding (all sources) for each phase segregated by source.

- Funding Agreement Requirements
  Project cost sharing shall be established in the funding agreements based on the information provided with the request for allocation and funding agreement packages. The cost sharing proportions documented in the funding agreement shall be used for risk sharing associated with the implementation of the phase(s) covered by the agreement.

ACTC_AR3351

- Local Cooperation Policy and Eligibility of Locally Incurred Costs
  Project Sponsors, and local jurisdictions whom are directly benefitting from the expected outcomes a project implemented in their locality by Alameda CTC, the Project Sponsor, or other implementing agencies, are required to be active funding partners to further the delivery of such improvement project.

  Locally incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by an implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. However, the costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC stipulated in the funding agreement, unless they are specifically identified as eligible in the funding agreement.

  Jurisdictions whom are Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) Recipients are encouraged to use local funds to support matching costs. DLD recipients shall not be eligible for reimbursement for local staff costs from Alameda CTC Administered Funds allocated to the Project. Project Sponsor staff costs can be included in the total cost and other funding amounts for the purpose of meeting the cost and risk sharing provisions of Agreement, but staff costs will not be considered reimbursable costs unless the Project Sponsor is performing direct activities related to the phase of the project.

  Refer to the Local Cooperation Policy in the CIP's Policies and Procedures appendix.

SECTION 9: FUND MANAGEMENT AND CIP ADMINISTRATION

Alameda CTC is responsible for the management and administration of the various funding programs within its programming and allocation purview. The CIP provides a summary of the programmed and allocated amounts for each fund source administered by Alameda CTC, and in some cases the fund sources administered by other agencies.

The fund sources administered by Alameda CTC must be managed in accordance with applicable laws and requirements related to the individual fund sources, and with government accounting standards. The programming and allocations included in the CIP provide the basis for the financial and accounting activities performed by Alameda CTC's annual budget, programming fund estimate, and cash management analysis. In general, the financial and accounting activities performed by Alameda CTC occur in the background of the day-to-day project implementation activities, and do not typically hinder a projects ability to be delivered. The specifics related restrictions of use, or

ACTC_AR3352

timing of reimbursements for allocated fund shall be addressed in the applicable funding agreement(s).

Alameda CTC Administered funds under Alameda CTC's direct administration purview shall be encumbered into a funding agreement with the Project Sponsor. The funding agreement shall be consistent with the original request for allocation/project application that was used to inform Alameda CTC's programming and allocation decision. Alameda CTC provides for a formal and administrative amendment process to amend an executed funding agreement to adjust the scope, funding, milestones, schedules based on a Project Sponsor's request.

CIP Administration

The CIP is updated periodically, as needed, to assess programming and allocations adjustments that reflect project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments. The Commission may amend the CIP at any time if an action must be taken before the next CIP update period. The Commission must approve all project additions or deletions. The Commission authorizes the executive director or his or her designee to administratively approve the acceleration of project/program schedules, as long as they can be accomplished within the budgeted amount. This is to maintain project scheduling and coordination with any other activities that may impact or delay project implementation or development. Significant changes in the scope of work, implementation schedule or costs will be presented to the Commission for consideration.

The CIP is updated in consultation with other planning and programming efforts such as the Alameda County Congestion Management Program, the Countywide Transportation Plan and Alameda CTC's annual budget process.

Annual CIP Update

Annual updates, as needed, include modifications to financial projections and confirmation of programming and allocation commitments in association with Alameda CTC's annual budgetary processes. Additionally, annual updates will examine general strategic planning of its projects and programs, and the status of various commitments, and technical adjustments required periodically.

Biennial CIP Update

Every two years, as needed, Alameda CTC will comprehensively update the CIP to review existing CIP projects and to open a nomination window for new projects. The biennially update occurs on odd number fiscal years, and represents a shift of the programming window to add the next two fiscal years.

ACTC_AR3353

Biennial CIP updates will include review of existing projects and programs to determine whether to recommend continuing or postponing funding and delaying, removing or reincorporating projects/programs. Alameda CTC may recommend additional funding to continue existing approved projects. As part of this update, Alameda CTC will open a nomination window to consider new projects for additional capacity granted with the two-year shift of the programming horizon. Projects submitted during the nomination window that meet the Commission-adopted screening criteria will be evaluated and prioritized for funding consideration.

Periodically, Alameda CTC will reassess the CIP development process, prioritization methodology and allocation process for consistency with any updated policies and goals. Alameda CTC will update and amend the CIP accordingly to account for project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments.

CIP Amendments / Adjustments

CIP Amendments / Adjustments are considered on a case-by-case basis, and may occur in the following situations:

- Alameda CTC made a programming recommendation that received final programming actions by other agencies for federal, State or regional funds.
- Additional funding is needed to complete a CIP project.
- Commission approved programming made off-cycle of a CIP update.
- Matching funds are needed to immediately leverage non-Alameda CTC Administered funds to Alameda County.
- Project Sponsors requested a fund exchange among existing approved projects to prevent delays or cost increases to the project.
- Project Sponsors required updates to reflect additional revenue from new or existing fund sources, or updated confirmed amounts.
- Project Sponsors are unable to meet the environmental and full funding requirements as defined in the sales tax expenditure plans.
- Project Sponsors reported changes such as budget increases, schedule delays or other factors that may impede project delivery.

Adjustments to the current CIP programming and allocation record will be reflected in the next regularly scheduled CIP update.

ACTC_AR3354

SECTION 10: ALLOCATION PROCESS AND REQUIREMENTS

Alameda CTC maintains programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard programming and allocation procedures and requirements further described in the CIP's Policies and Procedures appendix.

Generally, Alameda CTC allocates the funding for which it has allocation authority based on Requests for Allocations Packages in the form of separate allocation requests for named projects in the Transportation Expenditure plans or through funding applications submitted to Alameda CTC for funding consideration by Project Sponsors during a CIP call-for projects.

The Request for Allocation package shall include an overall project implementation plan which identifies anticipated costs by phase and potential funding sources for each phase throughout completion of the project. Requests for allocations for multiple phases without specifying amounts for the individual phases shall be considered on a case-by-case basis.

Generally, Requests for Allocation Packages should be submitted to Alameda CTC at least 45 days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval. In some cases, the project activities to be funded by an allocation being requested will be performed by an implementing agency that is different than the sponsor. In such cases, the request for allocation package should be prepared by the implementing agency and submitted to Alameda CTC by the Project Sponsor.

Alameda CTC has allocation authority for funds from the following sources:

- 1986 Measure B (1986 MB);
- 2000 Measure B (2000 MB);
- 2010 Vehicle Registration Fee (VRF);
- 2014 Measure BB (2014 MBB);
- Transportation Fund for Clean Air (TFCA) Program Manager; and
- CMA Transportation Improvement Program (CMATIP).

Alameda CTC allocates to the following phases:

- Planning/Scoping/Conceptual Engineering
- Preliminary Engineering/Environmental Studies
- PS&E/Final Design

ACTC_AR3355

- Right-of-Way Acquisition and Engineering
- Construction Capital and Support
- Equipment/Rolling Stock Acquisition
- Operations and/or Maintenance

SECTION 11: APPROVAL OF ADVANCE/PAYBACK AND EXCHANGE ARRANGEMENTS

Requests for advances or exchanges of funds programmed or allocated by Alameda CTC shall be considered on a case-by-case basis and shall only be approved if Alameda CTC resources permit such advance/exchange, and if a significant benefit to the implementation of the project can be identified.
Requests for such advances or exchanges shall be submitted in writing by the Project Sponsor, and shall include, at minimum:

1. Project Status and Current Implementation Plan
2. Project delivery strategy with the funding or exchange proposal that describes the costs and fund sources to be involved in the proposed advance or exchange.
3. Timing availability of the funds for which the advance or exchange is requested
4. Repayment schedule of Alameda CTC funds that are proposed to be advance
5. Intended use of the funds freed up by the advance or exchanged

Any advance or exchange arrangement involving funds programmed or allocated by Alameda CTC must be approved prior to allocation, and shall be addressed in the applicable funding agreement.

SECTION 12: SELECTION OF PROJECTS AND PROGRAMS FOR FINANCING

Management of the accounts established for the voter-approved funding programs requires forecasts and projections of revenues and expenditures for the revenue sources and expenditure commitments included in each program. The CIP includes revenue projections for each of the funding programs administered by Alameda CTC. Alameda CTC confirms the priorities for the expenditure commitments through the programming and allocations included in the CIP.

While the cumulative committed expenditures remain less than the cumulative revenues, Alameda CTC is able to fund the investments approved in the CIP on a pay-as-you-go basis. When enough projects are approved that create a scenario where the cumulative committed expenditures exceed the cumulative revenues for any of the funding programs, program level financing will be required to make the funds committed available when needed for project implementation.

ACTC_AR3356

The type of financing will be determined by the timing of the need for funding, the current financial markets, and the type of expenditure to be financed. Certain types of financing have restrictions on the timing and the type of expenditures that can be financed. The decision to finance projects and programs requires lead time to identify the most beneficial type of financing, and to perform the activities required for the financing to be approved.

The projects to be financed will be identified when the need for program level financing is identified at the fund account level. Individual project-level finance is only made on a case-by-case basis, where program level financing is not a viable option due to extraordinary circumstances. The basis of the program wide financial models is the information gathered for the programming and allocations approved in the CIP updated to reflect current project or program status.

SECTION 13: PROJECT DELIVERY RESPONSIBILITIES

The implementation of projects in the CIP begins once Alameda CTC approves the funding for the project. The Project Sponsor is the agency that takes the overall responsibility for project delivery, advocacy and reporting for the project regardless if it not the direct implementing agency for the project, unless otherwise agreed through written agreements between the Project Sponsor and the implementing agency.

Alameda CTC acts as project cosponsor, and as implementing agency, for phases of a number of projects and programs. As implementing agency, Alameda CTC incurs eligible project costs through contracts with vendors, staff charges and other direct costs. Implementing agencies, other than Alameda CTC, receive reimbursements from Alameda CTC via funding agreements which encumber the funds allocated by Alameda CTC. Once the funding agreements are in place, implementing agencies may encumber the funds for contracts and other direct costs to deliver the project as provided for in the funding agreement. Alameda CTC monitors the performance of the projects during implementation and after implementation during operations based on information provided by the Project Sponsor.

Throughout the implementation process, Alameda CTC relies on Project Sponsors and implementing agencies to communicate regularly about project activities and status as required by the funding agreements. The regular updates from Project Sponsors support Alameda CTC's management of the overall set of projects. The information collected from Project Sponsors provides the basis of the project status information made available to the public by Alameda CTC.

ACTC_AR3357

Timely and accurate reporting is essential for early identification of potential project or program issues, and of circumstances that may adversely affect project delivery. Alameda CTC needs as much lead time as possible for approving changes to project or program funding in reaction to project risks. Project Sponsors and implementing agencies must communicate risks to Alameda CTC as soon as they are identified by the Project Sponsor or implementing agency.

If a project requires additional funding, or a change to the funding as approved in the CIP, Alameda CTC will review the funding request and consider providing more funding, or approving changes to existing funding, in future CIP update cycles. If an amendment is required prior to the next CIP update cycle to maintain the current implementation schedule, Alameda CTC may approve additional funding, or changes to previously approved funding, at any regularly scheduled Commission meeting.

The CIP document will not be updated and re-published after each off-cycle funding adjustment. Off cycle adjustments to the funding approved in the CIP will be summarized as current programming in the next CIP update cycle.

SECTION 14: PROJECT FUNDING AGREEMENTS

Allocated funds are considered available for encumbrance in funding agreements between the funding agency and the recipient agency.

A funding agreement is required between agencies to allow for reimbursements of eligible project expenditures. The funding agreements specify the financial terms of the agreement, scope of work, costs, schedules and deliverables associated with the implementation of the project. Funding agreements are based on the project information, scope of work, costs, schedules and proposed outcomes at the time of the request for allocation.

Generally, Alameda CTC initiates funding agreement development between recipient agencies immediately after the Commission approves a funding allocation. However, it is the responsibility of the recipient agency to submit a request for funding agreement to the Alameda CTC to receive funds allocated by Alameda CTC. Requests for funding agreement must in accordance with the Timely Use of Fund Policy cited in the CIP Policies and Procedures appendix.

Recipient agencies are responsible for fulfilling all requirements related to executing the funding agreements.

ACTC_AR3358

SECTION 15: PROJECTS REIMBURSEMENT PROCEDURES

Alameda CTC approves reimbursements of eligible project costs based on Request for Reimbursement (RFR) packages submitted by implementing agencies and Project Sponsors which incur reimbursable costs against Alameda CTC Administered Funds encumbered in a funding agreement.

RFR requirements are included in the applicable funding agreements, and Project Sponsor's request generally include

- Itemization of eligible costs incurred to confirm the costs are consistent with the applicable funding agreement
- Itemization of Alameda CTC costs and other sources to calculate any proportional shares and reimbursement ratios set in the funding agreement
- Supporting documentation (timesheets, vendor invoices, proof of payment) for all costs cited within an RFR regardless if costs are intended to be Alameda CTC or non-Alameda CTC funded costs.

Alameda CTC approves RFRs upon sufficient supporting documentation of costs incurred, and based on the availability of funds.

Eligible costs for reimbursements are further described in the Eligible Cost for Reimbursement Policy cited in the CIP's Policies and Procedures appendix.

SECTION 16: ALAMEDA CTC LOCAL BUSINESS CONTRACT EQUITY PROGRAM REQUIREMENTS

All locally funded contracts approved by Project Sponsor, funded wholly or in part with Measure B, Measure BB, and/or Vehicle Registration Fee funds, except for contracts that also include State and/or federal funds or contracts funding non-capital projects (e.g., transit operations), are required to comply with Alameda CTC's Local Business Contract Equity (LBCE) Program.

This includes the obligation to report Local Business Enterprise (LBE), Small Local Business Enterprise, and Very Small Local Business Enterprise participation with all reimbursement requests submitted for contracts costs partially or wholly funded by Alameda CTC, whether or not the contract requires LBE participation.

Project Sponsors receiving Measure B, Measure B, and/or Vehicle Registration Fee funds through the programming and allocation process must follow these program requirements and may be requested to document procurement processes funds to

ACTC_AR3359

verify program compliance. Non-compliance Project Sponsors may have funds subject to rescission, or marked as ineligible for reimbursement, at the discretion of the Alameda CTC.

Alameda CTC's LBCE Program and is available online on the Alameda CTC website.

SECTION 17: PROJECT CLOSEOUT

Project closeout shall be in accordance with the applicable project funding agreement(s).

At a minimum, the Project Sponsor shall provide Alameda CTC with written confirmation that the project is complete with a summary of the final costs, funding and schedule information segregated by phase. If a project will continue beyond the time during the time which Alameda CTC programmed or allocated funds are being expended, the Project Sponsor shall notify Alameda CTC in writing when the expenditure of the funding is complete, and will continue to provide project status updates as required/requested by Alameda CTC until the project is fully implemented and in public service.

Periodic information updates during operations of projects funded by Alameda CTC may be required for monitoring purposes as specified in the applicable funding agreement, and as requested by Alameda CTC.

SECTION 18: PERFORMANCE MONITORING AND REPORTING

Countywide Performance Monitoring and Implementation

Projects that received funding through the CIP have been identified through the programming and allocation process to further the Alameda CTC's Countywide Transportation Plan, modal plans, and local planning documents vision to improve the transportation network. These plans identify project and transportation system investments based on expected outcomes modeled over a up to 30-year planning horizon. As projects are implemented through the CIP programming, Project Sponsors are required to report back to Alameda CTC on the outcomes of the implemented projects, and provide feedback on the planning and investment decisions.

Project Reporting

The CIP requires that each project include performance monitoring goals/metrics to gather project specific performance indicators on individual projects. Funding agreement will include all monitoring and reporting requirements required to capture the benefits and expected outcomes of Alameda CTC's investments.

The reporting requirements include the following:

Progress Reports
The executed funding agreements require regular progress reporting, based on the reporting schedule set forth on the agreement. The progress reports include a status update made toward implementation of the project, including deliverables, commitment status of supplemental funds identified in the funding agreement and adherence to the adopted project schedule.

Corrective Plans
Once a funding agreement is executed, Project Sponsors are required to report changes to the project scope, schedule, cost and funding as soon as the required changes are identified by the Project Sponsor for the Commission's consideration. Reports of changes such as budget increases, schedule delays and other factors that may represent an impediment to successful project delivery in accordance with the agreed-on scope, schedule, cost and funding must be accompanied by a Corrective Plan detailing the Project Sponsor's strategy to deliver the project or program within the proposed new parameters. Alameda CTC must accept the plan before future programming, allocations and reimbursements will be approved.

Final Report
The Project Sponsor must submit a final project delivery report of the completed project contained in a funding agreement. The final report must describe the completed scope of work, the final budget including spend down of all identified fund sources in the funding plan and any performance outcomes included in the funding agreement.

<u>Monitoring Project Sponsor Delivery and Accountability</u>
Alameda CTC will also monitor the Project Sponsor's ability to deliver a project as proposed. Project Sponsors are required to monitor and inform Alameda CTC if there are significant changes in project or program development, implementation schedule or budget. Project Sponsor's delivery record may be considered at future programming cycles or funding requests by the Project Sponsor. Failure to monitor performance or perform required expenditure audits may affect a Project Sponsor's eligibility to receive funding in future CIP update cycles.

Audits
Alameda CTC reserves the right to perform audits to confirm whether costs submitted for reimbursement are consistent with the provisions set forth in the applicable funding agreement(s). The audit may also include a review of

ACTC_AR3361

deliverables and outcomes to determine if they are consistent with the project scope and schedule in the funding agreement. Audits must also be performed for funding sources as described in the 2000 TEP and 2014 TEP.

Alameda CTC will periodically evaluate and summarize the project performance monitoring efforts conducted through the individual project and or comprehensive program updates to the Commission. This is intended to provide feedback on Alameda CTC's investments, including how the projects provided a benefit to the transportation system.

SECTION 1
COMPREHENSIVE INVESTMENT PLAN
PROGRAMMING PRINCIPLES

---

1. PURPOSE

The purpose of the Comprehensive Investment Plan (CIP) is to facilitate strategic programming and allocation of all fund sources under Alameda CTC's programming responsibilities. This includes funding from federal, State, regional, and local fund sources such as the Surface Transportation Program (STP) / Congestion Mitigation Air Quality Program (CMAQ), Lifeline Transportation Program, Transportation Fund for Clean Air Program (TFCA), local sales tax measures and vehicle registration fee programs.

To streamline programming of these funds sources, the CIP considers all available fund sources through a consolidated funding program that prioritizes, evaluates, and recommends funding to critical transportation infrastructure and operational needs that build and maintain the county's transportation system. The coordinated programming effort is also intended to minimize the number of funding applications required from Project Sponsors and prioritize investments to projects and programs ("projects") identified through countywide transportation planning efforts.

The purpose of the CIP programming principles established herein is to provide a framework for programming and allocation decisions made by the Alameda CTC to accomplish countywide transportation goals and objectives. The following five fundamental guiding principles have been identified:

1. Implementing Alameda CTC's adopted visions and goals
2. Balance strategic investments across project delivery phases
3. Maximize transportation investments
4. Investments in all modes and areas within Alameda County
5. Deliver solutions while ensuring accountability

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to create a uniform consolidation of historically separate programming goals and practices, where applicable, to more effectively coordinate funding towards highly beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

2. PROGRAMMING AND ALLOCATIONS PROCESS

The CIP includes a five-year programming window with a two-year allocation plan (i.e. the first two years of the five-year window).

The current programmed amount for a given project represents a commitment amount that is available for allocation when the programmed funds shift into the CIP's two-year allocation window. An allocated amount represents the amount available for encumbrance in project funding agreements and/or contracts, which are, in turn available for reimbursement of eligible costs.

All programmed funds are subject to the availability of funds, and current programming and allocation priorities.

The CIP programming and allocation process is as follows:

1. Alameda CTC will make programming and allocation recommendations to certain projects based on the available fund estimate for a given five-year CIP programming cycle.
2. Projects programmed within the first two-years of a given CIP will receive an allocation.
3. Projects with outer year programmed funds will receive an allocation in the fiscal year in which the funds were originally programmed, upon the Project Sponsor's allocation request through the CIP application process.
    - Allocation requests to advance outer programmed funds are subject to the availability of funds and Commission approval, as priority is given to projects with funds already allocated in the two-year allocation window.
4. Projects with outer year programmed funds that are not ready for an allocation may request to have the programming deferred to an outer CIP programming year by notifying Alameda CTC.

3. FUND SOURCES AND PROGRAMS

The CIP consolidates the programming and allocations of the various fund sources under Alameda CTC's purview. These sources are delineated into principle programs, where feasible, as identified on the table below. For example, 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Bicycle/Pedestrian funds are consolidated into a single Bicycle/Pedestrian Program. This provides greater coordination of similar funding types, requirements, and eligibilities to meet larger program goals and objectives. For all locally-funded programs (principle programs 1-10) a project-funding agreement between the Alameda CTC and Project Sponsor is required. For all other programs (principle programs 11- 13) Project Sponsors are required to enter into a funding agreement directly with the appropriate federal, State, or regional agency.

Principle Program	Fund Source & Investment Program
1. Bicycle/Pedestrian Program	Measure B (MB) Bike/Pedestrian Countywide Discretionary Fund Measure BB (MBB) Bike/Pedestrian Grant Program Measure BB (MBB) Three Major Trails Vehicle Registration Fee (VRF) Pedestrian-Bicycle Access and Safety Program
2. Transit Program	MB Express Bus MBB Innovative Transit Program (transit pass programs) VRF Transit for Congestion Relief Program

ACTC_AR3415

Principle Program	Fund Source & Investment Program
3. Transit Center for Development Program	MB Transit Center Development Program
4. Community Development Investment Program	MBB Community Development Investment Program
5. Paratransit Program	MB Special Transportation for Seniors and People with Disabilities "Gap Grant" Program MBB Coordination and Service Grants
6. Freight and Economic Development Program	MBB Freight and Economic Development MBB Countywide Freight Corridors
7. Technology, Innovation and Development	MBB Technology, Innovation, and Development
8. Local Streets and Roads (Arterials) Program	MBB Congestion Relief, Local Bridge, Seismic Safety
9. Highways Program	MBB Highway Capital Projects
10. Transportation Fund for Clean Air (TFCA)	TFCA Program
11. Lifeline Transportation Program (LTP)	State Transit Account (STA) Job Access Reverse Commute (JARC) and Surface Transportation Program (STP)
12. One Bay Area Grant Program (OBAG)	Surface Transportation Program (STP) and Congestion Mitigation and Air Quality (CMAQ)
13. State Transportation Improvement Program (STIP)	STIP

4. PROGRAMMING CAPACITY

Alameda CTC's programming capacity is limited to the funding anticipated to be available for projects included in the five-year programming and allocation horizon. Projects are programmed over a five-year period, with allocations to projects in the first two-years of the CIP window. Projects that exceed the five-year fiscally constrained CIP will be considered for inclusion in future CIP updates, and may receive priority consideration in the event a previously programmed commitment is unable to be delivered, or additional funding capacity is made available. Alameda CTC will provide a programming fund estimate as part of the CIP call for projects process.

5. PROGRAMMING PRIORITIES

Through the CIP, funds are prioritized to projects as follows:

a. Achieves Fundamental Programming Principles: The degree to which projects achieve the CIP's five (5) fundamental programming principles (*refer to Section 6 of CIP for details)*.
   1. Implementing Alameda CTC's adopted visions and goals
   2. Balance strategic investments across project delivery phases
   3. Maximize transportation investments
   4. Investments in all modes and areas within Alameda County
   5. Deliver solutions while ensuring accountability

b. Countywide Significance: Projects identified as a countywide priority, as an identified project, or along a transportation corridor, in Alameda CTC's Countywide Transportation Plan (CTP), Multi-modal Plans (Goods Movement, Arterial, and Transit), transportation

expenditure plans, and the Countywide Bicycle and Pedestrian Plans will receive higher priority consideration.

c. Readiness: Projects demonstrating higher state of construction readiness will receive higher priority consideration. Readiness includes technical and financial readiness such as completion of engineering, environmental and design studies, identification of risk-mitigation measures, secured funding towards project completion, feasible schedule, etc. Projects must be deliverable within the timeframe that funds are made available.

d. Fund Leveraging: Projects that leverage external funding commitments (such as federal and State discretionary funds) shall receive higher priority consideration.

e. Coordination and Support: The degree to which a project demonstrates coordination and support from multiple jurisdictions, agencies, and the community stakeholders throughout the planning and project implementation phases, and identification of commitments to maintain the improvements after completion.

6. ELIGIBLE APPLICANTS

a. Eligible applicants (direct recipients) of funds programmed through the CIP are limited to the following:

1. Cities of Alameda, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, Union City
2. County of Alameda
3. Transit agencies Altamont Corridor Express (ACE), Alameda-Contra Costa Transit District (AC Transit), San Francisco Bay Area Rapid Transit District (BART), Livermore Valley Transportation Authority (LAVTA), Union City Transit, and San Francisco Water Emergency Transportation Authority (WETA)
4. East Bay Regional Parks District (EBRPD)
5. Public school districts (K-12) in Alameda County *(exclusively for student transit pass programs)*
6. Alameda County Transportation Commission (Alameda CTC)
7. Private, non-profit organizations *(exclusively for programs targeted towards seniors and people with disabilities)*
8. Entities that are not identified specifically as eligible direct recipients will only be eligible to receive CIP funds as sub-recipients by partnering with an eligible direct recipient that is willing to pass through the funds to a sub-recipient. Exceptions allowing other entities to directly receive funds may be granted by Alameda CTC on a case-by-case basis.

b. Applicants must acknowledge and agree to comply with the specific requirements of the identified fund source and project funding agreement requirements prior to receiving funds programmed and allocated through the CIP.

c. Applicants must provide the expertise and staff resources necessary to successfully deliver projects within the constraints of the fund source requirements.

d. Applicants must identify and maintain a staff position that serves as the single point of contact for Alameda CTC programmed funds within that agency.

ACTC_AR3417

7. ELIGIBLE PROJECTS

Eligible CIP projects are as follows:

a. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.

b. Projects must be publicly accessible, and not only for private entity use.

c. Projects must be in and consistent with the most current adopted Regional Transportation Plan and the Alameda CTC's CTP.

d. Projects must meet the goals and objectives of the funding sources and funding programs.

- Projects funded with 2000 Measure B, 2014 Measure BB, and VRF monies must be consistent with eligible use of funds of the respective expenditure plans.
- Example requirements for federal funding include:
  - Compliance with the California Environmental Quality Act (Public Resource Code Section 21000 et seq.), the State Environmental Impact Report Guidelines (14 California Code of Regulations Section 15000 et seq.), and the National Environmental Protection Act (42 USC Section 4-1 et seq.) standards and procedures.
  - Completion of a Federal Transportation Improvement Program (FTIP) application through the Metropolitan Transportation Commission's Funding Management System.
- Potential funding eligibilities examples are identified on Exhibit A - Project Categories, Funding Eligibility, and Transportation Priorities.

e. Eligible capital infrastructure projects may include (but are not limited to):

- Local street and road improvements
- Bicycle and/or pedestrian infrastructure improvements include new facilities, parking/lockers, gap closure, and safety improvements
- Highway capital investments
- Freight, ferry, rail, and intermodal projects that facilitate the movement of goods, services, and people
- Transit infrastructure enhancements and expansion
- Safety or modernization improvements to transit centers, stations, or facilities,
- Transportation improvements that provide greater transit access for residents of low-income and disadvantaged communities
- Improvements that reduce greenhouse gas emissions
- Technology improvements such as intelligent transportation system, transit signal priority, innovative uses of technology as it pertains to improving the transportation system

f. Eligible non-infrastructure projects may include (but are not limited to):

- Bicycle and pedestrian master plans
- Feasibility or scoping only studies for capital projects
- Safe Routes to School program operations
- Crossing guard programs

- Safety education, training, enforcement, and promotional programs
- Transportation demand or traffic management programs
- Travel training and mobility management programs
- Transit or shuttle operations
- Transit incentive programs (including fare based)
- Bike share or rideshare programs

8. MINIMUM/ MAXIMUM AWARD AND MATCHING REQUIREMENTS

Project Type	Minimum Request	Maximum Request	Minimum Match
Capital Improvement	$250,000	$2,000,000	30% By Phase Requested
Programs and Transit/Shuttle Operations	$100,000 per year	$500,000 per year	75%
Plans/Studies	$100,000	$100,000	50%

The CIP will focus on comprehensive transportation projects that yield significant benefits to the countywide transportation system. In general, smaller projects or early project development (planning/scoping) activities that are able to be funded through local means (direct local distribution funds) will be a lesser priority for discretionary funding.

Project Sponsors shall provide the minimum match of Alameda CTC's administered funds requested by phase, unless otherwise stated by a particular program guideline.

9. MATCHING REQUIREMENTS

a. Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
b. Previously incurred costs or previously expended funds do not count towards fulling minimum matching requirement.
c. Named capital projects with identified specific funding commitments in the 2014 Measure BB Transportation Expenditure Plan are exempt from the matching requirements.
d. Projects funded with federal funds (such as STP/CMAQ) requires a non-federal local match. Non-federal sources for local match can include local sales tax, special bond measures, financial private donations, and other local revenues.
e. In-kind funding (non-cash contributions of time, goods and services, equipment, or space) will not count towards fulling the CIP matching requirement.
f. Alameda CTC may consider on a case-by-case basis exceptions to the matching requirement. Such exceptions may include exemptions for projects that provide considerable transportation benefits and/or projects that leverage significant transportation funds for the county.

ACTC_AR3419

10. ELIGIBLE PROJECT COSTS

Eligible costs for funds programmed through the CIP include

- Project development and preconstruction activities such as scoping level documents, preliminary study reports, feasibility studies, environmental documents, preliminary engineering and design work.
- Activities related to construction, rehabilitation, right-of-way acquisition, environmental mitigation, capital equipment acquisition.
- Program implementation, transit services, and shuttle operations.

All eligible costs for reimbursement must be in accordance with the policies and provisions set forth and described in detail in the "Eligible Costs for Reimbursement by Alameda CTC Policy".

Applicants are responsible for securing the necessary matching and for any additional funding needed to complete the project as a result of project cost increases, higher actual bid estimates, loss of funding, underestimated contingencies, and future maintenance costs.

11. FUNDING RESTRICTIONS

- Alameda CTC administered funds shall not supplant other committed funds.
- Alameda CTC will not be responsible to fund any cost overruns, cost increases, higher bid estimates, maintenance costs, or funding shortfalls beyond Alameda CTC's original programming and allocation commitment.
- 2000 Measure B Express Bus funds are only available to AC Transit and LAVTA.
- Programmed federal, State, and regional funds are subject to the requirements of the specific fund source, and may require Project Sponsors to enter into funding agreements directly with the authorizing agency.
- Reimbursement for eligible staff costs are limited to non-Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) recipients, unless otherwise agreed upon by the Alameda CTC with a project funding agreement for labor that includes direct staff implementation of a project activity. DLD recipients are expected to use DLD or other local funds to support staffing, contract management, and administrative costs associated with the project.
- Payments to fund recipients will be made on a reimbursement basis and after approval of submitted invoices. No reimbursements will be made prior to the execution of a project funding agreement with the Alameda CTC. Invoices are required to be submitted at least once every six months with required progress reports and completed task deliverables, unless otherwise authorized and approved by Alameda CTC.

12. SHUTTLE OPERATIONS FUNDING REQUIREMENTS

Funding for shuttle operations is strictly limited to shuttles which provide connections for first/last mile connections from regional transit facilities, transportation hubs, business districts, and employment centers. Paratransit services are not eligible for funding under transit eligible funding sources.

- Eligible applicants must be a public agency eligible to receive Alameda CTC funds.
- Shuttle service must be wholly located in Alameda County, available to general public, and serve multiple employers.
- Service routes within 0.5 mile radius from a major regional transit facility (BART station, major bus transfer station, or ferry terminal) will be given priority consideration.
- Applicants must provide a minimum match required for transit/shuttle operations.
- Service Operations Requirement
    - Shuttle service must not compete with existing fixed-route transit services provided by Alameda-Contra Costa Transit District, Livermore Amador Valley Transit Authority, or Union City Transit. A Letter of Concurrence from the appropriate transit agency, must be provided to affirm coordination with the transit agency, and acknowledge that the proposed shuttle program would not complete with existing or planned transit services.
- Funding Priority Considerations
    - Programs demonstrating long-term and local sustainability with matching funding consisting of 50 percent (50%) or more coming from private sources i.e. private business investment districts will be given priority consideration.
    - Ridership exceeding 500,000 annual boarding's, documented by existing service data or documented ridership projections will be given priority consideration.

13. FREIGHT RELATED PROJECTS FUNDING REQUIREMENTS

Funding for freight related projects is strictly limited to improvements that significantly contributes to the freight systems' economic activity or vitality; relieves congestion the freight system, improves the safety, security, or resilience of the freight system; improvements or preserves the freight system infrastructure; implements technology or innovation to improve the freight system or reduce or avoid its negative impacts; or reduces or avoids adverse community and/or environmental impacts of the freight system.

Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

14. PROJECT SELECTION CRITERIA

Project applications that meet the following screening criteria will be considered.

1. Consistency/identified within the most recently adopted Regional Transportation Plan and Countywide Transportation Plan.
2. Consistency/identified within the most recently adopted Countywide Bicycle and Pedestrian Master Plan *(applicable to bicycle/pedestrian improvements).*
3. Provide the minimum match of Alameda CTC's administered funds requested by phase.

ACTC_AR3421

The primary CIP project selection criteria are as follows:

1. Project Need and Benefits: Project clearly defines project needs and how proposed transportation improvement will benefit the intended users at a local and countywide level, and provide a usable segment (as applicable).

   Alameda CTC will consider key project merits and anticipated project performance such as (in no particular order):

   - Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
   - State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
   - Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.
   - Safety and Connectivity: Project's ability to foster a safe, connected, and accessible transportation system for multimodal movement of goods and people.
   - Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

2. Project Readiness: Project contains a well-defined funding plan, budget, and schedule. Project has no foreseeable implementation issues, has governing body approval, and is supported by the local community. Applicant clearly identifies the ability to coordinate among appropriate internal and external agencies, and has identified stakeholders. Project with a completed project study report or equivalent scoping document will receive a higher priority consideration for readiness.

3. Sustainability: Project application identifies funding sources and responsible agency for sustaining and maintaining the project beyond the funding period. Project is identified in a long-term development plan.

4. Matching Funds: Project has secured or committed funding from other funding sources outside of Alameda CTC's funding resources that is beyond the minimum matching requirement.

5. Other fund source specific criteria requirements: Project must meet the program requirements of specific fund sources, such as cost effectiveness calculations or proximity-connectivity to specific areas and user groups. These requirements are specific to the fund source and may change with each programming cycle.

ACTC_AR3422

Projects will be scored on a scale based on the project's expected outcomes and performance, project readiness, sustainability, and leveraging ability. Refer to Exhibit B – Project Selection Criteria for scoring weights for each project selection criteria category. Programming recommendations may not be based strictly on the scoring criteria alone. Consideration will be given towards the requirements of the various Alameda CTC administered fund sources, project delivery requirements, geographic equity, and countywide synergies of proposed improvements.

The project selection criteria will be applied by category mode (bicycle/pedestrian, transit, goods movement, highway, local streets and roads, transit operations, etc.) to provide a direct evaluation of similar investments to one another, i.e. transit projects to transit projects.

15. PERFORMANCE MEASURES AND MONITORING

Project Sponsors must identify and establish project goals, deliverables, and performance measures and intended outcomes that will measure the effectiveness of the investment. Performance measures will be established as part of a project funding agreement between Alameda CTC and the fund recipient.

a. For capital projects, performance indicators may include, but are not limited to, an evaluation of a project's ability to achieve CIP programming priorities, ability to meet specific funding program goals, and reporting on the status and implementation on the project delivery.
b. For operations, performance indicators may include the above, as well as quantifying and monitoring the number of trips, service hours, cost effectiveness, and outreach efforts.

16. POST ALLOCATION REQUIREMENTS

Project Sponsor whom are an awarded Alameda CTC Administered funding allocation are required

- Submit a governing body approval resolution that accepts Alameda CTC funds, confirms local matching commitments, project delivery strategy, and local support for the project in order to entered into a project funding agreement with Alameda CTC.
- Enter into a project funding agreement between the Alameda CTC for approved of allocations of Measure B, Measure BB, VRF, TFCA, and other funds under Alameda CTC purview. Agreements will include project scope, cost, schedule, performance measures, reporting requirements, publicity requirements, audit requirements, task deliverables, effective date of reimbursable costs, etc. The current agreement requirements are located here: https://www.alamedactc.org/app_pages/view/19025.
- Comply with Alameda CTC's Local Business Equity Program requirements: https://www.alamedactc.org/get-involved/contract-equity/

ACTC_AR3423

17. TIMELY USE OF FUNDS AND RESCISSION OF FUNDS

a. Projects must be started within a year of the schedule identified in the executed funding agreement that defines the date of eligible costs and reimbursements. Funds may be rescinded if a project is not started within the established time period.
b. Projects must be completed within three (3) years of the established initiation date, unless a different period is identified in the program guidelines or approved in advance by the Alameda CTC and incorporated into the funding agreement.
c. Projects receiving federal and State funds are to start and expend the program funds within the delivery timeframe required by federal funding requirements.
d. Projects are subject to the specific timely use of funds, policies and provisions pertaining to the specific fund sources allocated to the Project.
e. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds. If fund awards are withdrawn, allocations may be disencumbered from a funding agreement and removed from the CIP.
f. Rescinded funds will be returned to the program to be distributed in a future CIP cycle.

18. OTHER REQUIREMENTS

a. Program specific guidelines may supersede the requirements set forth in these CIP programming guidelines.
b. Programming and allocations actions made through the CIP are subject to the current policies and guidelines, as they may be created, revised, or amended from time to time.
c. Request for fund allocations for named 2014 Measure BB capital projects must be made prior to execution a funding agreement. The request for allocation must include at minimum a summary of project costs defined by phase and fund source, and a project schedule for each phase.
d. Alameda CTC may consider on a case-by-case basis exceptions to the programming requirements of the CIP programming principles and guidelines in the event of unanticipated programming actions/funding availability, or if a proposed project has extraordinary project merit, project synergies, or project delivery circumstances that if implemented will result in a significant countywide benefit.

This page intentionally left blank.

Exhibit A

Project Categories, Funding Eligibility, and Funding Eligibility

Projects will be separated into project categories by type as part of the project selection and evaluation process to prioritize projects relative to each other. The following table identifies CIP project categories, transportation priorities, and example funding eligibility.

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
1.	Transit Capital • Capital rehabilitation • Capacity expansion, stations, capital replacement • Safety and Access improvements • Transit Signal Priority (TSP) / Communications	1. Increase transit access and ridership 2. Regional projects in the expenditure plans 3. Projects/need identified in a transit plan 4. Increase frequency or reliability of service operations 5. Facilitates express bus services	X			X	X				X	X		X	
2.	Local Streets and Roads (Arterials) • Major Arterial Performance Initiative Program • Roadway Safety/Traffic Calming • Grade separations • Traffic Signals, ITS/CCTV installations and upgrade • Signal timing and coordination • Complete Streets and Streetscape • Coordination with freeways and ramps • Roadway/Pavement Rehabilitation • Sidewalk installation	1. Regional projects in the expenditure plans. 2. Projects/need identified in Multimodal Arterials Plan 3. Enhances multimodal connectivity and reliability, of transit, bicycle and pedestrian networks. 4. Provides congestion relief and increased mobility	X	X	X	X	X				X	X	X	X	X
3.	Bicycle and Pedestrian • Bike facilities (includes Class 1,2,3, and 4 facilities) • Bike storage capital costs (racks, lockers, cages) • Safety, gap closure, infrastructure improvements • Bicycle and Pedestrian Master Plans and updates • Safe Routes to School improvements/programs	1. Identified in a Countywide Bicycle/Pedestrian Plan 2. Regional projects in the Expenditure Plans 3. Closes gaps in local and countywide bicycle/pedestrian network. 4. Improves safety and connectivity by removing known barriers to access and connections to activity centers, schools, jobs, and transit 5. Bicycle/pedestrian master plans update to improve coordination	X	X		X	X	X				X

Exhibit B

Project Selection Criteria

Proposed projects will be scored on the basis of applicant responses to the following criteria, as applicable. Additional criterion may be included within this framework based on program needs and funding requirements.

A. READINESS DELIVERY CRITERIA The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the sponsor demonstrates coordination among internal and external agencies, as applicable.		
Index	*Criteria* (individual criterion evaluation scale High = 3 pts, Medium = 2 pts, and Low = 1 pt)	*Criteria Weight*
1.	Project Development Status *(not initiated, underway, complete)* • Status of planning and scoping documents • Status of environmental phase and clearances • Status of preliminary engineering & design phase • Status of right-of-way acquisitions	45
2.	Detailed Scope, Schedule, and Funding Plan • Defined project scope • Defined schedule and budget • Identified funding need to continue project development	
3.	Implementation Issues • Identified implementation issue(s) resolved or mitigated • Local community and governing body support • Coordination with partners	
	Subtotal	*45*

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
Index	*Criteria* (individual criterion evaluation scale High = 3 pts, Medium = 2 pts, and Low = 1 pt)	*Criteria Weight*
1.	Connectivity/Gap Closures • Expands the transportation system, network, or service • Enhances intermodal and multi-jurisdictional connectivity • Complements existing services (not duplicative)	45
2.	Access Improvements • Increases access to activity centers, central business districts, and employment centers • Serves transit dependent populations, communities of concerns, disadvantaged or vulnerable populations. • Improves transportation routes to schools • Serves a known or realistic level of demand in the community for transit services	
3.	State of Good Repair • Corrects a deteriorating condition/aging infrastructure • Addresses past deferred maintenance • Replaces capital assets that have exceeded their useful life	
4.	Technology and Innovation • Promotes innovative (non-traditional) elements for services	

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
	• Promotes vehicle technology or ITS coordination • Incorporates innovative design treatments to transportation projects	
5.	Multimodal Benefits • Identifies benefits to transit, bike, pedestrian, rail, and goods movement • Support multimodal transportation through coordination of improvements	
6.	Environmental Benefits • Promotes modal shifts that encourages less dependency on motorized transportation • Supports transit and/or transit access improvements • Supports housing and/or jobs adjacent to transit	
7.	Safety & Security • Identifies safety concerns • Increases public safety through a reduction of risk of accidents for vehicles, bicycles, and/or pedestrians • Identifies known safety issues with a proven countermeasure to address the conflicts	
8.	Economic Growth • Promotes job growth • Increases in economic growth as a result of improvements to freight corridors	
	Subtotal	*45*

C. MATCHING FUNDS CRITERIA Commits other funds beyond the minimum match		
Index	*Criteria* (evaluation scale 1 pt for every 5% match beyond minimum match requirement)	*Criteria Weight*
1.	Matching Funds • Commits other identified funds beyond the minimum match requirement for the phase of which funds are being requested.	10
	Subtotal	*10*

ACTC_AR3431

SECTION 2
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
ARTERIALS PROGRAM

PROGRAM SUMMARY

The Arterials Program includes discretionary funding from the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). This program aims to support the arterials in our community that serve as major commute routes for those traveling by transit, auto, bicycle, or foot, and enhance access to jobs, stores, and more through capital infrastructure investments, service operations, and innovative projects. This program focuses on improvements to major roads, bridges, freight corridors, or quiet zones.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Ten percent (10%) of the net revenue collected is dedicated to funding congestion relief, local bridge, and seismic safety type projects benefiting arterials and roadways that improve the mobility of transit riders, motorists, bicyclists, and pedestrians, as well as the movement of goods to stores and consumers within Alameda County.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to improve accessibility, enhance operational efficiencies, increase safety, and reduce congestion. Such activities include projects that remove bottlenecks, improve safety, enhance operations, and enhance alternatives to single occupant auto travel in key commute corridors.

As identified in the 2014 TEP, examples of investments and commute corridors eligible for funding include:

- *North County Major Roadways*: Solano Avenue Pavement resurfacing and beautification; San Pablo Avenue Improvements; State Route 13/Ashby Avenue corridor; Marin Avenue local road safety; Gilman railroad crossing; Park Street, High Street and Fruitvale Bridge replacements; Powell Street Bridge widening at Christie; East 14th Street improvements and Oakland Army Base transportation infrastructure improvements.

- *Central County Major Roadways:* Crow Canyon Road safety improvements, San Leandro local road resurfacing, Lewelling Road/Hesperian Boulevard improvements and Tennyson Road grade separation.

- *South County Major Roadways:* East-west connector in North Fremont and Union City, I-680/I-880 cross connectors, Fremont Boulevard improvements, upgrades to the relinquished Route 84 in Fremont, Central Avenue Overcrossing, Thornton Avenue widening, Mowry Avenue and Newark local streets.

- *East County Major Roadways:* Greenville Road widening, El Charro Road improvements, Dougherty Road widening, Dublin Boulevard widening and Bernal Bridge construction.

- *Countywide Freight Corridors:* Outer Harbor Intermodal Terminal at the Port of Oakland, 7th Street grade separation and roadway improvement in Oakland, as well as truck routes serving the Port of Oakland.

PROGRAMMING AND ALLOCATION PRIORITIES

The Arterials Program seeks to award projects that advance goals identified in the Countywide Multimodal Arterials Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide mobility along arterials. This program recognizes that concentrating improvements in key arterial corridors will improve access and efficiencies, increase safety, and reduce congestion. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Regional projects or corridors identified in the Transportation Expenditure Plan**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans.

2. **Projects aligned with needs established in the Multimodal Arterials Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Multimodal Arterials Plan.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.
4. **Enhance multimodal connectivity**: Priority consideration is given to projects that enhance the reliability, safety, and connectivity of transit, bicycle and pedestrian networks.

ACTC_AR3433

5. **Congestion relief and increased mobility**: Priority consideration is given to projects identified as significantly improving congestion on major commute corridors and facilitating connectivity and travel over multiple jurisdictions.

6. **State of Good Repair**: Priority consideration is given to projects that improve the conditions of existing transportation facilities or address conditions that would otherwise deteriorate if left unimproved.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance mobility, access, safety, and convenience in Alameda County. Arterials Program funds will be available for the example projects in projects that include, but are not limited to the following:

Capital Infrastructure

- Resurfacing and beautification
- Local road safety improvements
- Intersection enhancements
- Traffic/signal operation improvements
- Grade separations and railroad crossings
- Bridge replacements
- Cross connectors
- Truck route improvements
- Quiet zone enhancements
- Education, enforcement and promotion programs

INELIGIBLE PROJECTS

- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 3
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
BICYCLE AND PEDESTRIAN DISCRETIONARY PROGRAM

PROGRAM SUMMARY

The Bicycle and Pedestrian Discretionary Program includes the combined funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) that are available to bicycle and pedestrian improvements. This program aims to support enhanced access and safety for bicyclists and pedestrians through capital infrastructure investments, safety education, outreach promotion, and planning activities.

The 2000 Measure B, 2014 Measure BB, and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports projects which improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Five percent (5%) of the net revenue collected is dedicated to bicycle and pedestrian projects. The five percent (5%) is further separated into two distribution categories:

- 75 percent (75%) of the funds are formula Direct Local Distributions to Alameda County cities and County based on population; and
- 25 percent (25%) of the funds are distributed on a discretionary basis through the Measure B Bicycle and Pedestrian Countywide Discretionary Fund.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Eight percent (8%) of the net revenue collected is dedicated to bicycle and pedestrian infrastructure and safety projects that support projects that encourage people to bike and walk, as designated below:

- Three percent (3%) or $264 M is directed towards the Completion of Three Major Trails - Iron Horse Trail, Bay Trail, and the East Bay Greenway Corridor; and

- Three percent (3%) is formula allocated as Direct Local Distributions to Alameda County cities and County based on population; and
- Two percent (2%) of the funds are distributed on a discretionary basis through the Measure BB Bicycle and Pedestrian program for regional projects and trail maintenance. Funds in this category includes use for Countywide Bicycle and Pedestrian coordination.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF program began in May 2011. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Five percent (5%) of the VRF funds are dedicated to the VRF Pedestrian and Bicycle Access and Safety Program, which goal is to improve the safety of bicycles and pedestrians by reducing conflicts with motorized vehicles, create safety access to activity centers, and improve connectivity of the transportation network.

PROGRAMMING AND ALLOCATION PRIORITIES

The Bicycle and Pedestrian Discretionary Program seeks to award projects that advance countywide bicycle and pedestrian goals as identified in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and the Measure B, Measure BB, and VRF expenditure plans. The Alameda CTC's Countywide Bicycle and Pedestrian Plans identifies a priority vision system consisting of projects, corridors, and improvement initiatives that are the most significant from a countywide perspective. This priority system will guide and focus the programming and allocations of the bicycle/pedestrian program funds.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds during a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds during a given programming cycle may be used for non-infrastructure improvements including program operations, plans, and studies.

3. **Identified in the Countywide Bicycle and Pedestrian Plans**: Priority consideration is given to bicycle and pedestrian projects identified as a countywide priority in Alameda CTC's Countywide Bicycle and Pedestrian Plans.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans. This includes projects identified in the Alameda CTC's Measure BB Capital Project Delivery Plan.

ACTC_AR3437

5. **Gap Closure**: Priority consideration is given to projects that close gaps in local and countywide bicycle/pedestrian network.

6. **Safety and Connectivity**: Priority consideration is given to projects that improve connections to activity centers, schools, jobs, and transit by addressing and removing known barriers to access and connecting multiple jurisdictions and/or planning areas.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance bicycle and pedestrian access, convenience, safety and usage in Alameda County.

Bicycle and Pedestrian Discretionary Program funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Sidewalks and multi-use paths
- Bikeways and pedestrian facilities
- Crossing improvements (at intersections, interchanges, railroad, freeway)
- Bicycle and pedestrian signals
- Bicycle lockers, racks and parking facilities
- Signage, lighting, railing and other accessibility improvements for bicyclists/pedestrians
- Traffic calming devices
- Bicycle/pedestrian access improvements to and from transit facilitates, and schools
- Gap closure projects that link and build upon the existing bicycle/pedestrian network
- Bicycle/pedestrian components of complete streets and streetscape improvements
- Capital maintenance such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life.

Non-infrastructure

- Bicycle and Pedestrian Master Plans
- Feasibility or scoping only studies for capital projects
- Safe routes to school program operations
- Crossing guard programs
- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Routine maintenance of roadway facilitates with bicycle/pedestrian infrastructure

- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
- Ongoing facility operations (e.g. attended bicycle parking)

OTHER REQUIREMENTS/FUNDING RESTRICTIONS

Measure BB Funds – Completion of Three Major Trails

- Measure BB funds identified ($264 M) for the Completion of Three Major Trails Funds in the 2014 Transportation Expenditure Plan are limited to capital construction and/or capital maintenance projects that enhance the East Bay Greenway from Oakland to Fremont, Bay Trail Gap Closure and Access Projects, and Iron Horse Trail Gap Closure and Access Projects. Priority funding consideration is given to projects that directly enhance the regional bicycle/pedestrian transportation network pertinent to these three trails, and as envisioned and prioritized in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and other countywide plans.
    - Eligible projects
        - Capital infrastructure projects that address gaps and connectivity issues, safety and accessibility concerns, and capital maintenance needs such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life to and from these three major trails.
    - Ineligible projects
        - Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
        - Bicycle/pedestrian education, outreach, and promotional programs.

ACTC_AR3439

SECTION 4
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
COMMUNITY DEVELOPMENT INVESTMENT PROGRAM

PROGRAM SUMMARY

The Community Development Investment Program (CDIP) will support existing and new transportation infrastructure improvements that will enhance access and provide increased connectivity to and between job centers, schools, transportation facilities, community centers, and residential developments. Investments include capital projects, programs, plans and studies which serve to achieve the objectives of the CDIP, including but not limited to improvements to BART station facilities, bus transfer hubs, bicycle/pedestrian infrastructure, local streets and roads, and transit that facilitate transit-oriented growth.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plans.

FUND SOURCE

2014 Measure BB
Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. The 2014 TEP establishes a total of 4 percent of net sales tax revenue, for the development and implementation of the program. CDIP investments are intended to enhance access and safety around transit stations and hubs, and to support station area development and transit oriented development at the station areas listed in the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Community Development Investment Program seeks to award projects that advance access and connectivity to transit as identified in the Measure BB expenditure plan. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering community connectivity to transit, schools and job centers. In general, competitive projects are those that enhance connectivity from more than one specific planning area or jurisdiction in Alameda County.

ACTC_AR3440

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase Access and Connectivity:** Priority consideration will be given to projects that significant improve access and connectivity to transit, jobs and schools.

4. **Leveraging Funds**: Projects that demonstrate program sustainability by leverage and secure external funding commitments beyond the minimum matching requirement.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance access and safety around transit stations, hubs, and transit oriented development.

CDIP funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Transit station improvements including plazas, station access, pocket parks, parking facilities
- Local streets and road improvements including streetscape projects associated with high density developments and near transit facilities with sample elements such as pedestrian street lighting, bulb outs, crosswalk and sidewalk improvements, new striping for bicycle lanes and road diets, way finding signage and bus shelters.
- Bicycle and pedestrian improvements including bikeways and bike-transit facilities, bicycle/pedestrian paths and bridges, safe routes to transit, bicycle parking.
- Park-and-ride facility improvements
- Passenger rail station access and capacity improvements
- Development and implementation of transit priority treatments on local roadways
- Equipment and rolling stock such as equipment that is attached to a facility and integral to the benefit of the facility (i.e. EV charging stations)

Non-infrastructure

- Planning studies
- Feasibility or scoping only studies for capital projects
- Transit and shuttle operations
- Transit incentive programs (including fare-based)

ACTC_AR3441

- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Vehicle purchases and vehicle maintenance
- Studies that extend beyond Alameda County other than to establish contributing impacts
- Routine maintenance of capital facilities
- Promotional program giveaways including food, etc.
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Shuttle operations will be limited to a maximum award of $500,000 per year, and will require a 75 percent (75%) match.
- Plans and Studies will be limited to a maximum award of $100,000, and will require a 50 percent (50%) match.

ACTC_AR3442

This page intentionally left blank.

SECTION 5
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
FREIGHT AND ECONOMIC DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Freight and Economic Development Program includes discretionary funding from the 2014 Measure BB Program, which aims to develop innovative approaches to moving goods in a safe and healthy environment in support of a robust economy.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding improvements that support moving goods in a safe and healthy environment in support of a robust economy as part of the Traffic Relief on Highways Type (Highway Program) included in the 2014 TEP.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Enhance the safe transport of freight by truck or rail in Alameda County, including projects that reduce conflicts between freight movement and other types of transportation
- Improve reduction of greenhouse gas production in the transport of goods
- Mitigate environmental impacts of freight movements on residential neighborhoods
- Enhance coordination between the Port of Oakland, the Oakland Airport, and local jurisdictions for the purposes of improving the efficiency, safety, and environmental impacts of freight operations

ACTC_AR3444

PROGRAMMING AND ALLOCATION PRIORITIES

The Freight and Economic Development Program seeks to award projects that advance freight related goals identified in the Countywide Goods Movement Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide safety and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the Transportation Expenditure Plans. Funding from this category will be done in coordination with the Highway Program in the following section to support related transportation projects and corridor investments, where applicable.

2. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

3. **Projects aligned with needs established in the Goods Movement Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Goods Movement Plan.

4. **Reduce conflicts:** Priority consideration is given to projects that reduce conflicts between goods movement, passenger transportation, and local communities, and that improve safety.

5. **Improve goods mobility and economic development:** Priority consideration is given to projects that positively affect truck mobility and accessibility.

6. **Enhance coordination:** Priority consideration is given to projects that mitigate impacts on neighborhoods and enhance coordination between freight distribution centers.

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish the program's objective to improve mobility and coordination of freight and goods to and from Alameda County. Projects must directly address a specific freight coordination issue or goods movement need.

The Freight and Economic Development program will be available for projects that include, but are not limited to the following:

- Highway interchange improvements that address freight or passenger delays

ACTC_AR3445

- Technology programs that address smart operations and deliveries
- Rail infrastructure capacity improvements on freight rail lines
- Gateway infrastructure improvements
- Impact reduction programs
- Local truck route enhancements
- Goods movement planning support
- Quiet Zone Improvements
- Airport Facilities
- Truck vehicle parking
- Truck/port/freight/operations

INELIGIBLE PROJECTS

- Projects that do not directly benefit or facilitate freight and goods movement in Alameda County.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

ACTC_AR3446

This page intentionally left blank.

ACTC_AR3447

SECTION 6
PROGRAMMING/ALLOCATION GUIDELINES FOR 2014 MEASURE BB HIGHWAY PROGRAM

PROGRAM SUMMARY

The Highway Program seeks to implement projects as identified in the Measure BB 2014 Transportation Expenditure Plan (2014 TEP). The expenditure plan identifies specific highway and freight corridors and improvements on I-80, SR-84, I-580, I-680, and I-880 that would address infrastructure gaps and facilitate greater access, congestion relief and goods movement. The 2014 TEP identifies specific projects for each of the highway corridors in the amount of $600M, with an additional one percent (1%) of net revenue or approximately $77M specifically targeted towards improvements that improve goods movement. Projects were based on project readiness, local priority, and the ability to leverage current investment and funds. Alameda CTC aims to prioritize the specific investments that demonstrate an ability to move forward in project implementation and delivery. A number of eligible projects, or candidate projects will be selected for funding based on their contribution to maximizing the connectivity, reliability, and efficiency of the transportation system, while also providing congestion relief and facility improvements.

FUND SOURCES

2014 Measure BB

Measured BB, approved by Alameda County in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs that will be funded with the sales tax revenues. The 2014 TEP identifies $600 million for specific highway capital improvements with an additional one percent (1%) of net revenue or approximately $77 million, targeted specifically for the Freight and Economic Development Program that supports goods movement related improvements.

Funds will be periodically distributed by Alameda CTC for projects that will make the existing highway system safer, more efficient, and effective by:

- Removing bottlenecks at interchanges and other hot spots
- Improving efficiency by providing HOV/HOT/Express Lanes and operational improvements, and integrating Intelligent Transportation System (ITS) strategies
- Providing connectivity/accessibility between goods, markets, and employment centers
- Complementing other modes of transportation and integrating complete street features
- Completing gaps in the system
- Improving air quality by reducing pollution and greenhouse gas emissions

ACTC_AR3448

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

PROGRAMMING AND ALLOCATION PRIORITIES

The Highway Program seeks to award projects that improve the safety and efficiency of Alameda County's highway system, as specifically identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly towards addressing safety, access and infrastructure gaps, while also furthering countywide efficiencies and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the 2014 TEP and earmarked for certain Measure BB amounts. Priority consideration is provided to projects that are specifically named or referenced in the group category and that have already started various project development phases such as scoping, preliminary engineering, design, and environmental.

2. **Improve Safety:** Priority consideration is given to projects that improve safety among vehicles, bicycles and/or pedestrians, on major truck routes, and the safety of maintenance and operational workers.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Improve mobility and provide congestion relief:** Priority consideration is given to projects that positively affect transportation mobility and accessibility. This includes the removal of bottlenecks at the interchange locations and other hot spots identified, improving efficiency by providing additional capacity via HOV/HOT/Express and operational improvements, and reducing travel times (peak hour vehicle delays and average vehicle delays).

5. **Enhance Connectivity/Access Improvements**: Priority consideration is given to projects that provide connectivity and accessibility between goods and markets, ports, major businesses and employment centers

6. **System Reliability:** Priority consideration is given to projects that maximize connectivity, and provide congestion relief, gap closures, and contribute to improving environmental conditions i.e. air quality.

ACTC_AR3449

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish program's objectives to improve efficiency, remove bottlenecks, and increase access on the highway system to and from Alameda County. The Highway Program funds will be available for projects that include, but are not limited to the following:

- Highway projects and corridors identified in the 2014 TEP from the following investment categories:
  - I-80 Improvements
  - I-580 Improvements
  - I-680 Improvements
  - I-880 Improvements
  - I-880 Improvements
  - SR-84 Improvements
- Highway related improvements that provide congestion relief, increase safety, access, and enhances mobility of vehicles and goods movement operations.

INELIGIBLE PROJECTS

- Projects that do not directly benefit transportation in Alameda County.
- Projects that do not have a direct nexus or beneficial impact to the identified highway corridors.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

ACTC_AR3451

SECTION 7
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B AND 2014 MEASURE BB
PARATRANSIT DISCRETIONARY GRANT PROGRAM

PROGRAM SUMMARY

The Paratransit Discretionary Grant Program includes the discretionary funding from the 2000 Measure B and the 2014 Measure BB paratransit programs as a unified grant program. The 2000 Measure B and 2014 Measure BB funds shall be expended in accordance with the requirements of the guiding expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects and programs to improve the County's transportation system. Collections began on April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. A total of 10.45 percent (10.45%) of net MB revenue is directed towards projects intended for seniors and people with disabilities (Paratransit). The 10.45 percent (10.45%) is further split, as follows:

- 9.02 percent (9.02%) of net revenues are Direct Local Distributions (DLDs) to Alameda County cities, County and Transit Operators as follows:
    - 5.63 percent (5.63%) are DLDs directed towards the East Bay Paratransit Consortium (AC Transit and BART) for Americans with Disabilities Act (ADA) mandated paratransit services; and
    - 3.39 percent (3.39 %) are DLDs directed towards Alameda County cities and County for paratransit services based on a funding formula with population and other factors. The formula is recommended by the Alameda CTC's Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.
- 1.43 percent (1.43%) of net revenues are distributed on a discretionary basis, based on a funding recommendation by PAPCO and approved by the Commission. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

2014 Measure BB

Measure BB, approved by Alameda County voters in 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Ten percent (10%) of net revenue collected is dedicated to paratransit projects targeted towards seniors and people with disabilities (Paratransit), as follows:

ACTC_AR3452

- Six percent (6%) of net revenue is directed towards the East Bay Paratransit Consortium (AC Transit and BART) for ADA-mandated services.
- Three percent (3%) of net revenue are DLDs directed towards Alameda County cities and County for paratransit services, as follows:
    - A funding formula based on the percentage of the population over age 70 in each of four planning areas; and
    - Funds can be further allocated within each planning area to the individual cities based on a formula recommended by PAPCO and approved by the Commission.
- One percent (1%) of net Measure BB revenues are administered by the Alameda CTC and directed towards coordinating services across jurisdictional lines or filling gaps in the system to meet the mobility needs of seniors and people with disabilities. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

PROGRAM GOALS

Discretionary grant funding will be focused on mobility management types of activities that improve consumers' ability to access services, improve coordination between programs, and/or address gaps in the transportation system. The Program is designed to complement DLD funding which is dedicated to more traditional trip-provision services (e.g. taxi subsidies, door-to-door services, etc.). Mobility management activities aim to:

- Enhance people's travel options and access to services
- Promote awareness and education
- Effectively communicate/disseminate information to the public
- Improve coordination and partnerships
- Address critical gaps in the transportation system for seniors and people with disabilities
- Encourage seniors and people with disabilities who are able to use fixed-route public transit to do so
- Meet needs cost effectively and efficiently

Capital improvements and equipment purchases are also eligible if directly related to the implementation of mobility management and meet other criteria, e.g. transit stop improvements that support improving access to public transit for seniors and/or people with disabilities.

ACTC_AR3453

PROGRAMMING AND ALLOCATION PRIORITIES

Priority (in no particular order) is given to projects as follows:

1. **Identified in a Countywide or Regional Plan or Assessment:** Identified as a countywide and/or regional priority in a relevant plan or needs assessment such as the Alameda Countywide Transit Plan, Assessment of Mobility Needs of People with Disabilities and Seniors in Alameda County (Alameda County Needs Assessment), MTC Coordinated Public Transit-Human Services Transportation Plan (Coordinated Plan) or other relevant countywide or regional plan or needs assessment.
2. **Multi-jurisdictional Projects:** Identified projects that provide service across jurisdictional boundaries.
3. **Projects that provide critical, same-day accessible transportation service throughout Alameda County.**
4. **Other priorities** as recommended by PAPCO: PAPCO may periodically recommend other Program funding priorities.

ELIGIBLE PROJECTS

- **Mobility Management Type Programs**
  - Travel training
  - Trip planning assistance to improve access
  - One-Call/One-Click type programs
  - Volunteer driver programs
  - Coordination of service provision at the planning area level or countywide (separate from the cost of traditional trip provision, e.g. the administration costs for a planning area-wide program)
  - Transportation programs that fill unique and/or critical needs and gaps that are not filled through traditional trip-provision models

- **Capital Projects/Procurement**
  - Capital improvements and equipment purchases are eligible if directly related to the implementation of a project within an eligible category, including but not limited to:
    - Transit stop improvements that support improving access to public transit for seniors and/or people with disabilities
    - Accessible vehicle and equipment purchase
    - Capital projects to improve accessibility at shuttle stops.

This funding is not intended for ADA-mandated or City-based services that would traditionally be funded through DLD allocations. Sponsors are encouraged to submit programs that will benefit more than one city or otherwise illustrate advancement of coordination and mobility management goals.

Eligible projects must conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.

ACTC_AR3454

Refer to the *Implementation Guidelines for Paratransit Programs* for detailed eligibility requirements and service descriptions here: http://www.alamedactc.org/app_pages/view/19025.

INELIGIBLE PROJECTS

- Projects that do not conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.
- Capital projects, programs, maintenance, or operations that do not directly improve paratransit services.
- Using Program funds to replace/supplant other secured funding.

EVALUATION FRAMEWORK

PAPCO has historically supported projects and programs that:

- Demonstrate effectiveness at meeting mobility management goals
- Project sufficient demand for the program/service/project
- Are ready for implementation
- Provide service across jurisdictional boundaries
- Demonstrate coordination and collaboration with other service providers in their planning area
- Are effective, according to adopted performance measures and past performance (where applicable) or projected performance supported by substantive evidence of potential for success
- Are cost effective
- Leverage funds (including DLD reserves)
- Have been identified as a priority in relevant countywide or regional plans or needs assessments such as the Alameda Countywide Transit Plan, the Alameda County Needs Assessment, or the Coordinated Plan
- Support equitable distribution of resources throughout the County

PROGRAM REQUIREMENTS

Applicants should review requirements in the full CIP guidelines.

Maximum Grant Size
The maximum grant size is $500,000; there is no minimum grant size.

Minimum Matching Requirements
Minimum Matching requirements for applicants are as follows:

- Programs: 12% local match for DLD recipients, and 5% for non-DLD recipients.
- Plans and Studies: 50% local match
- Shuttle and transit operations: 50% local match
- “In-kind” costs are not eligible.

ACTC_AR3455

- Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
- DLD recipients must demonstrate a commitment to using their DLD reserves and new Measure BB DLD funds.
- Matching funds contributed to a project beyond the minimum required level may increase the competitiveness of the application.

Letter(s) of Support

All applicants must work in coordination with other service providers in their planning area. To demonstrate this support:

- Applicants must describe how they are coordinating with local jurisdictions, transit agencies, and non-profit organizations to fill service gaps and complement existing services.
- Non-profit organizations are required to provide a letter(s) of support from a local agency and/or transit provider to confirm service coordination and project support.
- All applicants are encouraged to provide letters from partners to demonstrate community support and coordination.

To establish partnerships, contact information for Measure B and Measure BB recipients of paratransit Direct Local Distribution (DLD) funds can be accessed at http://accessalameda.org/category/cities/.

Monitoring and Performance Measures

- Progress reports will be required every six (6) months illustrating program/project progress and funds spent.
- Applicants must identify program/project goals, deliverables, and performance measures that will be reported on in these progress reports.

RESOURCES

Resources for the 2020 CIP call for project nominations, including a link to the online application can be accessed from the Alameda CTC's website at: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3456

ACTC_AR3457

SECTION 8
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB AND VEHICLE REGISTRATION FEE
TECHNOLOGY, INNOVATION, AND DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Technology, Innovation, and Development Program includes the discretionary funding primarily from the 2014 Measure BB. However, funds identified for the Vehicle Registration Fee (VRF) Local Technology Program may be made available upon availability, at the discretion of the Alameda CTC, to meet the overall goals of the Technology, Innovation, and Development Program. Projects funded through the program shall support innovative development and application of technologies that enhance the performance of a multimodal transportation system.

The 2014 Measure BB and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding innovative approaches to meet the County's transportation vision, emphasizing the use of new and emerging technologies to better manage the transportation system. Successful models will receive the first priority for funding from this category.

Funds will be distributed periodically by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Increase utilization of non-auto types of transportation or to increase the occupancy of autos with the goal of reducing congestion, air pollution, and greenhouse gas production.
- Reduce transportation-related greenhouse gases through the utilization of a cleaner vehicle fleet including alternative fuels and/or locally produced energy.
- Use demand management strategies designed to reduce congestion, increase use of non-auto transportation, manage existing infrastructure and reduce greenhouse gas emissions.
- Inform consumers of their transportation choices and improve the efficiency or effectiveness of the county's transportation system.

ACTC_AR3458

- Manage parking supply to improve availability and utilization, and to reduce congestion and greenhouse gas production.
- Support environmental mitigation for transportation projects including land banking.

Grant awards will emphasize demonstrations or pilot projects which can leverage other funds.

Vehicle Registration Fee

Measure F, approved by Alameda County in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promotes the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies.

Five percent (5%) of net VRF funds are dedicated to the VRF Local Transportation Technology Program. This program aims to improve the performance of road, transit, pedestrian and bicyclist technology applications, and would accommodate emerging vehicle technologies such as electric and plug-in-hybrid vehicles. On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a Direct Local Distribution (DLD) program to the Alameda CTC. The goal of this policy is to create a reliable source of funding to support ongoing operational requirements and cost incurred by the Alameda CTC for technology related capital investments that benefit traffic corridors in Alameda County such as the "Smart Corridors Program" and other significant countywide technology programs implemented by the Alameda CTC.

PROGRAMMING AND ALLOCATION PRIORITIES

The Technology, Innovation, and Development Program seeks to award projects that contribute significantly to furthering countywide technological advancement and innovation related enhancing the transportation system through new and emerging research, assets, capital investments, applications, and technological based transportation strategies. In general, competitive projects are those that serve more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital projects for infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements program operations, shuttle operations, plans, and studies.

ACTC_AR3459

3. **New and Innovative Approaches**: Priority consideration is given to projects and programs that employ "out-of-the box" approaches to improving the transportation infrastructure and transit services.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the transportation expenditure plans. Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

5. **Increase transit access and ridership**: Priority consideration is given to projects and programs that promote access, use, and connectivity to the transit system and services in Alameda County and throughout the region, by identifying mobility-enhancing practices and technologies that promote multi-modal connectivity, provide transportation options, and improve the transit user's experience.

6. **Asset Innovation and Management**: Priority consideration is given to projects and programs ("projects") that identify innovative and sustainable use of transit vehicles, transit operations, and services including the employment of new technologies or technology-based strategies and partnerships.

7. **Enhance Efficiency of moving people and goods**: Priority consideration is given to projects that create greater mobility and reliability of the transportation system through the application of innovative technologies and practices that create sustainable movement of people and goods that increase economic vitality for the county.

8. **Increase in Safety**: Priority consideration is given to projects that increase safety of the transportation system through safety-enhancing practices, technologies, and programs.

ELIGIBLE PROJECTS

Eligible projects include planning, development, implementation, and maintenance of technology that will best serve Alameda County's transportation goals

Technology, Innovation, and Development Program funds will be available for projects that include, but are not limited to the following:

- Development, installation, operations, monitoring and maintenance of local street and arterial transportation management technology such as the "Smart Corridors Program", traffic signal interconnection, transit and emergency vehicle priority, advanced traffic management systems and advanced traveler information systems
- Infrastructure for alternative vehicle fuels such as electric and plug-in-hybrid vehicle stations

- New or emerging transportation technologies that provide congestion or pollution mitigation
- Technology implementation to improve freight system infrastructure, reliability, and/or to reduce community or environmental impacts related to freight improvements.
- Advanced signal technology for walking and bicycling
- Traveler information systems
- Advanced safety systems including infrastructure improvements that support vehicle-to-vehicle and vehicle-to-infrastructure communication, technologies associated with autonomous vehicles, and other collision avoidance technologies
- Mobile applications that facilitates greater transportation access, car sharing, and user ability (enhanced information availability, connectivity to transit, user experience).
- Advanced public transportation technologies that assist public transportation operators or other shared mobility entities in managing and optimizing public transportation and mobility services. This includes remote fleet monitoring systems, coordinated communication systems, and applications that support transit connectivity, data collection, information sharing, and mobility sharing.

INELIGIBLE PROJECTS

- Projects that do not directly benefit or are inaccessible to the public.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk, pursuant to Government Code Section 14525.3.

ACTC_AR3461

SECTION 9
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
TRANSIT PROGRAM

PROGRAM SUMMARY

The Transit Program includes the combined discretionary funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Express Bus and Transit. This program aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects. The 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee funds shall be expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple investments to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. 0.7 percent (0.7%) of the net revenue collected is dedicated to express bus service projects. The goal of the Express Bus Grant Program is to create, expand, and enhance express bus services, focusing on projects with countywide significance. Measure B funds will be available to fund eligible AC Transit and LAVTA projects only.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects ("projects") that will be funded with the sales tax revenues. 2.24 percent (2.24%) of the net revenue collected is dedicated to funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this funding category.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of

the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Twenty-five percent (25%) of the VRF funds are dedicated to the VRF Transit for Congestion Relief Program. The goal of the program is to make it easier for drivers to use public transportation, make the existing transportation system more efficient and effective, improve access to schools and jobs, decrease automobile usage and air pollution, and to provide countywide congestion relief.

PROGRAMMING AND ALLOCATION PRIORITIES

The Transit Program seeks to award projects that advance transit related goals identified in the Countywide Transit Plan and as identified in the Measure B, Measure BB, and VRF expenditure plans. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide access to and expansion of transit services. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase transit access and ridership**: Priority consideration is given to transit projects that promote access, use, and connectivity to transit services and the transit system in Alameda County and throughout the region.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the expenditure plans and Countywide Transit Plans (CTP).

5. **Projects aligned with needs established within the Transit Plan**: Priority consideration is given to projects that align with the goals and investment priorities within the Alameda CTC's Transit Plan or similar long-range planning studies.

6. **Reliability of Service Operations**: Priority consideration is given to projects that address regionally significant transit issues and maintain and improve reliability, frequency, and cost effectiveness of operational services.

ACTC_AR3463

7. **Express Bus Services**: Priority consideration is given to Express Bus Services that have countywide significance. In general, projects must service residents from more than one specific area or jurisdiction in Alameda County, or demonstrate how more than one area is served as a result of transit connections that go beyond one planning area.
   Express Bus Service is defined as either:
   a. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone, or
   b. Service that provides a simple route layout, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, signature identification of rapid bus such as color coded buses, stops, and enhanced stations.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance transit access, convenience, and service operations in Alameda County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

Transit Program funds will be available for projects that include, but are not limited to the following:

- Transit service expansion and preservation to provide congestion relief, such as express bus service in a congested area
- Development and implementation of transit priority treatments on local roadways
- Student transit pass programs identified through the affordable student transit program with models benefiting junior and high school youth riders
- Investments to improve the speed and reliability of transit operations
- Park-and-ride facility improvements
- Increased usage of clean transit vehicles
- Increased usage of low-floor transit vehicles
- Passenger rail station access and capacity improvements
- Routine bus maintenance
- Feasibility or scoping only studies for capital projects
- Safe routes to school operations
- Safety education, enforcement, and promotional programs
- Transit incentive programs (including fare-based)
- Express Bus Services including capital expenses and operations. Ongoing funding for express bus service operations is limited to transit operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

INELIGIBLE PROJECTS

- Routine bus maintenance

ACTC_AR3464

- Funding to replace funds for existing ongoing programs or transit operations
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Ongoing funding service operations is limited to operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

ACTC_AR3465

SECTION 10
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B
TRANSIT CENTER DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Transit Center Development Program (TCD) aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects.

Transit Center Developments refers to priority development areas (PDAs), transit villages, or transit oriented designs, a mixed-use residential or commercial area designed to maximize access to public transportation. The California Department of Transportation defines TCD or Transit Oriented Development (TOD) as "moderate to higher density development, located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping opportunities designed for pedestrians without excluding the auto. TOD can be new construction or redevelopment of one or more buildings whose design and orientation facilitates transit use." The 2000 Measure B funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple projects to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Approximately 0.19 percent (0.19%) of the net revenue collected is dedicated to the TCD Program. The goal of the TCD Program is to encourage transportation development near transit centers to facilitate and support the growth of transit oriented developments.

PROGRAMMING AND ALLOCATION PRIORITIES

The TCD Program seeks to award projects that advance TOD projects, and as identified in the 2000 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to facilitating residential and retail development near transit centers, and PDAs. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

ACTC_AR3466

Priority (in no particular order) is given to projects as follows:

1. **Support for Transit Oriented Developments or Priority Development Areas**: Priority consideration is given to activities that promote access, use and connectivity of transportation infrastructure that provides direct access to mixed use developments and housing near major transit facilitates in Alameda County.

2. **Consistent with the Expenditure Plan**: Priority consideration is given to projects that encourage the development of transit centers per the expenditure plan.

3. **Technical Assistance Program**: Priority consideration is given to a technical assistance program administered by the Alameda CTC, known as the Sustainable Communities Technical Assistance Program (SC-TAP), which supports jurisdictions in their technical planning efforts to complete studies and plans in a variety of topics that help advance TOD projects.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance the development of transit centers and transit oriented communities in Alameda County. The program goal is to fund projects that will best serve the County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

TCD Program funds will be available for projects that include, but are not limited to the following:

- Capital infrastructure projects that support access to and from transit villages
- PDA planning and implementation of projects
- Studies and plans, including technical assistance programs that address multimodal access and complete streets implementation, streetscape and urban design work, and implementation of transit communities, priority development areas, and the associated components
- Consultant services (through a technical assistance program) to complete specific planning, environmental review, and project development tasks

INELIGIBLE PROJECTS

- Project activities that do not support the development or implementation of transit oriented developments or to priority development areas

ACTC_AR3467

SECTION 11
PROGRAMMING/ALLOCATION GUIDELINES FOR
TRANSPORTATION FUND FOR CLEAN AIR (TFCA)
COUNTY PROGRAM MANAGER FUND PROGRAM

PROGRAM SUMMARY

The Transportation Fund for Clean Air (TFCA) County Program Manager (CPM) Fund is funding made available by the Bay Area Air Quality Management District (Air District) from revenue that is generated by a regional four dollar vehicle registration fee. TFCA funded projects are to result in the reduction of motor vehicle emissions and achieve "surplus" emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations. Projects typically funded with TFCA include shuttles, bicycle lanes and lockers, signal timing and vehicle trip reduction programs.

As the designated TFCA CPM for Alameda County, the Alameda CTC is responsible for programming 40 percent (40%) of the four dollar ($4) vehicle registration fee that is collected in Alameda County for this program. TFCA funds shall be expended in accordance with the requirements of the Air District's current TFCA CPM Policies, the Air District's adopted county expenditure plans and the provisions set forth in the annual TFCA CPM Master Funding Agreement between the Alameda CTC and the Air District.

FUND SOURCE

Transportation Fund for Clean Air
Pursuant to the 1988 California Clean Air Act, the Air District is required to periodically adopt a Clean Air Plan (CAP), which describes how the region will work toward compliance with State and federal ambient air quality standards and make progress on climate protection. To reduce emissions from motor vehicles, the CAP includes transportation control measures (TCMs) and mobile source measures (MSMs). A TCM is defined as any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions. MSMs encourage the retirement of older, more polluting vehicles and the introduction of newer, less polluting motor vehicle technologies.

To fund the implementation of TCMs and MSMs, the State Legislature, through AB 434 (Sher; Statutes of 1991) and AB 414 (Sher, Statutes of 1995), authorized the Air District to collect a fee of up to four dollars ($4) per vehicle per year, for reducing air pollution from motor vehicles and for related planning and programs. This legislation requires the Air District to allocate 40 percent (40%) of the revenue to an overall program manager in each county. The overall program manager must

ACTC_AR3468

be designated by resolutions adopted by the county board of supervisors and the city councils of a majority of the cities representing a majority of the population.

AB 414 references the trip reduction requirements in the Congestion Management Program (CMP) legislation and states that Congestion Management Agencies (CMAs) in the Bay Area that are designated as AB 434 program managers "shall ensure that those funds are expended as part of an overall program for improving air quality and for the purposes of this chapter (the CMP Statute)." The Air District has interpreted this language to allow a wide variety of transportation control measures as now eligible for funding by program managers, including an expansion of eligible transit, rail and ferry projects.

AB 414 also adds a requirement that designated county program managers adopt criteria for the expenditure of the county subventions and to review the expenditure of the funds. The content of the criteria and the review were not specified in the bill. However, the Air District has specified that any criteria used by a Program Manager must allocate TFCA funding to projects that are: 1) eligible under the law, 2) reduce motor vehicle emissions, 3) implement the relevant TCMs and/or MSMs in the Air District's most recently approved CAP , and 4) are not planning or technical studies.

PROGRAMMING AND ALLOCATION PRIORITIES

The Air District annually adopts policies for the TFCA CPM Fund. The current Air District TFCA CPM Policies further define eligible projects and establish criteria for calculating emissions reductions (i.e., TFCA cost-effectiveness). Projects that are authorized by HSC Section 44241 and achieve TFCA cost-effectiveness, but do not fully meet the Air District's current TFCA CPM policies are subject to Air District approval on a case-by-case basis.

Only projects that result in the reduction of motor vehicle emissions are eligible for TFCA funding. Projects must achieve surplus emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations at the time of the execution of a project-specific fund transfer agreement between the Alameda CTC and the Project Sponsor.

General Program Structure

As the designated CPM for Alameda County, the Alameda CTC is allocated 40 percent (40%) of the funds collected in Alameda County for this program. The Air District will advance these funds to the Alameda CTC in semi-annual installments each fiscal year. The Alameda CTC must fully program the TFCA revenue received each year within the Air District's allowable time period. Any unallocated funds may be reallocated by the Air District. The Alameda CTC will prepare an annual TFCA CPM Fund Estimate, as follows:

- A maximum of 6.25 percent (6.25%) of the annual revenue will be used directly by the Alameda CTC for program implementation and administration.
- The remaining 93.75 percent (93.75%) of funds will be distributed as follows:

ACTC_AR3469

- 70 percent (70%) of funds will be segregated into population-based shares for the cities and County:
  - A minimum of $10,000 to each jurisdiction.
  - City population will be updated annually based on the State Department of Finance (DOF) estimates.
  - The Alameda CTC may choose to roll over a city or the county's annual 70 percent (70%) allocation for programming in a future year.
  - The Alameda CTC may also borrow against the rolled over allocations in order to program all available revenues.
  - Unused funds from cancelled or completed projects are returned to the Project Sponsor's share of the fund estimate and are available for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for projects that are larger than the annual funds available.
- The remaining 30 percent (30%) of funds are to be programmed to transit-related projects on a discretionary basis:
  - Projects competing for the 30 percent (30%) discretionary funds will be evaluated based on the total emissions reductions projected as a result of the project.
  - Project prioritization may consider the TFCA cost-effectiveness evaluation, the emissions reductions per total project dollar invested for the project and the matching funds provided by the Project Sponsor.
  - Unused funds from cancelled or completed transit discretionary projects are returned to the 30 percent (30%) share of the fund estimate for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for transit-related projects that are larger than the annual funds available.

ELIGIBLE PROJECTS

Consistent with the project types authorized under the California Health and Safety Code (HSC) Section 44241, projects eligible for TFCA funds include:

- Implementation of rideshare programs;
- Purchase or lease of clean fuel buses for school districts and transit operators;
- Provision of local feeder bus or shuttle service to rail and ferry stations and to airports;
- Implementation and maintenance of local arterial traffic management, including, but not limited to, signal timing, transit signal preemption, bus stop relocation and "smart streets";
- Implementation of rail-bus integration and regional transit information systems;
- Implementation of demonstration projects in telecommuting and in congestion pricing of highways, bridges and public transit;

ACTC_AR3470

- Implementation of vehicle-based projects to reduce mobile source emissions, including, but not limited to engine repowers (subject to Air District approval on a case-by-case basis), engine retrofits, fleet modernization, alternative fuels, and advanced technology demonstrations;
- Implementation of smoking vehicles program;
- Implementation of an automobile buy-back scrappage program operated by a governmental agency;
- Implementation of bicycle facility improvement projects that are included in an adopted countywide bicycle plan or congestion management program; and
- Design and construction by local public agencies of physical improvements that support development projects that achieve motor vehicle emission reductions. The projects and the physical improvements shall be identified in an approved area-specific plan, redevelopment plan, general plan, or other similar plan.

INELIGIBLE PROJECTS

TFCA funds may not be used for:

- Planning activities that are not directly related to the implementation of a specific project;
- Routine maintenance;
- The purchase of personal computing equipment for an individual's home use;
- Projects that provide a direct or indirect financial transit or rideshare subsidy or shuttle/feeder bus service exclusively for the grantee's employees; or
- Costs of developing TFCA grant applications.

OTHER REQUIREMENTS

TFCA Cost Effectiveness

The Air District requires the evaluation of projects proposed for and completed with TFCA funding for TFCA cost-effectiveness. The Alameda CTC will measure cost-effectiveness based on the ratio of the TFCA cost divided by the sum total tons of emissions (reactive organic gases (ROG), oxides of nitrogen (NOx), and weighted particulate matter ten microns in diameter and smaller "PM10") that are estimated to be reduced by the project. For the purpose of calculating the TFCA cost-effectiveness, the TFCA project cost is the sum of the requested TFCA CPM Funds and any secured TFCA Regional Funds. Air District-generated forms are used to calculate a cost effectiveness result of $ TFCA/ton. The Alameda CTC will only approve projects with a TFCA cost effectiveness, on an individual project basis, that is equal to or less than either: 1) the standard threshold of $90,000 of TFCA funds per ton of total ROG, NOx and weighted PM10 emissions reduced ($/ton), or 2) another threshold as identified in the current Air District TFCA CPM Policies for the project type. Project Sponsors are required to provide the Alameda CTC with the data necessary to evaluate projects for TFCA cost-effectiveness. This may include, but is not

ACTC_AR3471

limited to, transit ridership, bicycle counts, verifiable survey data, vehicle data and results from comparable projects.

Attributes of Cost-Effective TFCA Projects

The following list includes the project attributes typically associated with successful candidate projects for TFCA funding:

- Project purchases or provides service using best available technology or cleanest vehicle (e.g., achieves significant petroleum reduction, utilizes vehicles that have 2010 and newer engines, is not a Family Emission Limit (FEL) engine, and/or have zero tailpipe emissions).
- Project is delivered or placed into service within one year and/or significantly in advance of regulatory changes (e.g., lower engine emission standards.).
- Project requests relatively low amount of TFCA funds; Grantee provides significant matching funds.
- Project is associated with a multi-modal transit center, supports high-density mixed-use development or communities.
- For vehicle trip reduction projects (e.g., bike facilities, shuttle/feeder bus service and ridesharing projects):
    - Project provides service to relatively large percent of riders/participants that otherwise would have driven alone over a long distance.
    - Project provides "first and last mile" connection to between employers and transit.
    - Service travels relatively short distances between start and end point/ and has relatively low mileage and a minimal amount of non-service miles. Shuttle operates on a route (service and non-service miles) that is relatively short in distance.
- For vehicle-based projects:
    - Vehicle has high operational use, annual mileage, and/or fuel consumption (e.g., taxis, transit fleets, and utility vehicles).
- For arterial management and smart growth projects:
    - Pre- and post-project counts demonstrate high usage and a potential to affect mode or behavior shift that reduces emissions.
    - Project demonstrates a strong potential to reduce motor vehicle trips by significantly improving mobility via walking, bicycling, and improving transit.
    - Project is located along high volume transit corridors and/or is near major activity centers such as schools, transit centers, civic or retail centers.

TFCA Expenditure Period

TFCA funding is subject to a TFCA expenditure period. In general, the Air District TFCA CPM Policies allow for a two-year expenditure period unless a longer expenditure period is established at the time of programming. For projects that provide a service, such as ridesharing

programs and shuttle/feeder bus projects, the TFCA grant period is limited to not more than two (2) years for operations, except for bike share (Bay Area Bike Share) projects, which have a TFCA grant period of up to five (5) years. To receive TFCA funding in subsequent funding cycles, all operations projects must be re-evaluated for TFCA cost effectiveness based on the most current project data. The Alameda CTC may approve no more than two one-year extensions to the TFCA expenditure period. Subsequent extensions are granted on a case-by-case basis by the Air District.

ACTC_AR3473

SECTION 12
PROGRAMMING/ALLOCATION GUIDELINES FOR
STP/CMAQ FUNDS
ONE BAY AREA GRANT (OBAG) CYCLE 2 PROGRAM

PROGRAM SUMMARY

The One Bay Area Grant Program Cycle 2 (OBAG 2) is the second round of the federal funding program designed to support the implementation of Plan Bay Area, the region's first Sustainable Communities Strategy (SCS). OBAG 2 covers the five-year period from FY 2017-18 to FY 2021-22.

The OBAG 2 program continues to integrate the region's federal transportation program with California's climate statutes and the SCS, and contributes to the implementation of the goals and objectives of the Regional Transportation Plan. Overall, the OBAG 2 Program goals include:

- Support the SCS by linking transportation dollars to land use decisions,
- Target transportation investments to support Priority Development Areas (PDAs), and
- Select transportation projects for funding based on Alameda County's PDA Investment and Growth Strategy.

MTC's Resolution 4202 (December 2016), the OBAG 2 project selection criteria and programming policy, identifies revenue estimates, project categories, and general and county programming policies and deadlines.

FUND SOURCES

OBAG 2 funding is based on anticipated future federal transportation program apportionments of Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) funding from the recently passed Fixing America's Surface Transportation (FAST) Act and its predecessor, Moving Ahead for Progress in the 21st Century (MAP-21) Act. The STP and CMAQ programs are the primary federal funding sources distributed to regions for transportation and can fund a variety of project types, including public transit, bicycle and pedestrian and local road and highway projects.

PROGRAMMING AND ALLOCATION PRIORITIES

As established in MTC Resolution 4202, OBAG 2 covers the five-year period from FY 2017-18 to FY 2021-22. At least 70 percent (70%) of OBAG 2 funds is to be programmed towards eligible PDA supportive Transportation Investment Projects. The purpose of PDA supportive transportation investments is to support community based transportation projects that promote new vibrancy to downtown areas, commercial cores, high density neighborhoods, and transit corridors, enhancing

ACTC_AR3474

their amenities and ambiance and making them places where people want to live, work and visit. This category supports the RTP/SCS by investing in improvements and facilities that promote alternative transportation modes.

ELIGIBLE PROJECTS

OBAG 2 will be available for projects and programs that include, but are not limited to the following:

- Planning and Outreach Activities
- Local Streets and Roads Preservation
- Bicycle and Pedestrian Improvements
- Transportation for Livable Communities
- Safe Routes to School
- Priority Conservation Areas
- Federal Aid Secondary (FAS) Improvements

OTHER REQUIREMENTS

MTC Program Requirements

MTC's Resolution 4202 (December 2016) (http://mtc.ca.gov/sites/default/files/RES-4202_approved_1.pdf) include:

- OBAG 2 funding is subject to the provisions of the Regional Project Delivery Policy (MTC Resolution 3606, or its successor) including the deadlines for Request for Authorization (RFA) submittal and federal authorization/obligation.
- At least half of the OBAG 2 funds must be obligated (federal authorization/FTA transfer) by January 31, 2020. All remaining OBAG 2 funds must be obligated by January 31, 2023.
- In general, capacity in the first year is to be prioritized for on-going activities such as CMA planning, non-infrastructure projects and the Preliminary Engineering (PE) phase of projects, followed by the capital phases of projects in later years.

Alameda CTC Program Requirements

In addition to conforming to the Alameda County OBAG 2 Programming Guidelines (2018 CIP Appendix J, Section 12), the project evaluation and program development for OBAG 2 conforms to the following:

- Alameda CTC's 2018 CIP Programming Principles (2018 CIP Appendix J, Section 1),
- Overall CIP and OBAG-specific evaluation criteria (2018 CIP Appendix J, Section 1),
- Alameda County OBAG 2 Principles (July 2016) (http://www.alamedactc.org/files/managed/Document/19310/6.6_Combo.pdf) and
- Alameda CTC's PDA Investment and Growth Strategy (update scheduled for May 2017) (http://www.alamedactc.org/app_pages/view/10385)

Additional information related to the programming of OBAG 2 funds, including PDA maps, is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3475

SECTION 13
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSIT ASSISTANCE
PROGRAM

PROGRAM SUMMARY

State Transit Assistance (STA) funds are generated by the sales tax on diesel fuel, and the amount of money available for transit agencies varies from year to year based on the ups and downs of diesel prices. The State splits the STA program into two components:

Population-based funds: Metropolitan Transportation Commission receives STA based on our share of the population. The use of these funds is governed by MTC Resolution 4321 which established a STA County Block Grant Program whereby the nine Bay Area Congestion Management Agencies determine how to invest the funds in public transit services/projects.

Link to MTC Resolution 4321: https://mtc.ca.gov/sites/default/files/MTC_ResNo_4321_STA_Pop-Based_Funds.pdf

Operators have full discretion over the use of TDA and most of STA apportioned to them. Funds may be used by transit operators for both capital projects and transit operations. For most smaller transit agencies, TDA and STA are their main sources of operating funds.

ACTC_AR3476

This page intentionally left blank.

ACTC_AR3477

SECTION 14
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSPORTATION IMPROVEMENT PROGRAM

PROGRAM SUMMARY

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. The STIP is composed of two sub-elements: 75 percent of STIP funds go toward the Regional Transportation Improvement Program (RTIP) and 25 percent go to the Interregional Transportation Improvement Program (ITIP).

Alameda CTC adopts and forwards a program of RTIP projects to the Metropolitan Transportation Commission (MTC) for each STIP cycle. As the Regional Transportation Planning Agency for the nine-county Bay Area, MTC is responsible for developing the regional priorities for the RTIP. MTC approves the region's RTIP and submits it to the California Transportation Commission for inclusion in the STIP. The California Department of Transportation is responsible for developing the ITIP.

Principles for the Development of the Alameda County 2018 STIP Project List
(Previously approved October 26, 2017)

- It is anticipated that any new funding programmed in the 2018 STIP will be made available in FYs 2021/22 and 2022/23.
- Previously-approved commitments for STIP programming, included in the attached list, will be considered during the development of the 2018 STIP project list.
- Sponsors of currently programmed projects will be required to provide updated project scope, status, schedule, cost and funding information.
- Any project considered for funding must be consistent with the Countywide Transportation Plan and satisfy all STIP programming requirements.
- Projects recommended for STIP funding must demonstrate readiness to meet applicable STIP programming, allocation and delivery requirements and deadlines.
- Consideration of the following are proposed for the required project prioritization for the development of the 2018 STIP project list:
    - The principles and objectives set forth in the Alameda CTC Comprehensive Investment Plan;
    - Previous commitments for STIP programming approved by the Alameda CTC;
    - Projects that can leverage funds from other SB1 programs
    - The degree to which a proposed project, or other activity intended to be funded by transportation funding programmed by the Alameda CTC, achieves or

ACTC_AR3478

advances the goals and objectives included in the Countywide Transportation Plan;

- The degree to which a proposed project has viable project implementation strategies that are based on current project-specific project delivery information provided by applicants, including:
  - Readiness for the current/requested project delivery phase;
  - The status of environmental clearance;
  - The project cost/funding plan by phase;
  - The potential for phasing of initial segment(s) which are fully-funded and provide independent benefit; and
  - Potential impediments, i.e. risks, to successful project implementation in accordance with the proposed project delivery schedule.

Additional information related to the programming of the State Transportation Improvement Program is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3479

SECTION 15
PROGRAMMING/ALLOCATION GUIDELINES FOR
REGIONAL MEASURE 3 PROGRAM

PROGRAM SUMMARY

To help solve the Bay Area's growing congestion problems, the Metropolitan Transportation Commission (MTC) worked with the state Legislature to authorize a ballot measure that would finance a comprehensive suite of highway and transit improvements through an increase tolls on the region's seven state-owned toll bridges. Senate Bill 595 (authored by Sen. Jim Beall of San Jose) was passed by the Legislature and signed into law by Gov. Brown in fall 2017.

Toll revenues will be used to finance a $4.45 billion slate of highway and transit improvements in the toll bridge corridors and their approach routes.

Major projects in the RM 3 expenditure plan include new BART cars to accommodate growing ridership; extending BART's Silicon Valley service to Santa Clara; extending Caltrain to downtown San Francisco; expanding S.F. Muni's transit vehicle fleet; more frequent transbay bus service; interchange improvements in Alameda, Contra Costa and Solano counties; an expanded express lane network; expanded ferry service; a direct freeway connector from northbound U.S. 101 in Marin County to the Richmond-San Rafael Bridge; upgrades to relieve congestion in the Dumbarton Bridge corridor; improving State Route 37; extending the new SMART rail system to Windsor and Healdsburg and much more.

Voter approval of RM 3 raised tolls on the region's state-owned toll bridges by $1 beginning Jan. 1, 2019. Tolls will rise by another $1 in January 2022 with another $1 increase in January 2025. The 2019 increase marked the first toll hike on the seven state-owned bridges since 2010.

ACTC_AR3484

POLICY 1: PROCEDURES FOR PROGRAMMING AND ALLOCATIONS

POLICY: The Alameda County Transportation Commission (Alameda CTC) has programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard procedures set forth herein.

Programmed funds in the Comprehensive Investment Plan (CIP) represent a commitment of funds to a Project Sponsor. Programmed funds are not available for expenditure unless and until Alameda CTC approves an allocation of the programmed amount. Only after allocation can funds be encumbered through funding agreements between Alameda CTC and the Project Sponsor, or for Alameda CTC-sponsored projects through contracts for costs to be incurred directly by Alameda CTC.

PURPOSE: Alameda CTC makes programming recommendations for the Alameda County shares of certain local, regional, state and federal funds. The purpose of this policy is to establish standard definitions and procedures by which Alameda CTC exercises its programming and allocation authority. The programming and allocation procedures for each of the fund sources within the purview of Alameda CTC are consolidated through the CIP to standardize the programming and allocation process to the extent practical for such fund sources, while maintaining compliance with the requirements for individual fund sources.

GUIDELINES: Programmed funds are adopted into the applicable programming document by the governing board of the agency or Commission with statutory authority for the administration of the fund program.

Alameda CTC administers the following local, voter-approved funding programs:

- The 1986 Measure B Program;
- The 2000 Measure B Program;
- The 2010 Vehicle Registration Fee Program; and
- The 2014 Measure BB Program.

The commitments from the local, voter-approved funding programs are established in the expenditure plans included in the ballot measure language for each program. The 1986 Measure B, 2000 Measure B, 2010 Vehicle Registration Fee and the 2014 Measure BB expenditure plans each include a set of commitments to fund the programs and projects listed in the plan. The Strategic Plan prepared for each of the individual funding programs confirms the funding commitments, allocated amounts, and the plan for future allocations. The Strategic Plan also functions to guide programming and

ACTC_AR3485

allocation for the individual fund sources to priority transportation investments based on a set of guiding principles.

Alameda CTC also administers the programming and allocation process for the Transportation Fund for Clean Air (TFCA) County Program Manager Fund in compliance with the requirements of the Bay Area Air Quality Management District (BAAQMD), which delegates the programming and allocation administration to Alameda CTC.

Alameda CTC also makes programming and allocation recommendations for other fund sources such as the State Transportation Improvement Program (STIP), Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) Program (through One Bay Area Grant program), and other funds as they become available to Alameda County, that are contingent upon final approval by the respective governing boards of the agencies with programming authority e.g., Metropolitan Transportation Commission (MTC) and/or California Transportation Commission (CTC).

By definition, programmed amounts for a given project represents the amount committed to the project, subject to allocation. An allocated amount represents the amount available for encumbrance through project funding agreements and/or contracts directly with Alameda CTC. Funds encumbered through project funding agreements and/or contracts are available for reimbursement of eligible project costs. These definitions are expanded with specific procedural considerations below:

- *Commitment Amount:* The Expenditure Plan contains the commitment amount of funds for the local, voter-approved funding programs administered by Alameda CTC. Commitment Amounts for the local, voter-approved funding programs are confirmed in the Strategic Plan appendices to the CIP.

- *Programmed Amount:* The CIP serves as the programming document for the fund sources administered by Alameda CTC.

    - Programmed Amounts approved in the CIP for the local, voter-approved funding programs are based on the Commitment Amounts and the requirements included in the Expenditure Plan for the specific funding program.

    - Programmed Amounts approved in the CIP for the TFCA County Program Manger Fund are based on the programming and allocation process administered by Alameda CTC in accordance with BAAQMD requirements.

ACTC_AR3486

- Programmed Amounts shown in the CIP for fund sources not directly administered by the Alameda CTC may be included for informational purposes to reflect the current programming information available from the agency with the statutory programming authority for the fund source.

- Programmed Amounts are typically approved for a specific project phase in a specific fiscal year. Funds programmed in specific fiscal years are required to be allocated by the end of the fiscal year in which the funds are programmed. Changes to Programmed Amounts require amendments to the CIP.

- *Allocated Amount:* The CIP five-year programming window includes a two-year allocation plan (i.e., the first two years of the five-year window). The CIP Allocation Plan shows the Allocation Amounts approved by Alameda CTC for the funds administered by Alameda CTC and anticipated allocations to be approved by other agencies.

    - Allocated Amounts shown in the CIP for the local, voter-approved funding programs are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action).

    - Allocated Amounts shown in the CIP for the TFCA County Program Manager Fund are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action, or if the Allocated Amount shown is dependent on a future programming approval).

<u>Request for Allocation Process</u>

Requests for allocation package may consists of a funding application in the form of a CIP funding application or a specific request for allocation for a named project in the Transportation Expenditure Plans. The amount of funding available for allocation to a given project, or project phase, is limited by the Programmed Amount for the project, or project phase, at the time of the allocation request.

Requests for any allocations for Alameda CTC-administered funds should be submitted to Alameda CTC at least 60 days prior to the Alameda CTC meeting at which the Project Sponsor requests the allocation to be approved, or the meeting at which the CIP will be approved. The request for allocation package shall be in a format provided by Alameda CTC or a format that at minimum

ACTC_AR3487

includes details about the program or project scope, cost, funding and schedule detailed by phase. The request package shall reflect total cost and funding amounts based on progress to date at the time of the request.

Requests for allocations received by Alameda CTC will be considered in the context of the CIP in effect at the time of the request. Alameda CTC reviews allocation requests to confirm items such as financial viability, project delivery readiness, funding availability to reimburse eligible project costs. If conditions warrant a review of the assumptions used for the most recent overall financial analysis, an updated overall financial analysis may be required to determine whether or not the requested allocation would have an adverse impact on commitments of funds to other projects.

Allocations, or modifications to allocations, are approved by Alameda CTC based on staff recommendations and allocation requests submitted by Project Sponsors typically through the annual/biennial CIP programming and allocation processes.

Allocated Amounts approved by Alameda CTC must be encumbered in funding agreements with Project Sponsors or in contracts for project costs incurred directly by Alameda CTC, in accordance with the CIP's policy for Timely Use of Funds Allocated by the Commission.

Allocation Considerations for Partially Fund Projects and Right-of-Way Phases

Funding allocations for phases beyond the environmental phase are considered at increased risk if a Project Sponsor has not identified or secured funding for all phases to complete the project funding plan.

Prior to making an allocation to a project with a known funding shortfall, Alameda CTC will perform risk analytics on the request funding and the project prior to making such allocation recommendation to the Commission. In this risk assessment, Alameda CTC will consider the project's and Project Sponsor's potential to use Alameda CTC funds to leverage and secure prospective funding from federal, State, regional, and local sources outside of Alameda CTC's purview, and the project's viability to be completed in a timely manner.

Right-of -Way Allocations shall be limited to projects that have a complete and viable project funding and delivery plan as assessed for firm funding commitments/partners and tangible plan to address identified project deliverability issues.

ACTC_AR3488

Right-of-Away Allocations to projects that contain funding shortfalls, uncertain project funding plans, and/or potential issues in project delivery are considered high risk, and will only be considered under very rare circumstances. Such right-of-way allocations must have an agreed understanding on how the Project Sponsor shall return the right-way-allocation to Alameda CTC for a project that has not in a entered into the construction phase, and/or for a project that is not completed in an established timeframe.

The agreed upon terms, including methods of repayment in arrears, shall be included with the Request for Allocation package submitted to Alameda CTC for consideration, will be subsequently be the basis for a fund agreement between Alameda CTC and the Project Sponsor.

Changes to Approved Allocations

A request to increase or decrease an Allocation Amount requires a written request by the Project Sponsor.

- *Increasing Allocations*: Request for an increase to an allocation is on a case-by-case basis for extraordinary circumstances, and subject to Commission approval. To increase the total amount of an allocation there must be sufficient capacity in the committed amounts for voter-approved expenditure named projects, programming/funding capacity, and reasonable justification for increasing the allocation amount.

- *Decreasing Allocations*: For projects named in the voter-approved Expenditure Plans, a reduction to an Allocated Amount will be credited back to the project for future reallocation to the project. Periodically through the CIP, Alameda CTC will deallocate unused funds related to project cost savings, fund rescissions, or inactive/infeasible project delivery.

- *Shifting Allocations Between Phases*: Funds allocated to a project by Alameda CTC may be shifted between the approved allocations are considered on a case-by-case basis. Requests for shifting allocated funds shall include updated project information that reflects the requested shift and allows for a before-and-after comparison of the project implementation plan. Funding shortfalls in the current or subsequent phases, which result from a requested shift of allocated funds shall be considered an adverse impact to implementation.

  Requests for shifting funds between allocations which do not change the total amount allocated to the project from an individual funding

ACTC_AR3489

program, e.g. Measure B, Measure BB or VRF, may be approved by the Executive Director, or a designee of the Executive Director, if the shift will not adversely impact the implementation of the project. Any requests for shifting funds between project phases that results in the amount changed the allocation amount from an individual funding program, e.g. Measure B, Measure BB or VRF, shall require consideration and approval by the Commission.

Effective Date of Reimbursable Costs

The effective date of reimbursable costs is generally based on the start of the fiscal year in which the allocated funds are identified in the CIP. The amounts shown in the first two fiscal years of the CIP for fund sources allocated by Alameda CTC shall be considered allocated in the fiscal year shown for the phase(s) of the project indicated upon approval of the CIP (if not already approved by Alameda CTC through a separate action).

For allocations made through a separate Commission Action, the effective date of reimbursable cost shall be the date of the Commission's approval, unless otherwise stated in the approved allocation request.

Funds administered by agencies other than Alameda CTC, such as the CTC, MTC, or the Federal Highway Administration (FHWA), must be approved by the agency that administers the particular fund source prior to being available for reimbursable costs.

Retroactive Allocations

Generally, funds are allocated for cost to be incurred after the allocation is approved by the Commission. On a case-by-case basis, Alameda CTC may consider identify a retroactive allocation to allow the eligible date of reimbursable cost incurred to be prior to the allocation date.

Approval of retroactive allocations shall be based in large part on which fund sources were used to reimburse the costs originally, and to what purpose, if any, the freed up funding will be committed. There are also certain requirements related to the procurement process and methodology for contracts funded wholly, or in part, by voter-approved funds. Any costs intended for the retroactive allocation for contracts that do not comply with the goal setting requirements set forth in Alameda CTC's Local Business Contract Equity Program (LCBE) must be identified in the Request for Allocation package and determined eligible for Measure BB funding. If a retroactive allocation of Measure BB funds is approved to cover contract costs in arrears, the reporting requirements set forth in the LBCE Program shall apply to the entire contract from inception to date.

ACTC_AR3490

POLICY 2: ENVIRONMENTAL APPROVAL AND FULL FUNDING FOR MEASURE B/MEASURE BB FUNDED CAPITAL PROJECTS DEADLINE

POLICY: Capital projects funded wholly, or in part, by Measure B and/or Measure BB shall receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements as required by the Expenditure Plan for each measure.

- For the 2000 Measure B, there are no projects remaining that are subject to this policy as deadlines occurred in previous years.
- For the 2014 Measure BB, named projects must receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements by December 31, 2022. Project Sponsors may appeal to Alameda CTC for one-year time extensions.

PURPOSE: To ensure that the projects included in the 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans can be completed in a timely manner, and to provide a process by which Project Sponsors may appeal to Alameda CTC for one-year time extensions. The intent is to require continued due diligence by the Project Sponsor to secure environmental clearance approvals and a full funding plan.

GUIDELINES: The 2000 Measure B Transportation Expenditure Plan (2000 TEP) and the 2014 Measure BB Transportation Expenditure Plan (2014 TEP) both contain provisions for projects which cannot clear the Environmental Approval process, or cannot do so in a timely manner. There are no remaining 2000 Measure B capital projects subject to the environmental clearance approval or full funding policy.

The 2014 TEP establishes a deadline for environmental clearance approval and a full funding plan for each capital project that receives Measure BB capital funding. Environmental clearance approval is defined as the issuance of a Categorical Exclusion (CE), a Finding of No Significant Impact (FONSI) or the filing of the Record of Decision (ROD) for National Environmental Policy Act documents and the Notice of Determination or Notice of Exemption for California Environmental Quality Act documents. A full funding plan is defined as a plan containing a reliable cost estimate and sufficient funding identified to cover the estimated costs. The 2014 Measure BB deadline is December 31, 2022; however, the 2014 TEP includes provisions for one-year extensions to the deadline, if approved by Alameda CTC.

POLICY 3: TIMELY USE OF FUNDS POLICIES – ALLOCATIONS AND FUNDING AGREEMENTS

POLICY: Allocations shall be encumbered in a funding agreement between Alameda CTC and the recipient agency incurring the reimbursable costs, or in a contract for costs

ACTC_AR3491

incurred directly by Alameda CTC, within twelve (12) months from the date the allocation is approved by the Commission.

Allocated funds not encumbered by the deadlines established in this policy are subject to rescission and reprogramming at the discretion of Alameda CTC.

PURPOSE: To ensure that funding allocated and distributed by Alameda CTC is expended expeditiously to implement the improvements and services for which the allocations and distributions were approved.

GUIDELINES: Alameda CTC's allocation recommendations and approvals are based on a Project Sponsor's Request for Allocation package/funding application that contain a specific scope, cost, and schedule. This policy requires Project Sponsors to encumber allocated funds through an executed project funding agreement or contract within twelve (12) months of an approved allocation to ensure accountability and consistency with the Project Sponsor's allocation request.

The project fund agreement(s) between Alameda CTC and the recipient agency outlines the agreed upon reimbursable costs, budget, scope, and schedule. Once an agreement is executed, Project Sponsors are expected to begin work on an allocation phase based on the delivery guidelines below, or per the schedule contained in the executed project funding agreement.

Project Phase	**Maximum Expenditure Timeline**
Planning/Scoping	• Activity must be complete within twenty-four (24) months from the date of allocation.
Preliminary Engineering / Environmental	• Activity must be complete within twenty-four (24) months from the date of allocation.
PS&E (Final Design)	• Activity must be complete within twenty-four (24) months from the date of allocation.
Construction	• Activity must be complete within twenty-four (36) months from the date of allocation.

Requests for Time-Extension

Project Sponsors may request time extension(s) to funding related deadlines established by policy, deadlines required at the time of allocation, or expiration dates established in funding agreements. Project Sponsors are limited to only a single time-extension of up to twenty-four (24) months that is required to be approved by the Commission.

Such requests for extensions shall be submitted in writing to Alameda CTC at least ninety (90) days prior to the deadline for which an extension is being requested and at

ACTC_AR3492

least forty-five (45) days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval.

The request for time-extension package submitted to Alameda CTC shall include a detailed explanation of the conditions or circumstances that have changed since the deadline was established, and the corresponding impact to the remainder of the project implementation schedule if the extension is approved. Extensions to delivery deadlines established in funding agreements shall be submitted, reviewed, and approved in accordance with the provisions set forth in the funding agreement. Additional requests for time-extensions will only be considered for rare and extraordinary circumstances.

Fund Rescission/Reprogramming

Allocated funds not encumbered into a funding agreement by the deadlines established in this policy or used in the manner inconsistent with these guidelines are subject to rescission and reprogramming at the discretion of Alameda CTC. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds.

If funding awards are withdrawn, the corresponding projects and allocations may be reprogrammed to a future year of the CIP, or deprogrammed from the CIP. Project sponsors who failed meet the timely use of funds deadlines may be penalized in their consideration for the next programming and allocation cycle.

POLICY 4: ELIGIBLE COSTS FOR REIMBURSEMENT

POLICY: Program and project costs to be reimbursed by Alameda CTC shall be segregated into project phases to correlate with the encumbrance(s) from which reimbursement is requested. Funds shall be encumbered in a funding agreement between Alameda CTC and either the Project Sponsor or, if different from the sponsor, the implementing agency which incurs the reimbursable costs, or in a contract with Alameda CTC for project costs incurred directly by Alameda CTC.

For Alameda CTC implemented projects, eligible staff and other direct costs incurred directly by Alameda CTC shall be considered encumbered when they are included in the annual budget adopted by the Commission. Costs submitted for reimbursement shall be limited to activities, materials and services directly related to the implementation of the scope of the project for which the funds were allocated and subsequently encumbered in a funding agreement. Eligible costs shall be incurred in accordance with the provisions set forth herein or be at risk of being determined ineligible for reimbursement by Alameda CTC.

ACTC_AR3493

PURPOSE: To limit the expenditures of funding administered by Alameda CTC to the reimbursement of eligible project costs and to provide general guidance to implementing agencies which incur the reimbursable costs.

GUIDELINES: Alameda CTC approves reimbursements of eligible project costs based on requests for reimbursements submitted by the Project Sponsors or implementing agencies which incur the reimbursable costs. The requirements for the requests for reimbursement are included in the project funding agreements between Alameda CTC and the recipient agency. In general, the request for reimbursements must identify the total costs by phase, be consistent with the agreed upon eligible costs, and segregate costs between Alameda CTC's and the Project Sponsor's cost sharing arrangement as described in the project funding agreement.

The following describes the eligible costs for specific phases:

Project Phase	Eligible Costs Requirements
Planning/Scoping	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare a well-developed project delivery plan or scoping document. • For projects that require a formal scoping document such as projects on the State highway system, or with State or federal funding, the preparation of the scoping document is eligible for scoping phase funding.
Preliminary Engineering / Environmental	• Project Sponsor staff, consultant costs and other direct costs necessary to perform preliminary engineering, and to secure approval for the appropriate environmental document for the project.
Plan, Specification and Estimate (Final Design /PS&E)	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare final PS&E and to provide support during the bidding process until the time of contract award. • Services beyond the contract award are considered design services during construction, which are typically included in the Construction Support Phase. The milestone (i.e., advertisement, award, etc.) at which the costs change from being budgeted and tracked in the PS&E Phase to the Construction Support Phase may vary on a case-by-case basis. Regardless of the phase in which the advertise-bid-award costs are budgeted and tracked, they should be clearly segregated from other costs in the same phase.
Right-of-Way Acquisition and Support Phases	• Project Sponsor staff, consultant costs and other direct costs necessary for the acquisition of right-of-way, right-of-way preservation and hardship acquisitions.

Project Phase	Eligible Costs Requirements
	• Right-of-way acquisitions initiated prior to environmental clearance approval for the project for which the right-of-way is required, shall not be eligible for reimbursement by Alameda CTC unless specifically authorized in the funding agreement. The cost of eligible right-of-way acquisitions shall be supported by an appraisal prepared by a professional appraiser. The appraisal report shall be provided to Alameda CTC with the request for allocation package. • Right-of-way activities related to property not required for the program or project as programmed shall be at the expense of Project Sponsor to the extent such costs can be determined. • If excess right of way is sold, used for purposes other than the program or project as programmed, or otherwise disposed of, a share of any proceeds from the sale of such excess property shall be returned to Alameda CTC based on the prorated percentage of Alameda CTC funding contributed to the purchase of the property. • If condemnation procedures are required to obtain access to right of way, Alameda CTC will consider the required deposit as an eligible cost and reimburse the Project Sponsor upon request in accordance with the funding agreement. If the amount of reimbursement to Project Sponsor is higher than the Alameda CTC funding share of the amount of settlement in the final order of condemnation, Project Sponsor shall pay Alameda CTC the difference between the amount reimbursed and the Alameda CTC funding share of the amount settled plus the Alameda CTC funding share of the interest accrued to the deposit account. • Property acquired for a project using Alameda CTC funding shall be available for project construction within 10 years of Alameda CTC reimbursement to the Project Sponsor. If, after 10 years, the property has not been utilized for the project as programmed, the Project Sponsor shall reimburse Alameda CTC for its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year after the expiration of this 10-year period. • If right of way is acquired for a project as programmed and is not utilized for the project as programmed, because the project has been modified or de-programmed, Alameda CTC shall be reimbursed its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year from the time the project is modified or de-programmed.

ACTC_AR3495

Project Phase	Eligible Costs Requirements
Construction Capital and Support Phases	• Project Sponsor staff, consultant costs, contractor costs and other direct costs necessary for all construction expenditures on the project that are part of the scope of work agreed to by Alameda CTC, including Project Sponsor's management oversight expenses associated with the construction of the project. • If Project Sponsor includes additional work beyond the scope of the project as programmed by Alameda CTC, such work and all related costs shall be segregated from the project costs funded by Alameda CTC. Costs not associated with the scope of the project as programmed by Alameda CTC shall be at the expense of the Project Sponsor and shall not count as a match for Alameda CTC funding for the project as programmed by Alameda CTC. • Items of work within the scope of the project as programmed, but utilizing more expensive than standard treatment, such as specialized lighting standards and signs, more elaborate landscaping, specialized treatment on the face of soundwalls/retaining walls and specialized sidewalk/hardscape treatments, will be eligible for reimbursement only if they are agreed to in advance and no additional Alameda CTC funding is required.
Rolling Stock and Equipment Acquisition Phases	• Rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC shall remain in the Project Sponsor fleet for a minimum of five years. If the rolling stock is removed from the fleet prior to the required five years, Project Sponsor shall notify Alameda CTC. If the rolling stock is sold and the receipts of the sale are not used to purchase replacement rolling stock, the proceeds from the sale shall be returned to Alameda CTC. • Project Sponsor shall prepare and submit to Alameda CTC for approval, prior to the beginning of service, an operations schedule indicating the frequency, vehicle type and operating hours of the rolling stock purchased by Project Sponsor for the program or project as programmed. The rolling stock used in this service will be the same type as purchased with Alameda CTC funding, but may not be the exact vehicles due to the need to rotate vehicles in the fleet. The approved service level shall be maintained, as a minimum, for five years. In the event that the minimum service level is not maintained, Project Sponsor shall reimburse Alameda CTC for its share of the reduced service based on vehicle needs for the reduced service and the salvage value of the rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC.

Project Phase	Eligible Costs Requirements
	• Specialized equipment required for the project must be identified in the project funding agreement to be eligible for reimbursement with Alameda CTC funding.

In addition to the individual phase requirements described above, the following general provisions apply to cost eligibility and exclusions for any phase:

Cost Type	Eligible Costs Requirements
Contract Costs	• Costs incurred via contracts between the implementing agency and consultants, contractors, suppliers or other vendors are eligible for reimbursement from the local, voter-approved funding programs administered by Alameda CTC only if the contract is established in accordance with Alameda CTC's Local Business Contract Equity (LBCE) Program. The LBCE Program applies to contracts funded wholly, or in part, with local, voter-approved funding programs administered by Alameda CTC. While not every contract funded in part by local, voter-approved funding programs administered by Alameda CTC will require a contract goal set during the procurement process, every contract is required to comply with the reporting requirements set LBCE program.
Project Sponsor Staff Costs	• Costs for Project Sponsor staff working on the project (direct implementation costs) will be eligible for reimbursement by Alameda CTC funding. Staff hours must be segregated on timesheets, or otherwise documented through an alternative method, approved by Alameda CTC. • Project sponsor overhead and general administrative costs that are not directly related to the implementation of a project are ineligible for reimbursement by Alameda CTC, unless otherwise approved by Alameda CTC. • Hourly wages and fringe benefits for Project Sponsor staff will be reimbursed based on the actual wage rate plus the audited fringe benefit rate supplied by the Project Sponsor. Alameda CTC will review and approve a fringe benefit rate based on documentation provided by the Project Sponsor. Approved fringe benefit rates will be set forth in the project funding agreement, but in no case will fringe benefits of more than 70 percent of the hourly wage be approved. • For Measure B/BB/Vehicle Registration Fee Direct Local Distribution Recipients, costs for Project Sponsor staff costs related to project administration, contract management of professional and construction services, are not eligible for reimbursement with allocated funds per the Local Cooperation Policy, unless specifically allowed in a project funding agreement.
Alameda CTC Project Support Requested by Project Sponsor	• If requested by Project Sponsor, Alameda CTC will consider providing support staff and/or consultant support for a project. Costs for these services will be considered eligible costs and be reimbursed to Alameda

ACTC_AR3497

Cost Type	Eligible Costs Requirements
	CTC from funds for the project, or be deducted directly by Alameda CTC from Alameda CTC funding allocated for the project.
Bonding Costs	• If Alameda CTC determines that it is in the best interest of a funding program to sell bonds, or otherwise incur financing costs to deliver the projects included in the funding program, the cost of bonding and financing, including interest payments, shall be considered a program-wide cost and shall be identified in the CIP as the first priority repayment. • If a Project Sponsor wishes to independently bond or use other approved borrowing programs, Alameda CTC funding is eligible to reimburse expenses incurred by Project Sponsor for staff time, consultant costs, principal payments and the associated cost of financing required to provide the financing for the project.
Fund Exchanges	• Alameda CTC may consider and approve fund exchanges on a case-by-case basis. Any exchange payments of Alameda CTC funding must be identified in the project funding agreement to be eligible for reimbursement
Miscellaneous Costs	• The costs of fees from other agencies, including permit fees or reimbursement for review or oversight costs needed for the project, are eligible project costs with the exception of the cost of permits, fees or oversight from the Project Sponsor. Reimbursable eligible costs must be consistent with the Local Cooperation Policy. • Direct costs, such as reproduction, shipping, mileage and long-distance calls, will be considered for reimbursement if they can be independently documented as directly relating to the implementation of the program or project for which the funds were allocated. Air travel and overnight stays are not eligible unless prior approval is obtained from Alameda CTC.
General Exclusions	• Cost not directly related to the implementation of the project as programmed, and consistent with an approved environmental document as applicable, will not be eligible for reimbursement with Alameda CTC funding.
Ongoing Costs (Maintenance/ Operations)	• Ongoing annual expenses incurred for maintenance of a project shall be borne by the Project Sponsor unless specifically identified in the funding agreement.

POLICY 5: FUNDING FOR PROJECT-RELATED COSTS INCURRED DIRECTLY BY THE ALAMEDA COUNTY TRANSPORTATION COMMISSION

POLICY: Costs incurred directly by Alameda CTC related to the management and implementation of programs and projects shall be eligible for the funding made available for those programs and projects. The eligibility of costs incurred directly by Alameda CTC shall be limited to any restrictions related to such costs for any individual fund source. General fund administration costs related to congestion management

ACTC_AR3498

activities are allocated to congestion management projects in compliance with *Title 2 U.S. Code of Federal Regulations Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance).*

PURPOSE: The purpose of this policy is to establish guidelines by which costs incurred directly by Alameda CTC related to the management and implementation of programs and projects are segregated to identify fund sources for such costs.

GUIDELINES: The following provisions are intended to support the purpose of this policy:

A. Direct costs relate to activities directly related to Capital Projects, Programs, Planning and grants. These direct costs shall be posted to appropriate funds or activities. Salaries and benefits shall be supported by timecards, and direct consulting and other costs shall be supported by approved invoices. Where specific agreements are in place, direct costs along with indirect cost (see below) allocations shall be posted to specific projects or grants. Where such agreements do not exist, the direct costs shall be posted to a control account within the Capital Projects or Program Funds.

B. Indirect costs relate to congestion management activities that don't directly relate to a specific Capital or Planning Project, or Program. Such costs shall be accumulated under the General Fund and supported by time cards, invoices and other appropriate documents. The indirect cost ratio for billing purposes will be based on General Fund congestion management related allowable costs. The cost allocation methodology will comply with *Uniform Guidance*.

C. Alameda CTC shall maintain a cost allocation plan as required by *Uniform Guidance*, certified by the Director of Finance, accepted and/or approved by Caltrans as the cognizant agency and available to grant funding agencies.

D. Alameda CTC shall implement a billing system, supported by acceptable detail for direct and indirect costs. However, no allowance shall be made for profit margin.

E. All direct costs and billable indirect costs shall be excluded from the salary and administration limitations set forth in the 2000 Measure B Transportation Expenditure Plan and in the 2014 Measure BB Transportation Expenditure Plan. Alameda CTC shall use general fund administrative costs to compute the administrative cost ratios.

ACTC_AR3499

POLICY 6: LOCAL CONTRACT BUSINESS EQUITY PROGRAM

POLICY: Alameda CTC has established this Local Business Contract Equity (LBCE) Program to create economic growth and jobs within Alameda County by requiring local contracting that supports residents and businesses in Alameda County. The LBCE Program helps to identify and engage the participation of Local Business Enterprise (LBE), Small Local Business Enterprise (SLBE) and Very Small Local Business Enterprise (VSLBE) firms located in Alameda County on applicable contracts.

PURPOSE: The purpose of this policy is to continue support for the hiring of local contractors, vendors, suppliers and service providers on contracts funded wholly, or in part, by funding approved by Alameda County voters. The LBCE Program contributes to the overall economic vitality of the County by:

1. Encouraging businesses to locate and remain in Alameda County;
2. Providing employment opportunities for residents of Alameda County; and
3. Generating economic activity and stimulating the local economy.

GUIDELINES: This program applies to contracts funded solely by any combination of Measure B, Measure BB, Vehicle Registration Fee, and/or local funds. Contracts that include state and federal funds must adhere to state and federal requirements. Full policy and program requirements are detailed here: https://www.alamedactc.org/app_pages/view/4543

Funds may be subject in rescission or ineligible for reimbursement if the Project Sponsor is determined to be out-of-compliance.

POLICY 7: ALAMEDA CTC PROJECT AND PROGRAMS MANAGEMENT POLICIES

POLICY: Alameda CTC shall administer and manage project delivery efforts and program implementation through these policies and procedures.

Direct Local Distribution Programs Management Policy: As the administering agency for the Measure BB DLD program, Alameda CTC is responsible for monitoring and compliance administration of the DLD recipients. Alameda CTC reserves up to one percent (1%) of Measure BB DLD funds to provide oversight to the DLD program.

Capital Projects and Programs Management Policy: As implementing agency for several countywide significant Measure BB related projects identified in the Capital Project Delivery Plan (CPDP), Alameda CTC has assumed the lead in project management and project delivery using its own staff and consultant resources. Alameda CTC reserves up to five (5) percent of Measure BB discretionary funds in order to effectively deliver Measure BB transportation projects, and to oversee projects being implemented by

other agencies. These funds support costs associated with establishing policies, procedures, ongoing project management oversight, preliminary scoping and planning, and other core functions related to Measure BB capital program delivery that are not directly related to Measure BB capital commitments for individual projects.

Project and Program-wide Contingency Reserve: Furthermore, the CPDP recommends programming Measure BB funds for specific project phases, including set-asides for program-wide management, oversight, and monitoring, as well as a program-wide risk contingency. Each project will include budget allowances that account for risk and unknowns. Where risk issues are common to many projects, Alameda CTC may elect to place those budget amounts into a program-wide contingency reserve. This is referred to herein as the Project and Program-wide Contingency Reserve.

PURPOSE: Alameda CTC is responsible for administering the voter-approved transportation programs, CMA functions, and emerging countywide transportation needs and initiatives. Alameda CTC requires these projects and program management policies in order to provide continuing support and resources for these functions; to strengthen and enhance the agency's position within the changing framework of regional, state, and federal transportation agencies; and to increase responsiveness to new regional and state climate change mandates.

GUIDELINES: Alameda CTC's annual requirements related to project and program implementation, oversight, and delivery management costs will be assessed through Alameda CTC's budgetary process.

POLICY 8: PROGRAMMING POLICIES FOR OUTREACH AND TRANSPARENCY

POLICY: The project selection and prioritization process employed for the development of the CIP, which begins with the Countywide Transportation Plan (CTP) update process, shall satisfy the requirements for all the fund sources included in the CIP, including federal, state, regional and local sources. The CTP update process shall include significant efforts to satisfy requirements related to notification, outreach and transparency typically satisfied at the time of individual, fund-specific calls for projects.

PURPOSE: To ensure that the notification, outreach and transparency measures employed by Alameda CTC to identify potential uses for transportation funding from the full range of sources available in Alameda County satisfy all programming policies from other agencies pertaining to the specific fund sources being programmed by Alameda CTC. By satisfying the most stringent of requirements, Alameda CTC will be afforded flexibility at the time of programming to match the most appropriate, available fund source to the priorities at the time of programming.

GUIDELINES: Project Sponsors are required to support this policy through outreach programs and notifications which reach all geographic areas, communities and portions of the population during solicitations for proposed uses of Alameda-CTC administered funding available for transportation programs and projects within Alameda County. The outreach must include disadvantaged communities, including Metropolitan Transportation Commission-defined Communities of Concern and other underserved populations.

POLICY 9: LOCAL COOPERATION POLICY

POLICY: Project Sponsors receiving DLD funds are not eligible to receive a reimbursement of staff time costs through allocations of Alameda CTC Administered Funds for oversight activities that are not directly related to project implementation.

Local jurisdiction(s) shall work in full cooperation with the implementing agency to assist in project implementation and delivery, where appropriate and as needed. This includes providing support, coordination, monitoring, technical assistance, etc. A local jurisdiction's costs associated with these activities to further a project implemented by Alameda CTC, a local jurisdiction (as the Project Sponsor), or another implementing agency within a jurisdiction's locality shall be funded through the local jurisdiction's eligible local fund sources such as Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) funds in lieu of a local jurisdiction billing these costs directly to the project or against its funding allocation.

PURPOSE: To ensure jurisdictions directly benefiting from the expected outcomes of a project in their locality implemented by Alameda CTC or other implementing agencies, are active funding partners to further the delivery of such improvement project, and to also ensure DLD recipients are using DLD funds predominately on contracts, services, materials, rather than contract administration.

GUIDELINES: Local agency-incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by another implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. Fees associated with permitting, plan review, and other general costs associated with the project shall be supported by the local jurisdiction in which the project is implemented, where feasible and appropriate. These costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC, unless they are specifically identified as eligible in the funding agreement.

POLICY 10: SMALL CITIES PROGRAM POLICY

POLICY: Cities within Alameda County with a population of less than 25,000 shall be considered for certain exceptions from Alameda CTC's local match requirements and/or Local Cooperation Policy requirements, and local projects that have a demonstrated multi-jurisdictional transportation significance shall receive consideration for delivery support from Alameda CTC, where practical and feasible.

PURPOSE: The purpose of this policy is to assist smaller cities in Alameda County in their project delivery efforts through relieving matching requirements, exploring financial strategies, and providing project delivery/implementation support, where feasible.

Small cities in Alameda County may not be financially equipped or resourced to meet certain project delivery needs and funding matching requirements.

Small cities receive limited Measure B/BB/Vehicle Registration Fee Direct Local Distributions in comparison to larger cities and often have difficulties finding the financial resources needed to satisfy minimum matching requirements, especially for larger transportation projects.

GUIDELINES: To qualify as a small city under this policy, a city must have a population of less than 25,000 as reflected in the most currently available California Department of Finance's population estimate.

As such, Alameda CTC may elect to waive matching requirements and/or Local Cooperation policy requirements based on a small city's request during the programming and allocation processes, or project coordination processes. Additionally, Alameda CTC will support facilitating Federal-local funding exchanges, whenever possible, to alleviate certain funding requirements required by external sources.

POLICY 11: MATCHING AND LEVERAGING POLICY

POLICY: For projects that have successfully secured other non-Alameda CTC discretionary funding, Alameda CTC shall consider fulfilling a portion of the minimum match required by external funding for projects and programs.

PURPOSE: The purpose of this policy is to maximize the leveraging capacity of Alameda CTC Administered Funds such as Measure B, Measure BB, Vehicle Registration Fee Program, Transportation Fund for Clean Air Program funds.

GUIDELINES: Through Alameda CTC's programming and allocation processes, Project Sponsors must document the following:

ACTC_AR3503

1. Project Sponsor must identify a project delivery and funding plan that describes the project scope, costs, schedule;
2. Document the approved programming of other, non-Alameda CTC discretionary funds to a project;
3. Cite the minimum matching amount required by the secured non-Alameda CTC funding source;
4. Identify the amount of matching funds requested from Alameda CTC. Matching funds will not address any project cost increases; and
5. Provide a cost sharing proposal between all prospective funding partners.

Alameda CTC may consider recommending programming and allocation to fulfill either a portion or the entire amount requested, based on available fund capacity, project delivery strategy, funding timelines, and the leveraging significance.

ALAMEDA COUNTY TRANSPORTATION COMMISSION

STRATEGIC PLAN

1. PURPOSE

Alameda County maintains a highly diverse transportation network complete with highway infrastructure, express lanes, local roadways, freight and port facilities, rail and bus transit, and bicycle and pedestrian improvements. Its wide range of transportation infrastructure may differ dramatically from one area of the county to the other as each respective community has unique transportation needs. Alameda CTC's goal is to leverage local funds under its purview to help secure additional competitive local regional, State, and federal transportation funding dollars in order to fund a balanced set of countywide transportation projects to maintain a well-connected and efficient system for the whole county.

Alameda CTC administers voter-approved sales tax programs (2000 Measure B and 2014 Measure BB), and the Vehicle Registration Fee (VRF) program (2010 Measure F) that provide critical funding for delivering transportation improvements within the county. The most significant source of funding under Alameda CTC's purview is the Measure BB sales tax revenue generated through the voter-approved 2014 Transportation Expenditure Plan (2014 TEP) in November 2014. The duration of the 2014 TEP is thirty (30) years, from April 1, 2015 to March 31, 2045. The 2014 TEP is projected to generate approximately $7.8 billion in revenues for transportation investments ranging from bus/ferry/commuter rail services and operations, streets and highways improvements, student transit passes, community development initiatives, technology and innovation programs, bicycle/pedestrian enhancements, and transportation programs for seniors and people with disabilities.

Although the 2014 TEP is anticipated to generate a significant source of funding for Alameda County, the transportation funding needs far outweigh the expected revenue generation required to complete the project and program delivery of the 2014 TEP in its entirety. Over 50 percent (approximately $4.1 billion) of the revenues generated are annually returned to local jurisdictions as Direct Local Distributions for local agencies to use at their own discretion. The remaining $3.7 billion is split among "Named" capital projects ($1.2 billion) and discretionary programs ($2.3 billion). The 2014 TEP recognizes investments within specific categories and types, and the Measure BB total revenue will not be able to fulfill the funding needs. It is imperative the Commission strategize investments to leverage external funding to fulfill the capital program needs.

The aim of the Strategic Plan is to simultaneously:

1. <u>Prioritize Project and Program Investments</u>
   Identify project investment strategies using Alameda CTC administered funds to get projects in a state of readiness to compete for available external funds as they presumably become available over the life of the strategic plan.

2. Maximize Measure BB Investments/Leveraging Strategy
   Identify an investment strategy to ensure that Measure BB is used to expediate the delivery of projects while also serving as the basis to attract external competitive funding to Alameda County such as Regional Measure 3, Senate Bill 1 programs, and U.S. Department of Transportation competitive programs for example.

3. Guide Project Delivery Strategy
   Identify project delivery strategies for an Alameda County portfolio of project investments that depict which projects can be delivered in whole, or in part, by the Measure BB sales tax program, other Alameda CTC-administered funds, or prospective external competitive funding programs. It also identifies the funding challenges leading up to full project implementation and the potential risks of early project development investments towards projects with incomplete funding.

The Strategic Plan focuses on Alameda CTC-implemented projects and externally implemented "Named" capital projects. Between Alameda CTC implemented projects and projects implemented by external Project Sponsors such as the Bay Area Rapid Transit (BART), City of Union City, and others, there is a collective total project cost of $6.7 billion, with only $2.1 B committed through Measure BB, Regional Measures, various state and federal programs, and other local sources. There is an overall funding need of $4.6 billion required to fill the gap and ensure the delivery of all these projects within the next decade.

Table 1: Summary of Project Delivery Funding Needs *($ in Billions)*

Project Sponsor	Total Project Costs	Total Commitment	Total Shortfall
Alameda CTC-Implemented	$3.8	$1.0	$2.8
Named Projects Implemented by External Sponsors	$2.9	$1.1	$1.8
Total	**$6.7**	**$2.1**	**$4.6**
Note: Commitment sources include funds from Measure B, Measure BB, VRF, local jurisdictions, STIP, secured state grants.			

The Strategic Plan address near-term financial implementation of countywide projects, including funding constraints, priority projects, and potential strategies. The strategies attempt to leverage existing local Alameda CTC administered fund sources against various outside funding programs anticipated in the next decade that aim to address the $4.6 billion shortfall.

For the Alameda CTC-implemented projects, Alameda CTC intends to pursue competitive funds from Senate Bill 1 Programs, Regional Measure 3, State Transportation Improvement Program (STIP), federal programs, and by encouraging local cooperation and funding partnerships with jurisdictions where a project resides or by whom might receive benefit. Local jurisdictions are encouraged to apply for these discretionary opportunities to maximize Alameda CTC funds to its fullest extent.

2. STRATEGIC PLAN GUIDING PRINCIPLES

The Strategic Plan Guiding Principles identified below support decision making to generate a portfolio of quality candidate projects for Alameda CTC administered funds and a prospective for external funds available to Alameda County jurisdictions.

These guiding principles are to:

1. Achieve the Alameda CTC's mission and vision and goals.

   In September 2019, the Alameda CTC approved the vision and goals for the 2020 Countywide Transportation Plan (CTP).

   Vision: "Alameda County residents, businesses and visitors will be served by a premier transportation system that supports a vibrant and livable Alameda County through a connected and integrated multimodal transportation system promoting sustainability, access, transit operations, public health and economic opportunities."

   To complete this vision, Alameda CTC prioritizes projects that achieve these aspiring goals for Alameda County's transportation system:
   - Accessible, Affordable and Equitable
   - Safe, Healthy and Sustainable
   - High Quality and Modern Infrastructure, and
   - Economic Vitality

2. Identify Alameda CTC sponsored and implemented projects based on project delivery strategies, transportation benefits, resource capabilities, and funding strategies that maximize leveraging Alameda CTC's administered funds.

3. Prioritize Alameda CTC sponsored and implemented projects for available local, regional, State and federal funds that may be available to Alameda County on the basis of Alameda CTC implementing multi-jurisdictional, resource intensive, county significant, and/or regional significant projects.

4. Prioritize 2014 Transportation Expenditure Plan (TEP)'s "named" capital projects by providing an investment and delivery strategy for Project Sponsors that promotes the development of these projects through the upcoming prospective funding opportunities.

5. Establish a systematic programming and allocation strategy for Alameda CTC administered funds to promote project delivery and project readiness. This includes an assessment of prospective local, regional, State, and federal fund sources anticipated to be made available to Alameda County.

6. Ensure the investment strategy remains flexible to provide capacity to respond to emerging and unanticipated needs in terms of both evolving project initiation and development needs, as well as, changes in funding opportunities, amounts and

programs that may require nimbleness in adjusting the overall funding strategy of the Strategic Plan.

7. Provide an informational tool for agency's project management, project delivery, resource management, and financing strategies.

8. Adhere to the Alameda CTC's budgeting and financing policies including:
    a. Pay-as you go financing strategy until an immediate need to issue debt for project(s) is required.
    b. Debt shall not be utilized for operating expenses.
    c. Maintains an adequate level of reserves and support strong bond ratings

9. Create synchronicities between Alameda CTC's Countywide Transportation Plan, Transportation Expenditure Plans, modal plans, CIP, local plans, and other delivery strategies plans, where feasible.

10. Optimize leveraging of external funding opportunities such as local, regional, State, and Federal sources available through Project Sponsor local funds, Senate Bill 1, State Transportation Improvement Program funds, Regional Measures, Federal Programs.

3. MEASURE B AND MEASURE BB COMMITMENTS

The following attachments reflect current 1986 Measure B, 2000 Measure B and 2014 Measure BB commitments and allocations. These investments have yielded significant leveraging of external fund sources such as the Senate Bill 1, Regional Measure 3, and State Transportation Improvement Program funds.

ACTC_AR3522

OVERVIEW FUNDING DISTRIBUTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for programming funding from federal, State, regional, and local fund sources across Alameda County towards transportation projects and programs. The Alameda CTC's Comprehensive Investment Plan (CIP) programs federal, State, regional, and local fund sources in consideration of addressing critical transportation needs, project readiness, countywide funding equity, modal equity, and leveraging opportunities.

The pursuit of equitable funding distribution across Alameda County is a vital objective in the CIP to ensure transportation dollars are programmed to the diverse and balanced package of transportation needs in the county.

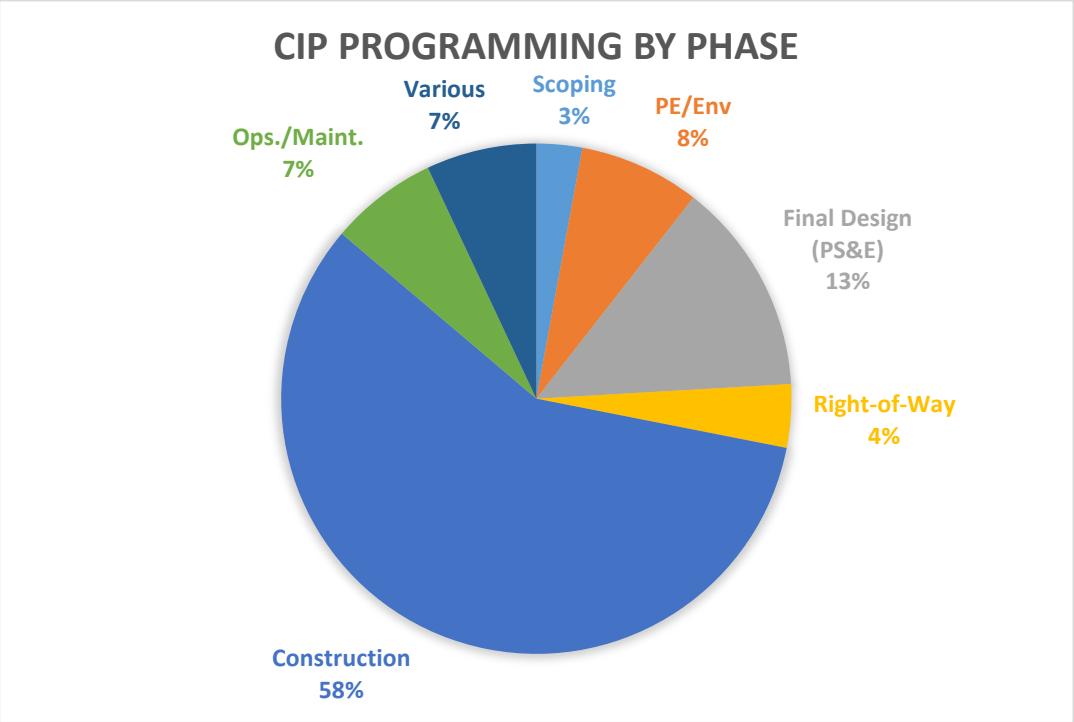
Alameda CTC's programming is guided by the CIP programming principles and project selection guidelines during each CIP programming cycle. As such, the funding distribution derived in the CIP is subject to the Commission's priority of investments during a programming event, the availability of fund sources and use of fund eligibilities, and the projects and programs proposed by Project Sponsors. In general, the CIP prioritizes funding towards projects and programs that are ready for implementation, secured funding plans, and demonstrated readiness with the first years of a given CIP five-year horizon.

Since the 2015, the CIP has programmed over $1.3 billion in transportation dollars amongst all jurisdictions in Alameda County. This Appendix includes a programming investments summary of the CIP's programming by:

1. Project Phase
2. Project Type/Mode
3. Planning Area

1. PROGRAMMING BY PROJECT PHASE

The CIP fundamental programming principles includes an investment strategy to target available funding resources to a diverse portfolio of projects and programs that are in various stages of project development, implementation, and construction.



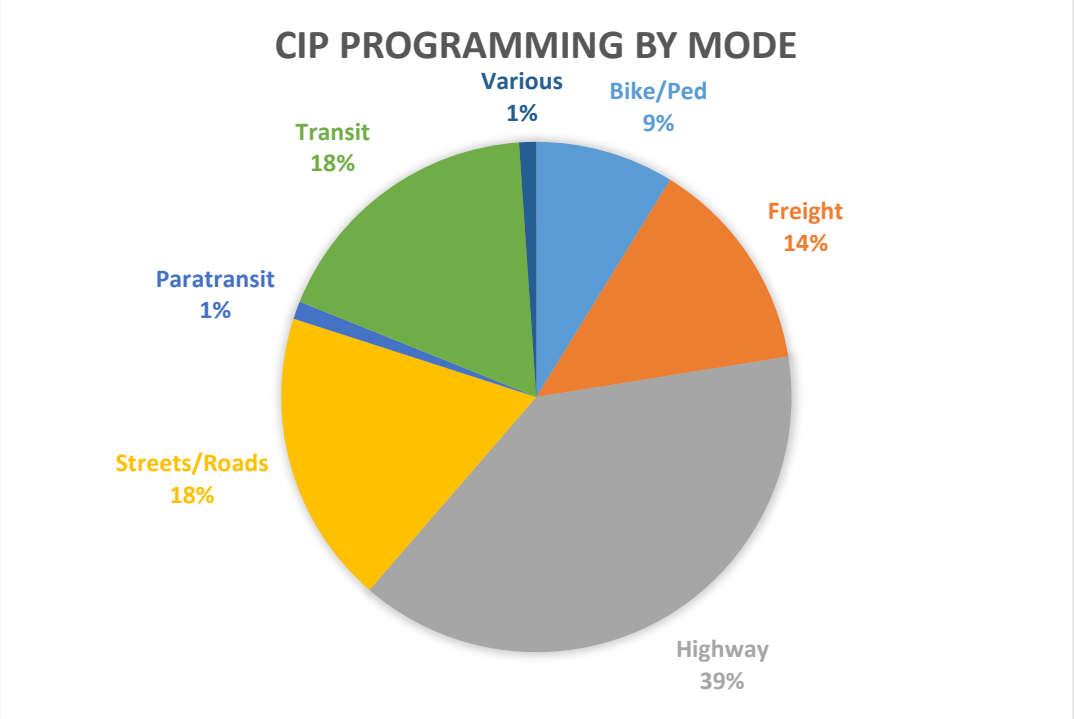
The goal is to strike a balance between investments in project development and construction capital phases that work simultaneously to:

- establish a pipeline of projects moving towards the construction phase,
- implement projects ready to for construction, and
- develop transportation projects to a point of project readiness so that project sponsors may be able to potentially secure competitive federal, State and regional funding sources as they become available.

ACTC_AR3523

Alameda CTC provides local cities, the county, and transit with Measure B / BB / VRF formula Direct Local Distribution funds that assist these agencies in initiating and developing their projects and programs for future inclusion in the CIP. These Direct Local Distribution funds are not part of the CIP funding distribution analysis but are a significant source of funding for all jurisdictions.

The current CIP Programming by Phase includes a range of funding investments progressively increasing in amount from the scoping, preliminary engineering, design, to the construction phases. The majority of CIP programming to date is committed to the construction phase.



2. PROGRAMMING BY PROJECT TYPE / MODE

Alameda County's transportation system is a diverse network of highway infrastructure, bicycle/pedestrian routes, local streets and roads, and transit routes that are each connected to provide the community with a complete multi-modal network of transportation travel options.

The CIP strives to make investments in all modes of transportation to build and maintain Alameda County's transportation infrastructure and program operations. Alameda CTC investments are only limited by use of fund eligibilities of certain funding sources i.e. Measure B / BB/ VRF bicycle/pedestrian funds can only be used towards bicycle/pedestrian related improvements.

However, due to the wide variety of fund sources programmed through the CIP, the CIP is able to supports a field of projects providing improvements to bicycle/pedestrian networks, local streets

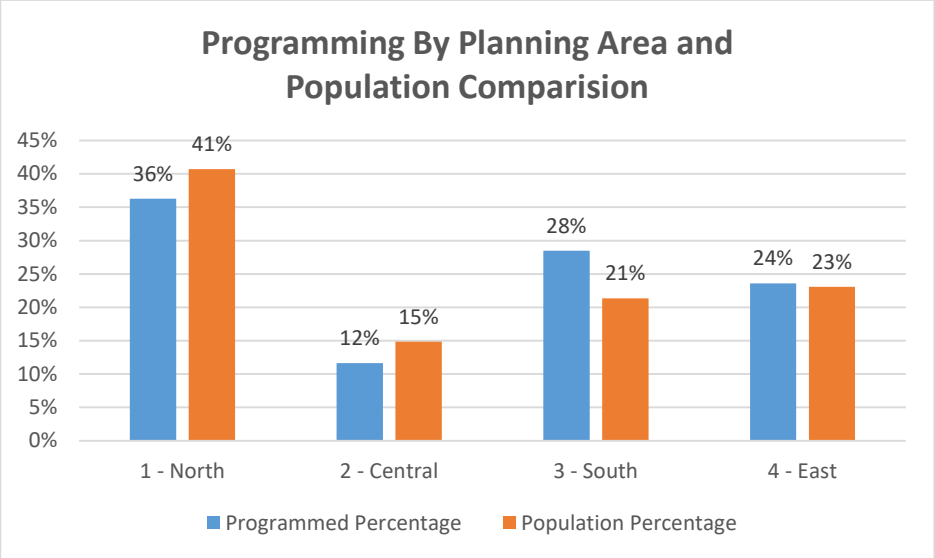
and roads, highway infrastructure, paratransit programs, transit, freight, and community developments.

3. PROGRAMMING BY PLANNING AREA

Alameda CTC considers funding equity across the jurisdictions and planning areas during a given CIP programming cycle. This requires an examination of types of projects proposed to the CIP, project readiness, and eligibilities of the fund sources available at the time of programming towards those projects and programs.

Alameda CTC use a traditional population share based methodology amongst the planning areas as a standard point of reference for determining the general percentage share of funding and population by planning area. Alameda CTC defines planning areas into four main geographic areas (north, central, south, east) as depicted in the table below.

Planning Area	Jurisdictions
Planning Area 1 North Area	• Alameda • Albany • Berkeley • Emeryville • Oakland • Piedmont
Planning Area 2 Central Area	• Hayward • San Leandro • Unincorporated areas of Castro Valley and San Lorenzo
Planning Area 3 South Area	• Fremont • Newark • Union City
Planning Area 4 East Area	• Dublin • Livermore • Pleasanton, and all unincorporated lands in that area



ACTC_AR3525

Within these planning areas, the Alameda County's population distribution favors more urbanized cities such as those in the North planning area.

Planning Area	Population	Percent
1 – North	680,277	41%
2 - Central	248,241	15%
3 - South	356,823	21%
4 - East	385,493	23%
Total	**1,670,834**	**100%**

The CIP programs available transportation dollars towards the Project Sponsors in consideration of the population share. However, it should be noted as described within the CIP's programming principles and project selection guidelines, population share is not the only factor in consideration. Other factors such as programming priorities, funding eligibilities, project readiness, and project types at the time of CIP programming are factors that affect level of investment by planning area.

To date, the CIP's programming investments by planning area, is +/- 5 percent relative to the population share of a planning area.

Alameda CTC's future CIP programming will continue to target and consider the balance of funding distribution across phases, modes, and planning areas.

SECTION 1: INTRODUCTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for the planning, programming, and allocation of local, regional, State and federal funding for transportation improvements throughout Alameda County.

Alameda CTC maintains programming and allocation authority for federal, State, regional and local transportation funding programs, such as the local, voter-approved measures (Measure B, Measure BB, and Measure F Vehicle Registration Fee), Transportation Fund for Clean Air (TFCA), State Transportation Improvement Program (STIP), and federal One Bay Area Grant Program (OBAG). Since 2016, Alameda CTC consolidates the programming and allocation for the funds sources under Alameda CTC's purview ("Alameda CTC Administered Funds") into a single programming and allocation document known as the Alameda CTC Comprehensive Investment Plan (CIP).

The CIP programming and allocations recommendations, in any given CIP cycle, demonstrates Alameda CTC's investment commitment to projects and programs that maintain and enhance the countywide transportation system based the current Commission's priorities at the time of the programming and allocation action(s).

The CIP contains programming and allocation policies, guidelines and procedures that guide Alameda CTC's investment decisions, programming and allocation processes, and the subsequent funding administration.

The CIP is updated annually to capture programming and allocations made since the last approval of the CIP, and to document programming and allocations adjustments including new programming requests, proposed adjustments by Project Sponsors, and technical adjustments as required by the CIP and funding administration policies.

The CIP contains a document structure of:

- Purpose, Background, strategic objectives, and an overview of programming principles for all programming through Alameda CTC.
- Appendices include
    - Technical summaries of adjustments to the prior programming and a summary with the final programming record.
    - Programming and Allocation Guidelines for future programming
    - Policies and Procedures for Alameda CTC's programming and funding administration

ACTC_AR3532

SECTION 2: PURPOSE OF COMPREHENSIVE INVESTMENT PLAN

The CIP is a programming and allocation document that establishes a financial investment strategy of funding under Alameda CTC's purview to deliver projects and programs ("projects") that allows the countywide transportation system to be more efficient and effective. The CIP identifies transportation funds from various sources expected to be available over a five-year programming horizon and targets them for transportation priorities in Alameda County.

The main objectives of the CIP are summarized as follows:

1. Translate long-range plans into short-range implementation
   The CIP transitions long-range plans into focused project/program delivery over a five-year programming window with a two-year allocation plan.

2. Serve as the Strategic Plan
   The CIP serves as Alameda CTC's Strategic Plan and satisfies public reporting requirements required by these funding programs.

   The revenue and expenditure assumptions for each fund source are confirmed periodically, and serve as the basis for the financial management of each funding program. Funding commitments to individual projects identified in the voter-approved transportation expenditure plans are confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans.

3. Establish a consolidated programming and allocation plan
   The CIP is a decision-making programming document that is used to program fund sources under Alameda CTC's responsibility for capital improvements, program operations, and maintenance projects. Integrating all fund sources into one programming document permits Alameda CTC to coordinate the programming and allocation of multiple fund sources to ensure that the investments of funds from the individual sources are joined to maximize the effectiveness of the overall investments in the Alameda County transportation system.

   The CIP includes a two-year allocation plan for funds allocated by Alameda CTC. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors

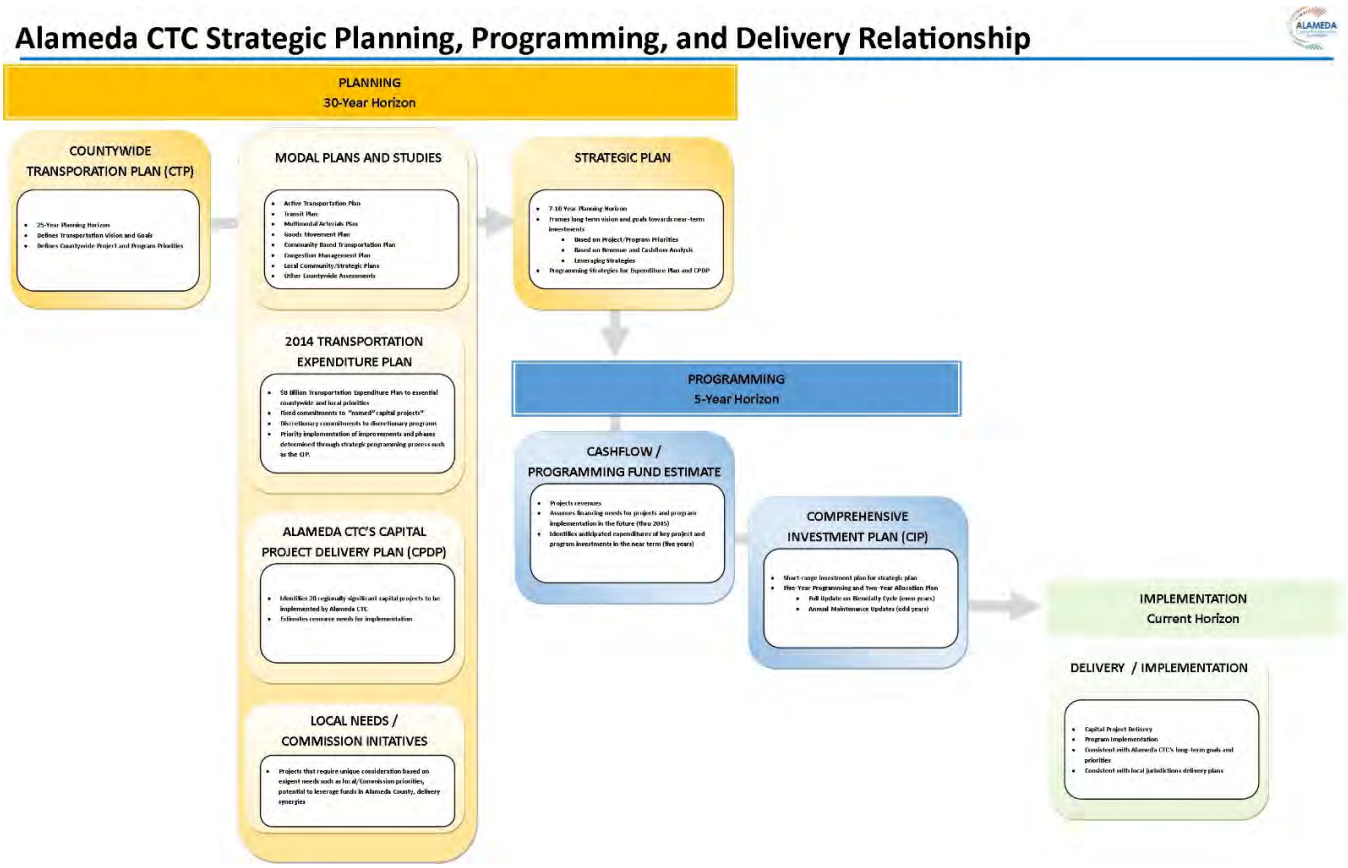
ACTC_AR3533

and implementing agencies, and for contracts and costs related to projects implemented directly by Alameda CTC.

The CIP will be updated on an annual and biennial basis, as needed, to reflect updates to Alameda CTC's programming and allocations. The annual updates are intended to include technical updates to confirm commitments and programming and allocation actions occurring outside the regular CIP process. A biennial update of the CIP will include a more robust update that shifts the five-year programming and allocation horizon, and allows for additional projects to be nominated and programmed into the CIP against the newly available programming capacity granted by the horizon shift.

The CIP guides investments to projects that provide demonstrate significant public benefit, advance project implementation, and support leveraging of local, regional, State and federal dollars for Alameda County's transportation priorities.

SECTION 3: RELATIONSHIP WITH PLANNING



The CIP's purpose is to strategically program available funds towards transportation investments that support long-range vision and goals established in Alameda CTC's Countywide Transportation Plan (CTP), multi-modal plans, and voter-approved transportation expenditure plans.

To be considered eligible to receive programming and allocation of Alameda CTC's Administered Funds, candidate projects are required to have a direct nexus to the Alameda CTC's CTP, Alameda CTC's multi-modal plans (Transit, Goods Movement, and Arterials), and other local planning efforts. This ensures candidate projects are consistent in coordination with local, countywide, and regional transportation priorities. The development of these planning documents also satisfies the public outreach requirements of the certain regional, State, and federal fund sources when they are required of by the funding programs.

For Alameda CTC implemented projects, the CIP incorporates the delivery recommendations included in the Measure BB Capital Project Delivery Plan (CPDP) as approved in March 2016. The CPDP addresses projects implemented directly by Alameda CTC and identifies projects posed for local, regional, State and Federal funding. The CIP incorporates the CPDP programming recommendations, policy and procedures, and project delivery assumptions in their entirety as it makes programming and allocation recommendations to projects contained in the CPDP.

Projects demonstrating a nexus to countywide planning efforts and transportation priorities formulate the eligible candidate pool. These projects may submit

programming and allocation applications through the Alameda CTC's Call for Projects and request for allocation processes. Project selection and prioritization for the CIP is based, in part, on priorities identified in adopted planning documents and studies, Strategic Plan Guiding Principles, but also considers other Commission approved project selection criteria.

SECTION 4: FUND SOURCES AND REVENUE ESTIMATES

Alameda CTC has programming and allocation authority for a number of transportation fund sources at the county level, and programming authority for the Alameda County shares of certain federal and State funding. Alameda CTC acts on behalf of Alameda County at the regional, State, and federal levels for matters pertaining to transportation funding from federal, State, and regional sources, including infusions of funding such as stimulus programs and proceeds from bond sales.

The CIP includes the fund sources listed below grouped according to the category federal, State, Regional and local funding.

Federal Program	
Fund Source	**Description**
Surface Transportation Program	Alameda CTC, as Alameda County's congestion management agency (CMA), is responsible for soliciting and prioritizing projects in Alameda County to receive a portion of the federal Surface Transportation Program (STP) funding. The STP is provided through funding from reauthorization of the federal funding for surface transportation by which Alameda CTC receives federal monies. The Metropolitan Transportation Commission (MTC) approves the programming of the STP funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.
Congestion Mitigation & Air Quality Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for a portion of the federal Congestion Mitigation & Air Quality Program (CMAQ) in the same fashion as the STP funding. The CMAQ is provided through funding from the reauthorization of federal funding for surface transportation by which Alameda CTC receives federal monies. The CMAQ funds are used on projects that will provide an air quality benefit. MTC approves the programming of the CMAQ funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.

State and Regional Programs	
Fund Source	**Description**
State Transit Assistance	State Transit Assistance is the State's flexible transit funding program which may be used for capital or operating purposes. The statewide STA program is split equally between a Revenue-based program (Public Utilities Code 99314) and a Population-based program (Public Utilities Code 99313). Under MTC Resolution 4321, Congestion Management Agencies (CMAs) are charged with playing a coordinating role in the development of a STA Population-Based distribution program within their county. MTC Resolution 4321 replaced MTC Resolution 3837 with a new transit-focused, One Bay Area Grant (OBAG)-style STA County Block Grant for 70 percent of the STA Population-Based funds received by MTC, with the remaining 30 percent directed towards MTC's Regional STA Program. MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program.
Regional Measure 2 and Future Regional Measures	In 2004, voters passed Regional Measure 2 (RM2) raising the toll on the seven state-owned toll bridges in the San Francisco Bay Area by $1. This extra dollar funds various transportation projects within the region determined to reduce congestion or to make improvements to travel in the toll bridge corridors, as identified in Senate Bill 916 (Chapter 715, Statutes of 2004). Specifically, RM2 establishes the Regional Traffic Relief Plan and identifies specific transit operating assistance, and capital projects eligible to receive RM2 funding.
State Transportation Improvement Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for the Alameda County Share of the State Transportation Improvement Program (STIP). Programming for each "County Share," of the Regional Improvement Program (RIP) portion of the STIP, is recommended by the CMA for each county (i.e., by Alameda CTC for Alameda County). The STIP is updated by the California Transportation Commission (CTC) on a two-year cycle with new STIP cycles approved every even year. The CTC adopts a fund estimate for each STIP cycle during the year before the even-numbered year in which the STIP cycle is adopted. The fund estimate provides the amounts for each of the County Shares that comprise the RIP portion of the STIP cycle. The STIP programming horizon is a five-fiscal-year window with two new fiscal years added each STIP cycle. Most programming capacity added in a given STIP cycle is in the two new, outer fiscal years of the STIP programming horizon. The funds programmed in the STIP are subject to the STIP Timely Use of Funds Provisions prescribed in the STIP Guidelines typically adopted with each STIP cycle.
Transportation Fund for Clean Air Program	State law permits the Bay Area Air Quality Management District (BAAQMD) to collect a fee of $4 per vehicle per year to reduce air pollution from motor vehicles. The fee provides the revenues for the Transportation Fund for Clean Air (TFCA) which is distributed by the BAAQMD at the regional and county levels. Sixty percent of the funding is programmed by the BAAQMD at the regional level. The

ACTC_AR3536

State and Regional Programs	
	remaining 40 percent is allocated annually by the BAAQMD for programming and allocation by the Program Manager for each county. Alameda CTC is the TFCA Program Manager for Alameda County. The Alameda County Program Manager funds are split 70 percent to the cities and the County; and 30 percent to transit-related projects.

Local Programs	
Fund Source	**Description**
1986 Measure B	In November 1986, voters passed the 1986 Measure B, a 15-year measure expected to generate more than $990 million through a half-cent transportation sales tax to fund local streets and roads improvements, bus and paratransit services, and other transportation infrastructure projects. The 1986 Transportation Expenditure Plan guides the use of those funds. Sales tax collection authorized by the 1986 Measure B ended in 2002, but several projects from the 1986 Measure B Capital Program are still underway. The 1986 Measure B generated more than $353 million for transportation programs and $864 million for highway, roadway and transit improvements. The sales tax collection for the 1986 Measure B ended in 2002, and no additional revenues are assumed.
2000 Measure B	Alameda County voters approved the 2000 Measure B Transportation Expenditure Plan (2000 TEP) which authorized a 20-year half-cent sales tax to be used for the transportation purposes identified in the 2000 TEP. Alameda CTC administers the 2000 Measure B Program to deliver essential transportation improvements and services. The 2000 TEP guides the expenditures of the 2000 Measure B funds. The collection of 2000 Measure B funds began on April 1, 2002 and will continue through March 31, 2022. The 2000 Measure B funds are divided as prescribed in the 2000 TEP between funds allocated directly to the jurisdictions and transit operators, and the funding available for the programs and capital projects named in the Measure. The 2000 Measure B funds are distributed as follows: *Direct Local Distributions*: The direct local distribution (DLD) funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2000 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages of net revenues used for the distributions are prescribed in the 2000 TEP as follows: • Mass Transit Operations (21.22 percent) • Local Streets Maintenance and Safety (22.34 percent) • Bicycle and Pedestrian Safety (3.75 percent) • Special Transportation for Seniors and People with Disabilities (9.02 percent) *Discretionary Programs*: The 2000 TEP includes a number of commitments to the following discretionary programs that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2000 TEP: • Express Bus Service Countywide (0.7 percent) • Bicycle and Pedestrian Safety (1.25 percent) • Special Transportation for Seniors and People with Disabilities - Coordination and Gaps in Service Grants (1.43 percent) • Transit Center Development Funds (0.19 percent) *Capital Projects*: The 2000 TEP includes commitments to individual capital projects. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding

ACTC_AR3537

Local Programs	
	agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
2010 Vehicle Registration Fee	Alameda County voters approved the Alameda County Vehicle Registration Fee (VRF) Program in 2010. The funds made available by the VRF are distributed as follows: *Direct Local Distributions*: The DLD portion of the VRF funding is distributed as follows: • Local Road Improvement and Repair Program (60 percent) • Local Transportation Technology (10 percent) o On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to the Alameda CTC.. *Discretionary Programs*: A portion of the VRF funding is distributed for the following grant sub-programs on a reimbursement basis: • Transit for Congestion Relief (25 percent) • Pedestrian and Bicyclist Access and Safety Program (5 percent)
2014 Measure BB	Alameda County voters approved the 2014 Transportation Expenditure Plan (2014 TEP) as part of Measure BB in November 2014. Measure BB authorized the augmentation and continuation of the voter-approved 2000 Measure B sales tax with a second half-cent sales tax through the end of the 2000 Measure B collection period, i.e. March 31, 2022, followed by a one-cent sales tax authorizes from April 1, 2022 through March 31, 2045. The 2014 Measure BB funds are allocated as follows: *Direct Local Distributions*: The 2014 Measure BB DLD funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2014 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages used for the distributions are prescribed in the 2014 TEP as follows: • Transit Operations, Maintenance, and Safety Program (21.55 percent) • Local Streets Maintenance and Safety (20 percent) • Bicycle and Pedestrian Infrastructure and Safety (3 percent) • Affordable Transit for Seniors and People with Disabilities (9 percent) *Discretionary Programs*: The 2014 TEP includes a number of commitments to the following discretionary programs available that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2014 TEP: • Affordable Student Transit Pass Program ($15 million) • Affordable Transit for Seniors and People with Disabilities/Coordination and Service Grants (1 percent) • Bicycle and Pedestrian Program (2 percent) • Community Investments That Improve Transit Connections to Jobs and Schools (4 percent) • Congestion Relief, Local Bridge Seismic Safety ($639 million) • Freight and Economic Development Program (1 percent) • Technology, Innovation and Development Program (1 percent) • Transit Innovation Program (2.24 percent) *Capital Projects*: The 2014 TEP includes commitments to individual capital projects and to groups, or categories, of capital projects as described in the 2014 TEP. Alameda CTC distributes sales tax funds for

ACTC_AR3538

Local Programs	
	capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
Local Exchange Program/CMA Transportation Improvement Program	Alameda CTC administers a local fund exchange program to exchange State and federal funds for local monies, giving Project Sponsors the flexibility to streamline and expedite project delivery. The local funds also allow agencies to begin projects earlier than would otherwise be possible due to the uncertain timing of the availability of State and federal funds in any given funding cycle. Based on State and federal economic conditions, the availability of State and federal funds is often delayed to beyond the year in which the funds were originally programmed. Such delays are unilateral from the State and/or federal levels and put a strain on timely implementation of projects. The local fund exchange program allows local monies exchanged for the State and federal funds to be available earlier, and on a more dependable timeline, than the State and federal funds in many cases. Exchanges are approved on a case-by-case basis, as opportunities present themselves.

SECTION 5: PROGRAMMING REQUIREMENTS

Projects must satisfy the following programming requirements to be considered for programming and allocation by Alameda CTC.

1. Projects must be included in, and be consistent with the most current adopted Regional Transportation Plan and Alameda CTC's Countywide Transportation Plan.
2. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.
3. Projects must be publicly accessible and provide direct benefits to public transportation infrastructure and operations.
4. Projects must meet the goals and objectives of the funding sources and programs that are ultimately recommended by Alameda CTC.
5. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF must be consistent with requirements and priorities of their respective expenditure plans.

Funds are programmed from a specific fund source(s), in a given fiscal year to a specific phase(s) of a project. The expected outcome of the total project, or of implementing any phase of the project, with funds programmed in the CIP, shall be consistent with the goals and objectives of the CTP, and any applicable fund source specific requirements.

Programming and allocations requests must at minimum contain the following:

- Project scope, cost, schedule,
- Description of benefits to determine the expected outcome and whether or not the outcome is consistent with the CTP and fund source goals and objectives.
- Funding breakdown by phase. Cost estimates for all phases are required for projects requesting programming or allocations for phases beyond environmental approval.

ACTC_AR3539

SECTION 6: PROGRAMMING PRINCIPLES AND GUIDELINES

Alameda CTC's programming and allocation decisions shall be based on a project's ability to achieve the following five fundamental policy principles that serve as a guide for the CIP development and project selection.

1. Implementing Alameda County's adopted vision
   All funding decisions will support implementation of Alameda CTC's long-range transportation vision for Alameda County as adopted in its long-range Countywide Transportation Plan.

2. Balanced strategic program across project delivery phase
   Alameda CTC strategically invests financial resources to optimize transportation planning, project delivery and performance analysis. The CIP will identify investments in all stages of project development. Striking a balance between project development and capital phases is desired to support a combination of project development phases that will utilize the available programming capacity and to position the county to leverage federal, State and regional funding sources as they become available. This will include considering the delivery status of projects to optimize competitiveness for future grant opportunities.

   Alameda CTC uses the following project or program delivery phases:
   - Planning/Scoping/Conceptual Engineering
   - Preliminary Engineering/Environmental Studies
   - PS&E/Final Design
   - Right-of-Way Acquisition and Engineering
   - Construction Capital and Support
   - Equipment/Rolling Stock Acquisition
   - Operations (includes Safe Routes to School, paratransit programs, transit-related operations)
   - Post-Construction Activities
   - Project Closeout

   The CIP will also include countywide program/operational investments including, but not limited to, the Safe Routes to Schools Program, senior travel training/mobility management, and system performance-monitoring efforts.

4. Maximizing transportation investments
   Alameda CTC will work with local agencies to program funds to projects that are implementation ready, have a credible funding plan, meet the requirements of the fund source and provide transportation benefits. The CIP will examine opportunities

ACTC_AR3540

to leverage the local fund sources to the maximum extent possible. In addition, Alameda CTC will use the CIP to identify co-benefits between projects, when practical and feasible.

5. Investments in all modes and areas within Alameda County
   The CIP strives to identify investments in all modes of transportation, project phases, and geographic areas in Alameda County. The CIP is constrained to the revenue projected to be available for the five-year programming. Alameda CTC will use the CIP to monitor geographic equity and modal equity investments over time.

6. Delivering solutions while ensuring accountability
   Alameda CTC will require timely and cost-effective project delivery, and will monitor implementation to ensure Project Sponsors are accountable for their projects. The CIP will promote the timely delivery of projects, leveraging of local funds and minimizing cost increases due to delays. Projects funded through the CIP will be subject to the requirements of each fund source used to implement the project. Timely use of funds provisions will apply to all funds programmed and/or allocated in the CIP.

Programming Principles and Guidelines

Programming and allocations decisions shall be based on a CIP Programming Principles and Guidelines included in the CIP's appendices. This describes the complete framework for programming and allocation decisions made by Alameda CTC, including defining eligible projects, eligible Project Sponsors, eligible costs, funds sources, funding guidelines and requirements.

Key project merits will be considered (in no particular order) such as:

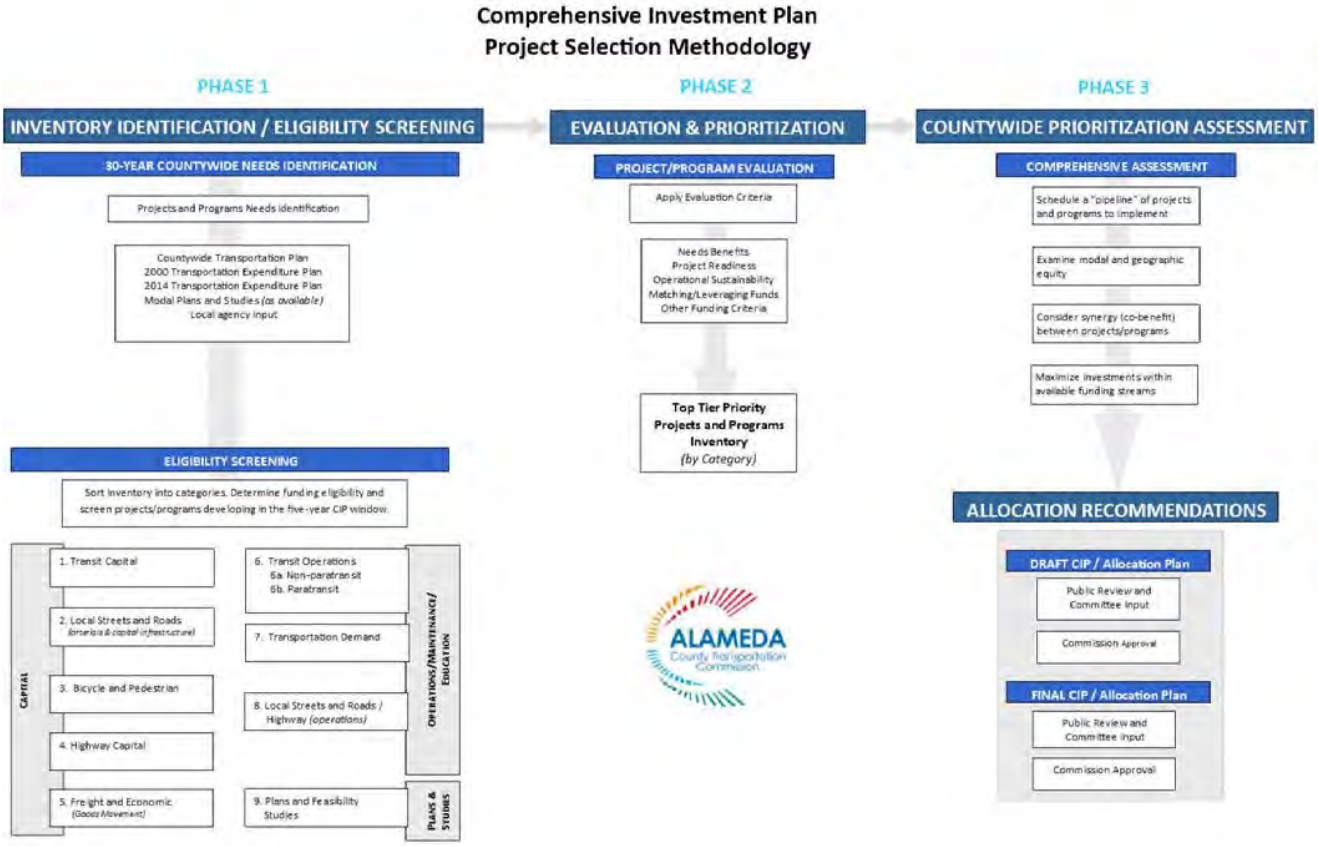
- Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.

- State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.

- Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.

- Safety and Connectivity: Project's ability to foster a safe, connected, accessible transportation system for multimodal movement of goods and people.

ACTC_AR3541



- Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to inform the uniform consolidation of historically separate programming practices, where applicable, to more effectively coordinate funding towards beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

Programming Guidelines are described in detail by program in the CIP's appendices.

SECTION 7: PROJECT SELECTION METHODOLOGY

The project selection methodology for the CIP is based on three step/phased approach as described below and illustrated in CIP Project Selection Methodology Diagram shown here.

ACTC_AR3542

Phase 1: Project Identification and Screening

Alameda CTC will identify project inventories from the CTP, countywide modal plans, short- and long-range transportation plans and other local planning documents. The inventory will be screened for eligible projects that are ready to be implemented within the five-year CIP window based on schedule, a credible funding plan and local prioritization. Alameda CTC may also initiate a Call for Project to gather updated project information to inform project selection decisions for CIP programming and allocations.

Alameda CTC will separate projects into modal categories based on the type of project (bicycle/pedestrian, roadway, etc. Projects will be assessed for eligible funding sources to ensure they meet funding requirements. The CIP Programming Principles and Guidelines located in the CIP's appendices provides a summary of the categories and sample project types included in the CIP.

The goal of Alameda CTC's funding recommendations will be to fund a project phase by phase, as applicable, so that the project can progress from development to construction and project delivery. Projects outside the five-year period will be considered for future implementation in subsequent funding cycles and CIP updates.

Phase 2: Project Evaluation

Based on the list developed in Phase 1, Alameda CTC will prioritize projects relative to each other in defined category types. Projects will be evaluated against the same category of projects (i.e., transit projects will be evaluated against transit projects, road projects against road projects, etc.). This approach will provide a balanced prioritization process that compares similar project types to one another. Projects specifically named in expenditure plans will be separated from those seeking discretionary funding and will be prioritized independent of the discretionary projects. Based on their scoring assessment, projects will be evaluated and arranged into three tiers within their respective categories (high, medium and low priority). This sorted list will then move into the third phase of evaluation.

Alameda CTC will evaluate eligible projects using the programming criteria adopted as part of the CIP, and other Commission actions, as the basis for programming and allocation decisions.

Phase 3: Countywide Prioritization Assessment

The final step in the project selection process will examine the top tiers of each category from the Phase 2 scoring, to strategically program available funding, to achieve countywide goals and priorities. Alameda CTC will perform a systematic examination across all of the categories to identify financial strategies, geographic and modal equity, and co-benefits between proposed improvements as part of the CIP update process

ACTC_AR3543

every two years, when the five-year programming window is shifted two years into the future.

Alameda CTC will examine opportunities to promote the timely delivery of projects, and leveraging of local funds. Programming recommendations will be constrained by the total available programming within the five-year CIP window, and by fund source eligibilities of projects.

Projects outside Alameda CTC's programming availability in the five-year CIP will be considered for inclusion in future funding cycles and CIP updates.

Project Selection Criteria

The CIP project selection criteria as approved and incorporated in the CIP updates, includes traditional programming criteria used previously by the Alameda CTC. The CIP uses four categories of criteria to score each project:

1. Readiness Delivery Criteria
   The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the agency has the ability to coordinate among internal and external agencies, as applicable.

2. Needs and Benefits Criteria
   The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, supporting well-maintained transportation facilities/equipment (as applicable); promotes innovation and a multimodal system; improves safety; supports a clean environment; and strengthens the economy.

3. Matching and Leveraging Funds Criteria
   The project has secured funding from other sources or demonstrates how it will leverage other funds for use on the project.

4. Other Funding Features
   As applicable, other requirements mandated by other funding sources/programs.

Alameda CTC will, to the extent possible, implement the above project selection process using the CIP programming principles identified in Section 6: Programming Principles and Guidelines for programming and allocation decisions.

ACTC_AR3544

SECTION 8: BASIS OF PROJECT COST SHARING

The investments of funding programmed in the CIP considers the overall project cost/funding picture and expected outcomes. The baseline for cost sharing is typically the proportional share of Alameda CTC Administer Funds against the total project costs at completion.

Project Sponsors are required to request Alameda CTC Administered Funds by phase and to provide matching funds to such request by phase. This ensures during any given CIP programming cycle the Commission's requirement for a minimum level of project cost sharing is achieved.

In the event, Alameda CTC funds are required in an earlier phase to increase the competitiveness of a project to leverage other funds sources, Alameda CTC, may at its discretion, make a programming recommendation to a phase without a match, that considers the project cost sharing overall.

A risk sharing arrangement shall be included in any funding agreement which obligates funding allocated by Alameda CTC in advance of its proportional share (based on the total funding) for project phases beyond environmental approval, especially for projects that do not have funding identified for all phases of implementation.

The following principles shall be the basis of cost sharing considered for programming and allocations approved by Alameda CTC:

- Complete Project Information
  Request for allocations through the CIP process and subsequent funding agreement packages shall include a summary of estimated total costs segregated by phase; a corresponding milestone schedule showing begin and end dates for each phase (and any significant delivery milestones within each phase); and the anticipated funding (all sources) for each phase segregated by source.

- Funding Agreement Requirements
  Project cost sharing shall be established in the funding agreements based on the information provided with the request for allocation and funding agreement packages. The cost sharing proportions documented in the funding agreement shall be used for risk sharing associated with the implementation of the phase(s) covered by the agreement.

ACTC_AR3545

- Local Cooperation Policy and Eligibility of Locally Incurred Costs
  Project Sponsors, and local jurisdictions whom are directly benefitting from the expected outcomes a project implemented in their locality by Alameda CTC, the Project Sponsor, or other implementing agencies, are required to be active funding partners to further the delivery of such improvement project.

  Locally incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by an implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. However, the costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC stipulated in the funding agreement, unless they are specifically identified as eligible in the funding agreement.

  Jurisdictions whom are Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) Recipients are encouraged to use local funds to support matching costs. DLD recipients shall not be eligible for reimbursement for local staff costs from Alameda CTC Administered Funds allocated to the Project. Project Sponsor staff costs can be included in the total cost and other funding amounts for the purpose of meeting the cost and risk sharing provisions of Agreement, but staff costs will not be considered reimbursable costs unless the Project Sponsor is performing direct activities related to the phase of the project.

  Refer to the Local Cooperation Policy in the CIP's Policies and Procedures appendix.

SECTION 9: FUND MANAGEMENT AND CIP ADMINISTRATION

Alameda CTC is responsible for the management and administration of the various funding programs within its programming and allocation purview. The CIP provides a summary of the programmed and allocated amounts for each fund source administered by Alameda CTC, and in some cases the fund sources administered by other agencies.

The fund sources administered by Alameda CTC must be managed in accordance with applicable laws and requirements related to the individual fund sources, and with government accounting standards. The programming and allocations included in the CIP provide the basis for the financial and accounting activities performed by Alameda CTC's annual budget, programming fund estimate, and cash management analysis. In general, the financial and accounting activities performed by Alameda CTC occur in the background of the day-to-day project implementation activities, and do not typically hinder a projects ability to be delivered. The specifics related restrictions of use, or

ACTC_AR3546

timing of reimbursements for allocated fund shall be addressed in the applicable funding agreement(s).

Alameda CTC Administered funds under Alameda CTC's direct administration purview shall be encumbered into a funding agreement with the Project Sponsor. The funding agreement shall be consistent with the original request for allocation/project application that was used to inform Alameda CTC's programming and allocation decision. Alameda CTC provides for a formal and administrative amendment process to amend an executed funding agreement to adjust the scope, funding, milestones, schedules based on a Project Sponsor's request.

CIP Administration

The CIP is updated periodically, as needed, to assess programming and allocations adjustments that reflect project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments. The Commission may amend the CIP at any time if an action must be taken before the next CIP update period. The Commission must approve all project additions or deletions. The Commission authorizes the executive director or his or her designee to administratively approve the acceleration of project/program schedules, as long as they can be accomplished within the budgeted amount. This is to maintain project scheduling and coordination with any other activities that may impact or delay project implementation or development. Significant changes in the scope of work, implementation schedule or costs will be presented to the Commission for consideration.

The CIP is updated in consultation with other planning and programming efforts such as the Alameda County Congestion Management Program, the Countywide Transportation Plan and Alameda CTC's annual budget process.

Annual CIP Update

Annual updates, as needed, include modifications to financial projections and confirmation of programming and allocation commitments in association with Alameda CTC's annual budgetary processes. Additionally, annual updates will examine general strategic planning of its projects and programs, and the status of various commitments, and technical adjustments required periodically.

Biennial CIP Update

Every two years, as needed, Alameda CTC will comprehensively update the CIP to review existing CIP projects and to open a nomination window for new projects. The biennially update occurs on odd number fiscal years, and represents a shift of the programming window to add the next two fiscal years.

ACTC_AR3547

Biennial CIP updates will include review of existing projects and programs to determine whether to recommend continuing or postponing funding and delaying, removing or reincorporating projects/programs. Alameda CTC may recommend additional funding to continue existing approved projects. As part of this update, Alameda CTC will open a nomination window to consider new projects for additional capacity granted with the two-year shift of the programming horizon. Projects submitted during the nomination window that meet the Commission-adopted screening criteria will be evaluated and prioritized for funding consideration.

Periodically, Alameda CTC will reassess the CIP development process, prioritization methodology and allocation process for consistency with any updated policies and goals. Alameda CTC will update and amend the CIP accordingly to account for project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments.

CIP Amendments / Adjustments

CIP Amendments / Adjustments are considered on a case-by-case basis, and may occur in the following situations:

- Alameda CTC made a programming recommendation that received final programming actions by other agencies for federal, State or regional funds.
- Additional funding is needed to complete a CIP project.
- Commission approved programming made off-cycle of a CIP update.
- Matching funds are needed to immediately leverage non-Alameda CTC Administered funds to Alameda County.
- Project Sponsors requested a fund exchange among existing approved projects to prevent delays or cost increases to the project.
- Project Sponsors required updates to reflect additional revenue from new or existing fund sources, or updated confirmed amounts.
- Project Sponsors are unable to meet the environmental and full funding requirements as defined in the sales tax expenditure plans.
- Project Sponsors reported changes such as budget increases, schedule delays or other factors that may impede project delivery.

Adjustments to the current CIP programming and allocation record will be reflected in the next regularly scheduled CIP update.

ACTC_AR3548

SECTION 10: ALLOCATION PROCESS AND REQUIREMENTS

Alameda CTC maintains programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard programming and allocation procedures and requirements further described in the CIP's Policies and Procedures appendix.

Generally, Alameda CTC allocates the funding for which it has allocation authority based on Requests for Allocations Packages in the form of separate allocation requests for named projects in the Transportation Expenditure plans or through funding applications submitted to Alameda CTC for funding consideration by Project Sponsors during a CIP call-for projects.

The Request for Allocation package shall include an overall project implementation plan which identifies anticipated costs by phase and potential funding sources for each phase throughout completion of the project. Requests for allocations for multiple phases without specifying amounts for the individual phases shall be considered on a case-by-case basis.

Generally, Requests for Allocation Packages should be submitted to Alameda CTC at least 45 days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval. In some cases, the project activities to be funded by an allocation being requested will be performed by an implementing agency that is different than the sponsor. In such cases, the request for allocation package should be prepared by the implementing agency and submitted to Alameda CTC by the Project Sponsor.

Alameda CTC has allocation authority for funds from the following sources:

- 1986 Measure B (1986 MB);
- 2000 Measure B (2000 MB);
- 2010 Vehicle Registration Fee (VRF);
- 2014 Measure BB (2014 MBB);
- Transportation Fund for Clean Air (TFCA) Program Manager; and
- CMA Transportation Improvement Program (CMATIP).

Alameda CTC allocates to the following phases:

- Planning/Scoping/Conceptual Engineering
- Preliminary Engineering/Environmental Studies
- PS&E/Final Design

ACTC_AR3549

- Right-of-Way Acquisition and Engineering
- Construction Capital and Support
- Equipment/Rolling Stock Acquisition
- Operations and/or Maintenance

SECTION 11: APPROVAL OF ADVANCE/PAYBACK AND EXCHANGE ARRANGEMENTS

Requests for advances or exchanges of funds programmed or allocated by Alameda CTC shall be considered on a case-by-case basis and shall only be approved if Alameda CTC resources permit such advance/exchange, and if a significant benefit to the implementation of the project can be identified.
Requests for such advances or exchanges shall be submitted in writing by the Project Sponsor, and shall include, at minimum:

1. Project Status and Current Implementation Plan
2. Project delivery strategy with the funding or exchange proposal that describes the costs and fund sources to be involved in the proposed advance or exchange.
3. Timing availability of the funds for which the advance or exchange is requested
4. Repayment schedule of Alameda CTC funds that are proposed to be advance
5. Intended use of the funds freed up by the advance or exchanged

Any advance or exchange arrangement involving funds programmed or allocated by Alameda CTC must be approved prior to allocation, and shall be addressed in the applicable funding agreement.

SECTION 12: DEBT FINANING FOR THE MEASURE BB CAPITAL PROGRAM

Management of the accounts established for the voter-approved funding programs requires forecasts and projections of revenues and expenditures for the revenue sources and expenditure commitments included in each program. The CIP includes revenue projections for each of the funding programs administered by Alameda CTC. Alameda CTC confirms the priorities for the expenditure commitments through the programming and allocations included in the CIP.

While the cumulative committed expenditures remain less than the cumulative revenues, Alameda CTC is able to fund the investments approved in the CIP on a pay-as-you-go basis. When enough projects are approved that create a scenario where the cumulative committed expenditures exceed the cumulative revenues for any of the funding programs, program level financing will be required to make the funds committed available when needed for project implementation.

ACTC_AR3550

When external financing is necessary, the financing mechanism will be determined by the timing of the need for funding, the current financial markets, and the type of expenditure to be financed as some financing mechanism have restrictions on the type of expenditures that can be financed. The decision to finance projects and programs requires lead time to identify the most beneficial type of financing, and to perform the activities required for the financing to be approved, so staff consistently updates cashflow schedules based on the changing needs of the projects and programs in the TEP.

Once funding agreements and contracts for funds allocated in this CIP are executed, Alameda CTC will have encumbered more Measure BB capital funds than can be provided to the projects on a pay-as-you-go basis. Current financial analysis shows the Measure BB capital program cash balance, without any external financing mechanism, will go negative in the very near-term. The amounts encumbered in funding agreements and contracts will not be expended immediately. The encumbrances for larger projects can take years to be fully expended; however, with encumbrances in place, financial management of the capital program must be diligent. The timing of the anticipated expenditures has a significant effect on financing options and costs. Current financial analysis indicates that debt financing from an external source will soon be required to provide Measure BB funding to the capital projects funded in this CIP.

Based on the volume and timing of funding needs in the Measure BB capital program, the external financing mechanism currently planned for the Measure BB capital program is the issuance of bonds in the capital markets. The process for issuing bonds secured by the sales tax is prescribed by the California Public Utilities Commission Code and expanded upon in guidelines prepared by the California Debt and Investment Advisory Commission. The required process includes Alameda CTC adopting a resolution authorizing the issuance of bonds. The resolution authorizing the issuance of bonds, at a minimum, must address the following (from the PUC):

- The purposes for which the proposed debt is to be incurred, which may include all costs and estimated costs incidental to, or connected with, the accomplishment of those purposes, including, without limitation, engineering, inspection, legal, fiscal agents, financial consultant and other fees, bond and other reserve funds, working capital, bond interest estimated to accrue during the construction period and for a period not to exceed three years thereafter, and expenses of all proceedings for the authorization, issuance, and sale of the bonds.
- The estimated cost of accomplishing those purposes.

ACTC_AR3551

- The amount of the principal of the indebtedness.
- The maximum term the bonds proposed to be issued shall run before maturity, which shall not be beyond the date of termination of the imposition of the retail transactions and use tax.
- The maximum rate of interest to be paid, which shall not exceed the maximum allowable by law.
- The denomination or denominations of the bonds, which shall not be less than five thousand dollars ($5,000).
- The form of the bonds, including, without limitation, registered bonds and coupon bonds, to the extent permitted by federal law, and the form of any coupons to be attached thereto, the registration, conversion, and exchange privileges, if any, pertaining thereto, and the time when all of, or any part of, the principal becomes due and payable.

The process for issuing bonds involves selecting a Financing Team including a Financial Advisor, an Underwriter (one or more), and Bond Counsel, and frequently also includes Disclosure Counsel, to help determine the bond structure and other specifics related to the bond issuance required to develop the bond package, market the bonds, sell the bonds and secure the proceeds. Once the bonds are issued, Alameda CTC will be responsible for bond compliance, monitoring and tracking expenditures, and investment and accounting for bond proceeds.

It is Alameda CTC's policy to fund capital project costs on a pay-as-you-go basis for as long as reasonably possible prior to issuing bonds which helps to minimize financing costs. However, based on current cash flow projections, the Measure BB capital program will require financing by early in FY2022-23 to continue to be able to provide funding to Measure BB projects at the time they are needed to pay expenditures incurred on projects for the next several years through 2032. Thereafter, available sales tax revenues from Measure BB are anticipated to be sufficient to meet capital project cost and debt service needs. Debt financing effectively makes future revenues available sooner to pay for project expenditures as they are incurred. Cash flow projections support the financial analysis and cash management efforts related to determining that a bond issuance is the best method of debt financing suited to Alameda CTC's needs and will allow the agency to fulfill commitments to the Measure BB capital program. The focus of the financial analysis and the Alameda CTC management team is to provide funding for Measure BB commitments to capital projects at the time the funding is needed to reimburse eligible project expenditures as they are incurred. Once a debt issuance is in place, Alameda CTC must prioritize debt service obligations when fluctuations to the timing of Measure BB funding needs on projects develop.

ACTC_AR3552

With borrowing needs spread over more than a 10-year period, Alameda CTC's Commission approved a strategy to address this need which includes issuing bonds every few years within a 10-year window to meet Measure BB capital project funding needs and is in line with requirements to spend down bond proceeds within three years of each issuance. The intended strategy of periodic bond issuances will allow Alameda CTC to have some certainty on the availability of funding to meet the demands of the Measure BB capital program as projects move through the process into the construction phase. Bonds are expected to be sold as tax-exempt, fixed rate bonds with a 10-year call feature, allowing Alameda CTC to refund and redeem the bonds at par on and after the 10-year call date to provide flexibility to the strategy and the Measure BB program. The final maturity of bonds issued will be in 2045, the final year of Measure BB sales tax collections.

With the approval of the Commission, Alameda CTC has begun the debt issuance process and has completed this process of bringing on a financing team as reported to the Commission in March 2022. The Financing Team is currently working on the development of all of the required bond documents for an inaugural issuance of Measure BB bonds.

While bond proceeds will fund Measure BB capital expenditures on a program-wide basis, within the capital program the projects with the largest draw on funds over the next few years and the precipice of the initial financing needs include the State Route 84 ("SR-84") Interstate 680 ("I-680") Interchange Improvements and SR-84 Widening Project, 7th Street Grade Separation East Project, Interstate 80 ("I-80")/Gilman Street Interchange Improvements Project (Phase 1 and 2), and I-680 Express Lane - Southbound Gap Closure (SR-84 to Alcosta Blvd) Project which are all projects included and allocated funding in this CIP as required by the agency's adopted debt policy.

SECTION 13: PROJECT DELIVERY RESPONSIBILITIES

The implementation of projects in the CIP begins once Alameda CTC approves the funding for the project. The Project Sponsor is the agency that takes the overall responsibility for project delivery, advocacy and reporting for the project regardless if it not the direct implementing agency for the project, unless otherwise agreed through written agreements between the Project Sponsor and the implementing agency.

Alameda CTC acts as project cosponsor, and as implementing agency, for phases of a number of projects and programs. As implementing agency, Alameda CTC incurs eligible project costs through contracts with vendors, staff charges and other direct costs. Implementing agencies, other than Alameda CTC, receive reimbursements from

ACTC_AR3553

Alameda CTC via funding agreements which encumber the funds allocated by Alameda CTC. Once the funding agreements are in place, implementing agencies may encumber the funds for contracts and other direct costs to deliver the project as provided for in the funding agreement. Alameda CTC monitors the performance of the projects during implementation and after implementation during operations based on information provided by the Project Sponsor.

Throughout the implementation process, Alameda CTC relies on Project Sponsors and implementing agencies to communicate regularly about project activities and status as required by the funding agreements. The regular updates from Project Sponsors support Alameda CTC's management of the overall set of projects. The information collected from Project Sponsors provides the basis of the project status information made available to the public by Alameda CTC.

Timely and accurate reporting is essential for early identification of potential project or program issues, and of circumstances that may adversely affect project delivery. Alameda CTC needs as much lead time as possible for approving changes to project or program funding in reaction to project risks. Project Sponsors and implementing agencies must communicate risks to Alameda CTC as soon as they are identified by the Project Sponsor or implementing agency.

If a project requires additional funding, or a change to the funding as approved in the CIP, Alameda CTC will review the funding request and consider providing more funding, or approving changes to existing funding, in future CIP update cycles. If an amendment is required prior to the next CIP update cycle to maintain the current implementation schedule, Alameda CTC may approve additional funding, or changes to previously approved funding, at any regularly scheduled Commission meeting.

The CIP document will not be updated and re-published after each off-cycle funding adjustment. Off cycle adjustments to the funding approved in the CIP will be summarized as current programming in the next CIP update cycle.

SECTION 14: PROJECT FUNDING AGREEMENTS

Allocated funds are considered available for encumbrance in funding agreements between the funding agency and the recipient agency.

A funding agreement is required between agencies to allow for reimbursements of eligible project expenditures. The funding agreements specify the financial terms of the agreement, scope of work, costs, schedules and deliverables associated with the

ACTC_AR3554

implementation of the project. Funding agreements are based on the project information, scope of work, costs, schedules and proposed outcomes at the time of the request for allocation.

Generally, Alameda CTC initiates funding agreement development between recipient agencies immediately after the Commission approves a funding allocation. However, it is the responsibility of the recipient agency to submit a request for funding agreement to the Alameda CTC to receive funds allocated by Alameda CTC. Requests for funding agreement must in accordance with the Timely Use of Fund Policy cited in the CIP Policies and Procedures appendix.

Recipient agencies are responsible for fulfilling all requirements related to executing the funding agreements.

SECTION 15: PROJECTS REIMBURSEMENT PROCEDURES

Alameda CTC approves reimbursements of eligible project costs based on Request for Reimbursement (RFR) packages submitted by implementing agencies and Project Sponsors which incur reimbursable costs against Alameda CTC Administered Funds encumbered in a funding agreement.

RFR requirements are included in the applicable funding agreements, and Project Sponsor's request generally include

- Itemization of eligible costs incurred to confirm the costs are consistent with the applicable funding agreement
- Itemization of Alameda CTC costs and other sources to calculate any proportional shares and reimbursement ratios set in the funding agreement
- Supporting documentation (timesheets, vendor invoices, proof of payment) for all costs cited within an RFR regardless if costs are intended to be Alameda CTC or non-Alameda CTC funded costs.

Alameda CTC approves RFRs upon sufficient supporting documentation of costs incurred, and based on the availability of funds.

Eligible costs for reimbursements are further described in the Eligible Cost for Reimbursement Policy cited in the CIP's Policies and Procedures appendix.

ACTC_AR3555

SECTION 16: ALAMEDA CTC LOCAL BUSINESS CONTRACT EQUITY PROGRAM REQUIREMENTS

All locally funded contracts approved by Project Sponsor, funded wholly or in part with Measure B, Measure BB, and/or Vehicle Registration Fee funds, except for contracts that also include State and/or federal funds or contracts funding non-capital projects (e.g., transit operations), are required to comply with Alameda CTC's Local Business Contract Equity (LBCE) Program.

This includes the obligation to report Local Business Enterprise (LBE), Small Local Business Enterprise, and Very Small Local Business Enterprise participation with all reimbursement requests submitted for contracts costs partially or wholly funded by Alameda CTC, whether or not the contract requires LBE participation.

Project Sponsors receiving Measure B, Measure B, and/or Vehicle Registration Fee funds through the programming and allocation process must follow these program requirements and may be requested to document procurement processes funds to verify program compliance. Non-compliance Project Sponsors may have funds subject to rescission, or marked as ineligible for reimbursement, at the discretion of the Alameda CTC.

Alameda CTC's LBCE Program and is available online on the Alameda CTC website.

SECTION 17: PROJECT CLOSEOUT

Project closeout shall be in accordance with the applicable project funding agreement(s).

At a minimum, the Project Sponsor shall provide Alameda CTC with written confirmation that the project is complete with a summary of the final costs, funding and schedule information segregated by phase. If a project will continue beyond the time during the time which Alameda CTC programmed or allocated funds are being expended, the Project Sponsor shall notify Alameda CTC in writing when the expenditure of the funding is complete, and will continue to provide project status updates as required/requested by Alameda CTC until the project is fully implemented and in public service.

Periodic information updates during operations of projects funded by Alameda CTC may be required for monitoring purposes as specified in the applicable funding agreement, and as requested by Alameda CTC.

ACTC_AR3556

SECTION 18: PERFORMANCE MONITORING AND REPORTING

Countywide Performance Monitoring and Implementation

Projects that received funding through the CIP have been identified through the programming and allocation process to further the Alameda CTC's Countywide Transportation Plan, modal plans, and local planning documents vision to improve the transportation network. These plans identify project and transportation system investments based on expected outcomes modeled over a up to 30-year planning horizon. As projects are implemented through the CIP programming, Project Sponsors are required to report back to Alameda CTC on the outcomes of the implemented projects, and provide feedback on the planning and investment decisions.

Project Reporting

The CIP requires that each project include performance monitoring goals/metrics to gather project specific performance indicators on individual projects. Funding agreement will include all monitoring and reporting requirements required to capture the benefits and expected outcomes of Alameda CTC's investments.

The reporting requirements include the following:

Progress Reports

The executed funding agreements require regular progress reporting, based on the reporting schedule set forth on the agreement. The progress reports include a status update made toward implementation of the project, including deliverables, commitment status of supplemental funds identified in the funding agreement and adherence to the adopted project schedule.

Corrective Plans

Once a funding agreement is executed, Project Sponsors are required to report changes to the project scope, schedule, cost and funding as soon as the required changes are identified by the Project Sponsor for the Commission's consideration. Reports of changes such as budget increases, schedule delays and other factors that may represent an impediment to successful project delivery in accordance with the agreed-on scope, schedule, cost and funding must be accompanied by a Corrective Plan detailing the Project Sponsor's strategy to deliver the project or program within the proposed new parameters. Alameda CTC must accept the plan before future programming, allocations and reimbursements will be approved.

Final Report

The Project Sponsor must submit a final project delivery report of the completed project contained in a funding agreement. The final report must

ACTC_AR3557

describe the completed scope of work, the final budget including spend down of all identified fund sources in the funding plan and any performance outcomes included in the funding agreement.

Monitoring Project Sponsor Delivery and Accountability

Alameda CTC will also monitor the Project Sponsor's ability to deliver a project as proposed. Project Sponsors are required to monitor and inform Alameda CTC if there are significant changes in project or program development, implementation schedule or budget. Project Sponsor's delivery record may be considered at future programming cycles or funding requests by the Project Sponsor. Failure to monitor performance or perform required expenditure audits may affect a Project Sponsor's eligibility to receive funding in future CIP update cycles.

Audits

Alameda CTC reserves the right to perform audits to confirm whether costs submitted for reimbursement are consistent with the provisions set forth in the applicable funding agreement(s). The audit may also include a review of deliverables and outcomes to determine if they are consistent with the project scope and schedule in the funding agreement. Audits must also be performed for funding sources as described in the 2000 TEP and 2014 TEP.

Alameda CTC will periodically evaluate and summarize the project performance monitoring efforts conducted through the individual project and or comprehensive program updates to the Commission. This is intended to provide feedback on Alameda CTC's investments, including how the projects provided a benefit to the transportation system.

SECTION 1
COMPREHENSIVE INVESTMENT PLAN
PROGRAMMING PRINCIPLES

---

1. PURPOSE

The purpose of the Comprehensive Investment Plan (CIP) is to facilitate strategic programming and allocation of all fund sources under Alameda CTC's programming responsibilities. This includes funding from federal, State, regional, and local fund sources such as the Surface Transportation Program (STP) / Congestion Mitigation Air Quality Program (CMAQ), Lifeline Transportation Program, Transportation Fund for Clean Air Program (TFCA), local sales tax measures and vehicle registration fee programs.

To streamline programming of these funds sources, the CIP considers all available fund sources through a consolidated funding program that prioritizes, evaluates, and recommends funding to critical transportation infrastructure and operational needs that build and maintain the county's transportation system. The coordinated programming effort is also intended to minimize the number of funding applications required from Project Sponsors and prioritize investments to projects and programs ("projects") identified through countywide transportation planning efforts.

The purpose of the CIP programming principles established herein is to provide a framework for programming and allocation decisions made by the Alameda CTC to accomplish countywide transportation goals and objectives. The following five fundamental guiding principles have been identified:

1. Implementing Alameda CTC's adopted visions and goals
2. Balance strategic investments across project delivery phases
3. Maximize transportation investments
4. Investments in all modes and areas within Alameda County
5. Deliver solutions while ensuring accountability

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to create a uniform consolidation of historically separate programming goals and practices, where applicable, to more effectively coordinate funding towards highly beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

2. PROGRAMMING AND ALLOCATIONS PROCESS

The CIP includes a five-year programming window with a two-year allocation plan (i.e. the first two years of the five-year window).

The current programmed amount for a given project represents a commitment amount that is available for allocation when the programmed funds shift into the CIP's two-year allocation window. An allocated amount represents the amount available for encumbrance in project funding agreements and/or contracts, which are, in turn available for reimbursement of eligible costs.

All programmed funds are subject to the availability of funds, and current programming and allocation priorities.

The CIP programming and allocation process is as follows:

1. Alameda CTC will make programming and allocation recommendations to certain projects based on the available fund estimate for a given five-year CIP programming cycle.
2. Projects programmed within the first two-years of a given CIP will receive an allocation.
3. Projects with outer year programmed funds will receive an allocation in the fiscal year in which the funds were originally programmed, upon the Project Sponsor's allocation request through the CIP application process.
    - Allocation requests to advance outer programmed funds are subject to the availability of funds and Commission approval, as priority is given to projects with funds already allocated in the two-year allocation window.
4. Projects with outer year programmed funds that are not ready for an allocation may request to have the programming deferred to an outer CIP programming year by notifying Alameda CTC.

3. FUND SOURCES AND PROGRAMS

The CIP consolidates the programming and allocations of the various fund sources under Alameda CTC's purview. These sources are delineated into principle programs, where feasible, as identified on the table below. For example, 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Bicycle/Pedestrian funds are consolidated into a single Bicycle/Pedestrian Program. This provides greater coordination of similar funding types, requirements, and eligibilities to meet larger program goals and objectives. For all locally-funded programs (principle programs 1-10) a project-funding agreement between the Alameda CTC and Project Sponsor is required. For all other programs (principle programs 11- 13) Project Sponsors are required to enter into a funding agreement directly with the appropriate federal, State, or regional agency.

Principle Program	Fund Source & Investment Program
1. Bicycle/Pedestrian Program	Measure B (MB) Bike/Pedestrian Countywide Discretionary Fund Measure BB (MBB) Bike/Pedestrian Grant Program Measure BB (MBB) Three Major Trails Vehicle Registration Fee (VRF) Pedestrian-Bicycle Access and Safety Program
2. Transit Program	MB Express Bus MBB Innovative Transit Program (transit pass programs) VRF Transit for Congestion Relief Program

Principle Program	Fund Source & Investment Program
3. Transit Center for Development Program	MB Transit Center Development Program
4. Community Development Investment Program	MBB Community Development Investment Program
5. Paratransit Program	MB Special Transportation for Seniors and People with Disabilities "Gap Grant" Program MBB Coordination and Service Grants
6. Freight and Economic Development Program	MBB Freight and Economic Development MBB Countywide Freight Corridors
7. Technology, Innovation and Development	MBB Technology, Innovation, and Development
8. Local Streets and Roads (Arterials) Program	MBB Congestion Relief, Local Bridge, Seismic Safety
9. Highways Program	MBB Highway Capital Projects
10. Transportation Fund for Clean Air (TFCA)	TFCA Program
11. Lifeline Transportation Program (LTP)	State Transit Account (STA) Job Access Reverse Commute (JARC) and Surface Transportation Program (STP)
12. One Bay Area Grant Program (OBAG)	Surface Transportation Program (STP) and Congestion Mitigation and Air Quality (CMAQ)
13. State Transportation Improvement Program (STIP)	STIP

4. PROGRAMMING CAPACITY

Alameda CTC's programming capacity is limited to the funding anticipated to be available for projects included in the five-year programming and allocation horizon. Projects are programmed over a five-year period, with allocations to projects in the first two-years of the CIP window. Projects that exceed the five-year fiscally constrained CIP will be considered for inclusion in future CIP updates, and may receive priority consideration in the event a previously programmed commitment is unable to be delivered, or additional funding capacity is made available. Alameda CTC will provide a programming fund estimate as part of the CIP call for projects process.

5. PROGRAMMING PRIORITIES

Through the CIP, funds are prioritized to projects as follows:

a. Achieves Fundamental Programming Principles: The degree to which projects achieve the CIP's five (5) fundamental programming principles (*refer to Section 6 of CIP for details)*.
   1. Implementing Alameda CTC's adopted visions and goals
   2. Balance strategic investments across project delivery phases
   3. Maximize transportation investments
   4. Investments in all modes and areas within Alameda County
   5. Deliver solutions while ensuring accountability

b. Countywide Significance: Projects identified as a countywide priority, as an identified project, or along a transportation corridor, in Alameda CTC's Countywide Transportation Plan (CTP), Multi-modal Plans (Goods Movement, Arterial, and Transit), transportation

ACTC_AR3610

expenditure plans, and the Countywide Bicycle and Pedestrian Plans will receive higher priority consideration.

c. Readiness: Projects demonstrating higher state of construction readiness will receive higher priority consideration. Readiness includes technical and financial readiness such as completion of engineering, environmental and design studies, identification of risk-mitigation measures, secured funding towards project completion, feasible schedule, etc. Projects must be deliverable within the timeframe that funds are made available.

d. Fund Leveraging: Projects that leverage external funding commitments (such as federal and State discretionary funds) shall receive higher priority consideration.

e. Coordination and Support: The degree to which a project demonstrates coordination and support from multiple jurisdictions, agencies, and the community stakeholders throughout the planning and project implementation phases, and identification of commitments to maintain the improvements after completion.

6. ELIGIBLE APPLICANTS

a. Eligible applicants (direct recipients) of funds programmed through the CIP are limited to the following:

1. Cities of Alameda, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, Union City
2. County of Alameda
3. Transit agencies Altamont Corridor Express (ACE), Alameda-Contra Costa Transit District (AC Transit), San Francisco Bay Area Rapid Transit District (BART), Livermore Valley Transportation Authority (LAVTA), Union City Transit, and San Francisco Water Emergency Transportation Authority (WETA)
4. East Bay Regional Parks District (EBRPD)
5. Public school districts (K-12) in Alameda County *(exclusively for student transit pass programs)*
6. Alameda County Transportation Commission (Alameda CTC)
7. Private, non-profit organizations *(exclusively for programs targeted towards seniors and people with disabilities)*
8. Entities that are not identified specifically as eligible direct recipients will only be eligible to receive CIP funds as sub-recipients by partnering with an eligible direct recipient that is willing to pass through the funds to a sub-recipient. Exceptions allowing other entities to directly receive funds may be granted by Alameda CTC on a case-by-case basis.

b. Applicants must acknowledge and agree to comply with the specific requirements of the identified fund source and project funding agreement requirements prior to receiving funds programmed and allocated through the CIP.

c. Applicants must provide the expertise and staff resources necessary to successfully deliver projects within the constraints of the fund source requirements.

d. Applicants must identify and maintain a staff position that serves as the single point of contact for Alameda CTC programmed funds within that agency.

ACTC_AR3611

7. ELIGIBLE PROJECTS

Eligible CIP projects are as follows:

a. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.

b. Projects must be publicly accessible, and not only for private entity use.

c. Projects must be in and consistent with the most current adopted Regional Transportation Plan and the Alameda CTC's CTP.

d. Projects must meet the goals and objectives of the funding sources and funding programs.

- Projects funded with 2000 Measure B, 2014 Measure BB, and VRF monies must be consistent with eligible use of funds of the respective expenditure plans.
- Example requirements for federal funding include:
  - Compliance with the California Environmental Quality Act (Public Resource Code Section 21000 et seq.), the State Environmental Impact Report Guidelines (14 California Code of Regulations Section 15000 et seq.), and the National Environmental Protection Act (42 USC Section 4-1 et seq.) standards and procedures.
  - Completion of a Federal Transportation Improvement Program (FTIP) application through the Metropolitan Transportation Commission's Funding Management System.
- Potential funding eligibilities examples are identified on Exhibit A - Project Categories, Funding Eligibility, and Transportation Priorities.

e. Eligible capital infrastructure projects may include (but are not limited to):

- Local street and road improvements
- Bicycle and/or pedestrian infrastructure improvements include new facilities, parking/lockers, gap closure, and safety improvements
- Highway capital investments
- Freight, ferry, rail, and intermodal projects that facilitate the movement of goods, services, and people
- Transit infrastructure enhancements and expansion
- Safety or modernization improvements to transit centers, stations, or facilities,
- Transportation improvements that provide greater transit access for residents of low-income and disadvantaged communities
- Improvements that reduce greenhouse gas emissions
- Technology improvements such as intelligent transportation system, transit signal priority, innovative uses of technology as it pertains to improving the transportation system

f. Eligible non-infrastructure projects may include (but are not limited to):

- Bicycle and pedestrian master plans
- Feasibility or scoping only studies for capital projects
- Safe Routes to School program operations
- Crossing guard programs

- Safety education, training, enforcement, and promotional programs
- Transportation demand or traffic management programs
- Travel training and mobility management programs
- Transit or shuttle operations
- Transit incentive programs (including fare based)
- Bike share or rideshare programs

8. MINIMUM/ MAXIMUM AWARD AND MATCHING REQUIREMENTS

Project Type	Minimum Request	Maximum Request	Minimum Match
Capital Improvement	$250,000	$2,000,000	25% By Phase Requested
Programs and Transit/Shuttle Operations	$100,000 per year	$500,000 per year	75%
Plans/Studies	$100,000	$100,000	50%

The CIP will focus on comprehensive transportation projects that yield significant benefits to the countywide transportation system. In general, smaller projects or early project development (planning/scoping) activities that are able to be funded through local means (direct local distribution funds) will be a lesser priority for discretionary funding.

Project Sponsors shall provide the minimum match of Alameda CTC's administered funds requested by phase, unless otherwise stated by a particular program guideline.

9. MATCHING REQUIREMENTS

a. Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
b. Previously incurred costs or previously expended funds do not count towards fulling minimum matching requirement.
c. Named capital projects with identified specific funding commitments in the 2014 Measure BB Transportation Expenditure Plan are exempt from the matching requirements.
d. Projects funded with federal funds (such as STP/CMAQ) requires a non-federal local match. Non-federal sources for local match can include local sales tax, special bond measures, financial private donations, and other local revenues.
e. In-kind funding (non-cash contributions of time, goods and services, equipment, or space) will not count towards fulling the CIP matching requirement.
f. Alameda CTC may consider on a case-by-case basis exceptions to the matching requirement. Such exceptions may include exemptions for projects that provide considerable transportation benefits and/or projects that leverage significant transportation funds for the county.

ACTC_AR3613

10. ELIGIBLE PROJECT COSTS

Eligible costs for funds programmed through the CIP include

- Project development and preconstruction activities such as scoping level documents, preliminary study reports, feasibility studies, environmental documents, preliminary engineering and design work.
- Activities related to construction, rehabilitation, right-of-way acquisition, environmental mitigation, capital equipment acquisition.
- Program implementation, transit services, and shuttle operations.

All eligible costs for reimbursement must be in accordance with the policies and provisions set forth and described in detail in the "Eligible Costs for Reimbursement by Alameda CTC Policy".

Applicants are responsible for securing the necessary matching and for any additional funding needed to complete the project as a result of project cost increases, higher actual bid estimates, loss of funding, underestimated contingencies, and future maintenance costs.

11. FUNDING RESTRICTIONS

- Alameda CTC administered funds shall not supplant other committed funds.
- Alameda CTC will not be responsible to fund any cost overruns, cost increases, higher bid estimates, maintenance costs, or funding shortfalls beyond Alameda CTC's original programming and allocation commitment.
- 2000 Measure B Express Bus funds are only available to AC Transit and LAVTA.
- Programmed federal, State, and regional funds are subject to the requirements of the specific fund source, and may require Project Sponsors to enter into funding agreements directly with the authorizing agency.
- Reimbursement for eligible staff costs are limited to non-Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) recipients, unless otherwise agreed upon by the Alameda CTC with a project funding agreement for labor that includes direct staff implementation of a project activity. DLD recipients are expected to use DLD or other local funds to support staffing, contract management, and administrative costs associated with the project.
- Payments to fund recipients will be made on a reimbursement basis and after approval of submitted invoices. No reimbursements will be made prior to the execution of a project funding agreement with the Alameda CTC. Invoices are required to be submitted at least once every six months with required progress reports and completed task deliverables, unless otherwise authorized and approved by Alameda CTC.

12. SHUTTLE OPERATIONS FUNDING REQUIREMENTS

Funding for shuttle operations is strictly limited to shuttles which provide connections for first/last mile connections from regional transit facilities, transportation hubs, business districts, and employment centers. Paratransit services are not eligible for funding under transit eligible funding sources.

- Eligible applicants must be a public agency eligible to receive Alameda CTC funds.
- Shuttle service must be wholly located in Alameda County, available to general public, and serve multiple employers.
- Service routes within 0.5 mile radius from a major regional transit facility (BART station, major bus transfer station, or ferry terminal) will be given priority consideration.
- Applicants must provide a minimum match required for transit/shuttle operations.
- Service Operations Requirement
    - Shuttle service must not compete with existing fixed-route transit services provided by Alameda-Contra Costa Transit District, Livermore Amador Valley Transit Authority, or Union City Transit. A Letter of Concurrence from the appropriate transit agency, must be provided to affirm coordination with the transit agency, and acknowledge that the proposed shuttle program would not complete with existing or planned transit services.
- Funding Priority Considerations
    - Programs demonstrating long-term and local sustainability with matching funding consisting of 50 percent (50%) or more coming from private sources i.e. private business investment districts will be given priority consideration.
    - Ridership exceeding 500,000 annual boarding's, documented by existing service data or documented ridership projections will be given priority consideration.

13. FREIGHT RELATED PROJECTS FUNDING REQUIREMENTS

Funding for freight related projects is strictly limited to improvements that significantly contributes to the freight systems' economic activity or vitality; relieves congestion the freight system, improves the safety, security, or resilience of the freight system; improvements or preserves the freight system infrastructure; implements technology or innovation to improve the freight system or reduce or avoid its negative impacts; or reduces or avoids adverse community and/or environmental impacts of the freight system.

Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

14. PROJECT SELECTION CRITERIA

Project applications that meet the following screening criteria will be considered.

1. Consistency/identified within the most recently adopted Regional Transportation Plan and Countywide Transportation Plan.
2. Consistency/identified within the most recently adopted Countywide Bicycle and Pedestrian Master Plan *(applicable to bicycle/pedestrian improvements).*
3. Provide the minimum match of Alameda CTC's administered funds requested by phase.

ACTC_AR3615

The primary CIP project selection criteria are as follows:

1. Project Need and Benefits: Project clearly defines project needs and how proposed transportation improvement will benefit the intended users at a local and countywide level, and provide a usable segment (as applicable).

   Alameda CTC will consider key project merits and anticipated project performance such as (in no particular order):

   - Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
   - State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
   - Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.
   - Safety and Connectivity: Project's ability to foster a safe, connected, and accessible transportation system for multimodal movement of goods and people.
   - Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.
   - Sustainability: Project sponsor identifies funding sources and responsible agency for sustaining and maintaining the project beyond the funding period. Project is identified in a long-term development plan.

2. Project Readiness: Project contains a well-defined funding plan, budget, and schedule. Project has no foreseeable implementation issues, has governing body approval, and is supported by the local community. Applicant clearly identifies the ability to coordinate among appropriate internal and external agencies, and has identified stakeholders. Project with a completed project study report or equivalent scoping document will receive a higher priority consideration for readiness.

3. Matching Funds: Project has secured or committed funding from other funding sources outside of Alameda CTC's funding resources that is beyond the minimum matching requirement.

4. Other fund source specific criteria requirements: Project must meet the program requirements of specific fund sources, such as cost effectiveness calculations or proximity-connectivity to specific areas and user groups. These requirements are specific to the fund source and may change with each programming cycle.

ACTC_AR3616

Projects will be scored on a scale based on the project's expected outcomes and performance, project readiness, sustainability, and leveraging ability. Refer to Exhibit B – Project Selection Criteria for scoring weights for each project selection criteria category. Programming recommendations may not be based strictly on the scoring criteria alone. Consideration will be given towards the requirements of the various Alameda CTC administered fund sources, project delivery requirements, geographic equity, and countywide synergies of proposed improvements.

The project selection criteria will be applied by category mode (bicycle/pedestrian, transit, goods movement, highway, local streets and roads, transit operations, etc.) to provide a direct evaluation of similar investments to one another, i.e. transit projects to transit projects.

15. PERFORMANCE MEASURES AND MONITORING

Project Sponsors must identify and establish project goals, deliverables, and performance measures and intended outcomes that will measure the effectiveness of the investment. Performance measures will be established as part of a project funding agreement between Alameda CTC and the fund recipient.

a. For capital projects, performance indicators may include, but are not limited to, an evaluation of a project's ability to achieve CIP programming priorities, ability to meet specific funding program goals, and reporting on the status and implementation on the project delivery.
b. For operations, performance indicators may include the above, as well as quantifying and monitoring the number of trips, service hours, cost effectiveness, and outreach efforts.

16. POST ALLOCATION REQUIREMENTS

Project Sponsor whom are an awarded Alameda CTC Administered funding allocation are required

- Submit a governing body approval resolution that accepts Alameda CTC funds, confirms local matching commitments, project delivery strategy, and local support for the project in order to entered into a project funding agreement with Alameda CTC.
- Enter into a project funding agreement between the Alameda CTC for approved of allocations of Measure B, Measure BB, VRF, TFCA, and other funds under Alameda CTC purview. Agreements will include project scope, cost, schedule, performance measures, reporting requirements, publicity requirements, audit requirements, task deliverables, effective date of reimbursable costs, etc. The current agreement requirements are located here: https://www.alamedactc.org/app_pages/view/19025.
- Comply with Alameda CTC's Local Business Equity Program requirements: https://www.alamedactc.org/get-involved/contract-equity/

ACTC_AR3617

17. TIMELY USE OF FUNDS AND RESCISSION OF FUNDS

a. Projects must be started within a year of the schedule identified in the executed funding agreement that defines the date of eligible costs and reimbursements. Funds may be rescinded if a project is not started within the established time period.
b. Projects must be completed within three (3) years of the established initiation date, unless a different period is identified in the program guidelines or approved in advance by the Alameda CTC and incorporated into the funding agreement.
c. Projects receiving federal and State funds are to start and expend the program funds within the delivery timeframe required by federal funding requirements.
d. Projects are subject to the specific timely use of funds, policies and provisions pertaining to the specific fund sources allocated to the Project.
e. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds. If fund awards are withdrawn, allocations may be disencumbered from a funding agreement and removed from the CIP.
f. Rescinded funds will be returned to the program to be distributed in a future CIP cycle.

18. OTHER REQUIREMENTS

a. Program specific guidelines may supersede the requirements set forth in these CIP programming guidelines.
b. Programming and allocations actions made through the CIP are subject to the current policies and guidelines, as they may be created, revised, or amended from time to time.
c. Request for fund allocations for named 2014 Measure BB capital projects must be made prior to execution a funding agreement. The request for allocation must include at minimum a summary of project costs defined by phase and fund source, and a project schedule for each phase.
d. Alameda CTC may consider on a case-by-case basis exceptions to the programming requirements of the CIP programming principles and guidelines in the event of unanticipated programming actions/funding availability, or if a proposed project has extraordinary project merit, project synergies, or project delivery circumstances that if implemented will result in a significant countywide benefit.

This page intentionally left blank.

Exhibit A

Project Categories, Funding Eligibility, and Funding Eligibility

Projects will be separated into project categories by type as part of the project selection and evaluation process to prioritize projects relative to each other. The following table identifies CIP project categories, transportation priorities, and example funding eligibility.

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
1.	Transit Capital • Capital rehabilitation • Capacity expansion, stations, capital replacement • Safety and Access improvements • Transit Signal Priority (TSP) / Communications	1. Increase transit access and ridership 2. Regional projects in the expenditure plans 3. Projects/need identified in a transit plan 4. Increase frequency or reliability of service operations 5. Facilitates express bus services	X			X	X				X	X		X	
2.	Local Streets and Roads (Arterials) • Major Arterial Performance Initiative Program • Roadway Safety/Traffic Calming • Grade separations • Traffic Signals, ITS/CCTV installations and upgrade • Signal timing and coordination • Complete Streets and Streetscape • Coordination with freeways and ramps • Roadway/Pavement Rehabilitation • Sidewalk installation	1. Regional projects in the expenditure plans. 2. Projects/need identified in Multimodal Arterials Plan 3. Enhances multimodal connectivity and reliability, of transit, bicycle and pedestrian networks. 4. Provides congestion relief and increased mobility	X	X	X	X	X				X	X	X	X	X
3.	Bicycle and Pedestrian • Bike facilities (includes Class 1,2,3, and 4 facilities) • Bike storage capital costs (racks, lockers, cages) • Safety, gap closure, infrastructure improvements • Bicycle and Pedestrian Master Plans and updates • Safe Routes to School improvements/programs	1. Identified in a Countywide Bicycle/Pedestrian Plan 2. Regional projects in the Expenditure Plans 3. Closes gaps in local and countywide bicycle/pedestrian network. 4. Improves safety and connectivity by removing known barriers to access and connections to activity centers, schools, jobs, and transit 5. Bicycle/pedestrian master plans update to improve coordination	X	X		X	X	X				X			
4.	Highway Capital • Interchange, bridge, sound wall, ramp improvements • Bridge improvements • Express lanes	1. Regional projects in the Expenditure Plans 2. Improves safety and connectivity 3. Address state of good repair of transportation system 4. Address congestion and mobility		X							X		X	X	X

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
5.	Freight and Economic Development (Goods Movement) • Truck/port/freight operations and goods movement • Airport Facilities, Truck-vehicle parking • Quiet Zone Improvements *Note: Road or highway access improvements will be evaluated under local streets and roads or highway categories.*	1. Regional projects in the Expenditure Plans 2. Projects identified a Goods Movement Plan 3. Reduce conflicts 4. Improve goods mobility and economic development 5. Enhance coordination to distribution centers	X	X							X			X	X
6a.	Transit Operations (non-paratransit) • Fixed route or Shuttle operations and service expansion • Transit priority measures • Congestion Relief Programs • Transit incentive programs (including fare-based)	1. Increase reliability of service operations 2. Increase transit ridership 3. Maintains or expands express bus services 4. Demonstrates operational and funding sustainability	X	X	X	X	X		X					X	
6b.	Paratransit Capital and Operations • ADA Mandated Services • City-based, non-ADA Services • Specialized transportation programs • Capital improvements (accessible vehicles, signage) • Related assessments and plans	1. Maintains or expands existing transportation services designed for seniors and people and disabilities 2. Increases accessibility of transportation services 3. Eliminates gaps in existing services by offering transportation options for seniors and people with disabilities to important travel destinations to meet life needs.	X				X			X				X	
7.	Transportation Demand Management / Education Outreach • Fare incentives – student bus passes • Guarantee Ride Home Program • Technical Assistance • Alternative mode education and incentives • Safe Routes to School or Transit • Parking management	1. Facilitates connectivity to transit 2. Promotes multi-modal transportation and modal shifts away from single occupancy vehicle (SOV) use towards alternative modes, including bicycle/pedestrian and transit. 3. Provides a cost-effective strategy to improve and facilitate access to transit, schools, and job centers.	X	X		X	X		X					X	
8.	LSR / Highway Operations • Traffic Signal Operations, ITS, maintenance • Highway and Bridge Maintenance & Operations	1. Addresses state of good repair of transportation system 2. Addresses congestion and mobility	X	X	X						X		X		
9.	Planning / Studies • Planning studies and implementation • Feasibility or scoping only studies • Modal Plans/Studies • Bicycle and Pedestrian Master Plans	1. Defines project scopes, schedules and expected outcomes 2. Examines feasibility of improvement implementations 3. Contributes to long-rang planning of improvements for future implementation and decision making 4. Supports Transit Oriented Development (TOD) and Priority Development Areas (PDA)	X	X	X			X	X	X	X	X		X	X

ACTC_AR3621

Exhibit B

Project Selection Criteria

Proposed projects will be scored on the basis of applicant responses to the following criteria, as applicable. Additional criterion may be included within this framework based on program needs and funding requirements.

A. READINESS DELIVERY CRITERIA The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the sponsor demonstrates coordination among internal and external agencies, as applicable.		
Index	*Criteria*	*Criteria Weight*
1.	Project Development Status *(not initiated, underway, complete)* • Status of planning and scoping documents • Status of environmental phase and clearances • Status of preliminary engineering & design phase • Status of right-of-way acquisitions	45
2.	Detailed Scope, Schedule, and Funding Plan • Defined project scope • Defined schedule and budget • Identified funding need to continue project development	
3.	Implementation Issues • Identified implementation issue(s) resolved or mitigated • Local community and governing body support • Coordination with partners	
	Subtotal	*45*

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
Index	*Criteria*	*Criteria Weight*
1.	Connectivity/Gap Closures • Expands the transportation system, network, or service • Enhances intermodal and multi-jurisdictional connectivity • Complements existing services (not duplicative)	45
2.	Access Improvements • Increases access to activity centers, central business districts, and employment centers • Serves transit dependent populations, communities of concerns, equity priority communities, disadvantaged or vulnerable populations. • Improves transportation routes to schools • Serves a known or realistic level of demand in the community for transit services	
3.	State of Good Repair • Corrects a deteriorating condition/aging infrastructure • Addresses past deferred maintenance • Replaces capital assets that have exceeded their useful life	
4.	Technology and Innovation • Promotes innovative (non-traditional) elements for services	

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
	• Promotes vehicle technology or ITS coordination • Incorporates innovative design treatments to transportation projects	
5.	Multimodal Benefits • Identifies benefits to transit, bike, pedestrian, rail, and goods movement • Support multimodal transportation through coordination of improvements	
6.	Environmental Benefits • Promotes modal shifts that encourages less dependency on motorized transportation • Supports transit and/or transit access improvements • Supports housing and/or jobs adjacent to transit	
7.	Safety & Security • Identifies safety concerns • Increases public safety through a reduction of risk of accidents for vehicles, bicycles, and/or pedestrians • Identifies known safety issues with a proven countermeasure to address the conflicts	
8.	Economic Growth • Promotes job growth • Increases in economic growth as a result of improvements to freight corridors	
	Subtotal	*45*

C. MATCHING FUNDS CRITERIA Commits other funds beyond the minimum match		
Index	*Criteria*	*Criteria Weight*
1.	Matching Funds • Commits other identified funds beyond the minimum match requirement for the phase of which funds are being requested.	10
	Subtotal	*10*

SECTION 2
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
ARTERIALS PROGRAM

PROGRAM SUMMARY

The Arterials Program includes discretionary funding from the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). This program aims to support the arterials in our community that serve as major commute routes for those traveling by transit, auto, bicycle, or foot, and enhance access to jobs, stores, and more through capital infrastructure investments, service operations, and innovative projects. This program focuses on improvements to major roads, bridges, freight corridors, or quiet zones.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Ten percent (10%) of the net revenue collected is dedicated to funding congestion relief, local bridge, and seismic safety type projects benefiting arterials and roadways that improve the mobility of transit riders, motorists, bicyclists, and pedestrians, as well as the movement of goods to stores and consumers within Alameda County.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to improve accessibility, enhance operational efficiencies, increase safety, and reduce congestion. Such activities include projects that remove bottlenecks, improve safety, enhance operations, and enhance alternatives to single occupant auto travel in key commute corridors.

As identified in the 2014 TEP, examples of investments and commute corridors eligible for funding include:

- *North County Major Roadways*: Solano Avenue Pavement resurfacing and beautification; San Pablo Avenue Improvements; State Route 13/Ashby Avenue corridor; Marin Avenue local road safety; Gilman railroad crossing; Park Street, High Street and Fruitvale Bridge replacements; Powell Street Bridge widening at Christie; East 14th Street improvements and Oakland Army Base transportation infrastructure improvements.

- *Central County Major Roadways:* Crow Canyon Road safety improvements, San Leandro local road resurfacing, Lewelling Road/Hesperian Boulevard improvements and Tennyson Road grade separation.

- *South County Major Roadways:* East-west connector in North Fremont and Union City, I-680/I-880 cross connectors, Fremont Boulevard improvements, upgrades to the relinquished Route 84 in Fremont, Central Avenue Overcrossing, Thornton Avenue widening, Mowry Avenue and Newark local streets.

- *East County Major Roadways:* Greenville Road widening, El Charro Road improvements, Dougherty Road widening, Dublin Boulevard widening and Bernal Bridge construction.

- *Countywide Freight Corridors:* Outer Harbor Intermodal Terminal at the Port of Oakland, 7th Street grade separation and roadway improvement in Oakland, as well as truck routes serving the Port of Oakland.

PROGRAMMING AND ALLOCATION PRIORITIES

The Arterials Program seeks to award projects that advance goals identified in the Countywide Multimodal Arterials Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide mobility along arterials. This program recognizes that concentrating improvements in key arterial corridors will improve access and efficiencies, increase safety, and reduce congestion. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Regional projects or corridors identified in the Transportation Expenditure Plan**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans.

2. **Projects aligned with needs established in the Multimodal Arterials Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Multimodal Arterials Plan.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

ACTC_AR3627

4. **Enhance multimodal connectivity**: Priority consideration is given to projects that enhance the reliability, safety, and connectivity of transit, bicycle and pedestrian networks.

5. **Congestion relief and increased mobility**: Priority consideration is given to projects identified as significantly improving congestion on major commute corridors and facilitating connectivity and travel over multiple jurisdictions.

6. **State of Good Repair**: Priority consideration is given to projects that improve the conditions of existing transportation facilities or address conditions that would otherwise deteriorate if left unimproved.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance mobility, access, safety, and convenience in Alameda County. Arterials Program funds will be available for the example projects in projects that include, but are not limited to the following:

Capital Infrastructure

- Resurfacing and beautification
- Local road safety improvements
- Intersection enhancements
- Traffic/signal operation improvements
- Grade separations and railroad crossings
- Bridge replacements
- Cross connectors
- Truck route improvements
- Quiet zone enhancements
- Education, enforcement and promotion programs

INELIGIBLE PROJECTS

- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

ACTC_AR3629

SECTION 3
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
BICYCLE AND PEDESTRIAN DISCRETIONARY PROGRAM

PROGRAM SUMMARY

The Bicycle and Pedestrian Discretionary Program includes the combined funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) that are available to bicycle and pedestrian improvements. This program aims to support enhanced access and safety for bicyclists and pedestrians through capital infrastructure investments, safety education, outreach promotion, and planning activities.

The 2000 Measure B, 2014 Measure BB, and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports projects which improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Five percent (5%) of the net revenue collected is dedicated to bicycle and pedestrian projects. The five percent (5%) is further separated into two distribution categories:

- 75 percent (75%) of the funds are formula Direct Local Distributions to Alameda County cities and County based on population; and
- 25 percent (25%) of the funds are distributed on a discretionary basis through the Measure B Bicycle and Pedestrian Countywide Discretionary Fund.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Eight percent (8%) of the net revenue collected is dedicated to bicycle and pedestrian infrastructure and safety projects that support projects that encourage people to bike and walk, as designated below:

- Three percent (3%) or $264 M is directed towards the Completion of Three Major Trails - Iron Horse Trail, Bay Trail, and the East Bay Greenway Corridor; and

- Three percent (3%) is formula allocated as Direct Local Distributions to Alameda County cities and County based on population; and
- Two percent (2%) of the funds are distributed on a discretionary basis through the Measure BB Bicycle and Pedestrian program for regional projects and trail maintenance. Funds in this category includes use for Countywide Bicycle and Pedestrian coordination.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF program began in May 2011. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Five percent (5%) of the VRF funds are dedicated to the VRF Pedestrian and Bicycle Access and Safety Program, which goal is to improve the safety of bicycles and pedestrians by reducing conflicts with motorized vehicles, create safety access to activity centers, and improve connectivity of the transportation network.

PROGRAMMING AND ALLOCATION PRIORITIES

The Bicycle and Pedestrian Discretionary Program seeks to award projects that advance countywide bicycle and pedestrian goals as identified in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and the Measure B, Measure BB, and VRF expenditure plans. The Alameda CTC's Countywide Bicycle and Pedestrian Plans identifies a priority vision system consisting of projects, corridors, and improvement initiatives that are the most significant from a countywide perspective. This priority system will guide and focus the programming and allocations of the bicycle/pedestrian program funds.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds during a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds during a given programming cycle may be used for non-infrastructure improvements including program operations, plans, and studies.

3. **Identified in the Countywide Bicycle and Pedestrian Plans**: Priority consideration is given to bicycle and pedestrian projects identified as a countywide priority in Alameda CTC's Countywide Bicycle and Pedestrian Plans.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans. This includes projects identified in the Alameda CTC's Measure BB Capital Project Delivery Plan.

ACTC_AR3631

5. **Gap Closure**: Priority consideration is given to projects that close gaps in local and countywide bicycle/pedestrian network.

6. **Safety and Connectivity**: Priority consideration is given to projects that improve connections to activity centers, schools, jobs, and transit by addressing and removing known barriers to access and connecting multiple jurisdictions and/or planning areas.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance bicycle and pedestrian access, convenience, safety and usage in Alameda County.

Bicycle and Pedestrian Discretionary Program funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Sidewalks and multi-use paths
- Bikeways and pedestrian facilities
- Crossing improvements (at intersections, interchanges, railroad, freeway)
- Bicycle and pedestrian signals
- Bicycle lockers, racks and parking facilities
- Signage, lighting, railing and other accessibility improvements for bicyclists/pedestrians
- Traffic calming devices
- Bicycle/pedestrian access improvements to and from transit facilitates, and schools
- Gap closure projects that link and build upon the existing bicycle/pedestrian network
- Bicycle/pedestrian components of complete streets and streetscape improvements
- Capital maintenance such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life.

Non-infrastructure

- Bicycle and Pedestrian Master Plans
- Feasibility or scoping only studies for capital projects
- Safe routes to school program operations
- Crossing guard programs
- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Routine maintenance of roadway facilitates with bicycle/pedestrian infrastructure

- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
- Ongoing facility operations (e.g. attended bicycle parking)

OTHER REQUIREMENTS/FUNDING RESTRICTIONS

Measure BB Funds – Completion of Three Major Trails

- Measure BB funds identified ($264 M) for the Completion of Three Major Trails Funds in the 2014 Transportation Expenditure Plan are limited to capital construction and/or capital maintenance projects that enhance the East Bay Greenway from Oakland to Fremont, Bay Trail Gap Closure and Access Projects, and Iron Horse Trail Gap Closure and Access Projects. Priority funding consideration is given to projects that directly enhance the regional bicycle/pedestrian transportation network pertinent to these three trails, and as envisioned and prioritized in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and other countywide plans.
    - Eligible projects
        - Capital infrastructure projects that address gaps and connectivity issues, safety and accessibility concerns, and capital maintenance needs such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life to and from these three major trails.
    - Ineligible projects
        - Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
        - Bicycle/pedestrian education, outreach, and promotional programs.

ACTC_AR3633

SECTION 4
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
COMMUNITY DEVELOPMENT INVESTMENT PROGRAM

PROGRAM SUMMARY

The Community Development Investment Program (CDIP) will support existing and new transportation infrastructure improvements that will enhance access and provide increased connectivity to and between job centers, schools, transportation facilities, community centers, and residential developments. Investments include capital projects, programs, plans and studies which serve to achieve the objectives of the CDIP, including but not limited to improvements to BART station facilities, bus transfer hubs, bicycle/pedestrian infrastructure, local streets and roads, and transit that facilitate transit-oriented growth.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plans.

FUND SOURCE

2014 Measure BB
Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. The 2014 TEP establishes a total of 4 percent of net sales tax revenue, for the development and implementation of the program. CDIP investments are intended to enhance access and safety around transit stations and hubs, and to support station area development and transit-oriented development at the station areas listed in the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Community Development Investment Program seeks to award projects that advance access and connectivity to transit as identified in the Measure BB expenditure plan. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering community connectivity to transit, schools and job centers. In general, competitive projects are those that enhance connectivity from more than one specific planning area or jurisdiction in Alameda County.

ACTC_AR3634

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase Access and Connectivity:** Priority consideration will be given to projects that significantly improve access and connectivity to transit, jobs and schools.

4. **Leveraging Funds**: Projects that demonstrate program sustainability by leverage and secure external funding commitments beyond the minimum matching requirement.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance access and safety around transit stations, hubs, and transit-oriented development.

CDIP funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Transit station improvements including plazas, station access, pocket parks, parking facilities
- Local streets and road improvements including streetscape projects associated with high density developments and near transit facilities with sample elements such as pedestrian street lighting, bulb outs, crosswalk and sidewalk improvements, new striping for bicycle lanes and road diets, way finding signage and bus shelters.
- Bicycle and pedestrian improvements including bikeways and bike-transit facilities, bicycle/pedestrian paths and bridges, safe routes to transit, bicycle parking.
- Park-and-ride facility improvements
- Passenger rail station access and capacity improvements
- Development and implementation of transit priority treatments on local roadways
- Equipment and rolling stock such as equipment that is attached to a facility and integral to the benefit of the facility (i.e. EV charging stations)

Non-infrastructure

- Planning studies
- Feasibility or scoping only studies for capital projects
- Transit and shuttle operations
- Transit incentive programs (including fare-based)

ACTC_AR3635

- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Vehicle purchases and vehicle maintenance
- Studies that extend beyond Alameda County other than to establish contributing impacts
- Routine maintenance of capital facilities
- Promotional program giveaways including food, etc.
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Shuttle operations will be limited to a maximum award of $500,000 per year, and will require a 75 percent (75%) match.
- Plans and Studies will be limited to a maximum award of $100,000, and will require a 50 percent (50%) match.

ACTC_AR3636

SECTION 5
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
FREIGHT AND ECONOMIC DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Freight and Economic Development Program includes discretionary funding from the 2014 Measure BB Program, which aims to develop innovative approaches to moving goods in a safe and healthy environment in support of a robust economy.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding improvements that support moving goods in a safe and healthy environment in support of a robust economy as part of the Traffic Relief on Highways Type (Highway Program) included in the 2014 TEP.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Enhance the safe transport of freight by truck or rail in Alameda County, including projects that reduce conflicts between freight movement and other types of transportation
- Improve reduction of greenhouse gas production in the transport of goods
- Mitigate environmental impacts of freight movements on residential neighborhoods
- Enhance coordination between the Port of Oakland, the Oakland Airport, and local jurisdictions for the purposes of improving the efficiency, safety, and environmental impacts of freight operations

ACTC_AR3638

PROGRAMMING AND ALLOCATION PRIORITIES

The Freight and Economic Development Program seeks to award projects that advance freight related goals identified in the Countywide Goods Movement Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide safety and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the Transportation Expenditure Plans. Funding from this category will be done in coordination with the Highway Program in the following section to support related transportation projects and corridor investments, where applicable.

2. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

3. **Projects aligned with needs established in the Goods Movement Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Goods Movement Plan.

4. **Reduce conflicts:** Priority consideration is given to projects that reduce conflicts between goods movement, passenger transportation, and local communities, and that improve safety.

5. **Improve goods mobility and economic development:** Priority consideration is given to projects that positively affect truck mobility and accessibility.

6. **Enhance coordination:** Priority consideration is given to projects that mitigate impacts on neighborhoods and enhance coordination between freight distribution centers.

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish the program's objective to improve mobility and coordination of freight and goods to and from Alameda County. Projects must directly address a specific freight coordination issue or goods movement need.

The Freight and Economic Development program will be available for projects that include, but are not limited to the following:

- Highway interchange improvements that address freight or passenger delays

ACTC_AR3639

- Technology programs that address smart operations and deliveries
- Rail infrastructure capacity improvements on freight rail lines
- Gateway infrastructure improvements
- Impact reduction programs
- Local truck route enhancements
- Goods movement planning support
- Quiet Zone Improvements
- Airport Facilities
- Truck vehicle parking
- Truck/port/freight/operations

INELIGIBLE PROJECTS

- Projects that do not directly benefit or facilitate freight and goods movement in Alameda County.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

ACTC_AR3641

SECTION 6
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
HIGHWAY PROGRAM

PROGRAM SUMMARY

The Highway Program seeks to implement projects as identified in the Measure BB 2014 Transportation Expenditure Plan (2014 TEP). The expenditure plan identifies specific highway and freight corridors and improvements on I-80, SR-84, I-580, I-680, and I-880 that would address infrastructure gaps and facilitate greater access, congestion relief and goods movement. The 2014 TEP identifies specific projects for each of the highway corridors in the amount of $600M, with an additional one percent (1%) of net revenue or approximately $77M specifically targeted towards improvements that improve goods movement. Projects were based on project readiness, local priority, and the ability to leverage current investment and funds. Alameda CTC aims to prioritize the specific investments that demonstrate an ability to move forward in project implementation and delivery. A number of eligible projects, or candidate projects will be selected for funding based on their contribution to maximizing the connectivity, reliability, and efficiency of the transportation system, while also providing congestion relief and facility improvements.

FUND SOURCES

2014 Measure BB

Measured BB, approved by Alameda County in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs that will be funded with the sales tax revenues. The 2014 TEP identifies $600 million for specific highway capital improvements with an additional one percent (1%) of net revenue or approximately $77 million, targeted specifically for the Freight and Economic Development Program that supports goods movement related improvements.

Funds will be periodically distributed by Alameda CTC for projects that will make the existing highway system safer, more efficient, and effective by:

- Removing bottlenecks at interchanges and other hot spots
- Improving efficiency by providing HOV/HOT/Express Lanes and operational improvements, and integrating Intelligent Transportation System (ITS) strategies
- Providing connectivity/accessibility between goods, markets, and employment centers
- Complementing other modes of transportation and integrating complete street features
- Completing gaps in the system
- Improving air quality by reducing pollution and greenhouse gas emissions

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

PROGRAMMING AND ALLOCATION PRIORITIES

The Highway Program seeks to award projects that improve the safety and efficiency of Alameda County's highway system, as specifically identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly towards addressing safety, access and infrastructure gaps, while also furthering countywide efficiencies and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the 2014 TEP and earmarked for certain Measure BB amounts. Priority consideration is provided to projects that are specifically named or referenced in the group category and that have already started various project development phases such as scoping, preliminary engineering, design, and environmental.

2. **Improve Safety:** Priority consideration is given to projects that improve safety among vehicles, bicycles and/or pedestrians, on major truck routes, and the safety of maintenance and operational workers.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Improve mobility and provide congestion relief:** Priority consideration is given to projects that positively affect transportation mobility and accessibility. This includes the removal of bottlenecks at the interchange locations and other hot spots identified, improving efficiency by providing additional capacity via HOV/HOT/Express and operational improvements, and reducing travel times (peak hour vehicle delays and average vehicle delays).

5. **Enhance Connectivity/Access Improvements**: Priority consideration is given to projects that provide connectivity and accessibility between goods and markets, ports, major businesses and employment centers

6. **System Reliability:** Priority consideration is given to projects that maximize connectivity, and provide congestion relief, gap closures, and contribute to improving environmental conditions i.e. air quality.

ACTC_AR3643

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish program's objectives to improve efficiency, remove bottlenecks, and increase access on the highway system to and from Alameda County. The Highway Program funds will be available for projects that include, but are not limited to the following:

- Highway projects and corridors identified in the 2014 TEP from the following investment categories:
  - I-80 Improvements
  - I-580 Improvements
  - I-680 Improvements
  - I-880 Improvements
  - I-880 Improvements
  - SR-84 Improvements
- Highway related improvements that provide congestion relief, increase safety, access, and enhances mobility of vehicles and goods movement operations.

INELIGIBLE PROJECTS

- Projects that do not directly benefit transportation in Alameda County.
- Projects that do not have a direct nexus or beneficial impact to the identified highway corridors.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

ACTC_AR3644

This page intentionally left blank.

ACTC_AR3645

SECTION 7
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B AND 2014 MEASURE BB
PARATRANSIT DISCRETIONARY GRANT PROGRAM

PROGRAM SUMMARY

The Paratransit Discretionary Grant Program includes the discretionary funding from the 2000 Measure B and the 2014 Measure BB paratransit programs as a unified grant program. The 2000 Measure B and 2014 Measure BB funds shall be expended in accordance with the requirements of the guiding expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects and programs to improve the County's transportation system. Collections began on April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. A total of 10.45 percent (10.45%) of net MB revenue is directed towards projects intended for seniors and people with disabilities (Paratransit). The 10.45 percent (10.45%) is further split, as follows:

- 9.02 percent (9.02%) of net revenues are Direct Local Distributions (DLDs) to Alameda County cities, County and Transit Operators as follows:
    - 5.63 percent (5.63%) are DLDs directed towards the East Bay Paratransit Consortium (AC Transit and BART) for Americans with Disabilities Act (ADA) mandated paratransit services; and
    - 3.39 percent (3.39 %) are DLDs directed towards Alameda County cities and County for paratransit services based on a funding formula with population and other factors. The formula is recommended by the Alameda CTC's Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.
- 1.43 percent (1.43%) of net revenues are distributed on a discretionary basis, based on a funding recommendation by PAPCO and approved by the Commission. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

2014 Measure BB

Measure BB, approved by Alameda County voters in 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Ten percent (10%) of net revenue collected is dedicated to paratransit projects targeted towards seniors and people with disabilities (Paratransit), as follows:

ACTC_AR3646

- Six percent (6%) of net revenue is directed towards the East Bay Paratransit Consortium (AC Transit and BART) for ADA-mandated services.
- Three percent (3%) of net revenue are DLDs directed towards Alameda County cities and County for paratransit services, as follows:
    - A funding formula based on the percentage of the population over age 70 in each of four planning areas; and
    - Funds can be further allocated within each planning area to the individual cities based on a formula recommended by PAPCO and approved by the Commission.
- One percent (1%) of net Measure BB revenues are administered by the Alameda CTC and directed towards coordinating services across jurisdictional lines or filling gaps in the system to meet the mobility needs of seniors and people with disabilities. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

PROGRAM GOALS

Discretionary grant funding will be focused on mobility management types of activities that improve consumers' ability to access services, improve coordination between programs, and/or address gaps in the transportation system. The Program is designed to complement DLD funding which is dedicated to more traditional trip-provision services (e.g. taxi subsidies, door-to-door services, etc.). Mobility management activities aim to:

- Enhance people's travel options and access to services
- Promote awareness and education
- Effectively communicate/disseminate information to the public
- Improve coordination and partnerships
- Address critical gaps in the transportation system for seniors and people with disabilities
- Encourage seniors and people with disabilities who are able to use fixed-route public transit to do so
- Meet needs cost effectively and efficiently

Capital improvements and equipment purchases are also eligible if directly related to the implementation of mobility management and meet other criteria, e.g. transit stop improvements that support improving access to public transit for seniors and/or people with disabilities.

ACTC_AR3647

PROGRAMMING AND ALLOCATION PRIORITIES

Priority (in no particular order) is given to projects as follows:

1. **Identified in a Countywide or Regional Plan or Assessment:** Identified as a countywide and/or regional priority in a relevant plan or needs assessment such as the Alameda Countywide Transit Plan, Assessment of Mobility Needs of People with Disabilities and Seniors in Alameda County (Alameda County Needs Assessment), MTC Coordinated Public Transit-Human Services Transportation Plan (Coordinated Plan) or other relevant countywide or regional plan or needs assessment.
2. **Multi-jurisdictional Projects:** Identified projects that provide service across jurisdictional boundaries.
3. **Projects that provide critical, same-day accessible transportation service throughout Alameda County.**
4. **Other priorities** as recommended by PAPCO: PAPCO may periodically recommend other Program funding priorities.

ELIGIBLE PROJECTS

- **Mobility Management Type Programs**
  - Travel training
  - Trip planning assistance to improve access
  - One-Call/One-Click type programs
  - Volunteer driver programs
  - Coordination of service provision at the planning area level or countywide (separate from the cost of traditional trip provision, e.g. the administration costs for a planning area-wide program)
  - Transportation programs that fill unique and/or critical needs and gaps that are not filled through traditional trip-provision models

- **Capital Projects/Procurement**
  - Capital improvements and equipment purchases are eligible if directly related to the implementation of a project within an eligible category, including but not limited to:
    - Transit stop improvements that support improving access to public transit for seniors and/or people with disabilities
    - Accessible vehicle and equipment purchase
    - Capital projects to improve accessibility at shuttle stops.

This funding is not intended for ADA-mandated or City-based services that would traditionally be funded through DLD allocations. Sponsors are encouraged to submit programs that will benefit more than one city or otherwise illustrate advancement of coordination and mobility management goals.

Eligible projects must conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.

ACTC_AR3648

Refer to the *Implementation Guidelines for Paratransit Programs* for detailed eligibility requirements and service descriptions here: http://www.alamedactc.org/app_pages/view/19025.

INELIGIBLE PROJECTS

- Projects that do not conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.
- Capital projects, programs, maintenance, or operations that do not directly improve paratransit services.
- Using Program funds to replace/supplant other secured funding.

EVALUATION FRAMEWORK

PAPCO has historically supported projects and programs that:

- Demonstrate effectiveness at meeting mobility management goals
- Project sufficient demand for the program/service/project
- Are ready for implementation
- Provide service across jurisdictional boundaries
- Demonstrate coordination and collaboration with other service providers in their planning area
- Are effective, according to adopted performance measures and past performance (where applicable) or projected performance supported by substantive evidence of potential for success
- Are cost effective
- Leverage funds (including DLD reserves)
- Have been identified as a priority in relevant countywide or regional plans or needs assessments such as the Alameda Countywide Transit Plan, the Alameda County Needs Assessment, or the Coordinated Plan
- Support equitable distribution of resources throughout the County

PROGRAM REQUIREMENTS

Applicants should review requirements in the full CIP guidelines.

Maximum Grant Size

The maximum grant size is $500,000; there is no minimum grant size.

Minimum Matching Requirements

Minimum Matching requirements for applicants are as follows:

- Programs: 12% local match for DLD recipients, and 5% for non-DLD recipients.
- Plans and Studies: 50% local match
- Shuttle and transit operations: 50% local match
- “In-kind” costs are not eligible.

ACTC_AR3649

- Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
- DLD recipients must demonstrate a commitment to using their DLD reserves and new Measure BB DLD funds.
- Matching funds contributed to a project beyond the minimum required level may increase the competitiveness of the application.

Letter(s) of Support

All applicants must work in coordination with other service providers in their planning area. To demonstrate this support:

- Applicants must describe how they are coordinating with local jurisdictions, transit agencies, and non-profit organizations to fill service gaps and complement existing services.
- Non-profit organizations are required to provide a letter(s) of support from a local agency and/or transit provider to confirm service coordination and project support.
- All applicants are encouraged to provide letters from partners to demonstrate community support and coordination.

To establish partnerships, contact information for Measure B and Measure BB recipients of paratransit Direct Local Distribution (DLD) funds can be accessed at http://accessalameda.org/category/cities/.

Monitoring and Performance Measures

- Progress reports will be required every six (6) months illustrating program/project progress and funds spent.
- Applicants must identify program/project goals, deliverables, and performance measures that will be reported on in these progress reports.

RESOURCES

Resources for the CIP call for project nominations, including a link to the online application can be accessed from the Alameda CTC's website at: http://www.alamedactc.org/app_pages/view/19025.

This page intentionally left blank.

ACTC_AR3651

SECTION 8
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB AND VEHICLE REGISTRATION FEE
TECHNOLOGY, INNOVATION, AND DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Technology, Innovation, and Development Program includes the discretionary funding primarily from the 2014 Measure BB. However, funds identified for the Vehicle Registration Fee (VRF) Local Technology Program may be made available upon availability, at the discretion of the Alameda CTC, to meet the overall goals of the Technology, Innovation, and Development Program. Projects funded through the program shall support innovative development and application of technologies that enhance the performance of a multimodal transportation system.

The 2014 Measure BB and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding innovative approaches to meet the County's transportation vision, emphasizing the use of new and emerging technologies to better manage the transportation system. Successful models will receive the first priority for funding from this category.

Funds will be distributed periodically by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Increase utilization of non-auto types of transportation or to increase the occupancy of autos with the goal of reducing congestion, air pollution, and greenhouse gas production.
- Reduce transportation-related greenhouse gases through the utilization of a cleaner vehicle fleet including alternative fuels and/or locally produced energy.
- Use demand management strategies designed to reduce congestion, increase use of non-auto transportation, manage existing infrastructure and reduce greenhouse gas emissions.
- Inform consumers of their transportation choices and improve the efficiency or effectiveness of the county's transportation system.

ACTC_AR3652

- Manage parking supply to improve availability and utilization, and to reduce congestion and greenhouse gas production.
- Support environmental mitigation for transportation projects including land banking.

Grant awards will emphasize demonstrations or pilot projects which can leverage other funds.

Vehicle Registration Fee

Measure F, approved by Alameda County in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promotes the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies.

Five percent (5%) of net VRF funds are dedicated to the VRF Local Transportation Technology Program. This program aims to improve the performance of road, transit, pedestrian and bicyclist technology applications, and would accommodate emerging vehicle technologies such as electric and plug-in-hybrid vehicles. On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a Direct Local Distribution (DLD) program to the Alameda CTC. The goal of this policy is to create a reliable source of funding to support ongoing operational requirements and cost incurred by the Alameda CTC for technology related capital investments that benefit traffic corridors in Alameda County such as the "Smart Corridors Program" and other significant countywide technology programs implemented by the Alameda CTC.

PROGRAMMING AND ALLOCATION PRIORITIES

The Technology, Innovation, and Development Program seeks to award projects that contribute significantly to furthering countywide technological advancement and innovation related enhancing the transportation system through new and emerging research, assets, capital investments, applications, and technological based transportation strategies. In general, competitive projects are those that serve more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital projects for infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements program operations, shuttle operations, plans, and studies.

ACTC_AR3653

3. **New and Innovative Approaches**: Priority consideration is given to projects and programs that employ "out-of-the box" approaches to improving the transportation infrastructure and transit services.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the transportation expenditure plans. Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

5. **Increase transit access and ridership**: Priority consideration is given to projects and programs that promote access, use, and connectivity to the transit system and services in Alameda County and throughout the region, by identifying mobility-enhancing practices and technologies that promote multi-modal connectivity, provide transportation options, and improve the transit user's experience.

6. **Asset Innovation and Management**: Priority consideration is given to projects and programs ("projects") that identify innovative and sustainable use of transit vehicles, transit operations, and services including the employment of new technologies or technology-based strategies and partnerships.

7. **Enhance Efficiency of moving people and goods**: Priority consideration is given to projects that create greater mobility and reliability of the transportation system through the application of innovative technologies and practices that create sustainable movement of people and goods that increase economic vitality for the county.

8. **Increase in Safety**: Priority consideration is given to projects that increase safety of the transportation system through safety-enhancing practices, technologies, and programs.

ELIGIBLE PROJECTS

Eligible projects include planning, development, implementation, and maintenance of technology that will best serve Alameda County's transportation goals

Technology, Innovation, and Development Program funds will be available for projects that include, but are not limited to the following:

- Development, installation, operations, monitoring and maintenance of local street and arterial transportation management technology such as the "Smart Corridors Program", traffic signal interconnection, transit and emergency vehicle priority, advanced traffic management systems and advanced traveler information systems
- Infrastructure for alternative vehicle fuels such as electric and plug-in-hybrid vehicle stations

- New or emerging transportation technologies that provide congestion or pollution mitigation
- Technology implementation to improve freight system infrastructure, reliability, and/or to reduce community or environmental impacts related to freight improvements.
- Advanced signal technology for walking and bicycling
- Traveler information systems
- Advanced safety systems including infrastructure improvements that support vehicle-to-vehicle and vehicle-to-infrastructure communication, technologies associated with autonomous vehicles, and other collision avoidance technologies
- Mobile applications that facilitates greater transportation access, car sharing, and user ability (enhanced information availability, connectivity to transit, user experience).
- Advanced public transportation technologies that assist public transportation operators or other shared mobility entities in managing and optimizing public transportation and mobility services. This includes remote fleet monitoring systems, coordinated communication systems, and applications that support transit connectivity, data collection, information sharing, and mobility sharing.

INELIGIBLE PROJECTS

- Projects that do not directly benefit or are inaccessible to the public.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk, pursuant to Government Code Section 14525.3.

ACTC_AR3655

SECTION 9
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
TRANSIT PROGRAM

PROGRAM SUMMARY

The Transit Program includes the combined discretionary funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Express Bus and Transit. This program aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects. The 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee funds shall be expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple investments to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. 0.7 percent (0.7%) of the net revenue collected is dedicated to express bus service projects. The goal of the Express Bus Grant Program is to create, expand, and enhance express bus services, focusing on projects with countywide significance. Measure B funds will be available to fund eligible AC Transit and LAVTA projects only.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects ("projects") that will be funded with the sales tax revenues. 2.24 percent (2.24%) of the net revenue collected is dedicated to funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this funding category.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of

ACTC_AR3656

the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Twenty-five percent (25%) of the VRF funds are dedicated to the VRF Transit for Congestion Relief Program. The goal of the program is to make it easier for drivers to use public transportation, make the existing transportation system more efficient and effective, improve access to schools and jobs, decrease automobile usage and air pollution, and to provide countywide congestion relief.

PROGRAMMING AND ALLOCATION PRIORITIES

The Transit Program seeks to award projects that advance transit related goals identified in the Countywide Transit Plan and as identified in the Measure B, Measure BB, and VRF expenditure plans. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide access to and expansion of transit services. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase transit access and ridership**: Priority consideration is given to transit projects that promote access, use, and connectivity to transit services and the transit system in Alameda County and throughout the region.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the expenditure plans and Countywide Transit Plans (CTP).

5. **Projects aligned with needs established within the Transit Plan**: Priority consideration is given to projects that align with the goals and investment priorities within the Alameda CTC's Transit Plan or similar long-range planning studies.

6. **Reliability of Service Operations**: Priority consideration is given to projects that address regionally significant transit issues and maintain and improve reliability, frequency, and cost effectiveness of operational services.

ACTC_AR3657

7. **Express Bus Services**: Priority consideration is given to Express Bus Services that have countywide significance. In general, projects must service residents from more than one specific area or jurisdiction in Alameda County, or demonstrate how more than one area is served as a result of transit connections that go beyond one planning area.
   Express Bus Service is defined as either:
   a. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone, or
   b. Service that provides a simple route layout, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, signature identification of rapid bus such as color-coded buses, stops, and enhanced stations.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance transit access, convenience, and service operations in Alameda County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

Transit Program funds will be available for projects that include, but are not limited to the following:

- Transit service expansion and preservation to provide congestion relief, such as express bus service in a congested area
- Development and implementation of transit priority treatments on local roadways
- Student transit pass programs identified through the affordable student transit program with models benefiting junior and high school youth riders
- Investments to improve the speed and reliability of transit operations
- Park-and-ride facility improvements
- Increased usage of clean transit vehicles
- Increased usage of low-floor transit vehicles
- Passenger rail station access and capacity improvements
- Routine bus maintenance
- Feasibility or scoping only studies for capital projects
- Safe routes to school operations
- Safety education, enforcement, and promotional programs
- Transit incentive programs (including fare-based)
- Express Bus Services including capital expenses and operations. Ongoing funding for express bus service operations is limited to transit operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

INELIGIBLE PROJECTS

- Routine bus maintenance

ACTC_AR3658

- Funding to replace funds for existing ongoing programs or transit operations
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Ongoing funding service operations is limited to operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

ACTC_AR3659

SECTION 10
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B
TRANSIT CENTER DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Transit Center Development Program (TCD) aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects.

Transit Center Developments refers to priority development areas (PDAs), transit villages, or transit-oriented designs, a mixed-use residential or commercial area designed to maximize access to public transportation. The California Department of Transportation defines TCD or Transit Oriented Development (TOD) as "moderate to higher density development, located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping opportunities designed for pedestrians without excluding the auto. TOD can be new construction or redevelopment of one or more buildings whose design and orientation facilitates transit use." The 2000 Measure B funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple projects to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Approximately 0.19 percent (0.19%) of the net revenue collected is dedicated to the TCD Program. The goal of the TCD Program is to encourage transportation development near transit centers to facilitate and support the growth of transit-oriented developments.

PROGRAMMING AND ALLOCATION PRIORITIES

The TCD Program seeks to award projects that advance TOD projects, and as identified in the 2000 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to facilitating residential and retail development near transit centers, and PDAs. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Support for Transit Oriented Developments or Priority Development Areas**: Priority consideration is given to activities that promote access, use and connectivity of transportation infrastructure that provides direct access to mixed use developments and housing near major transit facilitates in Alameda County.

2. **Consistent with the Expenditure Plan**: Priority consideration is given to projects that encourage the development of transit centers per the expenditure plan.

3. **Technical Assistance Program**: Priority consideration is given to a technical assistance program administered by the Alameda CTC, known as the Sustainable Communities Technical Assistance Program (SC-TAP), which supports jurisdictions in their technical planning efforts to complete studies and plans in a variety of topics that help advance TOD projects.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance the development of transit centers and transit-oriented communities in Alameda County. The program goal is to fund projects that will best serve the County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

TCD Program funds will be available for projects that include, but are not limited to the following:

- Capital infrastructure projects that support access to and from transit villages
- PDA planning and implementation of projects
- Studies and plans, including technical assistance programs that address multimodal access and complete streets implementation, streetscape and urban design work, and implementation of transit communities, priority development areas, and the associated components
- Consultant services (through a technical assistance program) to complete specific planning, environmental review, and project development tasks

INELIGIBLE PROJECTS

- Project activities that do not support the development or implementation of transit-oriented developments or to priority development areas

ACTC_AR3661

SECTION 11
PROGRAMMING/ALLOCATION GUIDELINES FOR
TRANSPORTATION FUND FOR CLEAN AIR (TFCA)
COUNTY PROGRAM MANAGER FUND PROGRAM

PROGRAM SUMMARY

The Transportation Fund for Clean Air (TFCA) County Program Manager (CPM) Fund is funding made available by the Bay Area Air Quality Management District (Air District) from revenue that is generated by a regional four-dollar vehicle registration fee. TFCA funded projects are to result in the reduction of motor vehicle emissions and achieve "surplus" emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations. Projects typically funded with TFCA include shuttles, bicycle lanes and lockers, signal timing and vehicle trip reduction programs.

As the designated TFCA CPM for Alameda County, the Alameda CTC is responsible for programming 40 percent (40%) of the four-dollar ($4) vehicle registration fee that is collected in Alameda County for this program. TFCA funds shall be expended in accordance with the requirements of the Air District's current TFCA CPM Policies, the Air District's adopted county expenditure plans and the provisions set forth in the annual TFCA CPM Master Funding Agreement between the Alameda CTC and the Air District.

FUND SOURCE

Transportation Fund for Clean Air
Pursuant to the 1988 California Clean Air Act, the Air District is required to periodically adopt a Clean Air Plan (CAP), which describes how the region will work toward compliance with State and federal ambient air quality standards and make progress on climate protection. To reduce emissions from motor vehicles, the CAP includes transportation control measures (TCMs) and mobile source measures (MSMs). A TCM is defined as any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions. MSMs encourage the retirement of older, more polluting vehicles and the introduction of newer, less polluting motor vehicle technologies.

To fund the implementation of TCMs and MSMs, the State Legislature, through AB 434 (Sher; Statutes of 1991) and AB 414 (Sher, Statutes of 1995), authorized the Air District to collect a fee of up to four dollars ($4) per vehicle per year, for reducing air pollution from motor vehicles and for related planning and programs. This legislation requires the Air District to allocate 40 percent (40%) of the revenue to an overall program manager in each county. The overall program manager must

be designated by resolutions adopted by the county board of supervisors and the city councils of a majority of the cities representing a majority of the population.

AB 414 references the trip reduction requirements in the Congestion Management Program (CMP) legislation and states that Congestion Management Agencies (CMAs) in the Bay Area that are designated as AB 434 program managers "shall ensure that those funds are expended as part of an overall program for improving air quality and for the purposes of this chapter (the CMP Statute)." The Air District has interpreted this language to allow a wide variety of transportation control measures as now eligible for funding by program managers, including an expansion of eligible transit, rail and ferry projects.

AB 414 also adds a requirement that designated county program managers adopt criteria for the expenditure of the county subventions and to review the expenditure of the funds. The content of the criteria and the review were not specified in the bill. However, the Air District has specified that any criteria used by a Program Manager must allocate TFCA funding to projects that are: 1) eligible under the law, 2) reduce motor vehicle emissions, 3) implement the relevant TCMs and/or MSMs in the Air District's most recently approved CAP, and 4) are not planning or technical studies.

PROGRAMMING AND ALLOCATION PRIORITIES

The Air District annually adopts policies for the TFCA CPM Fund. The current Air District TFCA CPM Policies further define eligible projects and establish criteria for calculating emissions reductions (i.e., TFCA cost-effectiveness). Projects that are authorized by HSC Section 44241 and achieve TFCA cost-effectiveness, but do not fully meet the Air District's current TFCA CPM policies are subject to Air District approval on a case-by-case basis.

Only projects that result in the reduction of motor vehicle emissions are eligible for TFCA funding. Projects must achieve surplus emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations at the time of the execution of a project-specific fund transfer agreement between the Alameda CTC and the Project Sponsor.

General Program Structure

As the designated CPM for Alameda County, the Alameda CTC is allocated 40 percent (40%) of the funds collected in Alameda County for this program. The Air District will advance these funds to the Alameda CTC in semi-annual installments each fiscal year. The Alameda CTC must fully program the TFCA revenue received each year within the Air District's allowable time period. Any unallocated funds may be reallocated by the Air District. The Alameda CTC will prepare an annual TFCA CPM Fund Estimate, as follows:

- A maximum of 6.25 percent (6.25%) of the annual revenue will be used directly by the Alameda CTC for program implementation and administration.
- The remaining 93.75 percent (93.75%) of funds will be distributed as follows:

ACTC_AR3663

- 70 percent (70%) of funds will be segregated into population-based shares for the cities and County:
  - A minimum of $10,000 to each jurisdiction.
  - City population will be updated annually based on the State Department of Finance (DOF) estimates.
  - The Alameda CTC may choose to roll over a city or the county's annual 70 percent (70%) allocation for programming in a future year.
  - The Alameda CTC may also borrow against the rolled over allocations in order to program all available revenues.
  - Unused funds from cancelled or completed projects are returned to the Project Sponsor's share of the fund estimate and are available for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for projects that are larger than the annual funds available.
- The remaining 30 percent (30%) of funds are to be programmed to transit-related projects on a discretionary basis:
  - Projects competing for the 30 percent (30%) discretionary funds will be evaluated based on the total emissions reductions projected as a result of the project.
  - Project prioritization may consider the TFCA cost-effectiveness evaluation, the emissions reductions per total project dollar invested for the project and the matching funds provided by the Project Sponsor.
  - Unused funds from cancelled or completed transit discretionary projects are returned to the 30 percent (30%) share of the fund estimate for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for transit-related projects that are larger than the annual funds available.

ELIGIBLE PROJECTS

Consistent with the project types authorized under the California Health and Safety Code (HSC) Section 44241, projects eligible for TFCA funds include:

- Implementation of rideshare programs;
- Purchase or lease of clean fuel buses for school districts and transit operators;
- Provision of local feeder bus or shuttle service to rail and ferry stations and to airports;
- Implementation and maintenance of local arterial traffic management, including, but not limited to, signal timing, transit signal preemption, bus stop relocation and "smart streets";
- Implementation of rail-bus integration and regional transit information systems;
- Implementation of demonstration projects in telecommuting and in congestion pricing of highways, bridges and public transit;

ACTC_AR3664

- Implementation of vehicle-based projects to reduce mobile source emissions, including, but not limited to engine repowers (subject to Air District approval on a case-by-case basis), engine retrofits, fleet modernization, alternative fuels, and advanced technology demonstrations;
- Implementation of smoking vehicles program;
- Implementation of an automobile buy-back scrappage program operated by a governmental agency;
- Implementation of bicycle facility improvement projects that are included in an adopted countywide bicycle plan or congestion management program; and
- Design and construction by local public agencies of physical improvements that support development projects that achieve motor vehicle emission reductions. The projects and the physical improvements shall be identified in an approved area-specific plan, redevelopment plan, general plan, or other similar plan.

INELIGIBLE PROJECTS

TFCA funds may not be used for:

- Planning activities that are not directly related to the implementation of a specific project;
- Routine maintenance;
- The purchase of personal computing equipment for an individual's home use;
- Projects that provide a direct or indirect financial transit or rideshare subsidy or shuttle/feeder bus service exclusively for the grantee's employees; or
- Costs of developing TFCA grant applications.

OTHER REQUIREMENTS

TFCA Cost Effectiveness

The Air District requires the evaluation of projects proposed for and completed with TFCA funding for TFCA cost-effectiveness. The Alameda CTC will measure cost-effectiveness based on the ratio of the TFCA cost divided by the sum total tons of emissions (reactive organic gases (ROG), oxides of nitrogen (NOx), and weighted particulate matter ten microns in diameter and smaller "PM10") that are estimated to be reduced by the project. For the purpose of calculating the TFCA cost-effectiveness, the TFCA project cost is the sum of the requested TFCA CPM Funds and any secured TFCA Regional Funds. Air District-generated forms are used to calculate a cost effectiveness result of $ TFCA/ton. The Alameda CTC will only approve projects with a TFCA cost effectiveness, on an individual project basis, that is equal to or less than either: 1) the standard threshold of $90,000 of TFCA funds per ton of total ROG, NOx and weighted PM10 emissions reduced ($/ton), or 2) another threshold as identified in the current Air District TFCA CPM Policies for the project type. Project Sponsors are required to provide the Alameda CTC with the data necessary to evaluate projects for TFCA cost-effectiveness. This may include, but is not

ACTC_AR3665

limited to, transit ridership, bicycle counts, verifiable survey data, vehicle data and results from comparable projects.

Attributes of Cost-Effective TFCA Projects

The following list includes the project attributes typically associated with successful candidate projects for TFCA funding:

- Project purchases or provides service using best available technology or cleanest vehicle (e.g., achieves significant petroleum reduction, utilizes vehicles that have 2010 and newer engines, is not a Family Emission Limit (FEL) engine, and/or have zero tailpipe emissions).
- Project is delivered or placed into service within one year and/or significantly in advance of regulatory changes (e.g., lower engine emission standards.).
- Project requests relatively low amount of TFCA funds; Grantee provides significant matching funds.
- Project is associated with a multi-modal transit center, supports high-density mixed-use development or communities.
- For vehicle trip reduction projects (e.g., bike facilities, shuttle/feeder bus service and ridesharing projects):
    - Project provides service to relatively large percent of riders/participants that otherwise would have driven alone over a long distance.
    - Project provides "first and last mile" connection to between employers and transit.
    - Service travels relatively short distances between start and end point/ and has relatively low mileage and a minimal amount of non-service miles. Shuttle operates on a route (service and non-service miles) that is relatively short in distance.
- For vehicle-based projects:
    - Vehicle has high operational use, annual mileage, and/or fuel consumption (e.g., taxis, transit fleets, and utility vehicles).
- For arterial management and smart growth projects:
    - Pre- and post-project counts demonstrate high usage and a potential to affect mode or behavior shift that reduces emissions.
    - Project demonstrates a strong potential to reduce motor vehicle trips by significantly improving mobility via walking, bicycling, and improving transit.
    - Project is located along high-volume transit corridors and/or is near major activity centers such as schools, transit centers, civic or retail centers.

TFCA Expenditure Period

TFCA funding is subject to a TFCA expenditure period. In general, the Air District TFCA CPM Policies allow for a two-year expenditure period unless a longer expenditure period is established at the time of programming. For projects that provide a service, such as ridesharing

programs and shuttle/feeder bus projects, the TFCA grant period is limited to not more than two (2) years for operations, except for bike share (Bay Area Bike Share) projects, which have a TFCA grant period of up to five (5) years. To receive TFCA funding in subsequent funding cycles, all operations projects must be re-evaluated for TFCA cost effectiveness based on the most current project data. The Alameda CTC may approve no more than two one-year extensions to the TFCA expenditure period. Subsequent extensions are granted on a case-by-case basis by the Air District.

ACTC_AR3667

SECTION 12
PROGRAMMING/ALLOCATION GUIDELINES FOR
STP/CMAQ FUNDS
ONE BAY AREA GRANT (OBAG) PROGRAM

PROGRAM SUMMARY

The One Bay Area Grant Program (OBAG) is a federal funding program designed to support the implementation of Plan Bay Area, the region's first Sustainable Communities Strategy (SCS). The OBAG program continues to integrate the region's federal transportation program with California's climate statutes and the SCS, and contributes to the implementation of the goals and objectives of the Regional Transportation Plan.

Overall, the OBAG Program goals include:

- Support the SCS by linking transportation dollars to land use decisions,
- Target transportation investments to support Priority Development Areas (PDAs), and
- Further county's PDA Investment and Growth Strategy.

MTC's Resolution 4202 (December 2016) guides the OBAG Cycle 2 project selection criteria and programming policy, identifies revenue estimates, project categories, and general and county programming policies and deadlines.

MTC's Resolution 4505 states OBAG Cycle 3 funding distribution, eligibility requirements, and other programming policy requirements.

FUND SOURCES

OBAG funding is based on anticipated future federal transportation program apportionments of Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) funding from the recently passed Fixing America's Surface Transportation (FAST) Act and its predecessor, Moving Ahead for Progress in the 21st Century (MAP-21) Act. The STP and CMAQ programs are the primary federal funding sources distributed to regions for transportation and can fund a variety of project types, including public transit, bicycle and pedestrian and local road and highway projects.

Refer to MTC's website for specific OBAG information: https://mtc.ca.gov/funding/federal-funding/federal-highway-administration-grants/one-bay-area-grant-obag-3

Additional information related to the programming of OBAG funds is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

This page intentionally left blank.

ACTC_AR3669

SECTION 13
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSIT ASSISTANCE
PROGRAM

PROGRAM SUMMARY

State Transit Assistance (STA) funds are generated by the sales tax on diesel fuel, and the amount of money available for transit agencies varies from year to year based on the ups and downs of diesel prices. The State splits the STA program into two components:

Population-based funds: Metropolitan Transportation Commission receives STA based on our share of the population. The use of these funds is governed by MTC Resolution 4321 which established a STA County Block Grant Program whereby the nine Bay Area Congestion Management Agencies determine how to invest the funds in public transit services/projects.

Link to MTC Resolution 4321: https://mtc.ca.gov/sites/default/files/MTC_ResNo_4321_STA_Pop-Based_Funds.pdf

Operators have full discretion over the use of TDA and most of STA apportioned to them. Funds may be used by transit operators for both capital projects and transit operations. For most smaller transit agencies, TDA and STA are their main sources of operating funds.

This page intentionally left blank.

SECTION 14
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSPORTATION IMPROVEMENT PROGRAM

PROGRAM SUMMARY

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. The STIP is composed of two sub-elements: 75 percent of STIP funds go toward the Regional Transportation Improvement Program (RTIP) and 25 percent go to the Interregional Transportation Improvement Program (ITIP).

Alameda CTC adopts and forwards a program of RTIP projects to the Metropolitan Transportation Commission (MTC) for each STIP cycle. As the Regional Transportation Planning Agency for the nine-county Bay Area, MTC is responsible for developing the regional priorities for the RTIP. MTC approves the region's RTIP and submits it to the California Transportation Commission for inclusion in the STIP. The California Department of Transportation is responsible for developing the ITIP.

Principles for the Development of the Alameda County 2018 STIP Project List
(Previously approved October 26, 2017)

- It is anticipated that any new funding programmed in the 2018 STIP will be made available in FYs 2021/22 and 2022/23.
- Previously-approved commitments for STIP programming, included in the attached list, will be considered during the development of the 2018 STIP project list.
- Sponsors of currently programmed projects will be required to provide updated project scope, status, schedule, cost and funding information.
- Any project considered for funding must be consistent with the Countywide Transportation Plan and satisfy all STIP programming requirements.
- Projects recommended for STIP funding must demonstrate readiness to meet applicable STIP programming, allocation and delivery requirements and deadlines.
- Consideration of the following are proposed for the required project prioritization for the development of the 2018 STIP project list:
    - The principles and objectives set forth in the Alameda CTC Comprehensive Investment Plan;
    - Previous commitments for STIP programming approved by the Alameda CTC;
    - Projects that can leverage funds from other SB1 programs
    - The degree to which a proposed project, or other activity intended to be funded by transportation funding programmed by the Alameda CTC, achieves or

advances the goals and objectives included in the Countywide Transportation Plan;

- The degree to which a proposed project has viable project implementation strategies that are based on current project-specific project delivery information provided by applicants, including:
  - Readiness for the current/requested project delivery phase;
  - The status of environmental clearance;
  - The project cost/funding plan by phase;
  - The potential for phasing of initial segment(s) which are fully-funded and provide independent benefit; and
  - Potential impediments, i.e. risks, to successful project implementation in accordance with the proposed project delivery schedule.

Additional information related to the programming of the State Transportation Improvement Program is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3673

SECTION 15
PROGRAMMING/ALLOCATION GUIDELINES FOR
REGIONAL MEASURE 3 PROGRAM

PROGRAM SUMMARY

To help solve the Bay Area's growing congestion problems, the Metropolitan Transportation Commission (MTC) worked with the state Legislature to authorize a ballot measure that would finance a comprehensive suite of highway and transit improvements through an increase tolls on the region's seven state-owned toll bridges. Senate Bill 595 (authored by Sen. Jim Beall of San Jose) was passed by the Legislature and signed into law by Gov. Brown in fall 2017.

Toll revenues will be used to finance a $4.45 billion slate of highway and transit improvements in the toll bridge corridors and their approach routes.

Major projects in the RM 3 expenditure plan include new BART cars to accommodate growing ridership; extending BART's Silicon Valley service to Santa Clara; extending Caltrain to downtown San Francisco; expanding S.F. Muni's transit vehicle fleet; more frequent transbay bus service; interchange improvements in Alameda, Contra Costa and Solano counties; an expanded express lane network; expanded ferry service; a direct freeway connector from northbound U.S. 101 in Marin County to the Richmond-San Rafael Bridge; upgrades to relieve congestion in the Dumbarton Bridge corridor; improving State Route 37; extending the new SMART rail system to Windsor and Healdsburg and much more.

Voter approval of RM 3 raised tolls on the region's state-owned toll bridges by $1 beginning Jan. 1, 2019. Tolls will rise by another $1 in January 2022 with another $1 increase in January 2025. The 2019 increase marked the first toll hike on the seven state-owned bridges since 2010.

ACTC_AR3678

POLICY 1: PROCEDURES FOR PROGRAMMING AND ALLOCATIONS

POLICY: The Alameda County Transportation Commission (Alameda CTC) has programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard procedures set forth herein.

Programmed funds in the Comprehensive Investment Plan (CIP) represent a commitment of funds to a Project Sponsor. Programmed funds are not available for expenditure unless and until Alameda CTC approves an allocation of the programmed amount. Only after allocation can funds be encumbered through funding agreements between Alameda CTC and the Project Sponsor, or for Alameda CTC-sponsored projects through contracts for costs to be incurred directly by Alameda CTC.

PURPOSE: Alameda CTC makes programming recommendations for the Alameda County shares of certain local, regional, state and federal funds. The purpose of this policy is to establish standard definitions and procedures by which Alameda CTC exercises its programming and allocation authority. The programming and allocation procedures for each of the fund sources within the purview of Alameda CTC are consolidated through the CIP to standardize the programming and allocation process to the extent practical for such fund sources, while maintaining compliance with the requirements for individual fund sources.

GUIDELINES: Programmed funds are adopted into the applicable programming document by the governing board of the agency or Commission with statutory authority for the administration of the fund program.

Alameda CTC administers the following local, voter-approved funding programs:

- The 1986 Measure B Program;
- The 2000 Measure B Program;
- The 2010 Vehicle Registration Fee Program; and
- The 2014 Measure BB Program.

The commitments from the local, voter-approved funding programs are established in the expenditure plans included in the ballot measure language for each program. The 1986 Measure B, 2000 Measure B, 2010 Vehicle Registration Fee and the 2014 Measure BB expenditure plans each include a set of commitments to fund the programs and projects listed in the plan. The Strategic Plan prepared for each of the individual funding programs confirms the funding commitments, allocated amounts, and the plan for future allocations. The Strategic Plan also functions to guide programming and

ACTC_AR3679

allocation for the individual fund sources to priority transportation investments based on a set of guiding principles.

Alameda CTC also administers the programming and allocation process for the Transportation Fund for Clean Air (TFCA) County Program Manager Fund in compliance with the requirements of the Bay Area Air Quality Management District (BAAQMD), which delegates the programming and allocation administration to Alameda CTC.

Alameda CTC also makes programming and allocation recommendations for other fund sources such as the State Transportation Improvement Program (STIP), Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) Program (through One Bay Area Grant program), and other funds as they become available to Alameda County, that are contingent upon final approval by the respective governing boards of the agencies with programming authority e.g., Metropolitan Transportation Commission (MTC) and/or California Transportation Commission (CTC).

By definition, programmed amounts for a given project represents the amount committed to the project, subject to allocation. An allocated amount represents the amount available for encumbrance through project funding agreements and/or contracts directly with Alameda CTC. Funds encumbered through project funding agreements and/or contracts are available for reimbursement of eligible project costs. These definitions are expanded with specific procedural considerations below:

- *Commitment Amount:* The Expenditure Plan contains the commitment amount of funds for the local, voter-approved funding programs administered by Alameda CTC. Commitment Amounts for the local, voter-approved funding programs are confirmed in the Strategic Plan appendices to the CIP.

- *Programmed Amount:* The CIP serves as the programming document for the fund sources administered by Alameda CTC.

    - Programmed Amounts approved in the CIP for the local, voter-approved funding programs are based on the Commitment Amounts and the requirements included in the Expenditure Plan for the specific funding program.

    - Programmed Amounts approved in the CIP for the TFCA County Program Manger Fund are based on the programming and allocation process administered by Alameda CTC in accordance with BAAQMD requirements.

ACTC_AR3680

- Programmed Amounts shown in the CIP for fund sources not directly administered by the Alameda CTC may be included for informational purposes to reflect the current programming information available from the agency with the statutory programming authority for the fund source.

- Programmed Amounts are typically approved for a specific project phase in a specific fiscal year. Funds programmed in specific fiscal years are required to be allocated by the end of the fiscal year in which the funds are programmed. Changes to Programmed Amounts require amendments to the CIP.

- *Allocated Amount:* The CIP five-year programming window includes a two-year allocation plan (i.e., the first two years of the five-year window). The CIP Allocation Plan shows the Allocation Amounts approved by Alameda CTC for the funds administered by Alameda CTC and anticipated allocations to be approved by other agencies.

    - Allocated Amounts shown in the CIP for the local, voter-approved funding programs are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action).

    - Allocated Amounts shown in the CIP for the TFCA County Program Manager Fund are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action, or if the Allocated Amount shown is dependent on a future programming approval).

<u>Request for Allocation Process</u>

Requests for allocation package may consists of a funding application in the form of a CIP funding application or a specific request for allocation for a named project in the Transportation Expenditure Plans. The amount of funding available for allocation to a given project, or project phase, is limited by the Programmed Amount for the project, or project phase, at the time of the allocation request.

Requests for any allocations for Alameda CTC-administered funds should be submitted to Alameda CTC at least 60 days prior to the Alameda CTC meeting at which the Project Sponsor requests the allocation to be approved, or the meeting at which the CIP will be approved. The request for allocation package shall be in a format provided by Alameda CTC or a format that at minimum

ACTC_AR3681

includes details about the program or project scope, cost, funding and schedule detailed by phase. The request package shall reflect total cost and funding amounts based on progress to date at the time of the request.

Requests for allocations received by Alameda CTC will be considered in the context of the CIP in effect at the time of the request. Alameda CTC reviews allocation requests to confirm items such as financial viability, project delivery readiness, funding availability to reimburse eligible project costs. If conditions warrant a review of the assumptions used for the most recent overall financial analysis, an updated overall financial analysis may be required to determine whether or not the requested allocation would have an adverse impact on commitments of funds to other projects.

Allocations, or modifications to allocations, are approved by Alameda CTC based on staff recommendations and allocation requests submitted by Project Sponsors typically through the annual/biennial CIP programming and allocation processes.

Allocated Amounts approved by Alameda CTC must be encumbered in funding agreements with Project Sponsors or in contracts for project costs incurred directly by Alameda CTC, in accordance with the CIP's policy for Timely Use of Funds Allocated by the Commission.

Allocation Considerations for Partially Fund Projects and Right-of-Way Phases

Funding allocations for phases beyond the environmental phase are considered at increased risk if a Project Sponsor has not identified or secured funding for all phases to complete the project funding plan.

Prior to making an allocation to a project with a known funding shortfall, Alameda CTC will perform risk analytics on the request funding and the project prior to making such allocation recommendation to the Commission. In this risk assessment, Alameda CTC will consider the project's and Project Sponsor's potential to use Alameda CTC funds to leverage and secure prospective funding from federal, State, regional, and local sources outside of Alameda CTC's purview, and the project's viability to be completed in a timely manner.

Right-of -Way Allocations shall be limited to projects that have a complete and viable project funding and delivery plan as assessed for firm funding commitments/partners and tangible plan to address identified project deliverability issues.

ACTC_AR3682

Right-of-Away Allocations to projects that contain funding shortfalls, uncertain project funding plans, and/or potential issues in project delivery are considered high risk, and will only be considered under very rare circumstances. Such right-of-way allocations must have an agreed understanding on how the Project Sponsor shall return the right-way-allocation to Alameda CTC for a project that has not in a entered into the construction phase, and/or for a project that is not completed in an established timeframe.

The agreed upon terms, including methods of repayment in arrears, shall be included with the Request for Allocation package submitted to Alameda CTC for consideration, will be subsequently be the basis for a fund agreement between Alameda CTC and the Project Sponsor.

Changes to Approved Allocations

A request to increase or decrease an Allocation Amount requires a written request by the Project Sponsor.

- *Increasing Allocations*: Request for an increase to an allocation is on a case-by-case basis for extraordinary circumstances, and subject to Commission approval. To increase the total amount of an allocation there must be sufficient capacity in the committed amounts for voter-approved expenditure named projects, programming/funding capacity, and reasonable justification for increasing the allocation amount.

- *Decreasing Allocations*: For projects named in the voter-approved Expenditure Plans, a reduction to an Allocated Amount will be credited back to the project for future reallocation to the project. Periodically through the CIP, Alameda CTC will deallocate unused funds related to project cost savings, fund rescissions, or inactive/infeasible project delivery.

- *Shifting Allocations Between Phases*: Funds allocated to a project by Alameda CTC may be shifted between the approved allocations are considered on a case-by-case basis. Requests for shifting allocated funds shall include updated project information that reflects the requested shift and allows for a before-and-after comparison of the project implementation plan. Funding shortfalls in the current or subsequent phases, which result from a requested shift of allocated funds shall be considered an adverse impact to implementation.

  Requests for shifting funds between allocations which do not change the total amount allocated to the project from an individual funding

ACTC_AR3683

program, e.g. Measure B, Measure BB or VRF, may be approved by the Executive Director, or a designee of the Executive Director, if the shift will not adversely impact the implementation of the project. Any requests for shifting funds between project phases that results in the amount changed the allocation amount from an individual funding program, e.g. Measure B, Measure BB or VRF, shall require consideration and approval by the Commission.

Effective Date of Reimbursable Costs

The effective date of reimbursable costs is generally based on the start of the fiscal year in which the allocated funds are identified in the CIP. The amounts shown in the first two fiscal years of the CIP for fund sources allocated by Alameda CTC shall be considered allocated in the fiscal year shown for the phase(s) of the project indicated upon approval of the CIP (if not already approved by Alameda CTC through a separate action).

For allocations made through a separate Commission Action, the effective date of reimbursable cost shall be the date of the Commission's approval, unless otherwise stated in the approved allocation request.

Funds administered by agencies other than Alameda CTC, such as the CTC, MTC, or the Federal Highway Administration (FHWA), must be approved by the agency that administers the particular fund source prior to being available for reimbursable costs.

Retroactive Allocations

Generally, funds are allocated for cost to be incurred after the allocation is approved by the Commission. On a case-by-case basis, Alameda CTC may consider identify a retroactive allocation to allow the eligible date of reimbursable cost incurred to be prior to the allocation date.

Approval of retroactive allocations shall be based in large part on which fund sources were used to reimburse the costs originally, and to what purpose, if any, the freed up funding will be committed. There are also certain requirements related to the procurement process and methodology for contracts funded wholly, or in part, by voter-approved funds. Any costs intended for the retroactive allocation for contracts that do not comply with the goal setting requirements set forth in Alameda CTC's Local Business Contract Equity Program (LCBE) must be identified in the Request for Allocation package and determined eligible for Measure BB funding. If a retroactive allocation of Measure BB funds is approved to cover contract costs in arrears, the reporting requirements set forth in the LBCE Program shall apply to the entire contract from inception to date.

ACTC_AR3684

POLICY 2: ENVIRONMENTAL APPROVAL AND FULL FUNDING FOR MEASURE B/MEASURE BB FUNDED CAPITAL PROJECTS DEADLINE

POLICY: Capital projects funded wholly, or in part, by Measure B and/or Measure BB shall receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements as required by the Expenditure Plan for each measure.

- For the 2000 Measure B, there are no projects remaining that are subject to this policy as deadlines occurred in previous years.
- For the 2014 Measure BB, named projects must receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements by December 31, 2022. Project Sponsors may appeal to Alameda CTC for one-year time extensions.

PURPOSE: To ensure that the projects included in the 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans can be completed in a timely manner, and to provide a process by which Project Sponsors may appeal to Alameda CTC for one-year time extensions. The intent is to require continued due diligence by the Project Sponsor to secure environmental clearance approvals and a full funding plan.

GUIDELINES: The 2000 Measure B Transportation Expenditure Plan (2000 TEP) and the 2014 Measure BB Transportation Expenditure Plan (2014 TEP) both contain provisions for projects which cannot clear the Environmental Approval process, or cannot do so in a timely manner. There are no remaining 2000 Measure B capital projects subject to the environmental clearance approval or full funding policy.

The 2014 TEP establishes a deadline for environmental clearance approval and a full funding plan for each capital project that receives Measure BB capital funding. Environmental clearance approval is defined as the issuance of a Categorical Exclusion (CE), a Finding of No Significant Impact (FONSI) or the filing of the Record of Decision (ROD) for National Environmental Policy Act documents and the Notice of Determination or Notice of Exemption for California Environmental Quality Act documents. A full funding plan is defined as a plan containing a reliable cost estimate and sufficient funding identified to cover the estimated costs. The 2014 Measure BB deadline is December 31, 2022; however, the 2014 TEP includes provisions for one-year extensions to the deadline, if approved by Alameda CTC.

POLICY 3: TIMELY USE OF FUNDS POLICIES – ALLOCATIONS AND FUNDING AGREEMENTS

POLICY: Allocations shall be encumbered in a funding agreement between Alameda CTC and the recipient agency incurring the reimbursable costs, or in a contract for costs

ACTC_AR3685

incurred directly by Alameda CTC, within twelve (12) months from the date the allocation is approved by the Commission.

Allocated funds not encumbered by the deadlines established in this policy are subject to rescission and reprogramming at the discretion of Alameda CTC.

PURPOSE: To ensure that funding allocated and distributed by Alameda CTC is expended expeditiously to implement the improvements and services for which the allocations and distributions were approved.

GUIDELINES: Alameda CTC's allocation recommendations and approvals are based on a Project Sponsor's Request for Allocation package/funding application that contain a specific scope, cost, and schedule. This policy requires Project Sponsors to encumber allocated funds through an executed project funding agreement or contract within twelve (12) months of an approved allocation to ensure accountability and consistency with the Project Sponsor's allocation request.

The project fund agreement(s) between Alameda CTC and the recipient agency outlines the agreed upon reimbursable costs, budget, scope, and schedule. Once an agreement is executed, Project Sponsors are expected to begin work on an allocation phase based on the delivery guidelines below, or per the schedule contained in the executed project funding agreement.

Project Phase	Maximum Expenditure Timeline
Planning/Scoping	• Activity must be complete within twenty-four (24) months from the date of allocation.
Preliminary Engineering / Environmental	• Activity must be complete within twenty-four (24) months from the date of allocation.
PS&E (Final Design)	• Activity must be complete within twenty-four (24) months from the date of allocation.
Construction	• Activity must be complete within twenty-four (36) months from the date of allocation.

Requests for Time-Extension

Project Sponsors may request time extension(s) to funding related deadlines established by policy, deadlines required at the time of allocation, or expiration dates established in funding agreements. Project Sponsors are limited to only a single time-extension of up to twenty-four (24) months that is required to be approved by the Commission.

Such requests for extensions shall be submitted in writing to Alameda CTC at least ninety (90) days prior to the deadline for which an extension is being requested and at

ACTC_AR3686

least forty-five (45) days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval.

The request for time-extension package submitted to Alameda CTC shall include a detailed explanation of the conditions or circumstances that have changed since the deadline was established, and the corresponding impact to the remainder of the project implementation schedule if the extension is approved. Extensions to delivery deadlines established in funding agreements shall be submitted, reviewed, and approved in accordance with the provisions set forth in the funding agreement. Additional requests for time-extensions will only be considered for rare and extraordinary circumstances.

Fund Rescission/Reprogramming

Allocated funds not encumbered into a funding agreement by the deadlines established in this policy or used in the manner inconsistent with these guidelines are subject to rescission and reprogramming at the discretion of Alameda CTC. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds.

If funding awards are withdrawn, the corresponding projects and allocations may be reprogrammed to a future year of the CIP, or deprogrammed from the CIP. Project sponsors who failed meet the timely use of funds deadlines may be penalized in their consideration for the next programming and allocation cycle.

POLICY 4: ELIGIBLE COSTS FOR REIMBURSEMENT

POLICY: Program and project costs to be reimbursed by Alameda CTC shall be segregated into project phases to correlate with the encumbrance(s) from which reimbursement is requested. Funds shall be encumbered in a funding agreement between Alameda CTC and either the Project Sponsor or, if different from the sponsor, the implementing agency which incurs the reimbursable costs, or in a contract with Alameda CTC for project costs incurred directly by Alameda CTC.

For Alameda CTC implemented projects, eligible staff and other direct costs incurred directly by Alameda CTC shall be considered encumbered when they are included in the annual budget adopted by the Commission. Costs submitted for reimbursement shall be limited to activities, materials and services directly related to the implementation of the scope of the project for which the funds were allocated and subsequently encumbered in a funding agreement. Eligible costs shall be incurred in accordance with the provisions set forth herein or be at risk of being determined ineligible for reimbursement by Alameda CTC.

ACTC_AR3687

PURPOSE: To limit the expenditures of funding administered by Alameda CTC to the reimbursement of eligible project costs and to provide general guidance to implementing agencies which incur the reimbursable costs.

GUIDELINES: Alameda CTC approves reimbursements of eligible project costs based on requests for reimbursements submitted by the Project Sponsors or implementing agencies which incur the reimbursable costs. The requirements for the requests for reimbursement are included in the project funding agreements between Alameda CTC and the recipient agency. In general, the request for reimbursements must identify the total costs by phase, be consistent with the agreed upon eligible costs, and segregate costs between Alameda CTC's and the Project Sponsor's cost sharing arrangement as described in the project funding agreement.

The following describes the eligible costs for specific phases:

Project Phase	Eligible Costs Requirements
Planning/Scoping	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare a well-developed project delivery plan or scoping document. • For projects that require a formal scoping document such as projects on the State highway system, or with State or federal funding, the preparation of the scoping document is eligible for scoping phase funding.
Preliminary Engineering / Environmental	• Project Sponsor staff, consultant costs and other direct costs necessary to perform preliminary engineering, and to secure approval for the appropriate environmental document for the project.
Plan, Specification and Estimate (Final Design /PS&E)	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare final PS&E and to provide support during the bidding process until the time of contract award. • Services beyond the contract award are considered design services during construction, which are typically included in the Construction Support Phase. The milestone (i.e., advertisement, award, etc.) at which the costs change from being budgeted and tracked in the PS&E Phase to the Construction Support Phase may vary on a case-by-case basis. Regardless of the phase in which the advertise-bid-award costs are budgeted and tracked, they should be clearly segregated from other costs in the same phase.
Right-of-Way Acquisition and Support Phases	• Project Sponsor staff, consultant costs and other direct costs necessary for the acquisition of right-of-way, right-of-way preservation and hardship acquisitions.

Project Phase	Eligible Costs Requirements
	• Right-of-way acquisitions initiated prior to environmental clearance approval for the project for which the right-of-way is required, shall not be eligible for reimbursement by Alameda CTC unless specifically authorized in the funding agreement. The cost of eligible right-of-way acquisitions shall be supported by an appraisal prepared by a professional appraiser. The appraisal report shall be provided to Alameda CTC with the request for allocation package. • Right-of-way activities related to property not required for the program or project as programmed shall be at the expense of Project Sponsor to the extent such costs can be determined. • If excess right of way is sold, used for purposes other than the program or project as programmed, or otherwise disposed of, a share of any proceeds from the sale of such excess property shall be returned to Alameda CTC based on the prorated percentage of Alameda CTC funding contributed to the purchase of the property. • If condemnation procedures are required to obtain access to right of way, Alameda CTC will consider the required deposit as an eligible cost and reimburse the Project Sponsor upon request in accordance with the funding agreement. If the amount of reimbursement to Project Sponsor is higher than the Alameda CTC funding share of the amount of settlement in the final order of condemnation, Project Sponsor shall pay Alameda CTC the difference between the amount reimbursed and the Alameda CTC funding share of the amount settled plus the Alameda CTC funding share of the interest accrued to the deposit account. • Property acquired for a project using Alameda CTC funding shall be available for project construction within 10 years of Alameda CTC reimbursement to the Project Sponsor. If, after 10 years, the property has not been utilized for the project as programmed, the Project Sponsor shall reimburse Alameda CTC for its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year after the expiration of this 10-year period. • If right of way is acquired for a project as programmed and is not utilized for the project as programmed, because the project has been modified or de-programmed, Alameda CTC shall be reimbursed its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year from the time the project is modified or de-programmed.

ACTC_AR3689

Project Phase	Eligible Costs Requirements
Construction Capital and Support Phases	• Project Sponsor staff, consultant costs, contractor costs and other direct costs necessary for all construction expenditures on the project that are part of the scope of work agreed to by Alameda CTC, including Project Sponsor's management oversight expenses associated with the construction of the project. • If Project Sponsor includes additional work beyond the scope of the project as programmed by Alameda CTC, such work and all related costs shall be segregated from the project costs funded by Alameda CTC. Costs not associated with the scope of the project as programmed by Alameda CTC shall be at the expense of the Project Sponsor and shall not count as a match for Alameda CTC funding for the project as programmed by Alameda CTC. • Items of work within the scope of the project as programmed, but utilizing more expensive than standard treatment, such as specialized lighting standards and signs, more elaborate landscaping, specialized treatment on the face of soundwalls/retaining walls and specialized sidewalk/hardscape treatments, will be eligible for reimbursement only if they are agreed to in advance and no additional Alameda CTC funding is required.
Rolling Stock and Equipment Acquisition Phases	• Rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC shall remain in the Project Sponsor fleet for a minimum of five years. If the rolling stock is removed from the fleet prior to the required five years, Project Sponsor shall notify Alameda CTC. If the rolling stock is sold and the receipts of the sale are not used to purchase replacement rolling stock, the proceeds from the sale shall be returned to Alameda CTC. • Project Sponsor shall prepare and submit to Alameda CTC for approval, prior to the beginning of service, an operations schedule indicating the frequency, vehicle type and operating hours of the rolling stock purchased by Project Sponsor for the program or project as programmed. The rolling stock used in this service will be the same type as purchased with Alameda CTC funding, but may not be the exact vehicles due to the need to rotate vehicles in the fleet. The approved service level shall be maintained, as a minimum, for five years. In the event that the minimum service level is not maintained, Project Sponsor shall reimburse Alameda CTC for its share of the reduced service based on vehicle needs for the reduced service and the salvage value of the rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC.

Project Phase	Eligible Costs Requirements
	• Specialized equipment required for the project must be identified in the project funding agreement to be eligible for reimbursement with Alameda CTC funding.

In addition to the individual phase requirements described above, the following general provisions apply to cost eligibility and exclusions for any phase:

Cost Type	Eligible Costs Requirements
Contract Costs	• Costs incurred via contracts between the implementing agency and consultants, contractors, suppliers or other vendors are eligible for reimbursement from the local, voter-approved funding programs administered by Alameda CTC only if the contract is established in accordance with Alameda CTC's Local Business Contract Equity (LBCE) Program. The LBCE Program applies to contracts funded wholly, or in part, with local, voter-approved funding programs administered by Alameda CTC. While not every contract funded in part by local, voter-approved funding programs administered by Alameda CTC will require a contract goal set during the procurement process, every contract is required to comply with the reporting requirements set LBCE program.
Project Sponsor Staff Costs	• Costs for Project Sponsor staff working on the project (direct implementation costs) will be eligible for reimbursement by Alameda CTC funding. Staff hours must be segregated on timesheets, or otherwise documented through an alternative method, approved by Alameda CTC. • Project sponsor overhead and general administrative costs that are not directly related to the implementation of a project are ineligible for reimbursement by Alameda CTC, unless otherwise approved by Alameda CTC. • Hourly wages and fringe benefits for Project Sponsor staff will be reimbursed based on the actual wage rate plus the audited fringe benefit rate supplied by the Project Sponsor. Alameda CTC will review and approve a fringe benefit rate based on documentation provided by the Project Sponsor. Approved fringe benefit rates will be set forth in the project funding agreement, but in no case will fringe benefits of more than 70 percent of the hourly wage be approved. • For Measure B/BB/Vehicle Registration Fee Direct Local Distribution Recipients, costs for Project Sponsor staff costs related to project administration, contract management of professional and construction services, are not eligible for reimbursement with allocated funds per the Local Cooperation Policy, unless specifically allowed in a project funding agreement.
Alameda CTC Project Support Requested by Project Sponsor	• If requested by Project Sponsor, Alameda CTC will consider providing support staff and/or consultant support for a project. Costs for these services will be considered eligible costs and be reimbursed to Alameda

ACTC_AR3691

Cost Type	Eligible Costs Requirements
	CTC from funds for the project, or be deducted directly by Alameda CTC from Alameda CTC funding allocated for the project.
Bonding Costs	• If Alameda CTC determines that it is in the best interest of a funding program to sell bonds, or otherwise incur financing costs to deliver the projects included in the funding program, the cost of bonding and financing, including interest payments, shall be considered a program-wide cost and shall be identified in the CIP as the first priority repayment. • If a Project Sponsor wishes to independently bond or use other approved borrowing programs, Alameda CTC funding is eligible to reimburse expenses incurred by Project Sponsor for staff time, consultant costs, principal payments and the associated cost of financing required to provide the financing for the project.
Fund Exchanges	• Alameda CTC may consider and approve fund exchanges on a case-by-case basis. Any exchange payments of Alameda CTC funding must be identified in the project funding agreement to be eligible for reimbursement
Miscellaneous Costs	• The costs of fees from other agencies, including permit fees or reimbursement for review or oversight costs needed for the project, are eligible project costs with the exception of the cost of permits, fees or oversight from the Project Sponsor. Reimbursable eligible costs must be consistent with the Local Cooperation Policy. • Direct costs, such as reproduction, shipping, mileage and long-distance calls, will be considered for reimbursement if they can be independently documented as directly relating to the implementation of the program or project for which the funds were allocated. Air travel and overnight stays are not eligible unless prior approval is obtained from Alameda CTC.
General Exclusions	• Cost not directly related to the implementation of the project as programmed, and consistent with an approved environmental document as applicable, will not be eligible for reimbursement with Alameda CTC funding.
Ongoing Costs (Maintenance/ Operations)	• Ongoing annual expenses incurred for maintenance of a project shall be borne by the Project Sponsor unless specifically identified in the funding agreement.

POLICY 5: FUNDING FOR PROJECT-RELATED COSTS INCURRED DIRECTLY BY THE ALAMEDA COUNTY TRANSPORTATION COMMISSION

POLICY: Costs incurred directly by Alameda CTC related to the management and implementation of programs and projects shall be eligible for the funding made available for those programs and projects. The eligibility of costs incurred directly by Alameda CTC shall be limited to any restrictions related to such costs for any individual fund source. General fund administration costs related to congestion management

ACTC_AR3692

activities are allocated to congestion management projects in compliance with *Title 2 U.S. Code of Federal Regulations Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance).*

PURPOSE: The purpose of this policy is to establish guidelines by which costs incurred directly by Alameda CTC related to the management and implementation of programs and projects are segregated to identify fund sources for such costs.

GUIDELINES: The following provisions are intended to support the purpose of this policy:

A. Direct costs relate to activities directly related to Capital Projects, Programs, Planning and grants. These direct costs shall be posted to appropriate funds or activities. Salaries and benefits shall be supported by timecards, and direct consulting and other costs shall be supported by approved invoices. Where specific agreements are in place, direct costs along with indirect cost (see below) allocations shall be posted to specific projects or grants. Where such agreements do not exist, the direct costs shall be posted to a control account within the Capital Projects or Program Funds.

B. Indirect costs relate to congestion management activities that don't directly relate to a specific Capital or Planning Project, or Program. Such costs shall be accumulated under the General Fund and supported by time cards, invoices and other appropriate documents. The indirect cost ratio for billing purposes will be based on General Fund congestion management related allowable costs. The cost allocation methodology will comply with *Uniform Guidance*.

C. Alameda CTC shall maintain a cost allocation plan as required by *Uniform Guidance*, certified by the Director of Finance, accepted and/or approved by Caltrans as the cognizant agency and available to grant funding agencies.

D. Alameda CTC shall implement a billing system, supported by acceptable detail for direct and indirect costs. However, no allowance shall be made for profit margin.

E. All direct costs and billable indirect costs shall be excluded from the salary and administration limitations set forth in the 2000 Measure B Transportation Expenditure Plan and in the 2014 Measure BB Transportation Expenditure Plan. Alameda CTC shall use general fund administrative costs to compute the administrative cost ratios.

ACTC_AR3693

POLICY 6: LOCAL CONTRACT BUSINESS EQUITY PROGRAM

POLICY: Alameda CTC has established this Local Business Contract Equity (LBCE) Program to create economic growth and jobs within Alameda County by requiring local contracting that supports residents and businesses in Alameda County. The LBCE Program helps to identify and engage the participation of Local Business Enterprise (LBE), Small Local Business Enterprise (SLBE) and Very Small Local Business Enterprise (VSLBE) firms located in Alameda County on applicable contracts.

PURPOSE: The purpose of this policy is to continue support for the hiring of local contractors, vendors, suppliers and service providers on contracts funded wholly, or in part, by funding approved by Alameda County voters. The LBCE Program contributes to the overall economic vitality of the County by:

1. Encouraging businesses to locate and remain in Alameda County;
2. Providing employment opportunities for residents of Alameda County; and
3. Generating economic activity and stimulating the local economy.

GUIDELINES: This program applies to contracts funded solely by any combination of Measure B, Measure BB, Vehicle Registration Fee, and/or local funds. Contracts that include state and federal funds must adhere to state and federal requirements. Full policy and program requirements are detailed here: https://www.alamedactc.org/app_pages/view/4543

Funds may be subject in rescission or ineligible for reimbursement if the Project Sponsor is determined to be out-of-compliance.

POLICY 7: ALAMEDA CTC PROJECT AND PROGRAMS MANAGEMENT POLICIES

POLICY: Alameda CTC shall administer and manage project delivery efforts and program implementation through these policies and procedures.

Direct Local Distribution Programs Management Policy: As the administering agency for the Measure BB DLD program, Alameda CTC is responsible for monitoring and compliance administration of the DLD recipients. Alameda CTC reserves up to one percent (1%) of Measure BB DLD funds to provide oversight to the DLD program.

Capital Projects and Programs Management Policy: As implementing agency for several countywide significant Measure BB related projects identified in the Capital Project Delivery Plan (CPDP), Alameda CTC has assumed the lead in project management and project delivery using its own staff and consultant resources. Alameda CTC reserves up to five (5) percent of Measure BB discretionary funds in order to effectively deliver Measure BB transportation projects, and to oversee projects being implemented by

ACTC_AR3694

other agencies. These funds support costs associated with establishing policies, procedures, ongoing project management oversight, preliminary scoping and planning, and other core functions related to Measure BB capital program delivery that are not directly related to Measure BB capital commitments for individual projects.

Project and Program-wide Contingency Reserve: Furthermore, the CPDP recommends programming Measure BB funds for specific project phases, including set-asides for program-wide management, oversight, and monitoring, as well as a program-wide risk contingency. Each project will include budget allowances that account for risk and unknowns. Where risk issues are common to many projects, Alameda CTC may elect to place those budget amounts into a program-wide contingency reserve. This is referred to herein as the Project and Program-wide Contingency Reserve.

PURPOSE: Alameda CTC is responsible for administering the voter-approved transportation programs, CMA functions, and emerging countywide transportation needs and initiatives. Alameda CTC requires these projects and program management policies in order to provide continuing support and resources for these functions; to strengthen and enhance the agency's position within the changing framework of regional, state, and federal transportation agencies; and to increase responsiveness to new regional and state climate change mandates.

GUIDELINES: Alameda CTC's annual requirements related to project and program implementation, oversight, and delivery management costs will be assessed through Alameda CTC's budgetary process.

POLICY 8: PROGRAMMING POLICIES FOR OUTREACH AND TRANSPARENCY

POLICY: The project selection and prioritization process employed for the development of the CIP, which begins with the Countywide Transportation Plan (CTP) update process, shall satisfy the requirements for all the fund sources included in the CIP, including federal, state, regional and local sources. The CTP update process shall include significant efforts to satisfy requirements related to notification, outreach and transparency typically satisfied at the time of individual, fund-specific calls for projects.

PURPOSE: To ensure that the notification, outreach and transparency measures employed by Alameda CTC to identify potential uses for transportation funding from the full range of sources available in Alameda County satisfy all programming policies from other agencies pertaining to the specific fund sources being programmed by Alameda CTC. By satisfying the most stringent of requirements, Alameda CTC will be afforded flexibility at the time of programming to match the most appropriate, available fund source to the priorities at the time of programming.

ACTC_AR3695

GUIDELINES: Project Sponsors are required to support this policy through outreach programs and notifications which reach all geographic areas, communities and portions of the population during solicitations for proposed uses of Alameda-CTC administered funding available for transportation programs and projects within Alameda County. The outreach must include disadvantaged communities, including Metropolitan Transportation Commission-defined Communities of Concern and other underserved populations.

POLICY 9: LOCAL COOPERATION POLICY

POLICY: Project Sponsors receiving DLD funds are not eligible to receive a reimbursement of staff time costs through allocations of Alameda CTC Administered Funds for oversight activities that are not directly related to project implementation.

Local jurisdiction(s) shall work in full cooperation with the implementing agency to assist in project implementation and delivery, where appropriate and as needed. This includes providing support, coordination, monitoring, technical assistance, etc. A local jurisdiction's costs associated with these activities to further a project implemented by Alameda CTC, a local jurisdiction (as the Project Sponsor), or another implementing agency within a jurisdiction's locality shall be funded through the local jurisdiction's eligible local fund sources such as Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) funds in lieu of a local jurisdiction billing these costs directly to the project or against its funding allocation.

PURPOSE: To ensure jurisdictions directly benefiting from the expected outcomes of a project in their locality implemented by Alameda CTC or other implementing agencies, are active funding partners to further the delivery of such improvement project, and to also ensure DLD recipients are using DLD funds predominately on contracts, services, materials, rather than contract administration.

GUIDELINES: Local agency-incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by another implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. Fees associated with permitting, plan review, and other general costs associated with the project shall be supported by the local jurisdiction in which the project is implemented, where feasible and appropriate. These costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC, unless they are specifically identified as eligible in the funding agreement.

ACTC_AR3696

POLICY 10: SMALL CITIES PROGRAM POLICY

POLICY: Cities within Alameda County with a population of less than 25,000 shall be considered for certain exceptions from Alameda CTC's local match requirements and/or Local Cooperation Policy requirements, and local projects that have a demonstrated multi-jurisdictional transportation significance shall receive consideration for delivery support from Alameda CTC, where practical and feasible.

PURPOSE: The purpose of this policy is to assist smaller cities in Alameda County in their project delivery efforts through relieving matching requirements, exploring financial strategies, and providing project delivery/implementation support, where feasible.

Small cities in Alameda County may not be financially equipped or resourced to meet certain project delivery needs and funding matching requirements.

Small cities receive limited Measure B/BB/Vehicle Registration Fee Direct Local Distributions in comparison to larger cities and often have difficulties finding the financial resources needed to satisfy minimum matching requirements, especially for larger transportation projects.

GUIDELINES: To qualify as a small city under this policy, a city must have a population of less than 25,000 as reflected in the most currently available California Department of Finance's population estimate.

As such, Alameda CTC may elect to waive matching requirements and/or Local Cooperation policy requirements based on a small city's request during the programming and allocation processes, or project coordination processes. Additionally, Alameda CTC will support facilitating Federal-local funding exchanges, whenever possible, to alleviate certain funding requirements required by external sources.

POLICY 11: MATCHING AND LEVERAGING POLICY

POLICY: For projects that have successfully secured other non-Alameda CTC discretionary funding, Alameda CTC shall consider fulfilling a portion of the minimum match required by external funding for projects and programs.

PURPOSE: The purpose of this policy is to maximize the leveraging capacity of Alameda CTC Administered Funds such as Measure B, Measure BB, Vehicle Registration Fee Program, Transportation Fund for Clean Air Program funds.

GUIDELINES: Through Alameda CTC's programming and allocation processes, Project Sponsors must document the following:

ACTC_AR3697

1. Project Sponsor must identify a project delivery and funding plan that describes the project scope, costs, schedule;
2. Document the approved programming of other, non-Alameda CTC discretionary funds to a project;
3. Cite the minimum matching amount required by the secured non-Alameda CTC funding source;
4. Identify the amount of matching funds requested from Alameda CTC. Matching funds will not address any project cost increases; and
5. Provide a cost sharing proposal between all prospective funding partners.

Alameda CTC may consider recommending programming and allocation to fulfill either a portion or the entire amount requested, based on available fund capacity, project delivery strategy, funding timelines, and the leveraging significance.

POLICY 12: DEBT ISSUANCE POLICY

POLICY: Alameda CTC's adopted Debt Policy governs the issuance and management of all debt funded through capital markets, direct bank loans, and federal lending programs, including the selection and management of related financial and advisory services and products.

The debt policy adopted by the Commission September 2021 can be reviewed here: https://www.alamedactc.org/wp-content/uploads/2021/11/AlamedaCTC_Debt_Policy_2021.pdf

PURPOSE: The purpose of the Debt Policy is to establish guidelines for the issuance and management of Alameda CTC debt. The policy also confirms the commitment of the Commission, management, staff, and other decision makers to adhere to sound financial management practices.

The purpose of debt financing falls into three categories:

(1) to finance new capital infrastructure,
(2) to refinance existing bonds to reduce financing costs and/or risk, or
(3) to reimburse an agency for eligible capital expenditures made within the last 18 months.

GUIDELINES: Priorities of the Debt Policy are as follows:

- Effectively manage and mitigate financial risk,
- Maintain strong credit ratings and good investor relations,
- Achieve the lowest cost of capital,
- Preserve future program flexibility, and
- Maintain ready and cost-effective access to the capital markets.

Responsibility for implementation of the Debt Policy and day-to-day responsibility and authority for structuring, implementing, and managing Alameda CTC debt and finance program, resides with the Executive Director and Deputy Executive Director of Finance and Administration and requires that the Commission specifically authorize each debt financing.

Alameda CTC's CIP is used in combination with Alameda CTC's Debt Policy to ensure proper allocation and financing of Alameda CTC sponsored projects. This CIP sets priorities and strategies for allocating Alameda CTC administered funds under its guiding principles, while the Debt Policy provides policy direction and limitations for proposed financings. Debt issuances for capital projects are considered and included in the CIP and presented to the Commission for review and approval as part of the CIP planning process.

The philosophy of Alameda CTC is to fund all projects in the TEPs on a pay-as-you-go basis for as long as possible. This strategy minimizes borrowing costs and maximizes tax dollars for projects. The agency considers the issuance of debt when capital program cash flow demand exceeds projected annual revenue capacity over a specified period of time. It is the agency's policy to issue bonds for broad-based program needs and on projects for which Alameda CTC is the project sponsor. This is consistent with both the economic and program management objectives of the agency.

As borrowing needs are identified, Alameda CTC evaluates the nature of the capital investment to determine if either long or short-term debt is the appropriate financing mechanism to meet the funding need. Standards for the appropriate use of debt financing include:

A. Long-Term Capital Projects: Debt should be used to finance capital projects on a programmatic basis where it is cost effective and fiscally prudent. The debt repayment period should not exceed 120% of the useful life of the project being financed or the term of the pledged sales tax Measure. The ability or need to expedite or maintain the programmed schedule of approved capital projects is a factor in the decision to issue debt.

B. Debt Financing Mechanism: Alameda CTC evaluates the use of financial alternatives available including, but not limited to, long-term debt, short-term debt, commercial paper, direct bank loans, federal lending programs, lines of credit and inter-fund borrowing. Alameda CTC utilizes the most cost-effective financing alternative consistent with limiting Alameda CTC's risk exposure.

C. Credit Quality: All Alameda CTC debt management activities for new debt issuances are conducted in a manner conducive to receiving the highest credit ratings possible.

The market for municipal finance is well developed and provides numerous products or types of debt including long-term, short-term and variable rate debt with various terms and structures and compliance requirements that Alameda CTC evaluates on a case-by-case basis.

ALAMEDA COUNTY TRANSPORTATION COMMISSION

STRATEGIC PLAN

1. PURPOSE

Alameda County maintains a highly diverse transportation network complete with highway infrastructure, express lanes, local roadways, freight and port facilities, rail and bus transit, and bicycle and pedestrian improvements. Its wide range of transportation infrastructure may differ dramatically from one area of the county to the other as each respective community has unique transportation needs. Alameda CTC's goal is to leverage local funds under its purview to help secure additional competitive local regional, State, and federal transportation funding dollars in order to fund a balanced set of countywide transportation projects to maintain a well-connected and efficient system for the whole county.

Alameda CTC administers voter-approved sales tax programs (2000 Measure B and 2014 Measure BB), and the Vehicle Registration Fee (VRF) program (2010 Measure F) that provide critical funding for delivering transportation improvements within the county. The most significant source of funding under Alameda CTC's purview is the Measure BB sales tax revenue generated through the voter-approved 2014 Transportation Expenditure Plan (2014 TEP) in November 2014. The duration of the 2014 TEP is thirty (30) years, from April 1, 2015 to March 31, 2045. The 2014 TEP is projected to generate approximately $7.8 billion in revenues for transportation investments ranging from bus/ferry/commuter rail services and operations, streets and highways improvements, student transit passes, community development initiatives, technology and innovation programs, bicycle/pedestrian enhancements, and transportation programs for seniors and people with disabilities.

Although the 2014 TEP is anticipated to generate a significant source of funding for Alameda County, the transportation funding needs far outweigh the expected revenue generation required to complete the project and program delivery of the 2014 TEP in its entirety. Over 50 percent (approximately $4.1 billion) of the revenues generated are annually returned to local jurisdictions as Direct Local Distributions for local agencies to use at their own discretion. The remaining $3.7 billion is split among "Named" capital projects ($1.2 billion) and discretionary programs ($2.3 billion). The 2014 TEP recognizes investments within specific categories and types, and the Measure BB total revenue will not be able to fulfill the funding needs. It is imperative the Commission strategize investments to leverage external funding to fulfill the capital program needs.

The aim of the Strategic Plan is to simultaneously:

1. <u>Prioritize Project and Program Investments</u>
   Identify project investment strategies using Alameda CTC administered funds to get projects in a state of readiness to compete for available external funds as they presumably become available over the life of the strategic plan.

2. Maximize Measure BB Investments/Leveraging Strategy
   Identify an investment strategy to ensure that Measure BB is used to expediate the delivery of projects while also serving as the basis to attract external competitive funding to Alameda County such as Regional Measure 3, Senate Bill 1 programs, and U.S. Department of Transportation competitive programs for example.

3. Guide Project Delivery Strategy
   Identify project delivery strategies for an Alameda County portfolio of project investments that depict which projects can be delivered in whole, or in part, by the Measure BB sales tax program, other Alameda CTC-administered funds, or prospective external competitive funding programs. It also identifies the funding challenges leading up to full project implementation and the potential risks of early project development investments towards projects with incomplete funding.

The Strategic Plan focuses on Alameda CTC-implemented projects and externally implemented "Named" capital projects. Between Alameda CTC implemented projects and projects implemented by external Project Sponsors such as the Bay Area Rapid Transit (BART), City of Union City, and others, there is a collective total project cost of $6.7 billion, with only $2.1 B committed through Measure BB, Regional Measures, various state and federal programs, and other local sources. There is an overall funding need of $4.6 billion required to fill the gap and ensure the delivery of all these projects within the next decade.

Table 1: Summary of Project Delivery Funding Needs *($ in Billions)*

Project Sponsor	Total Project Costs	Total Commitment	Total Shortfall
Alameda CTC-Implemented	$3.8	$1.0	$2.8
Named Projects Implemented by External Sponsors	$2.9	$1.1	$1.8
Total	**$6.7**	**$2.1**	**$4.6**
Note: Commitment sources include funds from Measure B, Measure BB, VRF, local jurisdictions, STIP, secured state grants.			

The Strategic Plan address near-term financial implementation of countywide projects, including funding constraints, priority projects, and potential strategies. The strategies attempt to leverage existing local Alameda CTC administered fund sources against various outside funding programs anticipated in the next decade that aim to address the $4.6 billion shortfall.

For the Alameda CTC-implemented projects, Alameda CTC intends to pursue competitive funds from Senate Bill 1 Programs, Regional Measure 3, State Transportation Improvement Program (STIP), federal programs, and by encouraging local cooperation and funding partnerships with jurisdictions where a project resides or by whom might receive benefit. Local jurisdictions are encouraged to apply for these discretionary opportunities to maximize Alameda CTC funds to its fullest extent.

2. STRATEGIC PLAN GUIDING PRINCIPLES

The Strategic Plan Guiding Principles identified below support decision making to generate a portfolio of quality candidate projects for Alameda CTC administered funds and a prospective for external funds available to Alameda County jurisdictions.

These guiding principles are to:

1. Achieve the Alameda CTC's mission and vision and goals.

   In September 2019, the Alameda CTC approved the vision and goals for the 2020 Countywide Transportation Plan (CTP).

   Vision: "Alameda County residents, businesses and visitors will be served by a premier transportation system that supports a vibrant and livable Alameda County through a connected and integrated multimodal transportation system promoting sustainability, access, transit operations, public health and economic opportunities."

   To complete this vision, Alameda CTC prioritizes projects that achieve these aspiring goals for Alameda County's transportation system:
   - Accessible, Affordable and Equitable
   - Safe, Healthy and Sustainable
   - High Quality and Modern Infrastructure, and
   - Economic Vitality

2. Identify Alameda CTC sponsored and implemented projects based on project delivery strategies, transportation benefits, resource capabilities, and funding strategies that maximize leveraging Alameda CTC's administered funds.

3. Prioritize Alameda CTC sponsored and implemented projects for available local, regional, State and federal funds that may be available to Alameda County on the basis of Alameda CTC implementing multi-jurisdictional, resource intensive, county significant, and/or regional significant projects.

4. Prioritize 2014 Transportation Expenditure Plan (TEP)'s "named" capital projects by providing an investment and delivery strategy for Project Sponsors that promotes the development of these projects through the upcoming prospective funding opportunities.

5. Establish a systematic programming and allocation strategy for Alameda CTC administered funds to promote project delivery and project readiness. This includes an assessment of prospective local, regional, State, and federal fund sources anticipated to be made available to Alameda County.

6. Ensure the investment strategy remains flexible to provide capacity to respond to emerging and unanticipated needs in terms of both evolving project initiation and development needs, as well as, changes in funding opportunities, amounts and

programs that may require nimbleness in adjusting the overall funding strategy of the Strategic Plan.

7. Provide an informational tool for agency's project management, project delivery, resource management, and financing strategies.

8. Adhere to the Alameda CTC's budgeting and financing policies including:
    a. Pay-as you go financing strategy until an immediate need to issue debt for project(s) is required.
    b. Debt shall not be utilized for operating expenses.
    c. Maintains an adequate level of reserves and support strong bond ratings

9. Create synchronicities between Alameda CTC's Countywide Transportation Plan, Transportation Expenditure Plans, modal plans, CIP, local plans, and other delivery strategies plans, where feasible.

10. Optimize leveraging of external funding opportunities such as local, regional, State, and Federal sources available through Project Sponsor local funds, Senate Bill 1, State Transportation Improvement Program funds, Regional Measures, Federal Programs.

3. MEASURE B AND MEASURE BB COMMITMENTS

The following attachments reflect current 1986 Measure B, 2000 Measure B and 2014 Measure BB commitments and allocations. These investments have yielded significant leveraging of external fund sources such as the Senate Bill 1, Regional Measure 3, and State Transportation Improvement Program funds.

ACTC_AR3716

OVERVIEW FUNDING DISTRIBUTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for programming funding from federal, State, regional, and local fund sources across Alameda County towards transportation projects and programs. The Alameda CTC's Comprehensive Investment Plan (CIP) programs federal, State, regional, and local fund sources in consideration of addressing critical transportation needs, project readiness, countywide funding equity, modal equity, and leveraging opportunities.

The pursuit of equitable funding distribution across Alameda County is a vital objective in the CIP to ensure transportation dollars are programmed to the diverse and balanced package of transportation needs in the county.

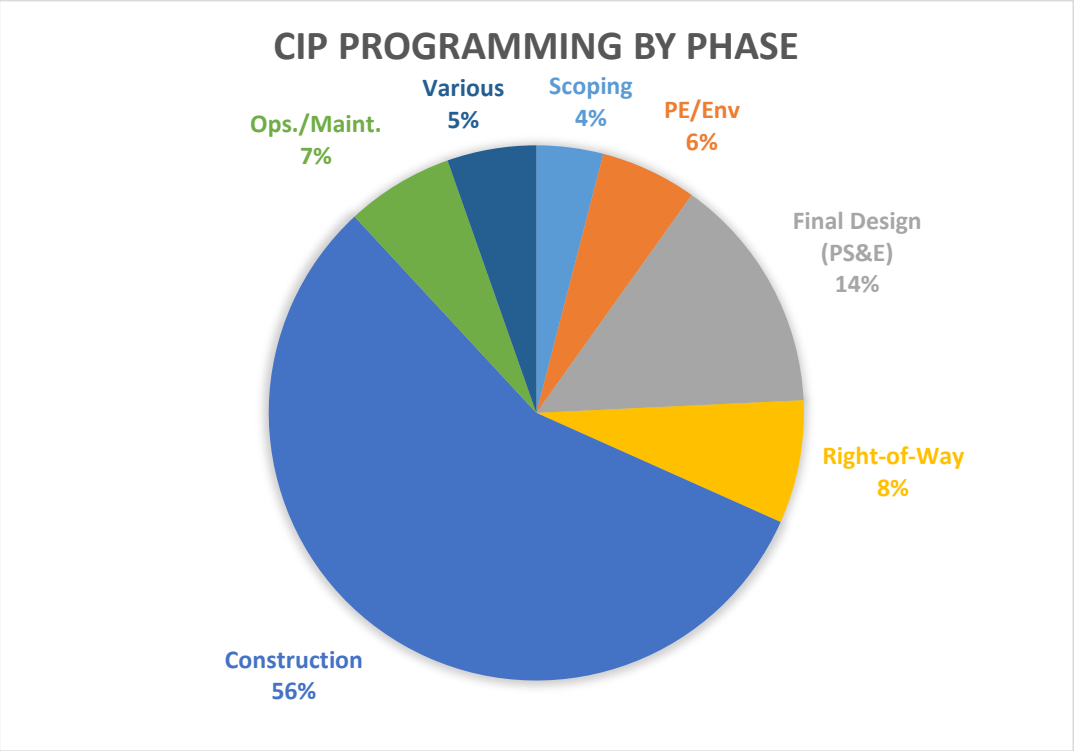
Alameda CTC's programming is guided by the CIP programming principles and project selection guidelines during each CIP programming cycle. As such, the funding distribution derived in the CIP is subject to the Commission's priority of investments during a programming event, the availability of fund sources and use of fund eligibilities, and the projects and programs proposed by Project Sponsors. In general, the CIP prioritizes funding towards projects and programs that are ready for implementation, secured funding plans, and demonstrated readiness with the first years of a given CIP five-year horizon.

Since the 2015, the CIP has programmed over $1.4 billion in transportation dollars amongst all jurisdictions in Alameda County. This Appendix includes a programming investments summary of the CIP's programming by:

1. Project Phase
2. Project Type/Mode
3. Planning Area

1. PROGRAMMING BY PROJECT PHASE

The CIP fundamental programming principles includes an investment strategy to target available funding resources to a diverse portfolio of projects and programs that are in various stages of project development, implementation, and construction.



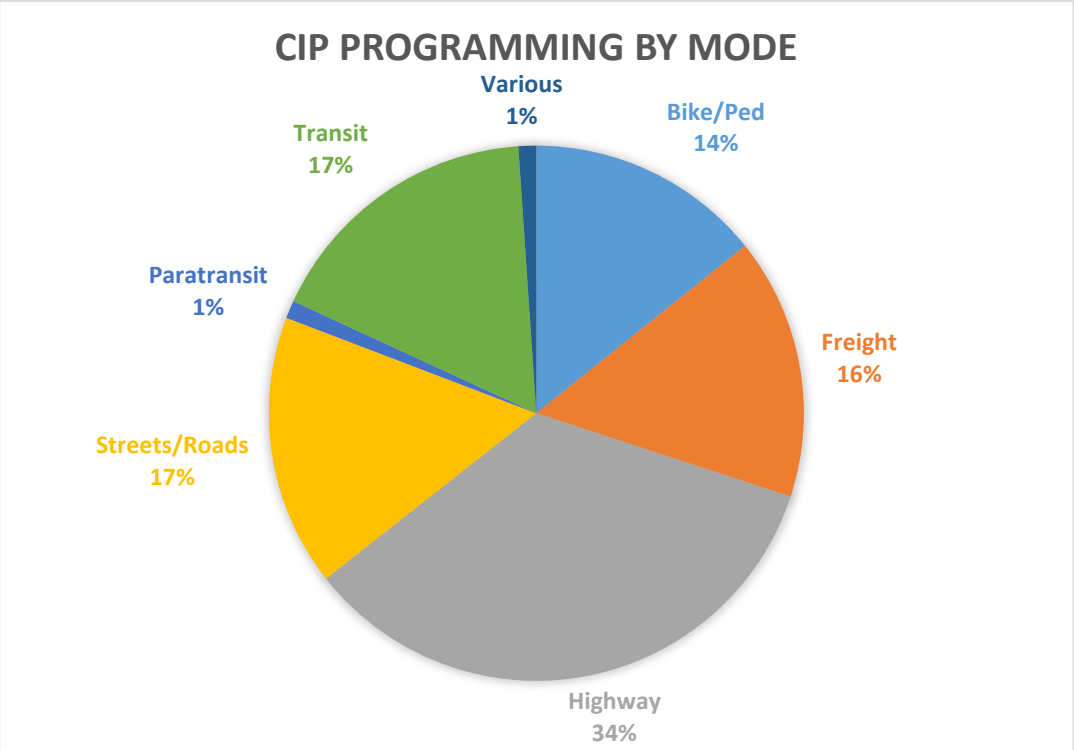
The goal is to strike a balance between investments in project development and construction capital phases that work simultaneously to:

- establish a pipeline of projects moving towards the construction phase,
- implement projects ready to for construction, and
- develop transportation projects to a point of project readiness so that project sponsors may be able to potentially secure competitive federal, State and regional funding sources as they become available.

ACTC_AR3717

Alameda CTC provides local cities, the county, and transit with Measure B / BB / VRF formula Direct Local Distribution funds that assist these agencies in initiating and developing their projects and programs for future inclusion in the CIP. These Direct Local Distribution funds are not part of the CIP funding distribution analysis but are a significant source of funding for all jurisdictions.

The current CIP Programming by Phase includes a range of funding investments progressively increasing in amount from the scoping, preliminary engineering, design, to the construction phases. The majority of CIP programming to date is committed to the construction phase.



2. PROGRAMMING BY PROJECT TYPE / MODE

Alameda County's transportation system is a diverse network of highway infrastructure, bicycle/pedestrian routes, local streets and roads, and transit routes that are each connected to provide the community with a complete multi-modal network of transportation travel options.

The CIP strives to make investments in all modes of transportation to build and maintain Alameda County's transportation infrastructure and program operations. Alameda CTC investments are only limited by use of fund eligibilities of certain funding sources i.e. Measure B / BB/ VRF bicycle/pedestrian funds can only be used towards bicycle/pedestrian related improvements.

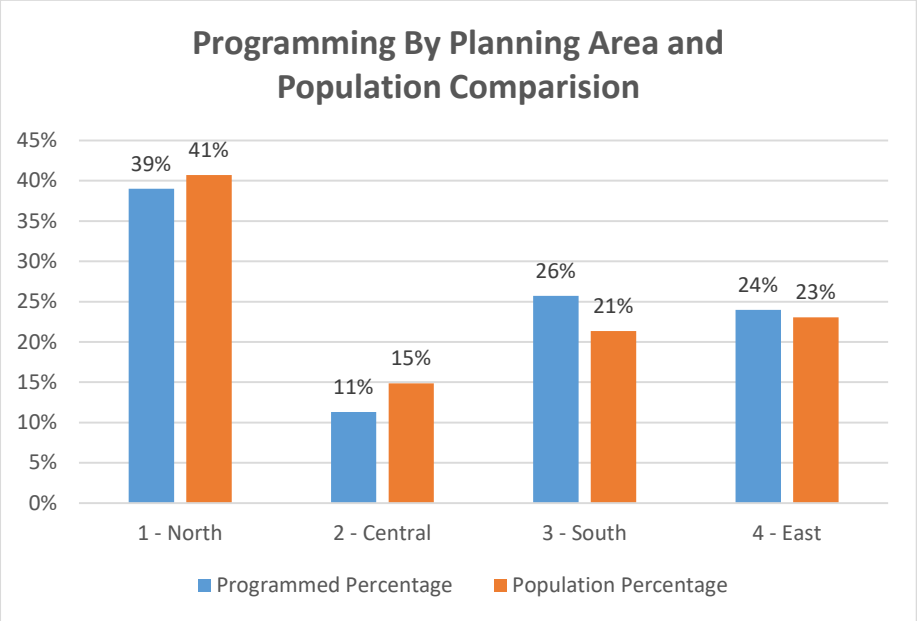
However, due to the wide variety of fund sources programmed through the CIP, the CIP is able to supports a field of projects providing improvements to bicycle/pedestrian networks, local streets

and roads, highway infrastructure, paratransit programs, transit, freight, and community developments.

3. PROGRAMMING BY PLANNING AREA

Alameda CTC considers funding equity across the jurisdictions and planning areas during a given CIP programming cycle. This requires an examination of types of projects proposed to the CIP, project readiness, and eligibilities of the fund sources available at the time of programming towards those projects and programs. Alameda CTC use a traditional population share based methodology amongst the planning areas as a standard point of reference for determining the general percentage share of funding and population by planning area. Alameda CTC defines planning areas into four main geographic areas (north, central, south, east) as depicted in the table below.

Planning Area	Jurisdictions
Planning Area 1 **North Area**	• Alameda • Albany • Berkeley • Emeryville • Oakland • Piedmont
Planning Area 2 **Central Area**	• Hayward • San Leandro • Unincorporated areas of Castro Valley and San Lorenzo
Planning Area 3 **South Area**	• Fremont • Newark • Union City
Planning Area 4 **East Area**	• Dublin • Livermore • Pleasanton, and all unincorporated lands in that area



ACTC_AR3719

Within these planning areas, the Alameda County's population distribution favors more urbanized cities such as those in the North planning area.

Planning Area	Population	Percent
1 – North	680,277	41%
2 - Central	248,241	15%
3 - South	356,823	21%
4 - East	385,493	23%
Total	**1,670,834**	**100%**

The CIP programs available transportation dollars towards the Project Sponsors in consideration of the population share. However, it should be noted as described within the CIP's programming principles and project selection guidelines, population share is not the only factor in consideration. Other factors such as programming priorities, funding eligibilities, project readiness, and project types at the time of CIP programming are factors that affect level of investment by planning area.

To date, the CIP's programming investments by planning area, is +/- 5 percent relative to the population share of a planning area.

Alameda CTC's future CIP programming will continue to target and consider the balance of funding distribution across phases, modes, and planning areas.

2024 Comprehensive Investment Plan Summary

Background:

On May 25, 2023, the Commission approved the 2024 Comprehensive Investment Plan (2024 CIP) which included approximately $207M programmed from fiscal year 2023/24 through 2027/28, and $191M allocated over the first two years.

The 2024 CIP shifts previous the five-year programming horizon to encompass fiscal years 2023/24 through 2027/28. The 2024 CIP programming strategy includes the following categories.

Alameda CTC's Comprehensive Investment Plan (CIP) is a near-term strategic programming document through which fund sources administered by Alameda CTC (such as Measure B, Measure BB, Vehicle Registration Fee, Transportation Fund for Clean Air, federal One Bay Area Grant Program) are programmed, allocated, and documented. The CIP is updated annually to document programming and allocations that occurred since its last approval, to capture new programming, allocations and technical adjustments, and to update CIP programming guidelines, policies and procedures.

On April 28, 2022, the Commission approved the 2022 CIP Update which included approximately $220 million programmed from fiscal years (FYs) 2021-22 through 2025-26, and $199 million allocated over the first two years.

As part of the biennial CIP update process, the 2024 CIP includes a shift of the five-year programming horizon to FYs 2023-24 through 2027-28. The recommended components of the 2024 CIP are as follows:

a. $179.7M in new programming and allocation recommendations consisting of Measure B, Measure BB, Vehicle Registration Fee (VRF), Transportation Fund for Clean Air (TFCA), and federal One Bay Area Grant Cycle 3 Program funds;
b. $11.7M in previously approved programming actions occurring after the 2022 CIP Update was approved on April 28, 2022;
c. $10.8M in allocations of previously approved programmed funds; and
d. Technical adjustments to previously programmed and allocated funds.

The resultant 2024 CIP recommended for approval includes a five-year programming total of approximately $207M, with $191M allocated over the first two fiscal years.

The policies, procedures and guidelines for the 2024 CIP Update have remained changes. The full policies, procedures and guidelines can be found on the website: https://www.alamedactc.org/funding/funding-opportunities/

SECTION 1: INTRODUCTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for the planning, programming, and allocation of local, regional, State and federal funding for transportation improvements throughout Alameda County.

Alameda CTC maintains programming and allocation authority for federal, State, regional and local transportation funding programs, such as the local, voter-approved measures (Measure B, Measure BB, and Measure F Vehicle Registration Fee), Transportation Fund for Clean Air (TFCA), State Transportation Improvement Program (STIP), and federal One Bay Area Grant Program (OBAG). Since 2016, Alameda CTC consolidates the programming and allocation for the fund sources under Alameda CTC's purview ("Alameda CTC Administered Funds") into a single programming and allocation document known as the Alameda CTC Comprehensive Investment Plan (CIP).

The CIP programming and allocations recommendations, in any given CIP cycle, demonstrates Alameda CTC's investment commitment to projects and programs that maintain and enhance the countywide transportation system based the current Commission's priorities at the time of the programming and allocation action(s).

The CIP contains programming and allocation policies, guidelines and procedures that guide Alameda CTC's investment decisions, programming and allocation processes, and the subsequent funding administration.

The CIP is updated annually to capture programming and allocations made since the last approval of the CIP, and to document programming and allocations adjustments including new programming requests, proposed adjustments by Project Sponsors, and technical adjustments as required by the CIP and funding administration policies.

The CIP contains a document structure of:

- Purpose, Background, strategic objectives, and an overview of programming principles for all programming through Alameda CTC.
- Appendices include
    - Technical summaries of adjustments to the prior programming and a summary with the final programming record.
    - Programming and Allocation Guidelines for future programming
    - Policies and Procedures for Alameda CTC's programming and funding administration

ACTC_AR3788

SECTION 2: PURPOSE OF COMPREHENSIVE INVESTMENT PLAN

The CIP is a programming and allocation document that establishes a financial investment strategy of funding under Alameda CTC's purview to deliver projects and programs ("projects") that allows the countywide transportation system to be more efficient and effective. The CIP identifies transportation funds from various sources expected to be available over a five-year programming horizon and targets them for transportation priorities in Alameda County.

The main objectives of the CIP are summarized as follows:

1. Translate long-range plans into short-range implementation
   The CIP transitions long-range plans into focused project/program delivery over a five-year programming window with a two-year allocation plan.

2. Serve as the Strategic Plan
   The CIP serves as Alameda CTC's Strategic Plan and satisfies public reporting requirements required by these funding programs.

   The revenue and expenditure assumptions for each fund source are confirmed periodically, and serve as the basis for the financial management of each funding program. Funding commitments to individual projects identified in the voter-approved transportation expenditure plans are confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans.

3. Establish a consolidated programming and allocation plan
   The CIP is a decision-making programming document that is used to program fund sources under Alameda CTC's responsibility for capital improvements, program operations, and maintenance projects. Integrating all fund sources into one programming document permits Alameda CTC to coordinate the programming and allocation of multiple fund sources to ensure that the investments of funds from the individual sources are joined to maximize the effectiveness of the overall investments in the Alameda County transportation system.

   The CIP includes a two-year allocation plan for funds allocated by Alameda CTC. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors

ACTC_AR3789

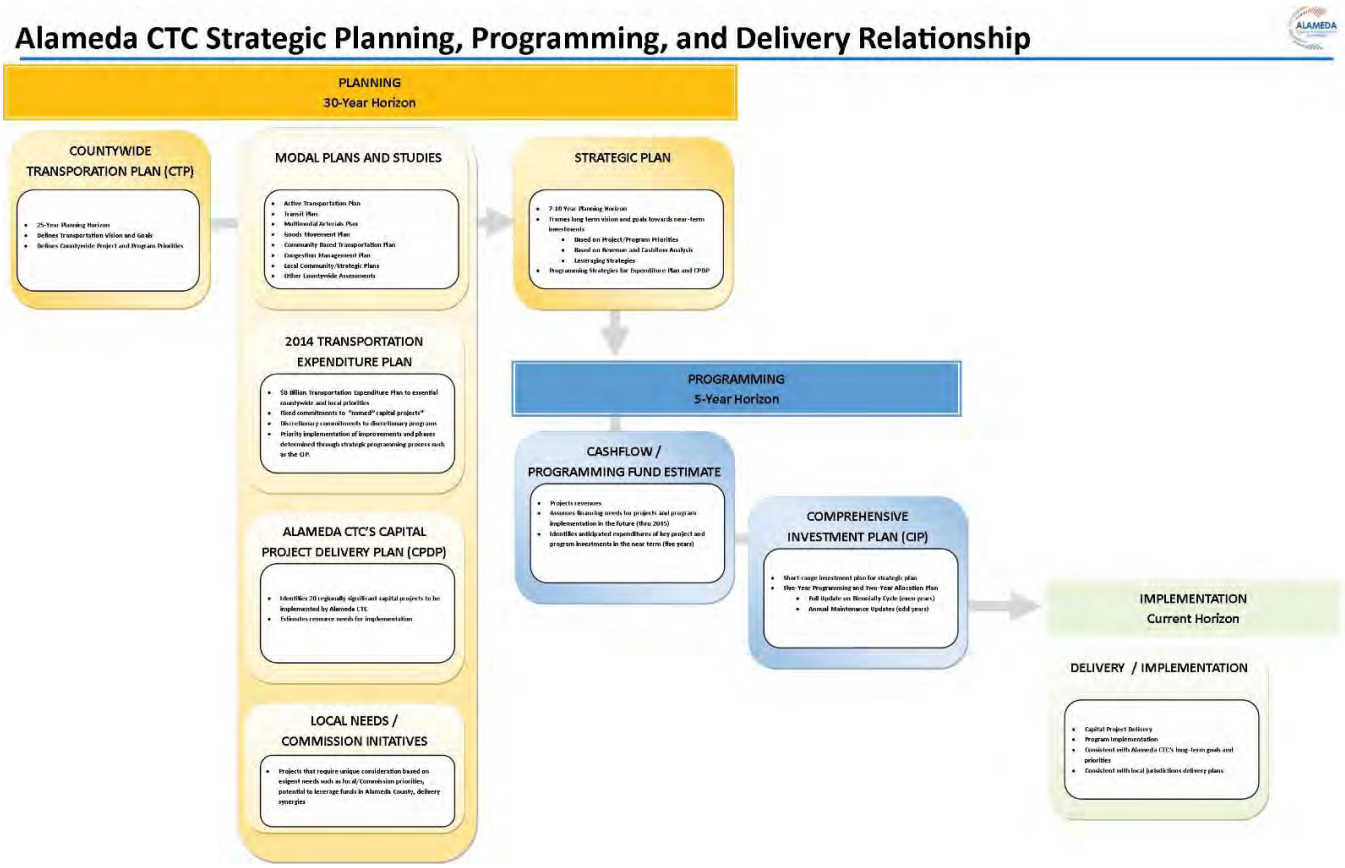
and implementing agencies, and for contracts and costs related to projects implemented directly by Alameda CTC.

The CIP will be updated on an annual and biennial basis, as needed, to reflect updates to Alameda CTC's programming and allocations. The annual updates are intended to include technical updates to confirm commitments and programming and allocation actions occurring outside the regular CIP process. A biennial update of the CIP will include a more robust update that shifts the five-year programming and allocation horizon, and allows for additional projects to be nominated and programmed into the CIP against the newly available programming capacity granted by the horizon shift.

The CIP guides investments to projects that provide demonstrate significant public benefit, advance project implementation, and support leveraging of local, regional, State and federal dollars for Alameda County's transportation priorities.

SECTION 3: RELATIONSHIP WITH PLANNING

The CIP's purpose is to strategically program available funds towards transportation investments that support long-range vision and goals established in Alameda CTC's Countywide Transportation Plan (CTP), multi-modal plans, and voter-approved transportation expenditure plans.



To be considered eligible to receive programming and allocation of Alameda CTC's Administered Funds, candidate projects are required to have a direct nexus to the Alameda CTC's CTP, Alameda CTC's multi-modal plans (Transit, Goods Movement, and Arterials), and other local planning efforts. This ensures candidate projects are consistent in coordination with local, countywide, and regional transportation priorities. The development of these planning documents also satisfies the public outreach requirements of the certain regional, State, and federal fund sources when they are required of by the funding programs.

For Alameda CTC implemented projects, the CIP incorporates the delivery recommendations included in the Measure BB Capital Project Delivery Plan (CPDP) as approved in March 2016. The CPDP addresses projects implemented directly by Alameda CTC and identifies projects posed for local, regional, State and Federal funding. The CIP incorporates the CPDP programming recommendations, policy and procedures, and project delivery assumptions in their entirety as it makes programming and allocation recommendations to projects contained in the CPDP.

Projects demonstrating a nexus to countywide planning efforts and transportation priorities formulate the eligible candidate pool. These projects may submit

ACTC_AR3790

programming and allocation applications through the Alameda CTC's Call for Projects and request for allocation processes. Project selection and prioritization for the CIP is based, in part, on priorities identified in adopted planning documents and studies, Strategic Plan Guiding Principles, but also considers other Commission approved project selection criteria.

SECTION 4: FUND SOURCES AND REVENUE ESTIMATES

Alameda CTC has programming and allocation authority for a number of transportation fund sources at the county level, and programming authority for the Alameda County shares of certain federal and State funding. Alameda CTC acts on behalf of Alameda County at the regional, State, and federal levels for matters pertaining to transportation funding from federal, State, and regional sources, including infusions of funding such as stimulus programs and proceeds from bond sales.

The CIP includes the fund sources listed below grouped according to the category federal, State, Regional and local funding.

ACTC_AR3791

Federal Program	
Fund Source	**Description**
Surface Transportation Program	Alameda CTC, as Alameda County's congestion management agency (CMA), is responsible for soliciting and prioritizing projects in Alameda County to receive a portion of the federal Surface Transportation Program (STP) funding. The STP is provided through funding from reauthorization of the federal funding for surface transportation by which Alameda CTC receives federal monies. The Metropolitan Transportation Commission (MTC) approves the programming of the STP funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.
Congestion Mitigation & Air Quality Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for a portion of the federal Congestion Mitigation & Air Quality Program (CMAQ) in the same fashion as the STP funding. The CMAQ is provided through funding from the reauthorization of federal funding for surface transportation by which Alameda CTC receives federal monies. The CMAQ funds are used on projects that will provide an air quality benefit. MTC approves the programming of the CMAQ funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.

State and Regional Programs	
Fund Source	**Description**
State Transit Assistance	State Transit Assistance is the State's flexible transit funding program which may be used for capital or operating purposes. The statewide STA program is split equally between a Revenue-based program (Public Utilities Code 99314) and a Population-based program (Public Utilities Code 99313). Under MTC Resolution 4321, Congestion Management Agencies (CMAs) are charged with playing a coordinating role in the development of a STA Population-Based distribution program within their county. MTC Resolution 4321 replaced MTC Resolution 3837 with a new transit-focused, One Bay Area Grant (OBAG)-style STA County Block Grant for 70 percent of the STA Population-Based funds received by MTC, with the remaining 30 percent directed towards MTC's Regional STA Program. MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program.
Regional Measure 2 and Future Regional Measures	In 2004, voters passed Regional Measure 2 (RM2) raising the toll on the seven state-owned toll bridges in the San Francisco Bay Area by $1. This extra dollar funds various transportation projects within the region determined to reduce congestion or to make improvements to travel in the toll bridge corridors, as identified in Senate Bill 916 (Chapter 715, Statutes of 2004). Specifically, RM2 establishes the Regional Traffic Relief Plan and identifies specific transit operating assistance, and capital projects eligible to receive RM2 funding.
State Transportation Improvement Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for the Alameda County Share of the State Transportation Improvement Program (STIP). Programming for each "County Share," of the Regional Improvement Program (RIP) portion of the STIP, is recommended by the CMA for each county (i.e., by Alameda CTC for Alameda County). The STIP is updated by the California Transportation Commission (CTC) on a two-year cycle with new STIP cycles approved every even year. The CTC adopts a fund estimate for each STIP cycle during the year before the even-numbered year in which the STIP cycle is adopted. The fund estimate provides the amounts for each of the County Shares that comprise the RIP portion of the STIP cycle. The STIP programming horizon is a five-fiscal-year window with two new fiscal years added each STIP cycle. Most programming capacity added in a given STIP cycle is in the two new, outer fiscal years of the STIP programming horizon. The funds programmed in the STIP are subject to the STIP Timely Use of Funds Provisions prescribed in the STIP Guidelines typically adopted with each STIP cycle.
Transportation Fund for Clean Air Program	State law permits the Bay Area Air Quality Management District (BAAQMD) to collect a fee of $4 per vehicle per year to reduce air pollution from motor vehicles. The fee provides the revenues for the Transportation Fund for Clean Air (TFCA) which is distributed by the BAAQMD at the regional and county levels. Sixty percent of the funding is programmed by the BAAQMD at the regional level. The

ACTC_AR3792

State and Regional Programs	
	remaining 40 percent is allocated annually by the BAAQMD for programming and allocation by the Program Manager for each county. Alameda CTC is the TFCA Program Manager for Alameda County. The Alameda County Program Manager funds are split 70 percent to the cities and the County; and 30 percent to transit-related projects.

Local Programs	
Fund Source	**Description**
1986 Measure B	In November 1986, voters passed the 1986 Measure B, a 15-year measure expected to generate more than $990 million through a half-cent transportation sales tax to fund local streets and roads improvements, bus and paratransit services, and other transportation infrastructure projects. The 1986 Transportation Expenditure Plan guides the use of those funds. Sales tax collection authorized by the 1986 Measure B ended in 2002, but several projects from the 1986 Measure B Capital Program are still underway. The 1986 Measure B generated more than $353 million for transportation programs and $864 million for highway, roadway and transit improvements. The sales tax collection for the 1986 Measure B ended in 2002, and no additional revenues are assumed.
2000 Measure B	Alameda County voters approved the 2000 Measure B Transportation Expenditure Plan (2000 TEP) which authorized a 20-year half-cent sales tax to be used for the transportation purposes identified in the 2000 TEP. Alameda CTC administers the 2000 Measure B Program to deliver essential transportation improvements and services. The 2000 TEP guides the expenditures of the 2000 Measure B funds. The collection of 2000 Measure B funds began on April 1, 2002 and will continue through March 31, 2022. The 2000 Measure B funds are divided as prescribed in the 2000 TEP between funds allocated directly to the jurisdictions and transit operators, and the funding available for the programs and capital projects named in the Measure. The 2000 Measure B funds are distributed as follows: *Direct Local Distributions*: The direct local distribution (DLD) funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2000 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages of net revenues used for the distributions are prescribed in the 2000 TEP as follows: • Mass Transit Operations (21.22 percent) • Local Streets Maintenance and Safety (22.34 percent) • Bicycle and Pedestrian Safety (3.75 percent) • Special Transportation for Seniors and People with Disabilities (9.02 percent) *Discretionary Programs*: The 2000 TEP includes a number of commitments to the following discretionary programs that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2000 TEP: • Express Bus Service Countywide (0.7 percent) • Bicycle and Pedestrian Safety (1.25 percent) • Special Transportation for Seniors and People with Disabilities - Coordination and Gaps in Service Grants (1.43 percent) • Transit Center Development Funds (0.19 percent) *Capital Projects*: The 2000 TEP includes commitments to individual capital projects. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding

ACTC_AR3793

Local Programs	
	agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
2010 Vehicle Registration Fee	Alameda County voters approved the Alameda County Vehicle Registration Fee (VRF) Program in 2010. The funds made available by the VRF are distributed as follows: *Direct Local Distributions*: The DLD portion of the VRF funding is distributed as follows: • Local Road Improvement and Repair Program (60 percent) • Local Transportation Technology (10 percent) o On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to the Alameda CTC. *Discretionary Programs*: A portion of the VRF funding is distributed for the following grant sub-programs on a reimbursement basis: • Transit for Congestion Relief (25 percent) • Pedestrian and Bicyclist Access and Safety Program (5 percent)
2014 Measure BB	Alameda County voters approved the 2014 Transportation Expenditure Plan (2014 TEP) as part of Measure BB in November 2014. Measure BB authorized the augmentation and continuation of the voter-approved 2000 Measure B sales tax with a second half-cent sales tax through the end of the 2000 Measure B collection period, i.e. March 31, 2022, followed by a one-cent sales tax authorizes from April 1, 2022 through March 31, 2045. The 2014 Measure BB funds are allocated as follows: *Direct Local Distributions*: The 2014 Measure BB DLD funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2014 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages used for the distributions are prescribed in the 2014 TEP as follows: • Transit Operations, Maintenance, and Safety Program (21.55 percent) • Local Streets Maintenance and Safety (20 percent) • Bicycle and Pedestrian Infrastructure and Safety (3 percent) • Affordable Transit for Seniors and People with Disabilities (9 percent) *Discretionary Programs*: The 2014 TEP includes a number of commitments to the following discretionary programs available that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2014 TEP: • Affordable Student Transit Pass Program ($15 million) • Affordable Transit for Seniors and People with Disabilities/Coordination and Service Grants (1 percent) • Bicycle and Pedestrian Program (2 percent) • Community Investments That Improve Transit Connections to Jobs and Schools (4 percent) • Congestion Relief, Local Bridge Seismic Safety ($639 million) • Freight and Economic Development Program (1 percent) • Technology, Innovation and Development Program (1 percent) • Transit Innovation Program (2.24 percent) *Capital Projects*: The 2014 TEP includes commitments to individual capital projects and to groups, or categories, of capital projects as described in the 2014 TEP. Alameda CTC distributes sales tax funds for

ACTC_AR3794

Local Programs	
	capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
Local Exchange Program/CMA Transportation Improvement Program	Alameda CTC administers a local fund exchange program to exchange State and federal funds for local monies, giving Project Sponsors the flexibility to streamline and expedite project delivery. The local funds also allow agencies to begin projects earlier than would otherwise be possible due to the uncertain timing of the availability of State and federal funds in any given funding cycle. Based on State and federal economic conditions, the availability of State and federal funds is often delayed to beyond the year in which the funds were originally programmed. Such delays are unilateral from the State and/or federal levels and put a strain on timely implementation of projects. The local fund exchange program allows local monies exchanged for the State and federal funds to be available earlier, and on a more dependable timeline, than the State and federal funds in many cases. Exchanges are approved on a case-by-case basis, as opportunities present themselves.

SECTION 5: PROGRAMMING REQUIREMENTS

Projects must satisfy the following programming requirements to be considered for programming and allocation by Alameda CTC.

1. Projects must be included in, and be consistent with the most current adopted Regional Transportation Plan and Alameda CTC's Countywide Transportation Plan.
2. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.
3. Projects must be publicly accessible and provide direct benefits to public transportation infrastructure and operations.
4. Projects must meet the goals and objectives of the funding sources and programs that are ultimately recommended by Alameda CTC.
5. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF must be consistent with requirements and priorities of their respective expenditure plans.

Funds are programmed from a specific fund source(s), in a given fiscal year to a specific phase(s) of a project. The expected outcome of the total project, or of implementing any phase of the project, with funds programmed in the CIP, shall be consistent with the goals and objectives of the CTP, and any applicable fund source specific requirements.

Programming and allocations requests must at minimum contain the following:

- Project scope, cost, schedule,
- Description of benefits to determine the expected outcome and whether or not the outcome is consistent with the CTP and fund source goals and objectives.
- Funding breakdown by phase. Cost estimates for all phases are required for projects requesting programming or allocations for phases beyond environmental approval.

ACTC_AR3795

SECTION 6: PROGRAMMING PRINCIPLES AND GUIDELINES

Alameda CTC's programming and allocation decisions shall be based on a project's ability to achieve the following five fundamental policy principles that serve as a guide for the CIP development and project selection.

1. Implementing Alameda County's adopted vision
   All funding decisions will support implementation of Alameda CTC's long-range transportation vision for Alameda County as adopted in its long-range Countywide Transportation Plan.

2. Balanced strategic program across project delivery phase
   Alameda CTC strategically invests financial resources to optimize transportation planning, project delivery and performance analysis. The CIP will identify investments in all stages of project development. Striking a balance between project development and capital phases is desired to support a combination of project development phases that will utilize the available programming capacity and to position the county to leverage federal, State and regional funding sources as they become available. This will include considering the delivery status of projects to optimize competitiveness for future grant opportunities.

   Alameda CTC uses the following project or program delivery phases:
   - Planning/Scoping/Conceptual Engineering
   - Preliminary Engineering/Environmental Studies
   - PS&E/Final Design
   - Right-of-Way Acquisition and Engineering
   - Construction Capital and Support
   - Equipment/Rolling Stock Acquisition
   - Operations (includes Safe Routes to School, paratransit programs, transit-related operations)
   - Post-Construction Activities
   - Project Closeout

   The CIP will also include countywide program/operational investments including, but not limited to, the Safe Routes to Schools Program, senior travel training/mobility management, and system performance-monitoring efforts.

4. Maximizing transportation investments
   Alameda CTC will work with local agencies to program funds to projects that are implementation ready, have a credible funding plan, meet the requirements of the fund source and provide transportation benefits. The CIP will examine opportunities

ACTC_AR3796

to leverage the local fund sources to the maximum extent possible. In addition, Alameda CTC will use the CIP to identify co-benefits between projects, when practical and feasible.

5. Investments in all modes and areas within Alameda County
   The CIP strives to identify investments in all modes of transportation, project phases, and geographic areas in Alameda County. The CIP is constrained to the revenue projected to be available for the five-year programming. Alameda CTC will use the CIP to monitor geographic equity and modal equity investments over time.

6. Delivering solutions while ensuring accountability
   Alameda CTC will require timely and cost-effective project delivery, and will monitor implementation to ensure Project Sponsors are accountable for their projects. The CIP will promote the timely delivery of projects, leveraging of local funds and minimizing cost increases due to delays. Projects funded through the CIP will be subject to the requirements of each fund source used to implement the project. Timely use of funds provisions will apply to all funds programmed and/or allocated in the CIP.

Programming Principles and Guidelines

Programming and allocations decisions shall be based on a CIP Programming Principles and Guidelines included in the CIP's appendices. This describes the complete framework for programming and allocation decisions made by Alameda CTC, including defining eligible projects, eligible Project Sponsors, eligible costs, funds sources, funding guidelines and requirements.

Key project merits will be considered (in no particular order) such as:

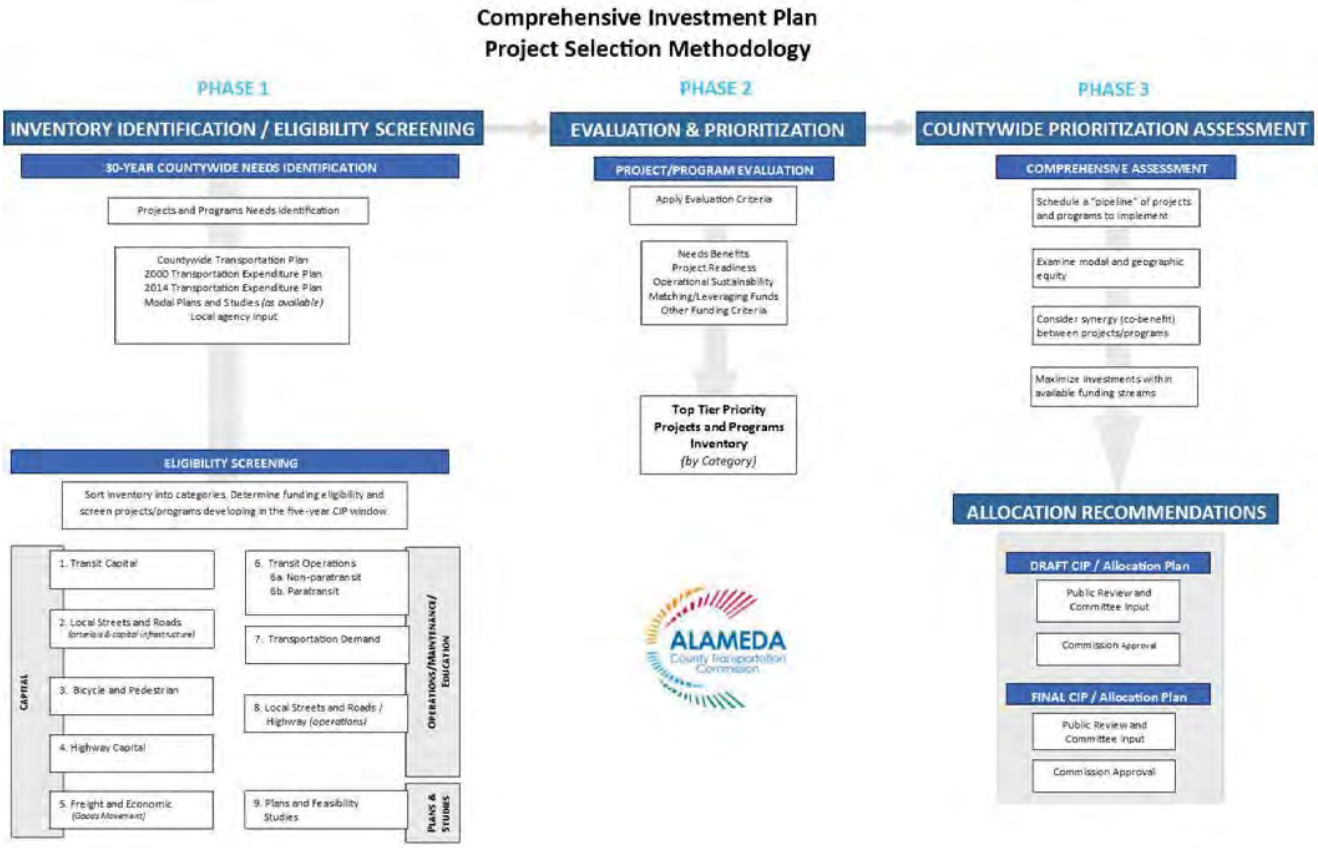
- Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.

- State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.

- Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.

- Safety and Connectivity: Project's ability to foster a safe, connected, accessible transportation system for multimodal movement of goods and people.

ACTC_AR3797



- Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to inform the uniform consolidation of historically separate programming practices, where applicable, to more effectively coordinate funding towards beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

Programming Guidelines are described in detail by program in the CIP's appendices.

SECTION 7: PROJECT SELECTION METHODOLOGY

The project selection methodology for the CIP is based on three step/phased approach as described below and illustrated in CIP Project Selection Methodology Diagram shown here.

ACTC_AR3798

Phase 1: Project Identification and Screening

Alameda CTC will identify project inventories from the CTP, countywide modal plans, short- and long-range transportation plans and other local planning documents. The inventory will be screened for eligible projects that are ready to be implemented within the five-year CIP window based on schedule, a credible funding plan and local prioritization. Alameda CTC may also initiate a Call for Project to gather updated project information to inform project selection decisions for CIP programming and allocations.

Alameda CTC will separate projects into modal categories based on the type of project (bicycle/pedestrian, roadway, etc. Projects will be assessed for eligible funding sources to ensure they meet funding requirements. The CIP Programming Principles and Guidelines located in the CIP's appendices provides a summary of the categories and sample project types included in the CIP.

The goal of Alameda CTC's funding recommendations will be to fund a project phase by phase, as applicable, so that the project can progress from development to construction and project delivery. Projects outside the five-year period will be considered for future implementation in subsequent funding cycles and CIP updates.

Phase 2: Project Evaluation

Based on the list developed in Phase 1, Alameda CTC will prioritize projects relative to each other in defined category types. Projects will be evaluated against the same category of projects (i.e., transit projects will be evaluated against transit projects, road projects against road projects, etc.). This approach will provide a balanced prioritization process that compares similar project types to one another. Projects specifically named in expenditure plans will be separated from those seeking discretionary funding and will be prioritized independent of the discretionary projects. Based on their scoring assessment, projects will be evaluated and arranged into three tiers within their respective categories (high, medium and low priority). This sorted list will then move into the third phase of evaluation.

Alameda CTC will evaluate eligible projects using the programming criteria adopted as part of the CIP, and other Commission actions, as the basis for programming and allocation decisions.

Phase 3: Countywide Prioritization Assessment

The final step in the project selection process will examine the top tiers of each category from the Phase 2 scoring, to strategically program available funding, to achieve countywide goals and priorities. Alameda CTC will perform a systematic examination across all of the categories to identify financial strategies, geographic and modal equity, and co-benefits between proposed improvements as part of the CIP update process

ACTC_AR3799

every two years, when the five-year programming window is shifted two years into the future.

Alameda CTC will examine opportunities to promote the timely delivery of projects, and leveraging of local funds. Programming recommendations will be constrained by the total available programming within the five-year CIP window, and by fund source eligibilities of projects.

Projects outside Alameda CTC's programming availability in the five-year CIP will be considered for inclusion in future funding cycles and CIP updates.

Project Selection Criteria

The CIP project selection criteria as approved and incorporated in the CIP updates, includes traditional programming criteria used previously by the Alameda CTC. The CIP uses four categories of criteria to score each project:

1. Readiness Delivery Criteria
   The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the agency has the ability to coordinate among internal and external agencies, as applicable.

2. Needs and Benefits Criteria
   The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, supporting well-maintained transportation facilities/equipment (as applicable); promotes innovation and a multimodal system; improves safety; supports a clean environment; and strengthens the economy.

3. Matching and Leveraging Funds Criteria
   The project has secured funding from other sources or demonstrates how it will leverage other funds for use on the project.

4. Other Funding Features
   As applicable, other requirements mandated by other funding sources/programs.

Alameda CTC will, to the extent possible, implement the above project selection process using the CIP programming principles identified in Section 6: Programming Principles and Guidelines for programming and allocation decisions.

ACTC_AR3800

SECTION 8: BASIS OF PROJECT COST SHARING

The investments of funding programmed in the CIP considers the overall project cost/funding picture and expected outcomes. The baseline for cost sharing is typically the proportional share of Alameda CTC Administer Funds against the total project costs at completion.

Project Sponsors are required to request Alameda CTC Administered Funds by phase and to provide matching funds to such request by phase. This ensures during any given CIP programming cycle the Commission's requirement for a minimum level of project cost sharing is achieved.

In the event, Alameda CTC funds are required in an earlier phase to increase the competitiveness of a project to leverage other funds sources, Alameda CTC, may at its discretion, make a programming recommendation to a phase without a match, that considers the project cost sharing overall.

A risk sharing arrangement shall be included in any funding agreement which obligates funding allocated by Alameda CTC in advance of its proportional share (based on the total funding) for project phases beyond environmental approval, especially for projects that do not have funding identified for all phases of implementation.

The following principles shall be the basis of cost sharing considered for programming and allocations approved by Alameda CTC:

- Complete Project Information
  Request for allocations through the CIP process and subsequent funding agreement packages shall include a summary of estimated total costs segregated by phase; a corresponding milestone schedule showing begin and end dates for each phase (and any significant delivery milestones within each phase); and the anticipated funding (all sources) for each phase segregated by source.

- Funding Agreement Requirements
  Project cost sharing shall be established in the funding agreements based on the information provided with the request for allocation and funding agreement packages. The cost sharing proportions documented in the funding agreement shall be used for risk sharing associated with the implementation of the phase(s) covered by the agreement.

ACTC_AR3801

- Local Cooperation Policy and Eligibility of Locally Incurred Costs
  Project Sponsors, and local jurisdictions whom are directly benefitting from the expected outcomes a project implemented in their locality by Alameda CTC, the Project Sponsor, or other implementing agencies, are required to be active funding partners to further the delivery of such improvement project.

  Locally incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by an implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. However, the costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC stipulated in the funding agreement, unless they are specifically identified as eligible in the funding agreement.

  Jurisdictions whom are Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) Recipients are encouraged to use local funds to support matching costs. DLD recipients shall not be eligible for reimbursement for local staff costs from Alameda CTC Administered Funds allocated to the Project. Project Sponsor staff costs can be included in the total cost and other funding amounts for the purpose of meeting the cost and risk sharing provisions of Agreement, but staff costs will not be considered reimbursable costs unless the Project Sponsor is performing direct activities related to the phase of the project.

  Refer to the Local Cooperation Policy in the CIP's Policies and Procedures appendix.

SECTION 9: FUND MANAGEMENT AND CIP ADMINISTRATION

Alameda CTC is responsible for the management and administration of the various funding programs within its programming and allocation purview. The CIP provides a summary of the programmed and allocated amounts for each fund source administered by Alameda CTC, and in some cases the fund sources administered by other agencies.

The fund sources administered by Alameda CTC must be managed in accordance with applicable laws and requirements related to the individual fund sources, and with government accounting standards. The programming and allocations included in the CIP provide the basis for the financial and accounting activities performed by Alameda CTC's annual budget, programming fund estimate, and cash management analysis. In general, the financial and accounting activities performed by Alameda CTC occur in the background of the day-to-day project implementation activities, and do not typically hinder a projects ability to be delivered. The specifics related restrictions of use, or

timing of reimbursements for allocated fund shall be addressed in the applicable funding agreement(s).

Alameda CTC Administered funds under Alameda CTC's direct administration purview shall be encumbered into a funding agreement with the Project Sponsor. The funding agreement shall be consistent with the original request for allocation/project application that was used to inform Alameda CTC's programming and allocation decision. Alameda CTC provides for a formal and administrative amendment process to amend an executed funding agreement to adjust the scope, funding, milestones, schedules based on a Project Sponsor's request.

CIP Administration

The CIP is updated periodically, as needed, to assess programming and allocations adjustments that reflect project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments. The Commission may amend the CIP at any time if an action must be taken before the next CIP update period. The Commission must approve all project additions or deletions. The Commission authorizes the executive director or his or her designee to administratively approve the acceleration of project/program schedules, as long as they can be accomplished within the budgeted amount. This is to maintain project scheduling and coordination with any other activities that may impact or delay project implementation or development. Significant changes in the scope of work, implementation schedule or costs will be presented to the Commission for consideration.

The CIP is updated in consultation with other planning and programming efforts such as the Alameda County Congestion Management Program, the Countywide Transportation Plan and Alameda CTC's annual budget process.

Annual CIP Update

Annual updates, as needed, include modifications to financial projections and confirmation of programming and allocation commitments in association with Alameda CTC's annual budgetary processes. Additionally, annual updates will examine general strategic planning of its projects and programs, and the status of various commitments, and technical adjustments required periodically.

Biennial CIP Update

Every two years, as needed, Alameda CTC will comprehensively update the CIP to review existing CIP projects and to open a nomination window for new projects. The biennially update occurs on odd number fiscal years, and represents a shift of the programming window to add the next two fiscal years.

Biennial CIP updates will include review of existing projects and programs to determine whether to recommend continuing or postponing funding and delaying, removing or reincorporating projects/programs. Alameda CTC may recommend additional funding to continue existing approved projects. As part of this update, Alameda CTC will open a nomination window to consider new projects for additional capacity granted with the two-year shift of the programming horizon. Projects submitted during the nomination window that meet the Commission-adopted screening criteria will be evaluated and prioritized for funding consideration.

Periodically, Alameda CTC will reassess the CIP development process, prioritization methodology and allocation process for consistency with any updated policies and goals. Alameda CTC will update and amend the CIP accordingly to account for project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments.

CIP Amendments / Adjustments

CIP Amendments / Adjustments are considered on a case-by-case basis, and may occur in the following situations:

- Alameda CTC made a programming recommendation that received final programming actions by other agencies for federal, State or regional funds.
- Additional funding is needed to complete a CIP project.
- Commission approved programming made off-cycle of a CIP update.
- Matching funds are needed to immediately leverage non-Alameda CTC Administered funds to Alameda County.
- Project Sponsors requested a fund exchange among existing approved projects to prevent delays or cost increases to the project.
- Project Sponsors required updates to reflect additional revenue from new or existing fund sources, or updated confirmed amounts.
- Project Sponsors are unable to meet the environmental and full funding requirements as defined in the sales tax expenditure plans.
- Project Sponsors reported changes such as budget increases, schedule delays or other factors that may impede project delivery.

Adjustments to the current CIP programming and allocation record will be reflected in the next regularly scheduled CIP update.

SECTION 10: ALLOCATION PROCESS AND REQUIREMENTS

Alameda CTC maintains programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard programming and allocation procedures and requirements further described in the CIP's Policies and Procedures appendix.

Generally, Alameda CTC allocates the funding for which it has allocation authority based on Requests for Allocations Packages in the form of separate allocation requests for named projects in the Transportation Expenditure plans or through funding applications submitted to Alameda CTC for funding consideration by Project Sponsors during a CIP call-for projects.

The Request for Allocation package shall include an overall project implementation plan which identifies anticipated costs by phase and potential funding sources for each phase throughout completion of the project. Requests for allocations for multiple phases without specifying amounts for the individual phases shall be considered on a case-by-case basis.

Generally, Requests for Allocation Packages should be submitted to Alameda CTC at least 60 days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval. In some cases, the project activities to be funded by an allocation being requested will be performed by an implementing agency that is different than the sponsor. In such cases, the request for allocation package should be prepared by the implementing agency and submitted to Alameda CTC by the Project Sponsor.

Alameda CTC has allocation authority for funds from the following sources:

- 1986 Measure B (1986 MB);
- 2000 Measure B (2000 MB);
- 2010 Vehicle Registration Fee (VRF);
- 2014 Measure BB (2014 MBB);
- Transportation Fund for Clean Air (TFCA) Program Manager; and
- CMA Transportation Improvement Program (CMATIP).

Alameda CTC allocates to the following phases:

- Planning/Scoping/Conceptual Engineering
- Preliminary Engineering/Environmental Studies
- PS&E/Final Design

ACTC_AR3805

- Right-of-Way Acquisition and Engineering
- Construction Capital and Support
- Equipment/Rolling Stock Acquisition
- Operations and/or Maintenance

SECTION 11: APPROVAL OF ADVANCE/PAYBACK AND EXCHANGE ARRANGEMENTS

Requests for advances or exchanges of funds programmed or allocated by Alameda CTC shall be considered on a case-by-case basis and shall only be approved if Alameda CTC resources permit such advance/exchange, and if a significant benefit to the implementation of the project can be identified.
Requests for such advances or exchanges shall be submitted in writing by the Project Sponsor, and shall include, at minimum:

1. Project Status and Current Implementation Plan
2. Project delivery strategy with the funding or exchange proposal that describes the costs and fund sources to be involved in the proposed advance or exchange.
3. Timing availability of the funds for which the advance or exchange is requested
4. Repayment schedule of Alameda CTC funds that are proposed to be advance
5. Intended use of the funds freed up by the advance or exchanged

Any advance or exchange arrangement involving funds programmed or allocated by Alameda CTC must be approved prior to allocation, and shall be addressed in the applicable funding agreement.

SECTION 12: DEBT FINANING FOR THE MEASURE BB CAPITAL PROGRAM

Management of the accounts established for the voter-approved funding programs requires forecasts and projections of revenues and expenditures for the revenue sources and expenditure commitments included in each program. The CIP includes revenue projections for each of the funding programs administered by Alameda CTC. Alameda CTC confirms the priorities for the expenditure commitments through the programming and allocations included in the CIP.

While the cumulative committed expenditures remain less than the cumulative revenues, Alameda CTC is able to fund the investments approved in the CIP on a pay-as-you-go basis. When enough projects are approved that create a scenario where the cumulative committed expenditures exceed the cumulative revenues for any of the funding programs, program level financing will be required to make the funds committed available when needed for project implementation.

ACTC_AR3806

When external financing is necessary, the financing mechanism will be determined by the timing of the need for funding, the current financial markets, and the type of expenditure to be financed as some financing mechanism have restrictions on the type of expenditures that can be financed. The decision to finance projects and programs requires lead time to identify the most beneficial type of financing, and to perform the activities required for the financing to be approved, so staff consistently updates cashflow schedules based on the changing needs of the projects and programs in the TEP.

Once funding agreements and contracts for funds allocated in this CIP are executed, Alameda CTC will have encumbered more Measure BB capital funds than can be provided to the projects on a pay-as-you-go basis. Current financial analysis shows the Measure BB capital program cash balance, without any external financing mechanism, will go negative in the very near-term. The amounts encumbered in funding agreements and contracts will not be expended immediately. The encumbrances for larger projects can take years to be fully expended; however, with encumbrances in place, financial management of the capital program must be diligent. The timing of the anticipated expenditures has a significant effect on financing options and costs. Current financial analysis indicates that debt financing from an external source will soon be required to provide Measure BB funding to the capital projects funded in this CIP.

Based on the volume and timing of funding needs in the Measure BB capital program, the external financing mechanism currently planned for the Measure BB capital program is the issuance of bonds in the capital markets. The process for issuing bonds secured by the sales tax is prescribed by the California Public Utilities Commission Code and expanded upon in guidelines prepared by the California Debt and Investment Advisory Commission. The required process includes Alameda CTC adopting a resolution authorizing the issuance of bonds. The resolution authorizing the issuance of bonds, at a minimum, must address the following (from the PUC):

- The purposes for which the proposed debt is to be incurred, which may include all costs and estimated costs incidental to, or connected with, the accomplishment of those purposes, including, without limitation, engineering, inspection, legal, fiscal agents, financial consultant and other fees, bond and other reserve funds, working capital, bond interest estimated to accrue during the construction period and for a period not to exceed three years thereafter, and expenses of all proceedings for the authorization, issuance, and sale of the bonds.
- The estimated cost of accomplishing those purposes.

ACTC_AR3807

- The amount of the principal of the indebtedness.
- The maximum term the bonds proposed to be issued shall run before maturity, which shall not be beyond the date of termination of the imposition of the retail transactions and use tax.
- The maximum rate of interest to be paid, which shall not exceed the maximum allowable by law.
- The denomination or denominations of the bonds, which shall not be less than five thousand dollars ($5,000).
- The form of the bonds, including, without limitation, registered bonds and coupon bonds, to the extent permitted by federal law, and the form of any coupons to be attached thereto, the registration, conversion, and exchange privileges, if any, pertaining thereto, and the time when all of, or any part of, the principal becomes due and payable.

The process for issuing bonds involves selecting a Financing Team including a Financial Advisor, an Underwriter (one or more), and Bond Counsel, and frequently also includes Disclosure Counsel, to help determine the bond structure and other specifics related to the bond issuance required to develop the bond package, market the bonds, sell the bonds and secure the proceeds. Once the bonds are issued, Alameda CTC will be responsible for bond compliance, monitoring and tracking expenditures, and investment and accounting for bond proceeds.

It is Alameda CTC's policy to fund capital project costs on a pay-as-you-go basis for as long as reasonably possible prior to issuing bonds which helps to minimize financing costs. However, based on current cash flow projections, the Measure BB capital program will require financing by early in FY2022-23 to continue to be able to provide funding to Measure BB projects at the time they are needed to pay expenditures incurred on projects for the next several years through 2032. Thereafter, available sales tax revenues from Measure BB are anticipated to be sufficient to meet capital project cost and debt service needs. Debt financing effectively makes future revenues available sooner to pay for project expenditures as they are incurred. Cash flow projections support the financial analysis and cash management efforts related to determining that a bond issuance is the best method of debt financing suited to Alameda CTC's needs and will allow the agency to fulfill commitments to the Measure BB capital program. The focus of the financial analysis and the Alameda CTC management team is to provide funding for Measure BB commitments to capital projects at the time the funding is needed to reimburse eligible project expenditures as they are incurred. Once a debt issuance is in place, Alameda CTC must prioritize debt service obligations when fluctuations to the timing of Measure BB funding needs on projects develop.

With borrowing needs spread over more than a 10-year period, Alameda CTC's Commission approved a strategy to address this need which includes issuing bonds every few years within a 10-year window to meet Measure BB capital project funding needs and is in line with requirements to spend down bond proceeds within three years of each issuance. The intended strategy of periodic bond issuances will allow Alameda CTC to have some certainty on the availability of funding to meet the demands of the Measure BB capital program as projects move through the process into the construction phase. Bonds are expected to be sold as tax-exempt, fixed rate bonds with a 10-year call feature, allowing Alameda CTC to refund and redeem the bonds at par on and after the 10-year call date to provide flexibility to the strategy and the Measure BB program. The final maturity of bonds issued will be in 2045, the final year of Measure BB sales tax collections.

With the approval of the Commission, Alameda CTC has begun the debt issuance process and has completed this process of bringing on a financing team as reported to the Commission in March 2022. The Financing Team is currently working on the development of all of the required bond documents for an inaugural issuance of Measure BB bonds.

While bond proceeds will fund Measure BB capital expenditures on a program-wide basis, within the capital program the projects with the largest draw on funds over the next few years and the precipice of the initial financing needs include the State Route 84 ("SR-84") Interstate 680 ("I-680") Interchange Improvements and SR-84 Widening Project, 7th Street Grade Separation East Project, Interstate 80 ("I-80")/Gilman Street Interchange Improvements Project (Phase 1 and 2), and I-680 Express Lane - Southbound Gap Closure (SR-84 to Alcosta Blvd) Project which are all projects included and allocated funding in this CIP as required by the agency's adopted debt policy.

SECTION 13: PROJECT DELIVERY RESPONSIBILITIES

The implementation of projects in the CIP begins once Alameda CTC approves the funding for the project. The Project Sponsor is the agency that takes the overall responsibility for project delivery, advocacy and reporting for the project regardless if it not the direct implementing agency for the project, unless otherwise agreed through written agreements between the Project Sponsor and the implementing agency.

Alameda CTC acts as project cosponsor, and as implementing agency, for phases of a number of projects and programs. As implementing agency, Alameda CTC incurs eligible project costs through contracts with vendors, staff charges and other direct costs. Implementing agencies, other than Alameda CTC, receive reimbursements from

ACTC_AR3809

Alameda CTC via funding agreements which encumber the funds allocated by Alameda CTC. Once the funding agreements are in place, implementing agencies may encumber the funds for contracts and other direct costs to deliver the project as provided for in the funding agreement. Alameda CTC monitors the performance of the projects during implementation and after implementation during operations based on information provided by the Project Sponsor.

Throughout the implementation process, Alameda CTC relies on Project Sponsors and implementing agencies to communicate regularly about project activities and status as required by the funding agreements. The regular updates from Project Sponsors support Alameda CTC's management of the overall set of projects. The information collected from Project Sponsors provides the basis of the project status information made available to the public by Alameda CTC.

Timely and accurate reporting is essential for early identification of potential project or program issues, and of circumstances that may adversely affect project delivery. Alameda CTC needs as much lead time as possible for approving changes to project or program funding in reaction to project risks. Project Sponsors and implementing agencies must communicate risks to Alameda CTC as soon as they are identified by the Project Sponsor or implementing agency.

If a project requires additional funding, or a change to the funding as approved in the CIP, Alameda CTC will review the funding request and consider providing more funding, or approving changes to existing funding, in future CIP update cycles. If an amendment is required prior to the next CIP update cycle to maintain the current implementation schedule, Alameda CTC may approve additional funding, or changes to previously approved funding, at any regularly scheduled Commission meeting.

The CIP document will not be updated and re-published after each off-cycle funding adjustment. Off cycle adjustments to the funding approved in the CIP will be summarized as current programming in the next CIP update cycle.

SECTION 14: PROJECT FUNDING AGREEMENTS

Allocated funds are considered available for encumbrance in funding agreements between the funding agency and the recipient agency.

A funding agreement is required between agencies to allow for reimbursements of eligible project expenditures. The funding agreements specify the financial terms of the agreement, scope of work, costs, schedules and deliverables associated with the

ACTC_AR3810

implementation of the project. Funding agreements are based on the project information, scope of work, costs, schedules and proposed outcomes at the time of the request for allocation.

Generally, Alameda CTC initiates funding agreement development between recipient agencies immediately after the Commission approves a funding allocation. However, it is the responsibility of the recipient agency to submit a request for funding agreement to the Alameda CTC to receive funds allocated by Alameda CTC. Requests for funding agreement must in accordance with the Timely Use of Fund Policy cited in the CIP Policies and Procedures appendix.

Recipient agencies are responsible for fulfilling all requirements related to executing the funding agreements.

SECTION 15: PROJECTS REIMBURSEMENT PROCEDURES

Alameda CTC approves reimbursements of eligible project costs based on Request for Reimbursement (RFR) packages submitted by implementing agencies and Project Sponsors which incur reimbursable costs against Alameda CTC Administered Funds encumbered in a funding agreement.

RFR requirements are included in the applicable funding agreements, and Project Sponsor's request generally include

- Itemization of eligible costs incurred to confirm the costs are consistent with the applicable funding agreement
- Itemization of Alameda CTC costs and other sources to calculate any proportional shares and reimbursement ratios set in the funding agreement
- Supporting documentation (timesheets, vendor invoices, proof of payment) for all costs cited within an RFR regardless if costs are intended to be Alameda CTC or non-Alameda CTC funded costs.

Alameda CTC approves RFRs upon sufficient supporting documentation of costs incurred, and based on the availability of funds.

Eligible costs for reimbursements are further described in the Eligible Cost for Reimbursement Policy cited in the CIP's Policies and Procedures appendix.

ACTC_AR3811

SECTION 16: ALAMEDA CTC LOCAL BUSINESS CONTRACT EQUITY PROGRAM REQUIREMENTS

All locally funded contracts approved by Project Sponsor, funded wholly or in part with Measure B, Measure BB, and/or Vehicle Registration Fee funds, except for contracts that also include State and/or federal funds or contracts funding non-capital projects (e.g., transit operations), are required to comply with Alameda CTC's Local Business Contract Equity (LBCE) Program.

This includes the obligation to report Local Business Enterprise (LBE), Small Local Business Enterprise, and Very Small Local Business Enterprise participation with all reimbursement requests submitted for contracts costs partially or wholly funded by Alameda CTC, whether or not the contract requires LBE participation.

Project Sponsors receiving Measure B, Measure B, and/or Vehicle Registration Fee funds through the programming and allocation process must follow these program requirements and may be requested to document procurement processes funds to verify program compliance. Non-compliance Project Sponsors may have funds subject to rescission, or marked as ineligible for reimbursement, at the discretion of the Alameda CTC.

Alameda CTC's LBCE Program and is available online on the Alameda CTC website.

SECTION 17: PROJECT CLOSEOUT

Project closeout shall be in accordance with the applicable project funding agreement(s).

At a minimum, the Project Sponsor shall provide Alameda CTC with written confirmation that the project is complete with a summary of the final costs, funding and schedule information segregated by phase. If a project will continue beyond the time during the time which Alameda CTC programmed or allocated funds are being expended, the Project Sponsor shall notify Alameda CTC in writing when the expenditure of the funding is complete, and will continue to provide project status updates as required/requested by Alameda CTC until the project is fully implemented and in public service.

Periodic information updates during operations of projects funded by Alameda CTC may be required for monitoring purposes as specified in the applicable funding agreement, and as requested by Alameda CTC.

ACTC_AR3812

SECTION 18: PERFORMANCE MONITORING AND REPORTING

Countywide Performance Monitoring and Implementation

Projects that received funding through the CIP have been identified through the programming and allocation process to further the Alameda CTC's Countywide Transportation Plan, modal plans, and local planning documents vision to improve the transportation network. These plans identify project and transportation system investments based on expected outcomes modeled over a up to 30-year planning horizon. As projects are implemented through the CIP programming, Project Sponsors are required to report back to Alameda CTC on the outcomes of the implemented projects, and provide feedback on the planning and investment decisions.

Project Reporting

The CIP requires that each project include performance monitoring goals/metrics to gather project specific performance indicators on individual projects. Funding agreement will include all monitoring and reporting requirements required to capture the benefits and expected outcomes of Alameda CTC's investments.

The reporting requirements include the following:

Progress Reports

The executed funding agreements require regular progress reporting, based on the reporting schedule set forth on the agreement. The progress reports include a status update made toward implementation of the project, including deliverables, commitment status of supplemental funds identified in the funding agreement and adherence to the adopted project schedule.

Corrective Plans

Once a funding agreement is executed, Project Sponsors are required to report changes to the project scope, schedule, cost and funding as soon as the required changes are identified by the Project Sponsor for the Commission's consideration. Reports of changes such as budget increases, schedule delays and other factors that may represent an impediment to successful project delivery in accordance with the agreed-on scope, schedule, cost and funding must be accompanied by a Corrective Plan detailing the Project Sponsor's strategy to deliver the project or program within the proposed new parameters. Alameda CTC must accept the plan before future programming, allocations and reimbursements will be approved.

Final Report

The Project Sponsor must submit a final project delivery report of the completed project contained in a funding agreement. The final report must

ACTC_AR3813

describe the completed scope of work, the final budget including spend down of all identified fund sources in the funding plan and any performance outcomes included in the funding agreement.

Monitoring Project Sponsor Delivery and Accountability

Alameda CTC will also monitor the Project Sponsor's ability to deliver a project as proposed. Project Sponsors are required to monitor and inform Alameda CTC if there are significant changes in project or program development, implementation schedule or budget. Project Sponsor's delivery record may be considered at future programming cycles or funding requests by the Project Sponsor. Failure to monitor performance or perform required expenditure audits may affect a Project Sponsor's eligibility to receive funding in future CIP update cycles.

Audits

Alameda CTC reserves the right to perform audits to confirm whether costs submitted for reimbursement are consistent with the provisions set forth in the applicable funding agreement(s). The audit may also include a review of deliverables and outcomes to determine if they are consistent with the project scope and schedule in the funding agreement. Audits must also be performed for funding sources as described in the 2000 TEP and 2014 TEP.

Alameda CTC will periodically evaluate and summarize the project performance monitoring efforts conducted through the individual project and or comprehensive program updates to the Commission. This is intended to provide feedback on Alameda CTC's investments, including how the projects provided a benefit to the transportation system.

SECTION 1
COMPREHENSIVE INVESTMENT PLAN
PROGRAMMING PRINCIPLES

---

1. PURPOSE

The purpose of the Comprehensive Investment Plan (CIP) is to facilitate strategic programming and allocation of all fund sources under Alameda CTC's programming responsibilities. This includes funding from federal, State, regional, and local fund sources such as the Surface Transportation Program (STP) / Congestion Mitigation Air Quality Program (CMAQ), Lifeline Transportation Program, Transportation Fund for Clean Air Program (TFCA), local sales tax measures and vehicle registration fee programs.

To streamline programming of these funds sources, the CIP considers all available fund sources through a consolidated funding program that prioritizes, evaluates, and recommends funding to critical transportation infrastructure and operational needs that build and maintain the county's transportation system. The coordinated programming effort is also intended to minimize the number of funding applications required from Project Sponsors and prioritize investments to projects and programs ("projects") identified through countywide transportation planning efforts.

The purpose of the CIP programming principles established herein is to provide a framework for programming and allocation decisions made by the Alameda CTC to accomplish countywide transportation goals and objectives. The following five fundamental guiding principles have been identified:

1. Implementing Alameda CTC's adopted visions and goals
2. Balance strategic investments across project delivery phases
3. Maximize transportation investments
4. Investments in all modes and areas within Alameda County
5. Deliver solutions while ensuring accountability

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to create a uniform consolidation of historically separate programming goals and practices, where applicable, to more effectively coordinate funding towards highly beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

2. PROGRAMMING AND ALLOCATIONS PROCESS

The CIP includes a five-year programming window with a two-year allocation plan (i.e. the first two years of the five-year window).

ACTC_AR3880

The current programmed amount for a given project represents a commitment amount that is available for allocation when the programmed funds shift into the CIP's two-year allocation window. An allocated amount represents the amount available for encumbrance in project funding agreements and/or contracts, which are, in turn available for reimbursement of eligible costs.

All programmed funds are subject to the availability of funds, and current programming and allocation priorities.

The CIP programming and allocation process is as follows:

1. Alameda CTC will make programming and allocation recommendations to certain projects based on the available fund estimate for a given five-year CIP programming cycle.
2. Projects programmed within the first two-years of a given CIP will receive an allocation.
3. Projects with outer year programmed funds will receive an allocation in the fiscal year in which the funds were originally programmed, upon the Project Sponsor's allocation request through the CIP application process.
    - Allocation requests to advance outer programmed funds are subject to the availability of funds and Commission approval, as priority is given to projects with funds already allocated in the two-year allocation window.
4. Projects with outer year programmed funds that are not ready for an allocation may request to have the programming deferred to an outer CIP programming year by notifying Alameda CTC.

3. FUND SOURCES AND PROGRAMS

The CIP consolidates the programming and allocations of the various fund sources under Alameda CTC's purview. These sources are delineated into principle programs, where feasible, as identified on the table below. For example, 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Bicycle/Pedestrian funds are consolidated into a single Bicycle/Pedestrian Program. This provides greater coordination of similar funding types, requirements, and eligibilities to meet larger program goals and objectives. For all locally-funded programs (principle programs 1-10) a project-funding agreement between the Alameda CTC and Project Sponsor is required. For all other programs (principle programs 11- 13) Project Sponsors are required to enter into a funding agreement directly with the appropriate federal, State, or regional agency.

Principle Program	Fund Source & Investment Program
1. Bicycle/Pedestrian Program	Measure B (MB) Bike/Pedestrian Countywide Discretionary Fund Measure BB (MBB) Bike/Pedestrian Grant Program Measure BB (MBB) Three Major Trails Vehicle Registration Fee (VRF) Pedestrian-Bicycle Access and Safety Program
2. Transit Program	MB Express Bus MBB Innovative Transit Program (transit pass programs) VRF Transit for Congestion Relief Program

ACTC_AR3881

Principle Program	Fund Source & Investment Program
3. Transit Center for Development Program	MB Transit Center Development Program
4. Community Development Investment Program	MBB Community Development Investment Program
5. Paratransit Program	MB Special Transportation for Seniors and People with Disabilities "Gap Grant" Program MBB Coordination and Service Grants
6. Freight and Economic Development Program	MBB Freight and Economic Development MBB Countywide Freight Corridors
7. Technology, Innovation and Development	MBB Technology, Innovation, and Development
8. Local Streets and Roads (Arterials) Program	MBB Congestion Relief, Local Bridge, Seismic Safety
9. Highways Program	MBB Highway Capital Projects
10. Transportation Fund for Clean Air (TFCA)	TFCA Program
11. Lifeline Transportation Program (LTP)	State Transit Account (STA) Job Access Reverse Commute (JARC) and Surface Transportation Program (STP)
12. One Bay Area Grant Program (OBAG)	Surface Transportation Program (STP) and Congestion Mitigation and Air Quality (CMAQ)
13. State Transportation Improvement Program (STIP)	STIP

4. PROGRAMMING CAPACITY

Alameda CTC's programming capacity is limited to the funding anticipated to be available for projects included in the five-year programming and allocation horizon. Projects are programmed over a five-year period, with allocations to projects in the first two-years of the CIP window. Projects that exceed the five-year fiscally constrained CIP will be considered for inclusion in future CIP updates, and may receive priority consideration in the event a previously programmed commitment is unable to be delivered, or additional funding capacity is made available. Alameda CTC will provide a programming fund estimate as part of the CIP call for projects process.

5. PROGRAMMING PRIORITIES

Through the CIP, funds are prioritized to projects as follows:

a. Achieves Fundamental Programming Principles: The degree to which projects achieve the CIP's five (5) fundamental programming principles (*refer to Section 6 of CIP for details)*.
   1. Implementing Alameda CTC's adopted visions and goals
   2. Balance strategic investments across project delivery phases
   3. Maximize transportation investments
   4. Investments in all modes and areas within Alameda County
   5. Deliver solutions while ensuring accountability

b. Countywide Significance: Projects identified as a countywide priority, as an identified project, or along a transportation corridor, in Alameda CTC's Countywide Transportation Plan (CTP), Multi-modal Plans (Goods Movement, Arterial, and Transit), transportation

ACTC_AR3882

expenditure plans, and the Countywide Bicycle and Pedestrian Plans will receive higher priority consideration.

c. Readiness: Projects demonstrating higher state of construction readiness will receive higher priority consideration. Readiness includes technical and financial readiness such as completion of engineering, environmental and design studies, identification of risk-mitigation measures, secured funding towards project completion, feasible schedule, etc. Projects must be deliverable within the timeframe that funds are made available.
d. Fund Leveraging: Projects that leverage external funding commitments (such as federal and State discretionary funds) shall receive higher priority consideration.
e. Coordination and Support: The degree to which a project demonstrates coordination and support from multiple jurisdictions, agencies, and the community stakeholders throughout the planning and project implementation phases, and identification of commitments to maintain the improvements after completion.

6. ELIGIBLE APPLICANTS

a. Eligible applicants (direct recipients) of funds programmed through the CIP are limited to the following:
    1. Cities of Alameda, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, Union City
    2. County of Alameda
    3. Transit agencies Altamont Corridor Express (ACE), Alameda-Contra Costa Transit District (AC Transit), San Francisco Bay Area Rapid Transit District (BART), Livermore Valley Transportation Authority (LAVTA), Union City Transit, and San Francisco Water Emergency Transportation Authority (WETA)
    4. East Bay Regional Parks District (EBRPD)
    5. Public school districts (K-12) in Alameda County *(exclusively for student transit pass programs)*
    6. Alameda County Transportation Commission (Alameda CTC)
    7. Private, non-profit organizations *(exclusively for programs targeted towards seniors and people with disabilities)*
    8. Entities that are not identified specifically as eligible direct recipients will only be eligible to receive CIP funds as sub-recipients by partnering with an eligible direct recipient that is willing to pass through the funds to a sub-recipient. Exceptions allowing other entities to directly receive funds may be granted by Alameda CTC on a case-by-case basis.
b. Applicants must acknowledge and agree to comply with the specific requirements of the identified fund source and project funding agreement requirements prior to receiving funds programmed and allocated through the CIP.
c. Applicants must provide the expertise and staff resources necessary to successfully deliver projects within the constraints of the fund source requirements.
d. Applicants must identify and maintain a staff position that serves as the single point of contact for Alameda CTC programmed funds within that agency.

ACTC_AR3883

7. ELIGIBLE PROJECTS

Eligible CIP projects are as follows:

a. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.

b. Projects must be publicly accessible, and not only for private entity use.

c. Projects must be in and consistent with the most current adopted Regional Transportation Plan and the Alameda CTC's CTP.

d. Projects must meet the goals and objectives of the funding sources and funding programs.
   - Projects funded with 2000 Measure B, 2014 Measure BB, and VRF monies must be consistent with eligible use of funds of the respective expenditure plans.
   - Example requirements for federal funding include:
     - Compliance with the California Environmental Quality Act (Public Resource Code Section 21000 et seq.), the State Environmental Impact Report Guidelines (14 California Code of Regulations Section 15000 et seq.), and the National Environmental Protection Act (42 USC Section 4-1 et seq.) standards and procedures.
     - Completion of a Federal Transportation Improvement Program (FTIP) application through the Metropolitan Transportation Commission's Funding Management System.
   - Potential funding eligibilities examples are identified on Exhibit A - Project Categories, Funding Eligibility, and Transportation Priorities.

e. Eligible capital infrastructure projects may include (but are not limited to):
   - Local street and road improvements
   - Bicycle and/or pedestrian infrastructure improvements include new facilities, parking/lockers, gap closure, and safety improvements
   - Highway capital investments
   - Freight, ferry, rail, and intermodal projects that facilitate the movement of goods, services, and people
   - Transit infrastructure enhancements and expansion
   - Safety or modernization improvements to transit centers, stations, or facilities,
   - Transportation improvements that provide greater transit access for residents of low-income and disadvantaged communities
   - Improvements that reduce greenhouse gas emissions
   - Technology improvements such as intelligent transportation system, transit signal priority, innovative uses of technology as it pertains to improving the transportation system

f. Eligible non-infrastructure projects may include (but are not limited to):
   - Bicycle and pedestrian master plans
   - Feasibility or scoping only studies for capital projects
   - Safe Routes to School program operations
   - Crossing guard programs

ACTC_AR3884

- Safety education, training, enforcement, and promotional programs
- Transportation demand or traffic management programs
- Travel training and mobility management programs
- Transit or shuttle operations
- Transit incentive programs (including fare based)
- Bike share or rideshare programs

8. MINIMUM/ MAXIMUM AWARD AND MATCHING REQUIREMENTS

Project Type	Minimum Request	Maximum Request	Minimum Match
Capital Improvement	$500,000	$2,000,000	25% (for each phase requested)
Programs and Transit/Shuttle Operations	$100,000 per year	$500,000 per year	75% (by year)
Plans/Studies	$100,000	$100,000	50%

The CIP will focus on comprehensive transportation projects that yield significant benefits to the countywide transportation system. In general, smaller projects or early project development (planning/scoping) activities that are able to be funded through local means (direct local distribution funds) will be a lesser priority for discretionary funding.

Project Sponsors shall provide the minimum match of Alameda CTC's administered funds requested by phase, unless otherwise stated by a particular program guideline.

9. MATCHING REQUIREMENTS

a. Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
b. Previously incurred costs or previously expended funds do not count towards fulling minimum matching requirement.
c. Named capital projects with identified specific funding commitments in the 2014 Measure BB Transportation Expenditure Plan are exempt from the matching requirements; however, matching is highly encouraged to support leveraging of Measure BB funds.
d. Projects funded with federal funds (such as STP/CMAQ) requires a non-federal local match. Non-federal sources for local match can include local sales tax, special bond measures, financial private donations, and other local revenues.
e. In-kind funding (non-cash contributions of time, goods and services, equipment, or space) will not count towards fulling the CIP matching requirement.
f. Alameda CTC may consider on a case-by-case basis exceptions to the matching requirement. Such exceptions may include exemptions for projects that provide considerable transportation benefits and/or projects that leverage significant transportation funds for the county.

ACTC_AR3885

10. ELIGIBLE PROJECT COSTS

Eligible costs for funds programmed through the CIP include

- Project development and preconstruction activities such as scoping level documents, preliminary study reports, feasibility studies, environmental documents, preliminary engineering and design work.
- Activities related to construction, rehabilitation, right-of-way acquisition, environmental mitigation, capital equipment acquisition.
- Program implementation, transit services, and shuttle operations.

All eligible costs for reimbursement must be in accordance with the policies and provisions set forth and described in detail in the "Eligible Costs for Reimbursement by Alameda CTC Policy".

Applicants are responsible for securing the necessary matching and for any additional funding needed to complete the project as a result of project cost increases, higher actual bid estimates, loss of funding, underestimated contingencies, and future maintenance costs.

11. FUNDING RESTRICTIONS

- Alameda CTC administered funds shall not supplant other committed funds.
- Alameda CTC will not be responsible to fund any cost overruns, cost increases, higher bid estimates, maintenance costs, or funding shortfalls beyond Alameda CTC's original programming and allocation commitment.
- 2000 Measure B Express Bus funds are only available to AC Transit and LAVTA.
- Programmed federal, State, and regional funds are subject to the requirements of the specific fund source, and may require Project Sponsors to enter into funding agreements directly with the authorizing agency.
- Reimbursement for eligible staff costs are limited to non-Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) recipients, unless otherwise agreed upon by the Alameda CTC with a project funding agreement for labor that includes direct staff implementation of a project activity. DLD recipients are expected to use DLD or other local funds to support staffing, contract management, and administrative costs associated with the project.
- Payments to fund recipients will be made on a reimbursement basis and after approval of submitted invoices. No reimbursements will be made prior to the execution of a project funding agreement with the Alameda CTC. Invoices are required to be submitted at least once every six months with required progress reports and completed task deliverables, unless otherwise authorized and approved by Alameda CTC.

12. SHUTTLE OPERATIONS FUNDING REQUIREMENTS

Funding for shuttle operations is strictly limited to shuttles which provide connections for first/last mile connections from regional transit facilities, transportation hubs, business districts, and

ACTC_AR3886

employment centers. Paratransit services are not eligible for funding under transit eligible funding sources.

- Eligible applicants must be a public agency eligible to receive Alameda CTC funds.
- Shuttle service must be wholly located in Alameda County, available to general public, and serve multiple employers.
- Service routes within 0.5-mile radius from a major regional transit facility (BART station, major bus transfer station, or ferry terminal) will be given priority consideration.
- Applicants must provide a minimum match required for transit/shuttle operations.
- Service Operations Requirement
    - Shuttle service must not compete with existing fixed-route transit services provided by Alameda-Contra Costa Transit District, Livermore Amador Valley Transit Authority, or Union City Transit. A Letter of Concurrence from the appropriate transit agency, must be provided to affirm coordination with the transit agency, and acknowledge that the proposed shuttle program would not complete with existing or planned transit services.
- Funding Priority Considerations
    - Programs demonstrating long-term and local sustainability with matching funding consisting of 50 percent (50%) or more coming from private sources i.e. private business investment districts will be given priority consideration.
    - Ridership exceeding 500,000 annual boarding's, documented by existing service data or documented ridership projections will be given priority consideration.

13. FREIGHT RELATED PROJECTS FUNDING REQUIREMENTS

Funding for freight related projects is strictly limited to improvements that significantly contributes to the freight systems' economic activity or vitality; relieves congestion the freight system, improves the safety, security, or resilience of the freight system; improvements or preserves the freight system infrastructure; implements technology or innovation to improve the freight system or reduce or avoid its negative impacts; or reduces or avoids adverse community and/or environmental impacts of the freight system.

Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

14. PROJECT SELECTION CRITERIA

Project applications that meet the following screening criteria will be considered.

1. Consistency/identified within the most recently adopted Regional Transportation Plan and Countywide Transportation Plan.
2. Consistency/identified within the most recently adopted Countywide Bicycle and Pedestrian Master Plan *(applicable to bicycle/pedestrian improvements).*
3. Provide the minimum match of Alameda CTC's administered funds requested by phase.

ACTC_AR3887

The primary CIP project selection criteria are as follows:

1. Project Need and Benefits: Project clearly defines project needs and how proposed transportation improvement will benefit the intended users at a local and countywide level, and provide a usable segment (as applicable).

   Alameda CTC will consider key project merits and anticipated project performance such as (in no particular order):

   - Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
   - State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
   - Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.
   - Safety and Connectivity: Project's ability to foster a safe, connected, and accessible transportation system for multimodal movement of goods and people.
   - Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.
   - Sustainability: Project sponsor identifies funding sources and responsible agency for sustaining and maintaining the project beyond the funding period. Project is identified in a long-term development plan.

2. Project Readiness: Project contains a well-defined funding plan, budget, and schedule. Project has no foreseeable implementation issues, has governing body approval, and is supported by the local community. Applicant clearly identifies the ability to coordinate among appropriate internal and external agencies, and has identified stakeholders. Project with a completed project study report or equivalent scoping document will receive a higher priority consideration for readiness.

3. Matching Funds: Project has secured or committed funding from other funding sources outside of Alameda CTC's funding resources that is beyond the minimum matching requirement.

4. Other fund source specific criteria requirements: Project must meet the program requirements of specific fund sources, such as cost effectiveness calculations or proximity-connectivity to specific areas and user groups. These requirements are specific to the fund source and may change with each programming cycle.

ACTC_AR3888

Projects will be scored on a scale based on the project's expected outcomes and performance, project readiness, sustainability, and leveraging ability. Refer to Exhibit B – Project Selection Criteria for scoring weights for each project selection criteria category. Programming recommendations may not be based strictly on the scoring criteria alone. Consideration will be given towards the requirements of the various Alameda CTC administered fund sources, project delivery requirements, geographic equity, and countywide synergies of proposed improvements.

The project selection criteria will be applied by category mode (bicycle/pedestrian, transit, goods movement, highway, local streets and roads, transit operations, etc.) to provide a direct evaluation of similar investments to one another, i.e. transit projects to transit projects.

15. PERFORMANCE MEASURES AND MONITORING

Project Sponsors must identify and establish project goals, deliverables, and performance measures and intended outcomes that will measure the effectiveness of the investment. Performance measures will be established as part of a project funding agreement between Alameda CTC and the fund recipient.

a. For capital projects, performance indicators may include, but are not limited to, an evaluation of a project's ability to achieve CIP programming priorities, ability to meet specific funding program goals, and reporting on the status and implementation on the project delivery.
b. For operations, performance indicators may include the above, as well as quantifying and monitoring the number of trips, service hours, cost effectiveness, and outreach efforts.

16. POST ALLOCATION REQUIREMENTS

Project Sponsor whom are an awarded Alameda CTC Administered funding allocation are required

- Submit a governing body approval resolution that accepts Alameda CTC funds, confirms local matching commitments, project delivery strategy, and local support for the project in order to entered into a project funding agreement with Alameda CTC.
- Enter into a project funding agreement between the Alameda CTC for approved of allocations of Measure B, Measure BB, VRF, TFCA, and other funds under Alameda CTC purview. Agreements will include project scope, cost, schedule, performance measures, reporting requirements, publicity requirements, audit requirements, task deliverables, effective date of reimbursable costs, etc. The current agreement requirements are located here: https://www.alamedactc.org/app_pages/view/19025.
- Comply with Alameda CTC's Local Business Equity Program requirements: https://www.alamedactc.org/get-involved/contract-equity/

ACTC_AR3889

17. TIMELY USE OF FUNDS AND RESCISSION OF FUNDS

a. Projects must be started within a year of the schedule identified in the executed funding agreement that defines the date of eligible costs and reimbursements. Funds may be rescinded if a project is not started within the established time period.
b. Projects must be completed within three (3) years of the established initiation date, unless a different period is identified in the program guidelines or approved in advance by the Alameda CTC and incorporated into the funding agreement.
c. Projects receiving federal and State funds are to start and expend the program funds within the delivery timeframe required by federal funding requirements.
d. Projects are subject to the specific timely use of funds, policies and provisions pertaining to the specific fund sources allocated to the Project.
e. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds. If fund awards are withdrawn, allocations may be disencumbered from a funding agreement and removed from the CIP.
f. Rescinded funds will be returned to the program to be distributed in a future CIP cycle.

18. OTHER REQUIREMENTS

a. Program specific guidelines may supersede the requirements set forth in these CIP programming guidelines.
b. Programming and allocations actions made through the CIP are subject to the current policies and guidelines, as they may be created, revised, or amended from time to time.
c. Request for fund allocations for named 2014 Measure BB capital projects must be made prior to execution a funding agreement. The request for allocation must include at minimum a summary of project costs defined by phase and fund source, and a project schedule for each phase.
d. Alameda CTC may consider on a case-by-case basis exceptions to the programming requirements of the CIP programming principles and guidelines in the event of unanticipated programming actions/funding availability, or if a proposed project has extraordinary project merit, project synergies, or project delivery circumstances that if implemented will result in a significant countywide benefit.

ACTC_AR3890

ACTC_AR3891

Exhibit A

Project Categories, Funding Eligibility, and Funding Eligibility

Projects will be separated into project categories by type as part of the project selection and evaluation process to prioritize projects relative to each other. The following table identifies CIP project categories, transportation priorities, and example funding eligibility.

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
1.	Transit Capital • Capital rehabilitation • Capacity expansion, stations, capital replacement • Safety and Access improvements • Transit Signal Priority (TSP) / Communications	1. Increase transit access and ridership 2. Regional projects in the expenditure plans 3. Projects/need identified in a transit plan 4. Increase frequency or reliability of service operations 5. Facilitates express bus services	X			X	X				X	X		X	
2.	Local Streets and Roads (Arterials) • Major Arterial Performance Initiative Program • Roadway Safety/Traffic Calming • Grade separations • Traffic Signals, ITS/CCTV installations and upgrade • Signal timing and coordination • Complete Streets and Streetscape • Coordination with freeways and ramps • Roadway/Pavement Rehabilitation • Sidewalk installation	1. Regional projects in the expenditure plans. 2. Projects/need identified in Multimodal Arterials Plan 3. Enhances multimodal connectivity and reliability, of transit, bicycle and pedestrian networks. 4. Provides congestion relief and increased mobility	X	X	X	X	X				X	X	X	X	X
3.	Bicycle and Pedestrian • Bike facilities (includes Class 1,2,3, and 4 facilities) • Bike storage capital costs (racks, lockers, cages) • Safety, gap closure, infrastructure improvements • Bicycle and Pedestrian Master Plans and updates • Safe Routes to School improvements/programs	1. Identified in a Countywide Bicycle/Pedestrian Plan 2. Regional projects in the Expenditure Plans 3. Closes gaps in local and countywide bicycle/pedestrian network. 4. Improves safety and connectivity by removing known barriers to access and connections to activity centers, schools, jobs, and transit 5. Bicycle/pedestrian master plans update to improve coordination	X	X		X	X	X				X			
4.	Highway Capital • Interchange, bridge, sound wall, ramp improvements • Bridge improvements • Express lanes	1. Regional projects in the Expenditure Plans 2. Improves safety and connectivity 3. Address state of good repair of transportation system 4. Address congestion and mobility		X							X		X	X	X

ACTC_AR3892

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
5.	Freight and Economic Development (Goods Movement) • Truck/port/freight operations and goods movement • Airport Facilities, Truck-vehicle parking • Quiet Zone Improvements *Note: Road or highway access improvements will be evaluated under local streets and roads or highway categories.*	1. Regional projects in the Expenditure Plans 2. Projects identified a Goods Movement Plan 3. Reduce conflicts 4. Improve goods mobility and economic development 5. Enhance coordination to distribution centers	X	X							X			X	X
6a.	Transit Operations (non-paratransit) • Fixed route or Shuttle operations and service expansion • Transit priority measures • Congestion Relief Programs • Transit incentive programs (including fare-based)	1. Increase reliability of service operations 2. Increase transit ridership 3. Maintains or expands express bus services 4. Demonstrates operational and funding sustainability	X	X	X	X	X		X					X	
6b.	Paratransit Capital and Operations • ADA Mandated Services • City-based, non-ADA Services • Specialized transportation programs • Capital improvements (accessible vehicles, signage) • Related assessments and plans	1. Maintains or expands existing transportation services designed for seniors and people and disabilities 2. Increases accessibility of transportation services 3. Eliminates gaps in existing services by offering transportation options for seniors and people with disabilities to important travel destinations to meet life needs.	X				X			X				X	
7.	Transportation Demand Management / Education Outreach • Fare incentives – student bus passes • Guarantee Ride Home Program • Technical Assistance • Alternative mode education and incentives • Safe Routes to School or Transit • Parking management	1. Facilitates connectivity to transit 2. Promotes multi-modal transportation and modal shifts away from single occupancy vehicle (SOV) use towards alternative modes, including bicycle/pedestrian and transit. 3. Provides a cost-effective strategy to improve and facilitate access to transit, schools, and job centers.	X	X		X	X		X					X	
8.	LSR / Highway Operations • Traffic Signal Operations, ITS, maintenance • Highway and Bridge Maintenance & Operations	1. Addresses state of good repair of transportation system 2. Addresses congestion and mobility	X	X	X						X		X		
9.	Planning / Studies • Planning studies and implementation • Feasibility or scoping only studies • Modal Plans/Studies • Bicycle and Pedestrian Master Plans	1. Defines project scopes, schedules and expected outcomes 2. Examines feasibility of improvement implementations 3. Contributes to long-rang planning of improvements for future implementation and decision making 4. Supports Transit Oriented Development (TOD) and Priority Development Areas (PDA)	X	X	X			X	X	X	X	X		X	X

ACTC_AR3893

This page intentionally left blank.

Exhibit B

Project Selection Criteria

Proposed projects will be scored on the basis of applicant responses to the following criteria, as applicable. Additional criterion may be included within this framework based on program needs and funding requirements.

General CIP Criterion	CIP Criterion Description	Score Scale	Criteria Weight
A. Project Readiness	The project has a well-defined funding plan, budget and schedule; implementation of the project or project phase(s) is feasible; governing body approval and community support are demonstrated; and the sponsor demonstrates coordination among internal and external agencies, as applicable.	40	40%
B. Needs and Benefits	The project's needs and benefits are evaluated on combined scoring of B.1 through B.4 below.	50	50%
B.1 General Benefits	The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment, facilitating a clean environment, promoting innovation and contributing to economic growth i.e. CTP Goals.	15	15%
B.2 Access Improvements/ Equity Priority Communities	The project demonstrates a significant impact and benefit to one or more MTC- identified Equity Priority Communities (EPCs). Sponsors may propose projects that are not physically located within the MTC-defined EPC if the application demonstrates a clear and direct benefit to other locally-identified and defined disadvantaged or underserved communities. For example, see Federal Justice 40 Initiative guidance *(See note).*	15	15%
B.3 Safety Benefits	The project enhances transportation safety and includes countermeasures that specifically address demonstrated safety issues.	10	10%
B.4 High Injury Network (HIN)	The project enhances transportation safety on the Countywide Bicycle and/or Pedestrian HINs.	10	10%
C. Matching Funds	Commits other identified funds beyond the minimum match requirement for the phase(s) funds are being requested. Up to 10 points assigned, 2 points earned for every additional 5% match beyond minimum match requirement.	10	10%
	Total	**100**	**100%**

Note:
The federal Justice 40 Initiative interim guidance defines a community as, "either a group of individuals living in geographic proximity to one another, or a geographically dispersed set of individuals, where either type of group experiences common conditions."

ACTC_AR3895

SECTION 2
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
ARTERIALS PROGRAM

PROGRAM SUMMARY

The Arterials Program includes discretionary funding from the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). This program aims to support the arterials in our community that serve as major commute routes for those traveling by transit, auto, bicycle, or foot, and enhance access to jobs, stores, and more through capital infrastructure investments, service operations, and innovative projects. This program focuses on improvements to major roads, bridges, freight corridors, or quiet zones.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Ten percent (10%) of the net revenue collected is dedicated to funding congestion relief, local bridge, and seismic safety type projects benefiting arterials and roadways that improve the mobility of transit riders, motorists, bicyclists, and pedestrians, as well as the movement of goods to stores and consumers within Alameda County.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to improve accessibility, enhance operational efficiencies, increase safety, and reduce congestion. Such activities include projects that remove bottlenecks, improve safety, enhance operations, and enhance alternatives to single occupant auto travel in key commute corridors.

As identified in the 2014 TEP, examples of investments and commute corridors eligible for funding include:

- *North County Major Roadways*: Solano Avenue Pavement resurfacing and beautification; San Pablo Avenue Improvements; State Route 13/Ashby Avenue corridor; Marin Avenue local road safety; Gilman railroad crossing; Park Street, High Street and Fruitvale Bridge replacements; Powell Street Bridge widening at Christie; East 14th Street improvements and Oakland Army Base transportation infrastructure improvements.

ACTC_AR3896

- *Central County Major Roadways:* Crow Canyon Road safety improvements, San Leandro local road resurfacing, Lewelling Road/Hesperian Boulevard improvements and Tennyson Road grade separation.

- *South County Major Roadways:* East-west connector in North Fremont and Union City, I-680/I-880 cross connectors, Fremont Boulevard improvements, upgrades to the relinquished Route 84 in Fremont, Central Avenue Overcrossing, Thornton Avenue widening, Mowry Avenue and Newark local streets.

- *East County Major Roadways:* Greenville Road widening, El Charro Road improvements, Dougherty Road widening, Dublin Boulevard widening and Bernal Bridge construction.

- *Countywide Freight Corridors:* Outer Harbor Intermodal Terminal at the Port of Oakland, 7th Street grade separation and roadway improvement in Oakland, as well as truck routes serving the Port of Oakland.

PROGRAMMING AND ALLOCATION PRIORITIES

The Arterials Program seeks to award projects that advance goals identified in the Countywide Multimodal Arterials Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide mobility along arterials. This program recognizes that concentrating improvements in key arterial corridors will improve access and efficiencies, increase safety, and reduce congestion. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Regional projects or corridors identified in the Transportation Expenditure Plan**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans.

2. **Projects aligned with needs established in the Multimodal Arterials Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Multimodal Arterials Plan.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

ACTC_AR3897

4. **Enhance multimodal connectivity**: Priority consideration is given to projects that enhance the reliability, safety, and connectivity of transit, bicycle and pedestrian networks.

5. **Congestion relief and increased mobility**: Priority consideration is given to projects identified as significantly improving congestion on major commute corridors and facilitating connectivity and travel over multiple jurisdictions.

6. **State of Good Repair**: Priority consideration is given to projects that improve the conditions of existing transportation facilities or address conditions that would otherwise deteriorate if left unimproved.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance mobility, access, safety, and convenience in Alameda County. Arterials Program funds will be available for the example projects in projects that include, but are not limited to the following:

Capital Infrastructure

- Resurfacing and beautification
- Local road safety improvements
- Intersection enhancements
- Traffic/signal operation improvements
- Grade separations and railroad crossings
- Bridge replacements
- Cross connectors
- Truck route improvements
- Quiet zone enhancements
- Education, enforcement and promotion programs

INELIGIBLE PROJECTS

- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

ACTC_AR3898

This page intentionally left blank.

ACTC_AR3899

SECTION 3
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
BICYCLE AND PEDESTRIAN DISCRETIONARY PROGRAM

PROGRAM SUMMARY

The Bicycle and Pedestrian Discretionary Program includes the combined funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) that are available to bicycle and pedestrian improvements. This program aims to support enhanced access and safety for bicyclists and pedestrians through capital infrastructure investments, safety education, outreach promotion, and planning activities.

The 2000 Measure B, 2014 Measure BB, and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports projects which improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Five percent (5%) of the net revenue collected is dedicated to bicycle and pedestrian projects. The five percent (5%) is further separated into two distribution categories:

- 75 percent (75%) of the funds are formula Direct Local Distributions to Alameda County cities and County based on population; and
- 25 percent (25%) of the funds are distributed on a discretionary basis through the Measure B Bicycle and Pedestrian Countywide Discretionary Fund.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Eight percent (8%) of the net revenue collected is dedicated to bicycle and pedestrian infrastructure and safety projects that support projects that encourage people to bike and walk, as designated below:

- Three percent (3%) or $264 M is directed towards the Completion of Three Major Trails - Iron Horse Trail, Bay Trail, and the East Bay Greenway Corridor; and

- Three percent (3%) is formula allocated as Direct Local Distributions to Alameda County cities and County based on population; and
- Two percent (2%) of the funds are distributed on a discretionary basis through the Measure BB Bicycle and Pedestrian program for regional projects and trail maintenance. Funds in this category includes use for Countywide Bicycle and Pedestrian coordination.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF program began in May 2011. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Five percent (5%) of the VRF funds are dedicated to the VRF Pedestrian and Bicycle Access and Safety Program, which goal is to improve the safety of bicycles and pedestrians by reducing conflicts with motorized vehicles, create safety access to activity centers, and improve connectivity of the transportation network.

PROGRAMMING AND ALLOCATION PRIORITIES

The Bicycle and Pedestrian Discretionary Program seeks to award projects that advance countywide bicycle and pedestrian goals as identified in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and the Measure B, Measure BB, and VRF expenditure plans. The Alameda CTC's Countywide Bicycle and Pedestrian Plans identifies a priority vision system consisting of projects, corridors, and improvement initiatives that are the most significant from a countywide perspective. This priority system will guide and focus the programming and allocations of the bicycle/pedestrian program funds.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds during a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds during a given programming cycle may be used for non-infrastructure improvements including program operations, plans, and studies.

3. **Identified in the Countywide Bicycle and Pedestrian Plans**: Priority consideration is given to bicycle and pedestrian projects identified as a countywide priority in Alameda CTC's Countywide Bicycle and Pedestrian Plans.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans. This includes projects identified in the Alameda CTC's Measure BB Capital Project Delivery Plan.

ACTC_AR3901

5. **Gap Closure**: Priority consideration is given to projects that close gaps in local and countywide bicycle/pedestrian network.

6. **Safety and Connectivity**: Priority consideration is given to projects that improve connections to activity centers, schools, jobs, and transit by addressing and removing known barriers to access and connecting multiple jurisdictions and/or planning areas.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance bicycle and pedestrian access, convenience, safety and usage in Alameda County.

Bicycle and Pedestrian Discretionary Program funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Sidewalks and multi-use paths
- Bikeways and pedestrian facilities
- Crossing improvements (at intersections, interchanges, railroad, freeway)
- Bicycle and pedestrian signals
- Bicycle lockers, racks and parking facilities
- Signage, lighting, railing and other accessibility improvements for bicyclists/pedestrians
- Traffic calming devices
- Bicycle/pedestrian access improvements to and from transit facilitates, and schools
- Gap closure projects that link and build upon the existing bicycle/pedestrian network
- Bicycle/pedestrian components of complete streets and streetscape improvements
- Capital maintenance such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life.

Non-infrastructure

- Bicycle and Pedestrian Master Plans
- Feasibility or scoping only studies for capital projects
- Safe routes to school program operations
- Crossing guard programs
- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Routine maintenance of roadway facilitates with bicycle/pedestrian infrastructure

- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
- Ongoing facility operations (e.g. attended bicycle parking)

OTHER REQUIREMENTS/FUNDING RESTRICTIONS

Measure BB Funds – Completion of Three Major Trails

- Measure BB funds identified ($264 M) for the Completion of Three Major Trails Funds in the 2014 Transportation Expenditure Plan are limited to capital construction and/or capital maintenance projects that enhance the East Bay Greenway from Oakland to Fremont, Bay Trail Gap Closure and Access Projects, and Iron Horse Trail Gap Closure and Access Projects. Priority funding consideration is given to projects that directly enhance the regional bicycle/pedestrian transportation network pertinent to these three trails, and as envisioned and prioritized in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and other countywide plans.
    - Eligible projects
        - Capital infrastructure projects that address gaps and connectivity issues, safety and accessibility concerns, and capital maintenance needs such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life to and from these three major trails.
    - Ineligible projects
        - Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
        - Bicycle/pedestrian education, outreach, and promotional programs.

ACTC_AR3903

SECTION 4
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
COMMUNITY DEVELOPMENT INVESTMENT PROGRAM

PROGRAM SUMMARY

The Community Development Investment Program (CDIP) will support existing and new transportation infrastructure improvements that will enhance access and provide increased connectivity to and between job centers, schools, transportation facilities, community centers, and residential developments. Investments include capital projects, programs, plans and studies which serve to achieve the objectives of the CDIP, including but not limited to improvements to BART station facilities, bus transfer hubs, bicycle/pedestrian infrastructure, local streets and roads, and transit that facilitate transit-oriented growth.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plans.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. The 2014 TEP establishes a total of 4 percent of net sales tax revenue, for the development and implementation of the program. CDIP investments are intended to enhance access and safety around transit stations and hubs, and to support station area development and transit-oriented development at the station areas listed in the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Community Development Investment Program seeks to award projects that advance access and connectivity to transit as identified in the Measure BB expenditure plan. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering community connectivity to transit, schools and job centers. In general, competitive projects are those that enhance connectivity from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase Access and Connectivity:** Priority consideration will be given to projects that significantly improve access and connectivity to transit, jobs and schools.

4. **Leveraging Funds**: Projects that demonstrate program sustainability by leverage and secure external funding commitments beyond the minimum matching requirement.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance access and safety around transit stations, hubs, and transit-oriented development.

CDIP funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Transit station improvements including plazas, station access, pocket parks, parking facilities
- Local streets and road improvements including streetscape projects associated with high density developments and near transit facilities with sample elements such as pedestrian street lighting, bulb outs, crosswalk and sidewalk improvements, new striping for bicycle lanes and road diets, way finding signage and bus shelters.
- Bicycle and pedestrian improvements including bikeways and bike-transit facilities, bicycle/pedestrian paths and bridges, safe routes to transit, bicycle parking.
- Park-and-ride facility improvements
- Passenger rail station access and capacity improvements
- Development and implementation of transit priority treatments on local roadways
- Equipment and rolling stock such as equipment that is attached to a facility and integral to the benefit of the facility (i.e. EV charging stations)

Non-infrastructure

- Planning studies
- Feasibility or scoping only studies for capital projects
- Transit and shuttle operations
- Transit incentive programs (including fare-based)

ACTC_AR3905

- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Vehicle purchases and vehicle maintenance
- Studies that extend beyond Alameda County other than to establish contributing impacts
- Routine maintenance of capital facilities
- Promotional program giveaways including food, etc.
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Shuttle operations will be limited to a maximum award of $500,000 per year, and will require a 75 percent (75%) match.
- Plans and Studies will be limited to a maximum award of $100,000, and will require a 50 percent (50%) match.

ACTC_AR3906

This page intentionally left blank.

ACTC_AR3907

SECTION 5
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
FREIGHT AND ECONOMIC DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Freight and Economic Development Program includes discretionary funding from the 2014 Measure BB Program, which aims to develop innovative approaches to moving goods in a safe and healthy environment in support of a robust economy.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding improvements that support moving goods in a safe and healthy environment in support of a robust economy as part of the Traffic Relief on Highways Type (Highway Program) included in the 2014 TEP.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Enhance the safe transport of freight by truck or rail in Alameda County, including projects that reduce conflicts between freight movement and other types of transportation
- Improve reduction of greenhouse gas production in the transport of goods
- Mitigate environmental impacts of freight movements on residential neighborhoods
- Enhance coordination between the Port of Oakland, the Oakland Airport, and local jurisdictions for the purposes of improving the efficiency, safety, and environmental impacts of freight operations

ACTC_AR3908

PROGRAMMING AND ALLOCATION PRIORITIES

The Freight and Economic Development Program seeks to award projects that advance freight related goals identified in the Countywide Goods Movement Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide safety and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the Transportation Expenditure Plans. Funding from this category will be done in coordination with the Highway Program in the following section to support related transportation projects and corridor investments, where applicable.

2. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

3. **Projects aligned with needs established in the Goods Movement Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Goods Movement Plan.

4. **Reduce conflicts:** Priority consideration is given to projects that reduce conflicts between goods movement, passenger transportation, and local communities, and that improve safety.

5. **Improve goods mobility and economic development:** Priority consideration is given to projects that positively affect truck mobility and accessibility.

6. **Enhance coordination:** Priority consideration is given to projects that mitigate impacts on neighborhoods and enhance coordination between freight distribution centers.

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish the program's objective to improve mobility and coordination of freight and goods to and from Alameda County. Projects must directly address a specific freight coordination issue or goods movement need.

The Freight and Economic Development program will be available for projects that include, but are not limited to the following:

- Highway interchange improvements that address freight or passenger delays

ACTC_AR3909

- Technology programs that address smart operations and deliveries
- Rail infrastructure capacity improvements on freight rail lines
- Gateway infrastructure improvements
- Impact reduction programs
- Local truck route enhancements
- Goods movement planning support
- Quiet Zone Improvements
- Airport Facilities
- Truck vehicle parking
- Truck/port/freight/operations

INELIGIBLE PROJECTS

- Projects that do not directly benefit or facilitate freight and goods movement in Alameda County.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 6
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
HIGHWAY PROGRAM

PROGRAM SUMMARY

The Highway Program seeks to implement projects as identified in the Measure BB 2014 Transportation Expenditure Plan (2014 TEP). The expenditure plan identifies specific highway and freight corridors and improvements on I-80, SR-84, I-580, I-680, and I-880 that would address infrastructure gaps and facilitate greater access, congestion relief and goods movement. The 2014 TEP identifies specific projects for each of the highway corridors in the amount of $600M, with an additional one percent (1%) of net revenue or approximately $77M specifically targeted towards improvements that improve goods movement. Projects were based on project readiness, local priority, and the ability to leverage current investment and funds. Alameda CTC aims to prioritize the specific investments that demonstrate an ability to move forward in project implementation and delivery. A number of eligible projects, or candidate projects will be selected for funding based on their contribution to maximizing the connectivity, reliability, and efficiency of the transportation system, while also providing congestion relief and facility improvements.

FUND SOURCES

2014 Measure BB

Measured BB, approved by Alameda County in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs that will be funded with the sales tax revenues. The 2014 TEP identifies $600 million for specific highway capital improvements with an additional one percent (1%) of net revenue or approximately $77 million, targeted specifically for the Freight and Economic Development Program that supports goods movement related improvements.

Funds will be periodically distributed by Alameda CTC for projects that will make the existing highway system safer, more efficient, and effective by:

- Removing bottlenecks at interchanges and other hot spots
- Improving efficiency by providing HOV/HOT/Express Lanes and operational improvements, and integrating Intelligent Transportation System (ITS) strategies
- Providing connectivity/accessibility between goods, markets, and employment centers
- Complementing other modes of transportation and integrating complete street features
- Completing gaps in the system
- Improving air quality by reducing pollution and greenhouse gas emissions

ACTC_AR3912

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

PROGRAMMING AND ALLOCATION PRIORITIES

The Highway Program seeks to award projects that improve the safety and efficiency of Alameda County's highway system, as specifically identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly towards addressing safety, access and infrastructure gaps, while also furthering countywide efficiencies and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the 2014 TEP and earmarked for certain Measure BB amounts. Priority consideration is provided to projects that are specifically named or referenced in the group category and that have already started various project development phases such as scoping, preliminary engineering, design, and environmental.

2. **Improve Safety:** Priority consideration is given to projects that improve safety among vehicles, bicycles and/or pedestrians, on major truck routes, and the safety of maintenance and operational workers.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Improve mobility and provide congestion relief:** Priority consideration is given to projects that positively affect transportation mobility and accessibility. This includes the removal of bottlenecks at the interchange locations and other hot spots identified, improving efficiency by providing additional capacity via HOV/HOT/Express and operational improvements, and reducing travel times (peak hour vehicle delays and average vehicle delays).

5. **Enhance Connectivity/Access Improvements**: Priority consideration is given to projects that provide connectivity and accessibility between goods and markets, ports, major businesses and employment centers

6. **System Reliability:** Priority consideration is given to projects that maximize connectivity, and provide congestion relief, gap closures, and contribute to improving environmental conditions i.e. air quality.

ACTC_AR3913

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish program's objectives to improve efficiency, remove bottlenecks, and increase access on the highway system to and from Alameda County. The Highway Program funds will be available for projects that include, but are not limited to the following:

- Highway projects and corridors identified in the 2014 TEP from the following investment categories:
  - I-80 Improvements
  - I-580 Improvements
  - I-680 Improvements
  - I-880 Improvements
  - I-880 Improvements
  - SR-84 Improvements
- Highway related improvements that provide congestion relief, increase safety, access, and enhances mobility of vehicles and goods movement operations.

INELIGIBLE PROJECTS

- Projects that do not directly benefit transportation in Alameda County.
- Projects that do not have a direct nexus or beneficial impact to the identified highway corridors.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

ACTC_AR3914

ACTC_AR3915

SECTION 7
PROGRAMMING/ALLOCATION GUIDELINES FOR 2000 MEASURE B AND 2014 MEASURE BB PARATRANSIT DISCRETIONARY GRANT PROGRAM

PROGRAM SUMMARY

The Paratransit Discretionary Grant Program includes the discretionary funding from the 2000 Measure B and the 2014 Measure BB paratransit programs as a unified grant program. The 2000 Measure B and 2014 Measure BB funds shall be expended in accordance with the requirements of the guiding expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects and programs to improve the County's transportation system. Collections began on April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. A total of 10.45 percent (10.45%) of net MB revenue is directed towards projects intended for seniors and people with disabilities (Paratransit). The 10.45 percent (10.45%) is further split, as follows:

- 9.02 percent (9.02%) of net revenues are Direct Local Distributions (DLDs) to Alameda County cities, County and Transit Operators as follows:
    - 5.63 percent (5.63%) are DLDs directed towards the East Bay Paratransit Consortium (AC Transit and BART) for Americans with Disabilities Act (ADA) mandated paratransit services; and
    - 3.39 percent (3.39 %) are DLDs directed towards Alameda County cities and County for paratransit services based on a funding formula with population and other factors. The formula is recommended by the Alameda CTC's Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.
- 1.43 percent (1.43%) of net revenues are distributed on a discretionary basis, based on a funding recommendation by PAPCO and approved by the Commission. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

2014 Measure BB

Measure BB, approved by Alameda County voters in 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Ten percent (10%) of net revenue collected is dedicated to paratransit projects targeted towards seniors and people with disabilities (Paratransit), as follows:

ACTC_AR3916

- Six percent (6%) of net revenue is directed towards the East Bay Paratransit Consortium (AC Transit and BART) for ADA-mandated services.
- Three percent (3%) of net revenue are DLDs directed towards Alameda County cities and County for paratransit services, as follows:
    - A funding formula based on the percentage of the population over age 70 in each of four planning areas; and
    - Funds can be further allocated within each planning area to the individual cities based on a formula recommended by PAPCO and approved by the Commission.
- One percent (1%) of net Measure BB revenues are administered by the Alameda CTC and directed towards coordinating services across jurisdictional lines or filling gaps in the system to meet the mobility needs of seniors and people with disabilities. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

PROGRAM GOALS

Discretionary grant funding will be focused on mobility management types of activities that improve consumers' ability to access services, improve coordination between programs, and/or address gaps in the transportation system. The Program is designed to complement DLD funding which is dedicated to more traditional trip-provision services (e.g. taxi subsidies, door-to-door services, etc.). Mobility management activities aim to:

- Enhance people's travel options and access to services
- Promote awareness and education
- Effectively communicate/disseminate information to the public
- Improve coordination and partnerships
- Address critical gaps in the transportation system for seniors and people with disabilities
- Encourage seniors and people with disabilities who are able to use fixed-route public transit to do so
- Meet needs cost effectively and efficiently

Capital improvements and equipment purchases are also eligible if directly related to the implementation of mobility management and meet other criteria, e.g. transit stop improvements that support improving access to public transit for seniors and/or people with disabilities.

ACTC_AR3917

PROGRAMMING AND ALLOCATION PRIORITIES

Priority (in no particular order) is given to projects as follows:

1. **Identified in a Countywide or Regional Plan or Assessment:** Identified as a countywide and/or regional priority in a relevant plan or needs assessment such as the Alameda Countywide Transit Plan, Assessment of Mobility Needs of People with Disabilities and Seniors in Alameda County (Alameda County Needs Assessment), MTC Coordinated Public Transit-Human Services Transportation Plan (Coordinated Plan) or other relevant countywide or regional plan or needs assessment.
2. **Multi-jurisdictional Projects:** Identified projects that provide service across jurisdictional boundaries.
3. **Projects that provide critical, same-day accessible transportation service throughout Alameda County.**
4. **Other priorities** as recommended by PAPCO: PAPCO may periodically recommend other Program funding priorities.

ELIGIBLE PROJECTS

- **Mobility Management Type Programs**
  - Travel training
  - Trip planning assistance to improve access
  - One-Call/One-Click type programs
  - Volunteer driver programs
  - Coordination of service provision at the planning area level or countywide (separate from the cost of traditional trip provision, e.g. the administration costs for a planning area-wide program)
  - Transportation programs that fill unique and/or critical needs and gaps that are not filled through traditional trip-provision models

- **Capital Projects/Procurement**
  - Capital improvements and equipment purchases are eligible if directly related to the implementation of a project within an eligible category, including but not limited to:
    - Transit stop improvements that support improving access to public transit for seniors and/or people with disabilities
    - Accessible vehicle and equipment purchase
    - Capital projects to improve accessibility at shuttle stops.

This funding is not intended for ADA-mandated or City-based services that would traditionally be funded through DLD allocations. Sponsors are encouraged to submit programs that will benefit more than one city or otherwise illustrate advancement of coordination and mobility management goals.

Eligible projects must conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.

ACTC_AR3918

Refer to the *Implementation Guidelines for Paratransit Programs* for detailed eligibility requirements and service descriptions here: http://www.alamedactc.org/app_pages/view/19025.

INELIGIBLE PROJECTS

- Projects that do not conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.
- Capital projects, programs, maintenance, or operations that do not directly improve paratransit services.
- Using Program funds to replace/supplant other secured funding.

EVALUATION FRAMEWORK

PAPCO has historically supported projects and programs that:

- Demonstrate effectiveness at meeting mobility management goals
- Project sufficient demand for the program/service/project
- Are ready for implementation
- Provide service across jurisdictional boundaries
- Demonstrate coordination and collaboration with other service providers in their planning area
- Are effective, according to adopted performance measures and past performance (where applicable) or projected performance supported by substantive evidence of potential for success
- Are cost effective
- Leverage funds (including DLD reserves)
- Have been identified as a priority in relevant countywide or regional plans or needs assessments such as the Alameda Countywide Transit Plan, the Alameda County Needs Assessment, or the Coordinated Plan
- Support equitable distribution of resources throughout the County

PROGRAM REQUIREMENTS

Applicants should review requirements in the full CIP guidelines.

Maximum Grant Size
The maximum grant size is $500,000; there is no minimum grant size.

Minimum Matching Requirements
Minimum Matching requirements for applicants are as follows:

- Programs: 12% local match for DLD recipients, and 5% for non-DLD recipients.
- Plans and Studies: 50% local match
- Shuttle and transit operations: 50% local match
- “In-kind” costs are not eligible.

ACTC_AR3919

- Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
- DLD recipients must demonstrate a commitment to using their DLD reserves and new Measure BB DLD funds.
- Matching funds contributed to a project beyond the minimum required level may increase the competitiveness of the application.

Letter(s) of Support

All applicants must work in coordination with other service providers in their planning area. To demonstrate this support:

- Applicants must describe how they are coordinating with local jurisdictions, transit agencies, and non-profit organizations to fill service gaps and complement existing services.
- Non-profit organizations are required to provide a letter(s) of support from a local agency and/or transit provider to confirm service coordination and project support.
- All applicants are encouraged to provide letters from partners to demonstrate community support and coordination.

To establish partnerships, contact information for Measure B and Measure BB recipients of paratransit Direct Local Distribution (DLD) funds can be accessed at http://accessalameda.org/category/cities/.

Monitoring and Performance Measures

- Progress reports will be required every six (6) months illustrating program/project progress and funds spent.
- Applicants must identify program/project goals, deliverables, and performance measures that will be reported on in these progress reports.

RESOURCES

Resources for the CIP call for project nominations, including a link to the online application can be accessed from the Alameda CTC's website at: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3920

This page intentionally left blank.

ACTC_AR3921

SECTION 8
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB AND VEHICLE REGISTRATION FEE
TECHNOLOGY, INNOVATION, AND DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Technology, Innovation, and Development Program includes the discretionary funding primarily from the 2014 Measure BB. However, funds identified for the Vehicle Registration Fee (VRF) Local Technology Program may be made available upon availability, at the discretion of the Alameda CTC, to meet the overall goals of the Technology, Innovation, and Development Program. Projects funded through the program shall support innovative development and application of technologies that enhance the performance of a multimodal transportation system.

The 2014 Measure BB and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding innovative approaches to meet the County's transportation vision, emphasizing the use of new and emerging technologies to better manage the transportation system. Successful models will receive the first priority for funding from this category.

Funds will be distributed periodically by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Increase utilization of non-auto types of transportation or to increase the occupancy of autos with the goal of reducing congestion, air pollution, and greenhouse gas production.
- Reduce transportation-related greenhouse gases through the utilization of a cleaner vehicle fleet including alternative fuels and/or locally produced energy.
- Use demand management strategies designed to reduce congestion, increase use of non-auto transportation, manage existing infrastructure and reduce greenhouse gas emissions.
- Inform consumers of their transportation choices and improve the efficiency or effectiveness of the county's transportation system.

ACTC_AR3922

- Manage parking supply to improve availability and utilization, and to reduce congestion and greenhouse gas production.
- Support environmental mitigation for transportation projects including land banking.

Grant awards will emphasize demonstrations or pilot projects which can leverage other funds.

Vehicle Registration Fee

Measure F, approved by Alameda County in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promotes the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies.

Five percent (5%) of net VRF funds are dedicated to the VRF Local Transportation Technology Program. This program aims to improve the performance of road, transit, pedestrian and bicyclist technology applications, and would accommodate emerging vehicle technologies such as electric and plug-in-hybrid vehicles. On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a Direct Local Distribution (DLD) program to the Alameda CTC. The goal of this policy is to create a reliable source of funding to support ongoing operational requirements and cost incurred by the Alameda CTC for technology related capital investments that benefit traffic corridors in Alameda County such as the "Smart Corridors Program" and other significant countywide technology programs implemented by the Alameda CTC.

PROGRAMMING AND ALLOCATION PRIORITIES

The Technology, Innovation, and Development Program seeks to award projects that contribute significantly to furthering countywide technological advancement and innovation related enhancing the transportation system through new and emerging research, assets, capital investments, applications, and technological based transportation strategies. In general, competitive projects are those that serve more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital projects for infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements program operations, shuttle operations, plans, and studies.

ACTC_AR3923

3. **New and Innovative Approaches**: Priority consideration is given to projects and programs that employ "out-of-the box" approaches to improving the transportation infrastructure and transit services.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the transportation expenditure plans. Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

5. **Increase transit access and ridership**: Priority consideration is given to projects and programs that promote access, use, and connectivity to the transit system and services in Alameda County and throughout the region, by identifying mobility-enhancing practices and technologies that promote multi-modal connectivity, provide transportation options, and improve the transit user's experience.

6. **Asset Innovation and Management**: Priority consideration is given to projects and programs ("projects") that identify innovative and sustainable use of transit vehicles, transit operations, and services including the employment of new technologies or technology-based strategies and partnerships.

7. **Enhance Efficiency of moving people and goods**: Priority consideration is given to projects that create greater mobility and reliability of the transportation system through the application of innovative technologies and practices that create sustainable movement of people and goods that increase economic vitality for the county.

8. **Increase in Safety**: Priority consideration is given to projects that increase safety of the transportation system through safety-enhancing practices, technologies, and programs.

ELIGIBLE PROJECTS

Eligible projects include planning, development, implementation, and maintenance of technology that will best serve Alameda County's transportation goals

Technology, Innovation, and Development Program funds will be available for projects that include, but are not limited to the following:

- Development, installation, operations, monitoring and maintenance of local street and arterial transportation management technology such as the "Smart Corridors Program", traffic signal interconnection, transit and emergency vehicle priority, advanced traffic management systems and advanced traveler information systems
- Infrastructure for alternative vehicle fuels such as electric and plug-in-hybrid vehicle stations

- New or emerging transportation technologies that provide congestion or pollution mitigation
- Technology implementation to improve freight system infrastructure, reliability, and/or to reduce community or environmental impacts related to freight improvements.
- Advanced signal technology for walking and bicycling
- Traveler information systems
- Advanced safety systems including infrastructure improvements that support vehicle-to-vehicle and vehicle-to-infrastructure communication, technologies associated with autonomous vehicles, and other collision avoidance technologies
- Mobile applications that facilitates greater transportation access, car sharing, and user ability (enhanced information availability, connectivity to transit, user experience).
- Advanced public transportation technologies that assist public transportation operators or other shared mobility entities in managing and optimizing public transportation and mobility services. This includes remote fleet monitoring systems, coordinated communication systems, and applications that support transit connectivity, data collection, information sharing, and mobility sharing.

INELIGIBLE PROJECTS

- Projects that do not directly benefit or are inaccessible to the public.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk, pursuant to Government Code Section 14525.3.

ACTC_AR3925

SECTION 9
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
TRANSIT PROGRAM

PROGRAM SUMMARY

The Transit Program includes the combined discretionary funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Express Bus and Transit. This program aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects. The 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee funds shall be expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple investments to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. 0.7 percent (0.7%) of the net revenue collected is dedicated to express bus service projects. The goal of the Express Bus Grant Program is to create, expand, and enhance express bus services, focusing on projects with countywide significance. Measure B funds will be available to fund eligible AC Transit and LAVTA projects only.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects ("projects") that will be funded with the sales tax revenues. 2.24 percent (2.24%) of the net revenue collected is dedicated to funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this funding category.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of

ACTC_AR3926

the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Twenty-five percent (25%) of the VRF funds are dedicated to the VRF Transit for Congestion Relief Program. The goal of the program is to make it easier for drivers to use public transportation, make the existing transportation system more efficient and effective, improve access to schools and jobs, decrease automobile usage and air pollution, and to provide countywide congestion relief.

PROGRAMMING AND ALLOCATION PRIORITIES

The Transit Program seeks to award projects that advance transit related goals identified in the Countywide Transit Plan and as identified in the Measure B, Measure BB, and VRF expenditure plans. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide access to and expansion of transit services. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase transit access and ridership**: Priority consideration is given to transit projects that promote access, use, and connectivity to transit services and the transit system in Alameda County and throughout the region.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the expenditure plans and Countywide Transit Plans (CTP).

5. **Projects aligned with needs established within the Transit Plan**: Priority consideration is given to projects that align with the goals and investment priorities within the Alameda CTC's Transit Plan or similar long-range planning studies.

6. **Reliability of Service Operations**: Priority consideration is given to projects that address regionally significant transit issues and maintain and improve reliability, frequency, and cost effectiveness of operational services.

ACTC_AR3927

7. **Express Bus Services**: Priority consideration is given to Express Bus Services that have countywide significance. In general, projects must service residents from more than one specific area or jurisdiction in Alameda County, or demonstrate how more than one area is served as a result of transit connections that go beyond one planning area.
   Express Bus Service is defined as either:
   a. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone, or
   b. Service that provides a simple route layout, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, signature identification of rapid bus such as color-coded buses, stops, and enhanced stations.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance transit access, convenience, and service operations in Alameda County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

Transit Program funds will be available for projects that include, but are not limited to the following:

- Transit service expansion and preservation to provide congestion relief, such as express bus service in a congested area
- Development and implementation of transit priority treatments on local roadways
- Student transit pass programs identified through the affordable student transit program with models benefiting junior and high school youth riders
- Investments to improve the speed and reliability of transit operations
- Park-and-ride facility improvements
- Increased usage of clean transit vehicles
- Increased usage of low-floor transit vehicles
- Passenger rail station access and capacity improvements
- Routine bus maintenance
- Feasibility or scoping only studies for capital projects
- Safe routes to school operations
- Safety education, enforcement, and promotional programs
- Transit incentive programs (including fare-based)
- Express Bus Services including capital expenses and operations. Ongoing funding for express bus service operations is limited to transit operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

INELIGIBLE PROJECTS

- Routine bus maintenance

ACTC_AR3928

- Funding to replace funds for existing ongoing programs or transit operations
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Ongoing funding service operations is limited to operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

ACTC_AR3929

SECTION 10
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B
TRANSIT CENTER DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Transit Center Development Program (TCD) aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects.

Transit Center Developments refers to priority development areas (PDAs), transit villages, or transit-oriented designs, a mixed-use residential or commercial area designed to maximize access to public transportation. The California Department of Transportation defines TCD or Transit Oriented Development (TOD) as "moderate to higher density development, located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping opportunities designed for pedestrians without excluding the auto. TOD can be new construction or redevelopment of one or more buildings whose design and orientation facilitates transit use." The 2000 Measure B funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple projects to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Approximately 0.19 percent (0.19%) of the net revenue collected is dedicated to the TCD Program. The goal of the TCD Program is to encourage transportation development near transit centers to facilitate and support the growth of transit-oriented developments.

PROGRAMMING AND ALLOCATION PRIORITIES

The TCD Program seeks to award projects that advance TOD projects, and as identified in the 2000 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to facilitating residential and retail development near transit centers, and PDAs. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Support for Transit Oriented Developments or Priority Development Areas**: Priority consideration is given to activities that promote access, use and connectivity of transportation infrastructure that provides direct access to mixed use developments and housing near major transit facilitates in Alameda County.

2. **Consistent with the Expenditure Plan**: Priority consideration is given to projects that encourage the development of transit centers per the expenditure plan.

3. **Technical Assistance Program**: Priority consideration is given to a technical assistance program administered by the Alameda CTC, known as the Sustainable Communities Technical Assistance Program (SC-TAP), which supports jurisdictions in their technical planning efforts to complete studies and plans in a variety of topics that help advance TOD projects.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance the development of transit centers and transit-oriented communities in Alameda County. The program goal is to fund projects that will best serve the County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

TCD Program funds will be available for projects that include, but are not limited to the following:

- Capital infrastructure projects that support access to and from transit villages
- PDA planning and implementation of projects
- Studies and plans, including technical assistance programs that address multimodal access and complete streets implementation, streetscape and urban design work, and implementation of transit communities, priority development areas, and the associated components
- Consultant services (through a technical assistance program) to complete specific planning, environmental review, and project development tasks

INELIGIBLE PROJECTS

- Project activities that do not support the development or implementation of transit-oriented developments or to priority development areas

ACTC_AR3931

SECTION 11
PROGRAMMING/ALLOCATION GUIDELINES FOR
TRANSPORTATION FUND FOR CLEAN AIR (TFCA)
COUNTY PROGRAM MANAGER FUND (40%) PROGRAM

PROGRAM SUMMARY

The Transportation Fund for Clean Air (TFCA) County Program Manager Fund (40%) Program is funding made available by the Bay Area Air Quality Management District (Air District) from revenue that is generated by a regional four-dollar ($4.00) vehicle registration fee. TFCA funded projects are to result in the reduction of motor vehicle emissions and achieve "surplus" emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations. Projects typically funded with TFCA include shuttles, bicycle lanes and lockers, signal timing and vehicle trip reduction programs.

Of the total TFCA revenue collected annually by the Air District for this program, 40% is returned to the county in which it was collected. As the designated TFCA Administering Agency for Alameda County, the Alameda CTC is responsible for annually programming these funds. TFCA funds shall be expended in accordance with the requirements of the Air District's current TFCA CPM Policies, the Air District's adopted county expenditure plans and the provisions set forth in the annual TFCA 40% Master Funding Agreement between the Alameda CTC and the Air District.

FUND SOURCE

Transportation Fund for Clean Air
Pursuant to the 1988 California Clean Air Act, the Air District is required to periodically adopt a Clean Air Plan (CAP), which describes how the region will work toward compliance with State and federal ambient air quality standards and make progress on climate protection. To reduce emissions from motor vehicles, the CAP includes transportation control measures (TCMs) and mobile source measures (MSMs). A TCM is defined as any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions. MSMs encourage the retirement of older, more polluting vehicles and the introduction of newer, less polluting motor vehicle technologies.

To fund the implementation of TCMs and MSMs, the State Legislature, through AB 434 (Sher; Statutes of 1991) and AB 414 (Sher, Statutes of 1995), authorized the Air District to collect a fee of up to four dollars ($4) per vehicle per year, for reducing air pollution from motor vehicles and for related planning and programs. This legislation requires the Air District to allocate 40 percent (40%) of the revenue to an overall administering agency in each county. The overall administering agency

must be designated by resolutions adopted by the county board of supervisors and the city councils of a majority of the cities representing a majority of the population.

AB 414 references the trip reduction requirements in the Congestion Management Program (CMP) legislation and states that Congestion Management Agencies (CMAs) in the Bay Area that are designated as AB 434 program managers (administering agencies) "shall ensure that those funds are expended as part of an overall program for improving air quality and for the purposes of this chapter (the CMP Statute)." The Air District has interpreted this language to allow a wide variety of transportation control measures as eligible for TFCA 40% funding, including an expansion of eligible transit, rail and ferry projects.

AB 414 also adds a requirement that designated county administering agencies adopt criteria for the expenditure of the county subventions and to review the expenditure of the funds. The content of the criteria and the review were not specified in the bill. However, the Air District has specified that any criteria used by an administering agency must allocate TFCA funding to projects that are: 1) eligible under the law, 2) reduce motor vehicle emissions, 3) implement the relevant TCMs and/or MSMs in the Air District's most recently approved CAP, and 4) are not planning or technical studies.

PROGRAMMING AND ALLOCATION PRIORITIES

The Air District annually adopts policies for the TFCA CPM Fund. The current Air District TFCA 40% Policies further define eligible projects and establish criteria for calculating emissions reductions (i.e., TFCA cost-effectiveness). Projects that are authorized by HSC Section 44241 and achieve TFCA cost-effectiveness, but do not fully meet the Air District's current TFCA CPM policies are subject to Air District approval on a case-by-case basis.

Only projects that result in the reduction of motor vehicle emissions are eligible for TFCA funding. Projects must achieve surplus emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations at the time of the execution of a project-specific fund transfer agreement between the Alameda CTC and the Project Sponsor.

General Program Structure

As the designated administering agency for Alameda County, the Alameda CTC is allocated 40 percent (40%) of the funds collected in Alameda County for this program. The Air District advances these funds to the Alameda CTC in semi-annual installments each fiscal year. The Alameda CTC must fully program the TFCA revenue received each year within the Air District's allowable time period. Any unallocated funds may be reallocated by the Air District. The Alameda CTC prepares an annual TFCA 40% Fund Estimate, as follows:

- A maximum of 6.25 percent (6.25%) of the annual revenue are used directly by the Alameda CTC for program administration.
- The remaining 93.75 percent (93.75%) of funds are distributed as follows:
    - 70 percent (70%) of funds to population-based shares for the cities and County:

ACTC_AR3933

- A minimum of $10,000 to each jurisdiction.
- City population is updated annually based on the State Department of Finance (DOF) estimates.
- The Alameda CTC may choose to roll over a city or the county's annual 70 percent (70%) allocation for programming in a future year.
- The Alameda CTC may also borrow against the rolled over allocations in order to annually program all available revenues.
- Unused funds from cancelled or completed projects are returned to the Project Sponsor's share of the fund estimate and are available for reprogramming in a future cycle.
- The Alameda CTC may also program against future TFCA revenue for projects that are larger than the annual funds available.

o The remaining 30 percent (30%) of funds are to be programmed to transit-related projects on a discretionary basis:

- Projects competing for the 30 percent (30%) discretionary funds will be evaluated based on the total emissions reductions projected as a result of the project.
- Project prioritization may consider the TFCA cost-effectiveness evaluation, the emissions reductions per total project dollar invested for the project and the matching funds provided by the Project Sponsor.
- Unused funds from cancelled or completed transit discretionary projects are returned to the 30 percent (30%) share of the fund estimate for reprogramming in a future cycle.
- The Alameda CTC may also program against future TFCA revenue for transit-related projects that are larger than the annual funds available.

ELIGIBLE PROJECTS

Consistent with the project types authorized under the California Health and Safety Code (HSC) Section 44241, projects eligible for TFCA funds include:

- Implementation of rideshare programs;
- Purchase or lease of clean fuel buses for school districts and transit operators;
- Provision of local feeder bus or shuttle service to rail and ferry stations and to airports;
- Implementation and updating of local arterial traffic management, including, but not limited to, signal timing, transit signal preemption, bus stop relocation and "smart streets";
    - As of 2023, in order to be eligible, signal timing/coordination projects require case-by-case approval by the Air District Board
- Implementation of rail-bus integration and regional transit information systems;
- Implementation of demonstration projects in telecommuting and in congestion pricing of highways, bridges and public transit;

ACTC_AR3934

- Implementation of vehicle-based projects to reduce mobile source emissions, including, but not limited to zero-emission vehicles and fueling infrastructure, and advanced technology demonstrations;
- Implementation of smoking vehicles program;
- Implementation of an automobile buy-back scrappage program operated by a governmental agency;
- Implementation of bicycle facility projects that are included in an adopted countywide bicycle plan or congestion management program; and
- Design and construction of physical improvements that support shifts to alternative transportation modes that achieve motor vehicle emission reductions. The projects and the physical improvements shall be identified in an approved area-specific plan, redevelopment plan, general plan, or other similar plan.

INELIGIBLE PROJECTS

TFCA funds may not be used for:

- Planning activities that are not directly related to the implementation of a specific project;
- Routine maintenance;
- The purchase of personal computing equipment for an individual's home use;
- Projects that provide a direct or indirect financial transit or rideshare subsidy or shuttle/feeder bus service exclusively for the grantee's employees; or
- Costs of developing TFCA grant applications or fulfilling TFCA grant administration activities such as review and execution of funding agreements, preparation of requests for reimbursement and reporting.

OTHER REQUIREMENTS

TFCA Cost Effectiveness

The Air District requires the evaluation of projects proposed for and completed with TFCA funding for TFCA cost-effectiveness. The Alameda CTC will measure cost-effectiveness based on the ratio of the TFCA cost divided by the sum total tons of emissions (reactive organic gases (ROG), oxides of nitrogen (NOx), and weighted particulate matter ten microns in diameter and smaller "PM10") that are estimated to be reduced by the project. For the purpose of calculating the TFCA cost-effectiveness, the TFCA project cost is the sum of the requested TFCA CPM Funds and any secured TFCA Regional Funds. Air District-generated forms are used to calculate a cost effectiveness result of $ TFCA/ton. The Alameda CTC will only approve projects with a TFCA cost effectiveness, on an individual project basis, that is equal to or less than: 1) the thresholds of TFCA funds per ton of total ROG, NOx and weighted PM10 emissions reduced ($/ton) by project type, as identified in the current Air District Board-adopted TFCA policies. Project Sponsors are required to provide the Alameda CTC with the data necessary to evaluate projects for TFCA cost-effectiveness. This may

ACTC_AR3935

include, but is not limited to, transit ridership, bicycle counts, verifiable survey data, vehicle data and results and/or data from comparable projects.

Attributes of Cost-Effective TFCA Projects

The following list includes the project attributes typically associated with successful candidate projects for TFCA funding:

- Project purchases or provides service using best available technology or cleanest vehicle (e.g., achieves significant petroleum reduction, utilizes vehicles that have newer engines, is not a Family Emission Limit (FEL) engine (per vehicle's CARB-issued Executive Order), and/or have zero tailpipe emissions).
- Project is delivered or placed into service well in advance of regulatory changes (e.g., lower engine emission standards).
- A relatively low amount of TFCA funds is requested; Grantee provides significant matching funds.
- Capital bike projects that are new facilities (not upgrades) and close a gap in existing lanes or increase the number of existing racks/lockers.
- For vehicle trip reduction projects (e.g., shuttle/feeder bus service and ridesharing projects):
    - Project provides service to relatively large percent of riders/participants that otherwise would have driven alone over a long distance.
    - Project provides "first and last mile" connection to between employers and transit.
    - Service travels relatively short distances between start and end point/ and has relatively low mileage and a minimal amount of non-service miles. Shuttle operates on a route (service and non-service miles) that is relatively short in distance.
- For vehicle-based projects:
    - Vehicle has high operational use, annual mileage, and/or fuel consumption (e.g., taxis, transit fleets, and utility vehicles).
- Capital projects for trip reduction:
    - Pre- and post-project counts demonstrate high usage and a potential to affect mode or behavior shift that reduces emissions.
    - Project demonstrates a strong potential to reduce motor vehicle trips by significantly improving mobility via walking, bicycling, and improving transit.
    - Project is located along high-volume transit corridors and/or is near major activity centers such as school's employment, transit, civic or retail.

TFCA Expenditure Period

TFCA funding is subject to a TFCA expenditure period. In general, the Air District TFCA 40% Policies allow for a two-year expenditure period unless a longer expenditure period is established at the time of programming. For projects that provide a service, such as ridesharing programs and shuttle/feeder bus projects, the TFCA grant period is limited to not more than two (2) years for operations, except for bike share (Bay Area Bike Share) projects, which have a TFCA grant period of up to five (5) years. In order for shuttle and program operations projects to receive TFCA funding in

subsequent funding cycles, they must be re-evaluated for TFCA cost effectiveness with each application based on the most current project data. The Alameda CTC may approve no more than two one-year extensions to the TFCA expenditure period. Subsequent extensions may be granted on a case-by-case basis by both Alameda CTC and Air District staff.

ACTC_AR3937

SECTION 12
PROGRAMMING/ALLOCATION GUIDELINES FOR
STP/CMAQ FUNDS
ONE BAY AREA GRANT (OBAG) PROGRAM

PROGRAM SUMMARY

The One Bay Area Grant Program (OBAG) is a federal funding program designed to support the implementation of Plan Bay Area, the region's first Sustainable Communities Strategy (SCS). The OBAG program continues to integrate the region's federal transportation program with California's climate statutes and the SCS, and contributes to the implementation of the goals and objectives of the Regional Transportation Plan.

Overall, the OBAG Program goals include:

- Support the SCS by linking transportation dollars to land use decisions,
- Target transportation investments to support Priority Development Areas (PDAs), and
- Further county's PDA Investment and Growth Strategy.

MTC develops a new framework and guidelines for each OBAG cycle. These include program priorities and policies, selection criteria, revenue estimates, project categories, and county programming policies and deadlines. Refer to MTC's website for more OBAG information: https://mtc.ca.gov/funding/federal-funding/federal-highway-administration-fhwa-grants

To date, MTC has completed three OBAG programming cycles:

- OBAG Cycle 1: MTC Resolution 4035
- OBAG Cycle 2: MTC Resolution 4202
- OBAG Cycle 3: MTC Resolution 4505

FUND SOURCES

OBAG funding is based on anticipated future federal apportionments of Surface Transportation Block Grant Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) funding. The STP and CMAQ programs are the primary discretionary federal funding sources distributed to regions for transportation and can fund a variety of project types, including public transit, bicycle and pedestrian and local road and highway projects.

Additional information related to the Alameda CTC's nominating of Alameda County projects for federal OBAG funds is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR3938

This page intentionally left blank.

SECTION 13
PROGRAMMING/ALLOCATION GUIDELINES FOR STATE TRANSIT ASSISTANCE COUNTY BLOCK GRANT PROGRAM

PROGRAM SUMMARY

State Transit Assistance (STA) funds are generated by the sales tax on diesel fuel and may be used by eligible transit operators for capital or operating purposes. The STA Population-based funds MTC receives are based on the region's share of the state population. Through MTC Resolution 4321, first adopted in 2018, MTC established a policy for the programming and allocation of these funds with the creation of a STA County Block Grant Program, through which 70 percent of the funds are directed to the nine Bay Area County Transportation Agencies (CTAs), to determine how to invest the funds in public transit services/projects for their respective counties. The remaining 30 percent is programmed directly by MTC.

MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program: small and north county operator minimum shares, mobility management program requirements, MTC approval for STA fund exchanges, coordinated claim process, submission deadline, performance measures, and annual reporting requirements.

CTAs are to adopt a county-level framework for how STA County Block Grant funding is to be distributed to the eligible transit operators within their respective counties. The distribution of Alameda County's share of STA County Block Grant funds is reviewed by the Alameda CTC Commission every two years.

The Alameda County STA Block Grant formula for FYs 2023-24 and 2024-25 was adopted by the Commission in April 2023. The program formula is scheduled to be reviewed in Spring 2025.

ACTC_AR3940

This page intentionally left blank.

ACTC_AR3941

SECTION 14
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSPORTATION IMPROVEMENT PROGRAM

PROGRAM SUMMARY

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. The STIP is composed of two sub-elements: 75 percent of STIP funds go toward the Regional Transportation Improvement Program (RTIP) and 25 percent go to the Interregional Transportation Improvement Program (ITIP).

Alameda CTC adopts and forwards a program of RTIP projects to the Metropolitan Transportation Commission (MTC) for each STIP cycle. As the Regional Transportation Planning Agency for the nine-county Bay Area, MTC is responsible for developing the regional priorities for the RTIP. MTC approves the region's RTIP and submits it to the California Transportation Commission for inclusion in the STIP. The California Department of Transportation is responsible for developing the ITIP.

Principles for the Development of the Alameda County 2024 STIP Project List
(*approved September 28, 2023)*

- It is anticipated that any new funding programmed in the 2024 STIP will be made available in FYs 2027-28 and/or 2028-29.
- Previously-approved commitments for STIP programming, included in the attached list, will be considered during the development of the 2024 STIP project list.
- Sponsors of currently programmed projects will be required to provide updated project scope, status, schedule, cost and funding information.
- Any project considered for funding must be consistent with the Countywide Transportation Plan and satisfy all STIP programming requirements.
- Projects recommended for STIP funding must demonstrate readiness to meet applicable STIP programming, allocation and delivery requirements and deadlines.
- Consideration of the following are proposed for the required project prioritization for the development of the 2024 STIP project list:
    - The principles and objectives set forth in the Alameda CTC Comprehensive Investment Plan;
    - Previous commitments for STIP programming approved by the Alameda CTC;
    - Projects that can leverage funds from other SB1 programs
    - The degree to which a proposed project, or other activity intended to be funded by transportation funding programmed by the Alameda CTC, achieves or

ACTC_AR3942

advances the goals and objectives included in the Countywide Transportation Plan;

- The degree to which a proposed project has viable project implementation strategies that are based on current project-specific project delivery information provided by applicants, including:
  - Readiness for the current/requested project delivery phase;
  - The status of environmental clearance, including federal National Environmental Policy Act (NEPA).
  - The project cost/funding plan by phase, including demonstration of a complete funding plan for the phase for which STIP funding is requested;
  - The potential for phasing of initial segment(s) which are fully-funded and provide independent benefit; and
  - Potential impediments, i.e. risks, to successful project implementation in accordance with the proposed project delivery schedule

ACTC_AR3943

SECTION 15
PROGRAMMING/ALLOCATION GUIDELINES FOR
REGIONAL MEASURE 3 PROGRAM

PROGRAM SUMMARY

To help solve the Bay Area's growing congestion problems, the Metropolitan Transportation Commission (MTC) worked with the state Legislature to authorize a ballot measure that would finance a comprehensive suite of highway and transit improvements through an increase tolls on the region's seven state-owned toll bridges. Senate Bill 595 (authored by Sen. Jim Beall of San Jose) was passed by the Legislature and signed into law by Gov. Brown in fall 2017.

Toll revenues will be used to finance a $4.45 billion slate of highway and transit improvements in the toll bridge corridors and their approach routes.

Major projects in the RM 3 expenditure plan include new BART cars to accommodate growing ridership; extending BART's Silicon Valley service to Santa Clara; extending Caltrain to downtown San Francisco; expanding S.F. Muni's transit vehicle fleet; more frequent transbay bus service; interchange improvements in Alameda, Contra Costa and Solano counties; an expanded express lane network; expanded ferry service; a direct freeway connector from northbound U.S. 101 in Marin County to the Richmond-San Rafael Bridge; upgrades to relieve congestion in the Dumbarton Bridge corridor; improving State Route 37; extending the new SMART rail system to Windsor and Healdsburg and much more.

Voter approval of RM 3 raised tolls on the region's state-owned toll bridges by $1 beginning Jan. 1, 2019. Tolls will rise by another $1 in January 2022 with another $1 increase in January 2025. The 2019 increase marked the first toll hike on the seven state-owned bridges since 2010.

ACTC_AR3947

POLICY 1: PROCEDURES FOR PROGRAMMING AND ALLOCATIONS

POLICY: The Alameda County Transportation Commission (Alameda CTC) has programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard procedures set forth herein.

Programmed funds in the Comprehensive Investment Plan (CIP) represent a commitment of funds to a Project Sponsor. Programmed funds are not available for expenditure unless and until Alameda CTC approves an allocation of the programmed amount. Only after allocation can funds be encumbered through funding agreements between Alameda CTC and the Project Sponsor, or for Alameda CTC-sponsored projects through contracts for costs to be incurred directly by Alameda CTC.

PURPOSE: Alameda CTC makes programming recommendations for the Alameda County shares of certain local, regional, state and federal funds. The purpose of this policy is to establish standard definitions and procedures by which Alameda CTC exercises its programming and allocation authority. The programming and allocation procedures for each of the fund sources within the purview of Alameda CTC are consolidated through the CIP to standardize the programming and allocation process to the extent practical for such fund sources, while maintaining compliance with the requirements for individual fund sources.

GUIDELINES: Programmed funds are adopted into the applicable programming document by the governing board of the agency or Commission with statutory authority for the administration of the fund program.

Alameda CTC administers the following local, voter-approved funding programs:

- The 1986 Measure B Program;
- The 2000 Measure B Program;
- The 2010 Vehicle Registration Fee Program; and
- The 2014 Measure BB Program.

The commitments from the local, voter-approved funding programs are established in the expenditure plans included in the ballot measure language for each program. The 1986 Measure B, 2000 Measure B, 2010 Vehicle Registration Fee and the 2014 Measure BB expenditure plans each include a set of commitments to fund the programs and projects listed in the plan. The Strategic Plan prepared for each of the individual funding programs confirms the funding commitments, allocated amounts, and the plan for future allocations. The Strategic Plan also functions to guide programming and

ACTC_AR3948

allocation for the individual fund sources to priority transportation investments based on a set of guiding principles.

Alameda CTC also administers the programming and allocation process for the Transportation Fund for Clean Air (TFCA) County Program Manager Fund in compliance with the requirements of the Bay Area Air Quality Management District (BAAQMD), which delegates the programming and allocation administration to Alameda CTC.

Alameda CTC also makes programming and allocation recommendations for other fund sources such as the State Transportation Improvement Program (STIP), Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) Program (through One Bay Area Grant program), and other funds as they become available to Alameda County, that are contingent upon final approval by the respective governing boards of the agencies with programming authority e.g., Metropolitan Transportation Commission (MTC) and/or California Transportation Commission (CTC).

By definition, programmed amounts for a given project represents the amount committed to the project, subject to allocation. An allocated amount represents the amount available for encumbrance through project funding agreements and/or contracts directly with Alameda CTC. Funds encumbered through project funding agreements and/or contracts are available for reimbursement of eligible project costs. These definitions are expanded with specific procedural considerations below:

- *Commitment Amount:* The Expenditure Plan contains the commitment amount of funds for the local, voter-approved funding programs administered by Alameda CTC. Commitment Amounts for the local, voter-approved funding programs are confirmed in the Strategic Plan appendices to the CIP.

- *Programmed Amount:* The CIP serves as the programming document for the fund sources administered by Alameda CTC.

    - Programmed Amounts approved in the CIP for the local, voter-approved funding programs are based on the Commitment Amounts and the requirements included in the Expenditure Plan for the specific funding program.

    - Programmed Amounts approved in the CIP for the TFCA County Program Manger Fund are based on the programming and allocation process administered by Alameda CTC in accordance with BAAQMD requirements.

ACTC_AR3949

- Programmed Amounts shown in the CIP for fund sources not directly administered by the Alameda CTC may be included for informational purposes to reflect the current programming information available from the agency with the statutory programming authority for the fund source.

- Programmed Amounts are typically approved for a specific project phase in a specific fiscal year. Funds programmed in specific fiscal years are required to be allocated by the end of the fiscal year in which the funds are programmed. Changes to Programmed Amounts require amendments to the CIP.

- *Allocated Amount:* The CIP five-year programming window includes a two-year allocation plan (i.e., the first two years of the five-year window). The CIP Allocation Plan shows the Allocation Amounts approved by Alameda CTC for the funds administered by Alameda CTC and anticipated allocations to be approved by other agencies.

    - Allocated Amounts shown in the CIP for the local, voter-approved funding programs are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action).

    - Allocated Amounts shown in the CIP for the TFCA County Program Manager Fund are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action, or if the Allocated Amount shown is dependent on a future programming approval).

<u>Request for Allocation Process</u>

Requests for allocation package may consists of a funding application in the form of a CIP funding application or a specific request for allocation for a named project in the Transportation Expenditure Plans. The amount of funding available for allocation to a given project, or project phase, is limited by the Programmed Amount for the project, or project phase, at the time of the allocation request.

Requests for any allocations for Alameda CTC-administered funds should be submitted to Alameda CTC at least 60 days prior to the Alameda CTC meeting at which the Project Sponsor requests the allocation to be approved, or the meeting at which the CIP will be approved. The request for allocation package shall be in a format provided by Alameda CTC or a format that at minimum

ACTC_AR3950

includes details about the program or project scope, cost, funding and schedule detailed by phase. The request package shall reflect total cost and funding amounts based on progress to date at the time of the request.

Requests for allocations received by Alameda CTC will be considered in the context of the CIP in effect at the time of the request. Alameda CTC reviews allocation requests to confirm items such as financial viability, project delivery readiness, funding availability to reimburse eligible project costs. If conditions warrant a review of the assumptions used for the most recent overall financial analysis, an updated overall financial analysis may be required to determine whether or not the requested allocation would have an adverse impact on commitments of funds to other projects.

Allocations, or modifications to allocations, are approved by Alameda CTC based on staff recommendations and allocation requests submitted by Project Sponsors typically through the annual/biennial CIP programming and allocation processes.

Allocated Amounts approved by Alameda CTC must be encumbered in funding agreements with Project Sponsors or in contracts for project costs incurred directly by Alameda CTC, in accordance with the CIP's policy for Timely Use of Funds Allocated by the Commission.

Allocation Considerations for Partially Fund Projects and Right-of-Way Phases

Funding allocations for phases beyond the environmental phase are considered at increased risk if a Project Sponsor has not identified or secured funding for all phases to complete the project funding plan.

Prior to making an allocation to a project with a known funding shortfall, Alameda CTC will perform risk analytics on the request funding and the project prior to making such allocation recommendation to the Commission. In this risk assessment, Alameda CTC will consider the project's and Project Sponsor's potential to use Alameda CTC funds to leverage and secure prospective funding from federal, State, regional, and local sources outside of Alameda CTC's purview, and the project's viability to be completed in a timely manner.

Right-of -Way Allocations shall be limited to projects that have a complete and viable project funding and delivery plan as assessed for firm funding commitments/partners and tangible plan to address identified project deliverability issues.

ACTC_AR3951

Right-of-Away Allocations to projects that contain funding shortfalls, uncertain project funding plans, and/or potential issues in project delivery are considered high risk, and will only be considered under very rare circumstances. Such right-of-way allocations must have an agreed understanding on how the Project Sponsor shall return the right-way-allocation to Alameda CTC for a project that has not in a entered into the construction phase, and/or for a project that is not completed in an established timeframe.

The agreed upon terms, including methods of repayment in arrears, shall be included with the Request for Allocation package submitted to Alameda CTC for consideration, will be subsequently be the basis for a fund agreement between Alameda CTC and the Project Sponsor.

Changes to Approved Allocations

A request to increase or decrease an Allocation Amount requires a written request by the Project Sponsor.

- *Increasing Allocations*: Request for an increase to an allocation is on a case-by-case basis for extraordinary circumstances, and subject to Commission approval. To increase the total amount of an allocation there must be sufficient capacity in the committed amounts for voter-approved expenditure named projects, programming/funding capacity, and reasonable justification for increasing the allocation amount.

- *Decreasing Allocations*: For projects named in the voter-approved Expenditure Plans, a reduction to an Allocated Amount will be credited back to the project for future reallocation to the project. Periodically through the CIP, Alameda CTC will deallocate unused funds related to project cost savings, fund rescissions, or inactive/infeasible project delivery.

- *Shifting Allocations Between Phases*: Funds allocated to a project by Alameda CTC may be shifted between the approved allocations are considered on a case-by-case basis. Requests for shifting allocated funds shall include updated project information that reflects the requested shift and allows for a before-and-after comparison of the project implementation plan. Funding shortfalls in the current or subsequent phases, which result from a requested shift of allocated funds shall be considered an adverse impact to implementation.

  Requests for shifting funds between allocations which do not change the total amount allocated to the project from an individual funding

ACTC_AR3952

program, e.g. Measure B, Measure BB or VRF, may be approved by the Executive Director, or a designee of the Executive Director, if the shift will not adversely impact the implementation of the project. Any requests for shifting funds between project phases that results in the amount changed the allocation amount from an individual funding program, e.g. Measure B, Measure BB or VRF, shall require consideration and approval by the Commission.

Effective Date of Reimbursable Costs

The effective date of reimbursable costs is generally based on the start of the fiscal year in which the allocated funds are identified in the CIP. The amounts shown in the first two fiscal years of the CIP for fund sources allocated by Alameda CTC shall be considered allocated in the fiscal year shown for the phase(s) of the project indicated upon approval of the CIP (if not already approved by Alameda CTC through a separate action).

For allocations made through a separate Commission Action, the effective date of reimbursable cost shall be the date of the Commission's approval, unless otherwise stated in the approved allocation request.

Funds administered by agencies other than Alameda CTC, such as the CTC, MTC, or the Federal Highway Administration (FHWA), must be approved by the agency that administers the particular fund source prior to being available for reimbursable costs.

Retroactive Allocations

Generally, funds are allocated for cost to be incurred after the allocation is approved by the Commission. On a case-by-case basis, Alameda CTC may consider identify a retroactive allocation to allow the eligible date of reimbursable cost incurred to be prior to the allocation date.

Approval of retroactive allocations shall be based in large part on which fund sources were used to reimburse the costs originally, and to what purpose, if any, the freed up funding will be committed. There are also certain requirements related to the procurement process and methodology for contracts funded wholly, or in part, by voter-approved funds. Any costs intended for the retroactive allocation for contracts that do not comply with the goal setting requirements set forth in Alameda CTC's Local Business Contract Equity Program (LCBE) must be identified in the Request for Allocation package and determined eligible for Measure BB funding. If a retroactive allocation of Measure BB funds is approved to cover contract costs in arrears, the reporting requirements set forth in the LBCE Program shall apply to the entire contract from inception to date.

ACTC_AR3953

POLICY 2: ENVIRONMENTAL APPROVAL AND FULL FUNDING FOR MEASURE B/MEASURE BB FUNDED CAPITAL PROJECTS DEADLINE

POLICY: Capital projects funded wholly, or in part, by Measure B and/or Measure BB shall receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements as required by the Expenditure Plan for each measure.

- For the 2000 Measure B, there are no projects remaining that are subject to this policy as deadlines occurred in previous years.
- For the 2014 Measure BB, named projects must receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements by December 31, 2022. Project Sponsors may appeal to Alameda CTC for one-year time extensions.

PURPOSE: To ensure that the projects included in the 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans can be completed in a timely manner, and to provide a process by which Project Sponsors may appeal to Alameda CTC for one-year time extensions. The intent is to require continued due diligence by the Project Sponsor to secure environmental clearance approvals and a full funding plan.

GUIDELINES: The 2000 Measure B Transportation Expenditure Plan (2000 TEP) and the 2014 Measure BB Transportation Expenditure Plan (2014 TEP) both contain provisions for projects which cannot clear the Environmental Approval process, or cannot do so in a timely manner. There are no remaining 2000 Measure B capital projects subject to the environmental clearance approval or full funding policy.

The 2014 TEP establishes a deadline for environmental clearance approval and a full funding plan for each capital project that receives Measure BB capital funding. Environmental clearance approval is defined as the issuance of a Categorical Exclusion (CE), a Finding of No Significant Impact (FONSI) or the filing of the Record of Decision (ROD) for National Environmental Policy Act documents and the Notice of Determination or Notice of Exemption for California Environmental Quality Act documents. A full funding plan is defined as a plan containing a reliable cost estimate and sufficient funding identified to cover the estimated costs. The 2014 Measure BB deadline is December 31, 2022; however, the 2014 TEP includes provisions for one-year extensions to the deadline, if approved by Alameda CTC.

POLICY 3: TIMELY USE OF FUNDS POLICIES – ALLOCATIONS AND FUNDING AGREEMENTS

POLICY: Allocations shall be encumbered in a funding agreement between Alameda CTC and the recipient agency incurring the reimbursable costs, or in a contract for costs

ACTC_AR3954

incurred directly by Alameda CTC, within twelve (12) months from the date the allocation is approved by the Commission.

Allocated funds not encumbered by the deadlines established in this policy are subject to rescission and reprogramming at the discretion of Alameda CTC.

PURPOSE: To ensure that funding allocated and distributed by Alameda CTC is expended expeditiously to implement the improvements and services for which the allocations and distributions were approved.

GUIDELINES: Alameda CTC's allocation recommendations and approvals are based on a Project Sponsor's Request for Allocation package/funding application that contain a specific scope, cost, and schedule. This policy requires Project Sponsors to encumber allocated funds through an executed project funding agreement or contract within twelve (12) months of an approved allocation to ensure accountability and consistency with the Project Sponsor's allocation request. For Measure BB Named Capital Project allocations are to be encumbered as soon as possible, within six (6) months of the approved allocation, if not earlier.

The project fund agreement(s) between Alameda CTC and the recipient agency outlines the agreed upon reimbursable costs, budget, scope, and schedule. Once an agreement is executed, Project Sponsors are expected to begin work on an allocation phase based on the delivery guidelines below, or per the schedule contained in the executed project funding agreement.

Project Phase	Maximum Expenditure Timeline
Planning/Scoping	• Activity must be complete within twenty-four (24) months from the date of allocation.
Preliminary Engineering / Environmental	• Activity must be complete within twenty-four (24) months from the date of allocation.
PS&E (Final Design)	• Activity must be complete within twenty-four (24) months from the date of allocation.
Construction	• Activity must be complete within twenty-four (36) months from the date of allocation.

Requests for Time-Extension

Project Sponsors may request time extension(s) to funding related deadlines established by policy, deadlines required at the time of allocation, or expiration dates established in funding agreements. Project Sponsors are limited to only a single time-extension of up to thirty-six (36) months that is required to be approved by the Commission.

ACTC_AR3955

Such requests for extensions shall be submitted in writing to Alameda CTC at least ninety (90) days prior to the deadline for which an extension is being requested and at least forty-five (45) days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval.

The request for time-extension package submitted to Alameda CTC shall include a detailed explanation of the conditions or circumstances that have changed since the deadline was established, and the corresponding impact to the remainder of the project implementation schedule if the extension is approved. Extensions to delivery deadlines established in funding agreements shall be submitted, reviewed, and approved in accordance with the provisions set forth in the funding agreement. Additional requests for time-extensions will only be considered for rare and extraordinary circumstances.

Fund Rescission/Reprogramming

Allocated funds not encumbered into a funding agreement by the deadlines established in this policy or used in the manner inconsistent with these guidelines are subject to rescission and reprogramming at the discretion of Alameda CTC. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds.

If funding awards are withdrawn, the corresponding projects and allocations may be reprogrammed to a future year of the CIP, or deprogrammed from the CIP. Project sponsors who failed meet the timely use of funds deadlines may be penalized in their consideration for the next programming and allocation cycle.

POLICY 4: ELIGIBLE COSTS FOR REIMBURSEMENT

POLICY: Program and project costs to be reimbursed by Alameda CTC shall be segregated into project phases to correlate with the encumbrance(s) from which reimbursement is requested. Funds shall be encumbered in a funding agreement between Alameda CTC and either the Project Sponsor or, if different from the sponsor, the implementing agency which incurs the reimbursable costs, or in a contract with Alameda CTC for project costs incurred directly by Alameda CTC.

For Alameda CTC implemented projects, eligible staff and other direct costs incurred directly by Alameda CTC shall be considered encumbered when they are included in the annual budget adopted by the Commission. Costs submitted for reimbursement shall be limited to activities, materials and services directly related to the implementation of the scope of the project for which the funds were allocated and subsequently encumbered in a funding agreement. Eligible costs shall be incurred in accordance with the provisions set forth herein or be at risk of being determined ineligible for reimbursement by Alameda CTC.

ACTC_AR3956

PURPOSE: To limit the expenditures of funding administered by Alameda CTC to the reimbursement of eligible project costs and to provide general guidance to implementing agencies which incur the reimbursable costs.

GUIDELINES: Alameda CTC approves reimbursements of eligible project costs based on requests for reimbursements submitted by the Project Sponsors or implementing agencies which incur the reimbursable costs. The requirements for the requests for reimbursement are included in the project funding agreements between Alameda CTC and the recipient agency. In general, the request for reimbursements must identify the total costs by phase, be consistent with the agreed upon eligible costs, and segregate costs between Alameda CTC's and the Project Sponsor's cost sharing arrangement as described in the project funding agreement.

The following describes the eligible costs for specific phases:

Project Phase	Eligible Costs Requirements
Planning/Scoping	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare a well-developed project delivery plan or scoping document. • For projects that require a formal scoping document such as projects on the State highway system, or with State or federal funding, the preparation of the scoping document is eligible for scoping phase funding.
Preliminary Engineering / Environmental	• Project Sponsor staff, consultant costs and other direct costs necessary to perform preliminary engineering, and to secure approval for the appropriate environmental document for the project.
Plan, Specification and Estimate (Final Design /PS&E)	• Project Sponsor staff, consultant costs and other direct costs necessary to prepare final PS&E and to provide support during the bidding process until the time of contract award. • Services beyond the contract award are considered design services during construction, which are typically included in the Construction Support Phase. The milestone (i.e., advertisement, award, etc.) at which the costs change from being budgeted and tracked in the PS&E Phase to the Construction Support Phase may vary on a case-by-case basis. Regardless of the phase in which the advertise-bid-award costs are budgeted and tracked, they should be clearly segregated from other costs in the same phase.
Right-of-Way Acquisition and Support Phases	• Project Sponsor staff, consultant costs and other direct costs necessary for the acquisition of right-of-way, right-of-way preservation and hardship acquisitions.

Project Phase	Eligible Costs Requirements
	• Right-of-way acquisitions initiated prior to environmental clearance approval for the project for which the right-of-way is required, shall not be eligible for reimbursement by Alameda CTC unless specifically authorized in the funding agreement. The cost of eligible right-of-way acquisitions shall be supported by an appraisal prepared by a professional appraiser. The appraisal report shall be provided to Alameda CTC with the request for allocation package. • Right-of-way activities related to property not required for the program or project as programmed shall be at the expense of Project Sponsor to the extent such costs can be determined. • If excess right of way is sold, used for purposes other than the program or project as programmed, or otherwise disposed of, a share of any proceeds from the sale of such excess property shall be returned to Alameda CTC based on the prorated percentage of Alameda CTC funding contributed to the purchase of the property. • If condemnation procedures are required to obtain access to right of way, Alameda CTC will consider the required deposit as an eligible cost and reimburse the Project Sponsor upon request in accordance with the funding agreement. If the amount of reimbursement to Project Sponsor is higher than the Alameda CTC funding share of the amount of settlement in the final order of condemnation, Project Sponsor shall pay Alameda CTC the difference between the amount reimbursed and the Alameda CTC funding share of the amount settled plus the Alameda CTC funding share of the interest accrued to the deposit account. • Property acquired for a project using Alameda CTC funding shall be available for project construction within 10 years of Alameda CTC reimbursement to the Project Sponsor. If, after 10 years, the property has not been utilized for the project as programmed, the Project Sponsor shall reimburse Alameda CTC for its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year after the expiration of this 10-year period. • If right of way is acquired for a project as programmed and is not utilized for the project as programmed, because the project has been modified or de-programmed, Alameda CTC shall be reimbursed its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year from the time the project is modified or de-programmed.

ACTC_AR3958

Project Phase	Eligible Costs Requirements
Construction Capital and Support Phases	• Project Sponsor staff, consultant costs, contractor costs and other direct costs necessary for all construction expenditures on the project that are part of the scope of work agreed to by Alameda CTC, including Project Sponsor's management oversight expenses associated with the construction of the project. • If Project Sponsor includes additional work beyond the scope of the project as programmed by Alameda CTC, such work and all related costs shall be segregated from the project costs funded by Alameda CTC. Costs not associated with the scope of the project as programmed by Alameda CTC shall be at the expense of the Project Sponsor and shall not count as a match for Alameda CTC funding for the project as programmed by Alameda CTC. • Items of work within the scope of the project as programmed, but utilizing more expensive than standard treatment, such as specialized lighting standards and signs, more elaborate landscaping, specialized treatment on the face of soundwalls/retaining walls and specialized sidewalk/hardscape treatments, will be eligible for reimbursement only if they are agreed to in advance and no additional Alameda CTC funding is required.
Rolling Stock and Equipment Acquisition Phases	• Rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC shall remain in the Project Sponsor fleet for a minimum of five years. If the rolling stock is removed from the fleet prior to the required five years, Project Sponsor shall notify Alameda CTC. If the rolling stock is sold and the receipts of the sale are not used to purchase replacement rolling stock, the proceeds from the sale shall be returned to Alameda CTC. • Project Sponsor shall prepare and submit to Alameda CTC for approval, prior to the beginning of service, an operations schedule indicating the frequency, vehicle type and operating hours of the rolling stock purchased by Project Sponsor for the program or project as programmed. The rolling stock used in this service will be the same type as purchased with Alameda CTC funding, but may not be the exact vehicles due to the need to rotate vehicles in the fleet. The approved service level shall be maintained, as a minimum, for five years. In the event that the minimum service level is not maintained, Project Sponsor shall reimburse Alameda CTC for its share of the reduced service based on vehicle needs for the reduced service and the salvage value of the rolling stock purchased by Project Sponsor and reimbursed by Alameda CTC.

Project Phase	Eligible Costs Requirements
	• Specialized equipment required for the project must be identified in the project funding agreement to be eligible for reimbursement with Alameda CTC funding.

In addition to the individual phase requirements described above, the following general provisions apply to cost eligibility and exclusions for any phase:

Cost Type	Eligible Costs Requirements
Contract Costs	• Costs incurred via contracts between the implementing agency and consultants, contractors, suppliers or other vendors are eligible for reimbursement from the local, voter-approved funding programs administered by Alameda CTC only if the contract is established in accordance with Alameda CTC's Local Business Contract Equity (LBCE) Program. The LBCE Program applies to contracts funded wholly, or in part, with local, voter-approved funding programs administered by Alameda CTC. While not every contract funded in part by local, voter-approved funding programs administered by Alameda CTC will require a contract goal set during the procurement process, every contract is required to comply with the reporting requirements set LBCE program.
Project Sponsor Staff Costs	• Costs for Project Sponsor staff working on the project (direct implementation costs) will be eligible for reimbursement by Alameda CTC funding. Staff hours must be segregated on timesheets, or otherwise documented through an alternative method, approved by Alameda CTC. • Project sponsor overhead and general administrative costs that are not directly related to the implementation of a project are ineligible for reimbursement by Alameda CTC, unless otherwise approved by Alameda CTC. • Hourly wages and fringe benefits for Project Sponsor staff will be reimbursed based on the actual wage rate plus the audited fringe benefit rate supplied by the Project Sponsor. Alameda CTC will review and approve a fringe benefit rate based on documentation provided by the Project Sponsor. Approved fringe benefit rates will be set forth in the project funding agreement, but in no case will fringe benefits of more than 70 percent of the hourly wage be approved. • For Measure B/BB/Vehicle Registration Fee Direct Local Distribution Recipients, costs for Project Sponsor staff costs related to project administration, contract management of professional and construction services, are not eligible for reimbursement with allocated funds per the Local Cooperation Policy, unless specifically allowed in a project funding agreement.
Alameda CTC Project Support Requested by Project Sponsor	• If requested by Project Sponsor, Alameda CTC will consider providing support staff and/or consultant support for a project. Costs for these services will be considered eligible costs and be reimbursed to Alameda

ACTC_AR3960

Cost Type	Eligible Costs Requirements
	CTC from funds for the project, or be deducted directly by Alameda CTC from Alameda CTC funding allocated for the project.
Bonding Costs	• If Alameda CTC determines that it is in the best interest of a funding program to sell bonds, or otherwise incur financing costs to deliver the projects included in the funding program, the cost of bonding and financing, including interest payments, shall be considered a program-wide cost and shall be identified in the CIP as the first priority repayment. • If a Project Sponsor wishes to independently bond or use other approved borrowing programs, Alameda CTC funding is eligible to reimburse expenses incurred by Project Sponsor for staff time, consultant costs, principal payments and the associated cost of financing required to provide the financing for the project.
Fund Exchanges	• Alameda CTC may consider and approve fund exchanges on a case-by-case basis. Any exchange payments of Alameda CTC funding must be identified in the project funding agreement to be eligible for reimbursement
Miscellaneous Costs	• The costs of fees from other agencies, including permit fees or reimbursement for review or oversight costs needed for the project, are eligible project costs with the exception of the cost of permits, fees or oversight from the Project Sponsor. Reimbursable eligible costs must be consistent with the Local Cooperation Policy. • Direct costs, such as reproduction, shipping, mileage and long-distance calls, will be considered for reimbursement if they can be independently documented as directly relating to the implementation of the program or project for which the funds were allocated. Air travel and overnight stays are not eligible unless prior approval is obtained from Alameda CTC.
General Exclusions	• Cost not directly related to the implementation of the project as programmed, and consistent with an approved environmental document as applicable, will not be eligible for reimbursement with Alameda CTC funding.
Ongoing Costs (Maintenance/ Operations)	• Ongoing annual expenses incurred for maintenance of a project shall be borne by the Project Sponsor unless specifically identified in the funding agreement.

POLICY 5: FUNDING FOR PROJECT-RELATED COSTS INCURRED DIRECTLY BY THE ALAMEDA COUNTY TRANSPORTATION COMMISSION

POLICY: Costs incurred directly by Alameda CTC related to the management and implementation of programs and projects shall be eligible for the funding made available for those programs and projects. The eligibility of costs incurred directly by Alameda CTC shall be limited to any restrictions related to such costs for any individual fund source. General fund administration costs related to congestion management

ACTC_AR3961

activities are allocated to congestion management projects in compliance with *Title 2 U.S. Code of Federal Regulations Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance).*

PURPOSE: The purpose of this policy is to establish guidelines by which costs incurred directly by Alameda CTC related to the management and implementation of programs and projects are segregated to identify fund sources for such costs.

GUIDELINES: The following provisions are intended to support the purpose of this policy:

A. Direct costs relate to activities directly related to Capital Projects, Programs, Planning and grants. These direct costs shall be posted to appropriate funds or activities. Salaries and benefits shall be supported by timecards, and direct consulting and other costs shall be supported by approved invoices. Where specific agreements are in place, direct costs along with indirect cost (see below) allocations shall be posted to specific projects or grants. Where such agreements do not exist, the direct costs shall be posted to a control account within the Capital Projects or Program Funds.

B. Indirect costs relate to congestion management activities that don't directly relate to a specific Capital or Planning Project, or Program. Such costs shall be accumulated under the General Fund and supported by time cards, invoices and other appropriate documents. The indirect cost ratio for billing purposes will be based on General Fund congestion management related allowable costs. The cost allocation methodology will comply with *Uniform Guidance*.

C. Alameda CTC shall maintain a cost allocation plan as required by *Uniform Guidance*, certified by the Director of Finance, accepted and/or approved by Caltrans as the cognizant agency and available to grant funding agencies.

D. Alameda CTC shall implement a billing system, supported by acceptable detail for direct and indirect costs. However, no allowance shall be made for profit margin.

E. All direct costs and billable indirect costs shall be excluded from the salary and administration limitations set forth in the 2000 Measure B Transportation Expenditure Plan and in the 2014 Measure BB Transportation Expenditure Plan. Alameda CTC shall use general fund administrative costs to compute the administrative cost ratios.

ACTC_AR3962

POLICY 6: LOCAL CONTRACT BUSINESS EQUITY PROGRAM

POLICY: Alameda CTC has established this Local Business Contract Equity (LBCE) Program to create economic growth and jobs within Alameda County by requiring local contracting that supports residents and businesses in Alameda County. The LBCE Program helps to identify and engage the participation of Local Business Enterprise (LBE), Small Local Business Enterprise (SLBE) and Very Small Local Business Enterprise (VSLBE) firms located in Alameda County on applicable contracts.

PURPOSE: The purpose of this policy is to continue support for the hiring of local contractors, vendors, suppliers and service providers on contracts funded wholly, or in part, by funding approved by Alameda County voters. The LBCE Program contributes to the overall economic vitality of the County by:

1. Encouraging businesses to locate and remain in Alameda County;
2. Providing employment opportunities for residents of Alameda County; and
3. Generating economic activity and stimulating the local economy.

GUIDELINES: This program applies to contracts funded solely by any combination of Measure B, Measure BB, Vehicle Registration Fee, and/or local funds. Contracts that include state and federal funds must adhere to state and federal requirements. Full policy and program requirements are detailed here: https://www.alamedactc.org/app_pages/view/4543

Funds may be subject in rescission or ineligible for reimbursement if the Project Sponsor is determined to be out-of-compliance.

POLICY 7: ALAMEDA CTC PROJECT AND PROGRAMS MANAGEMENT POLICIES

POLICY: Alameda CTC shall administer and manage project delivery efforts and program implementation through these policies and procedures.

Direct Local Distribution Programs Management Policy: As the administering agency for the Measure BB DLD program, Alameda CTC is responsible for monitoring and compliance administration of the DLD recipients. Alameda CTC reserves up to one percent (1%) of Measure BB DLD funds to provide oversight to the DLD program.

Capital Projects and Programs Management Policy: As implementing agency for several countywide significant Measure BB related projects identified in the Capital Project Delivery Plan (CPDP), Alameda CTC has assumed the lead in project management and project delivery using its own staff and consultant resources. Alameda CTC reserves up to five (5) percent of Measure BB discretionary funds in order to effectively deliver Measure BB transportation projects, and to oversee projects being implemented by

ACTC_AR3963

other agencies. These funds support costs associated with establishing policies, procedures, ongoing project management oversight, preliminary scoping and planning, and other core functions related to Measure BB capital program delivery that are not directly related to Measure BB capital commitments for individual projects.

Project and Program-wide Contingency Reserve: Furthermore, the CPDP recommends programming Measure BB funds for specific project phases, including set-asides for program-wide management, oversight, and monitoring, as well as a program-wide risk contingency. Each project will include budget allowances that account for risk and unknowns. Where risk issues are common to many projects, Alameda CTC may elect to place those budget amounts into a program-wide contingency reserve. This is referred to herein as the Project and Program-wide Contingency Reserve.

PURPOSE: Alameda CTC is responsible for administering the voter-approved transportation programs, CMA functions, and emerging countywide transportation needs and initiatives. Alameda CTC requires these projects and program management policies in order to provide continuing support and resources for these functions; to strengthen and enhance the agency's position within the changing framework of regional, state, and federal transportation agencies; and to increase responsiveness to new regional and state climate change mandates.

GUIDELINES: Alameda CTC's annual requirements related to project and program implementation, oversight, and delivery management costs will be assessed through Alameda CTC's budgetary process.

POLICY 8: PROGRAMMING POLICIES FOR OUTREACH AND TRANSPARENCY

POLICY: The project selection and prioritization process employed for the development of the CIP, which begins with the Countywide Transportation Plan (CTP) update process, shall satisfy the requirements for all the fund sources included in the CIP, including federal, state, regional and local sources. The CTP update process shall include significant efforts to satisfy requirements related to notification, outreach and transparency typically satisfied at the time of individual, fund-specific calls for projects.

PURPOSE: To ensure that the notification, outreach and transparency measures employed by Alameda CTC to identify potential uses for transportation funding from the full range of sources available in Alameda County satisfy all programming policies from other agencies pertaining to the specific fund sources being programmed by Alameda CTC. By satisfying the most stringent of requirements, Alameda CTC will be afforded flexibility at the time of programming to match the most appropriate, available fund source to the priorities at the time of programming.

ACTC_AR3964

GUIDELINES: Project Sponsors are required to support this policy through outreach programs and notifications which reach all geographic areas, communities and portions of the population during solicitations for proposed uses of Alameda-CTC administered funding available for transportation programs and projects within Alameda County. The outreach must include disadvantaged communities, including Metropolitan Transportation Commission-defined Communities of Concern and other underserved populations.

POLICY 9: LOCAL COOPERATION POLICY

POLICY: Project Sponsors receiving DLD funds are not eligible to receive a reimbursement of staff time costs through allocations of Alameda CTC Administered Funds for oversight activities that are not directly related to project implementation.

Local jurisdiction(s) shall work in full cooperation with the implementing agency to assist in project implementation and delivery, where appropriate and as needed. This includes providing support, coordination, monitoring, technical assistance, etc. A local jurisdiction's costs associated with these activities to further a project implemented by Alameda CTC, a local jurisdiction (as the Project Sponsor), or another implementing agency within a jurisdiction's locality shall be funded through the local jurisdiction's eligible local fund sources such as Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) funds in lieu of a local jurisdiction billing these costs directly to the project or against its funding allocation.

PURPOSE: To ensure jurisdictions directly benefiting from the expected outcomes of a project in their locality implemented by Alameda CTC or other implementing agencies, are active funding partners to further the delivery of such improvement project, and to also ensure DLD recipients are using DLD funds predominately on contracts, services, materials, rather than contract administration.

GUIDELINES: Local agency-incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by another implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. Fees associated with permitting, plan review, and other general costs associated with the project shall be supported by the local jurisdiction in which the project is implemented, where feasible and appropriate. These costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC, unless they are specifically identified as eligible in the funding agreement.

ACTC_AR3965

POLICY 10: SMALL CITIES PROGRAM POLICY

POLICY: Cities within Alameda County with a population of less than 25,000 shall be considered for certain exceptions from Alameda CTC's local match requirements and/or Local Cooperation Policy requirements, and local projects that have a demonstrated multi-jurisdictional transportation significance shall receive consideration for delivery support from Alameda CTC, where practical and feasible.

PURPOSE: The purpose of this policy is to assist smaller cities in Alameda County in their project delivery efforts through relieving matching requirements, exploring financial strategies, and providing project delivery/implementation support, where feasible.

Small cities in Alameda County may not be financially equipped or resourced to meet certain project delivery needs and funding matching requirements.

Small cities receive limited Measure B/BB/Vehicle Registration Fee Direct Local Distributions in comparison to larger cities and often have difficulties finding the financial resources needed to satisfy minimum matching requirements, especially for larger transportation projects.

GUIDELINES: To qualify as a small city under this policy, a city must have a population of less than 25,000 as reflected in the most currently available California Department of Finance's population estimate.

As such, Alameda CTC may elect to waive matching requirements and/or Local Cooperation policy requirements based on a small city's request during the programming and allocation processes, or project coordination processes. Additionally, Alameda CTC will support facilitating Federal-local funding exchanges, whenever possible, to alleviate certain funding requirements required by external sources.

POLICY 11: MATCHING AND LEVERAGING POLICY

POLICY: For projects that have successfully secured other non-Alameda CTC discretionary funding, Alameda CTC shall consider fulfilling a portion of the minimum match required by external funding for projects and programs.

PURPOSE: The purpose of this policy is to maximize the leveraging capacity of Alameda CTC Administered Funds such as Measure B, Measure BB, Vehicle Registration Fee Program, Transportation Fund for Clean Air Program funds.

GUIDELINES: Through Alameda CTC's programming and allocation processes, Project Sponsors must document the following:

ACTC_AR3966

1. Project Sponsor must identify a project delivery and funding plan that describes the project scope, costs, schedule;
2. Document the approved programming of other, non-Alameda CTC discretionary funds to a project;
3. Cite the minimum matching amount required by the secured non-Alameda CTC funding source;
4. Identify the amount of matching funds requested from Alameda CTC. Matching funds will not address any project cost increases; and
5. Provide a cost sharing proposal between all prospective funding partners.

Alameda CTC may consider recommending programming and allocation to fulfill either a portion or the entire amount requested, based on available fund capacity, project delivery strategy, funding timelines, and the leveraging significance.

POLICY 12: DEBT ISSUANCE POLICY

POLICY: Alameda CTC's adopted Debt Policy governs the issuance and management of all debt funded through capital markets, direct bank loans, and federal lending programs, including the selection and management of related financial and advisory services and products.

The debt policy adopted by the Commission September 2021 can be reviewed here: https://www.alamedactc.org/wp-content/uploads/2021/11/AlamedaCTC_Debt_Policy_2021.pdf

PURPOSE: The purpose of the Debt Policy is to establish guidelines for the issuance and management of Alameda CTC debt. The policy also confirms the commitment of the Commission, management, staff, and other decision makers to adhere to sound financial management practices.

The purpose of debt financing falls into three categories:

(1) to finance new capital infrastructure,
(2) to refinance existing bonds to reduce financing costs and/or risk, or
(3) to reimburse an agency for eligible capital expenditures made within the last 18 months.

GUIDELINES: Priorities of the Debt Policy are as follows:

- Effectively manage and mitigate financial risk,
- Maintain strong credit ratings and good investor relations,
- Achieve the lowest cost of capital,
- Preserve future program flexibility, and
- Maintain ready and cost-effective access to the capital markets.

ACTC_AR3967

Responsibility for implementation of the Debt Policy and day-to-day responsibility and authority for structuring, implementing, and managing Alameda CTC debt and finance program, resides with the Executive Director and Deputy Executive Director of Finance and Administration and requires that the Commission specifically authorize each debt financing.

Alameda CTC's CIP is used in combination with Alameda CTC's Debt Policy to ensure proper allocation and financing of Alameda CTC sponsored projects. This CIP sets priorities and strategies for allocating Alameda CTC administered funds under its guiding principles, while the Debt Policy provides policy direction and limitations for proposed financings. Debt issuances for capital projects are considered and included in the CIP and presented to the Commission for review and approval as part of the CIP planning process.

The philosophy of Alameda CTC is to fund all projects in the TEPs on a pay-as-you-go basis for as long as possible. This strategy minimizes borrowing costs and maximizes tax dollars for projects. The agency considers the issuance of debt when capital program cash flow demand exceeds projected annual revenue capacity over a specified period of time. It is the agency's policy to issue bonds for broad-based program needs and on projects for which Alameda CTC is the project sponsor. This is consistent with both the economic and program management objectives of the agency.

As borrowing needs are identified, Alameda CTC evaluates the nature of the capital investment to determine if either long or short-term debt is the appropriate financing mechanism to meet the funding need. Standards for the appropriate use of debt financing include:

A. Long-Term Capital Projects: Debt should be used to finance capital projects on a programmatic basis where it is cost effective and fiscally prudent. The debt repayment period should not exceed 120% of the useful life of the project being financed or the term of the pledged sales tax Measure. The ability or need to expedite or maintain the programmed schedule of approved capital projects is a factor in the decision to issue debt.

B. Debt Financing Mechanism: Alameda CTC evaluates the use of financial alternatives available including, but not limited to, long-term debt, short-term debt, commercial paper, direct bank loans, federal lending programs, lines of credit and inter-fund borrowing. Alameda CTC utilizes the most cost-effective financing alternative consistent with limiting Alameda CTC's risk exposure.

C. Credit Quality: All Alameda CTC debt management activities for new debt issuances are conducted in a manner conducive to receiving the highest credit ratings possible.

The market for municipal finance is well developed and provides numerous products or types of debt including long-term, short-term and variable rate debt with various terms and structures and compliance requirements that Alameda CTC evaluates on a case-by-case basis.

ALAMEDA COUNTY TRANSPORTATION COMMISSION

STRATEGIC PLAN

1. PURPOSE

Alameda County maintains a highly diverse transportation network complete with highway infrastructure, express lanes, local roadways, freight and port facilities, rail and bus transit, and bicycle and pedestrian improvements. Its wide range of transportation infrastructure may differ dramatically from one area of the county to the other as each respective community has unique transportation needs. Alameda CTC's goal is to leverage local funds under its purview to help secure additional competitive local regional, State, and federal transportation funding dollars in order to fund a balanced set of countywide transportation projects to maintain a well-connected and efficient system for the whole county.

Alameda CTC administers voter-approved sales tax programs (2000 Measure B and 2014 Measure BB), and the Vehicle Registration Fee (VRF) program (2010 Measure F) that provide critical funding for delivering transportation improvements within the county. The most significant source of funding under Alameda CTC's purview is the Measure BB sales tax revenue generated through the voter-approved 2014 Transportation Expenditure Plan (2014 TEP) in November 2014. The duration of the 2014 TEP is thirty (30) years, from April 1, 2015 to March 31, 2045. The 2014 TEP is projected to generate approximately $7.8 billion in revenues for transportation investments ranging from bus/ferry/commuter rail services and operations, streets and highways improvements, student transit passes, community development initiatives, technology and innovation programs, bicycle/pedestrian enhancements, and transportation programs for seniors and people with disabilities.

Although the 2014 TEP is anticipated to generate a significant source of funding for Alameda County, the transportation funding needs far outweigh the expected revenue generation required to complete the project and program delivery of the 2014 TEP in its entirety. Over 50 percent (approximately $4.1 billion) of the revenues generated are annually returned to local jurisdictions as Direct Local Distributions for local agencies to use at their own discretion. The remaining $3.7 billion is split among "Named" capital projects ($1.2 billion) and discretionary programs ($2.3 billion). The 2014 TEP recognizes investments within specific categories and types, and the Measure BB total revenue will not be able to fulfill the funding needs. It is imperative the Commission strategize investments to leverage external funding to fulfill the capital program needs.

The aim of the Strategic Plan is to simultaneously:

1. <u>Prioritize Project and Program Investments</u>
   Identify project investment strategies using Alameda CTC administered funds to get projects in a state of readiness to compete for available external funds as they presumably become available over the life of the strategic plan.

ACTC_AR3974

2. Maximize Measure BB Investments/Leveraging Strategy
   Identify an investment strategy to ensure that Measure BB is used to expediate the delivery of projects while also serving as the basis to attract external competitive funding to Alameda County such as Regional Measure 3, Senate Bill 1 programs, and U.S. Department of Transportation competitive programs for example.

3. Guide Project Delivery Strategy
   Identify project delivery strategies for an Alameda County portfolio of project investments that depict which projects can be delivered in whole, or in part, by the Measure BB sales tax program, other Alameda CTC-administered funds, or prospective external competitive funding programs. It also identifies the funding challenges leading up to full project implementation and the potential risks of early project development investments towards projects with incomplete funding.

The Strategic Plan focuses on Alameda CTC-implemented projects and externally implemented "Named" capital projects. Between Alameda CTC implemented projects and projects implemented by external Project Sponsors such as the Bay Area Rapid Transit (BART), City of Union City, and others, there is a collective total project cost of $6.7 billion, with only $2.1 B committed through Measure BB, Regional Measures, various state and federal programs, and other local sources. There is an overall funding need of $4.6 billion required to fill the gap and ensure the delivery of all these projects within the next decade.

Table 1: Summary of Project Delivery Funding Needs *($ in Billions)*

Project Sponsor	Total Project Costs	Total Commitment	Total Shortfall
Alameda CTC-Implemented	$3.8	$1.0	$2.8
Named Projects Implemented by External Sponsors	$2.9	$1.1	$1.8
Total	**$6.7**	**$2.1**	**$4.6**
Note: Commitment sources include funds from Measure B, Measure BB, VRF, local jurisdictions, STIP, secured state grants.			

The Strategic Plan address near-term financial implementation of countywide projects, including funding constraints, priority projects, and potential strategies. The strategies attempt to leverage existing local Alameda CTC administered fund sources against various outside funding programs anticipated in the next decade that aim to address the $4.6 billion shortfall.

For the Alameda CTC-implemented projects, Alameda CTC intends to pursue competitive funds from Senate Bill 1 Programs, Regional Measure 3, State Transportation Improvement Program (STIP), federal programs, and by encouraging local cooperation and funding partnerships with jurisdictions where a project resides or by whom might receive benefit. Local jurisdictions are encouraged to apply for these discretionary opportunities to maximize Alameda CTC funds to its fullest extent.

ACTC_AR3975

2. STRATEGIC PLAN GUIDING PRINCIPLES

The Strategic Plan Guiding Principles identified below support decision making to generate a portfolio of quality candidate projects for Alameda CTC administered funds and a prospective for external funds available to Alameda County jurisdictions.

These guiding principles are to:

1. Achieve the Alameda CTC's mission and vision and goals.

   In September 2019, the Alameda CTC approved the vision and goals for the 2020 Countywide Transportation Plan (CTP).

   Vision: "Alameda County residents, businesses and visitors will be served by a premier transportation system that supports a vibrant and livable Alameda County through a connected and integrated multimodal transportation system promoting sustainability, access, transit operations, public health and economic opportunities."

   To complete this vision, Alameda CTC prioritizes projects that achieve these aspiring goals for Alameda County's transportation system:
   - Accessible, Affordable and Equitable
   - Safe, Healthy and Sustainable
   - High Quality and Modern Infrastructure, and
   - Economic Vitality

2. Identify Alameda CTC sponsored and implemented projects based on project delivery strategies, transportation benefits, resource capabilities, and funding strategies that maximize leveraging Alameda CTC's administered funds.

3. Prioritize Alameda CTC sponsored and implemented projects for available local, regional, State and federal funds that may be available to Alameda County on the basis of Alameda CTC implementing multi-jurisdictional, resource intensive, county significant, and/or regional significant projects.

4. Prioritize 2014 Transportation Expenditure Plan (TEP)'s "named" capital projects by providing an investment and delivery strategy for Project Sponsors that promotes the development of these projects through the upcoming prospective funding opportunities.

5. Establish a systematic programming and allocation strategy for Alameda CTC administered funds to promote project delivery and project readiness. This includes an assessment of prospective local, regional, State, and federal fund sources anticipated to be made available to Alameda County.

6. Ensure the investment strategy remains flexible to provide capacity to respond to emerging and unanticipated needs in terms of both evolving project initiation and development needs, as well as, changes in funding opportunities, amounts and

ACTC_AR3976

programs that may require nimbleness in adjusting the overall funding strategy of the Strategic Plan.

7. Provide an informational tool for agency's project management, project delivery, resource management, and financing strategies.

8. Adhere to the Alameda CTC's budgeting and financing policies including:
    a. Pay-as you go financing strategy until an immediate need to issue debt for project(s) is required.
    b. Debt shall not be utilized for operating expenses.
    c. Maintains an adequate level of reserves and support strong bond ratings

9. Create synchronicities between Alameda CTC's Countywide Transportation Plan, Transportation Expenditure Plans, modal plans, CIP, local plans, and other delivery strategies plans, where feasible.

10. Optimize leveraging of external funding opportunities such as local, regional, State, and Federal sources available through Project Sponsor local funds, Senate Bill 1, State Transportation Improvement Program funds, Regional Measures, Federal Programs.

3. MEASURE B AND MEASURE BB COMMITMENTS

The following attachments reflect current 1986 Measure B, 2000 Measure B and 2014 Measure BB commitments and allocations. These investments have yielded significant leveraging of external fund sources such as the Senate Bill 1, Regional Measure 3, and State Transportation Improvement Program funds.

ACTC_AR3986

OVERVIEW FUNDING DISTRIBUTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for programming funding from federal, State, regional, and local fund sources across Alameda County towards transportation projects and programs. The Alameda CTC's Comprehensive Investment Plan (CIP) programs federal, State, regional, and local fund sources in consideration of addressing critical transportation needs, project readiness, countywide funding equity, modal equity, and leveraging opportunities.

The pursuit of equitable funding distribution across Alameda County is a vital objective in the CIP to ensure transportation dollars are programmed to the diverse and balanced package of transportation needs in the county.

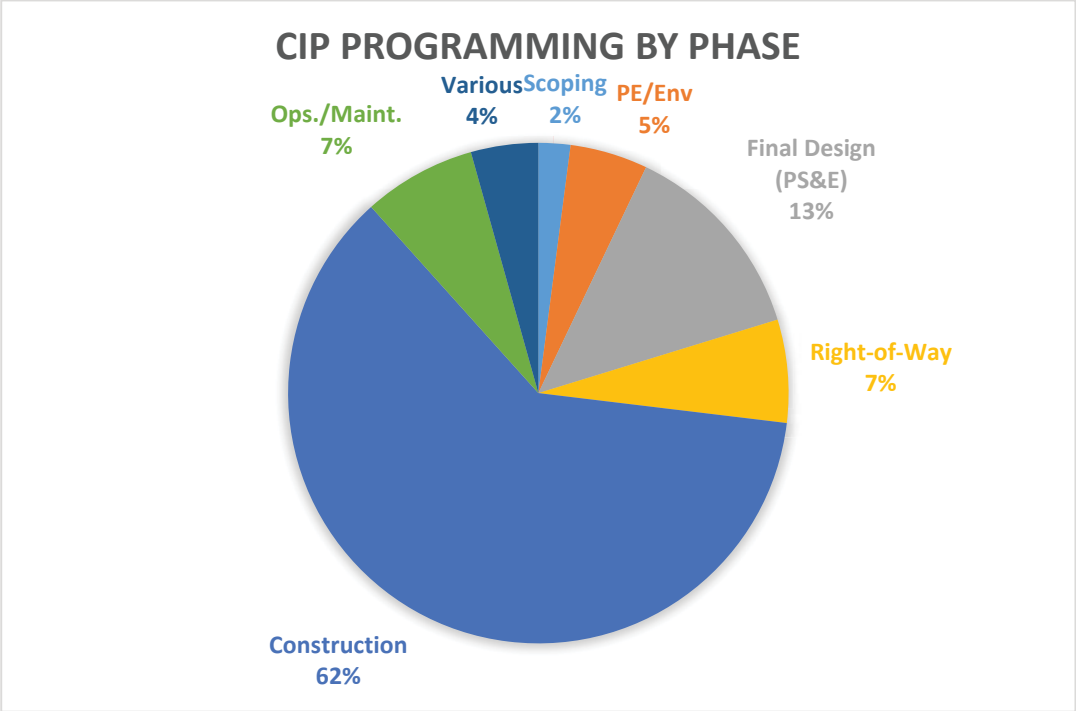
Alameda CTC's programming is guided by the CIP programming principles and project selection guidelines during each CIP programming cycle. As such, the funding distribution derived in the CIP is subject to the Commission's priority of investments during a programming event, the availability of fund sources and use of fund eligibilities, and the projects and programs proposed by Project Sponsors. In general, the CIP prioritizes funding towards projects and programs that are ready for implementation, secured funding plans, and demonstrated readiness with the first years of a given CIP five-year horizon.

Since the 2015, the CIP has programmed over $1.8 billion in transportation dollars amongst all jurisdictions in Alameda County. This Appendix includes a programming investments summary of the CIP's programming by:

1. Project Phase
2. Project Type/Mode
3. Planning Area

1. PROGRAMMING BY PROJECT PHASE

The CIP fundamental programming principles includes an investment strategy to target available funding resources to a diverse portfolio of projects and programs that are in various stages of project development, implementation, and construction.



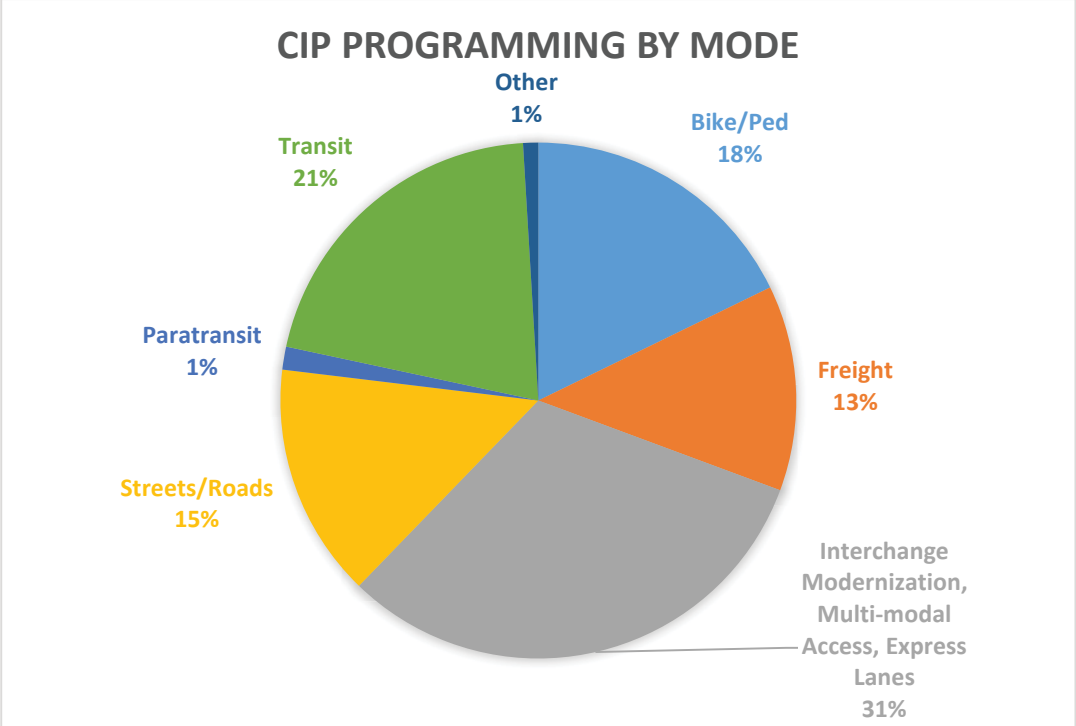
The goal is to strike a balance between investments in project development and construction capital phases that work simultaneously to:

- establish a pipeline of projects moving towards the construction phase,
- implement projects ready to for construction, and
- develop transportation projects to a point of project readiness so that project sponsors may be able to potentially secure competitive federal, State and regional funding sources as they become available.

ACTC_AR3987

Alameda CTC provides local cities, the county, and transit with Measure B / BB / VRF formula Direct Local Distribution funds that assist these agencies in initiating and developing their projects and programs for future inclusion in the CIP. These Direct Local Distribution funds are not part of the CIP funding distribution analysis but are a significant source of funding for all jurisdictions.

The current CIP Programming by Phase includes a range of funding investments progressively increasing in amount from the scoping, preliminary engineering, design, to the construction phases. The majority of CIP programming to date is committed to the construction phase.



2. PROGRAMMING BY PROJECT TYPE / MODE

Alameda County's transportation system is a diverse network of highway infrastructure, bicycle/pedestrian routes, local streets and roads, and transit routes that are each connected to provide the community with a complete multi-modal network of transportation travel options.

The CIP strives to make investments in all modes of transportation to build and maintain Alameda County's transportation infrastructure and program operations. Alameda CTC investments are only limited by use of fund eligibilities of certain funding sources i.e. Measure B / BB/ VRF bicycle/pedestrian funds can only be used towards bicycle/pedestrian related improvements.

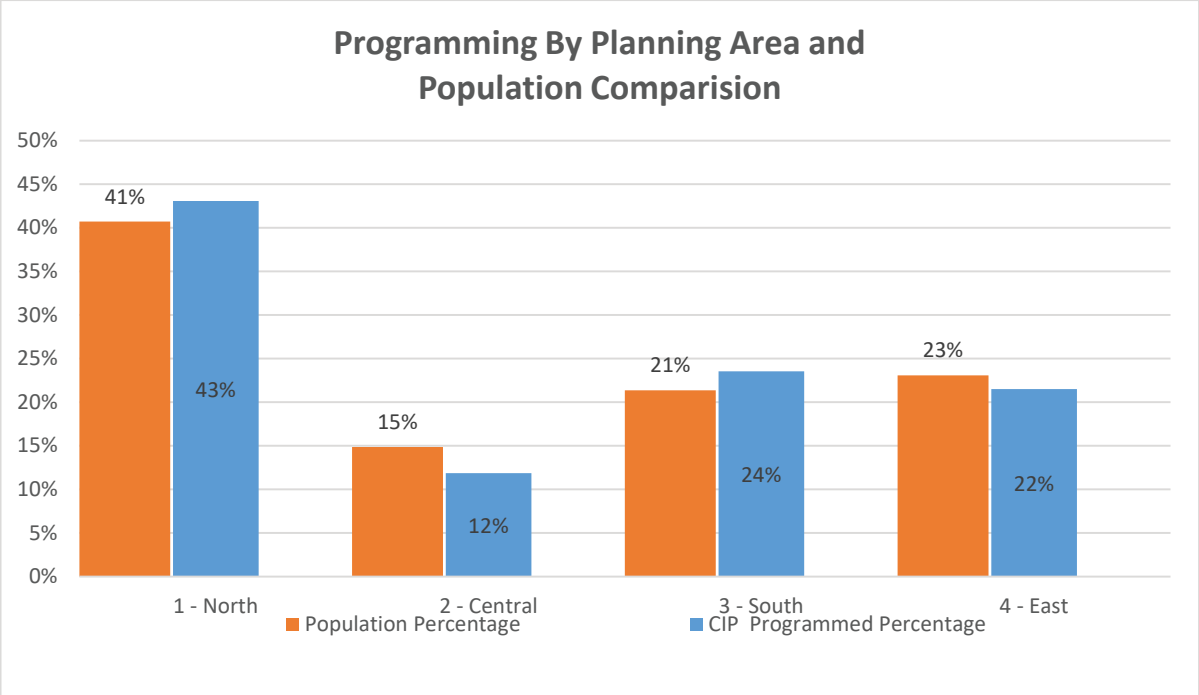
However, due to the wide variety of fund sources programmed through the CIP, the CIP is able to supports a field of projects providing improvements to bicycle/pedestrian networks, local streets and roads, highway infrastructure, paratransit programs, transit, freight, and community developments.

ACTC_AR3988

3. PROGRAMMING BY PLANNING AREA

Alameda CTC considers funding equity across the jurisdictions and planning areas during a given CIP programming cycle. This requires an examination of types of projects proposed to the CIP, project readiness, and eligibilities of the fund sources available at the time of programming towards those projects and programs. Alameda CTC use a traditional population share based methodology amongst the planning areas as a standard point of reference for determining the general percentage share of funding and population by planning area. Alameda CTC defines planning areas into four main geographic areas (north, central, south, east) as depicted in the table below.

Planning Area	Jurisdictions
Planning Area 1 **North Area**	• Alameda • Albany • Berkeley • Emeryville • Oakland • Piedmont
Planning Area 2 **Central Area**	• Hayward • San Leandro • Unincorporated areas of Castro Valley and San Lorenzo
Planning Area 3 **South Area**	• Fremont • Newark • Union City
Planning Area 4 **East Area**	• Dublin • Livermore • Pleasanton, and all unincorporated lands in that area



ACTC_AR3989

Within these planning areas, the Alameda County's population distribution favors more urbanized cities such as those in the North planning area.

Planning Area	Population	Percent
1 – North	680,277	41%
2 - Central	248,241	15%
3 - South	356,823	21%
4 - East	385,493	23%
Total	**1,670,834**	**100%**

The CIP programs available transportation dollars towards the Project Sponsors in consideration of the population share. However, it should be noted as described within the CIP's programming principles and project selection guidelines, population share is not the only factor in consideration. Other factors such as programming priorities, funding eligibilities, project readiness, and project types at the time of CIP programming are factors that affect level of investment by planning area.

To date, the CIP's programming investments by planning area, is +/- 5 percent relative to the population share of a planning area.

Alameda CTC's future CIP programming will continue to target and consider the balance of funding distribution across phases, modes, and planning areas.

ACTC_AR3996

EXECUTIVE SUMMARY

The Alameda County Transportation Commission (Alameda CTC) is responsible for programming funding from federal, state, regional, and local fund sources across Alameda County to transportation projects and programs. The Comprehensive Investment Plan (CIP) is Alameda CTC's near-term strategic planning and programming document through which the various discretionary funding sources administered by Alameda CTC are programmed through a consolidated process to maximize investments in transportation infrastructure and program operations needs that are essential for enhancing, developing and maintaining the county's multi-modal transportation system to facilitate safe, efficient and accessible travel for all.

Five fundamental principles guide the CIP process:

1. Implementing Alameda CTC's adopted visions and goals
2. Balancing strategic investments across project delivery phases
3. Maximizing transportation investments
4. Investing in all modes and areas within Alameda County
5. Delivering solutions while ensuring accountability

The CIP brings the agency's long-range, countywide plans into the near term by identifying investments over a five-year programming horizon on a discretionary basis. Projects and programs that demonstrate a nexus to countywide transportation planning efforts and priorities as well as consistency with the goals and objectives established in the Alameda Countywide Transportation Plan (CTP) formulate the eligible candidate pool. Project selection and prioritization for the CIP is based, in part, on the consideration of priorities identified in adopted plans and studies as well as Commission-approved project selection criteria.

Each adopted five-year CIP includes a two-year allocation plan. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors and implementing agencies, and for contracts and costs related to projects that Alameda CTC implements directly.

The revenue and expenditure assumptions for each CIP fund source are periodically confirmed and serve as the basis for the financial management of each funding program. Additionally, funding commitments to individual projects identified in the voter-approved transportation expenditure plans are periodically confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B, and 2014 Measure BB transportation expenditure plans.

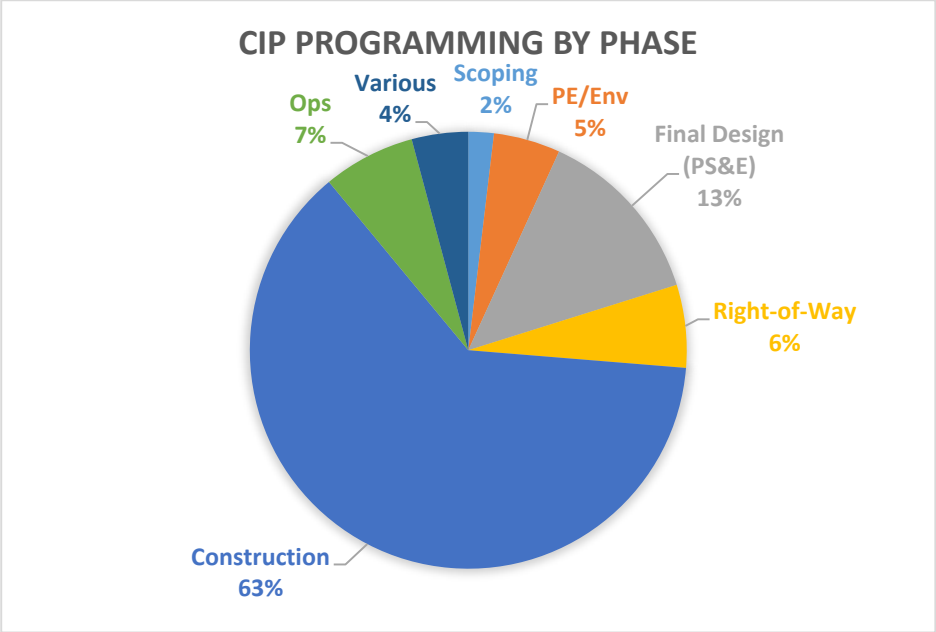
The CIP document contains programming and allocation guidelines, policies, and procedures that guide

ACTC_AR3997

Alameda CTC's CIP investment decisions, programming and allocation processes, and subsequent funding administration activities. Refer to Appendix D, CIP Programming Principles and Guidelines, and Appendix E, Policies and Procedures, for more information about CIP development and implementation processes.

2026 CIP and Summary of CIP Investments

The 2026 CIP covers fiscal years (FYs) 2025-26 through 2029-30, with FYs 2025-26 and 2026-27 identified as the two allocation years. The combined total 2026 CIP includes $80.29 million in programming over FYs 2025-26 through 2029-30. Of that total, $65.43 million is programmed in FYs 2025-26 and 2026-27, within the two-year allocation plan. Refer to Appendix C for the complete 2026 CIP project awards sorted by project sponsor, inclusive of past programming and allocations, 2015 - present.

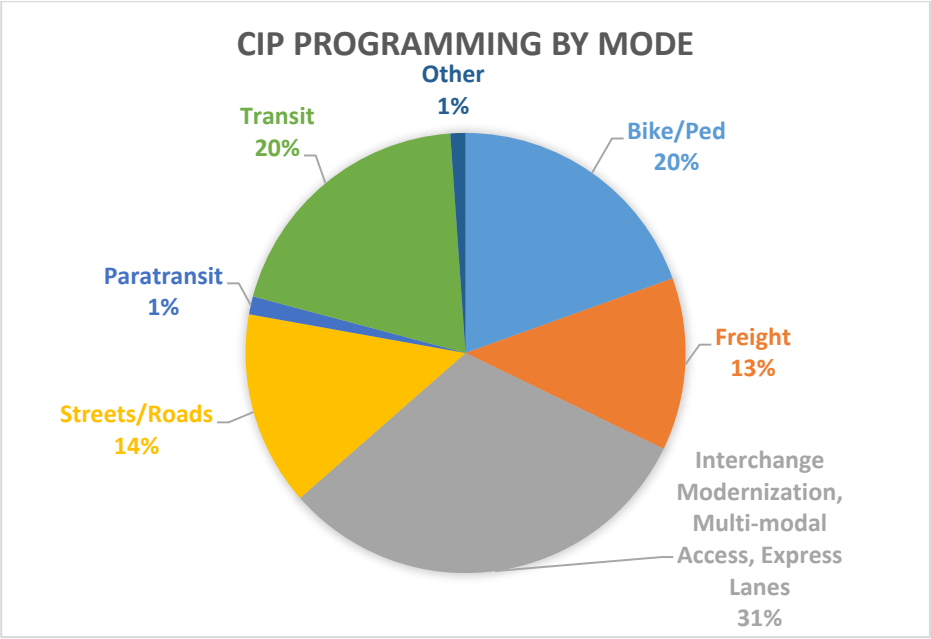


Since 2015, the CIP has programmed a total of over $1.88 billion in discretionary transportation dollars across all Alameda County jurisdictions. The pursuit of equitable funding distribution is a vital objective in the CIP to ensure transportation dollars are programmed to the diverse transportation needs of the county. As detailed in Appendix G, the CIP's programming investments by Project Phase, Project Mode, and Planning Area are summarized below.

CIP Programming by Project Phase

The CIP fundamental programming principles include an investment strategy to target available funding resources for a diverse portfolio of projects and programs in various stages of project development, implementation, and construction. The goal is to strike a balance between investments in project development and construction capital phases that work simultaneously to establish a pipeline of projects moving toward the construction phase, implement projects ready for construction and develop transportation projects to a point of project readiness so that Project Sponsors may apply for and potentially secure competitive federal, state and regional funding sources as they become available.

The current CIP Programming by Phase includes a range of funding investments progressively increasing in amount from the scoping, preliminary engineering, design, to the construction phases. The majority of CIP programming to date is committed to the construction phase.



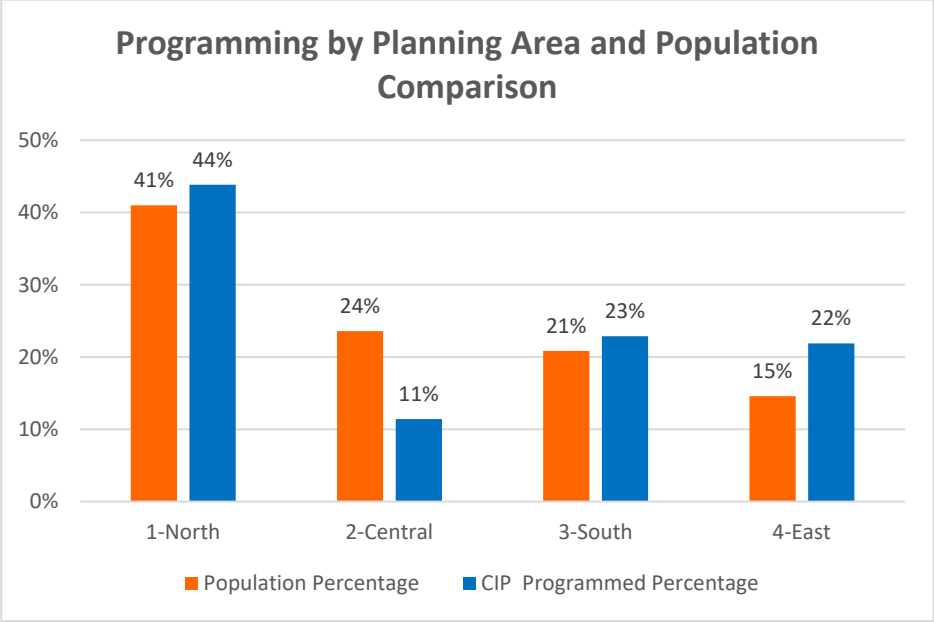
ACTC_AR3998

CIP Programming by Project Type/Mode

Alameda County's transportation system is a diverse network of highway infrastructure, freight, local streets and roads, bicycle/pedestrian facilities, transit and paratransit operations that are each connected to provide residents with a complete multimodal network of transportation travel options.

The CIP strives to make investments in all modes of transportation to build and maintain Alameda County's transportation infrastructure and program operations.

ACTC_AR3999



CIP Programming by Planning Area

Alameda CTC considers funding equity across the jurisdictions and planning areas during a given CIP programming cycle and over multiple cycles. This requires examining at the time of programming the types of proposed projects, project readiness, and the available fund sources and eligibilities.

Alameda CTC defines the Alameda County planning areas as four main geographic areas (north, central, south, east). Within these planning areas, the population distribution is focused in the more urbanized areas of the County such as in the North planning area.

Planning Area	Population	Percent
1 - North	672,912	41%
2 - Central	387,092	24%
3 - South	342,317	21%
4 - East	239,548	15%
Total	1,641,869	100%

Alameda CTC uses a traditional population share-based methodology where the percentage share of population by planning area is used as a standard point of reference for determining the equitable percentage share of funding. Although population share may be a consideration in CIP programming, as described in Sections 6 and 7, Programming Principles and Guidelines and Project Selection Methodology, at the time of programming each CIP cycle, other factors such as programming priorities and criteria, funding eligibilities, project types and readiness, are factors that affect the overall level of investment by planning area, within each CIP cycle as well as cumulatively over time. To date, the total CIP programming investment by planning area, is +/- 12 percent relative to the population share of a planning area.

SECTION 1: INTRODUCTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for planning, programming, and allocation of local, regional, state and federal funding for transportation improvements throughout Alameda County.

Alameda CTC maintains programming and allocation authority for federal, state, regional, and local transportation funding programs, such as local, voter-approved measures (Measure B, Measure BB, and Measure F Vehicle Registration Fee), the Transportation Fund for Clean Air (TFCA) Program, State Transportation Improvement Program (STIP), and federal One Bay Area Grant (OBAG) Program. Since 2016, Alameda CTC has consolidated the programming and allocation of the fund sources under Alameda CTC's purview ("Alameda CTC Administered Funds") into a single programming and allocation document known as the Alameda CTC Comprehensive Investment Plan (CIP).

The CIP programming and allocation recommendations, in any given CIP cycle, demonstrate Alameda CTC's commitment to invest in projects and programs that maintain and enhance the countywide transportation system, based on current Commission priorities at the time of the programming and allocation action(s). The CIP contains programming and allocation policies, guidelines, and procedures that guide Alameda CTC's investment decisions, programming and allocation processes, and the subsequent funding administration.

The CIP is updated annually to capture programming and allocations made since the last CIP approval, and to document programming and allocation adjustments including new programming requests, proposed adjustments by Project Sponsors, and technical adjustments as required by the CIP and funding administration policies.

The CIP document structure includes:

- Purpose, background, strategic objectives, and an overview of programming principles for all programming through Alameda CTC.
- Appendices include:
    - Technical summaries of adjustments to the prior programming and a summary with the final programming record.
    - Programming and allocation guidelines for future programming.
    - Policies and procedures for Alameda CTC's programming and funding administration.

ACTC_AR4001

SECTION 2: PURPOSE OF COMPREHENSIVE INVESTMENT PLAN

The CIP is a programming and allocation document that establishes a financial investment strategy of funding under Alameda CTC's purview to deliver projects and programs ("projects") that allow the countywide transportation system to be more efficient and effective. The CIP identifies transportation funds from various sources expected to be available over a five-year programming horizon and targets them for transportation priorities in Alameda County.

The main objectives of the CIP are summarized as follows:

1. **Translate long-range plans into short-range implementation.**
   The CIP transitions long-range plans into focused project/program delivery over a five-year programming window with a two-year allocation plan.

2. **Serve as the Strategic Plan.**
   The CIP serves as Alameda CTC's Strategic Plan and satisfies the public reporting requirements for these funding programs.

3. **Establish a consolidated programming and allocation plan.**
   The CIP is a decision-making programming document used to program fund sources under Alameda CTC's responsibility for capital improvements, program operations, and maintenance projects. Integrating all fund sources into one programming document permits Alameda CTC to coordinate the programming and allocation of multiple fund sources to ensure that the fund investments from the individual sources are joined to maximize the effectiveness of the overall investments in the Alameda County transportation system.

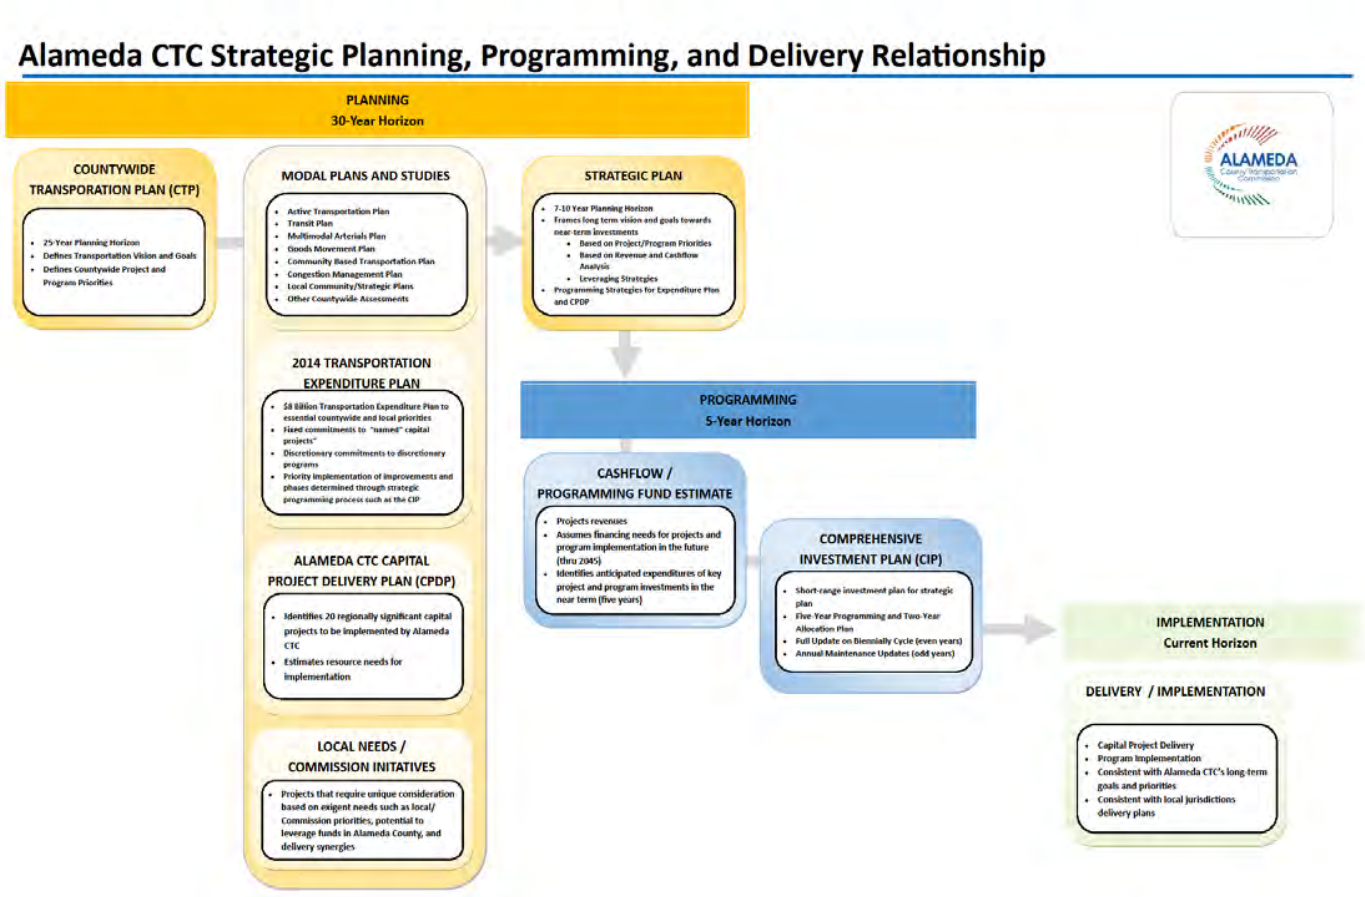
The CIP includes a two-year allocation plan for funds allocated by Alameda CTC. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors and implementing agencies, and for contracts and costs related to projects that Alameda CTC implements directly.

The revenue and expenditure assumptions for each fund source are confirmed periodically and serve as the basis for the financial management of each funding program. Funding commitments to individual projects identified in the voter-approved transportation expenditure plans are confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B, and 2014 Measure BB transportation expenditure plans.

The CIP will be updated on an annual and biennial basis, as needed, to reflect updates to Alameda CTC's programming and allocations. The annual updates are intended to include technical updates to confirm commitments and programming and allocation actions occurring outside the regular CIP process. A biennial update of the CIP will include a more robust update that shifts the five-year programming and allocation horizon and allows for additional projects to be nominated and programmed into the CIP against the newly available programming capacity granted by the horizon shift.

The CIP guides investments in projects that demonstrate significant public benefit, advance project implementation, and support leveraging of local, regional, state, and federal dollars for Alameda County's transportation priorities.

SECTION 3: RELATIONSHIP WITH PLANNING



The CIP's purpose is to strategically program available funds for transportation investments that support long-range vision and goals established in Alameda CTC's Countywide Transportation Plan (CTP), multimodal plans, and voter-approved transportation expenditure plans.

To be considered eligible to receive programming and allocation of Alameda CTC Administered Funds, candidate projects are required to have a direct nexus to Alameda CTC's CTP, Alameda CTC's multimodal plans (Transit, Goods Movement, and Arterials), and other local planning efforts. This ensures candidate projects are consistent in coordination with local, countywide, and regional transportation priorities. Development of these planning documents also satisfies the public outreach requirements of certain regional, state, and federal funding programs.

For Alameda CTC implemented projects, the CIP incorporates the delivery recommendations included in the Measure BB Capital Project Delivery Plan (CPDP) as approved in March 2016. The CPDP addresses projects implemented directly by Alameda CTC and identifies projects posed for local, regional, state, and federal funding. The CIP incorporates the CPDP programming recommendations, policies and procedures, and project delivery assumptions in their entirety as it makes programming and allocation recommendations to projects contained in the CPDP.

Projects demonstrating a nexus to countywide planning efforts and transportation priorities formulate the eligible candidate pool. These projects may submit programming and allocation applications through Alameda CTC's call for projects and request for allocation processes. Project selection and prioritization for the CIP is based,

in part, on priorities identified in adopted planning documents and studies, Strategic Plan Guiding Principles, but also considers Commission-approved project selection criteria.

SECTION 4: FUND SOURCES AND REVENUE ESTIMATES

Alameda CTC has programming and allocation authority for several transportation fund sources at the county level and has programming authority for the Alameda County shares of certain federal and state funding. Alameda CTC acts on behalf of Alameda County at the regional, state, and federal levels for matters pertaining to transportation funding from federal, state, and regional sources, including infusions of funding such as stimulus programs and proceeds from bond sales.

The CIP includes the following fund sources grouped according to federal, state, regional, and local funding categories.

Federal Program	
Fund Source	**Description**
Surface Transportation Program	As Alameda County's congestion management agency (CMA), Alameda CTC is responsible for soliciting and prioritizing projects in Alameda County to receive a portion of the federal Surface Transportation Program (STP) funding. The STP is provided through funding from reauthorization of federal funding for surface transportation from which Alameda CTC receives federal monies. The Metropolitan Transportation Commission (MTC) approves programming of STP funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.
Congestion Mitigation and Air Quality Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for a portion of the federal Congestion Mitigation and Air Quality Program (CMAQ) in the same fashion as for STP funding. The CMAQ is provided through funding from the reauthorization of federal funding for surface transportation by which Alameda CTC receives federal monies. CMAQ funds are used on projects that will provide an air quality benefit. MTC approves programming of CMAQ funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.

State and Regional Programs	
Fund Source	**Description**
State Transit Assistance	State Transit Assistance (STA) is the state's flexible transit funding program which may be used for capital or operating purposes. The STA program is split equally between a revenue-based program (Public Utilities Code 99314) and a population-based program (Public Utilities Code 99313). Under MTC Resolution 4321, CMAs are charged with playing a coordinating role in the development of a STA population-based distribution program within their county. MTC Resolution 4321 replaced MTC Resolution 3837 with a new transit-focused, STA County Block Grant for 70 percent of the STA population-based funds received by MTC, with the remaining 30 percent directed toward MTC's Regional STA Program. MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program.
Regional Measure 2 and Future Regional Measures	In 2004, voters passed Regional Measure 2 (RM2) raising the toll on the seven state-owned toll bridges in the San Francisco Bay Area by $1. This extra dollar funds various transportation projects within the region determined to reduce congestion or to make improvements to travel in the toll bridge corridors, as identified in Senate Bill 916 (Chapter 715, Statutes of 2004). RM2 establishes the Regional Traffic Relief Plan and identifies specific transit operating assistance and capital projects eligible to receive RM2 funding.
State Transportation Improvement Program	As the CMA, Alameda CTC is responsible for soliciting and prioritizing projects to receive the Alameda County share of the State Transportation Improvement Program (STIP). The CMA recommends programming for each "county share" of the Regional Improvement Program (RIP) portion of the STIP (i.e., Alameda CTC recommends programming for Alameda County). The California Transportation Commission (CTC) updates the STIP on a two-year cycle with new STIP cycles approved every even year. The CTC adopts a fund estimate for each STIP cycle during the year before the even-numbered year in which the STIP cycle is adopted. The fund estimate provides the amounts for each of the county shares that comprise the RIP portion of the STIP cycle. The STIP programming horizon is a five-fiscal-year window with two new fiscal years added to each STIP cycle. Most STIP programming capacity is added in the two new, outer fiscal years of the STIP programming horizon. Funds programmed in the STIP are subject to the STIP Timely Use of Funds Provisions prescribed in the STIP guidelines typically adopted with each STIP cycle.
Transportation Fund for Clean Air Program	State law permits the Bay Area Air Quality Management District (Air District) to collect a fee of $4 per vehicle per year to reduce air pollution from motor vehicles. The fee provides the revenues for the Transportation Fund for Clean Air (TFCA) which the Air District distributes at regional and county levels. The Air District programs 60 percent of the funding at the regional level and allocates annually the

State and Regional Programs	
	remaining 40 percent for programming and allocation by the designated County Program Manager (CPM) for each county. Alameda CTC is the TFCA CPM for Alameda County. For Alameda County's TFCA program, a county-level funding distribution formula directs 70 percent of the funds to the cities and the County and reserves 30 percent for transit-related projects.

Local Programs	
Fund Source	**Description**
1986 Measure B	In November 1986, voters passed the 1986 Measure B, a 15-year measure expected to generate more than $990 million through a half-cent transportation sales tax to fund local streets and roads improvements, bus and paratransit services, and other transportation infrastructure projects. The 1986 Transportation Expenditure Plan guides the use of those funds. Sales tax collection authorized by the 1986 Measure B ended in 2002, but a few projects from the 1986 Measure B Capital Program are still underway. The 1986 Measure B generated more than $353 million for transportation programs and $864 million for highway, roadway, and transit improvements. The sales tax collection for the 1986 Measure B ended in 2002, and no additional revenues are expected.
2000 Measure B	Alameda County voters approved the 2000 Measure B Transportation Expenditure Plan (2000 TEP) which authorized a 20-year half-cent sales tax to be used for the transportation purposes identified in the 2000 TEP. Alameda CTC administers the 2000 Measure B Program to deliver essential transportation improvements and services. The 2000 TEP guides expenditures of the 2000 Measure B funds. The collection of 2000 Measure B funds began on April 1, 2002 and continued through March 31, 2022. The 2000 Measure B funds are divided as prescribed in the 2000 TEP between funds allocated directly to the jurisdictions and transit operators, and the funding available for the programs and capital projects named in the Measure. The 2000 Measure B funds are distributed as follows: Direct Local Distributions: The direct local distribution (DLD) funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2000 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages of net revenues used for the distributions are prescribed in the 2000 TEP as follows: • Mass Transit Operations (21.22 percent) • Local Streets Maintenance and Safety (22.34 percent) • Bicycle and Pedestrian Safety (3.75 percent) • Special Transportation for Seniors and People with Disabilities (9.02 percent) Discretionary Programs: The 2000 TEP includes commitments to the following discretionary programs available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position and discretionary projects based on the percentages or amounts specified in the 2000 TEP: • Express Bus Service Countywide (0.7 percent) • Bicycle and Pedestrian Safety (1.25 percent) • Special Transportation for Seniors and People with Disabilities - Coordination and Gaps in Service Grants (1.43 percent) • Transit Center Development Funds (0.19 percent) Capital Projects: The 2000 TEP includes commitments to individual capital projects. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.

Local Programs	
2010 Vehicle Registration Fee	Alameda County voters approved the Alameda County Vehicle Registration Fee (VRF) Program in 2010. Funds made available by VRF are distributed as follows: Direct Local Distributions: The DLD portion of VRF funding is distributed as follows: • Local Road Improvement and Repair Program (60 percent) • Local Transportation Technology (10 percent) – On January 23, 2014, Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to Alameda CTC. Discretionary Programs: A portion of VRF funding is distributed for the following grant sub-programs on a reimbursement basis: • Transit for Congestion Relief (25 percent) • Pedestrian and Bicyclist Access and Safety Program (5 percent)
2014 Measure BB	Alameda County voters approved the 2014 Transportation Expenditure Plan (2014 TEP) as part of Measure BB in November 2014. Measure BB authorized the augmentation and continuation of the voter-approved 2000 Measure B sales tax with a second half-cent sales tax through the end of the 2000 Measure B collection period, i.e., March 31, 2022, followed by a one-cent sales tax authorized from April 1, 2022 through March 31, 2045. The 2014 Measure BB funds are allocated as follows: Direct Local Distributions: The 2014 Measure BB DLD funds are distributed directly to local jurisdictions and transit operators as received by Alameda CTC in accordance with the provisions set forth in the 2014 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages used for the distributions are prescribed in the 2014 TEP as follows: • Transit Operations, Maintenance, and Safety Program (21.55 percent) • Local Streets Maintenance and Safety (20 percent) • Bicycle and Pedestrian Infrastructure and Safety (3 percent) • Affordable Transit for Seniors and People with Disabilities (9 percent) Discretionary Programs: The 2014 TEP includes commitments to the following discretionary programs available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2014 TEP: • Affordable Student Transit Pass Program ($15 million) • Affordable Transit for Seniors and People with Disabilities/Coordination and Service Grants (1 percent) • Bicycle and Pedestrian Program (2 percent) • Community Investments That Improve Transit Connections to Jobs and Schools (4 percent) • Congestion Relief, Local Bridge Seismic Safety ($639 million) • Freight and Economic Development Program (1 percent) • Technology, Innovation and Development Program (1 percent) • Transit Innovation Program (2.24 percent) Capital Projects: The 2014 TEP includes commitments to individual capital projects and to groups, or categories, of capital projects as described in the 2014 TEP. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and the recipient agency, or for eligible project costs incurred directly by Alameda CTC.

Local Programs	
Local Exchange Program/CMA Transportation Improvement Program	Alameda CTC administers a Local Fund Exchange Program to exchange state and federal funds for local monies, giving Project Sponsors the flexibility to streamline and expedite project delivery. The local funds also allow agencies to begin projects earlier than would otherwise be possible due to the uncertain timing of the availability of state and federal funds in any given funding cycle. Based on state and federal economic conditions, the availability of state and federal funds is often delayed to beyond the year in which the funds were originally programmed. Such delays are unilateral from the state and/or federal levels and put a strain on timely implementation of projects. The Local Fund Exchange Program allows local monies to be exchanged with state and federal funds. In many cases, these exchanges allow local funding to be made available earlier, on a more dependable timeline, than the original state and federal funds. Exchanges are approved on a case-by-case basis, as opportunities present themselves.

SECTION 5: PROGRAMMING REQUIREMENTS

Projects must satisfy the following programming requirements to be considered for programming and allocation by Alameda CTC.

1. Projects must be included in and consistent with the latest adopted Regional Transportation Plan and Alameda CTC's Countywide Transportation Plan (CTP).
2. Projects must demonstrate a public benefit toward building and maintaining the transportation infrastructure in Alameda County.
3. Projects must be publicly accessible and provide direct benefits to public transportation infrastructure and operations.
4. Projects must meet the goals and objectives of the funding sources and programs ultimately recommended by Alameda CTC.
5. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF must be consistent with the requirements and priorities of their respective expenditure plans.

Funds are programmed from a specific fund source(s), in a given fiscal year to a specific project phase(s). The expected outcome of the total project, or of implementing any project phase with funds programmed in the CIP, shall be consistent with the goals and objectives of the CTP and any applicable fund source specific requirements.

Programming and allocations requests must at minimum contain the following:

- Project scope, cost, and schedule.
- Description of benefits to determine the expected outcome consistent with the CTP and fund source goals and objectives.
- Funding breakdown by phase. Cost estimates for all phases are required for projects requesting programming or allocations for phases beyond environmental approval.

ACTC_AR4008

SECTION 6: PROGRAMMING PRINCIPLES AND GUIDELINES

Alameda CTC's programming and allocation decisions shall be based on a project's ability to achieve the following five fundamental programming principles that serve as a guide for CIP development and project selection.

1. **Implementing Alameda County's adopted vision**
   All funding decisions will support implementation of Alameda CTC's long-range transportation vision for Alameda County as adopted in its long-range CTP.

2. **Balancing strategic investments across project delivery phases**
   Alameda CTC strategically invests financial resources to optimize transportation planning, project delivery, and performance analysis. The CIP will identify investments in all stages of project development. Striking a balance between project development and capital phases is desired to support a combination of project development phases that will utilize the available programming capacity and position the county to leverage federal, state, and regional funding sources as they become available. This will include considering the delivery status of projects to optimize competitiveness for future grant opportunities.

   Alameda CTC uses the following project or program delivery phases:
   - Planning/Scoping/Conceptual Engineering
   - Preliminary Engineering/Environmental Studies
   - Plans, Specifications & Estimates/Final Design
   - Right-of-Way Acquisition and Engineering
   - Construction Capital and Support
   - Equipment/Rolling Stock Acquisition
   - Operations (including Safe Routes to School, paratransit programs, transit-related operations)
   - Post-Construction Activities
   - Project Closeout

   The CIP also contains countywide program/operational investments including, but not limited to, the Safe Routes to Schools Program, senior travel training/mobility management, and system performance-monitoring efforts.

3. **Maximizing transportation investments**
   Alameda CTC will work with local agencies to program funds to projects that are implementation ready, have a credible funding plan, meet the requirements of the fund source, and provide transportation benefits. The CIP will examine opportunities to leverage the local fund sources to the maximum extent

ACTC_AR4009

possible. In addition, Alameda CTC will use the CIP to identify co-benefits between projects, when practical and feasible.

4. **Investing in all modes and areas within Alameda County**
   The CIP strives to identify investments in all modes of transportation, project phases, and geographic areas in Alameda County. The CIP is constrained to the revenue projected to be available for the five-year programming window. Alameda CTC will use the CIP to monitor geographic equity and modal equity investments over time.

5. **Delivering solutions while ensuring accountability**
   Alameda CTC will require timely and cost-effective project delivery and will monitor implementation to ensure Project Sponsors are accountable for their projects. The CIP will promote the timely delivery of projects, leveraging local funds, and minimizing cost increases due to delays. Projects funded through the CIP will be subject to the requirements of each fund source used to implement the project. Timely use of funds provisions will apply to all funds programmed and/or allocated in the CIP.

CIP Programming Principles and Guidelines

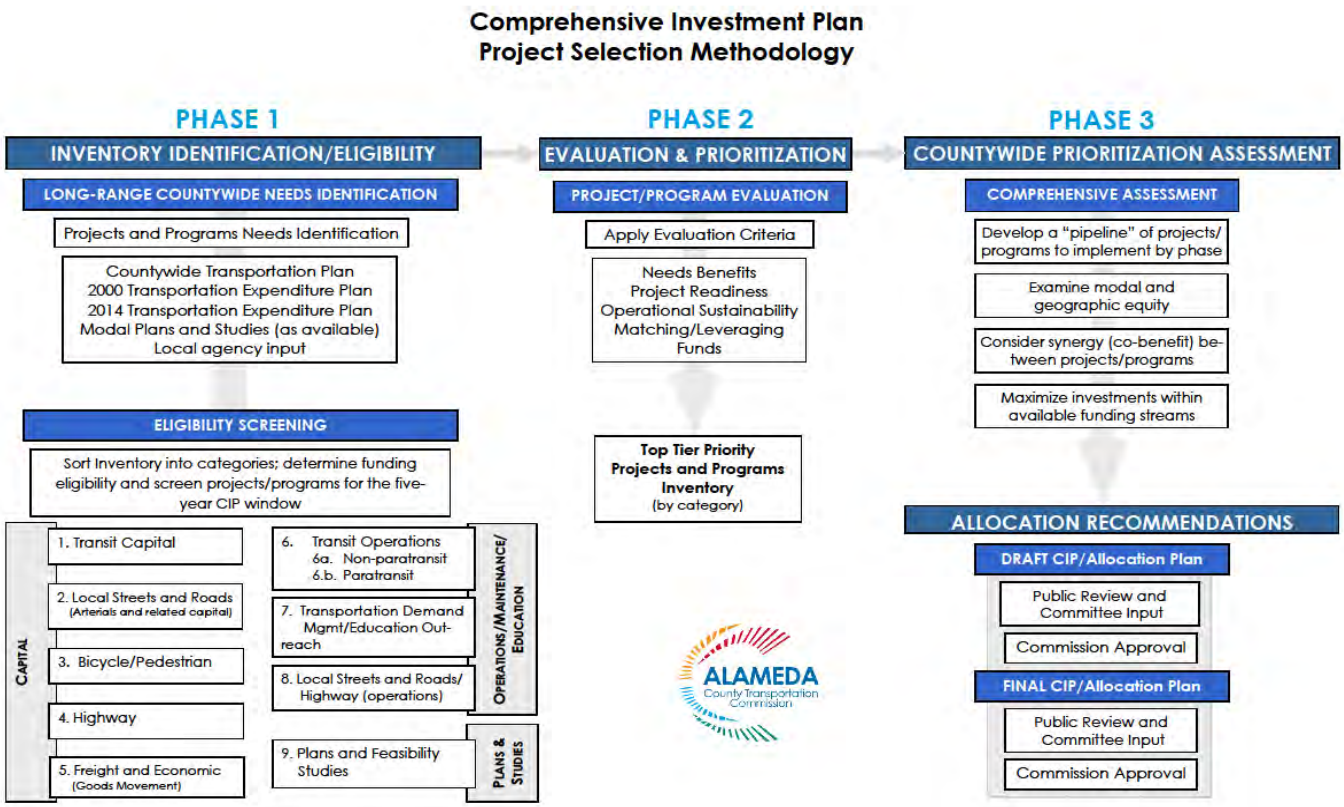
Programming and allocations decisions shall be based on CIP Programming Principles and Guidelines in Appendix D. This describes the complete framework for programming and allocation decisions made by Alameda CTC, including defining eligible projects, eligible Project Sponsors, eligible costs, funds sources, and funding guidelines and requirements.

Key project merits will be considered (in no particular order) such as:

- **Congestion Relief:** Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
- **State of Good Repair:** Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
- **Transportation Significance:** Project demonstrates regional or countywide significance toward improving the transportation network, economic competitiveness, and environmental conditions, i.e., regional greenhouse gases.
- **Safety and Connectivity:** Project's ability to foster a safe, connected, accessible transportation system for multimodal movement of goods and people.

ACTC_AR4010

- **Multimodal Access:** Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.



The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to inform the uniform consolidation of historically separate programming practices, where applicable, to more effectively coordinate funding toward beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

Programming Guidelines are described in detail by program in Appendix D.

SECTION 7: PROJECT SELECTION METHODOLOGY

The project selection methodology for the CIP is based on a three-step/phased approach as described and illustrated in the CIP Project Selection Methodology Diagram (next page).

ACTC_AR4011

Phase 1: Project Identification and Screening

Alameda CTC will identify project inventories from the CTP, countywide modal plans, short- and long-range transportation plans, and other local planning documents. The inventory will be screened for eligible projects ready to be implemented within the five-year CIP window based on schedule, a credible funding plan, and local prioritization. Alameda CTC may also initiate a call for projects to gather updated project information and inform project selection decisions for CIP programming and allocations.

Alameda CTC will separate projects into modal categories based on the type of project (bicycle/pedestrian, roadway, etc.). Projects will be assessed for eligible funding sources to ensure they meet funding requirements. The CIP Programming Principles and Guidelines in Appendix D provide a summary of the categories and sample project types included in the CIP.

The goal of Alameda CTC's funding recommendations is to fund a project by phase, as applicable, so that the project can progress from development to construction and project delivery. Projects outside the five-year period will be considered for future implementation in subsequent funding cycles and CIP updates.

ACTC_AR4012

Phase 2: Project Evaluation

Based on the list developed in Phase 1, Alameda CTC will prioritize projects relative to each other in defined category types. Projects will be evaluated against the same category of projects (i.e., transit projects will be evaluated against transit projects, road projects against road projects, etc.). This approach will provide a balanced prioritization process that compares similar project types to one another. Projects specifically named in expenditure plans will be separated from those seeking discretionary funding and will be prioritized independent of the discretionary projects. Based on their scoring assessment, projects will be evaluated and arranged into three tiers within their respective categories (high, medium, and low priority). This sorted list will then move into the third phase of evaluation.

Alameda CTC will evaluate eligible projects using the programming criteria adopted as part of the CIP, and other Commission actions, as the basis for programming and allocation decisions.

Phase 3: Countywide Prioritization Assessment

The final step in the project selection process will examine the top tiers of each category from the Phase 2 scoring, to strategically program available funding, and to achieve countywide goals and priorities. Alameda CTC will perform a systematic examination across all categories to identify financial strategies, geographic and modal equity, and co-benefits between proposed improvements as part of the CIP update process every two years, when the five-year programming window is shifted two years into the future.

Alameda CTC will examine opportunities to promote the timely delivery of projects and leverage local funds. Programming recommendations will be constrained by the total available programming within the five-year CIP window and by fund source project eligibility.

Projects outside Alameda CTC's programming availability in the five-year CIP will be considered for inclusion in future funding cycles and CIP updates.

Project Selection Criteria

The CIP project selection criteria as approved and incorporated in the CIP updates includes traditional programming criteria used previously by Alameda CTC. The CIP uses four categories of criteria to score each project:

1. **Readiness Delivery Criteria**
   The project has a well-defined funding plan, budget, and schedule;

ACTC_AR4013

implementation of the project phase is feasible; governing body approval and community support are demonstrated; and agency coordination among internal and external agencies is demonstrated, as applicable.

2. **Needs and Benefits Criteria**
   The need for the project is clearly defined and demonstrate how the transportation improvement will benefit intended users as follows: The project will increase connectivity, improve access, and support well-maintained transportation facilities/equipment (as applicable); it will promote innovation and a multimodal system; it will improve safety, support a clean environment, and strengthen the economy.

3. **Matching and Leveraging Funds Criteria**
   The project has secured funding from other sources or demonstrates how it will leverage other funds for use on the project.

4. **Other Funding Features**
   As applicable, the project meets other requirements mandated by other funding sources/programs.

Alameda CTC will, to the extent possible, implement the above project selection process using the CIP programming principles identified in Section 6: Programming Principles and Guidelines for programming and allocation decisions.

SECTION 8: BASIS OF PROJECT COST SHARING

The funding investments are programmed in the CIP considering the overall project cost/funding picture and expected outcomes. The baseline for cost sharing is typically the proportional share of Alameda CTC Administered Funds against the total project costs at completion.

Project Sponsors are required to request Alameda CTC Administered Funds by phase and to provide matching funds for the request by phase. This ensures during any given CIP programming cycle the Commission's requirement for a minimum level of project cost sharing is achieved.

In the event Alameda CTC funds are required in an earlier phase to increase the competitiveness of a project to leverage other fund sources, Alameda CTC, may at its discretion, make a programming recommendation to a phase without a match that considers the project cost sharing overall.

ACTC_AR4014

A risk sharing arrangement shall be included in any funding agreement which obligates funding allocated by Alameda CTC in advance of its proportional share (based on the total funding) for project phases beyond environmental approval, especially for projects that do not have funding identified for all phases of implementation.

The following principles shall be the basis of cost sharing considered for programming and allocations approved by Alameda CTC:

- **Complete Project Information**
  Requests for allocations through the CIP process and subsequent funding agreement packages shall include a summary of estimated total costs segregated by phase; a corresponding milestone schedule showing start and end dates for each phase (and any significant delivery milestones within each phase); and the anticipated funding (all sources) for each phase segregated by source.

- **Funding Agreement Requirements**
  Project cost sharing shall be established in the funding agreements based on the information provided with the request for allocation and funding agreement packages. The cost-sharing proportions documented in the funding agreement shall be used for risk sharing associated with the implementation of the phase(s) covered by the agreement.

- **Local Cooperation Policy and Eligibility of Locally Incurred Costs**
  Project Sponsors and local jurisdictions that directly benefit from the expected outcomes of a project implemented in their locality by Alameda CTC, the Project Sponsor, or other implementing agencies, are required to be active funding partners to further the delivery of such improvement project.

  Locally incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by an implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. However, these costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC stipulated in the funding agreement, unless they are specifically identified as eligible in the funding agreement.

  Jurisdictions that are Measure B/Measure BB/VRF DLD recipients are encouraged to use local funds to support matching costs. DLD recipients shall not be eligible for reimbursement for local staff costs from Alameda CTC Administered Funds allocated to the Project. Project Sponsor staff costs can be

included in the total cost and other funding amounts for the purpose of meeting the cost and risk sharing provisions of the funding agreement, but staff costs will not be considered reimbursable costs unless the Project Sponsor is performing direct activities related to the delivery of the project phase.

Refer to the Local Cooperation Policy in Appendix E.

SECTION 9: FUND MANAGEMENT AND CIP ADMINISTRATION

Alameda CTC is responsible for managing and administering various funding programs within its programming and allocation purview. The CIP provides a summary of the programmed and allocated amounts for each fund source administered by Alameda CTC, and in some cases the fund sources administered by other agencies.

Alameda CTC Administered Funds must be managed in accordance with applicable laws and requirements related to the individual fund sources, and with government accounting standards. The programming and allocations included in the CIP provide the basis for the financial and accounting activities performed by Alameda CTC's annual budget, programming fund estimate, and cash management analysis. In general, the financial and accounting activities performed by Alameda CTC occur in the background of the day-to-day project implementation activities and do not typically hinder a project's ability to be delivered. The specifics related to restrictions of use, or timing of reimbursements for allocated funds shall be addressed in the applicable funding agreement(s).

Alameda CTC Administered Funds under Alameda CTC's direct administration purview shall be encumbered in a funding agreement with the Project Sponsor. The funding agreement shall be consistent with the original request for allocation/project application used to inform Alameda CTC's programming and allocation decisions. Alameda CTC provides for a formal and administrative amendment process to amend an executed funding agreement to adjust the scope, funding, milestones, and schedules based on the Project Sponsor's request.

CIP Administration

The CIP is updated periodically, as needed, to assess programming and allocation adjustments that reflect project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments. The Alameda CTC Commission may amend the CIP at any time if an action must be taken before the next CIP update period. The Commission must approve all project additions or deletions. The Commission authorizes the executive director or his or her designee to administratively approve the acceleration of project/program schedules, if they can be accomplished within the budgeted amount. This is to maintain project scheduling and

ACTC_AR4016

coordination with any other activities that may impact or delay project implementation or development. Significant changes in the scope of work, implementation schedule, or costs will be presented to the Commission for consideration.

The CIP is updated in consultation with other planning and programming efforts such as the Alameda County Congestion Management Program, the Countywide Transportation Plan, and Alameda CTC's annual budget process.

Annual CIP Update

Annual updates, as needed, include modifications to financial projections and confirmation of programming and allocation commitments in association with Alameda CTC's annual budgetary processes. Additionally, annual updates will examine general strategic planning of its projects and programs, the status of various commitments, and technical adjustments required periodically.

Biennial CIP Update

Every two years, as needed, Alameda CTC will comprehensively update the CIP to review existing CIP projects and to open a nomination window for new projects. The biennial update occurs in odd numbered fiscal years and represents a shift of the programming window to add the next two fiscal years.

Biennial CIP updates will include reviewing existing projects and programs to determine whether to recommend continuing or postponing funding and delaying, removing, or reincorporating projects/programs. Alameda CTC may recommend additional funding to continue existing approved projects. As part of this update, Alameda CTC will open a nomination window to consider new projects for additional capacity granted with the two-year shift of the programming horizon. Projects submitted during the nomination window that meet the Commission-adopted screening criteria will be evaluated and prioritized for funding consideration.

Periodically, Alameda CTC will reassess the CIP development process, prioritization methodology, and allocation process for consistency with any updated policies and goals. Alameda CTC will update and amend the CIP accordingly to account for project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments.

CIP Amendments/Adjustments

CIP amendments/adjustments are considered on a case-by-case basis and may occur in the following situations:

- Alameda CTC made a programming recommendation that received final

ACTC_AR4017

programming actions by other agencies for federal, state, or regional funds.

- Additional funding is needed to complete a CIP project.
- Commission-approved programming action made off-cycle from a CIP update.
- Matching funds are needed to immediately leverage non-Alameda CTC administered funds to Alameda County.
- Project Sponsors requested a fund exchange among existing approved projects to prevent delays or cost increases to the project.
- Project Sponsors required updates to reflect additional revenue from new or existing fund sources or updated confirmed amounts.
- Project Sponsors are unable to meet the environmental and full funding requirements as defined in the sales tax expenditure plans.
- Project Sponsors reported changes such as budget increases, schedule delays, or other factors that may impede project delivery.

Adjustments to the current CIP programming and allocation record will be reflected in the next regularly scheduled CIP update.

SECTION 10: ALLOCATION PROCESS AND REQUIREMENTS

Alameda CTC maintains programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard programming and allocation procedures and requirements further described in Appendix E, CIP Policies and Procedures.

Generally, Alameda CTC allocates the funding for which it has allocation authority based on request for allocation packages in the form of separate allocation requests for named projects in the transportation expenditure plans or through funding applications submitted to Alameda CTC for funding consideration by Project Sponsors during a CIP call-for projects.

A request for allocation package shall include an overall project implementation plan which identifies anticipated costs by phase and potential funding sources for each phase throughout project completion. Requests for allocations for multiple phases without specifying amounts for the individual phases shall be considered on a case-by-case basis.

Generally, requests for allocation packages should be submitted to Alameda CTC at least 60 days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval. In some cases, an allocation is requested to fund project activities that will be performed by an implementing agency other than the sponsor. In such cases, the request for an allocation package should be prepared by the

ACTC_AR4018

implementing agency and submitted to Alameda CTC by the Project Sponsor.

Alameda CTC has allocation authority for the following fund sources:

- 1986 Measure B (1986 MB)
- 2000 Measure B (2000 MB)
- 2010 Vehicle Registration Fee (VRF)
- 2014 Measure BB (2014 MBB)
- Transportation Fund for Clean Air (TFCA) County Program Manager
- CMA Transportation Improvement Program (CMATIP)

Alameda CTC allocates funds to the following phases:

- Planning/Scoping/Conceptual Engineering
- Preliminary Engineering/Environmental Studies
- PS&E/Final Design
- Right-of-Way Acquisition and Engineering
- Construction Capital and Support
- Equipment/Rolling Stock Acquisition
- Operations and/or Maintenance

SECTION 11: APPROVAL OF ADVANCE/PAYBACK AND EXCHANGE ARRANGEMENTS

Requests for advances or exchanges of funds programmed or allocated by Alameda CTC shall be considered on a case-by-case basis and shall only be approved if Alameda CTC resources permit such advance/exchange and if a significant benefit to the project implementation can be identified. The Project Sponsor shall submit in writing requests for such advances or exchanges, which shall include, at minimum:

1. Project status and current implementation plan.
2. Project delivery strategy with the funding advance or exchange proposal that describes the costs and fund sources to be involved in the proposed advance or exchange.
3. Timing availability of the funds for which the advance or exchange is requested.
4. Repayment schedule of the Alameda CTC funds proposed to be advanced.
5. Intended use of the funds freed up by the requested advance or exchange.

Any advance or exchange arrangement involving funds programmed or allocated by Alameda CTC must be approved prior to allocation and shall be addressed in the applicable funding agreement.

SECTION 12: DEBT FINANCING FOR THE MEASURE BB CAPITAL PROGRAM

Management of the accounts established for the voter-approved funding programs requires forecasts and projections of revenues and expenditures for the revenue sources and expenditure commitments included in each program. The CIP includes revenue projections for each of the funding programs that Alameda CTC administers. Alameda CTC confirms the priorities for the expenditure commitments through programming and allocations in the CIP.

While the cumulative committed expenditures remain less than the cumulative revenues, Alameda CTC can fund the investments approved in the CIP on a pay-as-you-go basis. When enough projects are approved that create a scenario where the cumulative committed expenditures exceed the cumulative revenues for any of the funding programs, program-level financing will be required to make committed funds available when needed for project implementation.

When external financing is necessary, the financing mechanism will be determined by the timing of the funding need, current financial markets, and type of expenditure to be financed, as some financing mechanisms restrict the type of expenditures that can be financed. The decision to finance projects and programs requires lead time to identify the most beneficial type of financing and to perform the activities required for the financing approval, so staff consistently updates cashflow schedules based on the changing needs of the projects and programs in the 2000 TEP and 2014 TEP.

Once funding agreements and contracts for funds allocated in the CIP are executed, Alameda CTC will have encumbered more Measure BB capital funds than can be provided to the projects on a pay-as-you-go basis. Completed financial analysis showed the Measure BB capital program cash balance, without any external financing mechanism, would go negative in the near term. The amounts encumbered in funding agreements and contracts will not be expended immediately. The encumbrances for larger projects can take years to be fully expended; however, with encumbrances in place, financial management of the capital program must be diligent. The timing of the anticipated expenditures has a significant effect on financing options and costs. Completed financial analysis indicated that debt financing from an external source was required to provide Measure BB funding to the capital projects funded in this CIP.

Based on the volume and timing of funding needs in the Measure BB capital program, the external financing mechanism for the Measure BB capital program is the issuance of bonds in the capital markets. The process for issuing bonds secured by the sales tax is prescribed by the California Public Utilities Code (PUC) and

ACTC_AR4020

expanded on in guidelines prepared by the California Debt and Investment Advisory Commission. The required process includes Alameda CTC adopting a resolution authorizing the issuance of bonds. The resolution authorizing the issuance of bonds, at a minimum, must address the following (from the PUC):

- The purposes for which the proposed debt is to be incurred, which may include all costs and estimated costs incidental to, or connected with, the accomplishment of those purposes, including, without limitation, engineering, inspection, legal, fiscal agents, financial consultant and other fees, bond and other reserve funds, working capital, bond interest estimated to accrue during the construction period and for a period not to exceed three years thereafter, and expenses of all proceedings for the authorization, issuance, and sale of the bonds.
- The estimated cost of accomplishing those purposes.
- The amount of the principal of the indebtedness.
- The maximum term the bonds proposed to be issued shall run before maturity, which shall not be beyond the date of termination of the imposition of the retail transactions and use tax.
- The maximum rate of interest to be paid, which shall not exceed the maximum allowable by law.
- The denomination or denominations of the bonds, which shall not be less than five thousand dollars ($5,000).
- The form of the bonds, including, without limitation, registered bonds and coupon bonds, to the extent permitted by federal law, and the form of any coupons to be attached thereto, the registration, conversion, and exchange privileges, if any, pertaining thereto, and the time when all or any part of the principal becomes due and payable.

The process for issuing bonds involves selecting a financing team including a financial advisor, an underwriter (one or more), bond counsel, and often disclosure counsel, to help determine the bond structure and other specifics related to the bond issuance required to develop the bond package, market the bonds, sell the bonds, and secure the proceeds. Once the bonds are issued, Alameda CTC will be responsible for bond compliance, monitoring and tracking expenditures, and investment and accounting for bond proceeds.

Alameda CTC's policy is to fund capital project costs on a pay-as-you-go basis for as long as reasonably possible prior to issuing bonds, which helps to minimize financing costs. Based on past cash flow projections, the Measure BB capital program required financing in FY2022-23 to continue to be able to provide funding to Measure BB projects at the time they are needed to pay expenditures incurred on projects through 2032.

Thereafter, available sales tax revenues from Measure BB are anticipated to be sufficient to meet capital project cost and debt service needs. Debt financing effectively makes future revenues available sooner to pay for project expenditures as they are incurred. Cash flow projections support the financial analysis and cash management efforts related to determining that a bond issuance is the best method of debt financing suited to Alameda CTC's needs and allows the agency to fulfill commitments to the Measure BB capital program. The focus of the financial analysis and Alameda CTC's management team is to provide funding for Measure BB commitments to capital projects at the time the funding is needed to reimburse eligible project expenditures as they are incurred. Once a debt issuance is in place, Alameda CTC must prioritize debt service obligations when fluctuations to the timing of Measure BB funding needs on projects develop.

With borrowing needs spread over more than a 10-year period, Alameda CTC's Commission approved a strategy to address this need which includes issuing bonds every few years within a 10-year window to meet Measure BB capital project funding needs. This strategy of periodic bond issuances is in line with requirements to spend down bond proceeds within three years of each issuance, which will allow Alameda CTC to have some certainty on the availability of funding to meet the demands of the Measure BB capital program as projects move through the process into the construction phase. Bonds are expected to be sold as tax-exempt, fixed-rate bonds with a 10-year call feature, allowing Alameda CTC to refund and redeem the bonds at par on and after the 10-year call date to provide flexibility to the strategy and the Measure BB program. The final maturity of bonds issued will be in 2045, the final year of Measure BB sales tax collections.

With the inaugural issuance of Measure BB bonds completed, the bond proceeds will fund Measure BB capital expenditures on a program-wide basis. Within the capital program, the projects with the largest draw on funds over the next few years, and the primary need for financing, include the State Route 84 ("SR-84") Interstate 680 ("I-680") Interchange Improvements and SR-84 Widening Project, 7th Street Grade Separation East Project, Interstate 80 ("I-80")/Gilman Street Interchange Improvements Project (Phase 1 and 2), and I-680 Express Lane Southbound Gap Closure (SR-84 to Alcosta Blvd) Project. These projects and allocated funding are included in this CIP as required by the agency's adopted debt policy.

SECTION 13: PROJECT DELIVERY RESPONSIBILITIES

The implementation of projects in the CIP begins once Alameda CTC approves the project funding. The Project Sponsor is the agency that takes overall responsibility for

ACTC_AR4022

project delivery, advocacy, and reporting for the project, regardless of whether it is the direct implementing agency for the project, unless otherwise agreed through written agreements between the Project Sponsor and the implementing agency.

Alameda CTC acts as project co-sponsor and as implementing agency for phases of several projects and programs. As an implementing agency, Alameda CTC incurs eligible project costs through contracts with vendors, staff charges, and other direct costs. Implementing agencies other than Alameda CTC receive reimbursements from Alameda CTC via funding agreements which encumber the funds allocated by Alameda CTC. Once funding agreements are in place, implementing agencies may encumber the funds for contracts and other direct costs to deliver the project as provided for in the funding agreement. Alameda CTC monitors the performance of projects during and after implementation and during operations based on information provided by the Project Sponsor.

Throughout the implementation process, Alameda CTC relies on Project Sponsors and implementing agencies to communicate regularly about project activities and status as required by the funding agreements. Regular updates from Project Sponsors support Alameda CTC's management of the overall set of projects. The information collected from Project Sponsors provides the basis of the project status information Alameda CTC makes available to the public.

Timely and accurate reporting is essential for early identification of potential project or program issues and circumstances that may adversely affect project delivery. Alameda CTC needs as much lead time as possible for approving changes to project or program funding in reaction to project risks. Project Sponsors and implementing agencies must communicate risks to Alameda CTC as soon as they are identified by the Project Sponsor or implementing agency.

If a project requires additional funding, or a change to the funding as approved in the CIP, Alameda CTC will review the funding request and consider providing more funding or approving changes to existing funding in future CIP update cycles. If an amendment is required prior to the next CIP update cycle to maintain the current implementation schedule, Alameda CTC may approve additional funding or changes to previously approved funding at any regularly scheduled Commission meeting.

The CIP document will not be updated and re-published after each off-cycle funding adjustment. Off-cycle adjustments to the approved funding in the CIP will be summarized as current programming in the next CIP update cycle.

ACTC_AR4023

SECTION 14: PROJECT FUNDING AGREEMENTS

Allocated funds are considered available for encumbrance in funding agreements between the funding agency and the recipient agency. A funding agreement is required between agencies to allow for reimbursements of eligible project expenditures. The funding agreements specify the financial terms of the agreement, scope of work, costs, schedules, and deliverables associated with project implementation. Funding agreements are based on the project information, scope of work, costs, schedules, and proposed outcomes at the time of the request for allocation.

Generally, Alameda CTC initiates funding agreement development between recipient agencies immediately after the Commission approves a funding allocation. However, it is the responsibility of the recipient agency to submit a request for a funding agreement to Alameda CTC to receive funds allocated by Alameda CTC. Requests for funding agreements must be in accordance with the Timely Use of Fund Policy cited in Appendix E, CIP Policies and Procedures.

Recipient agencies are responsible for fulfilling all requirements related to executing the funding agreements.

SECTION 15: PROJECTS REIMBURSEMENT PROCEDURES

Alameda CTC approves reimbursements of eligible project costs based on request for reimbursement (RFR) packages submitted by implementing agencies and Project Sponsors which incur reimbursable costs against Alameda CTC Administered Funds encumbered in a funding agreement.

RFR requirements are included in the applicable funding agreements and RFR packages generally include the following.

- Itemization of eligible costs incurred to confirm the costs are consistent with the applicable funding agreement.
- Itemization of Alameda CTC costs and other sources to calculate any proportional shares and reimbursement ratios set in the funding agreement.
- Supporting documentation (timesheets, vendor invoices, proof of payment) for all costs cited within an RFR (Alameda CTC-funded and non-Alameda CTC funded costs).

Alameda CTC approves RFRs with sufficient supporting documentation of costs incurred, based on the availability of funds. Eligible costs for reimbursements are further described in the Eligible Cost for Reimbursement Policy cited in the Appendix E, CIP Policies and Procedures.

SECTION 16: ALAMEDA CTC LOCAL BUSINESS CONTRACT EQUITY PROGRAM REQUIREMENTS

All locally funded contracts approved by a Project Sponsor, funded wholly or in part with Measure B, Measure BB, and/or Vehicle Registration Fee funds, except for contracts that also include state and/or federal funds or contracts funding non-capital projects (e.g., transit operations), are required to comply with Alameda CTC's Local Business Contract Equity (LBCE) Program.

This includes the obligation to report Local Business Enterprise (LBE), Small Local Business Enterprise (SLBE), and Very Small Local Business Enterprise (VSLBE) participation with all reimbursement requests submitted for contract costs partially or wholly funded by Alameda CTC, whether or not the contract requires LBE, SLBE, and/or VSLBE participation.

Project Sponsors receiving Measure B, Measure BB, and/or Vehicle Registration Fee funds through the programming and allocation process must follow the LBCE Program requirements and may be requested to document their procurement processes to verify program compliance. Non-compliant Project Sponsors may have funds subject to rescission or marked as ineligible for reimbursement at Alameda CTC's discretion.

Information on Alameda CTC's LBCE Program is available online from the Alameda CTC website.

SECTION 17: PROJECT CLOSEOUT

Project closeout shall be in accordance with the applicable project funding agreement(s). At a minimum, the Project Sponsor shall provide Alameda CTC with written confirmation that the project is complete with a summary of the final costs, funding, and schedule information segregated by phase. If a project is not yet complete when the Alameda CTC-administered funding is fully expended, the Project Sponsor shall notify Alameda CTC in writing when the expenditure of the funding is complete and continue to provide project status updates as required/requested by Alameda CTC until the project is fully implemented and in public service.

Periodic information updates during operation of projects funded by Alameda CTC may be required for monitoring purposes as specified in the applicable funding agreement and as requested by Alameda CTC.

SECTION 18: PERFORMANCE MONITORING AND REPORTING

Countywide Performance Monitoring and Implementation

Projects that received funding through the CIP have been identified through the programming and allocation process to further the Alameda CTC's Countywide Transportation Plan, modal plans, and local planning documents' vision to improve the transportation network. These plans identify project and transportation system investments based on expected outcomes modeled over a 30-year planning horizon. As projects are implemented through CIP programming, Project Sponsors are required to report back to Alameda CTC on the outcomes of the implemented projects and provide feedback on planning and investment decisions.

Project Reporting

The CIP requires that each project includes performance monitoring goals/metrics to gather project-specific performance indicators. The funding agreement will include all monitoring and reporting requirements to capture the benefits and expected outcomes of Alameda CTC's investments. The reporting requirements include the following:

1. **Progress Reports**
   The executed funding agreements require regular progress reporting, based on the reporting schedule set forth on the agreement. The progress reports include a status update made toward implementation of the project, including deliverables, commitment status of supplemental funds identified in the funding agreement, and adherence to the adopted project schedule.

2. **Corrective Plans**
   Once a funding agreement is executed, Project Sponsors are required to report changes to the project scope, schedule, cost, and funding for the Commission's consideration as soon as the Project Sponsor identifies required changes. Reports of changes such as budget increases, schedule delays, and other factors that may impede successful project delivery in accordance with the agreed-on scope, schedule, cost, and funding must be accompanied by a Corrective Plan detailing the Project Sponsor's strategy to deliver the project or program within the proposed new parameters. Alameda CTC must accept the plan before future programming, allocations, and reimbursements will be approved.

3. **Final Report**
   The Project Sponsor must submit a final project delivery report of the completed project contained in a funding agreement. The final report must describe the completed scope of work, the final budget including expenditures of all identified fund sources in the funding plan, and any performance

ACTC_AR4026

outcomes in the funding agreement.

Monitoring Project Sponsor Delivery and Accountability

Alameda CTC will also monitor the Project Sponsor's ability to deliver a project as proposed. Project Sponsors are required to monitor the project's progress and inform Alameda CTC if there are significant changes in project or program development, implementation schedule, or budget. The Project Sponsor's delivery record may be considered in future programming cycles or when the Project Sponsor requests additional funding. Failure to monitor performance or perform required expenditure audits may affect a Project Sponsor's eligibility to receive funding in future CIP update cycles.

Audits

Alameda CTC reserves the right to perform audits to confirm whether costs submitted for reimbursement are consistent with the provisions set forth in the applicable funding agreement(s). The audit may also include a review of deliverables and outcomes to determine if they are consistent with the project scope and schedule in the funding agreement. Audits must also be performed for funding sources as described in the 2000 TEP and 2014 TEP.

Alameda CTC will periodically evaluate and summarize project performance monitoring efforts through individual project or comprehensive program updates to the Commission. This is intended to provide feedback on Alameda CTC's investments, including how the projects benefit the transportation system.

Alameda CTC Comprehensive Investment Plan
Changes to Current Programming
Programming And Allocation Adjustments to previously approved 2024 CIP Update

								Programming and Allocations ($ x 1,000)								
									Prior Allocations	Two-Year Allocation Plan		Future Programming				
CIP ID	Sponsor	Project Title	PA	Fund Source	Fund Subset	Mode	Phase	Programmed Amount	Prior Thru FY2024-25	FY2025-26	FY2026-27	FY2027-28	FY2028-29	FY2029-30	Total Allocated (Thru FY26-27)	Change Notes
00497	AC Transit	The East Oakland Facility Battery Electric Bus Infrastructure Project	Multiple	2010 VRF	Disc-Tech	Transit	CON	2,000		2,000					2,000	New Programming and Allocation (Discretionary).
00424	Alameda	Alameda-Oakland Estuary Water Shuttle Pilot Program	1-North	2010 VRF	Disc-Transit	Transit	Ops	185	9	176					185	Technical Adjustment: Fund source & programming year change
00424	Alameda	Alameda-Oakland Estuary Water Shuttle Pilot Program	1-North	TFCA	Prog Mgr	Transit	Ops	(185)	(384)	199					(185)	Technical Adjustment: Fund source & programming year change
00424	Alameda	Alameda-Oakland Water Shuttle Operations (FY2027 & FY2028)	1-North	2010 VRF	Disc-Transit	Transit	Ops	534			267	267			267	New Programming and Allocation (Discretionary).
00424	Alameda	Alameda-Oakland Water Shuttle Operations (FY2027 & FY2028)	1-North	TFCA	FYE26	Transit	Ops	196			98	98			98	New Programming and Allocation (Discretionary).
00482	Alameda	Neighborhood Greenway Crossings: Safety & Connectivity Improvements	1-North	2014 MBB	TEP-45	Bike/Ped	PS&E	166		166					166	New Programming and Allocation (Discretionary).
00482	Alameda	Neighborhood Greenway Crossings: Safety & Connectivity Improvements	1-North	2014 MBB	TEP-45	Bike/Ped	CON	371		371					371	New Programming and Allocation (Discretionary).
00482	Alameda	Neighborhood Greenway Crossings: Safety & Connectivity Improvements	1-North	2010 VRF	Disc-BP	Bike/Ped	CON	1,463		1,463					1,463	New Programming and Allocation (Discretionary).
00484	Alameda	Willie Stargell Ave Safety and Transit Improvements	1-North	2010 VRF	Disc-Transit	Bike/Ped	Env	200		200					200	New Programming and Allocation (Discretionary).
00484	Alameda	Willie Stargell Ave Safety and Transit Improvements	1-North	2010 VRF	Disc-Transit	Bike/Ped	PS&E	600		600					600	New Programming and Allocation (Discretionary).
00496	Alameda	Doolittle Drive/State Route 61 & Bay Farm Island FEMA BRIC Match	1-North	2014 MBB	TEP-42	Bike/Ped	CON	937					937			New Programming and Allocation (Discretionary).
00335	Alameda	West End Bike Ped Bridge Project	1-North	2014 MBB	TEP-37	Bike/Ped	Planning / Scoping	(108)	(108)						(108)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.
00467	Alameda County	Bicycle and Pedestrian Improvements on Norbridge Avenue to Castro Valley BART Station	4-East	TFCA	FYE25	Bike/Ped	CON	87	87						87	Previously Approved Programming/Allocation on 10/24/24.
00492	Alameda County	Sustainable Mobility Improvements on Heyer Avenue	2-Central	2014 MBB	TEP-44	Bike/Ped	CON	2,000		2,000					2,000	New Programming and Allocation (Discretionary).
00053	Alameda CTC	Affordable Student Transit Pass Programs	Multiple	2014 MBB	TEP-08	Transit	Ops	(4,740)	(4,740)						(4,740)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.
00084	Alameda CTC	East-West Connector in Fremont & Union City	3-South	1986 MB	MB226	LSR	CON	(800)	(800)						(800)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.
00132	Alameda CTC	San Pablo Ave Safety Enhancements	1-North	2014 MBB	TEP-26	LSR	PE/Env	525		525					525	New Programming and Allocation.
00132	Alameda CTC	San Pablo Ave Safety Enhancements	1-North	2014 MBB	TEP-26	LSR	Final Design (PS&E)	1,100		1,100					1,100	New Programming and Allocation.
00192	Alameda CTC	Transportation Demand Management (TDM) Program	Multiple	TFCA	Prog Mgr	Transit	Ops	(316)	(316)						(316)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.
00192	Alameda CTC	Transportation Demand Management (TDM) Program	Multiple	TFCA	Prog Mgr	Transit	Ops	210	210						210	Technical Adjustment: Programming/Allocation approved on 12/7/23, prior to the 2024 CIP Update approval.
00192	Alameda CTC	Transportation Demand Management (TDM) Program	Multiple	TFCA	FYE26	Transit	Ops	419			419				419	New Programming and Allocation.
00211	Alameda CTC	NextGen Technology Pilot Initiative	Multiple	2014 MBB	TEP-46	Multiple	Planning / Scoping	(114)	(114)						(114)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds
00287	Alameda CTC	Oakland Alameda Access Project	1-North	2014 MBB	TEP-37	HWY	PE/Env	(258)	(258)						(258)	Technical Adjustment: Phase allocation shift.
00287	Alameda CTC	Oakland Alameda Access Project	1-North	2014 MBB	TEP-37	HWY	Final Design (PS&E)	258	258						258	Technical Adjustment: Phase allocation shift.
00287	Alameda CTC	Oakland Alameda Access Project	1-North	2014 MBB	TEP-37	HWY	ROW	(4,879)	(4,879)						(4,879)	Technical Adjustment: Phase allocation shift.
00287	Alameda CTC	Oakland Alameda Access Project	1-North	2014 MBB	TEP-37	HWY	CON	4,879	4,879						4,879	Technical Adjustment: Phase allocation shift.
00287	Alameda CTC	Oakland Alameda Access Project	1-North	2014 MBB	TEP-40	HWY	CON	22,500	22,500						22,500	Previously Approved Programming/Allocation on 9/26/24.
00287	Alameda CTC	Oakland Alameda Access Project	1-North	TFCA	FYE25	Bike/Ped	CON	311	311						311	Previously Approved Programming/Allocation on 10/24/24.
00288	Alameda CTC	Rail Safety Enhancement Program - Phase A	Multiple	2014 MBB	TEP-23	Freight	Final Design (PS&E)	3,830		3,830					3,830	New Programming and Allocation.
00477	Alameda CTC	I-580/I-680 Interchange Safety Improvements Project	4-East	2014 MBB	TEP-33	HWY	Planning / Scoping	1,100	1,100						1,100	Previously Approved Programming/Allocation on 12/5/24.
00479	Alameda CTC	East Bay Greenway Multimodal (EBGWMM) Phase 1, North Segment (Lake Merritt to Bayfair) Project	1-North	2014 MBB	TEP-42	Bike/Ped	Final Design (PS&E)	3,400	3,400						3,400	Previously Approved Programming/Allocation on 12/5/24.
00483	Albany	Cleveland Avenue Bikeway Project	1-North	2010 VRF	Disc-BP	Bike/Ped	CON	515			515				515	New Programming and Allocation (Discretionary).
00300	ASEB	Regrowth of Transportation Services for Individuals with Dementia	1-North	2000 MB	Disc-PT	Paratransit	Ops	(87)	(87)						(87)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.
00454	ASEB	ASEB Revitalization of Transportation Program after Pandemic	1-North	2000 MB	Disc-PT	Paratransit	Ops	(542)	(542)						(542)	Technical Adjustment: Deallocation of balance. Scope complete/unused funds.

ACTC_AR4092

SECTION 1: COMPREHENSIVE INVESTMENT PLAN PROGRAMMING PRINCIPLES

1. Purpose

The purpose of the Comprehensive Investment Plan (CIP) is to facilitate strategic programming and allocation of all fund sources under programming responsibilities of the Alameda County Transportation Commission (Alameda CTC). This includes funding from federal, state, regional, and local fund sources such as the federal Surface Transportation Program (STP)/Congestion Mitigation and Air Quality (CMAQ) Program, State Transportation Improvement Program (STIP), Transportation Fund for Clean Air (TFCA) Program, local sales tax measures, and vehicle registration fee programs.

To streamline programming of these funds sources, Alameda CTC considers all available fund sources through a consolidated funding program that prioritizes, evaluates, and recommends funding to transportation infrastructure and operational needs of countywide importance that build and maintain the county's transportation system. The coordinated programming effort is also intended to minimize the number of funding applications required from Project Sponsors and prioritize investments to projects and programs ("projects") identified through countywide transportation planning efforts.

The purpose of the CIP programming principles established herein is to provide a framework for programming and allocation decisions that Alameda CTC makes to help accomplish countywide transportation goals and objectives. The following five fundamental principles guide this process:

1. Implementing Alameda CTC's adopted visions and goals
2. Balancing strategic investments across project delivery phases
3. Maximizing transportation investments
4. Investing in all modes and areas within Alameda County
5. Delivering solutions while ensuring accountability

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to uniformly consolidate historically separate programming goals and practices, where applicable, to more effectively coordinate funding toward highly beneficial transportation projects that address access, safety, connectivity, congestion, economic development, and state of good repair of a multimodal transportation system.

2. Programming and Allocation Process

The CIP includes a five-year programming window with a two-year allocation plan (i.e., the first two years of the five-year window). The current programmed amount for a given project represents a commitment amount available for allocation when the programmed funds shift into the CIP's two-year allocation window. An allocated amount represents the amount available for encumbrance in project funding agreements and/or contracts and available for reimbursement of eligible costs. All

ACTC_AR4093

programmed funds are subject to the availability of funds and current programming and allocation priorities.

The CIP programming and allocation process is as follows:

1. Alameda CTC will make programming and allocation recommendations to certain projects based on the available fund estimate for a given five-year CIP programming cycle.
2. Projects programmed within the first two years of a given CIP will receive an allocation.
3. Projects with outer-year programmed funds will receive an allocation in the fiscal year in which the funds were originally programmed, which may occur when the programmed year moves into the two-year allocation window and upon the Project Sponsor's allocation request through the CIP application process.
    - Allocation requests to advance outer-year programmed funds are subject to the availability of funds and Alameda CTC Commission approval, as priority is given to projects with funds already allocated in the two-year allocation window.
4. For projects with outer-year programmed funds not ready for an allocation, Project Sponsors may request to have the programming deferred to a different outer CIP programming year, subject to Alameda CTC approval.

3. Fund Sources and Programs

The CIP consolidates the programming and allocations of the various fund sources under Alameda CTC's purview ("Alameda CTC Administered Funds"). These sources are delineated into principal programs, where feasible, as identified in the table below. For example, 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee Bicycle/Pedestrian funds are consolidated into a single Bicycle and Pedestrian Program. This provides greater coordination of similar funding types, requirements, and eligibility to meet larger program goals and objectives. For all locally funded programs (see principal programs 1-10 below), a project-funding agreement between Alameda CTC and the Project Sponsor is required. For all other programs (see principal programs 11-13 below), Project Sponsors are required to enter into a funding agreement directly with the appropriate federal, state, or regional agency.

Principal Program	Fund Source(s) and Investment Program
1. Bicycle and Pedestrian Program	Measure B (MB) Bike/Pedestrian Countywide Discretionary Fund Measure BB (MBB) Bike/Pedestrian Grant Program MBB Three Major Trails Vehicle Registration Fee (VRF) Pedestrian-Bicycle Access and Safety Program
2. Transit Program	MB Express Bus MBB Innovative Transit Program (transit pass programs) VRF Transit for Congestion Relief Program
3. Transit Center Development Program	MB Transit Center Development Program
4. Community Development Investment Program	MBB Community Development Investment Program

ACTC_AR4094

Principal Program	Fund Source(s) and Investment Program
5. Paratransit Program	MB Special Transportation for Seniors and People with Disabilities "Gap Grant" Program MBB Coordination and Service Grants
6. Freight and Economic Development Program	MBB Freight and Economic Development MBB Countywide Freight Corridors
7. Technology, Innovation, and Development	MBB Technology, Innovation, and Development
8. Local Streets and Roads (Arterials) Program	MBB Congestion Relief, Local Bridge, Seismic Safety
9. Highways Program	MBB Highway Capital Projects
10. Transportation Fund for Clean Air (TFCA)	TFCA County Program Manager (40%)
11. State Transit Assistance (STA) County Block Grant Program	Population-based STA
12. One Bay Area Grant Program (OBAG)	Federal STP and CMAQ
13. State Transportation Improvement Program (STIP)	STIP

4. Programming Capacity

Alameda CTC's programming capacity is limited to the funding anticipated to be available for projects in the five-year programming and allocation horizon. Projects are programmed over a five-year period, with allocations to projects in the first two years of the CIP window. Projects that exceed the five-year fiscally constrained CIP will be considered for inclusion in future CIP updates and may receive priority consideration when a previously programmed commitment is unable to be delivered or additional funding capacity is available. Alameda CTC will provide a programming fund estimate as part of the CIP call for projects process.

5. Programming Priorities

Through the CIP, funds are prioritized to projects as follows:

a. Achieves Fundamental Programming Principles: The degree to which projects achieve the CIP's five (5) fundamental guiding programming principles (refer to CIP Section 6 for details).
   1. Implementing Alameda CTC's adopted visions and goals
   2. Balancing strategic investments across project delivery phases
   3. Maximizing transportation investments
   4. Investing in all modes and areas within Alameda County
   5. Delivering solutions while ensuring accountability

b. Countywide Significance: Projects identified as a countywide priority, an identified project, or along a transportation corridor in Alameda CTC's Countywide Transportation Plan (CTP), multimodal plans (goods movement, arterial, and transit), transportation expenditure plans, and the Countywide Bicycle and Pedestrian/Active Transportation Plan will receive higher priority consideration.

c. Readiness: Projects demonstrating a higher state of construction readiness will receive higher priority consideration. Readiness includes technical and financial readiness such as

ACTC_AR4095

completion of engineering, environmental, and design studies; identification of risk-mitigation measures; secured funding toward project completion; feasible schedule, etc. Projects must be deliverable within the timeframe that funds are available.

d. Fund Leveraging: Projects that leverage external funding commitments (such as federal and state discretionary funds) shall receive higher priority consideration.
e. Coordination and Support: The degree to which a project demonstrates coordination and support from multiple jurisdictions, agencies, transit agencies, community members, and other project stakeholders throughout the planning and project implementation phases and identifies commitments to maintain the improvements after completion shall also be considered.

6. Eligible Applicants

a. Eligible applicants (direct recipients) of funds programmed through the CIP are limited to the following:
    1. Cities of Alameda, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, Union City
    2. County of Alameda
    3. Transit agencies Altamont Corridor Express (ACE), Alameda-Contra Costa Transit District (AC Transit), San Francisco Bay Area Rapid Transit District (BART), Livermore Valley Transportation Authority (LAVTA), Union City Transit, and San Francisco Water Emergency Transportation Authority (WETA)
    4. Metropolitan Transportation Commission (MTC)
    5. East Bay Regional Parks District (EBRPD)
    6. Public school districts (K-12) in Alameda County (exclusively for student transit pass programs)
    7. Alameda CTC
    8. Private, non-profit organizations (exclusively for programs targeted toward seniors and people with disabilities)

    Note that entities not identified specifically as eligible direct recipients will only be eligible to receive CIP funds as sub-recipients by partnering with an eligible direct recipient that is willing to pass through the funds to a sub-recipient. Alameda CTC may grant exceptions on a case-by-case basis to allow other entities to directly receive funds.
b. Applicants must acknowledge and agree to comply with the specific requirements of the identified fund sources and Alameda CTC's project funding agreement, generally through a required governing body-adopted resolution of local support, prior to receiving funds allocated through the CIP.
c. Applicants must provide the expertise and staff resources necessary to successfully deliver projects within the constraints of the fund source requirements.
d. Applicants must identify and maintain a staff position that serves as the single point of contact within their agency for Alameda CTC-administered funds.

ACTC_AR4096

7. Minimum/Maximum Award and Matching Requirements

Project Type	Minimum Request	Maximum Request	Minimum Match
Capital Improvement	$500,000	$2,000,000	25% (for each phase requested)
Programs and Transit/Shuttle Operations	$100,000 per year	$500,000 per year	75% (by year)
Plans/Studies	$100,000	$100,000	50%

The CIP will focus on comprehensive transportation projects that yield significant benefits to the countywide transportation system. In general, smaller projects or early project development (planning/scoping) activities that can be funded through local means, including MB/MBB/VRF direct local distribution (DLD) funds, will be a lesser priority for CIP discretionary funding.

Project Sponsors shall provide the minimum match of Alameda CTC Administered Funds requested by phase, unless otherwise stated by a particular CIP policy or program guideline.

8. Matching Requirements

a. Matching funds must be expended concurrently and proportionally to Alameda CTC Administered Funds allocated to the project phase.
b. Previously incurred costs or previously expended funds do not count toward fulfilling the minimum matching requirement.
c. Named capital projects with identified specific funding commitments in the 2014 Measure BB Transportation Expenditure Plan are exempt from the matching requirements; however, matching is highly encouraged to support leveraging of Measure BB funds.
d. Projects funded with federal funds (such as STP/CMAQ) require a non-federal local match. Non-federal sources for the local match can include local sales tax and vehicle registration fee DLDs, special bond measures, private financial donations, and other local revenues.
e. In-kind funding (non-cash contributions of time, goods and services, equipment, or space) will not count toward fulling the CIP matching requirement.
f. Alameda CTC may consider on a case-by-case basis exceptions to the matching requirement or adopt CIP policies that modify the match requirements in certain cases. Such exceptions may include exemptions for projects that provide considerable transportation benefits and/or projects that leverage significant transportation funds for the County and CIP-specific policies such as the “Small Cities” Policy.

9. Eligible Project Costs

Eligible costs for funds programmed through the CIP include:

- Project development and preconstruction activities such as scoping-level documents, preliminary study reports, feasibility studies, environmental documents, preliminary engineering, and design work.

ACTC_AR4097

- Activities related to construction, rehabilitation, right-of-way acquisition, environmental mitigation, and capital equipment acquisition.
- Program implementation, transit services, and shuttle operations.

All eligible costs for reimbursement must be in accordance with the policies and provisions set forth and described in detail in the Eligible Costs for Reimbursement Policy in Appendix E.

Applicants are responsible for securing the necessary matching funds and any additional funding needed to complete the project, e.g., due to project cost increases, higher actual bid estimates, loss of funding, underestimated contingencies, and future maintenance costs.

10. Funding Restrictions

- Alameda CTC Administered Funds shall not supplant other committed funds.
- Alameda CTC will not be responsible to fund any cost overruns, cost increases, higher bid estimates, maintenance costs, or funding shortfalls beyond Alameda CTC's original programming and allocation commitment.
- 2000 Measure B Express Bus funds are only available to AC Transit and LAVTA.
- Programmed federal, state, and regional funds are subject to the requirements of the specific fund source and may require Project Sponsors to enter into funding agreements directly with the authorizing agency.
- Reimbursement for eligible staff costs are limited to non-Measure B/Measure BB/VRF DLD recipients, unless otherwise agreed upon by Alameda CTC with a project funding agreement for labor costs that includes direct staff implementation of a project phase or other eligible project activity. DLD recipients are expected to use DLD or other local funds to support staffing, contract management, invoicing and reporting activities, and other administrative costs associated with the project.
- Payments to funding recipients will be made on a reimbursement basis and after approval of submitted invoices. No reimbursements will be made prior to the execution of a project funding agreement with Alameda CTC. Invoices are required to be submitted at least once every six months with required progress reports and completed task deliverables, unless otherwise authorized and approved by Alameda CTC.

11. Shuttle Operations Funding Requirements

Funding for shuttle operations is strictly limited to shuttles which provide first/last mile connections from regional transit facilities, transportation hubs, business districts, and employment centers. Paratransit services are not eligible for funding under transit eligible funding sources.

- Eligible applicants must be a public agency eligible to receive Alameda CTC funds.
- Shuttle service must be wholly located in Alameda County, available to the public, and serve employment and/or activity centers.
- Applicants must provide the minimum match required for transit/shuttle operations.

ACTC_AR4098

- Non-competing service operations requirement: Shuttle service must not compete with existing fixed-route transit services provided by AC Transit, LAVTA, or Union City Transit. A letter of concurrence from the appropriate transit agency must be provided to affirm coordination with the transit agency and acknowledge that the proposed shuttle program would not complete with existing or planned transit services.

Priority considerations for funding shuttles:

- Service routes within 0.5-mile radius from a major regional transit facility (BART station, major bus transfer station, or ferry terminal).
- Programs demonstrating long-term and local sustainability with 50 percent (50%) or more of the committed local match funding coming from private sources, e.g., private business investment districts.
- Ridership exceeding 500,000 annual boardings, documented by existing service data or documented ridership projections.

12. Freight-Related Project Funding Requirements

Funding for freight-related projects is strictly limited to improvements that significantly contribute to the freight systems' economic activity or vitality; relieve congestion of the freight system; improve the safety, security, or resilience of the freight system; improve or preserve the freight system infrastructure; implement technology or innovation to improve the freight system or reduce or avoid its negative impacts; or reduce or avoid adverse community and/or environmental impacts of the freight system.

Freight-related projects that Alameda CTC funds must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

13. Project Selection Criteria

Project applications that meet the following screening criteria will be considered:

1. Consistency with/Identified in the most recently adopted Regional Transportation Plan and Countywide Transportation Plan.
2. Consistency with/Identified in the most recently adopted Countywide Bicycle and Pedestrian Master Plan (applicable to bicycle/pedestrian improvements).
3. Provides the minimum match of Alameda CTC Administered Funds requested by phase.

The primary CIP project selection criteria are as follows:

1. **Project Need and Benefits:** Project clearly defines project needs, describes how proposed transportation improvement will benefit the intended users at a local and countywide level, and provides a usable segment (as applicable). Alameda CTC will consider key project merits and anticipated project performance such as (in no particular order):

ACTC_AR4099

- Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
- State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
- Transportation Significance: Project demonstrates regional or countywide significance toward improving the transportation network, economic competitiveness, and environmental conditions, e.g., reduces regional greenhouse gases.
- Safety and Connectivity: Project's ability to foster a safe, connected, and accessible transportation system for multimodal movement of goods and people.
- Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.
- Sustainability: Project Sponsor identifies funding sources and responsible agency for sustaining and maintaining the project beyond the funding period. Project is identified in a long-term development plan.

2. **Project Readiness**: Project contains a well-defined funding plan, budget, and schedule. Project has no foreseeable implementation issues, has governing body approval, and is supported by the local community. Applicant clearly identifies the ability to coordinate among appropriate internal and external agencies and has identified stakeholders. Projects with a completed project study report or equivalent scoping document will receive higher priority consideration for readiness.

3. **Matching Funds**: Project has secured or committed funding that exceeds the minimum matching requirement and is not from an Alameda CTC discretionary funding source. .

4. **Other Fund Source Specific Criteria Requirements**: Project must meet the program requirements of specific fund sources, such as cost effectiveness calculations or proximity-connectivity to specific areas and user groups. These requirements are specific to the fund source and may change with each programming cycle.

Projects will be scored on a scale based on the project's expected outcomes and performance, project readiness, sustainability, and leveraging ability. Refer to Exhibit B: Project Selection Criteria for scoring weights for each project selection criteria category. Programming recommendations may not be based strictly on the scoring criteria alone. Consideration will be given to the requirements of various Alameda CTC Administered Fund sources, project delivery requirements, geographic equity, and countywide synergies of proposed improvements.

The project selection criteria will be applied by project category/mode (bicycle/pedestrian, transit, goods movement, highway, local streets and roads, transit operations, etc.) to provide a direct

ACTC_AR4100

evaluation of similar projects to one another, e.g., transit projects are compared to other transit projects.

14. Performance Measures and Monitoring

Project Sponsors must identify and establish project goals, deliverables, and performance measures and intended outcomes that will measure the effectiveness of the investment. Performance measures will be established as part of a project funding agreement between Alameda CTC and the fund recipient.

a. For capital projects, performance indicators may include, but are not limited to, an evaluation of a project's ability to achieve CIP programming priorities, meet specific funding program goals, and submit required reports on the project and implementation status.
b. For operations, performance indicators may include the above, as well as quantifying and monitoring the number of trips, service hours, cost effectiveness, and outreach efforts.

15. Post-Allocation Requirements

Project Sponsors that are awarded allocations of Alameda CTC Administered Funds are required to:

- Submit a governing body approved resolution of local support, using Alameda CTC's approved resolution template, that accepts Alameda CTC funds and confirms local matching commitments, project delivery strategy, and local support for the project, and authorizes entering into a project funding agreement with Alameda CTC. Such resolution may be requested with the funding application.
- Enter into a project funding agreement between Alameda CTC and the Project Sponsor for approved allocations of Measure B, Measure BB, VRF, TFCA, and other discretionary funds under Alameda CTC's purview. Agreements will include project scope, cost, funding plan, reimbursement ratio for reimbursable costs, schedule, performance measures, reporting requirements, publicity requirements, audit requirements, task deliverables, effective date of reimbursable costs, etc. See sample agreement requirements: https://www.alamedactc.org/wp-content/uploads/2022/05/Alameda_CTC_PFA_Boilerplate_FINAL_20210309.pdf
- Comply with Alameda CTC's Local Business Contract Equity Program requirements: https://www.alamedactc.org/get-involved/contract-equity/

16. Timely Use of Funds and Rescission of Funds

a. Projects must be started within a year of the schedule identified in the executed funding agreement that defines the date of eligible costs and reimbursements. Funds may be rescinded if a project is not started within the established period.
b. Projects must be completed within three (3) years of the established initiation date, unless a different period is identified in the program guidelines or approved in advance by Alameda CTC and incorporated into the funding agreement.
c. Projects receiving federal and/or state funds are to meet the project delivery requirements and timelines of the awarded federal and/or state funding.

d. Projects are subject to the specific timely use of funds policies and provisions pertaining to the specific fund sources allocated to the project.
e. Failing to meet timely use of funds requirements, funding agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds. If funding awards are withdrawn, allocations may be disencumbered from a funding agreement and removed from the CIP.
f. Rescinded funds will be returned to the program to be distributed in a future CIP cycle.

17. Other Requirements

a. Program-specific guidelines may supersede the requirements set forth in these CIP programming guidelines.
b. Programming and allocation actions made through the CIP are subject to the current policies and guidelines, as they may be created, revised, or amended from time to time.
c. Allocation requests for named 2014 Measure BB capital projects must be submitted by Project Sponsors and approved by the Alameda CTC Commission prior to executing a funding agreement. A request for allocation must include at minimum a summary of project costs defined by phase and fund source, and a project schedule by phase.
d. Alameda CTC may consider on a case-by-case basis exceptions to the CIP programming principles and guidelines in the event of unanticipated programming actions, funding availability, or if a proposed project has extraordinary project merit, project synergies, or project delivery circumstances that if implemented will result in a significant countywide benefit.

18. Eligible Projects

Eligible CIP projects are as follows:

a. Projects must demonstrate a public benefit toward building and maintaining the transportation infrastructure in Alameda County.
b. Projects must be publicly accessible and not only for private entity use.
c. Projects must be in and consistent with the current adopted Regional Transportation Plan and Alameda CTC's CTP.
d. Projects must meet the goals and objectives of the funding sources and funding programs.
e. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF monies must be consistent with the eligible uses of funds in the respective expenditure plans.
f. Projects funded with federal and/or state sources must meet the applicable requirements for the awarded sources. Example requirements include:
    - Compliance with the California Environmental Quality Act (Public Resource Code Section 21000 et seq.), the State Environmental Impact Report Guidelines (14 California Code of Regulations Section 15000 et seq.), and (for federal-funded projects) the National Environmental Protection Act (42 USC Section 4-1 et seq.) standards and procedures.

ACTC_AR4102

- Completion of a Federal Transportation Improvement Program (FTIP) application through the Metropolitan Transportation Commission's Funding Management System.

g. Potential funding eligibilities examples are identified in Exhibit A: Project Categories, Transportation Priorities, and Funding Eligibility.

h. Eligible capital infrastructure projects may include but are not limited to:
   - Local street and road improvements
   - Bicycle and/or pedestrian infrastructure improvements including new facilities, parking/lockers, gap closure, and safety improvements
   - Highway capital investments
   - Freight, ferry, rail, and intermodal projects that facilitate the movement of goods, services, and people
   - Transit infrastructure enhancements and expansion
   - Safety or modernization improvements to transit centers, stations, or facilities
   - Transportation improvements that provide greater transit access for residents of underserved and disadvantaged communities
   - Improvements that reduce greenhouse gas emissions
   - Technology improvements such as intelligent transportation systems, transit signal priority, and other innovative uses of technology that improve the transportation system

i. Eligible non-infrastructure projects may include but are not limited to:
   - Bicycle and pedestrian master plans
   - Feasibility or scoping-only studies for capital projects
   - Safe Routes to Schools program operations
   - Crossing guard programs
   - Safety education, training, enforcement, and promotional programs
   - Transportation demand or traffic management programs
   - Travel training and mobility management programs
   - Transit or shuttle operations
   - Transit incentive programs (including fare based)
   - Bike share or rideshare programs

19. Section 1 Exhibits

- Exhibit A: Project Categories, Transportation Priorities, and Funding Eligibility
- Exhibit B: Project Selection Criteria

The rest of Appendix D (Sections 2-15) specifies the programming and allocation guidelines for the various programs and funding sources programmed through the CIP.

This page intentionally left blank.

Section 1, Exhibit A: Project Categories, Transportation Priorities, and Funding Eligibility

Projects will be separated into project categories by type as part of the project selection and evaluation process to prioritize projects relative to each other. The following table identifies CIP project categories, transportation priorities, and funding eligibility examples.

Project Categories, Transportation Priorities, and Funding Eligibility			Federal		State	Regional and Local									
#	**Category and Sample Example Projects** *(eligible fund sources are generally identified for the category; some example projects may not be directly eligible for the fund source)*	**Transportation Priorities** *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF	MB- MBB-VRF	MB-MBB Paratransit	MBB-VRF	MB-TCD	MBB-Congestion	MBB-CDIP	MBB-Freight
1.	**Transit Capital** • Capital rehabilitation • Capacity expansion, stations, capital replacement • Safety and access improvements • Transit signal priority (TSP)/communications	1. Increase transit access and ridership. 2. Prioritize regional projects in the expenditure plans. 3. Identify projects/need in a transit plan. 4. Increase frequency or reliability of service operations. 5. Facilitate express bus services.	X			X	X		X		X	X		X	
2.	**Local Streets and Roads (Arterials)** • Major arterial performance initiative program • Roadway safety/traffic calming • Grade separations • Traffic signals, ITS/CCTV installations/upgrade • Signal timing and coordination • Complete streets and streetscape • Coordination with freeways and ramps • Roadway/pavement Rehabilitation • Sidewalk installation	1. Prioritize regional projects in the expenditure plans. 2. Identify projects/need in Multimodal Arterials Plan. 3. Enhance multimodal connectivity and reliability of transit, bicycle and pedestrian networks. 4. Provide congestion relief and increase mobility.	X	X	X	X	X				X	X	X	X	X
3.	**Bicycle and Pedestrian** • Bike facilities (include Class 1,2,3, and 4 facilities) • Bike storage capital costs (racks, lockers, cages) • Safety, gap closure, infrastructure improvements • Bicycle and pedestrian master plans and updates • Safe Routes to School improvements/programs	1. Identify projects in a Countywide Bicycle/Pedestrian Plan. 2. Prioritize regional projects in the expenditure plans. 3. Close gaps in local and countywide bicycle/pedestrian network. 4. Improve safety and connectivity by removing known barriers to access and connections to activity centers, schools, jobs, and transit. 5. Update bicycle/pedestrian master plans to improve coordination.	X	X		X	X	X				X		X	

Project Categories, Transportation Priorities, and Funding Eligibility			Federal		State	Regional and Local									
#	**Category and Sample Example Projects** *(eligible fund sources are generally identified for the category; some example projects may not be directly eligible for the fund source)*	**Transportation Priorities** *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF	MB- MBB-VRF	MB-MBB Paratransit	MBB-VRF	MB-TCD	MBB-Congestion	MBB-CDIP	MBB-Freight
4.	**Highway Capital** • Interchange, bridge, sound wall, ramp improvements • Bridge improvements • Express lanes	1. Prioritize regional projects in the expenditure plans. 2. Improve safety and connectivity. 3. Address state of good repair of transportation system. 4. Address congestion and mobility.		X							X		X	X	X
5.	**Freight and Economic Development (Goods Movement)** • Truck/port/freight operations and goods movement • Airport facilities, truck-vehicle parking • Quiet zone improvements *(Road or highway access improvements will be evaluated under local streets and roads or highway categories.)*	1. Prioritize regional projects in the expenditure plans. 2. Identify projects in a Goods Movement Plan. 3. Reduce conflicts. 4. Improve goods mobility and economic development. 5. Enhance coordination to distribution centers.	*X*	X							X			X	X
6a.	**Transit Operations (Non-paratransit)** • Fixed route or shuttle operations and service expansion • Transit priority measures • Congestion relief programs • Transit incentive programs (including fare-based)	1. Increase reliability of service operations. 2. Increase transit ridership. 3. Maintain or expand express bus services. 4. Demonstrate operational and funding sustainability.	X	X	X	X	X		X					X	
6b.	**Paratransit Capital and Operations** • ADA-mandated services • City-based, non-ADA services • Specialized transportation programs • Capital improvements (accessible vehicles, signage) • Related assessments and plans	1. Maintain or expand existing transportation services designed for seniors and people and disabilities. 2. Increase accessibility of transportation services. 3. Eliminate gaps in existing services by offering transportation options for seniors and people with disabilities to important travel destinations to meet life needs.	X				X			X				X	
7.	**Transportation Demand Management/ Education Outreach** • Fare incentives – student bus passes • Guarantee Ride Home Program	1. Facilitate connectivity to transit. 2. Promote multimodal transportation and modal shifts away from single occupancy vehicle (SOV) use toward alternative modes, including bicycle/pedestrian and transit.	X	X		X	X		X					X	

Project Categories, Transportation Priorities, and Funding Eligibility			Federal		State	Regional and Local									
#	**Category and Sample Example Projects** *(eligible fund sources are generally identified for the category; some example projects may not be directly eligible for the fund source)*	**Transportation Priorities** *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF	MB- MBB-VRF	MB-MBB Paratransit	MBB-VRF	MB-TCD	MBB-Congestion	MBB-CDIP	MBB-Freight
	• Technical assistance • Alternative mode education and incentives • Safe Routes to School or Transit • Parking management	3. Provide a cost-effective strategy to improve and facilitate access to transit, schools, and job centers.													
8.	**LSR/Highway Operations** • Traffic signal operations, ITS, maintenance • Highway and bridge maintenance and operations	1. Address state of good repair of transportation system. 2. Address congestion and mobility.	X	X	X						X		X		
9.	**Planning/Studies** • Planning studies and implementation • Feasibility or scoping-only studies • Modal plans/studies • Bicycle and pedestrian master plans	1. Define project scopes, schedules, and expected outcomes. 2. Examine feasibility of improvement implementations. 3. Contribute to long-rang planning of improvements for future implementation and decision making. 4. Support transit oriented development (TOD) and priority development areas (PDAs).	X	X	X			X	X	X	X	X		X	X

ACTC_AR4108

Section 1, Exhibit B: Project Selection Criteria

Proposed projects will be scored based on applicant-provided information for the following criteria, as applicable. Additional criterion may be included within this framework regarding program needs and funding requirements.

General CIP Criterion	CIP Criterion Description	Score Scale	Criteria Weight
A. Project Readiness	The project has a well-defined funding plan, budget, and schedule; implementation of the project or project phase(s) is feasible; governing body approval and community support are demonstrated; and the sponsor demonstrates coordination among internal and external agencies, as applicable.	40	40%
B. Needs and Benefits	The project's needs and benefits are evaluated on combined scoring of B.1 through B.4 below.	50	50%
B.1 General Benefits	The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment, facilitating a clean environment, promoting innovation, and contributing to economic growth, i.e., CTP goals.	15	15%
B.2 Access Improvements/ Equity Priority Communities	The project demonstrates a significant impact and benefit to one or more Metropolitan Transportation Commission (MTC) identified Equity Priority Communities (EPCs). Sponsors may propose projects that are not physically located within an MTC-defined EPC if the application demonstrates a clear and direct benefit to other locally-identified and defined disadvantaged or underserved communities. For example, see federal Justice 40 Initiative guidance (see note).	15	15%
B.3 Safety Benefits	The project enhances transportation safety and includes countermeasures that specifically address demonstrated safety issues.	10	10%
B.4 High Injury Network (HIN)	The project enhances transportation safety on the Countywide Bicycle and/or Pedestrian HINs.	10	10%
C. Matching Funds	The Sponsor commits other identified funds beyond the minimum match requirement for the phase(s) funds are being requested. Up to 10 points assigned, 2 points earned for every additional 5% match beyond minimum match requirement.	10	10%
	Total	**100**	**100%**

Note:
The federal Justice 40 Initiative interim guidance defines a community as, "either a group of individuals living in geographic proximity to one another, or a geographically dispersed set of individuals, where either type of group experiences common conditions."

SECTION 2: PROGRAMMING/ALLOCATION GUIDELINES FOR ARTERIALS/LOCAL STREETS AND ROADS PROGRAM

PROGRAM SUMMARY

The Arterials/Local Streets and Roads Program includes discretionary funding from the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). This program aims to support the arterials in our community that serve as major commute routes for those traveling by transit, auto, bicycle, or foot, and enhance access to jobs, stores, and more through capital infrastructure investments, service operations, and innovative projects. This program focuses on improvements to major roads, bridges, freight corridors, and quiet zones.

The 2014 Measure BB funds shall be allocated and expended in accordance with 2014 TEP requirements.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augmented the existing 2000 Measure B program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Of the net revenue collected, 10 percent (10%) is dedicated to funding congestion relief, local bridge, and seismic safety type projects benefiting arterials and roadways that improve the mobility of transit riders, motorists, bicyclists, and pedestrians, as well as the movement of goods to stores and consumers within Alameda County.

Alameda CTC will periodically distribute funds for projects with proven abilities to improve accessibility, enhance operational efficiencies, increase safety, and reduce congestion. Such activities include projects that remove bottlenecks, improve safety, enhance operations, and enhance alternatives to single-occupant auto travel in key commute corridors.

As identified in the 2014 TEP, examples of investments and commute corridors eligible for funding include:

- North County Major Roadways: Solano Avenue Pavement resurfacing and beautification; San Pablo Avenue Improvements; State Route 13/Ashby Avenue corridor; Marin Avenue local road safety; Gilman railroad crossing; Park Street, High Street and Fruitvale Bridge replacements; Powell Street Bridge widening at Christie; East 14th Street improvements; and Oakland Army Base transportation infrastructure improvements.

ACTC_AR4110

- Central County Major Roadways: Crow Canyon Road safety improvements, San Leandro local road resurfacing, Lewelling Road/Hesperian Boulevard improvements, and Tennyson Road grade separation.

- South County Major Roadways: East-west connector in North Fremont and Union City, I-680/I-880 cross connectors, Fremont Boulevard improvements, upgrades to the relinquished Route 84 in Fremont, Central Avenue Overcrossing, Thornton Avenue widening, Mowry Avenue, and Newark local streets.

- East County Major Roadways: Greenville Road widening, El Charro Road improvements, Dougherty Road widening, Dublin Boulevard widening, and Bernal Bridge construction.

- Countywide Freight Corridors: Outer Harbor Intermodal Terminal at the Port of Oakland, 7th Street grade separation and roadway improvements in Oakland, as well as truck routes serving the Port of Oakland.

PROGRAMMING AND ALLOCATION PRIORITIES

The Arterials Program seeks to award projects that advance goals identified in the Countywide Multimodal Arterials Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be for projects that contribute significantly to furthering countywide mobility along arterials. This program recognizes that concentrating improvements in key arterial corridors will improve access and efficiencies, increase safety, and reduce congestion. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Regional projects or corridors identified in the 2014 TEP**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plan.

2. **Projects aligned with needs established in the Multimodal Arterials Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Multimodal Arterials Plan.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Enhance multimodal connectivity**: Priority consideration is given to projects that enhance the reliability, safety, and connectivity of transit, bicycle, and pedestrian networks.

5. **Congestion relief and increased mobility**: Priority consideration is given to projects identified as significantly improving congestion on major commute corridors and facilitating connectivity and travel over multiple jurisdictions.

6. **State of good repair**: Priority consideration is given to projects that improve the conditions of existing transportation facilities or address conditions that would otherwise deteriorate if left unimproved.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance mobility, access, safety, and convenience in Alameda County. Arterials Program funds will be available for example projects in the 2014 TEP and projects that include, but are not limited to, the following:

Capital Infrastructure

- Resurfacing and beautification
- Local road safety improvements
- Intersection enhancements
- Traffic/signal operation improvements
- Grade separations and railroad crossings
- Bridge replacements
- Cross connectors
- Truck route improvements
- Quiet zone enhancements
- Education, enforcement, and promotion programs

INELIGIBLE PROJECTS

- Freight-related projects that Alameda CTC funds must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

ACTC_AR4112

SECTION 3: PROGRAMMING/ALLOCATION GUIDELINES FOR BICYCLE AND PEDESTRIAN DISCRETIONARY PROGRAM

PROGRAM SUMMARY

The Bicycle and Pedestrian Discretionary Program includes the combined funding from the 2000 Measure B, 2014 Measure BB, and VRF that are available to bicycle and pedestrian improvements. This program aims to support enhanced access and safety for bicyclists and pedestrians through capital infrastructure investments, safety education, outreach promotion, and planning activities.

The 2000 Measure B, 2014 Measure BB, and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports projects which improve the County's transportation system. Collections began on April 1, 2002 and ended on March 30, 2022. The 2000 Transportation Expenditure Plan outlines projects and programs ("projects") that the sales tax revenues fund. Of the net revenue collected, five percent (5%) is dedicated to bicycle and pedestrian projects and is further separated into two distribution categories:

- 75 percent (75%) of the funds are formula Direct Local Distributions to Alameda County cities and County based on population.
- 25 percent (25%) of the funds are distributed on a discretionary basis through the Measure B Bicycle and Pedestrian Countywide Discretionary Fund.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augmented the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that the sales tax revenues fund. Of the net revenue collected, eight percent (8%) is dedicated to bicycle and pedestrian infrastructure and safety projects that encourage people to bike and walk, as designated below:

- Three percent (3%) or $264 million is directed toward the Completion of Three Major Trails — Iron Horse Trail, Bay Trail, and the East Bay Greenway Corridor.
- Three percent (3%) is formula allocated as DLDs to Alameda County cities and the County based on population.
- Two percent (2%) of the funds are distributed on a discretionary basis through the Measure BB Bicycle and Pedestrian Program for regional projects and trail maintenance. Funds in this category may be used for countywide bicycle and pedestrian coordination.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF program began in May 2011. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies; five percent (5%) of VRF funds are dedicated to the VRF Pedestrian and Bicycle Access and Safety Program. Its goals are to improve the safety of bicycles and pedestrians by reducing conflicts with motorized vehicles, create safe access to activity centers, and improve connectivity of the transportation network.

PROGRAMMING AND ALLOCATION PRIORITIES

The Bicycle and Pedestrian Discretionary Program seeks to award projects that advance countywide bicycle and pedestrian goals as identified in Alameda CTC's Countywide Bicycle and Pedestrian Plans, and the Measure B, Measure BB, and VRF expenditure plans. Alameda CTC's Countywide Bicycle and Pedestrian Plans identify a priority vision system consisting of projects, corridors, and improvement initiatives that are the most significant from a countywide perspective. This priority system will guide and focus the programming and allocations of the bicycle/pedestrian program funds.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds during a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds during a given programming cycle may be used for non-infrastructure improvements including program operations, plans, and studies.

3. **Identified in the Countywide Bicycle and Pedestrian Plans**: Priority consideration is given to bicycle and pedestrian projects identified as a countywide priority in Alameda CTC's Countywide Bicycle and Pedestrian Plans.

4. **Regional projects in the expenditure plans**: Priority consideration is given to regional projects identified in the expenditure plans. This includes projects identified in the Alameda CTC's Measure BB Capital Project Delivery Plan.

5. **Gap Closure**: Priority consideration is given to projects that close gaps in the local and countywide bicycle/pedestrian network.

6. **Safety and Connectivity**: Priority consideration is given to projects that improve connections to activity centers, schools, jobs, and transit by addressing and removing known barriers to access and connecting multiple jurisdictions and/or planning areas.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance bicycle and pedestrian access, convenience, safety, and usage in Alameda County.

Bicycle and Pedestrian Discretionary Program funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Sidewalks and multi-use paths
- Bikeways and pedestrian facilities
- Crossing improvements (at intersections, interchanges, railroads, freeways)
- Bicycle and pedestrian signals
- Bicycle lockers, racks, and parking facilities
- Signage, lighting, railing, and other accessibility improvements for bicyclists/pedestrians
- Traffic calming devices
- Bicycle/pedestrian access improvements to and from transit facilitates and schools
- Gap closure projects that link and build upon the existing bicycle/pedestrian network
- Bicycle/pedestrian components of complete streets and streetscape improvements
- Capital maintenance such as pavement rehabilitation, infrastructure replacement, or upgrades that extend or replenish a facility's useful life

Non-infrastructure

- Bicycle and pedestrian master plans
- Feasibility or scoping-only studies for capital projects
- Safe Routes to School program operations
- Crossing-guard programs
- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Routine maintenance of roadway facilitates with bicycle/pedestrian infrastructure
- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs
- Ongoing facility operations (e.g., attended bicycle parking)

ACTC_AR4115

OTHER REQUIREMENTS/FUNDING RESTRICTIONS

Measure BB Funds – Completion of Three Major Trails

- Measure BB funds identified ($264 million) for the Completion of Three Major Trails Funds in the 2014 TEP are limited to capital construction and/or capital maintenance projects that enhance the East Bay Greenway from Oakland to Fremont, Bay Trail Gap Closure and Access Projects, and Iron Horse Trail Gap Closure and Access Projects. Priority funding consideration is given to projects that directly enhance the regional bicycle/pedestrian transportation network pertinent to these three trails, and as envisioned and prioritized in Alameda CTC's Countywide Bicycle and Pedestrian Plans and other countywide plans.

ELIGIBLE PROJECTS

Eligible projects include capital infrastructure projects that address gaps and connectivity issues, safety and accessibility concerns, and capital maintenance needs such as pavement rehabilitation, infrastructure replacement, or upgrades that extend or replenish a facility's useful life to and from these three major trails.

INELIGIBLE PROJECTS

- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
- Bicycle/pedestrian education, outreach, and promotional programs.

ACTC_AR4116

SECTION 4: PROGRAMMING/ALLOCATION GUIDELINES FOR COMMUNITY DEVELOPMENT INVESTMENT PROGRAM

PROGRAM SUMMARY

The 2014 Measure BB Community Development Investment Program (CDIP) supports existing and new transportation infrastructure improvements that will enhance access and provide increased connectivity to and between job centers, schools, transportation facilities, community centers, and residential developments. Investments include capital projects, programs, plans, and studies which serve to achieve the objectives of the CDIP, including but not limited to improvements to BART station facilities, bus transfer hubs, bicycle/pedestrian infrastructure, local streets and roads, and transit that facilitate transit-oriented growth.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the Measure BB Expenditure Plan.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. The 2014 TEP establishes a total of four percent (4%) of net sales tax revenue, for the development and implementation of the program. CDIP investments are intended to enhance access and safety around transit stations and hubs, and to support station area development and transit-oriented development at the station areas listed in the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Community Development Investment Program seeks to award projects that advance access and connectivity to transit as identified in the Measure BB Expenditure Plan. The programming and allocation primary priority shall be for projects that contribute significantly to furthering community connectivity to transit, schools, and job centers. In general, competitive projects are those that enhance connectivity from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in each programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in each programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase Access and Connectivity:** Priority consideration will be given to projects that significantly improve access and connectivity to transit, jobs, and schools.

4. **Leveraging Funds**: Projects that demonstrate program sustainability by leverage and secure external funding commitments beyond the minimum matching requirement.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance access and safety around transit stations, hubs, and transit-oriented development.

CDIP funds will be available for projects that include, but are not limited to, the following:

Capital Infrastructure

- Transit station improvements including plazas, station access, pocket parks, parking facilities
- Local streets and road improvements including streetscape projects associated with high density developments and near transit facilities with sample elements such as pedestrian street lighting, bulb outs, crosswalk and sidewalk improvements, new striping for bicycle lanes and road diets, way finding signage, and bus shelters
- Bicycle and pedestrian improvements including bikeways and bike-transit facilities, bicycle/pedestrian paths and bridges, safe routes to transit, and bicycle parking
- Park-and-ride facility improvements
- Passenger rail station access and capacity improvements
- Development and implementation of transit priority treatments on local roadways
- Equipment and rolling stock such as equipment that is attached to a facility and integral to the benefit of the facility (i.e., electric vehicle charging stations)

Non-infrastructure

- Planning studies
- Feasibility or scoping only studies for capital projects
- Transit and shuttle operations
- Transit incentive programs (including fare-based)
- Safety education, training, enforcement, and promotional programs

Transit and shuttle operations must not directly duplicate existing services but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

ACTC_AR4118

INELIGIBLE PROJECTS

- Vehicle purchases and vehicle maintenance
- Studies that extend beyond Alameda County other than to establish contributing impacts
- Routine maintenance of capital facilities
- Promotional program giveaways including food, etc.

OTHER REQUIREMENTS

- Shuttle operations will be limited to a maximum award of $500,000 per year and will require a 75 percent (75%) match.
- Plans and studies will be limited to a maximum award of $100,000 and will require a 50 percent (50%) match.

ACTC_AR4119

This page intentionally left blank.

SECTION 5: PROGRAMMING/ALLOCATION GUIDELINES FOR FREIGHT AND ECONOMIC DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Freight and Economic Development Program includes discretionary funding from the 2014 Measure BB Program, which aims to develop innovative approaches to moving goods in a safe and healthy environment in support of a robust economy.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the Measure BB Transportation Expenditure Plan (2014 TEP).

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Of the net revenue collected, one percent (1%) is dedicated to funding improvements that support moving goods in a safe and healthy environment in support of a robust economy as part of the Traffic Relief on Highways Type (Highway Program) included in the 2014 TEP.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Enhance the safe transport of freight by truck or rail in Alameda County, including projects that reduce conflicts between freight movement and other types of transportation.
- Improve the reduction of greenhouse gas production in the transport of goods.
- Mitigate environmental impacts of freight movements on residential neighborhoods.
- Enhance coordination between the Port of Oakland, the Oakland Airport, and local jurisdictions to improve efficiency and safety and reduce the environmental impacts of freight operations.

PROGRAMMING AND ALLOCATION PRIORITIES

The Freight and Economic Development Program seeks to award projects that advance freight-related goals identified in the Countywide Goods Movement Plan and in the 2014 TEP. The programming and allocation primary priority shall be for projects that contribute significantly to furthering countywide safety and coordination of goods movement. In general, competitive projects are those that enhance the safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

ACTC_AR4121

Priority (in no particular order) is given to projects as follows:

1. **Projects in the expenditure plans:** Priority consideration is given to projects identified in the expenditure plans. Funding from this category will be programmed in coordination with the Highway Program in the following section to support related transportation projects and corridor investments, where applicable.

2. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

3. **Projects aligned with needs established in the Goods Movement Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Goods Movement Plan.

4. **Reduce conflicts:** Priority consideration is given to projects that reduce conflicts between goods movement, passenger transportation, and local communities, and that improve safety.

5. **Improve goods mobility and economic development:** Priority consideration is given to projects that positively affect truck mobility and accessibility.

6. **Enhance coordination:** Priority consideration is given to projects that mitigate impacts on neighborhoods and enhance coordination between freight distribution centers.

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish the program's objective to improve mobility and coordination of freight and goods to and from Alameda County. Projects must directly address a specific freight coordination issue or goods movement need.

The Freight and Economic Development Program will be available for projects that include, but are not limited to, the following:

- Highway interchange improvements that address freight or passenger delays
- Technology programs that address smart operations and deliveries
- Rail infrastructure capacity improvements on freight rail lines
- Gateway infrastructure improvements
- Impact reduction programs
- Local truck route enhancements
- Goods movement planning support
- Quiet zone Improvements
- Airport facilities
- Truck vehicle parking
- Truck/port/freight/operations

INELIGIBLE PROJECTS

- Projects that do not directly benefit or facilitate freight and goods movement in Alameda County.
- Projects that do not meet the goals and objectives of this program.
- Freight-related projects that Alameda CTC funds must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 6: PROGRAMMING/ALLOCATION GUIDELINES FOR HIGHWAY PROGRAM

PROGRAM SUMMARY

The Highway Program seeks to implement projects as identified in the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). The 2014 TEP identifies specific highway and freight corridors and improvements on I-80, SR-84, I-580, I-680, and I-880 that would address infrastructure gaps and facilitate greater access, congestion relief, and goods movement. The 2014 TEP identifies specific projects for each of the highway corridors in the amount of $600 million, with an additional one percent (1%) of net revenue or approximately $77 million specifically targeted toward goods movement improvements. Project funding decisions are based on project readiness, local priority, and the ability to leverage current investment and funds. Alameda CTC aims to prioritize the specific investments that demonstrate an ability to move forward in project implementation and delivery. Several eligible projects or candidate projects will be selected for funding based on their contribution to maximizing the connectivity, reliability, and efficiency of the transportation system, while providing congestion relief and facility improvements.

FUND SOURCES

2014 Measure BB

Measured BB, approved by Alameda County in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs that will be funded with the sales tax revenues. The 2014 TEP identifies $600 million for specific highway capital improvements with an additional one percent (1%) of net revenue or approximately $77 million, targeted specifically for the Freight and Economic Development Program that supports goods movement related improvements.

Funds will be periodically distributed by Alameda CTC for projects that will make the existing highway system safer, more efficient, and effective by:

- Removing bottlenecks at interchanges and other hot spots.
- Improving efficiency by providing HOV/HOT/Express Lanes and operational improvements and integrating Intelligent Transportation System strategies.
- Providing connectivity/accessibility between goods, markets, and employment centers.
- Complementing other modes of transportation and integrating complete street features.
- Completing gaps in the system.
- Improving air quality by reducing pollution and greenhouse gas emissions.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Highway Program seeks to award projects that improve the safety and efficiency of Alameda County's highway system, as specifically identified in the 2014 TEP. The programming and allocation primary priority shall be for projects that contribute significantly toward addressing safety, access, and infrastructure gaps, while furthering countywide efficiencies and coordination of goods movement. In general, competitive projects are those that enhance the safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Transportation Expenditure Plan:** Priority consideration is given to projects identified in the 2014 TEP and earmarked for certain Measure BB amounts. Priority consideration is provided to projects specifically named or referenced in the group category and that have already started various project development phases such as scoping, preliminary engineering, design, and environmental.

2. **Improve safety:** Priority consideration is given to projects that improve safety among vehicles, bicycles and/or pedestrians, on major truck routes, and the safety of maintenance and operational workers.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Improve mobility and provide congestion relief:** Priority consideration is given to projects that positively affect transportation mobility and accessibility. This includes the removal of bottlenecks at the interchange locations and other hot spots identified, improving efficiency by providing additional capacity via HOV/HOT/Express Lanes and operational improvements, and reducing travel times (peak hour vehicle delays and average vehicle delays).

5. **Enhance connectivity/improve access**: Priority consideration is given to projects that provide connectivity and accessibility between goods and markets, ports, major businesses, and employment centers.

6. **System reliability:** Priority consideration is given to projects that maximize connectivity and provide congestion relief, gap closures, and contribute to improving environmental conditions, i.e., air quality.

ACTC_AR4126

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish program's objectives to improve efficiency, remove bottlenecks, and increase access on the highway system to and from Alameda County. The Highway Program funds will be available for projects that include, but are not limited to, the following:

- Highway projects and corridors identified in the 2014 TEP from the following investment categories:
    - I-80 Improvements
    - I-580 Improvements
    - I-680 Improvements
    - I-880 Improvements
    - I-880 Improvements
    - SR-84 Improvements
- Highway-related improvements that provide congestion relief, increase safety and access, and enhance the mobility of vehicles and goods movement operations.

INELIGIBLE PROJECTS

- Projects that do not directly benefit transportation in Alameda County.
- Projects that do not have a direct nexus or beneficial impact to the identified highway corridors.
- Projects that do not meet the program goals and objectives.
- Freight-related projects that Alameda CTC funds must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 7: PROGRAMMING/ALLOCATION GUIDELINES FOR PARATRANSIT DISCRETIONARY GRANT PROGRAM

PROGRAM SUMMARY

The Paratransit Discretionary Grant Program includes the discretionary funding from the 2000 Measure B and the 2014 Measure BB paratransit programs as a unified grant program. The 2000 Measure B and 2014 Measure BB funds shall be expended in accordance with the requirements of the guiding expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects and programs to improve the County's transportation system. Collections began on April 1, 2002 and ended on March 30, 2022. The 2000 Transportation Expenditure Plan outlines projects and programs ("projects") that the sales tax revenues fund. A total of 10.45 percent (10.45%) of net MB revenue was directed toward projects intended for seniors and people with disabilities (Paratransit). The 10.45 percent (10.45%) is further split, as follows:

- 9.02 percent (9.02%) of net revenues are DLDs to Alameda County cities, the County, and transit operators as follows:
    - 5.63 percent (5.63%) are DLDs directed toward the East Bay Paratransit Consortium (AC Transit and BART) for Americans with Disabilities Act (ADA) mandated paratransit services.
    - 3.39 percent (3.39 %) are DLDs directed toward Alameda County cities and the County for paratransit services based on a funding formula with population and other factors. The formula is recommended by the Alameda CTC's Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.
- 1.43 percent (1.43%) of net revenues are distributed on a discretionary basis, based on a funding recommendation by PAPCO and approved by the Commission. Funds in this category includes use for countywide paratransit programs administered by Alameda CTC.

2014 Measure BB

Measure BB, approved by Alameda County voters in 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that the sales tax revenues fund. Of net revenue collected, ten percent (10%) is dedicated to paratransit projects targeted toward seniors and people with disabilities (paratransit), as follows:

- Six percent (6%) of net revenues are directed toward the East Bay Paratransit Consortium (AC Transit and BART) for ADA-mandated services.
- Three percent (3%) of net revenues are DLDs directed toward Alameda County cities and the County for paratransit services, as follows:

ACTC_AR4129

  - A funding formula based on the percentage of the population over age 70 in each of four planning areas.
  - Funds can be further allocated within each planning area to the individual cities based on a formula recommended by PAPCO and approved by the Commission.
- One percent (1%) of net Measure BB revenues is administered by Alameda CTC and directed toward coordinating services across jurisdictional lines or filling gaps in the system to meet the mobility needs of seniors and people with disabilities. Funds in this category are used for countywide paratransit programs that Alameda CTC administers.

PROGRAM GOALS

Discretionary grant funding will be focused on mobility management types of activities that improve consumers' ability to access services, improve coordination between programs, and/or address gaps in the transportation system. The program is designed to complement DLD funding which is dedicated to more traditional trip-provision services (e.g., taxi subsidies, door-to-door services, etc.).

Mobility management activities aim to:

- Enhance people's travel options and access to services.
- Promote awareness and education.
- Effectively communicate/disseminate information to the public.
- Improve coordination and partnerships.
- Address critical gaps in the transportation system for seniors and people with disabilities.
- Encourage seniors and people with disabilities who can use fixed-route public transit to do so.
- Meet the needs of seniors and people with disabilities cost effectively and efficiently.

Capital improvements and equipment purchases are also eligible if directly related to the implementation of mobility management and meet other criteria, e.g., transit stop improvements that support improving access to public transit for seniors and/or people with disabilities.

PROGRAMMING AND ALLOCATION PRIORITIES

Priority (in no particular order) is given to projects as follows:

1. **Identified in a countywide or regional plan or assessment:** Priority consideration is given to projects identified as a countywide and/or regional priority in a relevant plan or needs assessment such as the Alameda Countywide Transit Plan, Assessment of Mobility Needs of People with Disabilities and Seniors in Alameda County (Alameda County Needs Assessment), MTC Coordinated Public Transit-Human Services Transportation Plan (Coordinated Plan), or other relevant countywide or regional plan or needs assessment.

2. **Multi-jurisdictional projects:** Priority consideration is given to projects identified that provide service across jurisdictional boundaries.

ACTC_AR4130

3. **Projects that provide same-day accessible transportation.** Priority consideration is given to projects that provide critical, same-day accessible transportation service throughout Alameda County.

4. **Other priorities as recommended by PAPCO.** PAPCO may periodically recommend other program funding priorities.

ELIGIBLE PROJECTS

- **Mobility Management Type Programs**
  - Travel training
  - Trip planning assistance to improve access
  - One-call/one-click type programs
  - Volunteer driver programs
  - Coordination of service provision at the planning area level or countywide (separate from the cost of traditional trip provision, e.g., the administration costs for a planning area-wide program)
  - Transportation programs that fill unique and/or critical needs and gaps not filled through traditional trip-provision models

- **Capital Projects/Procurement**
  - Capital improvements and equipment purchases are eligible if directly related to the implementation of a project within an eligible category, including but not limited to:
    - Transit-stop improvements that support improving access to public transit for seniors and/or people with disabilities.
    - Accessible vehicle and equipment purchase.
    - Capital projects to improve accessibility at shuttle stops.

This funding is not intended for ADA-mandated or City-based services that would traditionally be funded through DLD allocations. Sponsors are encouraged to submit programs that will benefit more than one city or otherwise illustrate advancement of coordination and mobility management goals.

Eligible projects must conform to the Commission-adopted Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB.

Refer to the Implementation Guidelines for Paratransit Programs for detailed eligibility requirements and service descriptions.

INELIGIBLE PROJECTS

- Projects that do not conform to the Commission-adopted Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB.
- Capital projects, programs, maintenance, or operations that do not directly improve paratransit services.
- Using program funds to replace/supplant other secured funding.

EVALUATION FRAMEWORK

PAPCO has historically supported projects and programs that:

- Demonstrate effectiveness at meeting mobility management goals.
- Project sufficient demand for the program/service/project.
- Are ready for implementation.
- Provide service across jurisdictional boundaries.
- Demonstrate coordination and collaboration with other service providers in their planning area.
- Are effective, according to adopted performance measures and past performance (where applicable) or projected performance supported by substantive evidence of success.
- Are cost effective.
- Leverage funds (including DLD reserves).
- Have been identified as a priority in relevant countywide or regional plans or needs assessments such as the Alameda Countywide Transit Plan, the Alameda County Needs Assessment, or the Coordinated Plan.
- Support equitable distribution of resources throughout the County.

PROGRAM REQUIREMENTS

Applicants should review the general requirements for Alameda CTC-administered discretionary funding in the full CIP guidelines, including reimbursements and timely use of funds provisions.

Maximum Grant Size

The maximum grant size is $500,000; there is no minimum grant size.

Minimum Matching Requirements

Minimum matching requirements for applicants are as follows:

- Programs: 12 percent (12%) local match for DLD recipients and five percent (5%) for non-DLD recipients.
- Plans and Studies: 50 percent (50%) local match.
- Shuttle and transit operations: 50 percent (50%) local match.
- “In-kind” costs are not eligible.
- Matching funds must be expended concurrently and proportionally to Alameda CTC Administered Funds allocated to the project phase.
- DLD recipients must demonstrate a commitment to using their DLD reserves and new Measure BB DLD funds.
- Matching funds contributed to a project beyond the minimum required level may increase the competitiveness of the application.

Letter(s) of Support

All applicants must work in coordination with other service providers in their planning area. To demonstrate this support:

ACTC_AR4132

- Applicants must describe how they are coordinating with local jurisdictions, transit agencies, and non-profit organizations to fill service gaps and complement existing services.
- Non-profit organizations are required to provide a letter(s) of support from a local agency and/or transit provider to confirm service coordination and project support.
- All applicants are encouraged to provide letters from partners to demonstrate community support and coordination.

To establish partnerships, contact information for Measure B and Measure BB recipients of paratransit DLD funds on the Access Alameda website: https://accessalameda.org/communities/

Monitoring and Performance Measures

- Progress reports will be required every six months illustrating program/project progress and funds spent.
- Applicants must identify program/project goals, deliverables, and performance measures in these progress reports.

RESOURCES

Resources for the CIP call for project nominations, including a link to the online application can be accessed from Alameda CTC's website: http://www.alamedactc.org/app_pages/view/19025

This page intentionally left blank.

SECTION 8: PROGRAMMING/ALLOCATION GUIDELINES FOR TECHNOLOGY, INNOVATION, AND DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Technology, Innovation, and Development Program includes discretionary funding primarily from the 2014 Measure BB. However, funds identified for the Vehicle Registration Fee (VRF) Local Technology Program may be made available at the discretion of Alameda CTC to meet the overall goals of the Technology, Innovation, and Development Program. Projects funded through the program shall support innovative development and application of technologies that enhance the performance of a multimodal transportation system.

The 2014 Measure BB and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Of the net revenue collected, one percent (1%) is dedicated to funding innovative approaches to meet the County's transportation vision, emphasizing the use of new and emerging technologies to better manage the transportation system. Successful models will receive priority for funding from this category.

Funds will be distributed periodically by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Increase utilization of non-auto types of transportation or increase the occupancy of autos with the goal of reducing congestion, air pollution, and greenhouse gas production.
- Reduce transportation-related greenhouse gases through the utilization of a cleaner vehicle fleet including alternative fuels and/or locally produced energy.
- Use demand management strategies designed to reduce congestion, increase use of non-auto transportation, manage existing infrastructure, and reduce greenhouse gas emissions.
- Inform consumers of their transportation choices and improve the efficiency or effectiveness of the County's transportation system.
- Manage parking supply to improve availability and utilization, and to reduce congestion and greenhouse gas production.
- Support environmental mitigation for transportation projects including land banking.

Grant awards will emphasize demonstrations or pilot projects which can leverage other funds.

Vehicle Registration Fee

Measure F, approved by Alameda County in November 2010, authorizes a $10 per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies.

The VRF program dedicates five percent (5%) of net funds to the VRF Local Transportation Technology Program. This program aims to improve the performance of road, transit, pedestrian and bicyclist technology applications and accommodate emerging vehicle technologies such as electric and plug-in-hybrid vehicles. On January 23, 2014, Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to Alameda CTC. The goal of this policy is to create a reliable source of funding to support ongoing operational requirements and costs incurred by Alameda CTC for technology-related capital investments that benefit traffic corridors in Alameda County such as the Smart Corridors Program and other significant countywide technology programs implemented by Alameda CTC.

PROGRAMMING AND ALLOCATION PRIORITIES

The Technology, Innovation, and Development Program seeks to award projects that contribute significantly to furthering countywide technological advancement and innovation related to enhancing the transportation system through new and emerging research, assets, capital investments, applications, and technology-based transportation strategies. In general, competitive projects are those that serve more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital infrastructure**: A minimum of 70 percent (70%) of available program funds in each programming cycle will be specifically allotted to capital projects for infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in each programming cycle may be used for non-infrastructure improvements program operations, shuttle operations, plans, and studies.

3. **New and innovative approaches**: Priority consideration is given to projects and programs that employ "out-of-the box" approaches to improving transportation infrastructure and transit services.

4. **Regional projects in the expenditure plans**: Priority consideration is given to regional projects identified in the expenditure plans. Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

ACTC_AR4136

5. **Increase transit access and ridership**: Priority consideration is given to projects and programs that promote access, use, and connectivity to the transit system and services in Alameda County and throughout the region, by identifying mobility-enhancing practices and technologies that promote multi-modal connectivity, provide transportation options, and improve the transit user's experience.

6. **Asset innovation and management**: Priority consideration is given to projects and programs ("projects") that identify innovative and sustainable use of transit vehicles, transit operations, and services including the employment of new technologies or technology-based strategies and partnerships.

7. **Enhance efficiency of moving people and goods**: Priority consideration is given to projects that create greater mobility and reliability of the transportation system through the application of innovative technologies and practices that create sustainable movement of people and goods and increase economic vitality for the County.

8. **Increase in safety**: Priority consideration is given to projects that increase the safety of the transportation system through safety-enhancing practices, technologies, and programs.

ELIGIBLE PROJECTS

Eligible projects include planning, development, implementation, and maintenance of technology that will best serve Alameda County's transportation goals.

Technology, Innovation, and Development Program funds will be available for projects that include, but are not limited to the following:

- Development, installation, operations, monitoring, and maintenance of local street and arterial transportation management technology such as the Smart Corridors Program, traffic signal interconnection, transit and emergency vehicle priority, advanced traffic management systems, and advanced traveler information systems
- Infrastructure for alternative vehicle fuels such as electric and plug-in-hybrid vehicle stations
- New or emerging transportation technologies that provide congestion or pollution mitigation
- Technology implementation to improve freight system infrastructure, reliability, and/or to reduce community or environmental impacts related to freight improvements
- Advanced signal technology for walking and bicycling
- Traveler information systems
- Advanced safety systems including infrastructure improvements that support vehicle-to-vehicle and vehicle-to-infrastructure communication, technologies associated with autonomous vehicles, and other collision avoidance technologies

- Mobile applications that facilitate greater transportation access, car sharing, and user ability (enhanced information availability, connectivity to transit, user experience)
- Advanced public transportation technologies that assist public transportation operators or other shared mobility entities in managing and optimizing public transportation and mobility services. These include remote fleet monitoring systems, coordinated communication systems, and applications that support transit connectivity, data collection, information sharing, and mobility sharing.

INELIGIBLE PROJECTS

- Projects that do not directly benefit or are inaccessible to the public.
- Projects that do not meet the goals and objectives of this program.
- Freight-related projects that Alameda CTC funds must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk, pursuant to Government Code Section 14525.3.

ACTC_AR4138

SECTION 9 PROGRAMMING/ALLOCATION GUIDELINES FOR TRANSIT PROGRAM

PROGRAM SUMMARY

The Transit Program includes the combined discretionary funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Express Bus and Transit. This program aims to support creating, expanding, and enhancing access to transit through capital infrastructure investments, service operations, and innovative transit projects. The 2000 Measure B, 2014 Measure BB, and VRF funds shall be expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple investments to improve the County's transportation system. Collections began on April 1, 2002 and ended March 30, 2022. The 2000 Transportation Expenditure Plan outlines projects and programs ("projects") that will be funded with the sales tax revenues. Of the net revenue collected, 0.7 percent (0.7%) is dedicated to express bus service projects. The goal of the Express Bus Grant Program is to create, expand, and enhance express bus services, focusing on projects with countywide significance. Measure B funded eligible AC Transit and LAVTA projects only.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augmented the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects ("projects") that will be funded with the sales tax revenues. Of the net revenue collected, 2.24 percent (2.24%) is dedicated to funding innovative and emerging transit projects and implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive priority for funding from this fund category.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a $10 per year vehicle registration fee. Collections for the VRF program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. The VRF program dedicates 25 percent (25%) of funds to the VRF Transit for Congestion Relief Program. The goal of the program is to make it easier for drivers to use public transportation, make the existing transportation system more efficient and

ACTC_AR4139

effective, improve access to schools and jobs, decrease automobile usage and air pollution, and provide countywide congestion relief.

PROGRAMMING AND ALLOCATION PRIORITIES

The Transit Program seeks to award projects that advance transit related goals identified in the Countywide Transit Plan and as identified in the Measure B, Measure BB, and VRF expenditure plans. The programming and allocation primary priority shall be for projects that contribute significantly to furthering countywide access to and expansion of transit services. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital infrastructure**: A minimum of 70 percent (70%) of available program funds in each programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in each programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase transit access and ridership**: Priority consideration is given to transit projects that promote access, use, and connectivity to transit services and the transit system in Alameda County and throughout the region.

4. **Regional projects in the expenditure plans**: Priority consideration is given to regional projects identified in the expenditure plans and Countywide Transit Plans.

5. **Projects aligned with needs established within the Transit Plan**: Priority consideration is given to projects that align with the goals and investment priorities within the Alameda CTC's Transit Plan or similar long-range planning studies.

6. **Reliability of Service Operations**: Priority consideration is given to projects that address regionally significant transit issues and maintain and improve reliability, frequency, and cost effectiveness of operational services.

7. **Express Bus Services**: Priority consideration is given to Express Bus Services that have countywide significance. In general, projects must service residents from more than one specific area or jurisdiction in Alameda County or demonstrate how more than one area is served by transit connections that go beyond one planning area. Express Bus Service is defined as either:
    a. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone, or

b. Service that provides a simple route, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, and signature identification of rapid buses such as color-coded buses, stops, and enhanced stations.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance transit access, convenience, and service operations in Alameda County. Alameda CTC's evaluation process will consider the balance of all project types and prioritize improvements relative to each other (i.e., capital projects to capital projects, operations to operations, study to study) as feasible and practical.

Transit Program funds will be available for projects that include, but are not limited to, the following:

- Transit service expansion, enhancement and preservation to provide congestion relief, such as express bus service in a congested area
- Development and implementation of transit priority treatments on local roadways
- Student transit pass programs identified through the affordable student transit program with models benefiting junior and high school youth riders
- Investments to improve the speed and reliability of transit operations
- Park-and-ride facility improvements
- Increased usage of clean transit vehicles
- Increased usage of low-floor transit vehicles
- Passenger rail station access and capacity improvements
- Feasibility or scoping only studies for capital projects
- Safe routes to school operations
- Safety education, enforcement, and promotional programs
- Transit incentive programs (including fare-based)
- Express bus services including capital expenses and operations

Note that ongoing funding for express bus service operations is limited to transit operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls. Transit and shuttle operations that enhance existing service should be coordinated with the existing service and transit operator(s) to the extent feasible.

INELIGIBLE PROJECTS

- Routine bus maintenance
- Funding to replace funds for existing ongoing programs or transit operations
- Transit and shuttle operations that directly duplicate existing transit services

OTHER REQUIREMENTS

- Ongoing funding for service operations is limited to operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

ACTC_AR4142

SECTION 10: PROGRAMMING/ALLOCATION GUIDELINES FOR TRANSIT CENTER DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The 2000 Measure B Transit Center Development (TCD) Program aims to create, expand, and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects.

Transit Center Developments are priority development areas (PDAs), transit villages, transit-oriented designs, and mixed-use residential or commercial areas designed to maximize access to public transportation. The California Department of Transportation defines TCD or Transit Oriented Development (TOD) as "moderate to higher density development, located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping opportunities designed for pedestrians without excluding the auto. TOD can be new construction or redevelopment of one or more buildings whose design and orientation facilitates transit use."

The 2000 Measure B funds shall be expended in accordance with the requirements of the Measure B Expenditure Plan (2000 TEP).

FUND SOURCE

2000 Measure B
Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects to improve the County's transportation system. Collections began on April 1, 2002 and ended on March 30, 2022. The 2000 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Approximately 0.19 percent (0.19%) of the net revenue collected is dedicated to the TCD Program. The goal of the TCD Program is to encourage transportation development near transit centers to facilitate and support the growth of transit-oriented developments.

PROGRAMMING AND ALLOCATION PRIORITIES

The TCD Program seeks to award funding to advance TOD projects, and as identified in the 2000 TEP. The programming and allocation primary priority shall be for projects that contribute significantly to facilitating residential and retail development near transit centers and PDAs. In general, competitive projects serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

ACTC_AR4143

1. **Support for TODs or PDAs**: Priority consideration is given to activities that promote access, use, and connectivity of transportation infrastructure that provides direct access to mixed use developments and housing near major transit facilitates in Alameda County.

2. **Consistent with the Expenditure Plan**: Priority consideration is given to projects that encourage the development of transit centers per the Measure B Expenditure Plan.

3. **Technical Assistance Program**: Priority consideration is given to a technical assistance program administered by Alameda CTC, known as the Sustainable Communities Technical Assistance Program, which supports jurisdictions in their technical planning efforts to complete studies and plans in a variety of topics that help advance TOD projects.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance the development of transit centers and transit-oriented communities in Alameda County. The program goal is to fund projects that will best serve the County. Alameda CTC's evaluation process will consider the balance of all project types and prioritize improvements relative to each other (i.e., capital projects to capital projects, operations to operations, study to study), as feasible and practical.

TCD Program funds will be available for projects that include, but are not limited to, the following:

- Capital infrastructure projects that support access to and from transit villages
- PDA planning and implementation of projects
- Studies and plans, including technical assistance programs that address multimodal access and complete streets implementation, streetscape and urban design work, and implementation of transit communities, priority development areas, and the associated components
- Consultant services (through a technical assistance program) to complete specific planning, environmental review, and project development tasks

INELIGIBLE PROJECTS

- Project activities that do not support the development or implementation of TODs or PDAs

ACTC_AR4144

SECTION 11 PROGRAMMING/ALLOCATION GUIDELINES FOR TRANSPORTATION FUND FOR CLEAN AIR COUNTY PROGRAM MANAGER FUND (40%) PROGRAM

PROGRAM SUMMARY

The Bay Area Air Quality Management District (Air District) provides the Transportation Fund for Clean Air (TFCA) County Program Manager Fund (40%) Program from revenue generated by a regional four-dollar ($4) vehicle registration fee. TFCA-funded projects reduce motor vehicle emissions and achieve "surplus" emission reductions beyond the current requirements of regulations, ordinances, contracts, or other legally binding obligations. Projects typically funded with TFCA include shuttles, bicycle lanes and lockers, signal timing, and vehicle trip reduction programs.

Of the total TFCA revenue collected annually by the Air District for this program, 40 percent (40%) is returned to the county in which it was collected. As the designated TFCA Administering Agency for Alameda County, Alameda CTC is responsible for annually programming these funds. TFCA funds shall be expended in accordance with the requirements of the Air District's current TFCA County Program Manager Fund policies, the Air District's adopted county expenditure plans, and the provisions set forth in the annual TFCA 40% Master Funding Agreement between the Alameda CTC and the Air District.

FUND SOURCE

Transportation Fund for Clean Air

Pursuant to the 1988 California Clean Air Act, the Air District is required to periodically adopt a Clean Air Plan (CAP), which describes how the region will work toward compliance with state and federal ambient air quality standards and make progress on climate protection. To reduce emissions from motor vehicles, the CAP includes transportation control measures (TCMs) and mobile source measures (MSMs). A TCM is defined as any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions. MSMs encourage the retirement of older, more polluting vehicles and the introduction of newer, less polluting motor vehicle technologies.

To fund the implementation of TCMs and MSMs, the state legislature, through Assembly Bill (AB) 434 (Sher; Statutes of 1991) and AB 414 (Sher, Statutes of 1995), authorized the Air District to collect a fee of up to four dollars ($4) per vehicle per year, for reducing air pollution from motor vehicles and for related planning and programs. This legislation requires the Air District to allocate 40 percent (40%) of the revenue to an overall administering agency in each county. The overall administering agency must be designated by resolutions adopted by the county board of supervisors and a majority of the city councils representing a majority of the population.

AB 414 references the trip reduction requirements in the Congestion Management Program (CMP) legislation and states that Congestion Management Agencies (CMAs) in the Bay Area designated as AB 434 program managers (administering agencies) "shall ensure that those funds are expended as part of an overall program for improving air quality and for the purposes of this chapter (the CMP Statute)." The Air District has interpreted this language to allow a wide variety of transportation control measures as eligible for TFCA 40 percent (40%) funding, including an expansion of eligible transit, rail, and ferry projects.

AB 414 also adds a requirement that designated county administering agencies adopt criteria for the expenditure of the county subventions and review the expenditure of the funds. The content of the criteria and the review were not specified in the bill. However, the Air District has specified that any criteria used by an administering agency must allocate TFCA funding to projects that are: 1) eligible under the law, 2) reduce motor vehicle emissions, 3) implement the relevant TCMs and/or MSMs in the Air District's most recently approved CAP, and 4) are not planning or technical studies.

PROGRAMMING AND ALLOCATION PRIORITIES

The Air District annually adopts policies for the TFCA County Program Manager Fund. The current Air District TFCA 40% Policies further define eligible projects and establish criteria for calculating emission reductions (i.e., TFCA cost-effectiveness). Projects authorized by the California Health and Safety Code (HSC) Section 44241 and achieve TFCA cost-effectiveness, but do not fully meet the Air District's current TFCA policies are subject to Air District approval on a case-by-case basis.

Only projects that reduce motor vehicle emissions are eligible for TFCA funding. Projects must achieve surplus emission reductions beyond current requirements of regulations, ordinances, contracts, or other legally binding obligations at the time of the execution of a project-specific fund transfer agreement between Alameda CTC and the Project Sponsor.

General Program Structure

As the designated administering agency for Alameda County, Alameda CTC is allocated 40 percent (40%) of the funds collected in Alameda County for this program. The Air District advances these funds to Alameda CTC in semi-annual installments each fiscal year. Alameda CTC must fully program the TFCA revenue received each year within the Air District's allowable time period. Any unallocated funds may be reallocated by the Air District. Alameda CTC prepares an annual TFCA 40 percent (40%) fund estimate as follows:

- A maximum of 6.25 percent (6.25%) of the annual revenue is used directly by Alameda CTC for program administration.
- The remaining 93.75 percent (93.75%) of funds are distributed as follows:
  - 70 percent (70%) of funds to population-based shares for the cities and County:
    - A minimum of $10,000 to each jurisdiction.
    - City population is updated annually based on the State Department of Finance (DOF) estimates.

        - Alameda CTC may choose to roll over a city or the county's annual 70 percent (70%) allocation for programming in a future year.
        - Alameda CTC may also borrow against the rolled over allocations to annually program all available revenues.
        - Unused funds from cancelled or completed projects are returned to the Project Sponsor's share of the fund estimate and are available for reprogramming in a future cycle.
        - Alameda CTC may also program against future TFCA revenue for projects that are larger than the annual funds available.
    - The remaining 30 percent (30%) of funds are programmed to transit-related projects on a discretionary basis:
        - Projects competing for the 30 percent (30%) discretionary funds will be evaluated based on the total emissions reductions projected from the project.
        - Project prioritization may consider the TFCA cost-effectiveness evaluation, the emissions reductions per total project dollar invested for the project, and the matching funds provided by the Project Sponsor.
        - Unused funds from cancelled or completed transit discretionary projects are returned to the 30 percent (30%) share of the fund estimate for reprogramming in a future cycle.
        - Alameda CTC may also program against future TFCA revenue for transit-related projects that are larger than the annual funds available.

ELIGIBLE PROJECTS

Consistent with the project types authorized under HSC Section 44241, projects eligible for TFCA funds include:

- Implementation of rideshare programs
- Purchase or lease of clean fuel buses for school districts and transit operators
- Provision of local feeder bus or shuttle service to rail and ferry stations and to airports
- Implementation and updating of local arterial traffic management, including but not limited to, signal timing, transit signal preemption, bus stop relocation, and "smart streets." As of 2023, to be eligible, signal timing/coordination projects require case-by-case approval by the Air District Board.
- Implementation of rail-bus integration and regional transit information systems
- Implementation of demonstration projects in telecommuting and in congestion pricing of highways, bridges, and public transit
- Implementation of vehicle-based projects to reduce mobile source emissions, including but not limited to zero-emission vehicles and fueling infrastructure, and advanced technology demonstrations
- Implementation of smoking vehicles program

- Implementation of an automobile buy-back scrappage program operated by a governmental agency
- Implementation of bicycle facility projects included in an adopted countywide bicycle plan or congestion management program
- Design and construction of physical improvements that support shifts to alternative transportation modes that achieve motor vehicle emission reductions. The projects and the physical improvements shall be identified in an approved area-specific plan, redevelopment plan, general plan, or other similar plan.

INELIGIBLE PROJECTS

TFCA funds may not be used for:

- Planning activities that are not directly related to the implementation of a specific project
- Routine maintenance
- Purchase of personal computing equipment for an individual's home use
- Projects that provide a direct or indirect financial transit or rideshare subsidy or shuttle/feeder bus service exclusively for the grantee's employees
- Costs of developing TFCA grant applications or fulfilling TFCA grant administration activities such as review and execution of funding agreements, preparation of requests for reimbursement, and reporting

OTHER REQUIREMENTS

TFCA Cost Effectiveness

The Air District requires the evaluation of projects proposed for and completed with TFCA funding for TFCA cost-effectiveness. Alameda CTC will measure cost-effectiveness based on the ratio of the TFCA cost divided by the total tons of emissions (reactive organic gases (ROG), oxides of nitrogen (NOx), and weighted particulate matter ten microns in diameter and smaller (PM10)) estimated to be reduced by the project. To calculate the TFCA cost-effectiveness, the TFCA project cost is the sum of the requested TFCA County Program Manager Funds and any secured TFCA Regional Funds. Air District-generated forms are used to calculate a cost effectiveness result of TFCA $/ton. Alameda CTC will only approve projects with TFCA cost effectiveness on an individual project basis that is equal to or less than: the thresholds of TFCA funds per ton of total ROG, NOx, and weighted PM10 emissions reduced ($/ton) by project type, as identified in the current Air District Board-adopted TFCA policies. Project Sponsors are required to provide Alameda CTC with the data necessary to evaluate projects for TFCA cost-effectiveness. This may include, but is not limited to, transit ridership, bicycle counts, verifiable survey data, vehicle data and results, and/or data from comparable projects.

Attributes of Cost-Effective TFCA Projects

The following list includes the project attributes typically associated with successful candidate projects for TFCA funding:

- Project purchases or provides service using best available technology or cleanest vehicle, e.g., achieves significant petroleum reduction, utilizes vehicles that have newer engines, does not include a Family Emission Limit engine (per vehicle's CARB-issued Executive Order), and/or has zero tailpipe emissions.
- Project is delivered or placed into service well in advance of regulatory changes (e.g., lower engine emission standards).
- A relatively low amount of TFCA funds is requested; grantee provides significant matching funds.
- Capital bike projects are new facilities (not upgrades) and close a gap in existing lanes or increase the number of existing racks/lockers.
- For vehicle trip reduction projects (e.g., shuttle/feeder bus service and ridesharing projects):
  - Project provides service to relatively large percentage of riders/participants that otherwise would have driven alone over a long distance.
  - Project provides "first and last mile" connection between employers and transit.
  - Service travels relatively short distances between start and end point and has relatively low mileage and a minimal amount of non-service miles. Shuttle operates on a route (service and non-service miles) that is relatively short in distance.
- For vehicle-based projects:
  - Vehicle has high operational use, annual mileage, and/or fuel consumption (e.g., taxis, transit fleets, and utility vehicles).
- Capital projects for trip reduction:
  - Pre- and post-project counts demonstrate high usage and potential to affect mode or behavior shift that reduces emissions.
  - Project demonstrates a strong potential to reduce motor vehicle trips by significantly improving mobility via walking, bicycling, and transit.
  - Project is located along high-volume transit corridors and/or is near major activity centers such as school's employment, transit, civic, or retail.

TFCA Expenditure Period

TFCA funding is subject to a TFCA expenditure period. In general, the Air District TFCA 40% policies allow for a two-year expenditure period unless a longer expenditure period is established at the time of programming. For projects that provide a service, such as ridesharing programs and shuttle/feeder bus projects, the TFCA grant period is limited to not more than two years for operations, except for bike share (Bay Area Bike Share) projects, which have a TFCA grant period of up to five years. For shuttle and program operations projects to receive TFCA funding in subsequent funding cycles, they must be re-evaluated for TFCA cost effectiveness with each application based on the most current project data. Alameda CTC may approve no more than two one-year extensions to the TFCA expenditure period. Subsequent extensions may be granted on a case-by-case basis by both Alameda CTC and Air District staff.

SECTION 12: PROGRAMMING/ALLOCATION GUIDELINES FOR STP/CMAQ FUNDS ONE BAY AREA GRANT PROGRAM

PROGRAM SUMMARY

The One Bay Area Grant (OBAG) Program is a federal funding program designed to support the implementation of Plan Bay Area, the region's first Sustainable Communities Strategy (SCS). The OBAG Program continues to integrate the region's federal transportation program with California's climate statutes and the SCS. It also contributes to the implementation of the goals and objectives of the Regional Transportation Plan.

Overall, the OBAG Program goals include:

- Support the SCS by linking transportation dollars to land use decisions.
- Target transportation investments to support PDAs.
- Further Alameda County's Priority Development Area Investment and Growth Strategy.

MTC develops a new framework and guidelines for each OBAG cycle. These include program priorities and policies, selection criteria, revenue estimates, project categories, and county programming policies and deadlines. Refer to MTC's website for more OBAG information: https://mtc.ca.gov/funding/federal-funding/federal-highway-administration-fhwa-grants

To date, MTC has completed three OBAG programming cycles:

- OBAG Cycle 1: MTC Resolution 4035
- OBAG Cycle 2: MTC Resolution 4202
- OBAG Cycle 3: MTC Resolution 4505

FUND SOURCES

OBAG funding is based on anticipated future federal apportionments of Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) funding. The STP and CMAQ programs are the primary discretionary federal funding sources distributed to regions for transportation and can fund a variety of project types, including public transit, bicycle and pedestrian, and local road and highway projects.

Additional information related to the Alameda CTC's nominating of Alameda County projects for federal OBAG funds is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

This page intentionally left blank.

SECTION 13: PROGRAMMING/ALLOCATION GUIDELINES FOR STATE TRANSIT ASSISTANCE COUNTY BLOCK GRANT PROGRAM

PROGRAM SUMMARY

State Transit Assistance (STA) funds are generated by the sales tax on diesel fuel and may be used by eligible transit operators for capital or operating purposes. The STA population-based funds MTC receives are based on the region's share of the state population. Through MTC Resolution 4321, first adopted in 2018, MTC established a policy for the programming and allocation of these funds with the creation of a STA County Block Grant Program, through which 70 percent (70%) of the funds are directed to the nine Bay Area County Transportation Agencies (CTAs), to determine how to invest the funds in public transit services/projects for their respective counties. The remaining 30 percent (30%) is programmed directly by MTC.

MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program: small and north county operator minimum shares, mobility management program requirements, MTC approval for STA fund exchanges, a coordinated claim process, the submission deadline, performance measures, and annual reporting requirements.

CTAs are to adopt a county-level framework for how STA County Block Grant funding is to be distributed to the eligible transit operators within their respective counties. The distribution of Alameda County's share of STA County Block Grant funds is reviewed by the Alameda CTC Commission every two years.

The Alameda County STA Block Grant formula for FYs 2025-26 and 2026-27 was adopted by the Commission in April 2025.

ACTC_AR4153

This page intentionally left blank.

SECTION 14: PROGRAMMING/ALLOCATION GUIDELINES FOR STATE TRANSPORTATION IMPROVEMENT PROGRAM

PROGRAM SUMMARY

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. The STIP is composed of two sub-elements: 75 percent (75%) of STIP funds go toward the Regional Transportation Improvement Program (RTIP) and 25 percent (25%) of STIP funds go to the Interregional Transportation Improvement Program (ITIP).

Alameda CTC adopts and forwards a program of RTIP projects to MTC for each STIP cycle. As the Regional Transportation Planning Agency for the nine-county Bay Area, MTC is responsible for developing the regional priorities for the RTIP. MTC approves the region's RTIP and submits it to the California Transportation Commission for inclusion in the STIP. The California Department of Transportation is responsible for developing the ITIP.

Principles for the Development of the Alameda County 2026 STIP Project List
(approved July 2025)

- It is anticipated that any new funding programmed in the 2026 STIP will be made available in Fiscal Years (FYs) 2029-30 and/or 2030-31.
- Previously-approved County and/or regional commitments for STIP programming will be considered during the development of the 2026 STIP project list.
- Sponsors of currently programmed STIP projects will be required to provide updated project scope, status, schedule, cost and funding information.
- Any project considered for funding must be consistent with the Countywide Transportation Plan (CTP) and satisfy all STIP programming requirements.
- Projects recommended for STIP funding must demonstrate readiness to meet applicable STIP programming, allocation and delivery requirements, and deadlines, including federal requirements.
- Consideration of the following are proposed for the required project prioritization for the development of the 2026 STIP project list:
  - The principles and objectives set forth in the Alameda CTC Comprehensive Investment Plan
  - Projects that can leverage funds from other federal, Senate Bill 1 (SB1) and regional programs
  - Previous commitments for STIP programming approved by Alameda CTC, which may include existing STIP projects with remaining funding needs eligible for additional STIP funding
  - The degree to which a proposed project, or other activity intended to be funded by transportation funding programmed by Alameda CTC, achieves or advances the goals and objectives included in the CTP

- The degree to which a proposed project has viable project implementation strategies based on current project-specific project delivery information provided by applicants, including:
  - Readiness for the current/requested project delivery phase
  - Status of environmental clearance, including federal National Environmental Policy Act (NEPA)
  - The project cost/funding plan by phase, including demonstration of a complete funding plan for the phase for which STIP funding is requested
  - The potential for phasing of initial segment(s) that are fully funded and provide independent benefit
  - Potential impediments and risks to successful project implementation in accordance with the proposed project delivery schedule

ACTC_AR4156

SECTION 15 PROGRAMMING/ALLOCATION GUIDELINES FOR REGIONAL MEASURE 3 PROGRAM

PROGRAM SUMMARY

To help solve the Bay Area's growing congestion problems, MTC worked with the state legislature to authorize a ballot measure that would finance a comprehensive suite of highway and transit improvements from increased tolls on the region's seven state-owned toll bridges. Senate Bill 595 (authored by Senator Jim Beall of San Jose) was passed by the legislature and signed into law by Governor Brown in fall 2017.

Toll revenues will be used to finance a $4.45 billion slate of highway and transit improvements in the toll bridge corridors and their approach routes.

Major projects in the Regional Measure 3 (RM 3) expenditure plan include new BART cars to accommodate growing ridership; extending BART's Silicon Valley service to Santa Clara; extending Caltrain to downtown San Francisco; expanding San Francisco Muni's transit vehicle fleet; more frequent transbay bus service; interchange improvements in Alameda, Contra Costa, and Solano counties; an expanded express lane network; expanded ferry service; a direct freeway connector from northbound U.S. 101 in Marin County to the Richmond-San Rafael Bridge; upgrades to relieve congestion in the Dumbarton Bridge corridor; improving State Route 37; extending the new SMART rail system to Windsor and Healdsburg and many more projects.

Refer to the Regional Measure 3 Expenditure Plan:

POLICY 1: PROCEDURES FOR PROGRAMMING AND ALLOCATIONS

POLICY: The Alameda County Transportation Commission (Alameda CTC) has programming and allocation authority for a variety of transportation fund sources. Alameda CTC shall approve programming and allocations in accordance with the requirements of the individual fund source and with the standard procedures set forth herein.

Programmed funds in the Comprehensive Investment Plan (CIP) represent a commitment of funds to a Project Sponsor. Programmed funds are not available for expenditure unless and until Alameda CTC approves an allocation of the programmed amount. Only after allocation can funds be encumbered through funding agreements between Alameda CTC and the Project Sponsor, or for Alameda CTC-sponsored projects through contracts for costs that Alameda CTC directly incurs.

PURPOSE: Alameda CTC makes programming recommendations for the Alameda County shares of certain local, regional, state, and federal funds. The purpose of this policy is to establish standard definitions and procedures by which Alameda CTC exercises its programming and allocation authority. The programming and allocation procedures for each of the fund sources within the purview of Alameda CTC ("Alameda CTC Administered Funds") are consolidated through the CIP to standardize the programming and allocation process to the extent practical for such fund sources, while maintaining compliance with the requirements for individual fund sources.

GUIDELINES: Programmed funds are adopted into the applicable programming document by the governing board of the agency or commission with statutory authority for the administration of the fund program.

Alameda CTC administers the following local, voter-approved funding programs:

- The 1986 Measure B Program
- The 2000 Measure B Program
- The 2010 Vehicle Registration Fee (VRF) Program
- The 2014 Measure BB Program

The commitments from the local, voter-approved funding programs are established in the expenditure plans included in the ballot measure language for each program. The 1986 Measure B, 2000 Measure B, 2010 VRF, and 2014 Measure BB transportation expenditure plans each include a set of commitments to fund the programs and projects listed in the plan. The strategic plan prepared for each of the individual funding programs confirms the funding commitments, allocated amounts, and the plan for future allocations. The strategic plan also functions to guide programming and allocation

for the individual fund sources to priority transportation investments based on a set of guiding principles.

Alameda CTC also administers the programming and allocation process for the Transportation Fund for Clean Air (TFCA) County Program Manager Fund in compliance with the requirements of the Bay Area Air Quality Management District (Air District), which delegates the programming and allocation administration to Alameda CTC.

Alameda CTC also makes programming and allocation recommendations for other fund sources such as the State Transportation Improvement Program (STIP), Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) Program (through the One Bay Area Grant program), and other funds as they become available to Alameda County that are contingent upon final approval by the respective governing boards of the agencies with programming authority, e.g., the Metropolitan Transportation Commission (MTC) and/or the California Transportation Commission (CTC).

Programmed amounts for a given project represent the amount committed to the project, subject to allocation. An allocated amount represents the amount available for encumbrance through project funding agreements and/or contracts, either directly with Alameda CTC or the funding agency with programming authority. Funds encumbered through project funding agreements and/or contracts are available for reimbursement of eligible project costs. These definitions are expanded with specific procedural considerations below:

- **Commitment Amount:** For the local, voter-approved funding programs administered by Alameda CTC, the expenditure plan contains the funding commitment amount. Commitment amounts for the local, voter-approved funding programs are confirmed in the Alameda CTC Strategic Plan appendix in the CIP.

- **Programmed Amount:** The CIP serves as the programming document for Alameda CTC Administered Funds.

    - Programmed amounts approved in the CIP for the local, voter-approved funding programs are based on the commitment amounts and the requirements included in the expenditure plan for the specific funding program.

    - Programmed amounts approved in the CIP for the TFCA County Program Manager Fund are based on the programming and allocation process administered by Alameda CTC in accordance with Air District requirements.

ACTC_AR4164

- Programmed amounts shown in the CIP for fund sources not directly administered by Alameda CTC may be included for informational purposes to reflect the current programming information available from the agency with the statutory programming authority for the fund source.

- Programmed amounts are typically approved for a specific project phase in a specific fiscal year. Funds programmed in specific fiscal years are required to be allocated by the end of the fiscal year in which the funds are programmed. Changes to programmed amounts require amendments to the CIP.

- **Allocated Amount:** The CIP five-year programming window includes a two-year allocation plan (i.e., the first two years of the five-year window). The CIP Allocation Plan shows allocation amounts Alameda CTC approved for Alameda CTC Administered Funds and anticipated allocations to be approved by other agencies.

  - Allocated amounts shown in the CIP for local, voter-approved funding programs are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action).

  - Allocated amounts shown in the CIP for the TFCA County Program Manager Fund are considered approved by Alameda CTC upon approval of the CIP (if the allocations have not been previously approved by Alameda CTC under separate action, or if the allocated amount shown is dependent on a future programming approval).

Request for Allocation Process

For the fund sources directly administered by Alameda CTC, request for allocation packages may consist of a CIP funding application or a specific request for allocation for a named project in the transportation expenditure plans. The amount of funding available for allocation to a given project, or project phase, is limited by the programmed amount for the project, or project phase, programmed in a fiscal year that is eligible for allocation at the time of the allocation request.

Allocation requests for Alameda CTC Administered Funds should be submitted to Alameda CTC at least sixty (60) days prior to the Alameda CTC meeting at which the Project Sponsor requests the allocation approval, or the meeting at which the next CIP or CIP Update will be approved. The request for an allocation package shall be in a

format provided by Alameda CTC or a format that at minimum includes details about the program or project scope, cost, funding, and schedule detailed by phase. The request package shall reflect total cost and funding amounts based on progress to date at the time of the request.

Request for allocation packages received by Alameda CTC will be considered in the context of the CIP in effect at the time of the request. Alameda CTC reviews allocation requests to confirm items such as financial viability, project delivery readiness, and funding availability to reimburse eligible project costs. If conditions warrant a review of the assumptions used for the most recent overall financial analysis, an updated overall financial analysis may be required to determine whether the requested allocation would have an adverse impact on funding commitments to other projects.

Alameda CTC approves allocations, or modifications to allocations, based on staff recommendations, and allocation requests submitted by Project Sponsors are typically approved through the annual/biennial CIP programming and allocation processes.

Allocated amounts approved by Alameda CTC must be encumbered in funding agreements with Project Sponsors or in contracts for project costs incurred directly by Alameda CTC, in accordance with the CIP's policy for Timely Use of Funds Allocated by the Alameda CTC Commission (Commission).

For funding identified as allocated in the CIP from other regional, state, federal sources not directly administered by Alameda CTC (e.g., STIP, OBAG), Project Sponsors are to follow the administering agency's requirements for requesting an allocation/obligation and entering into a funding agreement.

Allocation Considerations for Partially Funded Projects and Right-of-Way Phases
Funding allocations for phases beyond the environmental phase are considered at increased risk if a Project Sponsor has not identified or secured funding for all phases to complete the project funding plan.

Prior to making an allocation to a project with a known funding shortfall, Alameda CTC will perform risk analytics on the project and requested funding prior to making such allocation recommendation to the Commission. In this risk assessment, Alameda CTC will consider the project's and Project Sponsor's potential to use Alameda CTC funds to leverage and secure prospective funding from federal, state, regional, and local sources outside of Alameda CTC's purview, and the project's viability to be completed in a timely manner.

ACTC_AR4166

Right-of-way allocations shall be limited to projects that have a complete and viable project funding and delivery plan as assessed for firm funding commitments/partners and tangible plan to address identified project deliverability issues.

Right-of-way allocations to projects that contain funding shortfalls, uncertain project funding plans, and/or potential issues in project delivery are considered high risk and will only be considered under very rare circumstances. Such right-of-way allocations must have an agreed upon understanding of how the Project Sponsor shall return the right-of-way allocation to Alameda CTC should the project fail to enter the construction phase and/or reach project completion within an established timeframe.

The agreed upon terms, including methods of repayment in arrears, shall be included with the request for allocation package submitted to Alameda CTC for consideration. If such allocation request is approved, the agreed upon terms shall be included in the subsequent funding agreement between Alameda CTC and Project Sponsor.

Changes to Approved Allocations

Increasing or decreasing an allocation amount requires a written request by the Project Sponsor.

- **Increasing Allocations:** Request for an increase to an allocation is on a case-by-case basis for extraordinary circumstances, and subject to Commission approval. To increase the total amount of an allocation there must be sufficient capacity in the committed amounts for named projects in voter-approved expenditure plans, programming/funding capacity, and reasonable justification for increasing the allocation amount.

- **Decreasing Named Project Allocations:** For projects named in the voter-approved transportation expenditure plans, a reduction to an allocated amount will be credited for future reallocation to the project. Periodically through the CIP, Alameda CTC will deallocate unused funds related to project cost savings, fund rescissions, or inactive/infeasible project delivery.

- **Shifting Allocations Between Phases:** Funds allocated to a project by Alameda CTC may be shifted between the approved allocations, and requests are considered on a case-by-case basis. Requests for shifting allocated funds shall include updated project information that reflects the requested shift and allows for a before-and-after comparison of the project implementation plan. Funding shortfalls in the current or subsequent phases, which result from a requested shift of allocated funds, shall be considered an adverse impact to implementation.

Requests for shifting funds between allocations which do not change the total amount allocated to the project from an individual funding program, e.g., Measure B, Measure BB, or VRF, may be approved by the Executive Director or a designee of the Executive Director if the shift will not adversely impact project implementation. Any requests for shifting funds between project phases that will change the allocation amount from an individual funding program, e.g. Measure B, Measure BB, or VRF, shall require consideration and approval by the Commission.

Effective Date for Reimbursable Costs

The effective date for reimbursable costs is generally based on the start of the fiscal year in which the allocated funds are identified in the CIP. The amounts shown in the first two fiscal years of the CIP for fund sources Alameda CTC allocated shall be considered allocated in the fiscal year shown for the project phase(s) indicated upon approval of the CIP (if not already approved by Alameda CTC through a separate action).

For allocations made through a separate Commission action, the effective date of reimbursable cost shall be the date of the Commission's approval, unless otherwise stated in the approved allocation request.

Funds administered by agencies other than Alameda CTC, such as the CTC, MTC, or the Federal Highway Administration (FHWA), are included in the CIP for informational purposes only and must be approved, allocated/obligated, and encumbered by the agency that administers the particular fund source with the effective date identified for commencing eligible activities and incurring reimbursable costs.

Retroactive Allocations

Generally, reimbursable costs are to be incurred only after the allocation is approved by the Commission and encumbered through a funding agreement or a contract. On a case-by-case basis, Alameda CTC may consider identifying a retroactive allocation date to allow the eligible date to incur reimbursable costs prior to the date the Commission approves the allocation.

Approval of retroactive allocations shall be based on which fund sources were originally identified to reimburse the costs, and to what purpose, if any, the freed-up funding will be committed. There are also certain requirements related to the procurement process and methodology for contracts funded wholly, or in part, by voter-approved funds. Any costs intended for the retroactive allocation for contracts that do not comply with the goal setting requirements set forth in Alameda CTC's Local Business Contract Equity Program (LBCE) must be identified in the request for allocation package and determined eligible for Measure BB funding. If a retroactive allocation of Measure BB funds is approved to cover contract costs in arrears, the reporting requirements set forth in the LBCE Program shall apply to the entire contract from inception.

ACTC_AR4168

POLICY 2: ENVIRONMENTAL APPROVAL AND FULL FUNDING FOR MEASURE B AND MEASURE BB-FUNDED CAPITAL PROJECTS DEADLINE

POLICY: Capital projects funded wholly, or in part, by Measure B and/or Measure BB shall receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements as required by the transportation expenditure plan for each measure.

- For the 2000 Measure B, no projects remain that are subject to this policy, as deadlines occurred in previous years.
- For the 2014 Measure BB, named projects were required to receive all necessary environmental clearance approvals and have a full funding plan for the proposed improvements by December 31, 2022. Project Sponsors may continue to appeal to Alameda CTC for one-year time extensions, subject to Alameda CTC approval.

PURPOSE: To ensure that the projects included in the 2000 Measure B and 2014 Measure BB transportation expenditure plans can be completed in a timely manner, and to provide a process by which Project Sponsors may appeal to Alameda CTC for one-year time extensions. The intent is to require continued due diligence by the Project Sponsor to secure environmental clearance approvals and a full funding plan.

GUIDELINES: The 2000 Measure B Transportation Expenditure Plan (2000 TEP) and the 2014 Measure BB Transportation Expenditure Plan (2014 TEP) both contain provisions for projects which cannot clear the Environmental Approval process or cannot do so in a timely manner. There are no remaining 2000 Measure B capital projects subject to the environmental clearance approval or full funding policy.

The 2014 TEP establishes a deadline for environmental clearance approval and a full funding plan for each capital project that receives Measure BB capital funding. Environmental clearance approval is defined as the issuance of a Categorical Exclusion (CE), a Finding of No Significant Impact (FONSI), or the filing of the Record of Decision (ROD) for National Environmental Policy Act documents and the Notice of Determination or Notice of Exemption for California Environmental Quality Act documents. A full funding plan is defined as a plan containing a reliable cost estimate and sufficient funding identified to cover the estimated costs. The 2014 Measure BB deadline was December 31, 2022; however, the 2014 TEP includes provisions for sponsors to request one-year time extensions to the deadline, subject to Alameda CTC approval.

ACTC_AR4169

POLICY 3: TIMELY USE OF FUNDS POLICIES – ALLOCATIONS AND FUNDING AGREEMENTS

POLICY: Allocations shall be encumbered in a funding agreement between Alameda CTC and the recipient agency incurring the reimbursable costs, or in a contract for costs incurred directly by Alameda CTC, within twelve (12) months from the date the Alameda CTC Commission approves the allocation.

Allocated funds not encumbered by the deadlines established in this policy are subject to rescission and reprogramming at Alameda CTC's discretion.

PURPOSE: To ensure that funding allocated and distributed by Alameda CTC is expended expeditiously to implement the improvements and services for which the allocations and distributions were approved.

GUIDELINES: Alameda CTC's allocation recommendations and approvals are based on a Project Sponsor's request for allocation package/funding application that contain a specific scope, cost, and schedule. This policy requires Project Sponsors to encumber allocated funds through an executed project funding agreement or contract within twelve (12) months of an approved allocation to ensure accountability and consistency with the Project Sponsor's allocation request. Measure BB Named Capital Project allocations are to be encumbered as soon as possible following Commission approval, within six (6) months of the approved allocation, if not earlier.

The project fund agreements between Alameda CTC and the recipient agency outline the agreed upon reimbursable costs, budget, scope, and schedule. Once an agreement is executed, Project Sponsors are expected to begin work on the allocated phase based on the delivery guidelines below, or per the schedule contained in the executed project funding agreement.

Project Phase	Maximum Expenditure Timeline
Planning/Scoping	• Activity must be complete within twenty-four (24) months from the date of allocation.
Preliminary Engineering/ Environmental	• Activity must be complete within twenty-four (24) months from the date of allocation.
PS&E (Final Design)	• Activity must be complete within twenty-four (24) months from the date of allocation.
Construction	• Activity must be complete within thirty-six (36) months from the date of allocation.

Requests for Time Extension

Project Sponsors may request time extensions to funding-related deadlines established by policy, deadlines required at the time of allocation, or expiration dates established in

ACTC_AR4170

funding agreements. Project Sponsors are limited to requesting a single time-extension of up to thirty-six (36) months that requires approval by the Commission.

Such requests for extensions shall be submitted in writing to Alameda CTC at least ninety (90) days prior to the deadline for which an extension is being requested and at least sixty (60) days prior to the regularly scheduled Commission meeting at which the request will be considered for approval.

Time extension request packages submitted to Alameda CTC shall include a detailed explanation of the conditions or circumstances that have changed since the deadline was established, and the corresponding impact to the remainder of the project implementation schedule if the extension is approved. Extensions to delivery deadlines established in funding agreements shall be submitted, reviewed, and approved in accordance with the provisions set forth in the funding agreement. Following approval of the one allowable time extension, any subsequent requests for additional time extensions will be considered by Alameda CTC on a case-by-case basis only for rare and extraordinary circumstances.

Fund Rescission/Reprogramming

Allocated funds not encumbered into a funding agreement by the deadlines established in this policy or used in a manner inconsistent with these guidelines are subject to rescission and reprogramming at Alameda CTC's discretion. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds.

If funding awards are withdrawn, the corresponding projects and allocations may be deprogrammed from the CIP. If allocations are withdrawn (e.g., due to project delays), at Alameda CTC's discretion the funds may be reprogrammed to a future year of the CIP. Project Sponsors who fail to meet the timely use of funds deadlines may be penalized during the next CIP programming and allocation cycle.

POLICY 4: ELIGIBLE COSTS FOR REIMBURSEMENT

POLICY: Program and project costs Alameda CTC reimburses shall be segregated into project phases to correlate with the encumbrance(s) from which reimbursement is requested. Funds shall be encumbered in a funding agreement between Alameda CTC and either the Project Sponsor or, if different from the sponsor, the implementing agency which incurs the reimbursable costs, or in a contract with Alameda CTC for project costs incurred directly by Alameda CTC.

For Alameda CTC implemented projects, eligible staff and other direct costs incurred directly by Alameda CTC shall be considered encumbered when they are included in the

ACTC_AR4171

annual budget adopted by the Commission. Costs submitted for reimbursement shall be limited to activities, materials, and services directly related to the implementation of the scope of the project for which the funds were allocated and subsequently encumbered in a funding agreement. Eligible costs shall be incurred in accordance with the provisions set forth herein or be at risk of being determined ineligible for reimbursement by Alameda CTC.

PURPOSE: To limit the expenditures of Alameda CTC Administered Funds to the reimbursement of eligible project costs and to provide general guidance to implementing agencies which incur the reimbursable costs.

GUIDELINES: Alameda CTC approves reimbursements of eligible project costs based on requests for reimbursements submitted by Project Sponsors or implementing agencies which incur the reimbursable costs. The requirements for the requests for reimbursement are included in the project funding agreements between Alameda CTC and the recipient agency. In general, the request for reimbursements must identify the total costs by phase, be consistent with the agreed upon eligible costs, and segregate Alameda CTC's and the Project Sponsor's costs in accordance with cost sharing arrangement as described in the project funding agreement.

The following describes the eligible costs for specific phases:

Project Phase	Eligible Costs Requirements
Planning/Scoping	• Project Sponsor staff costs, consultant costs, and other direct costs necessary to prepare a well-developed project delivery plan or scoping document. • For projects that require a formal scoping document such as projects on the State Highway System or with state or federal funding, the preparation of the scoping document is eligible for scoping phase funding.
Preliminary Engineering/ Environmental	• Project Sponsor staff costs, consultant costs, and other direct costs necessary to perform preliminary engineering and to secure approval for the appropriate environmental document for the project.
Plan, Specification and Estimate (Final Design/ PS&E)	• Project Sponsor staff costs, consultant costs, and other direct costs necessary to prepare final PS&E and to provide support during the bidding process until the time of contract award. • Services beyond the contract award are considered design services during construction, which are typically included in the Construction Support Phase. The milestone (i.e., advertisement, award, etc.) at which the costs change from being budgeted and tracked in the PS&E Phase to the Construction Support Phase may vary on a case-by-case basis. Regardless of the phase in which the advertised-bid-award costs are

ACTC_AR4172

Project Phase	Eligible Costs Requirements
	budgeted and tracked, they should be clearly segregated from other costs in the same phase.
Right-of-Way Acquisition and Support Phases	• Project Sponsor staff costs, consultant costs, and other direct costs necessary for the acquisition of right-of-way, right-of-way preservation, and hardship acquisitions. • Right-of-way acquisitions initiated prior to environmental clearance approval for the project for which the right-of-way is required, shall not be eligible for reimbursement by Alameda CTC unless specifically authorized in the funding agreement. The cost of eligible right-of-way acquisitions shall be supported by an appraisal prepared by a professional appraiser. The appraisal report shall be provided to Alameda CTC with the allocation request package. • Right-of-way activities related to property not required for the program or project as programmed shall be at the expense of Project Sponsor to the extent such costs can be determined. • If excess right of way is sold, used for purposes other than the program or project as programmed, or otherwise disposed of, a share of any proceeds from the sale of such excess property shall be returned to Alameda CTC based on the prorated percentage of Alameda CTC funding contributed to the property purchase. • If condemnation procedures are required to obtain access to right of way, Alameda CTC will consider the required deposit as an eligible cost and reimburse the Project Sponsor upon request in accordance with the funding agreement. If the amount of reimbursement to the Project Sponsor is higher than the Alameda CTC funding share of the amount of settlement in the final order of condemnation, the Project Sponsor shall pay Alameda CTC the difference between the amount reimbursed and the Alameda CTC funding share of the amount settled plus the Alameda CTC funding share of the interest accrued to the deposit account. • Property acquired for a project using Alameda CTC funding shall be available for project construction within ten (10) years of Alameda CTC reimbursement to the Project Sponsor. If, after ten (10) years, the property has not been utilized for the project as programmed, the Project Sponsor shall reimburse Alameda CTC for its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted at no cost to Alameda CTC, within one year after the expiration of this ten (10) -year period. • If right of way is acquired for a project as programmed and is not utilized for the project as programmed, because the project has been modified or de-programmed, Alameda CTC shall be reimbursed its proportional share of the fair market value of the property, based on the net proceeds from the sale of the property or an appraisal of the property conducted

Project Phase	Eligible Costs Requirements
	at no cost to Alameda CTC, within one year from the time the project is modified or de-programmed.
Construction Capital and Support Phases	• Project Sponsor staff costs, consultant costs, contractor costs, and other direct costs necessary for all construction expenditures on the project that are part of the scope of work agreed to by Alameda CTC, including the Project Sponsor's management oversight expenses associated with the construction of the project. • If the Project Sponsor includes additional work beyond the scope of the project as programmed by Alameda CTC, such work and all related costs shall be segregated from the project costs funded by Alameda CTC. Costs not associated with the scope of the project as programmed by Alameda CTC shall be at the expense of the Project Sponsor and shall not count as a match for Alameda CTC funding for the project as programmed by Alameda CTC. • Items of work within the scope of the project as programmed, but utilizing more expensive than standard treatment, such as specialized lighting standards and signs, more elaborate landscaping, specialized treatment on the face of soundwalls/retaining walls, and specialized sidewalk/hardscape treatments, will be eligible for reimbursement only if they are agreed to in advance and no additional Alameda CTC funding is required.
Rolling Stock and Equipment Acquisition Phases	• Rolling stock purchased by the Project Sponsor and reimbursed by Alameda CTC shall remain in the Project Sponsor fleet for a minimum of five (5) years. If the rolling stock is removed from the fleet prior to the required five (5) years, the Project Sponsor shall notify Alameda CTC. If the rolling stock is sold and the receipts of the sale are not used to purchase replacement rolling stock, the proceeds from the sale shall be returned to Alameda CTC. • The Project Sponsor shall prepare and submit to Alameda CTC for approval, prior to the beginning of service, an operations schedule indicating the frequency, vehicle type, and operating hours of the rolling stock purchased by the Project Sponsor for the program or project as programmed. The rolling stock used in this service will be the same type as purchased with Alameda CTC funding but may not be the exact vehicles due to the need to rotate vehicles in the fleet. The approved service level shall be maintained, at a minimum, for five (5) years. If the minimum service level is not maintained, the Project Sponsor shall reimburse Alameda CTC for its share of the reduced service based on vehicle needs for the reduced service and the salvage value of the rolling stock purchased by the Project Sponsor and reimbursed by Alameda CTC. • Specialized equipment required for the project must be identified in the project funding agreement to be eligible for reimbursement with Alameda CTC Administered Funds.

ACTC_AR4174

In addition to the individual phase requirements described above, the following general provisions apply to cost eligibility and exclusions for any phase:

Cost Type	Eligible Costs Requirements
Contract Costs	• Costs incurred via contracts between the implementing agency and consultants, contractors, suppliers or other vendors are eligible for reimbursement from the local, voter-approved funding programs administered by Alameda CTC if the contract is established in accordance with Alameda CTC's Local Business Contract Equity (LBCE) Program. The LBCE Program applies to contracts funded wholly or in part with local, voter-approved funding programs administered by Alameda CTC. While not every contract funded in part by local, voter-approved funding programs administered by Alameda CTC will require a contract goal to be set during the procurement process, every contract is required to comply with the reporting requirements of the LBCE program.
Project Sponsor Staff Costs	• Costs for Project Sponsor staff working on the project (direct implementation costs) will be eligible for reimbursement by Alameda CTC Administered Funds. Staff hours must be segregated on timesheets, or otherwise documented through an alternative method, approved by Alameda CTC. • Project Sponsor overhead and general administrative costs not directly related to project implementation are ineligible for reimbursement by Alameda CTC, unless otherwise approved by Alameda CTC. • Hourly wages and fringe benefits for Project Sponsor staff will be reimbursed based on the actual wage rate plus the audited fringe benefit rate supplied by the Project Sponsor. Alameda CTC will review and approve a fringe benefit rate based on documentation provided by the Project Sponsor. Approved fringe benefit rates will be set forth in the project funding agreement, but in no case will fringe benefits of more than 70 percent (70%) of the hourly wage be approved. • For Measure B, Measure BB, and Vehicle Registration Fee (VRF) Direct Local Distribution (DLD) recipients, Project Sponsor staff costs related to project administration and/or management of professional services and construction contracts are not eligible for reimbursement with allocated funds per the Local Cooperation Policy, unless specifically allowed in a project funding agreement.
Alameda CTC Project Support Requested by Project Sponsor	• If requested by the Project Sponsor, Alameda CTC will consider providing support staff and/or consultant support for a project. Costs for these services will be considered eligible costs and be reimbursed to Alameda CTC from project funds or be deducted directly by Alameda CTC from Alameda CTC funding allocated for the project.
Bonding Costs	• If Alameda CTC determines it is in the best interest of a funding program to sell bonds or otherwise incur financing costs to deliver the projects included in the funding program, the cost of bonding and financing, including interest payments, shall be considered a program-wide cost and shall be identified in the CIP as the first priority repayment.

Cost Type	Eligible Costs Requirements
	• If a Project Sponsor wishes to independently bond or use other approved borrowing programs, Alameda CTC funding is eligible to reimburse expenses incurred by the Project Sponsor for staff time, consultant costs, principal payments, and the associated cost required to finance the project.
Fund Exchanges	• Alameda CTC may consider and approve fund exchanges on a case-by-case basis. Any exchange payments of Alameda CTC funding must be identified in the project funding agreement to be eligible for reimbursement.
Miscellaneous Costs	• The costs of fees from other agencies, including permit fees or reimbursement for review, or oversight costs needed for the project, are eligible project costs with the exception of the cost of permits, fees, or Project Sponsor oversight. Reimbursable eligible costs must be consistent with the Local Cooperation Policy. • Direct costs, such as reproduction, shipping, mileage, and long-distance calls, will be considered for reimbursement if they can be independently documented as directly relating to the implementation of the program or project for which the funds were allocated. Air travel and overnight stays are not eligible unless prior approval is obtained from Alameda CTC.
General Exclusions	• Costs not directly related to the implementation of the project as programmed and/or inconsistent with an approved environmental document, as applicable, will not be eligible for reimbursement with Alameda CTC Administered Funds.
Ongoing Costs (Maintenance/ Operations)	• Ongoing annual expenses incurred for project maintenance shall be borne by the Project Sponsor unless specifically identified in the funding agreement.

POLICY 5: FUNDING FOR PROGRAM- AND PROJECT-RELATED COSTS INCURRED DIRECTLY BY ALAMEDA CTC

POLICY: Costs Alameda CTC incurs directly related to the management and implementation of programs and projects shall be eligible for the funding made available for those programs and projects. The eligibility of these costs shall be limited to any restrictions related to such costs for any individual fund source. General fund administration costs related to congestion management activities are allocated to congestion management projects in compliance with Title 2 U.S. Code of Federal Regulations Part 200, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance).

PURPOSE: To establish guidelines by which costs incurred directly by Alameda CTC related to the management and implementation of programs and projects are segregated to identify fund sources for such costs.

ACTC_AR4176

GUIDELINES: The following provisions are intended to support the purpose of this policy:

A. **Direct costs related to activities directly related to capital projects, programs, planning, and grants.** These direct costs shall be posted to appropriate funds or activities. Salaries and benefits shall be supported by timecards, and direct consulting and other costs shall be supported by approved invoices. Where specific agreements are in place, direct cost along with indirect cost allocations shall be posted to specific projects or grants (see below). Where such agreements do not exist, the direct costs shall be posted to a control account within the capital projects or program funds.

B. **Indirect costs related to congestion management activities that don't directly relate to a specific capital or planning project, or program.** Such costs shall be accumulated under the General Fund and supported by time cards, invoices, and other appropriate documents. The indirect cost ratio for billing purposes will be based on General Fund congestion management-related allowable costs. The cost allocation methodology will comply with Uniform Guidance.

C. **Cost allocation plan.** Alameda CTC shall maintain a cost allocation plan as required by Uniform Guidance, certified by the Director of Finance, accepted and/or approved by Caltrans as the cognizant agency, and available to grant funding agencies.

D. **Billing system.** Alameda CTC shall implement a billing system, supported by acceptable detail for direct and indirect costs. However, no allowance shall be made for profit margin.

E. **Salary and administration limitations.** All direct costs and billable indirect costs shall be excluded from the salary and administration limitations set forth in the 2000 Measure B TEP and in the 2014 Measure BB TEP. Alameda CTC shall use general fund administrative costs to compute the administrative cost ratios.

POLICY 6: LOCAL BUSINESS CONTRACT EQUITY PROGRAM

POLICY: Alameda CTC has established this Local Business Contract Equity (LBCE) Program to create economic growth and jobs within Alameda County by requiring local contracting that supports residents and businesses in Alameda County. The LBCE Program helps to identify and engage the participation of Local Business Enterprise (LBE), Small Local Business Enterprise (SLBE), and Very Small Local Business Enterprise (VSLBE) firms located in Alameda County on applicable contracts.

ACTC_AR4177

PURPOSE: To continue support for the hiring of local contractors, vendors, suppliers, and service providers on contracts funded wholly, or in part, by funding approved by Alameda County voters. The LBCE Program contributes to the overall economic vitality of the County by:

1. Encouraging businesses to locate and remain in Alameda County.
2. Providing employment opportunities for residents of Alameda County.
3. Generating economic activity and stimulating the local economy.

GUIDELINES: This program applies to contracts funded solely by any combination of Measure B, Measure BB, VRF, and/or local funds. Contracts that include state and federal funds must adhere to state and federal requirements. Full policy and program requirements are detailed here: https://www.alamedactc.org/app_pages/view/4543

Funds may be subject to rescission or ineligible for reimbursement if the Project Sponsor is determined to be out-of-compliance.

POLICY 7: ALAMEDA CTC PROJECT AND PROGRAMS MANAGEMENT POLICIES

POLICY: Alameda CTC shall administer and manage project delivery efforts and program implementation through these policies and procedures.

Direct Local Distribution Programs Management Policy: As the administering agency for the Measure BB DLD program, Alameda CTC is responsible for monitoring and compliance administration of the DLD recipients. Alameda CTC reserves up to one percent (1%) of Measure BB DLD funds to provide oversight to the DLD program.

Capital Projects and Programs Management Policy: As the implementing agency for several countywide significant Measure BB related projects identified in the Capital Project Delivery Plan (CPDP), Alameda CTC has assumed the lead in project management and project delivery using its own staff and consultant resources. Alameda CTC reserves up to five percent (5%) of Measure BB discretionary funds to effectively deliver Measure BB transportation projects and to oversee projects being implemented by other agencies. These funds support costs associated with establishing policies, procedures, ongoing project management oversight, preliminary scoping and planning, and other core functions related to the Measure BB capital program delivery not directly related to Measure BB capital commitments for individual projects.

Project and Program-wide Contingency Reserve: Furthermore, the CPDP recommends programming Measure BB funds for specific project phases, including set-asides for program-wide management, oversight, and monitoring, as well as a program-wide risk

ACTC_AR4178

contingency. Each project will include budget allowances that account for risk and unknowns. Where risk issues are common to many projects, Alameda CTC may elect to place those budget amounts into a program-wide contingency reserve. This is referred to herein as the Project and Program-wide Contingency Reserve.

PURPOSE: Alameda CTC is responsible for administering the voter-approved transportation programs, Congestion Management Agency (CMA) functions, and emerging countywide transportation needs and initiatives. Alameda CTC requires these projects and program management policies to provide continuing support and resources for these functions; to strengthen and enhance the agency's position within the changing framework of regional, state, and federal transportation agencies; and to increase responsiveness to new regional and state climate change mandates.

GUIDELINES: Alameda CTC's annual requirements related to project and program implementation, oversight, and delivery management costs will be assessed through Alameda CTC's budgetary process.

POLICY 8: PROGRAMMING POLICIES FOR OUTREACH AND TRANSPARENCY

POLICY: The project selection and prioritization process employed for the development of the CIP, which begins with the Countywide Transportation Plan (CTP) update process, shall satisfy the requirements for all the fund sources included in the CIP, including federal, state, regional, and local sources. The CTP update process shall include significant efforts to satisfy requirements related to notification, outreach, and transparency typically satisfied at the time of individual, fund-specific calls for projects.

PURPOSE: To ensure that the notification, outreach, and transparency measures that Alameda CTC employs to identify potential uses for transportation funding from the full range of sources available in Alameda County satisfy all programming policies from other agencies pertaining to the specific fund sources being programmed by Alameda CTC. By satisfying the most stringent of requirements, Alameda CTC will be afforded flexibility at the time of programming to match the most appropriate, available fund source to the priorities at the time of programming.

GUIDELINES: Project Sponsors are required to support this policy through outreach programs and notifications which reach all applicable geographic areas, communities, and target populations during solicitations for proposed uses of Alameda-CTC Administered Funds available for transportation programs and projects within Alameda County. The outreach must engage disadvantaged communities, including Metropolitan Transportation Commission-defined Equity Priority Communities and other underserved populations.

ACTC_AR4179

POLICY 9: LOCAL COOPERATION POLICY

POLICY: Project Sponsors receiving DLD funds are not eligible to receive a reimbursement of staff time costs through allocations of Alameda CTC Administered Funds for oversight activities not directly related to project implementation.

Local jurisdictions shall work in full cooperation with the implementing agency to assist in project implementation and delivery, where appropriate and as needed. This includes providing support, coordination, monitoring, technical assistance, etc. A local jurisdiction's costs associated with these activities to further a project implemented by Alameda CTC, a local jurisdiction (as the Project Sponsor), or another implementing agency within a jurisdiction's locality shall be funded through the local jurisdiction's eligible local fund sources such as Measure B, Measure BB, and VRF DLD funds in lieu of a local jurisdiction billing these costs directly to the project or against its funding allocation.

PURPOSE: To ensure jurisdictions directly benefiting from the expected outcomes of projects in their locality, implemented by Alameda CTC or other implementing agencies, are active funding partners to further the delivery of such improvement projects, and to ensure DLD recipients are using DLD funds predominately on contracts, services, and materials, rather than for contract administration.

GUIDELINES: Local agency-incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further project delivery by another implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. Fees associated with permitting, plan review, and other general costs associated with the project shall be supported by the local jurisdiction in which the project is implemented, where feasible and appropriate. These costs shall not be included in the costs eligible for reimbursement by the allocated discretionary Alameda CTC Administered Funds, unless they are specifically identified as eligible in the funding agreement.

POLICY 10: SMALL CITIES PROGRAM POLICY

POLICY: Cities within Alameda County with a population of less than 25,000 shall be considered for certain exceptions from Alameda CTC's local match requirements and/or Local Cooperation Policy requirements, and local projects that have demonstrated multi-jurisdictional transportation significance shall receive consideration for delivery support from Alameda CTC, where practical and feasible.

PURPOSE: To assist smaller cities in Alameda County in their project delivery efforts through relieving matching requirements, exploring financial strategies, and providing

ACTC_AR4180

project delivery/implementation support, where feasible, since small cities in Alameda County may not be financially equipped or resourced to meet certain project delivery needs and funding matching requirements.

Small cities receive limited Measure B, Measure BB, and VRF DLDs in comparison to larger cities and often have difficulties finding the financial resources needed to satisfy minimum matching requirements, especially for larger transportation projects.

GUIDELINES: To qualify as a small city under this policy, a city must have a population of less than 25,000 as reflected in the most currently available California Department of Finance's population estimate.

As such, Alameda CTC may elect to waive matching requirements and/or Local Cooperation Policy requirements based on a small city's request during the programming and allocation processes, or project coordination processes. Additionally, Alameda CTC will support facilitating federal-local funding exchanges, whenever possible, to alleviate certain funding requirements required by external sources.

POLICY 11: MATCHING AND LEVERAGING POLICY

POLICY: For projects that have successfully secured other non-Alameda CTC discretionary funding, Alameda CTC shall consider fulfilling a portion of the minimum match required by external funding for projects and programs.

PURPOSE: To maximize the leveraging capacity of Alameda CTC Administered Funds such as Measure B, Measure BB, VRF Program, and TFCA Program funds.

GUIDELINES: Through Alameda CTC's programming and allocation processes, Project Sponsors must document the following:

1. Identify a project delivery and funding plan that describes the project scope, costs, and schedule.
2. Document the approved programming of other, non-Alameda CTC discretionary funds to a project.
3. Cite the minimum matching amount required by the secured non-Alameda CTC funding source.
4. Identify the amount of matching funds requested from Alameda CTC. Matching funds will not address any project cost increases.
5. Provide a cost-sharing proposal between all prospective funding partners.

ACTC_AR4181

Alameda CTC may consider recommending programming and allocation to fulfill either a portion or the entire amount requested, based on available fund capacity, project delivery strategy, funding timelines, and leveraging significance.

POLICY 12: DEBT ISSUANCE POLICY

POLICY: Alameda CTC's adopted debt policy governs the issuance and management of all debt funded through capital markets, direct bank loans, and federal lending programs, including the selection and management of related financial and advisory services and products.

The debt policy adopted by the Commission September 2021 can be reviewed here: https://www.alamedactc.org/wp-content/uploads/2021/11/AlamedaCTC_Debt_Policy_2021.pdf

PURPOSE: To establish guidelines for the issuance and management of Alameda CTC debt. The policy also confirms the commitment of the Commission, management, staff, and other decision makers to adhere to sound financial management practices.

The purpose of debt financing falls into three categories:

1. To finance new capital infrastructure.
2. To refinance existing bonds to reduce financing costs and/or risk.
3. To reimburse an agency for eligible capital expenditures made within the last eighteen (18) months.

GUIDELINES: Priorities of the debt policy are as follows:

- Effectively manage and mitigate financial risk.
- Maintain strong credit ratings and good investor relations.
- Achieve the lowest cost of capital.
- Preserve future program flexibility.
- Maintain ready and cost-effective access to the capital markets.

Responsibility for implementation of the debt policy and day-to-day responsibility and authority for structuring, implementing, and managing Alameda CTC's debt and finance program, resides with the Executive Director and Deputy Executive Director of Finance and Administration and requires the Commission to specifically authorize each debt financing.

Alameda CTC's CIP is used in combination with Alameda CTC's debt policy to ensure proper allocation and financing of Alameda CTC sponsored projects. This CIP sets priorities and strategies for allocating Alameda CTC Administered Funds under its guiding principles, while the debt policy provides policy direction and limitations for proposed financings. Debt issuances for capital projects are considered and included in

the CIP and presented to the Commission for review and approval as part of the CIP planning process.

The philosophy of Alameda CTC is to fund all projects in the transportation expenditure plans on a pay-as-you-go basis for as long as possible. This strategy minimizes borrowing costs and maximizes tax dollars for projects. The agency considers the issuance of debt when capital program cash flow demand exceeds projected annual revenue capacity over a specified time. The agency's policy is to issue bonds for broad-based program needs and on projects for which Alameda CTC is the Project Sponsor. This is consistent with both the economic and program management objectives of the agency.

As borrowing needs are identified, Alameda CTC evaluates the nature of the capital investment to determine if either long- or short-term debt is the appropriate financing mechanism to meet the funding need. Standards for the appropriate use of debt financing include:

A. **Long-Term Capital Projects:** Debt should be used to finance capital projects on a programmatic basis where it is cost effective and fiscally prudent. The debt repayment period should not exceed 120 percent (120%) of the useful life of the project being financed or the term of the pledged sales tax measure. The ability or need to expedite or maintain the programmed schedule of approved capital projects is a factor in the decision to issue debt.

B. **Debt Financing Mechanism:** Alameda CTC evaluates the use of financial alternatives available including, but not limited to, long-term debt, short-term debt, commercial paper, direct bank loans, federal lending programs, lines of credit, and inter-fund borrowing. Alameda CTC utilizes the most cost-effective financing alternative consistent with limiting Alameda CTC's risk exposure.

C. **Credit Quality:** All Alameda CTC debt management activities for new debt issuances are conducted in a manner conducive to receiving the highest credit ratings possible.

The market for municipal finance is well developed and provides numerous products or types of debt including long-term, short-term, and variable-rate debt with various terms and structures and compliance requirements that Alameda CTC evaluates on a case-by-case basis.

STRATEGIC PLAN

1. Purpose

Alameda County maintains a highly diverse transportation network complete with highway infrastructure, express lanes, local roadways, freight and port facilities, rail and bus transit, and bicycle and pedestrian improvements. Its wide range of transportation infrastructure may differ dramatically from one area of the county to the other as each respective community has unique transportation needs. Alameda CTC's goal is to leverage local funds under its purview to help secure additional competitive local, regional, state, and federal transportation funding dollars to fund a balanced set of countywide transportation projects to maintain a well-connected and efficient system for the whole county.

The Alameda County Transportation Commission (Alameda CTC) administers voter-approved sales tax programs (2000 Measure B and 2014 Measure BB), and the Vehicle Registration Fee (VRF) program (2010 Measure F) that provide critical funding for delivering transportation improvements within the county. The most significant source of funding under Alameda CTC's purview ("Alameda CTC Administered Funds") is the Measure BB sales tax revenue generated through the voter-approved 2014 Transportation Expenditure Plan (2014 TEP) in November 2014. The duration of the 2014 TEP is thirty (30) years, from April 1, 2015 to March 31, 2045. The 2014 TEP is projected to generate approximately $7.8 billion in revenues for transportation investments ranging from bus/ferry/commuter rail services and operations, streets and highways improvements, student transit passes, community development initiatives, technology and innovation programs, bicycle/pedestrian enhancements, and transportation programs for seniors and people with disabilities.

Although the 2014 TEP is anticipated to generate a significant source of funding for Alameda County, the transportation funding need far outweighs the expected revenue generation required to complete the project and program delivery of the 2014 TEP in its entirety. Over 50 percent (approximately $4.1 billion) of the revenues generated are annually returned to local jurisdictions as Direct Local Distributions for local agencies to use at their own discretion. The remaining $3.7 billion is split among "Named" capital projects ($1.2 billion) and discretionary programs ($2.3 billion). The 2014 TEP recognizes investments within specific categories and types, and the Measure BB total revenue will not be able to fulfill the total funding needs. It is imperative that the Commission strategize investments to leverage external funding to fulfill the capital program needs.

The aim of the Strategic Plan is to simultaneously:

ACTC_AR4189

1. Prioritize Project and Program Investments
   Identify project investment strategies using Alameda CTC Administered Funds to get projects in a state of readiness to compete for available external funds as they presumably become available over the life of the strategic plan.

2. Maximize Measure BB Investments/Leveraging Strategy
   Identify an investment strategy to ensure that Measure BB is used to expediate the delivery of projects while also serving as the basis to attract external competitive funding to Alameda County, such as Regional Measure 3, Senate Bill 1 programs, and U.S. Department of Transportation competitive programs.

3. Guide Project Delivery Strategy
   Identify project delivery strategies for an Alameda County portfolio of project investments that depict which projects can be delivered in whole, or in part, by the Measure BB sales tax program, other Alameda CTC-Administered Funds, or prospective external competitive funding programs. It also identifies the funding challenges leading up to full project implementation and the potential risks of early project development investments toward projects with incomplete funding.

The Strategic Plan addresses near-term financial implementation of countywide projects, including funding constraints, priority projects, and potential strategies. The strategies attempt to leverage existing local Alameda CTC administered fund sources against various outside funding programs anticipated in the next decade that aim to address any shortfall.

For Alameda CTC-implemented projects, Alameda CTC intends to pursue competitive funds from Senate Bill 1 Programs, Regional Measure 3, State Transportation Improvement Program (STIP), federal programs, and by encouraging local cooperation and funding partnerships with jurisdictions where a project resides or by whom might receive benefit. Local jurisdictions are encouraged to apply for these discretionary opportunities to maximize Alameda CTC funds to the fullest extent.

2. Guiding Principles

The Strategic Plan Guiding Principles identified below support decision making to generate a portfolio of quality candidate projects for Alameda CTC Administered Funds and a prospective for external funds available to Alameda County jurisdictions.

These guiding principles are to:

1. Achieve the Alameda CTC's mission and vision and goals.

   In September 2019, Alameda CTC approved the vision and goals for the 2020 Countywide Transportation Plan (CTP).

   Vision: Alameda County residents, businesses and visitors will be served by a premier transportation system that supports a vibrant and livable Alameda County through a connected and integrated multimodal transportation system promoting sustainability, access, transit operations, public health and economic opportunities.

ACTC_AR4190

To complete this vision, Alameda CTC prioritizes projects that achieve these aspiring goals for Alameda County's transportation system:

- Accessible, Affordable and Equitable
- Safe, Healthy and Sustainable
- High Quality and Modern Infrastructure, and
- Economic Vitality

2. Identify Alameda CTC sponsored and implemented projects based on project delivery strategies, transportation benefits, resource capabilities, and funding strategies that maximize leveraging Alameda CTC Administered Funds.

3. Prioritize Alameda CTC sponsored and implemented projects for available local, regional, state and federal funds that may be available to Alameda County based on Alameda CTC implementing multi-jurisdictional, resource intensive, county significant, and/or regional significant projects.

4. Prioritize 2014 TEP named capital projects by providing an investment and delivery strategy for Project Sponsors that promotes project development through upcoming prospective funding opportunities.

5. Establish a systematic programming and allocation strategy for Alameda CTC Administered Funds to promote project delivery and project readiness. This includes an assessment of prospective local, regional, state, and federal fund sources anticipated to be made available to Alameda County.

6. Ensure the investment strategy remains flexible to provide capacity to respond to emerging and unanticipated needs in terms of both evolving project initiation and development needs, as well as changes in funding opportunities, amounts, and programs that may require flexibility in adjusting the overall funding strategy of the Strategic Plan.

7. Provide an informational tool for agency's project management, project delivery, resource management, and financing strategies.

8. Adhere to the Alameda CTC's budgeting and financing policies including:
    a. Use a pay-as-you-go financing strategy until an immediate need to issue debt for project(s) is required.
    b. Debt shall not be utilized for operating expenses.
    c. Maintain an adequate level of reserves and support strong bond ratings.

9. Create synchronicities between Alameda CTC's CTP, TEPs, modal plans, CIP, local plans, and other delivery strategies plans, where feasible.

10. Optimize leveraging of external local, regional, state, and federal funding sources available through opportunities such as Project Sponsor local funds, Senate Bill 1, State Transportation Improvement Program funds, Regional Measures, Federal Programs.

3. Measure B and Measure BB Commitments

The following attachments reflect current 1986 Measure B, 2000 Measure B and 2014 Measure BB commitments and allocations. These investments have yielded significant leveraging of external fund sources such as the Senate Bill 1, Regional Measure 3, and STIP funds.

ACTC_AR4192

Alameda CTC 1986 Measure B Capital Program
Strategic Plan - Project Commitment and Allocation Summary
Remaining Active Capital Projects

May 2025

ACTA No.	ACTA No. Title	Total 1986 Measure B Commitment ($ x 1,000)	Total Amount Allocated To Date ($ x 1,000)	Remaining Programmed Balance (Un-Allocated) ($ x 1,000)
MB226	Quarry Lakes Parkway Project (Note 1)	$ 69,801	$ 26,796	$ 43,005
MB240	Central Alameda County Freeway System Operational Analysis	$ 5,000	$ 5,000	$ -
MB241	Castro Valley Local Area Traffic Circulation Improvement	$ 5,000	$ 5,000	$ -
MBVar	Program-Wide and Project Closeout Costs (Note 2)	$ 5,750	$ 5,750	$ -
	Totals	**$ 85,551**	**$ 42,546**	**$ 43,005**

Notes:

1. The City of Union City is the project sponsor and implementing agency for the Quarry Lakes Parkway Project (PN 1177001). The remaining 1986 Measure B commitment for MB226 for the Alameda CTC-sponsored I-880 to Mission Blvd East-West Connector Project was transferred to the Quarry Lakes Parkway Project by the Commission in March 2018. The first allocations of 1986 Measure B funding for the Quarry Lakes Parkway Project were approved by the Commission in November 2020. The Total 1986 Measure B Commitment for the Quarry Lakes Parkway Project was adjusted by the Commission in November 2024.
2. The Program-Wide and Project Closeout Costs (MBVar) commitment is programmed and allocated for program-wide and project closeout activities related to multiple projects and the capital program overall such as post-project obligations, financial closeout, right of way transfers, and other activities requiring post-project coordination for closeout.

FUNDING DISTRIBUTION OVERVIEW

The Alameda County Transportation Commission (Alameda CTC) is responsible for programming funding from federal, state, regional, and local fund sources across Alameda County to transportation projects and programs. Alameda CTC's Comprehensive Investment Plan (CIP) programs federal, state, regional, and local fund sources in consideration of addressing critical transportation needs, project readiness, countywide funding equity, modal equity, and leveraging opportunities.

The pursuit of equitable funding distribution across Alameda County is a vital objective in the CIP to ensure transportation dollars are programmed to the diverse transportation needs in the county.

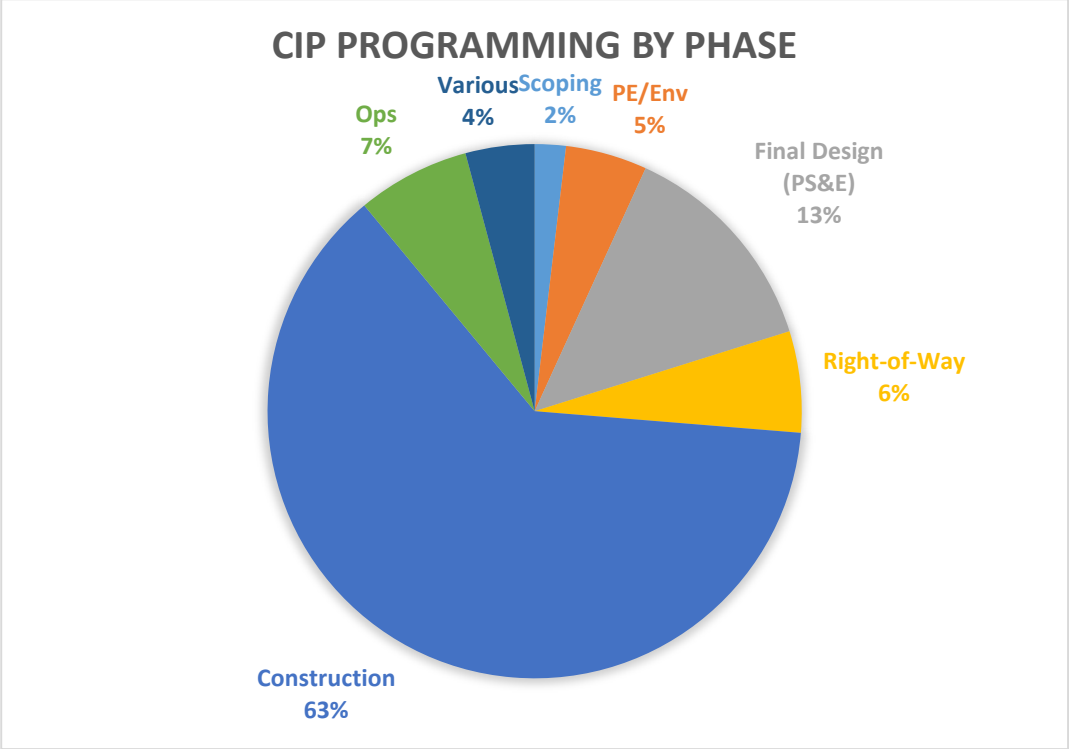
Alameda CTC's programming is guided by the CIP programming principles and project selection guidelines during each CIP programming cycle. As such, the funding distribution derived in the CIP is subject to the Commission's priority of investments during a programming event, the availability and eligible uses of fund sources, and the projects and programs proposed by Project Sponsors. In general, the CIP prioritizes funding for projects and programs that are ready for implementation with secured funding plans and demonstrated readiness within the first few years of a given CIP five-year horizon.

Since 2015, the CIP has programmed over $1.88 billion in transportation dollars across all Alameda County jurisdictions. This appendix includes a summary of the CIP's programming investments by:

1. Project Phase
2. Project Type/Mode
3. Planning Area

1. Programming by Project Phase

The CIP fundamental programming principles include an investment strategy to target available funding resources for a diverse portfolio of projects and programs in various stages of project development, implementation, and construction.



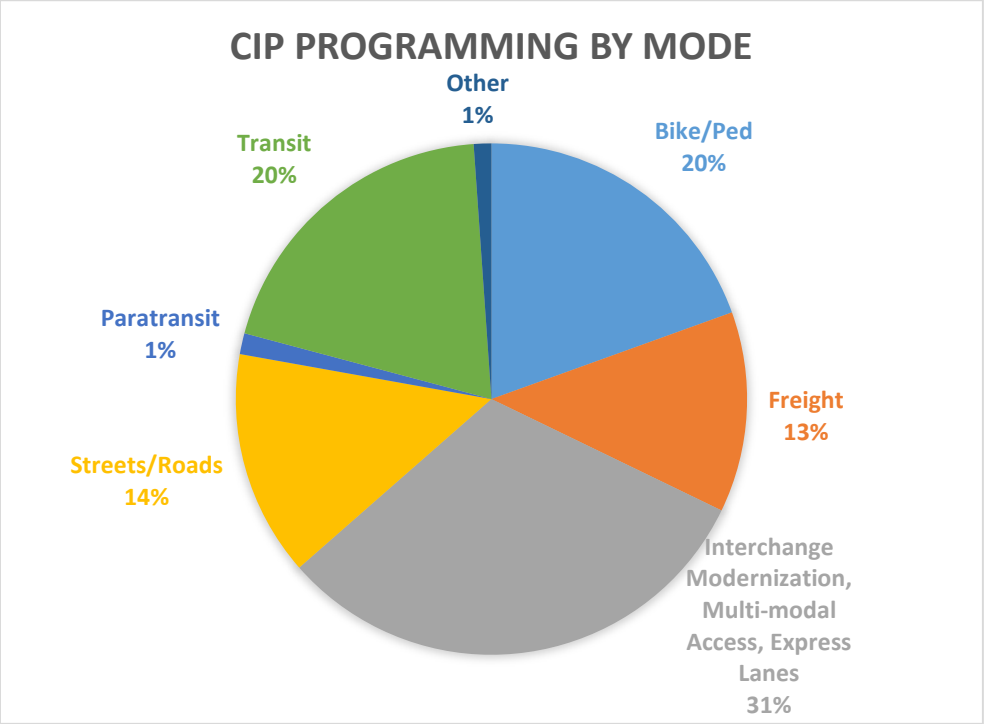
The goal is to strike a balance between investments in project development and construction capital phases that work simultaneously to:

- Establish a pipeline of projects moving toward the construction phase.
- Implement projects ready for construction.
- Develop transportation projects to a point of project readiness so that Project Sponsors may apply for and potentially secure competitive federal, state and regional funding sources as they become available.

Alameda CTC provides local cities, the county, and transit with Measure B, Measure BB, and VRF formula Direct Local Distribution funds that assist these agencies in initiating and developing their projects and programs for future inclusion in the CIP. These Direct Local Distribution funds are not part of the CIP funding distribution analysis but are a significant source of funding for all jurisdictions.

ACTC_AR4203

The current CIP Programming by Phase includes a range of funding investments progressively increasing in amount from the scoping, preliminary engineering, design, to the construction phases. The majority of CIP programming to date is committed to the construction phase.



2. Programming by Project Type/Mode

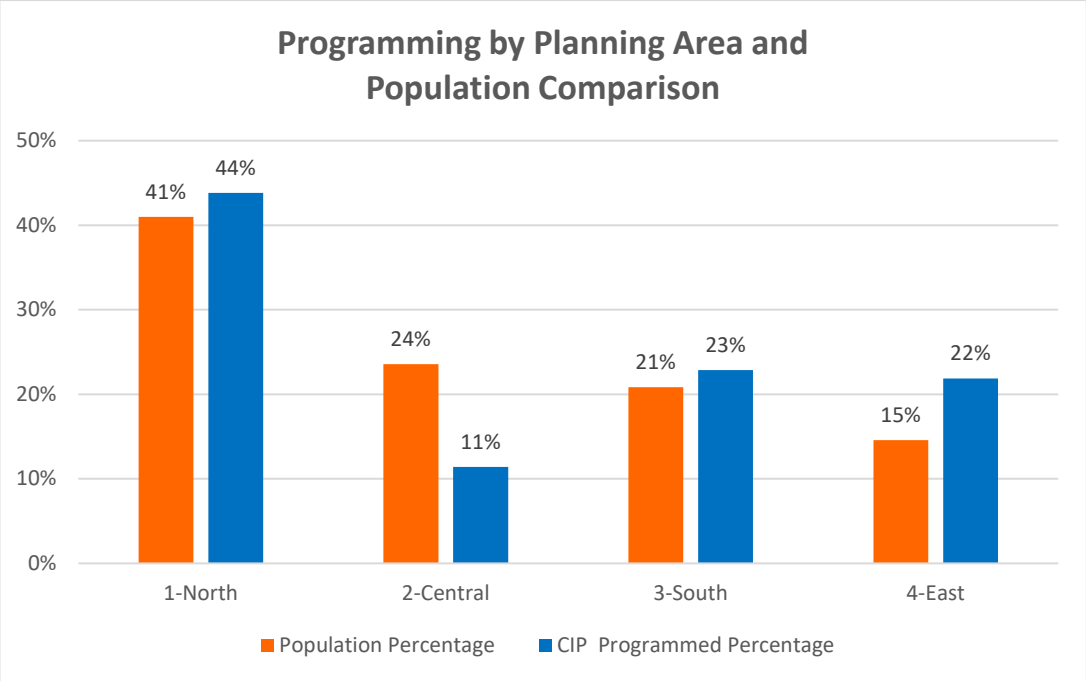
Alameda County's transportation system is a diverse network of highway infrastructure, bicycle/pedestrian routes, local streets and roads, and transit routes that are each connected to provide the community with a complete multimodal network of transportation travel options.

The CIP strives to make investments in all modes of transportation to build and maintain Alameda County's transportation infrastructure and program operations. Alameda CTC investments are limited by use of fund eligibilities of certain funding sources, e.g., Measure B, Measure BB, and VRF bicycle/pedestrian funds can only be used toward bicycle/pedestrian-related improvements.

However, due to the wide variety of fund sources programmed through the CIP, the CIP support a field of projects providing improvements to bicycle/pedestrian networks, local streets and roads, highway infrastructure, paratransit programs, transit, freight, and community developments.

3. Programming by Planning Area

Alameda CTC considers funding equity across the jurisdictions and planning areas during a given CIP programming cycle and over multiple cycles. This requires examining types of projects proposed to the CIP, project readiness, and eligibilities of the fund sources available at the time of programming to those projects and programs. Alameda CTC uses a traditional population share-based methodology where the percentage share of population by planning area is used as a standard point of reference for determining the equitable percentage share of funding . Alameda CTC defines planning areas as four main geographic areas (north, central, south, east) as depicted in the table below.



Planning Area	Jurisdictions
Planning Area 1 **North Area**	• Alameda • Albany • Berkeley • Emeryville • Oakland • Piedmont
Planning Area 2 **Central Area**	• Hayward • San Leandro • Unincorporated areas of Castro Valley and San Lorenzo
Planning Area 3 **South Area**	• Fremont • Newark • Union City
Planning Area 4 **East Area**	• Dublin • Livermore • Pleasanton, and all unincorporated lands in that area

Within these planning areas, the population distribution is focused in the more urbanized cities such as those in the North planning area.

Planning Area	Population	Percent
1 - North	672,912	41%
2 - Central	387,092	24%
3 - South	342,317	21%
4 - East	239,548	15%
Total	1,641,869	100%

The CIP programs available transportation dollars to the Project Sponsors in consideration of the population share. However, it should be noted as described within the CIP's programming principles and project selection guidelines, population share is not the only factor in consideration. Other factors such as programming priorities, funding eligibilities, project readiness, and project types at the time of CIP programming are factors that affect level of investment by planning area.

To date, the CIP's programming investments by planning area, is +/- 12 percent relative to the population share of a planning area.

Alameda CTC's future CIP programming will continue to target and consider the balance of funding distribution across phases, modes, and planning areas.
