Alameda County 20-Year Transportation Expenditure Plan Executive Summary

The Plan provides a balance between mass transit and road improvements.

The Alameda County 20-Year Transportation Expenditure Plan will guide the expenditure of more than $1.4 billion in county transportation funds generated through the continuation of Alameda County's half-cent transportation sales tax over the next 20 years, if approved by voters in the November 2000 election. Alameda County's current transportation Plan, approved by voters in 1986, expires in March 2002. The new Plan was developed to serve major regional transportation needs in Alameda County and addresses congestion in every major commute corridor in the county.

The Plan provides a balance between mass transit and road improvements. It funds major expansions of the Bay Area Rapid Transit (BART) system within Alameda County, the Altamont Commuter Express (ACE) Rail Service, and countywide express, local and feeder bus service. It expands special transportation services for seniors and people with disabilities, recognizing that the dema nds for these services will increase with our aging population. The Plan also provides funding for critical capital projects where expansion of the county's aging highway infrastructure is needed, including funds for new lanes and interchange improvements on I-580, I-680, I-880, I-238, and State Routes 84 and 92.

Status of the current Expenditure Plan

In 1986, Alameda County voters authorized a half-cent transportation sales tax to finance improvements to the County's overburdened transportation infrastructure. This tax expires in 2002. A detailed Expenditure Plan guides the use of those funds. The 1986 Expenditure Plan authorized the expenditure of local transportation funds to extend BART to Dublin/Pleasanton, open 22 miles of carpool lanes on I-880, and maintain and expand bus service throughout the county.

In addition, the current Plan funds special transportation services for seniors and people with disabilities. The Plan also provided congestion relief throughout Alameda County by adding lanes to I-880 overpasses, improving the I-580/680 interchange in Dublin and Pleasanton which included widening sections of I-580, reconstructing the Route 13/Highway 24 interchange, extending Route 84 in Livermore to remove highway traffic from the downtown area, improving access to the Oakland International Airport, and upgrading surface streets and arterial roadways.

Certified annual audits have verified that 100% of the public funds authorized in Measure B have been spent in accordance with the approved Expenditure Plan.

Most of the 10 major projects authorized by the current Expenditure Plan have been completed or are under construction, and those that are still in the design and review stage are scheduled to begin construction in the next few years. Certified annual audits have verified that 100% of the public funds authorized in the current Expenditure Plan have been spent in accordance with the approved Expenditure Plan.

In addition, the existing Expenditure Plan has attracted supplemental funds of over $400,000,000 from outside sources for Alameda County capital investments.

ACTC_AR0004

Benefits of the current Expenditure Plan

Each year, the existing Expenditure Plan supports almost seven million trips on transit and by people choosing to share a ride.

The Dublin/Pleasanton BART extension and new carpool lanes on I-880 currently result in over 15,000 people using transit or sharing a ride each day rather than driving alone on Alameda County's overcrowded roads. AC Transit service funded by the current Plan transports 6.6 million riders per year, the equivalent of the Bay Area population. The current Plan also funds special transportation services that provide 150,000 trips each year for seniors and people with disabilities.

Annual audit of current Expenditure Plan

The Alameda County Transportation Authority has been audited each year since revenues have been collected. Recent audits have been completed in record time and all funds are in order. Over 200 audits have been conducted for funds passed to the cities, the County, AC Transit, and for special transportation services for seniors and people with disabilities.

Regional priorities of the new Plan

The new Expenditure Plan will address congestion in every key commute corridor in Alameda County. The Plan identifies each major commute corridor in the county and prioritizes projects and expenditures to relieve congestion. The priorities of the Plan include:

This Plan addresses congestion in every key commute corridor in Alameda County.

1. **Expand mass transit programs that have a demonstrated ability to get people out of their cars.** These include major new expansions of the BART system in the county, Altamont Commuter Express Rail service, and express, local and feeder bus services.
2. **Improve the County's aging highway infrastructure.** The Plan authorizes major new projects to improve interchanges, open new lanes, and improve surface streets and arterial roads that feed key commute corridors.
3. **Maintain and improve local streets and roads.** The current Expenditure Plan provides critical funds to Alameda County and every city for maintenance and upkeep of local streets and roads. The new Plan will continue to fund these activities: repaving streets, filling potholes, and upgrading local transportation infrastructure.
4. **Improve bike and pedestrian safety .** The Plan funds significant improvements in bike and pedestrian infrastructure to improve access and maximize safety for cyclists and pedestrians.
5. **Expand special transportation services for seniors and people with disabilities.** The Plan significantly increases funds to better serve people with special transportation needs and the growing aging population in Alameda County.

What specifically is in the Plan

The total net revenue from the sales tax estimated for the 20-Year Expenditure Plan is $1,420,870,122. This amount will attract an additional estimated $577 million in local, state and federal funds, totaling almost $2 billion for Alameda County transportation improvements based on the half cent sales tax revenues.

Funding allocations for each of the regional programmatic priorities in the Plan are listed in Table 1. (see next page)

ACTC_AR0005

Table 1 – Projects and Programs by Regional Priority

Priority	Type	Projects	Funds Allocated
Mass Transit			**$612,085,967**
	BART	• South Fremont Extension • Oakland Airport Connector • Fruitvale BART Transit Village • I-580 Corridor/BART to Livermore Studies • Union City Intermodal Transit Station	
	Rail	• Altamont Commuter Express (ACE) Rail • Dumbarton Corridor Improvements	
	Countywide Express, Local and Feeder Bus Service	• A.C. Transit Services • Countywide Express Bus Service • Livermore/Amador Valley Transit Authority (LAVTA) Services (Wheels) • Union City Transit	
	Other Mass Transit Programs	• Alameda/Oakland Transbay Ferry Service • Transit Center Development Fund	
Highway Infrastructure			**$236,200,000**

	Congestion Relief Emergency Fund	• Countywide funds to address future congestion	
Local Streets and Roads			**$343,292,426**
		• Programmatic discretionary transportation funds for all cities and the County • Specific transportation capital improvements for surface streets/arterial roads	
Bike and Pedestrian Safety			**$80,648,506**
		• Downtown Oakland Streetscape Improvement Project • Iron Horse Bicycle, Pedestrian, and Transit Route • Countywide bicycle and pedestrian improvements	
Special Transit for Seniors and People with Disabilities			**$148,643,224**
		• Countywide special transportation services for seniors and people with disabilities	

What is in the Plan by commute corridor

The 20-Year Transportation Expenditure Plan addresses congestion in every commute corridor within the County. Recognizing the importance of all commute options, improvements to the commute corridors listed in Table 2 are a combination of transit, highway, and street and road improvements.

Table 2 – Projects and Programs by Commute Corridor

Corridor Improvements	Projects
I-680 Corridor	ACE Rail Operations ACE Rail Capital Improvements BART South Fremont Extension Express, Local and Feeder Bus Services I-680 Express Lane Improvements I-680/I-880 Cross Connector Studies Iron Horse Bicycle, Pedestrian, Transit Route Isabel Route. 84/I-580 Interchange LAVTA Operations (Wheels and special transportation for seniors and disabled) Route 84 Expressway Union City Intermodal Station Union City Transit

Extensive public involvement guided development of the Expenditure Plan.

How the Plan was developed

Extensive public involvement guided development of the new Expenditure Plan. A 40-member expenditure committee representing the diverse interests in Alameda County solicited extensive public input over a two-year period to develop the initial plan. Environmental groups, social justice organizations, trade unions and transit advocates and advocates for seniors and the disabled were intimately involved in Plan development. Outreach to these groups and businesses large and small resulted in changes to the Plan, ensuring that the Plan will serve the county's diverse transportation needs. Further input was sought from civic groups and the County and every city in Alameda County.

City Councils for all 14 cities in the County and the County Board of Supervisors each held public meetings and approved the final Plan.

Citizen oversight

A Citizens Watchdog Committee will be created with the assistance of the League of Women Voters and other citizen's groups. This committee will report directly to the public and will be charged with reviewing all expenditures of the Agency. The Citizens Watchdog Committee members must consist of private citizens. Members cannot be elected officials at any level of government nor public employees from agencies that either oversee or benefit from the proceeds of the sales tax. Membership will be restricted to individuals who live in Alameda County.

ACTC_AR0008

Alameda County 20-Year Transportation Expenditure Plan

The Alameda County 20-Year Transportation Expenditure Plan will guide the expenditure of more than $1.4 billion in county transportation funds . The Plan was developed to serve major regional transportation needs in Alameda County and addresses congestion in every major commute corridor in the county. Alameda County's current transportation Plan was approved by voters in 1986. This tax expires in March 2002. The new Plan describes the way funds that are generated through the 20-year renewal of the county's half cent retail transactions and use tax ordinance will be spent.

The Plan provides a balance between mass transit and road improvements.

The new Expenditure Plan provides a balance between mass transit and road improvements. It funds major expansions of the BART system within Alameda County, the Altamont Commuter Express Rail Service, and countywide express bus, local and feeder bus service. It expands special transit services for seniors and people with disabilities, recognizing that the demands for these services will increase with our aging population. The Plan also provides funding for critical capital projects where expansion of the county's aging highway infrastructure is needed, including funds for new lanes and interchange improvements on I-580, I-680, I-880, I-238, and State Routes 84 and 92.

Regional priorities of the new Plan

The new Expenditure Plan addresses congestion in every key commute corridor in Alameda County . The Plan identifies each major commute corridor in the county and prioritizes projects and expenditures to relieve congestion. The priorities of the Plan include:

1. **Expand mass transit programs that have a demonstrated ability to get people out of their cars.** These include major new expansions of the BART system in the county, Altamont Commuter Express Rail service, and express, local and feeder bus services.

2. **Improve the County's aging highway infrastructure.** The Plan authorizes major new projects to improve interchanges, open new lanes, increase safety, and improve surface streets and arterial roads that feed key commute corridors.

3. **Maintain and improve local streets and roads.** The current Expenditure Plan provides critical funds to every Alameda County city for maintenance and upkeep of local streets and roads. The new Plan will continue to fund these activities, repaving streets, filling potholes, and upgrading local transportation infrastructure.

4. **Improve bike and pedestrian safety .** The Plan funds significant improvements in bike and pedestrian infrastructure to minimize traffic disruption and maximize safety for cyclists and pedestrians.

5. **Expand special transportation services for seniors and people with disabilities.** The Plan significantly increases funds to better serve people with special transportation needs and the growing aging population in Alameda County.

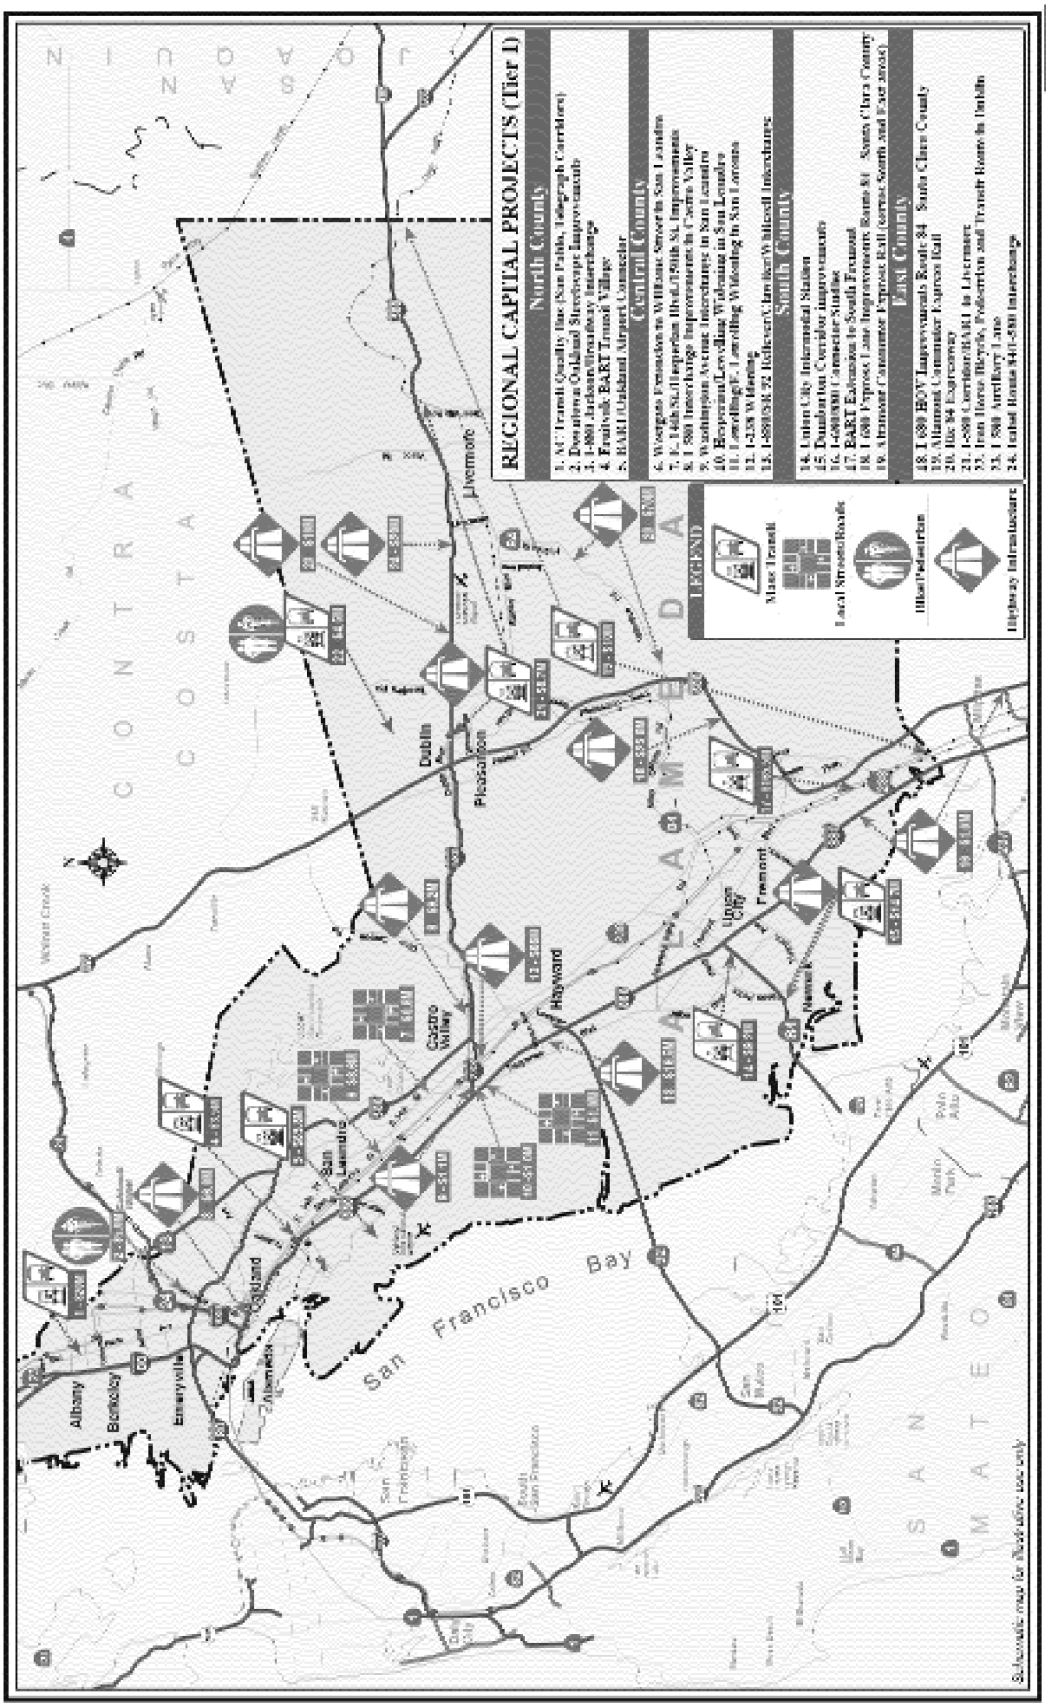
Regional Priorities

1. **Expand mass transit**
2. **Improve the County's aging highway infrastructure.**
3. **Maintain and improve local streets and roads.**
4. **Improve bike and pedestrian safety.**
5. **Expand special transportation services for seniors and people with disabilities.**

Regional priority expenditures

The Expenditure Plan identifies five regional transportation priorities that will guide expenditures of county transportation sales tax revenues over the next twenty years: mass transit, highway infrastructure, local streets and roads, bike and pedestrian safety, and special transportation for seniors and people with disabilities. Expenditures within these categories are identified as either programmatic or capital project expenditures. Funding for programs are intended to reflect geographic equity based on the population projections for the County in 2005.

Programmatic expenditures will generally be disbursed on a monthly basis, based on a set percentage of net revenues which are included in the descriptions of programmatic expeditures (see Appendix A). Each agency that receives these funds will be responsible for using these funds for the projects and programs in the Expenditure Plan. The use of these funds will be audited annually.



Capital project expenditures are delineated between Tier 1 and Tier 2 projects to ensure flexibility while providing very clear direction for funding priorities. Tier 1 projects are designed to be funded with sales tax receipts, based on the current assumptions for revenue growth and construction cost escalation. Some projects will also receive funding from other sources. Tier 2 projects will receive sales tax funds only in the event that more funds than anticipated become available.

The following highlights the regional priority expenditures for capital and programmatic expenditures for both Tier 1 and Tier 2 capital expenditure components of the Plan.

Summary descriptions and conceptual maps of Tier 1 and Tier 2 projects are provided. These maps are intended to be conceptual only, and do not indicate specific route alignments. In most cases, specific alignments will be detailed after further study and environmental review. The following project descriptions identify project costs (in 1998 $), funding allocations from the sales tax and other sources, and the project sponsor to which allocations will be provided.

ACTC_AR0010

Location of Regional Projects

Mass Transit

BART Capital Projects:

Capital expenditures:

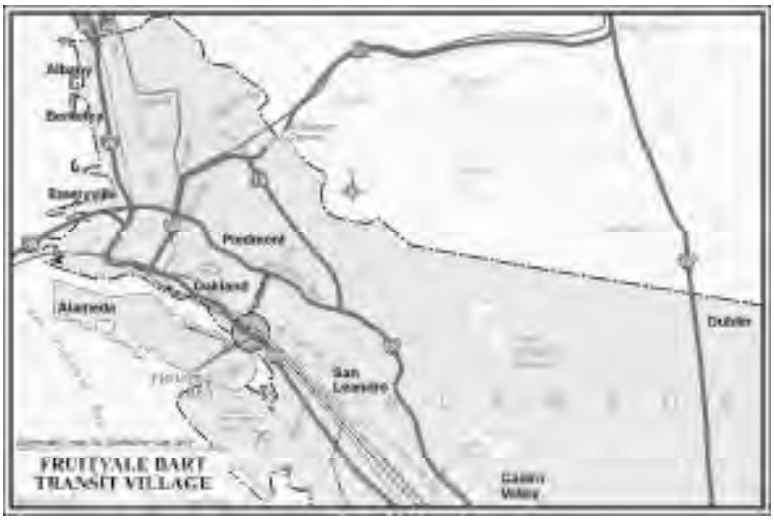
BART Extension to South Fremont (to connect to Santa Clara County Extension) -BART

Sales Tax Funding	$165,500,000	Tier 1(plus $85.9 M in Tier 2)
Other Funding Sources	$380,800,000	State, Federal, and Local sources
Project Cost	$546,300,000	

This project funds the first phase of a BART rail extension that will ultimately extend into Santa Clara County. Funds for construction of the first segment of the BART rail extension to Warm Springs in Southern Fremont may not be used until full funding for the rail connection to Santa Clara County is assured. Project development, right-of way, design, and station site development costs are eligible prior to securing full funding for the rail construction.

BART Oakland Airport Connector - BART

Sales Tax Funding	$65,800,000	Tier 1 (plus $7.2 M in Tier 2)
Other Funding Sources	$64,200,000	Port, Bridge Tolls, and other sources
Project Cost	$130,000,000	



This project provides an elevated guideway with automated vehicle operation between BART's Coliseum station and the Oakland International Airport. The project includes construction, rolling stock, and a maintenance facility required for operation.

Fruitvale BART Transit Village - City of Oakland/BART

Sales Tax Funding	$3,500,000	Tier 1
Other Funding Sources	$7,650,000	State Transportation Improvement Program (STIP)
Project Cost	$11,150,000	

This project is one phase of a transit and pedestrian oriented mixed use development at the BART Fruitvale station. The project develops two parking structures in addition to substantial retail and residential development around the existing Fruitvale station.

I-580 Corridor/BART to Livermore Studies - tbd

Sales Tax Funding	$8,700,000	Tier 1 (also in Tier 2)
Other Funding Sources	tbd	
Project Cost	$8,700,000	

Potential improvements in the I-580 corridor could include highway improvements, a BART extension, or other parallel route construction. This funding would allow for studies and environmental documentation to identify the preferred mode and method of expenditure.

Union City Intermodal Station - City of Union City

Sales Tax Funding	$9,200,000	Tier 1
Project Cost	$9,200,000	

This project would develop an intermodal station serving BART, buses, Capital Corridor service, and proposed Valley Transportation Authority (VTA) and Dumbarton rail operations near the existing Union City BART station. Pedestrian and bicycle access improvements in and around the station are also included.

BART Seismic Retrofit - BART

Sales Tax Funding	$109,000,000	Tier 2 (Project is segmentable)
Project Cost	$109,000,000	

This project upgrades the existing BART system within Alameda County to the latest seismic standards.

BART Station at West Dublin/Pleasanton - BART

Sales Tax Funding	$38,400,000	Tier 2
Project Cost	$38,400,000	

This project adds an intermediate station between existing Castro Valley and East Dublin/Pleasanton stations.

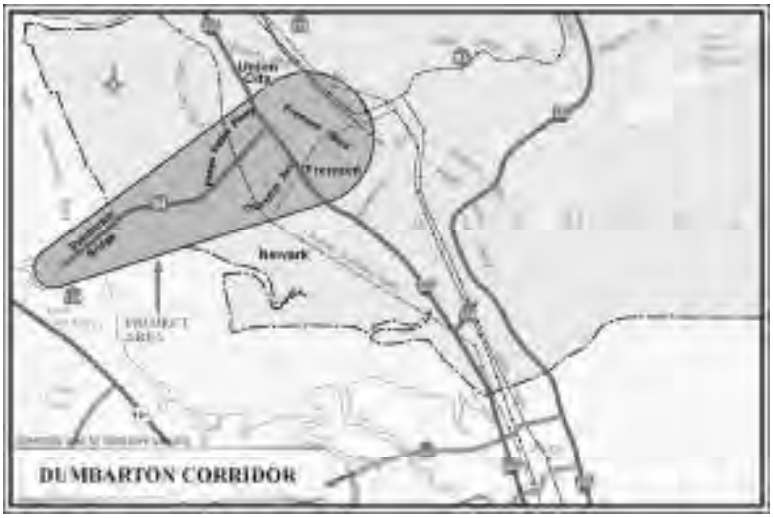
Rail

Capital expenditures:

***Altamont Commuter Express (ACE) Rail - Alameda County CMA**

Sales Tax Funding	$10,000,000	Tier 1
Project Cost	$10,000,000	

Provides $10 million in track, station, and other improvements for the Alameda County share of ACE service.



**Total ACE expenditures ($40,149,767) include both capital and operating costs.*

Dumbarton Corridor Improvements - tbd

Sales Tax Funding	$14,700,000	Tier 1
Other Funding Sources	tbd	
Project Cost	$14,700,000	

A number of potential projects have been identified to relieve congestion and promote transit usage in the Dumbarton Bridge corridor. Those projects include widening local streets and coordinating signals to provide parallel and alternative routes, improvements at the toll plaza, improvement of the Thornton/Paseo Parkway Interchange/Route 84 ramps, development of park and ride lots, expansion of express bus service, and implementation of a Dumbarton rail connection to the peninsula. Full funding for the operations and capital costs of a rail connection will need to be secured before Expenditure Plan funds can be spent to implement the rail project.

Programmatic expenditures:

***Altamont Commuter Express Operating Expenditures (2.12% of net revenues)**

Sales Tax Funding	South County	$15,937,556
	East County	$14,212,211

Provides $30,149,767 in operating support for the Alameda share of ACE service.

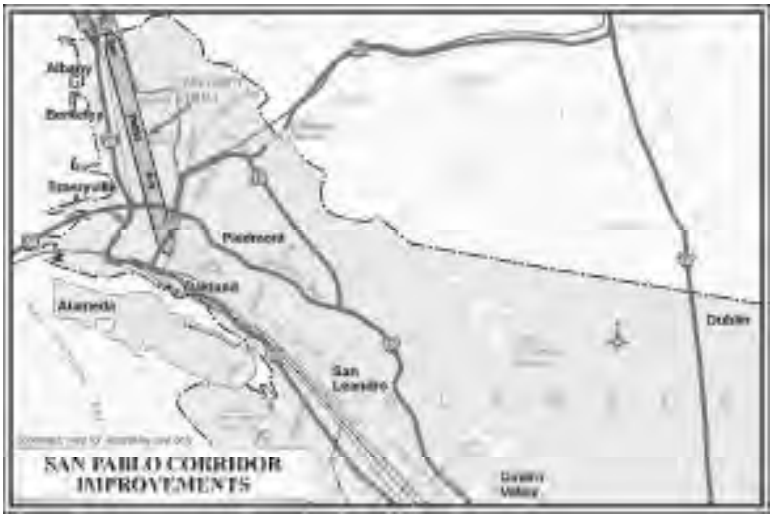
**Total ACE expenditures ($40,149,767) include both capital and operating costs.*

Countywide Express, Local and Feeder Bus Service

Capital expenditures:

A.C. Transit Quality Bus - San Pablo/Telegraph Corridors - AC Transit

Sales Tax Funding Tier 1 Capital Project $20,000,000 ($2M in Tier 2 for Berkeley/Oakland Corridors)
Tier 2 Capital Project: $44,000,000 (for two additional corridors)



Tier 1 improvements include high-capacity articulated buses, stations and shelters, lighting, advancements in signalization, and other bus related enhancements in key Berkeley/Oakland Corridors - San Pablo and/or Telegraph Avenue. The specific corridor will be selected following Major Investment Studies. Tier 2 funding would add two additional corridors to receive the same types of improvements as the Tier 1 projects.

A.C. Transit San Pablo Corridor Improvements - AC Transit

Sales Tax Funding Tier 2 Capital Project $19,000,000

A program of transit capital and improved transit frequencies to enhance mobility along a corridor extending from downtown Oakland to the Contra Costa County line would be included in this project.

Programmatic expenditures:

Countywide Express Bus Service (0.70% of net revenues)

Sales Tax Funding	$10,000,000

Provides $10,000,000 to provide countywide Express Bus Service.

Countywide Local and Feeder Bus Service

Sales Tax Funding		$260,624,587
AC Transit	North County (9.48%)	$134,930,163
	Central County (4.74%)	$67,467,377
	South County (1.61%)	$22,878,062
AC Transit Welfare to Work	North County (1.24%)	$17,599,586
AC Transit Welfare to Work	Central County (0.22%)	$3,122,281
LAVTA	East County (0.69%)	$9,810,684
Union City Transit	South County (0.34%)	$4,816,434

Provides funding for countywide local and feeder bus service in every region of the county to link neighborhoods and commuters to BART, rail, and express bus connections throughout the county. Welfare to Work programs dedicate 1.46% of overall net sales tax receipts to enhancing transportation opportunities for persons making the transition from welfare to work.

Other Mass Transit Programs

Programmatic expenditures:

Alameda/Oakland Transbay Ferry Service (0.78% of net revenues)

Sales Tax Funding:	$11,146,405

Provides over $11 million to expand transbay ferry service from Alameda.

Transit Center Development Fund (0.19% of net revenues)

Sales Tax Funding:	$2,765,207

These funds are available to cities in the County and to Alameda County to encourage residential and retail development near transit centers. The Agency administering the half-cent sales tax will be responsible for allocating these funds.

Highway Infrastructure

Capital expenditures:

I-680 Corridor

I-680 Express Lane Improvements - Route 84 to Santa Clara County - Caltrans/Alameda County Congestion Management Agency (CMA)

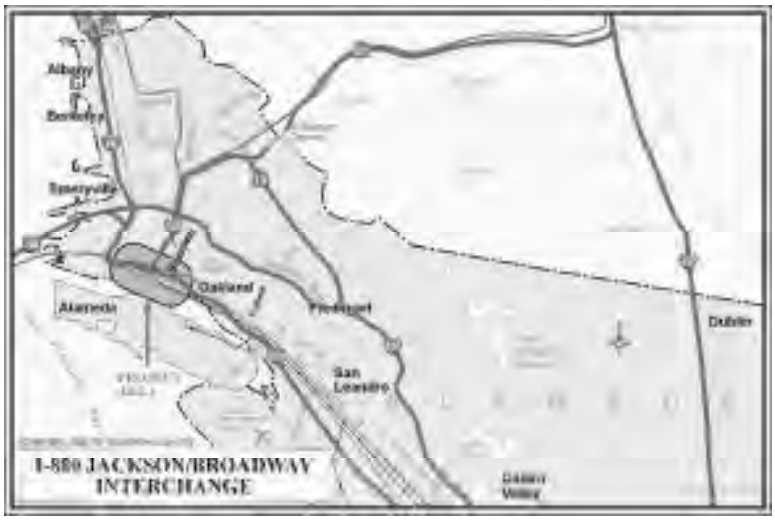
Sales Tax Funding	$25,800,000	Tier 1
Other Funding Sources	$10,200,000	STIP
Project Cost	$36,000,000	

These improvements provide express lanes, which would allow car pools to travel free of charge and would allow excess capacity in the lane to be used by low-occupancy vehicles that pay a fee for use of the lane. Occupancy requirements and fees would be set to maintain non-congested travel conditions in the express lanes under normal conditions. A southbound express lane should be implemented first. If the current Alameda County Congestion Management Agency value pricing study determines that express lanes are operationally infeasible for both the northbound and southbound directions, excess funds may be used for construction of a new northbound HOV lane. Fees generated from the express lanes shall be used for operations of the express lane and/or for transit serving the Sunol Grade corridor.

I-680/880 Cross Connector Studies - Caltrans

Sales Tax Funding	$1,000,000	Tier 1 (plus $6.5 M in Tier 2)
Other Funding Sources	$1,000,000	Milpitas/Santa Clara Co.
Project Cost	$2,000,000	

This project would complete a Major Investment Study including environmental documentation and engineering support for a connector between I-680 and I-880 between Auto Mall Parkway and Montague Expressway.



I-880 Corridor

I-880 Jackson/Broadway Interchange - City of Alameda

Sales Tax Funding	$6,000,000	Tier 1
Other Funding Sources	$1,800,000	STIP
Project Cost	$7,800,000	

This project will improve access to Oakland's Chinatown, Jack London Square, and Alameda, including replacing access that was available prior to the Loma Prieta earthquake.

Washington Avenue Interchange in San Leandro - City of San Leandro

Sales Tax Funding	$1,100,000	Tier 1
Project Cost	$1,100,000	

Provides local improvements to Beatrice Street and the Washington Avenue interchange in San Leandro by constructing a signalized intersection at the Beatrice Street/southbound on and off-ramp intersection and widening of the off-ramp and Beatrice Street.

I-580 Corridor

I-580 Auxiliary Lane (Santa Rita to Airway) - Caltrans

Sales Tax Funding	$10,000,000	Tier 1 (Santa Rita to Airway)
	$8,400,000	Tier 2 (Airway to Route 84)
Project Cost	$18,400,000	

Project constructs a series of auxiliary lanes on I-580 between Santa Rita Interchange and the new Isabel/Route 84/I-580 Interchange. The Tier 1 project is between Santa Rita Road and Airway Boulevard; the Tier 2 project is between Airway Boulevard and Isabel/Route 84/I-580 Interchange.

I-580 Interchange Improvements in Castro Valley - Alameda County

Sales Tax Funding	$9,200,000	Tier 1
Project Cost	$9,200,000	

Proposes several ramp improvements including a westbound off-ramp to Castro Valley Blvd. west of Center Street, an eastbound on-ramp from Redwood Road, and replacement of the existing eastbound off-ramp to Center Street.

I-238 Corridor

I-238 Widening - Caltrans

Sales Tax Funding	$66,000,000	Tier 1
Other Funding Sources	$36,000,000	STIP
Project Cost	$102,000,000	

Reconstruct and widen I-238 between I-580 and I-880 from four to six lanes, including auxiliary lanes on I-880 south of I-238.

State Route 92 Corridor

I-880/State Route 92 Reliever Route - Clawiter/ Whitesell Interchange - City of Hayward

Sales Tax Funding	$19,500,000	Tier 1 ($15.7 mil in Tier 2 for expanded scope)
Project Cost	$19,500,000	

This project would construct a new combined Clawiter/Whitesell/State Route 92 Interchange and would extend three discontinuous streets.

State Route 84 Corridor

Isabel Route 84/I-580 Interchange - City of Livermore

Sales Tax Funding	$20,000,000	Tier 1 (plus $35 M in Tier 2)
Other Funding Sources	$35,000,000	STIP and other
Project Cost	$55,000,000	

This project would construct a partial cloverleaf interchange at the intersection of I-580 and the extension of Isabel Avenue (relocated Route 84) in Livermore.

Route 84 Expressway - City of Livermore

Sales Tax Funding	$70,000,000	Tier 1 (plus $18.0 M in Tier 2)
Other Funding Sources	tbd	TVTC fee funds may augment project scope
Project Cost	$70,000,000	

This project provides a four-lane roadway along relocated Route 84 (the Isabel Avenue Corridor) from I-580 south to Vallecitos Road, and provides improvements along Route 84 through Pigeon Pass to provide a high speed two-lane roadway with passing lanes. This project designates the Vallecitos Road portion of the new route as a scenic corridor.

Congestion Relief Emergency Fund - tbd

Sales Tax Funding $7,600,000 Tier 1

This emergency contingency fund shall be available to fund high-priority projects that address major regional congestion problems that emerge during the lifetime of the Plan and which are not addressed by the proposed Plan.

Local Streets and Roads

Programmatic expenditures:

Sales Tax Funding $317,852,426

Local streets and roads funds are provided to local cities and Alameda County. The funds may be used for any local transportation need based on local priorities, including streets and roads projects, local transit projects, bicycle and pedestrian projects and other transportation uses. Local transportation funds within a geographic sub-area will be allocated to the jurisdictions within that sub-area based on a formula weighted 50% by the population of the jurisdiction within the sub-area and 50% on the number of road miles within the sub-area. The allocations may change in the future based on changes in population and road mile figures. Funding for local streets and roads by city are shown in Table 3.

Table 3 – Funding for Local Streets and Roads by City*

Area	% of net revenues*	Estimated Total in 1998 Dollars
Alameda	1.40%	$19,873,750
Albany	0.32%	$4,560,150
Berkeley	2.25%	$32,058,551
Dublin	0.26%	$3,680,531
Emeryville	0.16%	$2,279,399
Fremont	1.80%	$25,640,493
Hayward	1.68%	$23,885,742
Livermore	0.79%	$11,269,234
Newark	0.39%	$6,800,005
Oakland	8.38%	$123,244,781
Piedmont	0.34%	$4,799,257
Pleasanton	0.64%	$9,159,228
San Leandro	1.10%	$15,632,396
Union City	0.53%	$7,531,797
Alameda County (North)	0.06%	$806,458
Alameda County (Central)	1.22%	$17,427,492
Alameda County (East)	0.39%	$5,603,364
Alameda County Bridges	0.62%	$8,799,793
Total	22.33%	$317,852,426

**Formulas may change based on population and road miles in each city. Alameda County (Central) is reduced by 0.39% of total revenues to reflect a transit funding increase.*

Surface Streets and Arterial Roads

Capital expenditures:

E. 14th Street/Hesperian Blvd/150th Street Improvements in San Leandro - City of San Leandro

Sales Tax Funding	$830,000	Tier 1
Project Cost	$830,000	

This project adds a dual northbound left turn lane at E. 14th Street, adds a southbound left turn lane on Bancroft at E. 14th Street, and adds a northbound left turn lane on E. 14th Street at Hesperian.

Hesperian/Lewelling Widening in San Leandro - City of San Leandro

Sales Tax Funding	$1,000,000	Tier 1
Project Cost	$1,000,000	

This project would add one southbound lane on Hesperian for right turns onto Lewelling and add dual left turn lanes on Lewelling at Hesperian.

Lewelling/E. Lewelling Widening in San Lorenzo - Alameda County

Sales Tax Funding $9,800,000 Tier 1 ($6.8 M in Tier 2 for broader scope)

Project Cost $9,800,000

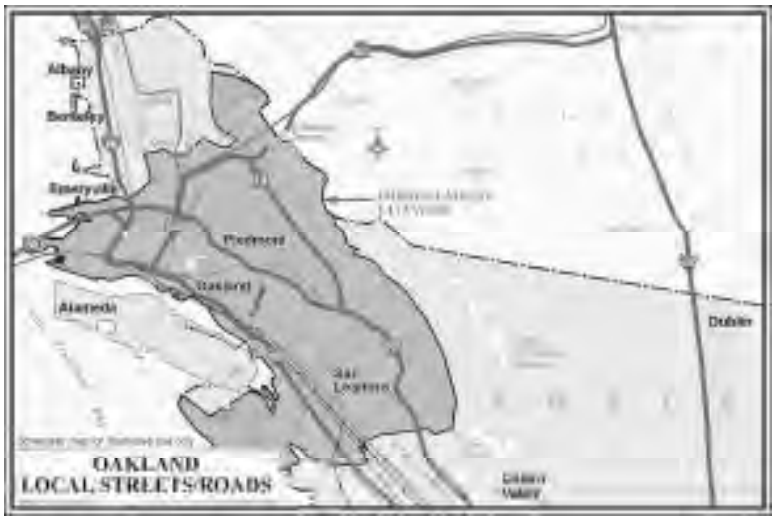
Provides funds for improvement of Lewelling and E. Lewelling from Hesperian Blvd. to near Meekland Avenue. Improvements include widening from two to four lanes, addition of a median island, bicycle lanes, curbs, gutters, and sidewalks.

Newark Local Streets - City of Newark

Sales Tax Funding $1,200,000 Tier 1

Project Cost $1,200,000

This project provides capital funds for critical roadway maintenance and safety enhancements in the City of Newark.



Oakland Local Streets and Roads - City of Oakland

Sales Tax Funding $4,000,000 Tier 1

Project Cost $4,000,000

This project provides $4 million for local streets and road maintenance within the City of Oakland. The capital funds will help offset the maintenance deficit for roadway, pedestrian, and bicycle related facilities.

Westgate Extension to Williams Street in San Leandro - City of San Leandro

Sales Tax Funding $8,610,000 Tier 1

Project Cost $8,610,000

This project would construct a new arterial between Davis Street and Williams Street along the eastern edge of the Westgate Shopping Center.

Bicycle and Pedestrian Safety

Capital expenditures:

Iron Horse Bicycle, Pedestrian, and Transit Route - City of Dublin

Sales Tax Funding	$4,500,000	Tier 1
Other Funding Sources	$500,000	
Project Cost	$5,000,000	

A bicycle/pedestrian/roadway and transit lane in existing Alameda County and Southern Pacific right-of-way between the Dublin BART station to Dougherty Road and bus lanes along Dougherty Road will be provided as part of this project. The project includes bus lanes, the bicycle path, and Scarlett Drive roadway.

Downtown Oakland Streetscape Improvement Project - City of Oakland

Sales Tax Funding	$5,000,000	Tier 1
Project Cost	$5,000,000	

This project will provide pedestrian and transit amenities on Broadway, 14th Street, and Telegraph Avenue in downtown Oakland.

Programmatic expenditures:

Countywide Bicycle and Pedestrian Safety (5.00% of net revenues)

Sales Tax Funding $71,148,506

This program funds projects that expand and enhance bicycle and pedestrian safety and facilities in Alameda County, focusing on high priority projects like gap closures and intermodal connections. Funds are distributed to cities in the County and to Alameda County to be spent on planning and construction of bicycle and pedestrian projects. This is a new program, not funded in the current Measure B. Allocation and use of funds are guided by the rules described in Appendix A.

ACTC_AR0031

Special Transportation for Seniors and People with Disabilities

Programmatic expenditures:

Program provides $148,643,224 for services mandated by the Americans with Disabilities Act to fixed route public transit operators who are required to provide that service. Funds are also provided for non-mandated services, aimed at improving mobility for seniors and people with disabilities. These funds are provided to the cities in the County and to Alameda County based on a formula developed by PAPCO.

Sales Tax Funding (10.5% of net revenues)	$148,643,224	Tier 1
Non-mandated–North County (1.24%)	$17,599,586	
Non-mandated–Central County (0.88%)	$12,489,126	
Non-mandated–East County (0.21%)	$3,003,271	
North County–AC Transit (3.38%)	$48,105,536	
North County–BART (1.15%)	$16,426,281	
Central County–AC Transit (0.76%)	$10,771,871	
Central County–BART (0.34%)	$4,839,536	
South County* (1.06%)	$15,051,357	
Coordination/Gaps in Service (1.43%)	$20,356,660	

*Funds for South County will be allocated between mandated and non-mandated programs on an annual basis by the cities in that part of the County.

Capital expenditures:

Coordination of service gaps and special transportation for seniors and people with disabilities

Sales Tax Funding	$7,500,000	Tier 2
Project Cost	$7,500,000	

Additional funding of $7.5 million to be allocated by the Alameda County Paratransit Coordinating Council (PAPCO) to reduce differences in service that might occur based on the geographic residence of any individual needing special transportation services for seniors and people with disabilities.

Governing Board and Organizational Structure

The reauthorization of the sales tax is authorized under the Local Transportation Authority and Improvement Act, California Public Utilities Code Section §180000 et seq. In enacting this ordinance, the voters will authorize that the Alameda County Transportation Improvement Authority (referred to as Agency hereafter) be given the responsibility to administer the tax proceeds. The make-up of this Agency's governing board is as follows:

- Five members of the Alameda County Board of Supervisors
- 3 representatives appointed by the Alameda County Mayors' Conference from among the cities of Hayward, Fremont, Newark, Union City, Pleasanton, Livermore and Dublin
- 2 representatives appointed by the Alameda County Mayors' Conference from among the cities of San Leandro, Oakland, Alameda, Albany, Berkeley, Emeryville, and Piedmont
- 1 representative designated by the Mayor of Oakland

All representatives to the Agency's governing board will be elected officials within Alameda County.

The Agency's function is to improve and maintain the transportation system in Alameda County

The Agency will hire the staff and professional assistance required to administer the proceeds of the tax and carry out the mission outlined in this Expenditure Plan. This Agency will have as its function the implementation of the Expenditure Plan and related projects to improve and maintain the transportation system in the County with the sales tax and other available funds.

The total cost for salaries and benefits for administrative Agency employees will not exceed 1% of the revenues generated by the sales tax authorized collected to support this Plan. The Agency will prepare an annual report, identifying the total expenditures for administration, as well as all other costs associated with delivering the program. A total of 4.5% has been budgeted for implementing the sales tax program. In addition, $2.1 million has been budgeted to repay a loan from Alameda County for the election costs of the Measure from the 1998 and 2000 elections.

The duration of the tax will be 20 years from the initial year of collection, which will begin in April 2002. The tax will therefore terminate/expire on March 31, 2022.

Sales tax proceeds will be used to pay for the programs and projects outlined in this Expenditure Plan or as it may be amended, and may not be used for any other purpose. Amendments to this Plan will require a two-thirds vote of the governing board of the Agency. In addition, each of the City Councils and the County Board of Supervisors will have an opportunity to comment on any Plan amendment prior to its adoption.

The new Agency will have the authority to bond for the purposes of expediting the delivery of transportation projects and programs. The bonds will be paid with the proceeds of the retail transactions and use tax. The costs associated with bonding will be borne only by the capital projects included in the Plan, and by any programs included in this Plan that utilize the bond proceeds. The costs and risks associated with bonding will be presented in the Agency's annual Strategic Plan, and will be subject to public comment before approving any bond sale.

ACTC_AR0033

Annual Budget/Financial Projections
An Annual Budget will be adopted by the Agency each year. The Budget will project the expected sales tax receipts, other anticipated funds and planned expenditures for administration, programs, and projects.

Citizens Watchdog Committee
A Citizens Watchdog Committee will be created by the Agency governing board with the assistance of the League of Women Voters and other citizen's groups. This committee will report directly to the public and will be charged with reviewing all expenditures of the Agency. The responsibilities of the committee are:

The members of the Citizens Watchdog Committee will provide a balance of viewpoints, geography, age, gender and ethnicity to represent the different perspectives of taxpayers throughout the County.

- The Committee must hold public hearings and issue reports, on at least an annual basis, to inform Alameda County residents how the funds are being spent. The hearings will be open to the public and must be held in compliance with the Brown Act, California's open meeting law, with information announcing the hearings well-publicized and posted in advance.

- The Committee will have full access to the Agency's independent auditor and will have authority to request and review specific information and to comment on the auditor's reports.

- The Committee must publish an annual report and any comments concerning the Agency's audit in local newspapers. In addition, copies of these documents must be made available to the public at large.

Citizens Watchdog Committee members will be private citizens who are not elected officials at any level of government nor public employees from agencies that either oversee or benefit from the proceeds of the sales tax. Membership will be restricted to individuals who live in Alameda County. Members will be required to submit a statement of financial disclosure and membership will be restricted to individuals without economic interest in any of the Agency's projects. The Committee will be designed to reflect the diversity of the County. The Committee will consist of 17 members. Membership will be as follows:

- Two at-large members will be designated from each of the five supervisorial districts in the County (total of 10 at-large members). One member will be nominated by each member of the Board of Supervisors and one additional member in each supervisorial district will be selected by the Alameda County Mayors' Conference.

- Seven members will be selected to reflect a balance of viewpoints across the County. These members will be nominated by their respective organizations and approved by the board of the Agency, as follows:

ACTC_AR0034

— One representative from the Alameda County Taxpayer's Association

— One representative from the Sierra Club

— One representative from the Alameda County Labor Council

— One representative from the Alameda County Economic Development Alliance for Business

— One representative from the Alameda County Paratransit Advisory Panel

— One representative from the East Bay Bicycle Coalition

— One representative from the League of Women Voters

The members of the Citizens Watchdog Committee are expected to provide a balance of viewpoints, geography, age, gender and ethnicity to represent the different perspectives of taxpayers throughout the County. To ensure that citizens throughout the County have the opportunity to serve on the Committee, the at-large members will be limited to a single two-year term.

All of the projects and programs included in this Expenditure Plan are considered essential for the transportation needs of Alameda County.

Annual Strategic Plan

All of the projects and programs included in this Expenditure Plan are considered essential for the transportation needs of Alameda County. The Agency will prepare an annual Strategic Plan which will identify the priority for projects and dates for project implementation based on project readiness, ability to generate leveraged funds, and other relevant criteria. This Plan will be adopted at a public meeting of the Agency's governing board.

Amendments to the Plan

To modify this Plan, an amendment must be approved by a two-thirds vote of the Agency Board. All jurisdictions within the County will be given a minimum of 45 days to comment on any proposed Plan amendment.

Funds for capital projects which cannot be delivered for any reason may be reallocated to another project in the same planning area by the Agency Board with the approval of a majority of the Cities (and County for unincorporated areas) representing a majority of the population of the planning area and approval of the amendment by the Agency Board.

Agency as Co-Sponsor

The Agency will serve as "co-sponsor" of all projects for the purposes of implementation.

Staffing

The Board of the Agency will have the authority to hire professional staff and consultants to deliver the projects and programs included in this Plan in the most efficient and cost-effective manner. The salaries and benefits for administrative staff hired by the Agency will not exceed 1% of the proceeds of the tax. Other administrative costs (such as rent, supplies, fees paid to the State Board of Equalization for collecting the tax and financial, legal, project management, and other necessary consultants) are not included in the 1% cap.

ACTC_AR0035

Implementing Guidelines

This Plan is guided by principles that ensure that the revenue generated by the sales tax is spent in the most efficient and effective manner possible, consistent with the desires of the voters of Alameda County. The principles outlined in this section provide flexibility needed to address issues that may arise during the life of the Plan.

1. Excess revenue could result from higher than expected receipts, lower than expected project costs, or the addition of leveraged funds from other sources. All excess revenue will be programmed in the Agency's annual Strategic Plan and will be disbursed based on a concern for geographic equity. The first priority for programming revenues in excess of projected funds will be to meet unanticipated requirements of Tier 1 projects. However, no programmed capital project may be augmented by more than 15% over the cost estimate provided in this Plan. Cost estimates were prepared using high standards for accuracy, and project sponsors are encouraged to deliver projects within these limits.

Implementing guidelines ensure that the revenue generated by the sales tax is spent in the most efficient and effective manner possible, consistent with the desires of Alameda County voters.

2. The next priority for programming excess revenues will be to address gaps in special transportation service for seniors and people with disabilities.

3. If there are no additional special transportation service needs for seniors and people with disabilities or cost increases on Tier 1 projects, the next priority for disbursing excess revenue will be funding of Tier 2 projects based on priorities determined by the Agency's annual Strategic Plan. Tier 2 projects will be funded based on a strategy of geographic equity.

4. In the event that actual receipts are less than projected, funds would be programmed based on the annual Strategic Plan.

5. Leveraging of outside funding sources is encouraged. Any additional sales tax revenues made available through their replacement by leveraged funds will be spent based on the principles outlined above.

6. Funding of Tier 2 projects would not be considered a Plan amendment, and would be accomplished through administrative action, with the completion of the annual Strategic Plan.

7. New cities or new entities (such as new transit agencies) that come into existence in Alameda County during the life of the Plan could be considered as eligible recipients of funds through a Plan amendment.

8. Should a planned project become infeasible or unfundable due to circumstances unforeseen at the time of this Plan, funding may be applied to another project in the planning area by the Agency, with the approval of a majority of the cities (and County for unincorporated areas) representing a majority of the population of the planning area.

ACTC_AR0036

9. This Plan's goal is to complete the projects promised in this Plan in a timely manner. A project will be given five years from the first year of revenue collection (up to April 1, 2007) to receive environmental approvals and to have a fully funded project. Projects that cannot meet this requirement may appeal to the Agency's governing board for one or more one-year time extensions. Once time has expired, the sponsor will be deemed to have approved deletion of the project, and the funds will be reallocated based on the principles described above.

10. All activities of the Agency charged with administering the sales tax will be conducted in public according to state law, through publicly noticed meetings. The annual budget of the Agency, annual Strategic Plan and annual report will all be prepared for public scrutiny. The interests of the public will further be protected by the Citizens Watchdog Committee described previously in this Plan.

11. Under no circumstance may the proceeds of this tax be applied to any purpose other than for transportation improvements in Alameda County. The funds may not be used for any projects or programs other than those specified in this Plan without a specific amendment of the Expenditure Plan.

ACTC_AR0037

Appendix A

Programmatic Expenditures

The Expenditure Plan identifies five programs for this sales tax extension:

- Mass Transit
- Local Streets and Roads
- Bike and Pedestrian Safety
- Special Transportation of Seniors and People with Disabilities
- Transit Center Development Funds

Programmatic funds are generally disbursed on a monthly basis, based on a set formula for distribution. Funding for programs are intended to reflect geographic equity based on the population projections for the County in 2005.

Dollar figures are based on financial projections which assume a 4% annual growth rate. Amounts shown are estimates. Actual distributions will be based on a percentage of net revenues. Descriptions of the programs are included in the following paragraphs.

In all cases, North Area refers to the Cities of Oakland, Berkeley, Albany, Piedmont, Emeryville and Alameda, as well as unincorporated areas within that boundary. Central Area includes the Cities of Hayward, and San Leandro, and the unincorporated area of Castro Valley, as well as other unincorporated lands governed by Alameda County in the Central Area. South Area includes the Cities of Fremont, Newark and Union City; and East Area includes the Cities of Livermore, Dublin and Pleasanton, and all unincorporated lands in that area.

Programmatic funds anticipated in each of the programs based on 1998 forecast revenues are listed below.

Mass Transit (21.92% overall)

Transit operating funds are provided to transit operators for maintenance of transit services, restoration of service cuts, expansion of transit services, and passenger safety and security. The transit operators will determine the priorities for these funds through public processes and will submit an annual audit to the Agency.

A.C. Transit agrees to allocate 1.46% of overall net sales tax receipts to enhancing transportation opportunities for persons making the transition from welfare to work. These "welfare to work" funds can be used by A.C. Transit for service restoration and expansion or implementation of improved bus service to facilitate travel to and from work. A.C. Transit will prioritize the restoration and development of new services to meet the employment-related transit needs of low income residents in northern and central Alameda County. Additionally, these funds may be used, at the determination of A.C. Transit, to provide subsidies of regular bus fares for individuals living in northern and central Alameda County who are transferring from welfare to work as well as those who are economically disadvantaged. In the event that sufficient funds are otherwise available to A.C. Transit to meet these needs then "welfare to work" funds can be used for other general passenger service purposes in northern and central Alameda County.

A.C. Transit will work together with and actively seek input from bus riders, business leaders, mayors and other elected officials in San Leandro, Hayward, and the unincorporated areas in Central Alameda County to ensure that the additional transit funds in Central County are used for bus improvements such as night, weekend, and more

frequent service, connections to residential growth areas, and access to major employment centers, including enhancement of east-west corridors.

A.C. Transit will continue to provide transit service similar to the Department of Labor-funded shuttle to and from job sites in East and West Oakland, as needed. A.C. Transit, the County, the City of Oakland, the Port of Oakland and other entities will look for additional money from outside sources to fund the service. If needed, a portion of the proceeds from the reauthorization of Measure B may be used.

Local Streets and Roads (22.34% overall)
Local Transportation funds are provided to local cities and Alameda County. The funds may be used for any local transportation need based on local priorities, including streets and roads projects, local transit projects, bicycle and pedestrian projects and other transportation uses. Local transportation funds within a geographic sub-area will be allocated to the jurisdictions within that sub-area based on a formula weighted 50% by the population of the jurisdiction within the sub-area and 50% on the number of road miles within the sub-area. The allocations may change in the future based on changes in population and road mile figures.

Existing state and local laws regarding contracting will also govern the expenditure of Local Transportation funds. Each agency must submit an annual audit documenting the use of the sales tax funds.

Bike and Pedestrian Safety (5.00 % overall)
These funds are distributed to cities in the County and to Alameda County to be spent on planning and construction of bicycle and pedestrian projects. This is a new program, not funded in the current Measure B Expenditure Plan. This category is intended to expand and enhance bicycle and pedestrian facilities in Alameda County, focusing on high priority projects like gap closures and intermodal connections.

A total of 25% of the funding will be reserved for regional planning and regional projects, including the preparation of local master plans, design support services to local agencies, funding for a Countywide Bicycle and Pedestrian Coordinator position, and funding for high priority regional capital projects identified in the Countywide Bicycle Plan. High priority will be given to East Bay Regional Park District projects included in the Countywide Bicycle Plan. Priority will also be given to projects which significantly leverage other outside funding sources.

The remaining 75% of the funds will be designated as local funds. Each city and Alameda County may receive up to their proportional share of the 75% funds based on population over the life of the Measure. Eligible uses for those funds will include capital improvements for bicycle and pedestrian facilities and ADA accessibility that have been prioritized through local or regional planning processes. Projects that improve intermodal connections for bicyclists and pedestrians or close gaps in existing pedestrian or bicycle corridors will be given the highest priority. Projects may be submitted for funding at any time during the life of the Measure. Unallocated local non-motorized program funds will be available for reprogramming to regional projects after 17 years.

Special Transportation for Seniors and People with Disabilities (10.45%)
Funding for special transportation for seniors and people with disabilities is provided for services mandated by the Americans with Disabilities Act to fixed route public transit operators who are required to provide that service. Funds are also provided for non-

mandated services, aimed at improving mobility for seniors and persons with disabilities. These funds are provided to the cities in the County and to Alameda County based on a formula developed by the Alameda County Paratransit Coordinating Council (PAPCO). Funds for South County will be allocated between mandated and non-mandated programs on an annual basis by the cities in that part of the County.

Jurisdictions may elect to provide special services for seniors and people with disabilities directly, or may contract with any other agency to provide a more seamless, uniform program. Agencies receiving these funds must allocate them to non-mandated services, unless they determine through a public hearing process that no unmet service needs exist. Jurisdictions which do not spend their entire allocation on non-mandated services will assign the remainder of their funds to augment the funding for ADA mandated service or for accessibility improvements to any fixed route transit service.

This program designates 1.43% of overall net sales tax receipts to be allocated by PAPCO to reduce differences that might occur based on the geographic residence of any individual needing services.

Transit Center Development Funds (0.19% overall)
These funds are available to cities in the County and to Alameda County to encourage development near transit centers. The Agency will be responsible for allocating these funds.

Capital Projects

The Plan includes Tier 1 and Tier 2 projects to ensure flexibility while providing very clear direction for funding priorities. Tier 1 projects are designed to be funded with the receipts of the sales tax, based on the current assumptions for revenue growth and construction cost escalation. Some of these projects will also receive funding from other sources. Tier 2 projects would receive sales tax funds only in the event that more funds than anticipated became available, either through changes in assumptions, or through the availability of increased funds from outside sources, such as State or Federal funds. The top priority for the Tier 2 funds is coordination of special transportation services for seniors and people with disabilities. The remaining projects on the list include expanding the scope of Tier 1 projects to fund additional segments of those projects, as well as new projects that will not receive any funds under Tier 1. Priorities for these projects will be set by the Annual Strategic Plan process and will maintain geographic equity.

Appendix B -
Projects and Programs Listed in Alphabetical Order

Tier 1 Projects

Figure B1 – Tier 1 projects

Project	Sponsor	Cost ($M)	Sales Tax ($M)
A.C. Transit Quality Bus - San Pablo, Telegraph Corridors	A.C. Transit	$20.00	$20.00
Altamont Commuter Express Rail	Alameda County CMA	$10.00	$10.00
BART Extension to South Fremont	BART	$546.30	$165.50
BART Oakland Airport Connector	BART	$130.00	$65.80
Downtown Oakland Streetscape Improvement Project	City of Oakland	$5.00	$5.00
Dumbarton Corridor Improvements	tbd	$14.70	$14.70
E. 14th St/Hesperian Blvd./ 150th St. Improvements in San Leandro	City of San Leandro	$0.83	$0.83
Emerging Projects	tbd	tbd	$7.60
Fruitvale BART Transit Village	City of Oakland/BART	$11.10	$3.50
Hesperian/Lewelling Widening in San Leandro	City of San Leandro	$1.00	$1.00
I-238 Widening	Caltrans	$102.00	$66.00
I-580 Corridor/BART to Livermore Studies	tbd	$8.70	$8.70
I-580 Eastbound Auxiliary Lane (Santa Rita to Airway)	Caltrans	$18.40	$10.00
I-580 Interchange Improvements in Castro Valley	Alameda County	$9.20	$9.20
I-680 Express Lane Improvements - Route 84 to Santa Clara County	Caltrans/Alameda County CMA	$36.00	$25.80
I-680/I-880 Cross Connector Studies	Caltrans	$2.00	$1.00
I-880/SR92 Reliever Route - Clawiter/Whitesell Interchange	City of Hayward	$19.50	$19.50
I-880 Jackson/Broadway Interchange	City of Alameda	$7.80	$6.00
Iron Horse Bicycle, Pedestrian and Transit Route	City of Dublin	$5.00	$4.50
Isabel Route 84/I-580 Interchange	City of Livermore	$55.00	$20.00
Lewelling/E. Lewelling Widening in San Lorenzo	Alameda County	$9.80	$9.80
Newark Local Streets	City of Newark	$1.20	$1.20
Oakland Local Streets/Roads	City of Oakland	$4.00	$4.00
Route 84 Expressway	City of Livermore	$70.00	$70.00
Union City Intermodal Station	City of Union City	$9.20	$9.20
Washington Avenue Interchange in San Leandro	City of San Leandro	$1.10	$1.10
Westgate Extension to Williams in San Leandro	City of San Leandro	$8.61	$8.61
Total			$568.54

Tier 2 Projects

Figure B2 –Tier 2 Projects

Project	Sponsor	Cost ($M)	Sales Tax ($M)
A.C. Transit Phase I (Oakland/Berkeley Corridor)	A.C. Transit		$2.00
A.C. Transit Quality Bus (2 additional corridors)	A.C. Transit	$44.00	$44.00
BART Airport Connector	BART	$130.00	$7.20
BART Extension to South Fremont	BART	$546.30	$85.90
BART Seismic Improvement	BART	$109.00	$109.00
BART Station at West Dublin/Pleasanton	BART	$38.40	$38.40
Dumbarton Corridor	tbd	tbd	tbd
I-580 Corridor/BART to Livermore Studies	tbd	tbd	tbd
I-580 Eastbound Auxiliary Lane (from Airway to Route 84)	Caltrans	$18.40	$8.40
I-680/I-880 Cross Connector Studies	Caltrans	$6.50	$6.50
I-880/SR92 Reliever Route Clawiter/Whitesell Interchange	City of Hayward	$15.70	$15.70
Isabel Route 84/I-580 Interchange	City of Livermore	$55.00	$35.00
Lewelling/E. Lewelling Widening in San Lorenzo	Alameda County	$6.80	$6.80
Paratransit Coordination and Service Gaps	PAPCO	$7.50	$7.50
Route 84 Expressway	City of Livermore	$70.00	$18.00
San Pablo Corridor Improvements	A.C. Transit	$19.00	$19.00

Note: The top priority for Tier 2 funds is funding special transportation services for seniors and people with disabilties. Priorities for the remaining Tier 2 projects will be set by the annual Strategic Plan process and will maintain geographic equity.

Programs

Figure B3 –Programs

Area/Agency	% of net revenues	Estimated Total in 1998 $
Mass Transit Operations		
A.C. Transit - North County	9.48%	$134,930,163
A.C. Transit - Central County	4.74%	$67,467,377
A.C. Transit - South County	1.61%	$22,878,062
A.C. Transit - Welfare to Work - North County	1.24%	$17,599,586
A.C. Transit - Welfare to Work - Central County	0.22%	$3,122,281
Altamont Commuter Express Rail - South County	1.12%	$15,937,556
Altamont Commuter Express Rail - East County	1.00%	$14,212,211
Alameda Ferries	0.78%	$11,146,405
Express Bus Service - Countywide	0.70%	$10,000,000
LAVTA	0.69%	$9,810,684
Union City Transit	0.34%	$4,816,434
Total Mass Transit Operations	21.92%	$311,920,760
Special Transportation for Seniors and People with Disabilities		
Non-Mandated - North County	1.24%	$17,599,586
Non-Mandated - Central County	0.88%	$12,489,126
Non-Mandated - East County	0.21%	$3,003,271
Consortium - North County - A.C. Transit	3.38%	48,105,536
Consortium - North County - BART	1.15%	$16,426,281
Consortium - Central County - A.C. Transit	0.76%	$10,771,871
Consortium - Central County - BART	0.34%	$4,839,536
South County *	1.06%	$15,051,357
Coordination and Gaps in Service	1.43%	$20,356,660
Total	10.45%	$148,643,224
Bike and Pedestrian Safety	**5.00%**	**$71,148,506**
Transit Center Development Funds	**0.19%**	**$2,765,207**

*Funds for South County will be allocated between mandated and non-mandated programs on an annual basis by the cities in that part of the County.

JOINT POWERS AGREEMENT

ALAMEDA COUNTY TRANSPORTATION COMMISSION

This Agreement is dated March 25, 2010 for reference purposes only.

1. PURPOSE. The purpose of this Joint Powers Agreement ("Agreement") is to create a joint powers agency pursuant to the California Joint Exercise of Powers Act that will have all of the authority, powers and rights of the Alameda County Congestion Management Agency ("ACCMA") and the Alameda County Transportation Improvement Authority ("ACTIA") and certain additional powers as described in this Agreement.

2. OBJECTIVES. The objectives of this Agreement are to:

(a) Coordinate transportation planning and conduct transportation programming within Alameda County for all countywide, regional, state and federal funding programs;

(b) Position Alameda County jurisdictions, including the Transit Operators and other transportation system operators, to better compete for limited state and federal transportation dollars;

(c) Develop a consensus on future improvements to major roads, freeways and transit services in Alameda County;

(d) Carry out the projects and programs in Alameda County's 20 Year Sales Tax Transportation Expenditure Plan, dated July 2000, as it may be amended from time to time and the responsibilities of a Local Transportation Authority pursuant to Public Utilities Code 180000 et seq., including but not limited to preparation of a new Expenditure Plan and submission of a new or extension of the existing sales tax to the voters;

(e) Complete the projects in the Alameda County Sales Tax Transportation Plan's 1986 Expenditure Plan and carry out the responsibilities of a Local Transportation Authority pursuant to Public Utilities Code 130000;

(f) Continue and sustain a Congestion Management Agency for Alameda County and its member cities;

(g) Develop and update countywide transportation policies through the Countywide Transportation Plan and the Congestion Management Program;

(h) Implement the requirements of state legislation to maintain and administer a Congestion Management Program for the County;

(i) Designate the ACTC as the Alameda County Program Manager for the Transportation Fund for Clean Air;

(j) Use where applicable the programs and policies of the County's and Cities' General Plans, the plans of the Transit Operators in Alameda County, the Alameda Countywide Transportation Plan, and the Alameda County Transportation Improvement Authority's Strategic Plan as input to the Congestion Management Program;

(k) Prepare, maintain and update the Alameda Countywide Transportation Plan;

(l) Develop and promote Bicycle and Pedestrian Plans and programs throughout the County.

(m) Coordinate multi-modal planning throughout the County and in cooperation with the Region;

(n) Develop and promote Paratransit, Transit Oriented Development and Transportation Demand Management Plans and programs throughout the County;

(o) Foster communication among Local Agencies and Transit Operators on transportation projects and issues, and on the system of roadways and transit designated in the Congestion Management Program;

(p) Fulfill the objectives of the Global Warming Solutions Act of 2006 (AB 32) and SB 375 (Steinberg 2008) and related laws and programs regarding global warming and land use for Alameda County; and

(q) Carry out other programs and projects consistent with the goals and needs of the Cities in Alameda County and the Transit Operators.

3. DEFINITIONS. Certain words as used in this Agreement shall be defined as follows:

(a) "Local Agencies" shall mean the County of Alameda, the cities of Alameda County, the Alameda County Transportation Improvement Authority and the Alameda County Congestion Management Agency.

(b) "Transit Operators" shall mean the Bay Area Rapid Transit District ("BART"), Alameda Contra Costa Transit District ("AC Transit"), Livermore Amador Valley Transit Authority, Union City Transit, Altamont Commuter Express and the Water Emergency Transportation Authority.

(c) "Member Transit Operators" shall mean BART and AC Transit.

4. EFFECTIVE DATE. This Agreement shall become effective upon the approval by the Board of Supervisors and a majority of the cities representing a majority of the population of the cities within the county.

5. CREATION OF THE ALAMEDA COUNTY TRANSPORTATION COMMISSION. There is hereby created the Alameda County Transportation Commission

("ACTC"), to exercise in the manner set forth in this Agreement the powers common to each of the Local Agencies and the Member Transit Operators. The ACTC shall be a public entity separate from the Local Agencies and the Member Transit Operators. No debt, liability or obligation of the ACTC shall constitute a debt, liability or obligation of any Local Agency or the Member Transit Operator, and each party's obligation hereunder is expressly limited only to the appropriation and contribution of such funds as may be levied pursuant to this Agreement or as the parties hereto may agree.

6. SUCCESSOR AGENCY. It is intended that ACTC shall become the successor agency to the Alameda County Congestion Management Agency and the Alameda County Transportation Improvement Authority as soon as reasonably and legally possible. ACTC is the successor agency to the Alameda County Transportation Authority.

7. FUNCTIONS AND RESPONSIBILITIES. The ACTC shall have the following functions and responsibilities:

(a) All of the functions and responsibilities of the Alameda County Congestion Management Agency.

(b) All of the functions and responsibilities of the Alameda County Transportation Improvement Authority.

(c) All of the functions and responsibilities of the Alameda County Transportation Authority.

(d) Prepare, adopt, revise, amend, administer and implement the Congestion Management Program for Alameda County pursuant to Section 65088 et seq. of the Government Code.

(e) Develop, adopt and update the Alameda Countywide Transportation Plan pursuant to Section 66531 of the Government Code.

(f) Coordinate transportation planning, conduct transportation programming within Alameda County for all transportation funding programs and coordinate with contiguous counties and other Bay Area counties.

(g) Coordinate the countywide input to:

(i) The California Clean Air Act and Transportation Control Measures of the Metropolitan Transportation Commission ("MTC") and the Bay Area Air Quality Management District ("BAAQMD");

(ii) The California Transportation Commission ("CTC") and Caltrans for funding programs;

(iii) MTC guidelines for County Transportation Plans pursuant to Government Code section 66531;

(iv) MTC's Regional Transportation Plan; and

(v) MTC's Regional Transportation Improvement Program and the CTC's State Transportation Improvement Program.

(vi) Sustainable Communities Strategic Plans in the cities in the County, the County and the region.

(h) Prepare, adopt, update and administer the federal surface transportation program, the federal congestion mitigation and air quality program, and other federal funding programs as appropriate or any successor federal funding programs.

(i) Prepare, adopt, update and administer the Alameda County element of the State Transportation Improvement Program.

(j) Act as the Alameda County Program Manager for the regional Transportation Fund for Clean Air (TFCA) program. This Agreement supersedes previous agreements relative to the TFCA program.

(k) Prepare, adopt, update and administer all other new or existing regional and state transportation funding programs and programs regarding global warming and land use as appropriate and/or as delegated to ACTC.

(l) Develop, construct, operate and maintain the Alameda County Express Lane system.

(m) Design, acquire environmental clearance, and construct transportation and related projects.

(n) Collect and administer any Vehicle Registration Fee approved by the voters to be collected by a countywide transportation planning agency in Alameda County.

(o) Levy and collect fees and charges, including administrative and operating costs, as provided in this Agreement or by law, against all entities to which the law applies, both signatory and non-signatory to this Agreement.

(p) Seek state and federal funding to pay for the cost of preparing, adopting, amending, administering and implementing the Congestion Management Plan, transportation projects and programs in Alameda County and other duties described in this Agreement.

(q) As appropriate, prepare a new Transportation Expenditure Plan for a potential new or extended or expanded sales tax to be submitted to the voters for approval.

(r) Other functions and responsibilities that are consistent with the purpose, objectives, functions and responsibilities described in this Agreement as well as any function and responsibilities that are imposed by state or federal law.

(s) Other functions and responsibilities as may be added by amendments to this Agreement pursuant to Section 19.

8. ANNUAL BUDGET. The ACTC shall adopt by June 30 of each year a budget for the succeeding fiscal year setting forth all administrative, operational and capital expenses for the ACTC, together with the apportionment of such expenses by levy against each Local Agency and Member Transit Operator. The budget shall reflect allocations to dedicated funding sources and the restrictions on salaries and benefits and on administrative expenses that apply to existing Measure B funds and any sales tax funds to be received by ACTC in the future. The fiscal year shall be July 1 to June 30. An alternative fiscal year may be established by the ACTC. The ACTC shall notify and provide a copy of the proposed budget to each Local Agency and Member Transit Operator thirty (30) days prior to the adoption of the budget.

9. BOUNDARIES. The boundaries of the ACTC shall be the boundaries of the County of Alameda.

10. ORGANIZATION.

(a) Board. The ACTC shall be governed by the board which shall exercise all powers and authority on behalf of the ACTC. The governing Board of the ACTC is empowered to establish its own procedures. The Board may do any and all things necessary to carry out the purposes of this Agreement.

(b) Board membership. The ACTC Board shall be composed as follows:

(i) Each member of the Alameda County Board of Supervisors who shall each have one vote, except that at each ACTC Board meeting, the Supervisor actually present at the meeting with the longest service on the Board of Supervisors shall have two votes;

(ii) Two members representing the City of Oakland, with the member with the longest service on ACTC (or previously on ACCMA or ACTIA) having three votes and the other member having one vote;

(iii) One member representing the City of Fremont and one member representing the City of Hayward, each of whom shall have two votes;

(iv) Eleven members each representing one of the other 11 Cities in Alameda County, each of whom shall have one vote; and

(v) One representative of BART and one representative of AC Transit, each of whom shall have one vote.

(vi) Notwithstanding the foregoing, only members of bodies who have paid or allocated the fees set by the ACTC Board shall be entitled to be members of the ACTC Board.

(c) Members and Alternates. All members and alternates shall be elected officials, and shall be appointed as follows:

(i) All members and alternates representing a City shall be either that City's mayor or a member of the City Council for such City. If a member representing a City has more than one vote, as set forth in subsection **(b)** above, his or her alternate shall carry the same number of votes as the absent member.

(ii) All members and alternates representing a Member Transit District shall represent a district or ward primarily or fully contained within Alameda County or be a director elected at-large.

(iii) All alternates and members other than the members of the Board of Supervisors will be chosen in the manner determined by their respective City Council or Board.

(iv) The alternate to each member of the Board of Supervisors shall be appointed by the respective Board member, and shall be a mayor or city council member of a City primarily or fully contained within the Supervisor's District, who is not otherwise a voting member of ACTC. Each such alternate shall have only one vote at an ACTC Board meeting, notwithstanding subsection **(b)(i)** above.

(v) Upon execution of this Agreement, and pursuant to subsection **(c)** above, the governing body of each agency other than the Board of Supervisors having representation on the ACTC Board shall appoint a member to the Board and an alternate member, and the City of Oakland shall appoint two members and one or two alternates, who shall serve on the Board in the absence of the regular member. The term of each member other than the Board of Supervisors, who shall serve so long as they are a member of the Board of Supervisors, shall be one year. Each member and alternate shall hold office from the first meeting of the ACTC Board after his or her appointment until a successor is selected, or until such member or alternate is no longer an elected official, whichever is first. Each member and alternate shall serve at the pleasure of the appointing body or person.

(d) Chairperson and Vice-Chairperson. The ACTC Board will annually select a chairperson and vice-chairperson from among its members, by nomination and vote.

(e) Meetings of the ACTC Board.

(i) Regular Meetings. The ACTC Board shall hold regular meeting each month, as determined by the ACTC Board; the Board may decide it is not necessary to meet in any particular month. The date, hour and place at which each such regular meeting shall be fixed by the ACTC Board.

(ii) Special Meetings. Special meetings of the ACTC Board may be called in accordance with applicable provisions of law.

(iii) Notice of Meetings. All meetings of the ACTC Board shall be held subject to the provisions of the Ralph M. Brown Act, being sections 54950 et seq. of the

Government Code, and other applicable laws of the State of California requiring notice of meetings of public bodies to be given.

(iv) Quorum. A majority of the members of the ACTC Board, by numbers rather than voting power, shall constitute a quorum for the transaction of business, except that less than a quorum may adjourn from time to time.

(v) Meeting Compensation. The ACTC Board is authorized to fix a reasonable sum to be paid elected officials for attendance at ACTC Board and committee meetings and meetings of other agencies while on ACTC business. Such compensation shall cover mileage and other costs associated with meeting attendance.

(f) By-Laws. The ACTC Board shall adopt from time to time such by-laws and/or administrative codes, rules or regulations for the conduct of its affairs as may be required. At a minimum the by-laws or administrative code shall include guidelines and procedures related to the finding of non-conformance with the Congestion Management Program.

(g) Technical Advisory Committee. The Alameda County Transportation Advisory Committee ("ACTAC") will function as the technical advisory committee to the ACTC. The ACTAC shall be composed of: one staff representative of ACTC, who shall serve as chair of the ACTAC; one staff representative of each city and the County; one staff representative of each Transit Operator; and one staff representative each of MTC, Caltrans and BAAQMD. The ACTC Board may add additional representatives to ACTAC. Each representative shall have one vote. A majority of the members shall constitute a quorum for the conduct of business. Staff representatives for Local Agencies are expected to be selected from the public works and planning departments. ACTAC may form subcommittees as necessary.

(h) Citizens' Watchdog Committee. The Citizens' Watchdog Committee as described in the Alameda County 2000 Transportation Expenditure Plan shall be appointed as and have the powers specified in that Plan regarding the expenditure of ACTIA funds.

(i) Other Committees. The ACTC Board may establish standing and special committees, which may include members of the Board, representatives of other agencies, and/or members of the public as necessary to accomplish its responsibilities under this Agreement.

11. POWERS. The ACTC is hereby authorized in its own name to perform all acts necessary for the exercise of said powers including but not limited to the following:

(a) To make and enter into contracts;

(b) To apply for and accept grants, advances and contributions;

(c) To employ or contract for the services of agents, employees, consultants and such other persons or firms as it deems necessary;

(d) To make plans and conduct studies and to review, recommend or adopt revisions or amendments thereto to the extent allowed by law;

(e) To acquire, construct, manage, maintain, operate and control any building, transportation services, public or private works or improvements necessary to perform its functions under this Agreement;

(f) To acquire, hold or dispose of property necessary to perform its functions under this Agreement, including the power to acquire property by eminent domain to the extent allowed by state law;

(g) To sue and be sued in its own name;

(h) To incur debts, liabilities or obligations, subject to limitations herein set forth;

(i) To levy and collect fees and charges, including administrative and operating costs, as provided in this Agreement or by law, against all entities to which the law applies, both signatory and non-signatory to this Agreement;

(j) To adopt, as authorized by law, ordinances or resolutions necessary to carry out the purposes of this Agreement;

(k) To seek regional, state and federal funding to assist in paying the cost of carrying out the duties described in this Agreement, including but not limited to preparing, adopting, amending, administering and implementing the Congestion Management Program, the programs and projects described in the Alameda County 2000 Transportation Expenditure Plan and activities described in this Agreement; and

(l) To recommend, adopt and amend the Congestion Management Program to the extent allowed by law.

(m) To exercise any and all other powers that may be exercised by members of ACTC.

12. VOTE REQUIRED. A majority of the voting power of those present and voting shall be required for all actions of the ACTC; except that a two-thirds vote of the total voting power shall be required to amend the Alameda County 2000 Transportation Expenditure Plan.

13. STAFFING. The ACTC may appoint and retain staff as necessary to fulfill its powers, duties and responsibilities under this Agreement, including but not limited to appointment of temporary or permanent staff and contracting with any Local Agency.

14. RESTRICTION UPON EXERCISE OF POWER OF ACTC. This Agreement is entered into under the provisions of Government Code section 6500 et seq. concerning joint powers agreements. The powers to be exercised hereunder shall be subject to the restrictions set forth herein. The manner of exercising powers granted ACTC by this Agreement shall be subject to the same restrictions as imposed upon the County of Alameda.

15. FUNDS, AUDIT AND ACCOUNTING SERVICES. Pursuant to the requirements of Section 6505.5 and 6505.6 of the Government Code, and prior to taking

possession of any monetary assets from any predecessor agencies, ACTC shall appoint a finance manager, chief financial officer or similar employee of ACTC to be the depositary and to have custody of all funds from whatever source, and to comply with the duties and responsibilities of the offices of treasurer and auditor as set forth in subdivisions (a) to (d), inclusive, of Section 6505.5.

There shall be strict accountability of all funds and the designated employee shall report to the ACTC Board all receipts and disbursements. In addition, the ACTC Board shall contract for an audit of the accounts and records at least annually as prescribed by section 6505 of the Government Code. In each case the minimum requirements of the audit shall be those prescribed by the State Controller for special districts under section 26909 of the Government Code and the audit shall conform to generally accepted auditing standards.

16. DISPOSITION OF ACTC FUNDS UPON TERMINATION.

(a) In the event of termination of the ACTC where there is a successor public entity which will carry on the activities of the ACTC and assume its obligations, ACTC funds, including any interest earned on deposits, remaining upon termination of the ACTC and after payments of all obligations shall be transferred to the successor public entity.

(b) If there is no successor public entity which would carry on any of the activities of the ACTC or assume any of its obligations, ACTC funds, including any interest earned on deposits, remaining upon termination of the ACTC and after payment of all obligations, shall be returned in proportion to the contribution of each local jurisdiction during the term of this Agreement.

17. PROCEDURE FOR BECOMING A SIGNATORY TO THIS AGREEMENT. Cities incorporated and transit agencies established after the effective date of this Agreement may become signatories to this Agreement by petition to the ACTC Board.

18. SPECIAL PROVISIONS. The signatories to this Agreement desire to continue levying a fee for the purpose of defraying the cost of preparing, maintaining, administering and implementing the Congestion Management Program, the Countywide Transportation Plan and other functions of the ACCMA. Therefore, by their signatures hereon, the signatories delegate to the ACTC the power to levy such a fee upon the signatories for the purpose of defraying the costs of preparing, maintaining, administering and implementing the Congestion Management Program and other duties of the ACTC as specified in this Agreement. It is presumed that such fees will be paid from fuel tax subventions to local government, and/or any other funds available for the purpose. If a portion of all of the fees is to be paid from fuel tax subventions, the ACTC may request the State Controller to subvene those fees directly to the ACTC.

If fees are levied against Local Agencies, such fees shall be assigned based on the proportion the Local Agency's Proposition 111 fuel tax subventions bear to the total of Proposition 111 fuel tax subventions for all Local Agencies. If fees are levied against the Member Transit Operators, such fees shall be assigned to each Member Transit Operator according to an equitable formula.

Failure to provide its share of the adopted fee to the ACTC shall be deemed to constitute

non-conformance with the requirements of the Congestion Management Program for the affected Local Agency. The ACTC shall notify the State Controller of the Local Agency's non-conformance.

19. AMENDMENTS. This Agreement may be amended by the affirmative vote of the Board of Supervisors and a majority of the cities representing a majority of the population.

20. NOTICES. All notices to agencies shall be deemed to have been given when mailed to the governing body of each member agency.

IN WITNESS WHEREOF, each agency has executed approval of this Agreement and filed said approval with the Clerk of the County of Alameda. This Agreement may be executed in counterparts, each of which shall be deemed an original, but all of which counterparts together shall constitute one and same instrument.

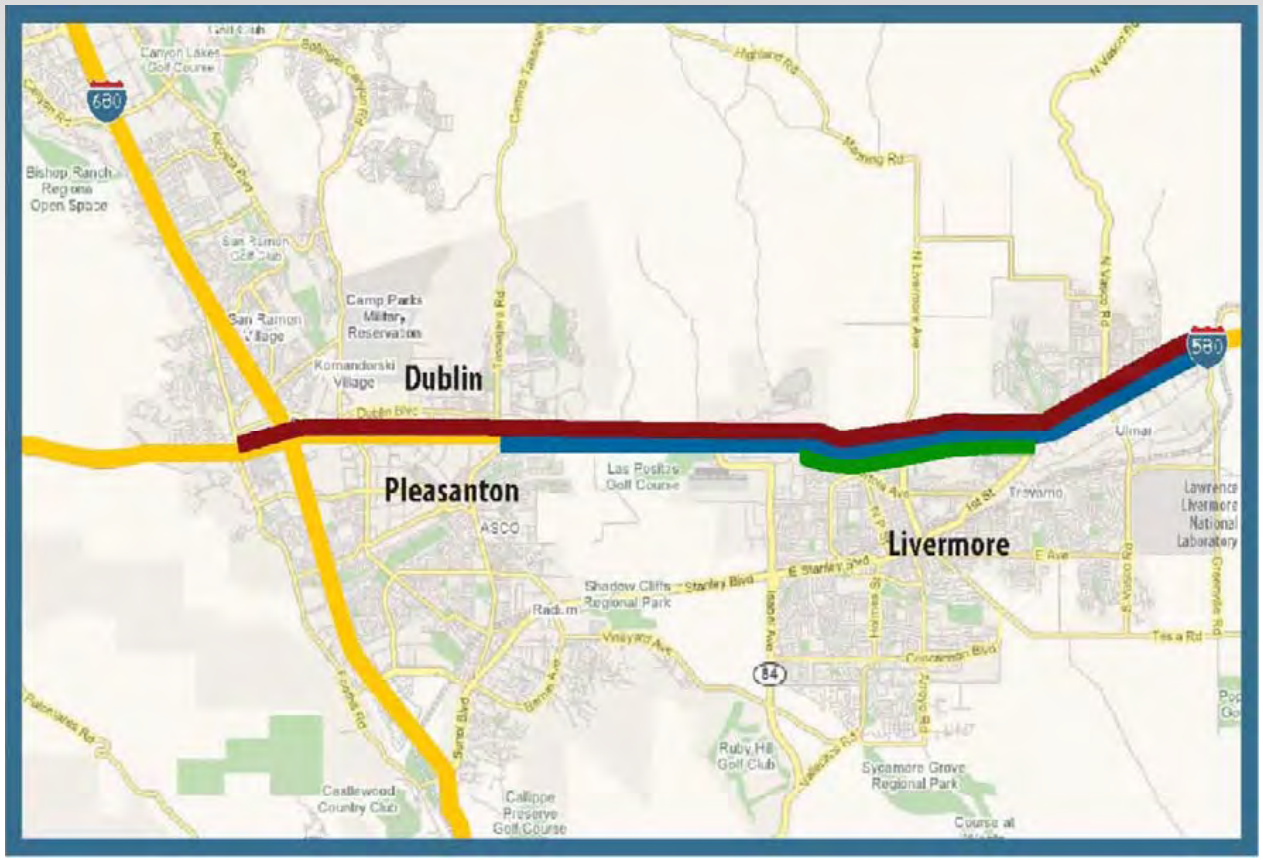
I-580 Corridor Improvement Projects

Project Delivery Strategy and Status Update

Presentation to Alameda County Transportation Commission
Program and Projects Committee
April 11, 2011

Purpose of Presentation

- **Provide an update on the status, scope, cost, and schedule of the I-580 Corridor Express (HOT) Lane Projects including a project delivery plan for the I-580 WB Express Lane.**



Inventory of Current I-580 Corridor Projects

- **Eastbound I-580 HOV Lane Project** (Hacienda Drive to Greenville Road)
  - Includes Rehabilitation within project limits
- **Eastbound Auxiliary Lane Project** (Isabel Avenue to First Street)
- **Eastbound HOT Lane Project Conversion** (Hacienda Dr to Greenville Rd)
- **Westbound I-580 HOV Lane Project** (Foothill Blvd to Greenville Rd)
  - Includes Rehabilitation within project limits (Pending Fund Allocation)
- **Westbound HOT Lane Conversion Project** (Foothill Blvd to Greenville Rd)
- **I-580 Traffic Management Plan & Corridor Management**
- **I-580 Landscaping & Environmental Mitigation**
- **I-580/Isabel Avenue Interchange Project**
- **Eastbound Truck Climbing Lane Project** (Greenville Rd to North Flynn Rd)
- **I-580/I-680 Interchange Improvements Study**

I-580 Corridor Projects – Vicinity Map

Eastbound Aux Lane Limits

Eastbound HOT Lane Limits

Westbound HOV/HOT Lane Limits

I-580 CORRIDOR IMPROVEMENTS

Eastbound I-580 HOV Lane Project

- Constructed via two construction contracts
  - Segment 1 – Portola to Greenville
    - HOV Lane opened October 2009
  - Segment 2 – Hacienda to Portola
    - HOV Lane opened November 2010

Eastbound I-580 HOV Lane Project

- **Segment 1 Status**
  - Contract Acceptance – February 2, 2010
  - Final Contract Cost – $41,214,986.52
- **Segment 2 Status**
  - Contract is suspended to accommodate Isabel I/C Project. Remaining work, pavement rehabilitation between Portola and Airway, will commence August 2011.
  - Estimated Date of Contract Acceptance: December 2011
  - Estimated Contract Cost - $32,700,000

Eastbound I-580 HOV Lane Project – Programmed Funding (In $Mil)

	CMIA	STIP	TCRP (LONP)	SHOPP	RM2	TCRP	FED	TVTC	TOTAL

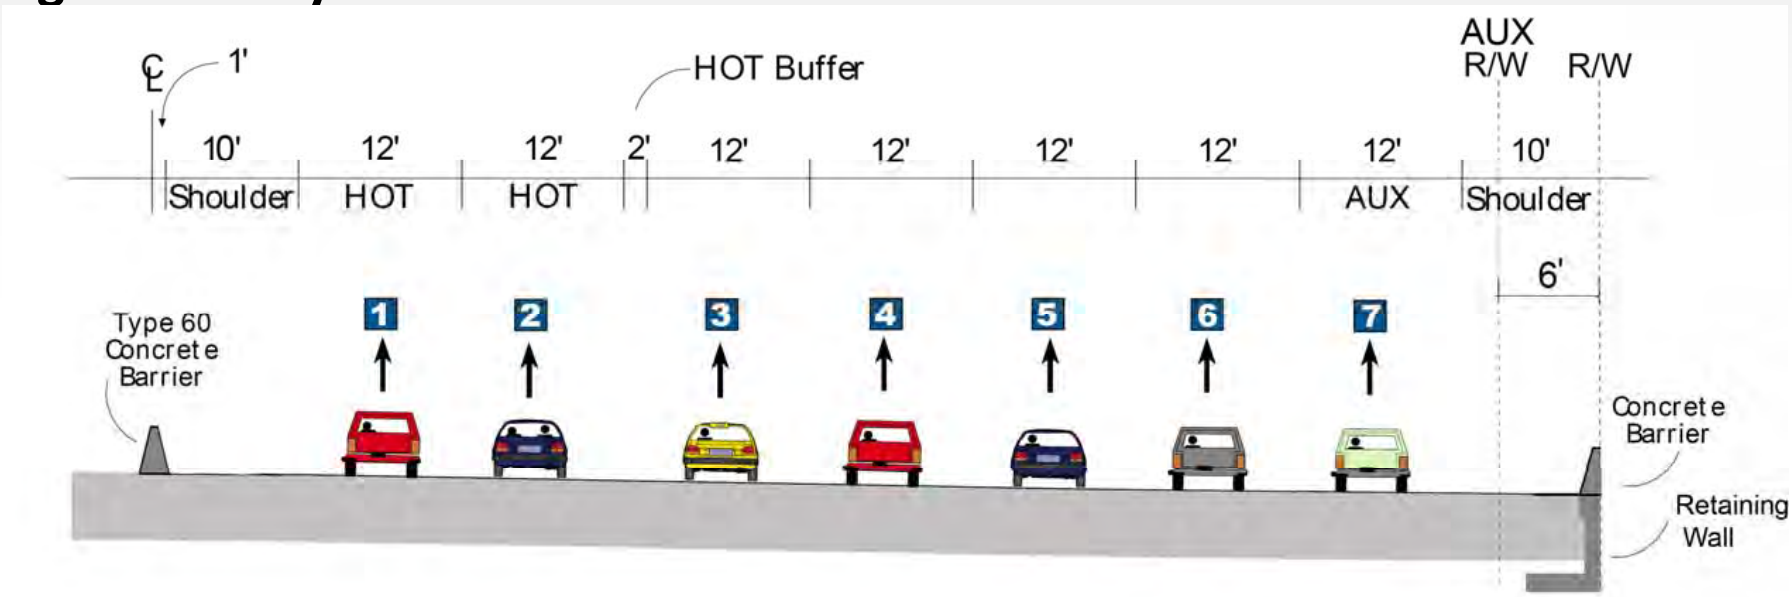
TOTAL	52.13	17.67	18.00	27.00	6.00	7.00	5.30	0.60	133.70

Total Project Cost: $133.70 M

I-580 Eastbound Auxiliary Lanes Project – Isabel Avenue to First Street



- **Environmental documentation is being prepared through a second revalidation of the original EB I-580 HOV Lane Project environmental document**
  - **Includes the road bed width necessary for a standard double HOT Lane.**
- **Currently at 95% PS&E:**
  - **95% PS&E must be revised to include additional width to accommodate a double HOT Lane.**
  - **Includes sound wall that was deleted from the I-580/Isabel Avenue Interchange Project.**
  - **Plan to add additional HOT Lane scope for construction.**

I-580 Eastbound Auxiliary Lanes Project with HOT Lane

- **Will accommodate conversion of the recently constructed EB HOV Lane to a double HOT lane facility with <u>standard shoulder and lane widths.</u>**

- **Aux Lane PS&E will be revised to accommodate HOT Lane Project. HOT lane design currently at PA&ED level.**

I-580 Westbound HOT Lane

Westbound HOT Lanes

Project Location:

I-580 WB from Greenville Road in Livermore to Foothill Road in Dublin

Status:

Feasibility, Revenue and Traffic Operations Report preparation underway.

Upcoming Contracts:

Alameda CTC issued RFP for PSR/PR in March 2011. RFP for System Manager Planned for April 2011

I-580 Westbound HOT Lane Project
Current Status

- I-580 Westbound HOTL Feasibility Report, Traffic Operations Analysis Report (TOAR) and Revenue Analysis scheduled to be completed in June 2011
- Alameda CTC issued RFP to prepare a PSR/PR (Project Approval) in March 2011; Approved contract expected in June 2011
- RFP for I-580 and I-680 Corridors System Manager will be issued in April 2011
- The project delivery plan has been discussed with Caltrans, owner of the facility and MTC, owner of the Regional Hot Lane Network

I-580 Westbound HOT Lane Project
Project Implementation

The project implementation plan for the Westbound Express Lane Project includes the following:

- **Conversion of the I-580 westbound HOV lane to a single express lane, with conversion to a double HOT lane to occur in the future, when necessary**
- **Project Approval will come in the form of a revalidation of the I-580 WB HOV lane project document and approval of a PSR/PR**
- **Civil elements will be incorporated in to the I-580 westbound HOV lane project via CCO after westbound HOT project approval.**
- **Development of the Electronic Toll System and preparation of the required cooperative, interface, enforcement, and tolling agreements will occur concurrently with design**

I-580 Westbound HOT Lane Project
Project Implementation

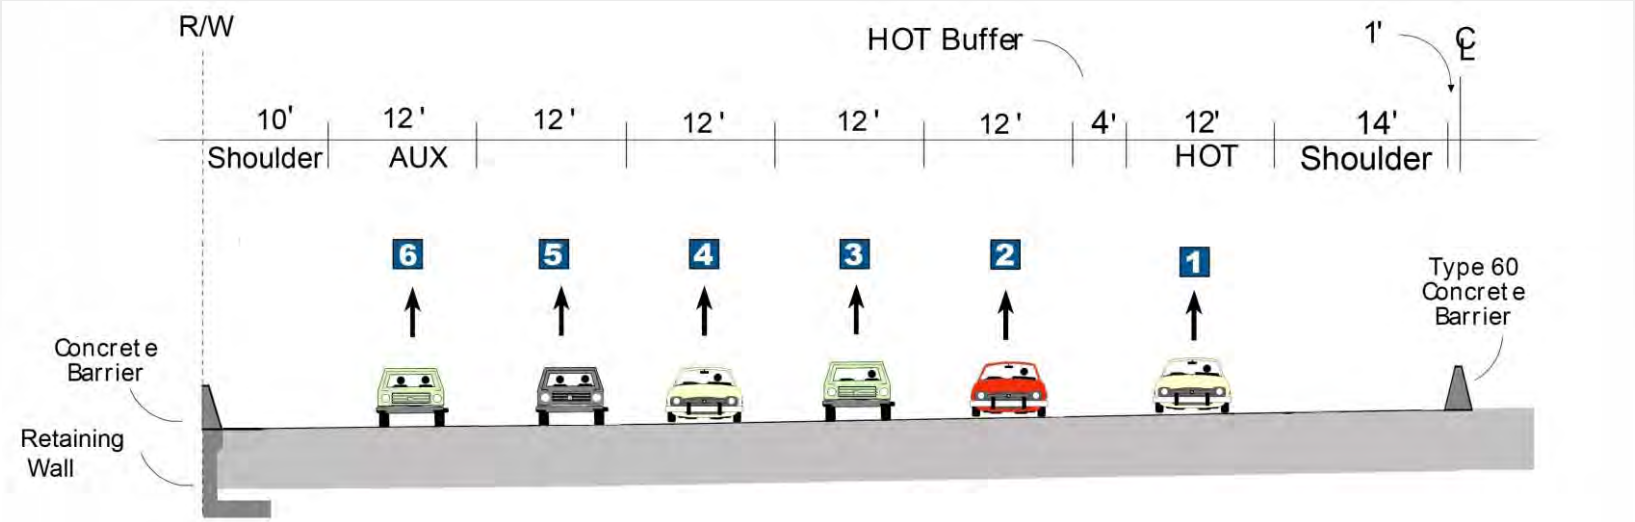
Issues to be Finalized During Preparation of PSR/PR:

- Approval of necessary Design Exceptions (Minimal with single lane option)
- Location of Ingress/Egress (to be determined by Traffic Operations & Analysis Report)
- Location of Enforcement Areas
- Striping
- Location of signs, toll gantries & CCTV

I-580 Westbound HOT Lane Project
System Manager

RFP for System manager will include one System Manager for I-680 and I-580 HOT lane corridors. System Manager tasks include :

- Concept of operations
- Enforcement Plan
- Systems Engineering Management Plan (SEMP)
- Expression of Interest
- Preparation of RFP for System Integrators
- Assisting Alameda CTC Staff with the management of System Integrator contracts
- Assisting with the development of corridor Tolling Policies.



Project Issues

- Westbound HOT funded for scoping, project approval and design only. Source of System Integrator and construction funding in the amount of $12.1 Million yet to be determined.
- Project will construct a single HOT lane. Conversion to double HOT lane will be a future project.
- Current design and estimate assumes utilization of existing pavement with no additional widening and no additional R/W (Constructing a single HOT lane mitigates this issue).
- Tolling Policy for westbound I-580 needed finalize TOAR and revenue Forecast.

I-580 Westbound HOT Lane

Typical cross section for single WB HOT lane

Note: Scheduled to have HOT infrastructure in place for WB HOV opening as HOT

Discussion

Alameda County Transportation Commission Implementation Guidelines for the Local Streets and Roads Program Funded through Measure B and Vehicle Registration Fees

(Adopted December 16, 2011)

Section 1. Purpose

A. To delineate the eligible uses of Local Streets and Roads funds authorized under Alameda County Transportation Commission Master Program Funding Agreements, these implementation guidelines have been developed to specify the requirements that local jurisdictions must follow in their use of Measure B and Vehicle Registration Fees (VRF) pass-through funds. These guidelines are incorporated by reference in the Master Program Funding Agreements. All other terms and conditions for programs are contained in the agreements themselves. The intent of the implementation guidelines is to:

1. Provide guidance on Local Streets and Roads funds eligible uses and expenditures.
2. Define the terms in the Master Program Funding Agreements.
3. Guide Local Streets and Roads Program implementation.

Section 2. Authority

A. These Implementation Guidelines have been adopted by the Alameda County Transportation Commission and set forth eligible uses and expenditures for the Local Streets and Roads funds. The Alameda CTC may update these guidelines on an as-needed basis and will do so with involvement of its technical and community advisory committees (as applicable). Exceptions to these guidelines must be requested in writing and be approved by the Alameda CTC Board.

Section 3. Background

A. Alameda CTC developed Implementation Guidelines for the Local Streets and Roads funds to clarify eligible fund uses and expenditures in association with new, 10-year Master Program Funding Agreements for the November 2000 voter-approved Measure B pass-through funds. The Expenditure Plan allocates 22.34 percent of Measure B funds for Local Streets and Roads programs and projects. The original program funding agreements for Measure B pass-through funds expired in spring 2012, and Alameda CTC put in place the new Master Program Funding Agreements to continue fund allocations for the remaining term of Measure B funds allocations through June 2022. In addition, the Master Program Funding Agreements include a new local, voter-approved revenue stream, the Vehicle Registration Fee (VRF), which will provide approximately $11 million per year for transportation improvements throughout the County. The VRF includes 60 percent of net revenues for a Local Streets and Roads Program. These Implementation Guidelines define the eligible uses and allocation process for the Measure B and VRF Local Streets and Roads funds and reflect new policies approved by the Alameda CTC.

Section 4. Definition of Terms

A. **Alameda CTC:** The Alameda County Transportation Commission is a Joint Powers Authority created by the merger of the Alameda County Congestion Management Agency, which performed long-range planning and funding for countywide transportation projects and programs, and the Alameda County Transportation Improvement Authority, which administered the voter-approved, half-cent transportation sales taxes in Alameda County (the Measure B sales tax programs approved in 1986 and 2000).

B. **Bike parking:** Bike racks and lockers, bike shelters, attended bike parking facilities, and bike parking infrastructure.

C. **Bikeways and multiuse paths:** Bike lanes, bike boulevards, sidepaths, bike routes, multiuse pathways, at-grade bike crossings, and maintenance of bikeway facilities.

D. **Bridges and tunnels:** Crossings above or below grade for bicycles, pedestrians, and/or autos and transit.

E. **Capital project:** A capital investment that typically requires the following phases: planning/feasibility, scoping, environmental clearance, design, right-of-way, construction, and completion.

F. **Complete Street:** A transportation facility that is planned, designed, operated, and maintained to provide safe mobility for all users, including bicyclists, pedestrians, transit vehicles, truckers, and motorists, appropriate to the function and context of the facility. Complete street concepts apply to rural, suburban, and urban areas. (Caltrans definition)

G. **Complete Streets Act of 2008:** The California Complete Streets Act (Assembly Bill 1358) was signed into law in September 2008. It requires that local jurisdictions modify their general plans as follows:

"(A) Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.

(B) For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors."

H. **Construction:** Construction of a new capital project, including development of preliminary engineering and construction documents, including plans, specifications, and estimates (PS&E).

I. **Cost Allocation Plans (CAPs):** CAPs and indirect cost (IDC) rate proposals are plans that provide a systematic manner to identify, accumulate, and distribute allowable direct and indirect costs to Local Streets and Roads programs funded through the Alameda CTC Master Program Funding Agreements.

J. **Direct cost:** A cost completely attributed to the provision of a service, operations, a program, a capital cost, or a product. These costs include documented hourly project staff

labor charges (salaries, wages, and benefits) that are directly and solely related to the implementation of the Alameda CTC-funded Local Streets and Roads projects, consultants, and materials. These funds may be used for travel or training if they are directly related to the implementation of the Local Streets and Roads funds.

K. **Education and promotion:** Marketing, education, information, outreach, and promotional campaigns and programs.

L. **Environmental documents**: Preparation of environmental documents, such as those related to the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA), or permits required by state or federal permitting agencies.

M. **Equipment and new vehicles:** Purchase or lease of vehicles and equipment for service improvements, such as information dissemination, fare collection, etc.

N. **Grants**: Funding for plans, programs, or projects based on a competitive call for projects; evaluated based on adopted evaluation criteria; and allocated based on a reimbursement basis.

O. **Indirect cost:** Also known as "overhead," any cost of doing business other than direct costs. These costs include utilities, rent, administrative staff, officers' salaries, accounting department costs, and personnel department costs, which are requisite for general operation of the organization but are not directly allocable to a particular service or product.

P. **Maintenance:** Repairs, renovation, or upgrade of existing facility or infrastructure.

Q. **Measure B:** Alameda County's half-cent transportation sales tax, originally approved in 1986, and reauthorized by voters in November 2000. Collection of the sales tax began on April 1, 2002. Administered by the Alameda CTC, Measure B funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

R. **Operations:** Provision of services that operate transportation facilities and programs. Operations costs do not include the costs to operate community outreach or other programs not directly related to a specific transportation service, program, or product.

S. **Pass-through funds:** Funds allocated based on a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter-approved measure and provided to eligible jurisdictions on a regularly scheduled basis (such as a regular monthly payment).

T. **Pedestrian crossing improvements:** At-grade pedestrian crossing improvements such as crosswalks, roadway/geometric changes, or reconfiguration specifically benefiting pedestrians.

U. **Planning:** Identification of project and program current conditions and needs and development of strategies and plans to address the identified needs.

V. **Planning area:** Four geographical sub-areas of the county (Planning Areas 1, 2, 3, and 4). The sub-areas of the county are defined by the Alameda CTC as follows:

1. Planning Area 1 – North Area: Cities of Alameda, Albany, Berkeley, Emeryville, Oakland and Piedmont

2. Planning Area 2 – Central Area: Cities of Hayward and San Leandro, and the unincorporated areas of Castro Valley and San Lorenzo, as well as other unincorporated lands in that area

3. Planning Area 3 – South Area: Cities of Fremont, Newark, and Union City

4. Planning Area 4 – East Area: Cities of Dublin, Livermore, and Pleasanton, and all unincorporated lands in that area

W. **Project completion/closeout:** Inspection/project acceptance, final invoicing, final reporting, and the processes for closing out a project.

X. **Scoping and project feasibility:** Early capital project phases that identify project needs, costs, and implementation feasibility.

Y. **Sidewalks and ramps:** New sidewalks, sidewalk maintenance, curb ramps, and stairs/ramps for pedestrian and Americans with Disabilities Act access.

Z. **Signage:** Warning, regulatory, wayfinding, or informational signage.

AA. **Signals:** New traffic signals or crossing signals, signal upgrades, countdown signals, audible signals, or signal timing improvements.

BB. **Street resurfacing and maintenance:** Repaving and resurfacing of on-street surfaces, including striping.

CC. **Traffic calming:** Infrastructure primarily aimed at slowing down motor vehicle traffic.

DD. **Vehicle Registration Fee (VRF):** Measure F, Alameda County's VRF Program, approved by the voters in November 2010 with 63 percent of the vote. It will generate approximately $11 million per year through a $10 per year vehicle registration fee. Administered by the Alameda CTC, the VRF funds four main types of programs and the distribution percentage is as follows: local streets and roads (60 percent); transit (25 percent); local transportation technology (10 percent); and bicycle and pedestrian projects (5 percent).

Section 5. Local Streets and Roads Fund Allocations

A. These Implementation Guidelines provide guidance on the Local Streets and Roads Fund allocation process for Measure B and VRF pass-through funds.

1. Measure B Local Streets and Roads Pass-through Funds

a. *General:* Alameda CTC distributes Measure B Local Streets and Roads Pass-through Funds to cities in the county and to Alameda County to be spent on transportation capital improvements for surface streets and arterial roads, and maintenance and upkeep of local streets and roads, including repaving streets, filling potholes, and upgrading local transportation infrastructure. These funds are intended to maintain and improve local streets and roads in Alameda County, and may be used for any local transportation need based on local priorities, including streets and roads

projects, local transit projects, bicycle and pedestrian projects, projects (sponsored by others) that require local agency support, and other transportation uses as approved through a public process by the jurisdiction.

The pass-through funds constitute 100 percent of the total Measure B Local Streets and Roads funds. Each city and Alameda County will receive their proportional share (which share shall be adjusted annually as described in the Master Program Funding Agreement) of the local transportation pass-through funds within their sub-area based on a formula weighted 50 percent by the population of the jurisdiction within the sub-area and 50 percent on the number of road miles within the sub-area. These funds are allocated on a monthly basis directly to each city and the County. These funds must be placed in a separate account from the VRF Funds.

b. *Eligible Uses:* The Measure B Local Streets and Roads pass-through funds may be used for capital projects, programs, maintenance, or operations that directly improve local streets and roads and local transportation. Eligible uses for these funds include, but are not necessarily limited to:

1) Capital projects, including:

a) All phases of capital projects, including feasibility studies, planning, and environmental

b) Upgrades to or installation of new local streets and roads infrastructure including installation of streets, roads, and highways

c) Street resurfacing and maintenance including repaving and resurfacing of on-street surfaces including striping

d) Improvements or upgrades to bridges and tunnels

e) Installation of or upgrades to sidewalks and curb ramps

f) Americans with Disabilities Act (ADA) on-street improvements, including sidewalk upgrades and curb ramp installations

g) Purchase or lease of equipment or new vehicles for local streets and roads improvements

h) Crossing improvements including traffic signals, signage, and traffic lights (at intersections, interchanges, railroads, freeways, etc.) for drivers, pedestrians, and bicyclists

i) Improvements to or installation of new pedestrian facilities (e.g., sidewalks, curb ramps, countdown signals, accessible signals, at-grade bike crossings)

j) Improvements or upgrades to or installation of new bikeways (such as bicycle routes, boulevards, lanes, multi-use pathways)

k) Maintenance of or installation of bicycle and pedestrian facilities, including construction, maintenance, and operations of bike parking facilities.

l) Pedestrian and bicycle access improvements to, from and at transit facilities

m) Traffic calming projects

2) Transit system operations, operations of traffic signal system controls and interconnections, and corridor monitoring and management

3) Mass transit project operations including bus, ferry, shuttle, rail, and Welfare to Work services

4) Paratransit services

5) Direct staff and consultant costs that support eligible activities, including the end-of-year compliance report

6) Direct staff training costs directly related to implementation of projects or programs implemented with the Local Streets and Roads Funds

c. *Ineligible Uses:* The following is a list of ineligible uses of Measure B Local Streets and Roads pass-through funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities not related to transportation

2) Capital projects, programs, maintenances, or operations that do not directly improve local streets and roads and local transportation

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan

d. *List of Projects/Programs:* All projects and programs that use Measure B Local Streets and Roads pass-through funds must receive governing board approval prior to the jurisdiction expending the pass-through funding on the project/program. This approval allows the opportunity for the public to provide input on planning for local streets and roads projects. These projects and programs must be included in any of the following, as long as they have been adopted by the jurisdiction's governing board:

1) List of projects on which to specifically spend Measure B funds

2) Local Streets and Roads Master Plan with priority projects

3) Capital Improvement Program

4) A resolution, such as to submit a grant application

Furthermore, the jurisdiction must submit to Alameda CTC the list of projects/programs on which the jurisdiction will spend Measure B pass-through funding in advance of expending the funds. The jurisdiction must submit projects and programs to the Alameda CTC through the annual end-of-year compliance report for Measure B funds.

2. VRF Local Streets and Roads Pass-through Funds

a. *General:* Alameda CTC distributes VRF Local Streets and Roads Pass-through Funds to cities in the county and to Alameda County to be spent on transportation capital improvements for surface streets and arterial roads, and maintenance and upkeep of local streets and roads. These funds are intended to maintain and improve local streets and roads as well as a broad range of facilities in Alameda County (from local to arterial facilities).

The pass-through funds constitute 100 percent of the total VRF Local Streets and Roads funds and are distributed among the four planning areas of the county. VRF local streets and roads pass-through funds within the geographic planning area are based on a formula weighted 50 percent by the population of the jurisdiction within the planning area and 50 percent of the number of registered vehicles in the planning area. VRF local streets and roads funds will be distributed by population within a planning area. Allocations may change in the future based on changes in population and number of registered vehicle figures. Recipients are not required to enter into a separate agreement with Alameda CTC prior to receipt of such funds. Agencies will maintain all interest accrued from the VRF Local Road Program pass through funds within the program. These funds are allocated on a monthly basis directly to each city and the County. These funds must be placed in a separate account from the Measure B Funds.

b. *Eligible Uses:* The VRF Local Streets and Roads pass-through funds may be used for improving, maintaining, and rehabilitating local roads and traffic signals. It will also incorporate the Complete Streets practice that makes local roads safe for all modes, including bicyclists and pedestrians, and accommodates transit. Eligible uses for these funds include, but are not necessarily limited to:

1) Street repaving and rehabilitation, including curbs, gutters and drains

2) Traffic signal maintenance and upgrades, including bicyclist and pedestrian treatments

3) Signage and striping on roadways, including traffic and bicycle lanes and crosswalks

4) Sidewalk repair and installation

5) Bus stop improvements, including bus pads, turnouts and striping

6) Improvements to roadways at rail crossings, including grade separations and safety protection devices

7) Improvements to roadways with truck or transit routing

c. *Ineligible Uses:* The following is a list of ineligible uses of VRF Local Streets and Roads pass-through funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities that are not related to transportation

2) Projects or programs that are not directly related to streets and roads improvements

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

Section 6. Complete Streets Policy Requirement

A. To receive Measure B and VRF funds, local jurisdictions must do both of the following with respect to Complete Streets policies:

1. Have an adopted Complete Streets policy, or demonstrate that a policy is being developed and will be adopted by June 30, 2013. This policy should include the "Elements of an Ideal Complete Streets Policy" developed by the National Complete Streets Coalition (http://www.completestreets.org/webdocs/policy/cs-policyelements.pdf). Resources will be developed by the Alameda CTC to assist local jurisdictions with developing and implementing complete streets policies.

2. Comply with the California Complete Streets Act of 2008. The California Complete Streets Act (AB1358) requires that local general plans do the following:

a. Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.

b. For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors.

The Governor's Office of Planning and Research has developed detailed guidance for meeting this law: *Update to the General Plan Guidelines: Complete Streets and the Circulation Element* (http://www.opr.ca.gov/planning/docs/Update_GP_Guidelines_Complete_Streets.pdf).

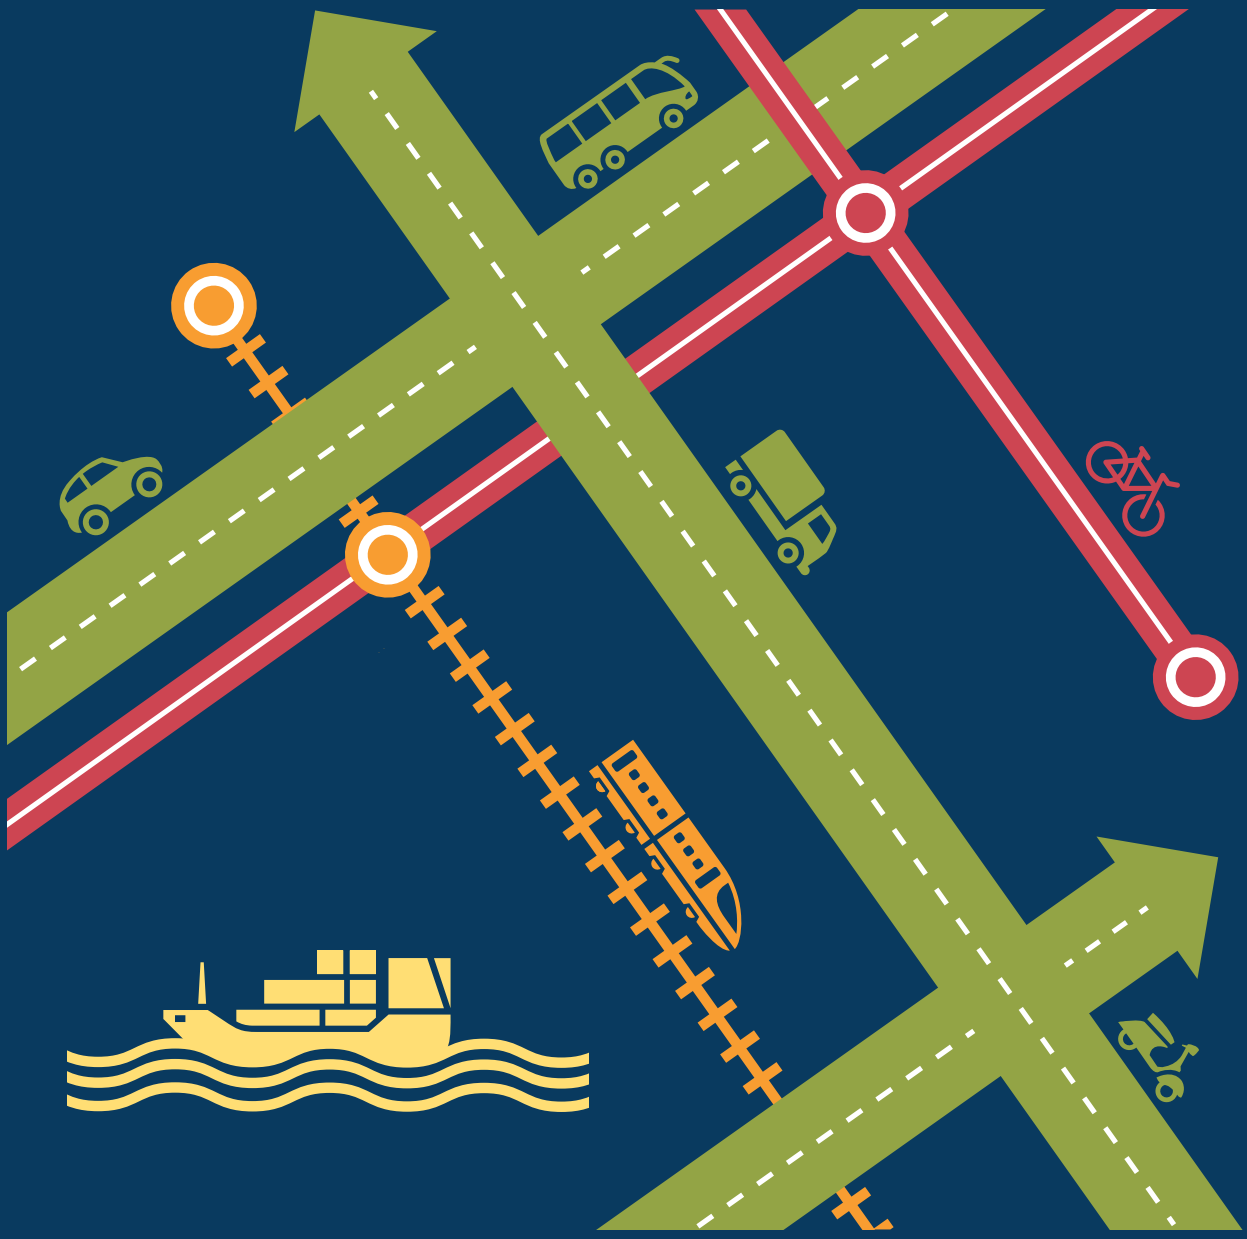
Section 7. Pavement Condition Index Reporting

A. To receive Measure B and VRF funds, local jurisdictions must do both of the following with respect to the reporting of an agency's pavement condition (PCI) index:

1. Annually report on the citywide pavement condition index (PCI), which rates the "health" of local streets from 1 to 100, in the Annual Program Compliance Report Form. Where applicable, this information will be consistent with material provided for MTC reporting requirements.

2. If the PCI falls below a total average index of 60 (fair condition), specify in the Annual Program Compliance Report what funding amounts, policies, or other needs are required to enable increasing the recipient's PCI to 60 or above.

Section 8. Advancement of Pass-through Funds



A. The Alameda CTC may consider advancing future year pass-through funds, with the goal of seeing improvements made in the near term. If a jurisdiction is interested in this option, a written request to the Alameda CTC Director of Finance and a copy to the Deputy Director of Projects and Programs, indicating the amount of funds requested and the projects on which the funds will be spent, is required. Requests will be considered on an individual basis.

Section 9. Adoption of Implementation Guidelines

A. Implementation Guidelines are adopted by the Alameda CTC on an as-needed basis. Changes to Implementation Guidelines will be brought through the Alameda CTC's Technical Advisory Committee for review and comment, as well as any other Alameda CTC committees as necessary, before changes are adopted by the Alameda CTC Board.

In The Fast Lane:

Improving Reliability, Stabilizing Local Funding, and Enabling the Transportation Systems of the Future in Alameda County

An exploration of Alameda County's transportation systems, how they are funded, what role they play in supporting economic growth, and what changes are needed to ensure a prosperous future.

An analysis prepared by the Bay Area Council Economic Institute

Connecting business, labor, government and education

Acknowledgments

This report was prepared by the Bay Area Council Economic Institute for the Alameda County Transportation Commission. Sean Randolph (President & CEO) oversaw the development of the study. Tracey Grose (Vice President) designed the study and directed the analysis and completion of the report. Matt Chwierut (Consulting Senior Research Associate) was the primary contributor to Sections 1, 3 and 4 and also contributed to Section 2. Jeff Bellisario (Senior Research Associate) contributed to the overall narrative of the document. Alex Foard (Research Associate) contributed to Sections 2 and 5.

ALAMEDA
County Transportation Commission

Alameda County Transportation Commission's mission is to plan, fund and deliver a broad spectrum of transportation programs and projects that expand access and improve mobility to foster a vibrant and livable Alameda County.

The Bay Area Council Economic Institute

353 Sacramento Street, Suite 1000 | San Francisco, CA 94111
www.bayareaeconomy.org | bacei@bayareacouncil.org

Bay Area Council Economic Institute is a partnership of business with labor, government, higher education, and philanthropy that works to support the economic vitality and competitiveness of the Bay Area and California.

The Association of Bay Area Governments (ABAG) is a founder and key institutional partner. The Economic Institute also supports and manages the Bay Area Science and Innovation Consortium (BASIC), a partnership of Northern California's leading scientific research universities and federal and private research laboratories.

Through its economic and policy research and its many partnerships, the Economic Institute addresses key issues impacting the competitiveness, economic development, and quality of life of the region and the state, including infrastructure, globalization, science and innovation, energy, and governance. A public-private Board of Trustees oversees the development of its products and initiatives.

In The Fast Lane

Improve Reliability, Stabilize Local Funding, and Enable the Transportation Systems of the Future in Alameda County

Alameda County, the Hub of Bay Area Commute Flows

Alameda County has the second-largest population in the region, and one of the fastest-growing populations in the state.

Alameda County's more than 600,000 jobs make it the second largest employment base in the Bay Area, behind Santa Clara County.

Alameda residents commuting outside the county increased from 46% to 52% from 2003 to 2011.

12% of Alameda County commuters use public transit, 2% more than the regional average.

20% of all public transit boardings in the Bay Area are in Alameda County

34% of all BART boardings originate in Alameda County

37% of Bay Area workers travel to, from, or through Alameda County

53% of workers in Alameda County live outside the county

Strengthening Economic Competitiveness

Efficient transportation systems are being deployed around the world, positioning regions for the future to:

- **Support** the clustering of firms
- **Expand** the regional labor pool
- **Improve** reliability
- **Conserve** natural resources
- **Improve** quality of life
- **Lower the cost** of moving people & goods

Alameda County's 2014 TEP* addresses current and future needs.

Well-functioning transportation systems are critical to economic competitiveness at the national and the regional levels, influencing commute times, freight delays, land use, quality of life, and productivity.

* Transportation Expenditure Plan that will be on Alameda County's November 2014 ballot

ACTC_AR0111

Alameda County represents a critical focal point in the Bay Area's regional transportation system. While the Port of Oakland accounts for a large share of movement of goods in and out of the region, the county also serves as a vital conduit across all modes of transportation for people within the Bay Area.

Transportation systems must not only be maintained but also upgraded and expanded to keep pace with population growth, connect housing and jobs, and support the economic competitiveness of the region.

Stimulating Economic Impact

Direct spending from Alameda County's 30-year, $8 billion 2014 Transportation Expenditure Plan will yield:

$20B in total economic activity in the Bay Area

150,000 jobs*

- Construction
- Transit operations and maintenance
- Professional, scientific, and technical services
- Manufacturing

* Full-time equivalent jobs

Expanding Goods Movement

Alameda County is the Bay Area's hub for international and domestic trade:

90% of Bay Area trade in agriculture, wine, and heavy machinery by weight goes through the Port of Oakland, sending California's exports around the world

99% of containerized cargo from Northern California passes through the Port of Oakland

The Bay Area's **trucking distribution system** is highly concentrated in **Alameda County**.

The direct spending of Alameda County's 2014 Transportation Expenditure Plan is estimated to yield $20 billion in total economic activity in the Bay Area economy by extending and augmenting the existing 1/2-cent transportation sales tax.

ACTC_AR0112

Executive Summary

Alameda County represents a critical focal point in the Bay Area's regional transportation system. While the Port of Oakland accounts for a large share of movement of goods in and out of the region, the county also serves as a vital conduit for people within the Bay Area across all modes of transportation.

As the population of the county and wider region grows, and as global trade increases, transportation systems must not only be maintained but also upgraded and expanded. But, where does the funding come from? And how does transportation funding translate into positive economic impact?

Alameda County has proposed a 2014 Transportation Expenditure Plan (TEP) that addresses the county's desire to expand transit services, keep fares affordable, provide traffic relief, improve air quality, and create jobs. This document lays out the fundamentals of public transportation spending, illustrates signals of the future of transportation systems, and highlights the role of transportation infrastructure in an advanced economy in enhancing quality of life and securing global competitiveness. This report also provides an overview of the proposed TEP and how it addresses the region's current and future needs.

Advancing transportation infrastructure is critical for growing regional economic competitiveness as it influences everything from the cost of production, the flow of innovation and ideas, and property values.

- Efficient transportation systems increase reliability and can lower the cost of commuter flows and goods movement.
- Quality transportation systems support the productive clustering of firms and expand the labor pool.
- Technological innovations are opening new possibilities in urban transportation, encouraging the growth of systems that are more digital, multi-modal, efficient, adaptable, and accommodating of petroleum alternatives.
- Cities around the world are experimenting with transportation solutions, ready to reap the economic benefits of superior mobility.
- In this uncertain environment, regions must make transportation investments to prepare for a changing future of moving goods and people.

Alameda County is at the heart of Bay Area commute flows, connecting diverse residential communities (even outside the Bay Area) with the region's job centers. As the economy and population grow, Bay Area commutes are becoming longer, and the number of commuters is rising.

- The Bay Area's highly mobile regional labor pool consists of 1.3 million residents who cross at least one county line to get to work. These workers account for 47 percent of employed residents in the Bay Area.
- Approximately 37 percent of Bay Area workers travel to, from, or through Alameda County. In 2011, approximately 180,000 commuters traveled through the county each day to work destinations to both its east and west, and over 300,000 commuters traveled into the county for work.

ACTC_AR0113

- Alameda County is the largest source of inter-county commuters in the Bay Area with over 300,000 residents commuting outside of the county each day.
- The percentage of Alameda County residents commuting outside the county increased from 46 percent to 52 percent from 2003 to 2011.
- Over 12 percent of commutes originating in Alameda County use public transportation, compared to 10 percent of commutes in the broader Bay Area, and 5 percent in the United States.
- Approximately one-third of all BART system boardings occur in Alameda County.
- Home to 21 percent of the Bay Area's population, Alameda County was one of the fastest growing counties in California in 2013.
- More cars and longer distances translate into greater delays. Given its pivotal position in the region, Alameda County experiences the largest number of vehicle hours spent delayed in traffic in the Bay Area.

Alameda County is the Bay Area's hub for international and domestic trade.

- By value, 41 percent of Bay Area trade passes through Alameda County.
- The Port of Oakland handles over 90 percent of total Bay Area trade by weight for many of California's key exports, including high-value agriculture, wine, and heavy machinery.
- The Port of Oakland handles 99 percent of containerized cargo that flows through Northern California.
- The Oakland International Airport handles the majority of all air cargo in the Bay Area, with a focus on domestic trade.
- Highly concentrated in Alameda County, Bay Area trade relies extensively on the trucking distribution system and, in turn, on the region's highways.

Transportation funding is complex, increasingly unreliable, and more and more dependent on local communities.

- The transportation funding system in the United States is complex. Funds come from a variety of sources and flow through multiple levels of governments until they can be directed to local uses and projects.
- Federal sources of transportation funding are becoming increasingly unreliable. Federal stimulus funding funneled more than $50 billion in general funds to transportation projects, but this recent surge in spending is unlikely to continue.

The direct spending of Alameda County's 2014 Transportation Expenditure Plan is estimated to yield $20 billion in total economic activity in the Bay Area economy.

ACTC_AR0114

- The federal gas tax - set at $0.184 per gallon for gasoline - has not been raised since 1993. Because it is not indexed to inflation, its value has eroded immensely over the past 20 years.
- Bonds are increasingly relied on for transportation funding across the US and in California. A $20 billion transportation bond, approved by voters statewide in 2006, is almost entirely spent.
- Local funding, including sales tax measures (like Measure B in Alameda County in 2000), supplies approximately 50 percent of transportation revenues in California and, relative to other funding sources, provides strong local transparency and control.
- Most of the projects envisioned in the voter-approved 2000 Measure B have been completed ahead of schedule. A Citizens Watchdog Committee has found expenditures to be consistently satisfactory. This has occurred even in the face of lower-than-forecast sales tax revenues.
- Measure B funds have helped secure over $3 billion in additional external funding to support transportation projects in Alameda County.

Alameda County's 2014 Transportation Expenditure Plan (TEP) invests in immediate transportation needs with an eye toward the future success of the region's economy.

- The 2014 TEP primarily focuses on maintaining existing transportation systems, particularly transit, and on relieving congestion, improving air quality, and stimulating economic development.
- Major new projects envisioned in the 2014 TEP include BART modernization and expansion, improved bicycle trails and facilities throughout the county, expanding high-occupancy vehicle/high-occupancy toll (HOV/HOT) lanes, local community developments that connect transit to jobs, and projects that improve the movement of freight on trucks and rail.

The direct spending of Alameda County's 2014 Transportation Expenditure Plan is estimated to yield $20 billion in total economic activity in the Bay Area economy.

- Planned spending across the economy for maintenance, operations, new construction, new equipment, and other new systems will translate into approximately 149,900 full-time equivalent jobs.
- This added economic activity will generate an estimated total of approximately $2.4 billion in federal, state, and local tax revenue.

ACTC_AR0115

Introduction

Alameda County is a critical focal point in the Bay Area's regional transportation system. While the Port of Oakland and Oakland International Airport account for a large share of the movement of goods in and out of the region, the county also serves as a vital conduit for people moving throughout the Bay Area across all modes of transportation.

As the population of the county and region grows, and as global trade increases, transportation systems must not only be maintained but also upgraded and expanded. But, from where does the funding come? And how does transportation funding translate into positive economic impact in the county?

This document illustrates signals of the future of transportation systems and highlights the role of transportation infrastructure in enhancing quality of life and securing global competitiveness in an advanced economy. The report focuses on Alameda County and the significant part it plays in the movement of goods and people in the Bay Area economy. To support this vital role, Alameda County has proposed a 2014 Transportation Expenditure Plan (TEP) that addresses the county's desire to expand transit services, keep fares affordable, provide traffic relief, improve air quality, and create jobs.

In order to better understand the importance of these investments and their potential positive economic benefits, this report provides an overview of the evolution of transportation infrastructure and the financing system that is used to pay for it. Alameda County's TEP seeks to position the region ahead of these changes, which will translate into economic advantages as the Bay Area becomes more interconnected. Additionally, TEP investments will produce significant economic benefit for the area in the form of job growth, while improving upon a transportation system that is a crucial piece of the region's competitive infrastructure.

Section 1 explores the role of advanced transportation systems in economic competitiveness today, offers examples of early-stage transportation systems of the future, and discusses places in the world that are early adopters of advanced technologies. Through a series of metrics, **Section 2** illustrates Alameda County's critical role as the region's hub for the movement of goods and people. **Section 3** examines the sources of transportation funding in Alameda County and how that funding has changed over the years. Alameda County's proposed 2014 (TEP) is laid out in **Section 4**. Reflecting on the planned expenditures of the TEP, **Section 5** estimates the broader regional economic impacts of this investment.

ACTC_AR0116

Advanced Transportation Systems and Economic Competitiveness

Modern transportation systems play an important role in local and global commerce, growing economic vitality and improving quality of life. Our context is changing locally and globally. External drivers as well as changing preferences are forcing us to reconsider how we do things, and technology offers new options for responding to change and shaping our future. Other places in the world are already in the fast lane, implementing advanced transportation systems to support local economic growth and future competitiveness. What are the systems of the future? How can new technology in transportation systems improve our lives and commerce in the county and region?

New practices and new technological tools are emerging that offer new options either in response to change or in advance of change. Positioning a region on the front end of change translates into a stronger competitive position.

This section explores the role of advanced transportation systems in economic competitiveness today and how improving system reliability and reducing traffic congestion can grow economic vitality and quality of life. Pushing the envelope of creative problem-solving, examples of early-stage transportation systems of the future are presented as well as examples of other metro areas in the world that are early adopters of advanced technologies. This section closes by shifting the focus to Alameda County, where numerous examples of innovative transportation systems are already in use. The 2014 Transportation Expenditure Plan (TEP) provides funding to expand these types of advanced projects and services, which will help shape and drive the county's future development.

Looming Changes in Transportation: Technological, Economic, Political, Environmental, and Social Changes

One hundred years ago, a Ford Model T – the famous first mass-produced automobile – could be produced in 93 minutes, and Henry Ford's plants produced more automobiles than all other automakers combined. The Ford Model T helped draft the agenda for 20th century transportation, and since then, the story of personal transportation in the US has largely been a series of footnotes to the Model T. Eighty years ago, Robert Moses began the transformation of New York infrastructure to accommodate the automobile – and many cities followed suit. The post World War II era saw massive investment in highway infrastructure across the US, and the automobile dominated the aspirations of middle-class life. Were Henry Ford to step forward 100 years into the US, into California or into Alameda County to view the transportation system today, much would be recognizable. The buses, bikes, rail, and cylinder-engine automobiles that today support the 1.5 million residents of Alameda County were all known in his day.

However, were he to step forward another 10 years, to 2024, much would likely surprise him. Numerous technological and socioeconomic developments are laying the foundation for improved transportation systems – using new strategies for addressing new mobility needs. Vehicles based on new fuels are accelerating into the market. Digitization of the car, the road, and the driving experience are combining the

ACTC_AR0117

IT industry and the transportation industry. Shifting demographic preferences and social practices are destabilizing the dominant model of automobile ownership. Evolving practices in 21st century work are changing how transportation is delivered and demanded. Preparing for – and harnessing – many of these changes demands investments in a next-generation transportation system.

Henry Ford helped revolutionize how we move people, but our transportation system also must move goods. Indeed, innovations in freight movement and broader economic changes over the past half-century set the stage for Alameda County's critical role in US freight transportation. In the mid-20th century, Malcom McLean, a trucking entrepreneur, helped standardize the use of containers for the transportation of goods; his particular genius was designing a system where containers could be transported over sea and land without being unloaded in between. This began modern container shipping, which today allows single containers to come through US ports and be loaded directly onto trucks or rail. This innovation also caused shipping costs to plummet, trade to swell, and supply chains to expand. One of containerization's many effects was the decline of the Port of San Francisco, which could not handle deep-hull ships, and the rise of the Port of Oakland, which could. In 2012, the Port of Oakland handled over 2 million TEUs (twenty-foot equivalent unit) of cargo, including machinery, apparel, wine, and produce.[1]

Air transportation also dramatically changed freight movement and trade, offering faster and more flexible shipping routes. This, in turn, has helped globalize supply chains and available markets, particularly for items with a high value-to-weight ratio, such as pharmaceuticals and advanced electronics. In 2011, electronics accounted for 37 percent of the total value of California's air exports – more than any other category by value – but only 13 percent of total tonnage, second only to agricultural products. In 2011, the Bay Area (San Jose, San Francisco, and Oakland) exported almost $8 billion in electronics products by air – though only 20 kilotons.

Freight movement is undergoing a revolution. Automation is quietly infiltrating advanced port operations. Advanced freight tracking and management help maximize the efficiency of the existing system. Changes in oil prices and regulations requiring cleaner fuels will impact transportation costs

[1] Port of Oakland Container Statistics, http://www.portofoakland.com/maritime/containerstats.aspx. A TEU (twenty-foot equivalent units) is an inexact unit measuring cargo capacity in container shipping. A 20-foot container is 1 TEU; a 40-foot container is 2 TEUs.

ACTC_AR0118

and transportation modes. The expansion of the Panama Canal, expected to conclude in 2015, is likely to change Pacific shipping routes. With major implications for West Coast ports, some shipping traffic from Asia may bypass California and pass directly to the East Coast. But some Atlantic traffic may come directly to the West Coast. The ultimate effect is uncertain. A 2008 study argues that Atlantic and Gulf ports could seize up to 25 percent of West Coast cargo,[2] but Dan Smith of the Tioga Group, a freight transportation consultancy, argues that the importance of transit time, reliability, Southern California and Bay Area consumer markets, and actual capacity on alternative routes will dampen cargo diversion.[3]

A major report analyzing the competitive position of West Coast Ports argues that further investment in rail is needed to maintain cargo share.[4] Regardless, many analysts agree that other economic forces, such as consumer demand, will be greater drivers. Economic changes are favoring more agile, often more local, supply chains – even as overall global trade is forecast to grow. Any changes in goods movement will have major implications for our transportation systems.

An Array of Possibilities

Transportation planners are challenged to design and manage systems that must perform in an uncertain future. Each decade brings a new set of disruptions, innovations, and regulations, but transportation investments must be resilient. It is critical to examine areas of change that might affect transportation, and the benefits of this scrutiny are twofold. It is possible to anticipate the consequences of major changes, particularly issues that might influence demand for transportation. It is also possible to identify potential technological tools that could enable new strategies for improving efficiency, could create economic opportunities, or could pose policy challenges.

The next ten years will see a range of possibilities for personal and freight mobility. Transportation infrastructure may change slowly in the US, but mobility practices are changing rapidly. Ten years ago, the navigation aid in state-of-the-art cars was a dedicated GPS receiver; now, voice automated smartphones can provide turn-by-turn instructions. In the US, car sharing used to mean borrowing a friend's car; now, car sharing is a widely recognized industry including organizations such as Zipcar and City CarShare.

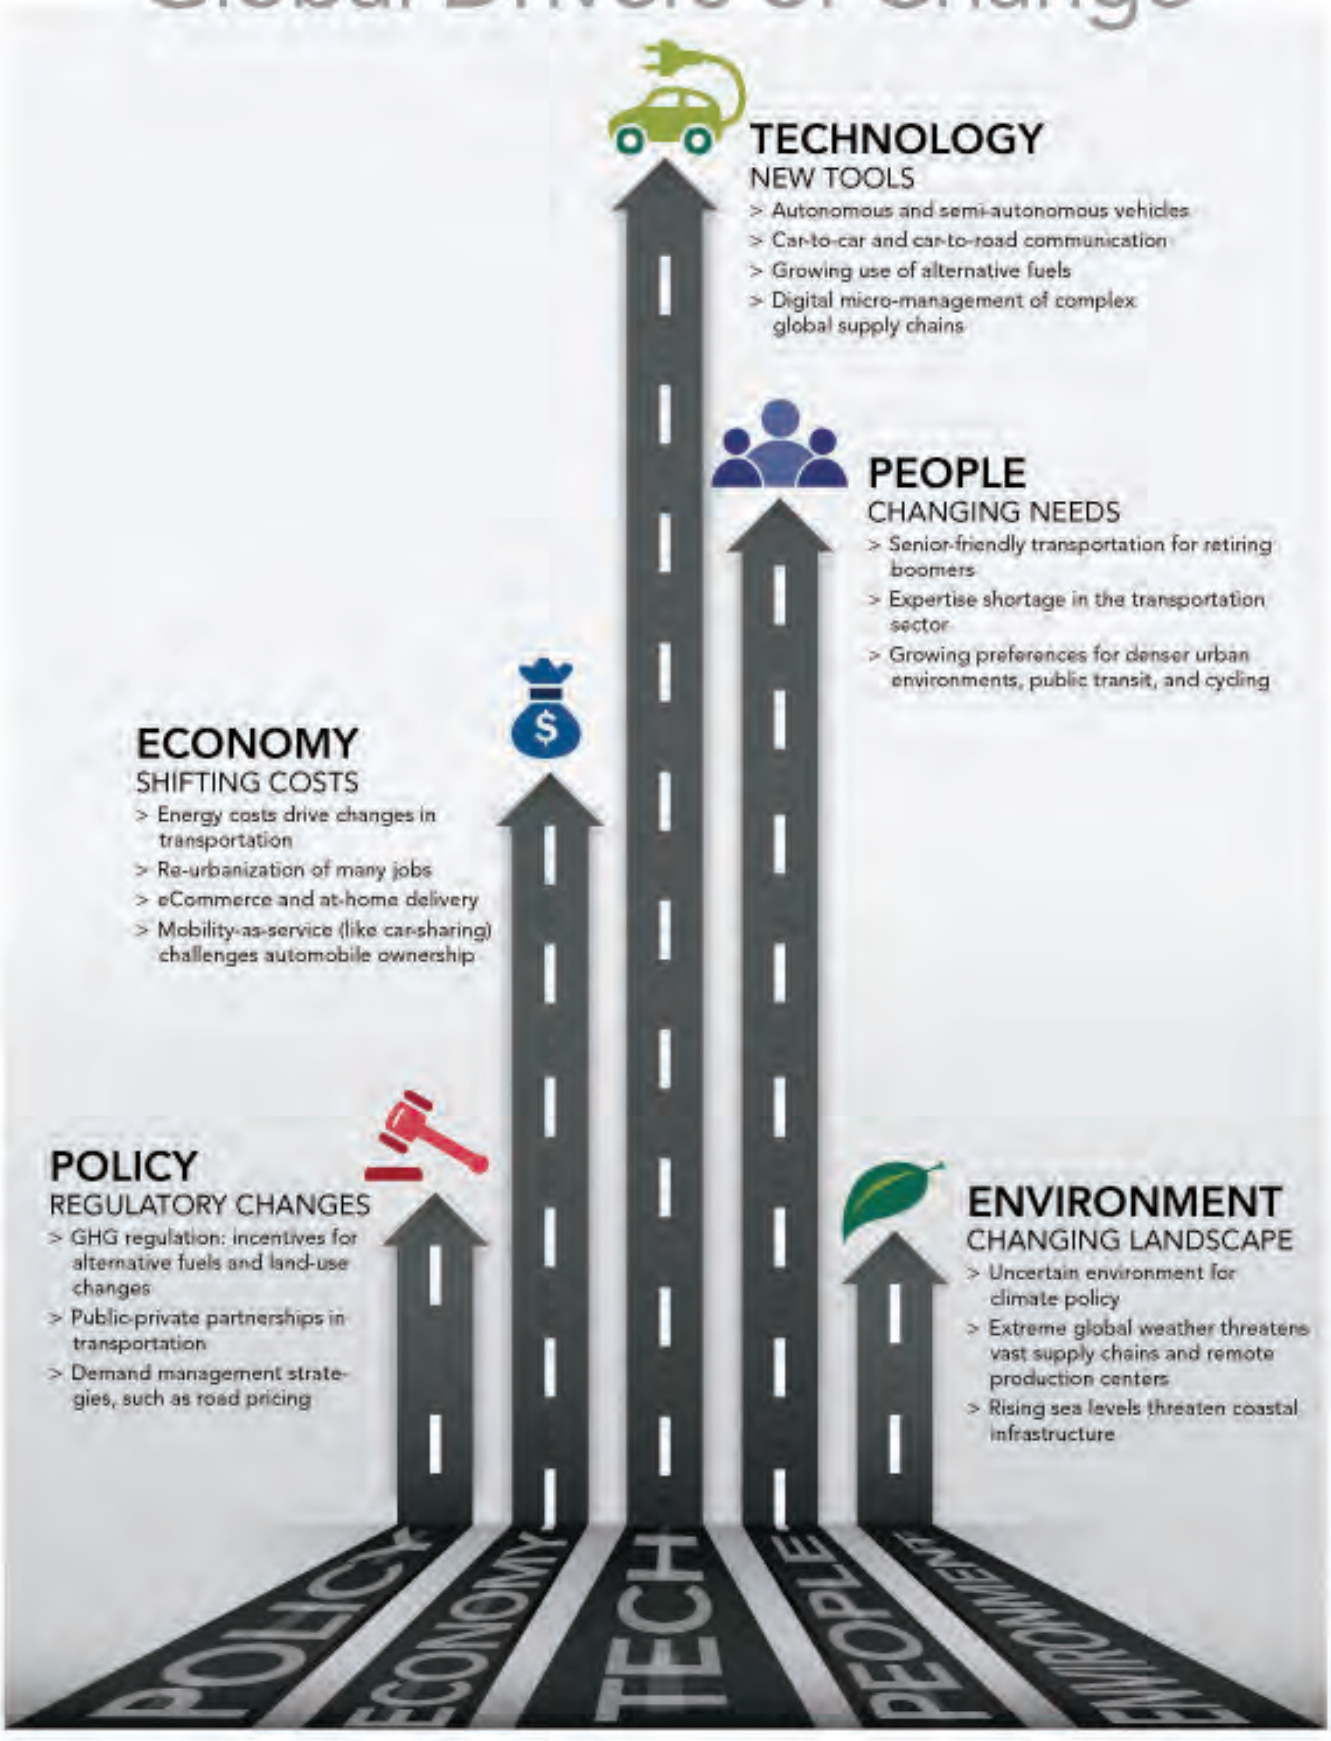
ACTC_AR0119

Autonomous vehicles were still science fiction; now financial analysts are predicting the economic savings that autonomous cars will be contributing to the economy in the next decade, and California is drafting regulations to allow autonomous cars on the road in 2015. Today, all of these developments are major topics for media and, to varying degrees, for transportation planners.[5] Analyzing the flow of innovations and trends helps reveal how transportation systems might change over the next decade.



Global Drivers of Change

Category	Developments in Transportation of People and Goods
People: Changing needs and preferences	• The wave of retirements in the coming decade is expected to present a shortage of workers in the transport sector – both personal and freight. • Retiring Baby Boomers and extended longevity will require more senior-friendly transportation and land use. • As Millennials (born in the 1980s and 1990s) enter adulthood, they are preferring denser urban environments, public transit, and cycling.
Technology: New tools for today and the future	• Digitization of transportation can enable autonomous and semi-autonomous vehicles. • Wireless sensors and advanced routers could enable cars connected to the Internet, infrastructure, and each other. • Alternative fuels will require new refueling infrastructure. • Sensors and data analytics enable much more granular freight tracking and complex supply chains.
Policy: Geopolitical and regulatory changes reframing the context	• Greenhouse gas (GHG) regulation will drive adoption of clean fuels, land use changes, and demand-management strategies like road pricing. • Densification of land use will encourage more urban and multimodal forms of transportation, and have implications for non-work travel. • Trade policy will impact the costs of freight, though this is difficult to forecast. • Public-private partnership models – including private transportation systems – are increasingly necessary to address transportation funding gaps.
Markets: Shifting local and global markets for labor and goods	• Energy costs will be a major driver of change in transportation. • A knowledge- and innovation-based economy in the US will concentrate in metro areas, making well-functioning urban transportation systems essential. • Mobile work and coworking are changing commute patterns. • E-commerce and home delivery could put new demands on the urban freight system, which will be required to transport goods to houses rather than just to retail outlets. • Mobility-as-a-service (such as car sharing) will challenge the automobile ownership model. • Reshoring of manufacturing may reduce imports but could also increase exports. • Digital fabrication technologies – and local manufacturing networks – could increase intra-regional trade and domestic freight.
Environment: Changing physical landscape creates disruptions	• Climate change will create an uncertain environment for climate policy. • Extreme weather events will drive the need for simple or more agile supply chains. • Rising sea levels could threaten coastal infrastructure – at any point in the supply chain. • Planning for an uncertain environmental future will require resilience measures and infrastructure adaption.

[5] An exhaustive analysis of new technologies or fully developed US transportation scenarios are beyond the scope of this paper. Examples of such work include "Long Range Strategic Issues Facing the Transportation Industry," by ICF International; the MIT "Future Freight Flows Symposium," and "The Future of Mobility: Scenarios for the United States in 2030," by RAND.

ACTC_AR0120

Global Drivers of Change

These drivers of change are what will shape future transportation development in Alameda County and across the globe. As a result, transportation in Alameda County will evolve over the next 30 years. The 2014 TEP will shape the county's development over this time and provide funding for the types of projects and services that will be required as a result of these drivers of change. Potential implications for next-generation transportation systems include:

Transportation systems are increasingly automated and digital. The core technologies for transporting people and goods are undergoing a revolution. The internal combustion engine has dominated transportation for over 100 years; now a host of innovations are rebuilding and rewiring the automobile. The Google fleet of autonomous Priuses has logged over 140,000 miles. General Motors predicts that autonomous vehicles will enter consumer markets by 2020. Even sooner, carmakers are releasing vehicles with automation features, such as active cruise control with stop-and-go function.[6] New regulatory challenges arise when such vehicles share the road with other vehicles, but policymakers have already been discussing these issues for several years, and California law will allow these vehicles on the road in 2015. Moreover, autonomous vehicles might see more deployment in port operations and other sites using heavy equipment. In October 2013, international research consortium InTraDE successfully demonstrated technology for intelligent autonomous vehicles (IAVs) for loading and unloading port cargo.[7] Also close to deployment is connected vehicle technology, which communicates wirelessly with other vehicles and with road infrastructure. The technology underpinning autonomous vehicles also includes numerous other features, such as automatic breaking to avoid collisions, traffic rerouting, and location-based services. Such efficiency is two-edged: allowing more cars to move seamlessly on the roads can relieve congestion and increase safety, but it also increases wear and tear on the roads, which already suffer from maintenance funding shortfalls.

Transportation strategies are multimodal. As the world urbanizes, a core challenge will be developing transportation systems that are maximally efficient and multimodal. Cities around the world are investing in pedestrian and bike facilities and in new transit systems. Global automobile usage will rise, but many cities and regions around the world are simply too dense to rely solely on single-occupancy vehicles. High density also dictates certain types of transportation, as new car infrastructure often cannot be built out in dense areas. This has led to programs such as bike sharing; in early 2013, there were over 500 bike sharing systems worldwide, with many more cities in the process of planning or launching such systems.[8] Hangzhou, home to China's first commercial car sharing scheme, also has one of the largest bicycle sharing systems in the world, with a fleet of almost 70,000. Hangzhou has also integrated the bike network with transit and subway networks.[9] Bike sharing systems, combined with bike infrastructure investment, can relieve congestion by encouraging the mode shift from cars to bicycles. Demographic trends also point to multimodal growth; Millenials in the US – roughly defined as those born in the 1980s and 90s – are driving less, ride transit more, and prefer urban walkable neighborhoods more than previous generations.[10] Another pillar of multimodal transportation systems is mobility-as-a-service (MaaS) systems, including informal car sharing. Services like Zipcar allow people to rent cars by the hour. Car2go,

ACTC_AR0122

a European car sharing scheme managed by Daimler, allows members to rent small vehicles by the minute and park them in areas throughout the urban service area. Peer-to-peer (P2P) programs allow users to rent out their own cars to others. Uber, a service that allows members to share rides, creates a P2P taxi service. Corporations are also entering the transportation market by providing commuter shuttle services to and from their corporate campuses. All of these innovations decrease the need for automobile ownership and help make urban mobility even easier.

Advanced transportation systems focus on efficient use. A growing body of research is challenging the dominant paradigm of highway expansion as a cure for congestion, and demand management systems are being seen as better alternatives. Research suggests that expanding highways does not reduce congestion in the long term, primarily because as highways expand, more people choose to drive or move to areas where driving is necessary.[11] Congestion pricing and related strategies that use price signals to encourage rational user behavior are put forward as a preferred strategy for managing congestion. McKinsey & Company has found that expanding highway capacity has one of the lowest benefit-cost ratios among congestion reduction strategies, often much lower than demand management systems like congestion pricing and signal optimization. Demand management is also much cheaper. For example, the UK's M42 motorway intelligent transport system (ITS) cost $150 million and required two years to implement; widening the road for the same outcome would have cost $800 million and would have taken 10 years.[12]

"When it comes to the future, there are three kinds of people: those who let it happen, those who make it happen, and those who wonder what happened."

- John M. Richardson, Jr., pioneer in the field of systems dynamics

Advanced transportation systems must be agile. Expanding world trade will impact the freight transportation system. If manufacturing increases in the US, exports may rise. Broad market shifts that privilege speed to market and niche offerings will likely also lead to complex supply networks that must respond to shifts in production and market demand. E-commerce may increase the need for transportation networks that connect to the home; the "last-mile problem" might become warehouse to neighborhood, rather than warehouse to retailer. A 2012 report by Accenture notes that more than 80 percent of companies are concerned about supply chain resilience; supply chain managers globally are worried about supply chain disruptions due to extreme weather, political unrest, and cyber security issues.[13] An MIT report on the future of freight noted that digital fabrication and small-scale manufacturing could change how consumers acquire goods.[14]

Advanced transportation systems need new petroleum-alternative infrastructure. Three major reports on the future of transportation emphasize the importance of oil prices in driving transportation

ACTC_AR0123

futures.[15] A review of cleantech investment by the Congressional Budget Office found that R&D funding and federal tax incentives related to energy, including fossil fuels and energy efficiency, jumped after the oil crisis in the 1970s, then fell as oil prices came down, and then rose again in the past decade as oil prices rose again.[16] Nonetheless, R&D investment has already led to new products and near-to-market clean technologies, such as advanced biofuels, electric vehicles, fuel cells, and more. These will require advanced fueling infrastructure, consumer confidence, and new technologies to make them viable in the marketplace. Policy – in the form of incentives and renewables targets, such as California's AB32 – is advancing requirements that are funneling investments to alternative infrastructure and driving adoption.

These examples are major changes in transportation that will affect residents, planners, and companies. Thinking through future alternatives is critical to designing robust transportation systems. As John M. Richardson, Jr., a pioneer in the field of systems dynamics, noted, "When it comes to the future, there are three kinds of people: those who let it happen, those who make it happen, and those who wonder what happened."[17] In Alameda County, transportation planners are looking ahead to the infrastructure needs of the county. The proposed 2014 TEP puts forth solutions that address present and future gaps in furthering advanced transportation systems in Alameda County.

Responding to Change Is Critical – and Some Are Already There

Transportation is the circulatory system of our economy. A complex network of infrastructure, vehicles, and exchange points enables the flow of people and goods around the world. People can access jobs, meet to exchange ideas, and engage in leisure activities. Goods can be manufactured in one area, tested in another, and purchased in a third – taking advantage of the economic strengths of each place. Ships, planes, trains, and trucks support an extraordinarily complex global supply chain. Well-functioning transportation systems are critical to economic competitiveness at the national and the regional levels, where they influence everything from commute times, freight delays, land use, quality of life, air quality, productivity, and agglomeration.

- **Cost of Production and Competitiveness:** An efficient transportation system can lower the cost of goods movement and increase reliability. Studies have found a correlation between infrastructure investments and economic output; infrastructure supports private sector productivity gains, often with higher returns than traditional business investments.[18]

- **Agglomeration and Productivity:** When firms cluster, they can more easily share ideas, supply chains, and people, thus boosting productivity. A 2012 study by Patricia Melo and Daniel Graham found that "doubling the number of jobs accessible within 20 minutes of driving time leads to an increase in real average wages of 6.5 percent, while the impact for a similar increase within 20 to 30 minutes is as small as 0.5 percent."[19] This effect is even more pronounced in knowledge-intensive industries.[20]

ACTC_AR0124

- **Imports and Exports:** A 2010 Brookings report on metropolitan exports found that exports are critical to national and regional economic competitiveness. In addition, the report notes that many US exports require intermediary inputs, implying that imports are also critical for the value-added processes that US firms employ on eventual exports.[21]
- **Expanded Labor Pool:** Well-functioning transportation systems enable firms to access more workers. This supports economic growth and facilitates efficient labor matching, allowing firms to access the most talented workers in a given geographic area.
- **Real Estate Values:** Transportation infrastructure can boost local property values. For example, a study of the Hiawatha Light Rail corridor running from Minneapolis to Bloomington, Minnesota found that "the LRT [light rail transit] had a significant positive impact on property values..." and that "residential property values increased by $47 million along the segment of the corridor studied."[22] Trails and greenways have been found to have a similar positive effect on real estate.[23]
- **Employment Benefits:** Transportation provides well-paying jobs and has ripple effects across the public and private sector. For example, a study prepared for the American Public Transportation Association found that for every billion dollars of national investment in public transportation, 36,000 jobs are supported for one year.[24]

Well-functioning transportation systems are critical to economic competitiveness at the national and the regional levels, influencing commute times, freight delays, land use, quality of life, and productivity.

Much like the human circulatory system, people most often notice transportation systems when they malfunction. Congestion, routing errors, and system failure all contribute to economic losses.

- In 2013, over one-fifth of US scheduled flights were delayed or canceled.[25]
- In 2011, US drivers lost 5.5 billion hours, 2.9 billion gallons of fuel, and $121 billion due to traffic congestion and delay.[26]
- Nineteen percent of shipping vessels do not arrive on time in ports; in the world's busiest shipping lanes, container delivery to the end customer was even less reliable.[27]

Maintaining transportation system performance is critical for economic competitiveness.

ACTC_AR0125

Transportation systems are not easy to design, build, or manage. Some transportation technologies can fundamentally change the architecture of transportation systems (as the advent of the automobile and the airplane did). Other technologies, like cargo cranes or wireless sensors can introduce new ways to manage transportation systems.

Transportation infrastructure must be engineered for safety, reliability, *and* efficiency. Transportation investments are also about people, how they *want* to move around, and what impacts transportation systems might have on their communities. Complex global supply chains rely on efficient transportation systems that can handle multiple moving pieces. Transportation globally is increasingly becoming a challenge for urban and suburban communities. Where physical space is a premium, construction is more complex and costly, and the sheer density of people introduces critical tradeoffs between different transportation modes. Even without a changing future, transportation systems are complex, and new developments can intensify the challenges.

Cities and Regions Around the World Are Moving Into the Fast Lane

Cities and regions around the world are not idling while the future overtakes them. Many are tackling the challenges and defining the next era of transportation systems. Some transportation improvements are humble design innovations whose time has come. Others are radical experiments in mobility. Historically, US economic competitiveness has been supported by a world-class rail network and then by a road network. New York City enjoys the human capital benefits of density, which are difficult to imagine without its subway system. The Bay Area has similar pockets of density,[28] which are connected by an extensive rail network. US seaports and airports feed a complex trucking distribution system enabled by a highway network. Today, other transportation systems are now positioning their regions for social and economic success in the 21st century.

Examples of advanced transportation systems deployed or in early development around the world include the following.

Agile Transit Infrastructure: Over the past decade, bus rapid transit (BRT) has captured the imagination of transportation planners around the world. BRT offers many of the amenities of a subway, including platform boarding, enclosed stations, dedicated lanes, and the dramatically reduced costs of using roads and wheels rather than rail infrastructure and custom-designed trains. BRT systems can be maintained and expanded at a fraction of the costs for rail. TransMilenio, a BRT system introduced in 2000 in Bogotá has been viewed as a model BRT system and has convinced

many skeptics that it can outperform alternative light rail systems. In 2012, the entire system covered 54 miles, with ambitions to eventually cover 240 miles; in comparison, the entire BART (Bay Area Rapid Transit) system in California covers 105 miles. There are now many BRT systems around the world, although there are few in the US that actually have dedicated lanes, which are critical to improving performance.

Digitally Integrated Smart City: In Rio de Janeiro, city officials and administrators can monitor various systems in the entire city from an IBM-created mission control room, which reports integrated city data in real time. In response to an emergency such as a fire or a building collapse, controllers can reroute traffic, close transit stations, and issue warnings to travelers. This lets first responders do their jobs, allows Rio residents to continue their travels, and prevents already critical situations from getting out of control. In integrating transportation as part of a larger system of city behavior, the intelligent operations center enables highly coordinated responses to urban needs, including the flow of goods and people.

Efficient Demand Management: In 2006, policymakers in Stockholm, Sweden launched a pilot congestion pricing scheme that charged vehicles entering the city center a variable fee during the weekday rush hour. After extensive outreach, planners held a six-month trial of the system, then revoked it and later held a referendum to see if Stockholm citizens wanted to keep it. They voted to reinstall it permanently. The system avoids the cost and traffic of tollbooths by using optical recognition of license plates; monthly bills are sent to the drivers. Congestion inside and outside the city center fell by 20 to 25 percent during the trial period, public transit use increased, and air quality improved. The city recouped its investment in less

Port of Hong Kong Automated Crane

Photo Credit: B&R Automation

than four years.[29] Similar strategies have been employed in the Bay Area by SFpark and GoBerkeley in order to better manage scarce parking spaces.

A New Transit Experience: In Seoul, South Korea, subway riders can shop for goods from Tesco Homeplus (a major retailer) using a virtual store aisle in the downtown subway station. Riders can order items via Quick Response Code from their phones and have them delivered to their homes or held for pickup.[30] This use of transportation infrastructure has enabled new financing streams and delivered a unique service to riders.

Automated Port Operations: Located in Hong Kong's Kwai Tsing Container Terminals port facility, Hong Kong International Terminals (HIT) uses a technologically wired terminal management system that is widely considered to be the most advanced in the world. A massive data tracking system enables automated rail-mounted cranes to operate 24 hours a day. This technology will likely be explored by other ports as a way to increase trade volume.

Automated Electric-Car Dispensing Vending Machine: In China, the city of Hangzhou, home to 8.7 million people, is experimenting with a new system of car sharing on a scale and density unmatched anywhere in the world. Car sharing is not a novel invention, but the complexity of cities in China requires a model different from the Zipcar model of surface-parked cars. A company called Kandi Technologies intends to use a system that works like a

vending machine to make 100,000 vehicles available to residents of Hangzhou through automated parking garages that each hold up to 300 vehicles.[31] By comparison, the entire Zipcar fleet in 2012 was less than 10,000 vehicles.[32] The system allows one-way rentals, and the mechanically dispensed cars can be rented by the hour and returned to any Kandi automated garage in the city.

Land Airbus: TBS China has proposed plans for a massive bus that travels over two lanes of traffic, combining the minimal-infrastructure benefits of BRT with the high-tech interior and traffic independence of a rail system. The bus would allow traffic to pass underneath even when stopped. The idea first appeared in 2010, with construction slated in Beijing's Mentougou district,[33] but an updated concept by TBS China was released in 2012, showing increased capabilities and safety features. Actual deployment is unclear, but the idea shows creative experimentation for highly dense urban areas where even rail and roads compete for right of way.

Complete Street Design: New approaches to street design break down the traditional separation between highways, transit, walking, and bicycling, and instead focus on the desired outcome of a transportation system that supports safe use and beneficial public spaces. The complete streets movement is gaining steam across the US, as cities like New York City, San Francisco, Oakland, Chicago, and Washington, D.C. experiment with new cost-effective, context appropriate street designs. While complete streets policies are different in every location, strategies that calm traffic, separate buses and bicycles from vehicle flows, and enhance crosswalks and pedestrian refuges can make streets safer, optimize traffic speeds, and produce economic vitality.

These innovations in cities and regions around the world offer more than points of inspiration; they also represent economic competition. Mobility of goods and people is critical in the 21st century, and ideas, investments, and businesses will flow where regional advantages, including transportation, are highest. However, the future is not only occurring overseas; it is also happening today in Alameda County.

ACTC_AR0129

Early Signs of the Transportation Future in the Bay Area

Many of the technologies driving global infrastructure innovation are initially developed in the Bay Area. In addition, many transportation agencies, including those in Alameda County, are investing in advanced infrastructure systems. Examples exist where Alameda County is on the forefront of innovation, moving beyond traditional transportation to adjust to changing demand preferences, environmental considerations, and emerging technology.

- **East Bay Bus Rapid Transit:** Planned improvements include rail-like bus stations, dedicated bus lanes, new traffic signals with priority for buses, street lighting, landscaped medians, and crosswalk improvements between the cities of Oakland and San Leandro. The project corridor stretches from 20th Street in downtown Oakland; extends along International Boulevard; and ends at the San Leandro BART station. Projections show an increase in corridor ridership from 25,000 to 36,000 patrons per day with 28 percent faster travel speeds during the afternoon rush hour as compared to current bus service.
- **I-80 Integrated Corridor Mobility:** This project will implement intelligent transportation strategies, such as adaptive ramp metering and incident management systems, along a 19.5-mile stretch of I-80 from the Bay Bridge Toll Plaza to the Carquinez Bridge in Contra Costa County. Adaptive ramp metering – which uses an algorithm that takes into account ramp and freeway volumes – will optimize the flow of traffic, while real-time traffic information displays will allow drivers to make informed route decisions during their trip.

Across the Bay Area, many other elements of advanced transportation systems are also emerging. Examples include dynamic pricing for highway use and parking, BRT, smart metering at highway on-ramps, car and bike sharing, and digital freeway signs for real-time information. Companies in the region such as Tesla and Google are also at the forefront of advancing transportation technologies.

ACTC_AR0130

Transportation systems represent a complex component of daily life. As physical infrastructure, they involve large, long-term investments, and they are governed by multiple regulatory bodies at different levels of government. They serve complex economies of goods and services, commuting workers, multiple vehicles, and countless diverse communities. However, the diverse needs of residents and commerce and the demands of public policy can shift quickly. A major challenge facing any infrastructure system – and particularly the transportation system – is how to adapt to a rapidly changing future. Alameda County's 2014 TEP proposes investments that will position the county to respond to evolving demands on its transportation infrastructure while also moving toward a future in which mobility can continue to translate into economic benefits.

ACTC_AR0131

Alameda County: A Critical Hub for the Movement of Goods and People in the Bay Area

Alameda County serves as the Bay Area's hub for the movement of goods and people. Approximately 37 percent of Bay Area workers move to, from, or pass through Alameda County, an indication of the county's vital importance to the region's economy.[34] In addition, at least 41 percent of Bay Area trade (by value) passes directly through Alameda County's air and water ports, and much trade through other regional ports relies on Alameda County's extensive transportation system.[35] The following sections detail current transportation trends in Alameda County and around the Bay Area.

Alameda County, the Hub of Bay Area Commute Flows

Given its central positioning in the nine-county Bay Area, Alameda County serves as a conduit for commuters moving throughout the region. With three bridges spanning San Francisco Bay, 20 BART stations, and multiple major highways, Alameda County has connections to all corners of the region. In addition to being a hub for transportation flows, the county also boasts a large and growing population of over 1.5 million residents – making it the second largest county in the Bay Area. With 21 percent of the region's total population, it trails only Santa Clara County. Its population increase of 1.68 percent over the one-year period to July 2013 constituted the fastest county population growth rate in all of California.[36]

Approximately 37 percent of Bay Area workers move to, from, or pass through Alameda County each day on their way to work.

Regional Commute Patterns by Geography

Unlike most metropolitan regions with a central city as the hub of the regional economy, the Bay Area has multiple job centers and a diversity of residential communities. Given this situation, the region has a highly mobile regional labor pool. With a total workforce of approximately 3 million people, large numbers of commuters cross bridges and take trains in the region each day. Alameda County plays an outsized role in supporting Bay Area commutes. With its central location, Alameda County frequently handles cross-regional trips or is the home county for two-worker households living between two workplaces.

Forty-seven percent of all Bay Area workers cross at least one county line to reach their places of employment. With Alameda County's proximity to large employment centers in Silicon Valley and San Francisco, 52 percent of the county's employed residents work outside the county boundaries. In comparison to other commute patterns in the broader Bay Area, a slightly larger percentage of Alameda County residents commute to other counties for work.

[34] Calculation based on the US Census Bureau, Longitudinal Employment-Household Dynamics dataset. The calculation includes only those that work in the nine-county Bay Area as its total population.
[35] Calculation based on US Trade Online dataset.
[36] State of California, Department of Finance, "July 1, 2013 County Estimates Ranked by Size, Numeric and Percent Change," December 2013.

ACTC_AR0132

Bay Area Commute Patterns by County, 2011

County	Residents Working Outside the County	Residents Working within the County	Workers Living Outside the County
Alameda	52%	48%	53%
Contra Costa	61%	39%	49%
Marin	60%	40%	61%
Napa	47%	53%	49%
San Francisco	39%	61%	60%

Santa Clara	30%	70%	38%
Solano	64%	36%	51%
Sonoma	39%	61%	32%
Bay Area	47%	53%	50%

Data Source: US Census Bureau, Longitudinal Employer-Household Dynamics
Analysis: Bay Area Council Economic Institute

Alameda County also attracts a significant number of workers from other areas, and it reports a net commuter inflow of approximately 9,000 people. Fifty-three percent of workers employed in the county reside outside of its bounds – a higher percentage than neighboring counties such as Contra Costa and Santa Clara. Taken together, these data points exemplify the significant inbound and outbound commuter flows that Alameda County experiences each day, all of which rely on the transportation system.

While the Bay Area job market is often thought to be led by San Francisco and Silicon Valley, Alameda County actually has the second largest employment base in the region. Workers from around the Bay Area rely on Alameda County's diverse employment centers, such as UC Berkeley, Hacienda Business Park in Pleasanton, the downtown Oakland business district, the three national laboratories, and many hospitals. It is notable that more than 300,000 workers per day commute into the county – an amount comparable to both San Francisco and Santa Clara Counties – fully offsetting the number of residents that commute outside of Alameda County to reach their workplace.

Cross County Labor Flows, 2011

County	Residents Working within the County	Residents Working Outside the County	Workers Living Outside the County	Total County Employment	Net Inflows
Alameda	286,444	309,074	318,108	604,552	9,034

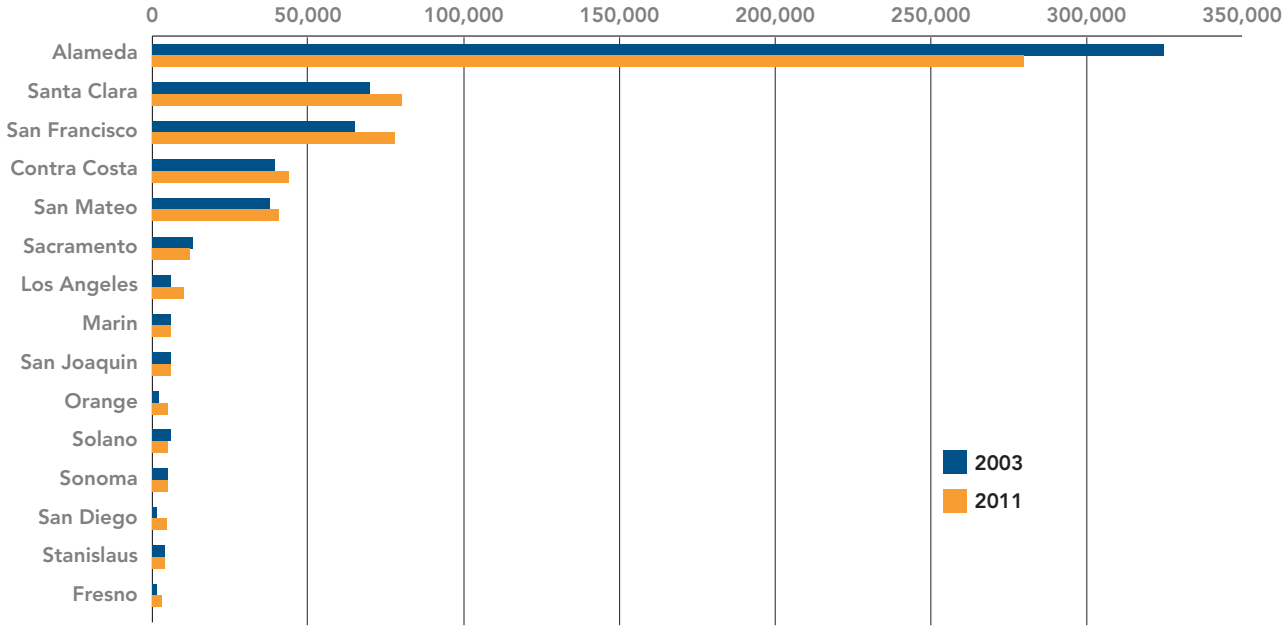
ACTC_AR0133

With over 300,000 residents leaving the county each day to reach their workplaces, Alameda County is the largest source of inter-county commuters in the Bay Area. The percentage of residents commuting elsewhere for work has also been rising. The 52 percent of Alameda County residents who crossed county lines to reach their workplaces in 2011 rose from 46 percent in 2003, an increase of 27,500 commuters over just eight years.



Alameda County's more than 600,000 jobs make it the second largest employment base of any Bay Area county, trailing only Santa Clara County.

The Bay Area has a number of job centers in San Francisco, Santa Clara, Contra Costa, and San Mateo Counties, which account for the vast majority of all commute destinations outside of Alameda County. The San Francisco and Santa Clara employer destinations produced significant growth, surging upward by 18 percent and 8 percent, respectively, in the number of Alameda County residents that commute there since 2003.

The largest flow of workers into Alameda County comes from Contra Costa County, a reflection of its geographic proximity and the fact that Alameda County has nearly twice as many jobs. Contra Costa County residents comprise 27 percent of all Alameda County workers commuting in from outside the county, though in absolute terms, numbers fell by 3,500 between 2003 and 2011. Approximately 89 percent of these workers from Contra Costa County drive to Alameda County.[37] The largest influx of workers since 2003 has come from Santa Clara County, which added 5,400 commuters to Alameda County over this period.

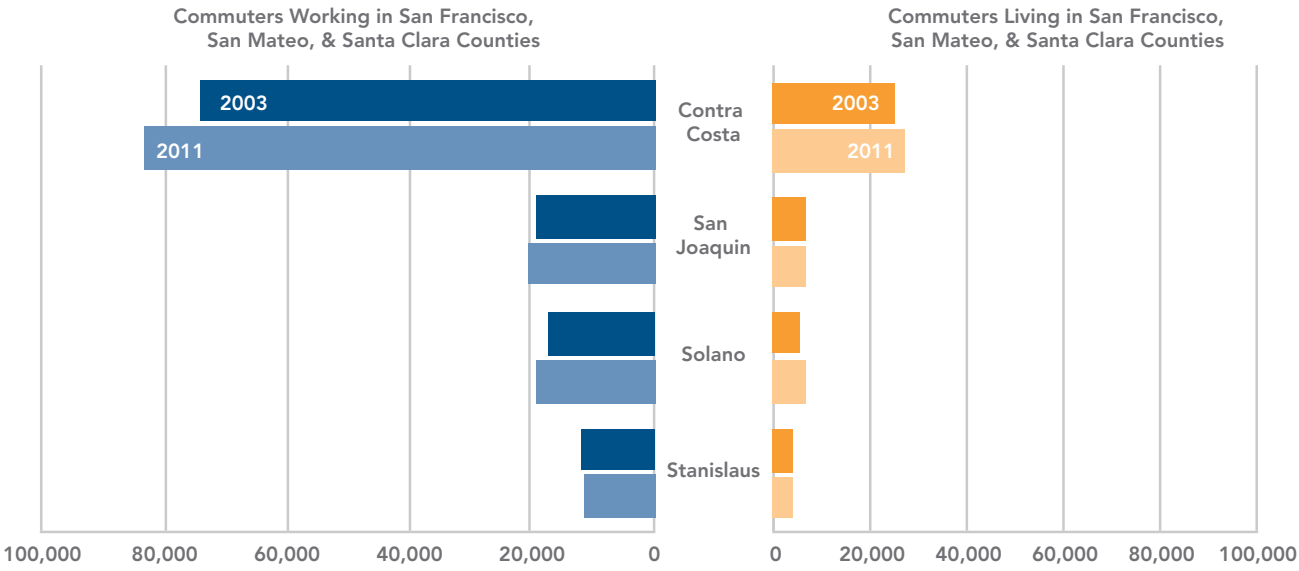
ACTC_AR0134

Residence County of Workers in Alameda County
2003 and 2011

Data Source: US Census Bureau, Longitudinal Employer-Household Dynamics
Analysis: Bay Area Council Economic Institute



In addition to commute traffic originating from and destined to Alameda County, the county is centrally situated between several major residential and economic centers in the Bay Area. As a critical focal point in the region's transportation system, Alameda County has heavy volumes of through traffic on its roadways and on public transportation systems. In 2011, as many as 181,640 Bay Area commuters moved through Alameda County each day on their way to work.[38] Approximately 75 percent of these trips were associated with worker movements into San Francisco, San Mateo, and Santa Clara Counties – with nearly two-thirds of those commutes originating in neighboring Contra Costa County. Since 2003, the number of pass-through commuters has increased by 9 percent with influxes from all surrounding counties.

[38] Data include trips originating or ending in San Francisco, San Mateo, and Santa Clara Counties with connected origin or end in Contra Costa, San Joaquin, Solano, and Stanislaus Counties.

All Commuters 2003 and 2011

Note: Data includes commuters moving to and from San Francisco, San Mateo, and Santa Clara Counties.
Data Source: Source: US Census Bureau, Longitudinal Employer-Household Dynamics
Analysis: Bay Area Council Economic Institute

One cause of the increased commuting movement throughout the Bay Area has been the disparate effects of the recent recession on regional employment. The San Francisco and Silicon Valley metropolitan areas have produced steady job growth in recent years to the point where total employment now exceeds pre-recession levels. In contrast, the recession in the East Bay was deeper and recovery has been slower, leaving the East Bay region with fewer reported jobs than in 2007. While workers have had to broaden their job searches to encompass the entire region, they are less likely to change their housing when changing jobs;[39] thus contributing to the increasing trend in cross-county commutes.

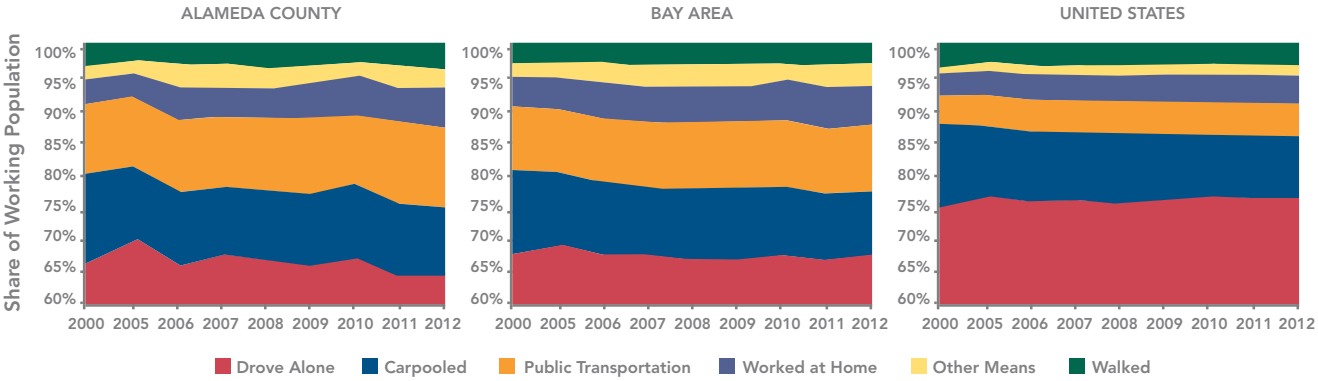
ACTC_AR0136

Diverse Commute Modes

Over 1.3 million people in the Bay Area cross at least one county line to reach their workplaces. While the majority of these workers drive, the regional average of 77 percent is well below the 86 percent of Americans who rely on cars – either driving alone or in carpools—for their commutes.



Commute choices vary around the Bay Area. Alameda County's central location and heavy commute flows provide its commuters with more choices than most. For example, 40 percent of Alameda County residents who work in San Francisco travel by car, in contrast to 94 percent traveling from Santa Clara County into San Francisco.[40] Over 12 percent of Alameda County residents use public transportation to get to work, higher than the regional average of 10.4 percent and much higher than the national rate of 5 percent.

Bay Area commutes are becoming longer in distance and duration, and the total number of commuters is rising.

While usage of public transportation has maintained a steady share of overall Bay Area commute modes since 2005, public transportation's mode share in Alameda County expanded by 3 percentage points over the seven-year period from 2005 to 2012. A slow steady trend toward more multimodal commuting is also notable, as driving modes' combined share dropped from 80 to 75 percent of commuters between 2000 and 2012. Prior to this period, driving had grown or maintained its mode share in the Bay Area in each of the previous four decades.[41] Additionally, the growing trend of people working from home is observable throughout the Bay Area as technology allows more distributed work.

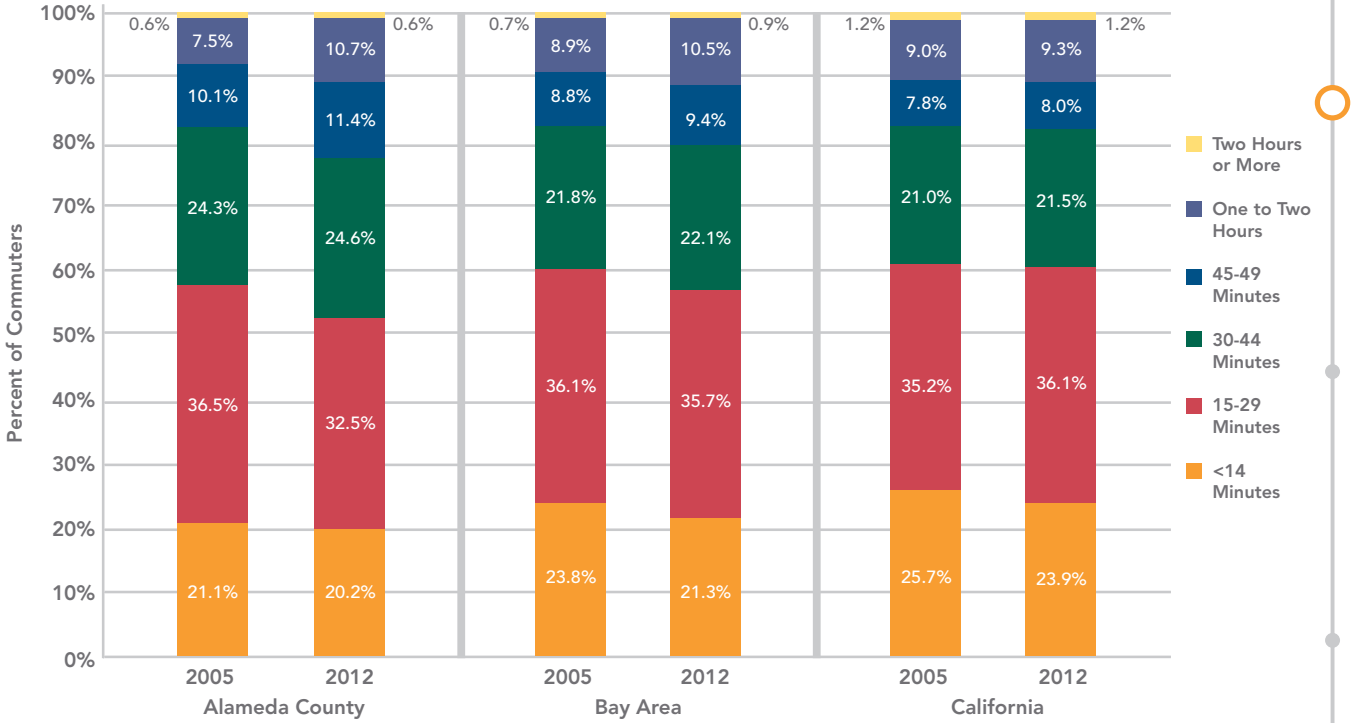
[41] SPUR, "The Urban Future of Work." September 2011.



ACTC_AR0137

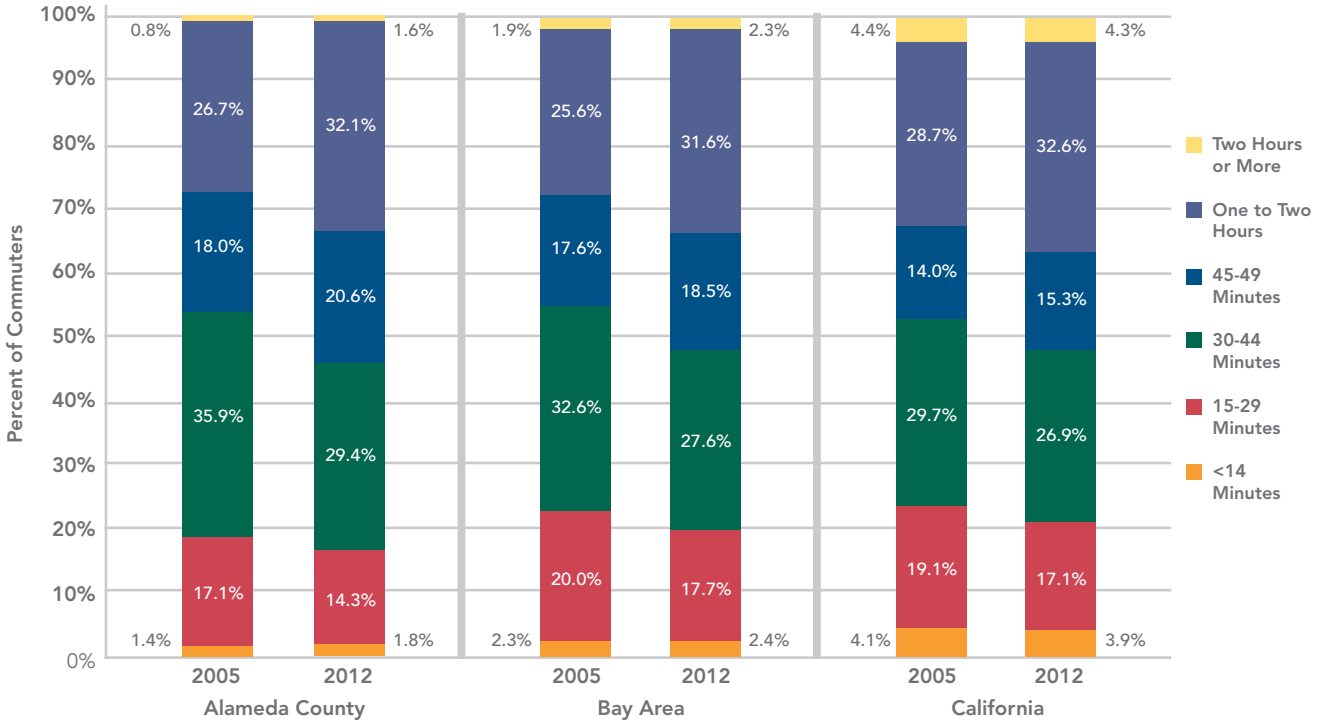
Rising Commute Times

As populations grow and commuter preferences shift, average commute times of various transportation modes also change. For workers across California, commute times have crept upward from 2005 to 2012. The average commute in the Bay Area took 28.5 minutes in 2012, while the US average was 25.7 minutes. Commute times in Alameda County averaged 29.3 minutes and have outpaced the broader Bay Area as the number of Alameda County workers spending more than half an hour to get to work increased from 42.4 percent to 47.3 percent between 2005 and 2012. Additionally, the percentage of workers requiring more than one hour to arrive to work rose from 7.5 percent to 10.7 percent over the same period.

Commute Times

Minutes to Work for Alameda County, Bay Area and California Workers

Data Source: U.S. Census Bureau, American Community Survey one-year estimates
Analysis: Bay Area Council Economic Institute



In short, Bay Area commutes are becoming longer in distance and duration, and the number of total commuters has increased by 100,000 since its low in 2009. Region-wide, more than 20 percent of commuters spend more than 45 minutes on their commutes, which is up from 2005. In Alameda County, longer commutes have become more prevalent, which is partly attributable to the increasing trend of Alameda County residents commuting greater distances to other counties for work, specifically to San Francisco and Santa Clara counties where recent job growth has been stronger. The distribution of the population farther from job centers is also reflected in the longer commute times on public transportation.

In Alameda County, 16.3 percent of commuters spent less than 30 minutes traveling to work on public transit in 2012, which is down from 18.5 percent in 2005. Those driving are generally less likely to accept long commutes as compared to users of public transit; 56 percent of vehicle commuters had commutes of less than 30 minutes.

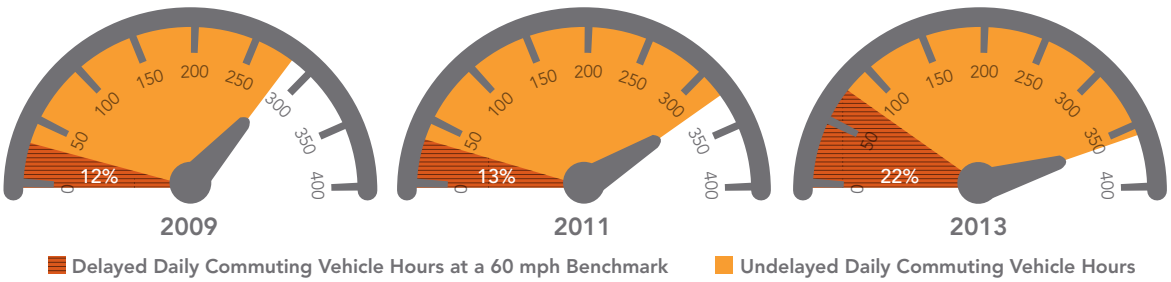
ACTC_AR0139

Trends in Passenger Vehicle Commutes: Reflecting the Pulse of the Economy

With the total number of cars and trucks on the road in the Bay Area moving back above its pre-recession high, the amount of time spent en route is also rising. Given the region's growing economy and population, and Alameda County's central location, the county was home to four of the top 10 most congested freeway routes in the Bay Area in 2012.[42]



Between 2009 and 2013, daily vehicle hours spent on the road in Alameda County increased by 67,700 hours to 353,000 hours. Of this additional time, more than 63 percent can be attributed to delayed traffic. Most notably, Alameda County is home to the largest number of vehicle hours spent delayed in traffic in the Bay Area with an average of 77,400 vehicle hours delayed per day when compared to a 60 mile per hour (mph) norm. Santa Clara County follows with daily delays of 39,500 vehicle hours. Non-work travel is also becoming more congested in Alameda County than in the rest of the Bay Area. Between 2005 and 2013, weekend and holiday vehicle hours of delay grew by 87 percent in Alameda County, but by only 72 percent in the broader region.

As congestion rises, average speeds fall. Average speeds at peak commuter travel times have seen a noticeable decline across the Bay Area over the eight years since the Caltrans Mobility Performance database began tracking commute flows on highways and freeways. Between 2005 and 2013, Bay Area drivers experienced a decrease of 1 mph during the morning commute. Over the same period, morning commute traffic slowed in Alameda County by approximately 3 mph. Evening commutes have slowed more considerably. The broader Bay Area dropped 2.7 mph from 54.8 to 52.1 mph. Alameda County drivers experienced 3.4 mph of reduced speed in the evening, from 51.7 to 48.3 mph.

It is important to note that increasing traffic congestion is a common side effect of a growing economy. In analyzing Alameda County's average annual vehicle speeds over time, it becomes clear that decreasing speeds are a recent occurrence, tied directly to the economic upswing. Vehicle speeds actually increased during the busiest commute hours between 2006 and 2009, a period that included the global economic downturn. As the economy began picking up again, speeds began to decline. From 2009 to 2013, average morning commute speeds dropped by 9.7 percent, losing 5.8 mph. Evening commute speeds dropped even further by 6.8 mph, or 12.4 percent.

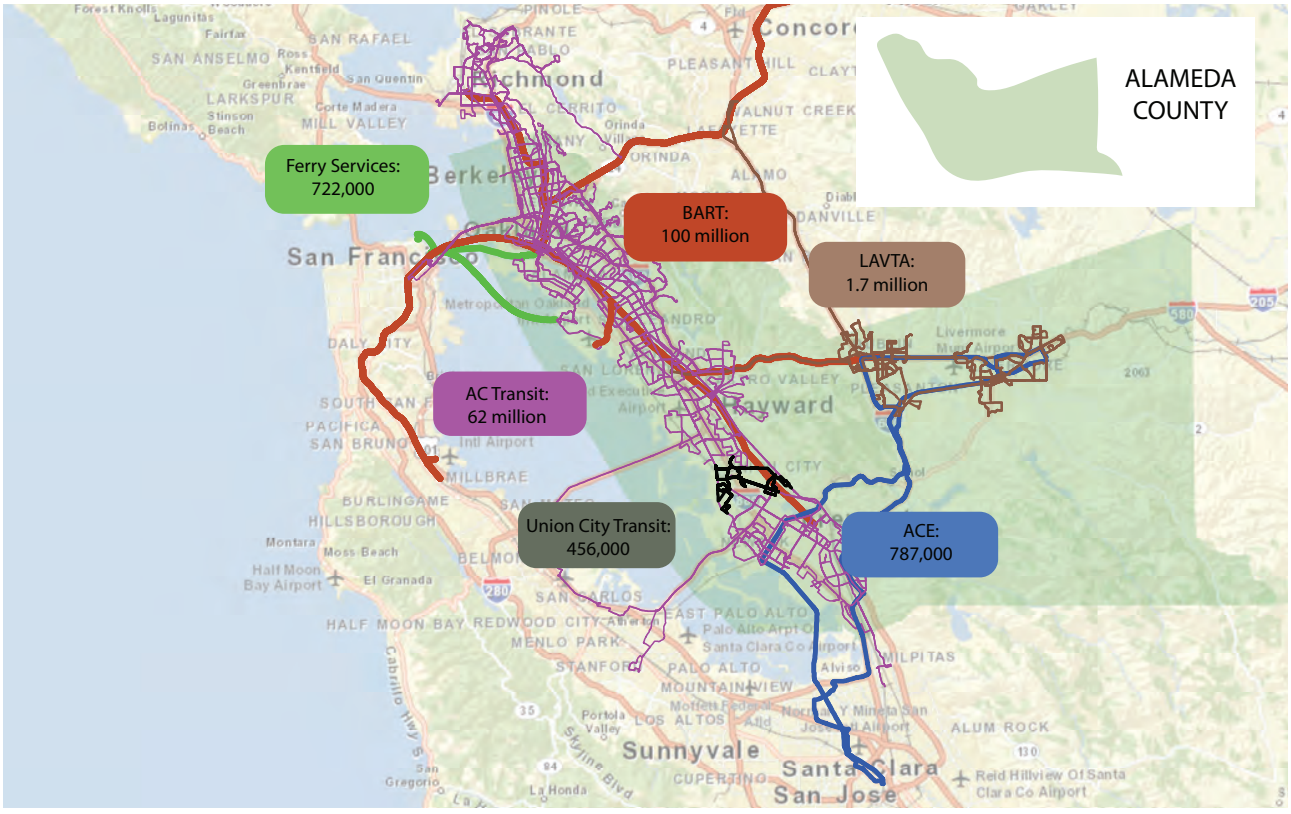
Trends in Public Transit Commutes

In 2012, public transportation accounted for slightly more than 10 percent of the regional commuting mode share. The Bay Area has 23 separate transit systems that bring people into, out of, and through its counties via 4,271 total vehicles, which include buses, vans, rail vehicles, cable cars, and ferry boats.

Alameda County is integrated with six of these regional systems: Bay Area Rapid Transit (BART), Alameda-Contra Costa Transit (AC Transit), Altamont Commuter Express (ACE), Livermore/Amador Valley Transit Authority (LAVTA), the San Francisco Bay Area Water Emergency Transportation Authority (WETA),[43]

[43] WETA was formed in 2010 as a consolidation of regional ferry services. Prior to 2010, Alameda County residents were primarily served by ferry services operated by the City of Alameda and the Port of Oakland.

ACTC_AR0141



and Union City Transit. In 2010, these six systems together enabled approximately 93 million transit boardings within Alameda County, or approximately 20 percent of all transit trips taken in the Bay Area.[44] The vast majority of transit trips originating from Alameda County occur on either BART or AC Transit given their wider reach and relative ease of access compared to other systems. Other smaller transit systems serve as important links to both BART and AC Transit and also connect passengers to destinations outside of Alameda County as well as to interregional transit, such as the Amtrak Capitol Corridor and the Altamont Commuter Express Rail. While annual ridership growth across each of the six primary transit systems within the county has been mixed, the broader trend matches the general increase in the use of public transportation across the Bay Area.

Bay Area Rapid Transit

BART ridership has increased steadily over the last 15 years. Its upward trajectory has accelerated following the recession and demand continues to grow. In April 2014, average weekday boardings of nearly 404,000 represented a 1 percent year-over-year increase. While service levels have increased 17 percent since 1998, measured in vehicle-revenue hours – time spent in revenue-generating operation – passenger usage has grown at an even greater rate. Over the period from 1998 to 2012, the number of unlinked passenger trips (UPTs) has grown by 47 percent while the number of passenger miles traveled has ballooned by nearly 56 percent, reflecting a growing dependence on longer BART

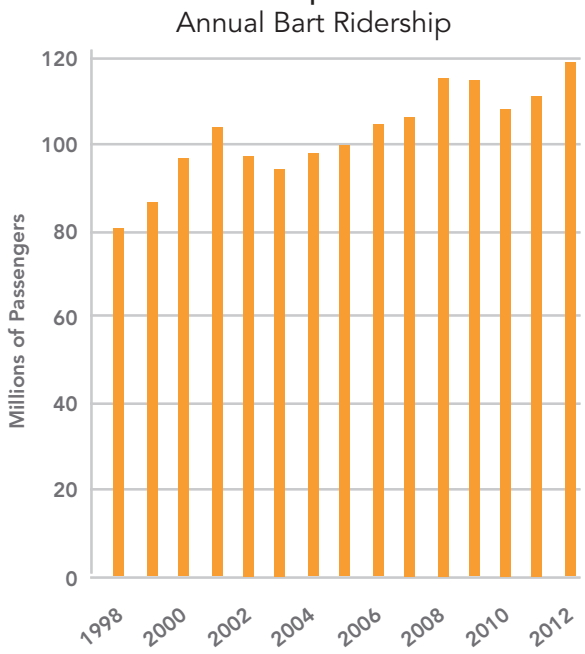
Alameda County accounts for 20 percent of all public transit boardings in the Bay Area.

Transit Systems Serving Alameda County and Annual Ridership

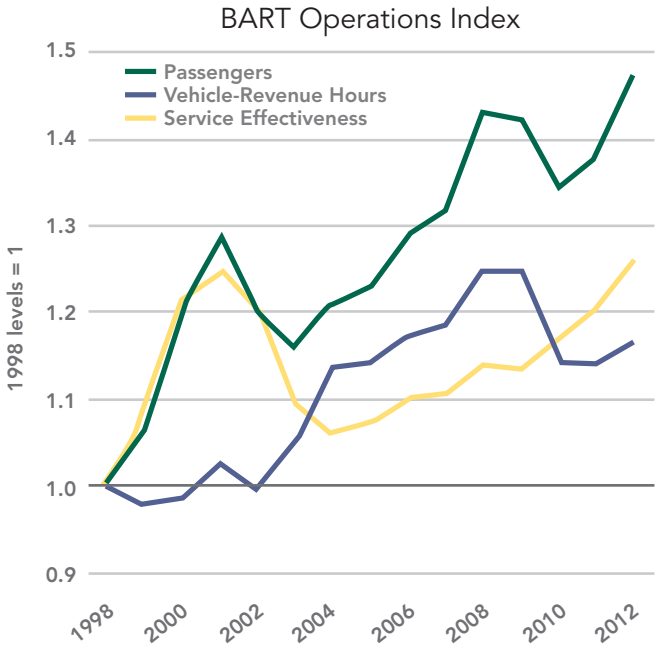
Source: Bay Area Council Economic Institute

[44] National Transit Database, 2013 ACTC Performance Report.

ACTC_AR0142



trips across the Bay Area.[45] With these additional rides, BART's service effectiveness[46] has increased by 26 percent since 1998.



Alameda County accounts for 34 percent of all BART boardings.

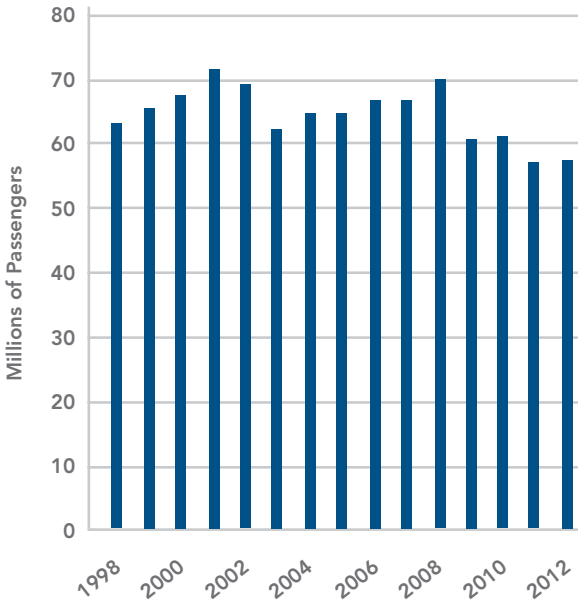
Alameda County BART entries across the county's 20 stations accounted for 34 percent of the more than 390,000 average daily BART trips taken in the region in fiscal year 2013 – a proportion that has slowly grown since 2009 (for comparison, 44 percent of BART trips originated in San Francisco County, 13 percent in Contra Costa County, and 9 percent in San Mateo County). Passenger usage has jumped in recent years, with Alameda County BART entries growing by 14 percent from their trough in 2010 in the wake of reduced service following the recession. Alameda County BART entries also outpaced the 8 percent passenger growth of the rest of the system over that same period, reflecting both the county's increasing population and its residents' ability to shift travel modes.

Annual BART Ridership and Service Levels

Data Source: MTC Transit Performance Reports
Analysis: Bay Area Council Economic Institute

Alameda-Contra Costa Transit District

Unlike BART, AC Transit has seen fairly inconsistent passenger growth patterns over the last 15 years. After a decade of fluctuating annual trip numbers, there has been a significant decrease in trips related to cuts in service in the last five years. Total passenger trips for AC Transit have seemingly moved in tandem with the health of the broader economy, as ridership fell drastically in 2003 and 2009 in conjunction with economic recessions. In contrast to the 2003 reduction in usage that was followed by a rebound, passenger trips continued their lag through 2012.



[45] Transit services are often measured in terms of Passenger-Miles Traveled (PMT) and unlinked passenger trips or boardings (UPT). Unlinked Passenger Trips (UPTs) are an imprecise measure because they do not control for transfers: if a passenger's trip involves two different bus transfers, the trip is counted as three boardings. UPTs on bus systems likely overstate the number of passenger journeys, while UPTs on rail, such as BART, should approximate passenger journeys closely because passengers rarely leave the system and tag back in.

[46] Service effectiveness is defined as the number of passengers served per vehicle-revenue hour.

ACTC_AR0143

AC Transit has also experienced varying levels of service, with many routes cut in the past five years in the wake of decreasing state and local funding. These cuts produced sharp drops in the number of passengers, but the agency has witnessed a recent rebound in ridership. Average daily ridership grew by 8.2 percent during the 2013 calendar year, with 78 of 107 bus lines experiencing higher passenger levels.[47] AC Transit service continues to face challenges from traffic congestion and road conditions that other operators, such as BART, do not have to contend with. To combat these issues, AC Transit has revamped its fleet with 210 new buses for greater dependability and has instituted initiatives to improve on-time performance. AC Transit is also the largest recipient of projected 2014 TEP funds.

Annual AC Transit Ridership

Data Source: MTC Transit Performance Reports
Analysis: Bay Area Council Economic Institute

Transit systems not only provide Alameda County residents with a diverse set of transportation options, they play the important role of connecting people to jobs, education, and vital services – and they do so in a way that minimizes negative environmental impacts.

Other Transit Operators

Other operators serve to connect diverse communities to the Bay Area's job centers.

Altamont Corridor Express (ACE): In fiscal year 2012, ACE supported 787,000 trips between San Joaquin, Alameda, and Santa Clara Counties with an average weekday ridership of 3,123. ACE ridership has fluctuated over the past decade, though trips and passenger miles have rebounded in the past few years after a post-recession dip. Alameda County stations – Vasco, Livermore, Pleasanton, and Fremont – accounted for 33 percent of annual entries in fiscal year 2012, with Santa Clara County and San Joaquin County each accounting for another 33 percent.

Alameda Ferry Services: Ferry services supported 722,000 trips in 2012, continuing the rebound in passenger trips following the recent recession; ridership has grown by 33 percent since 2009. In 2010, the Alameda Ferry was consolidated into the San Francisco Bay Area Water Emergency Transportation

[47] AC Transit. (2014). AC Transit Ridership Swells [Press release]. Accessed at: http://www.actransit.org/2014/01/30/high-spiraling-rideship-for-ac-transit/.

ACTC_AR0144

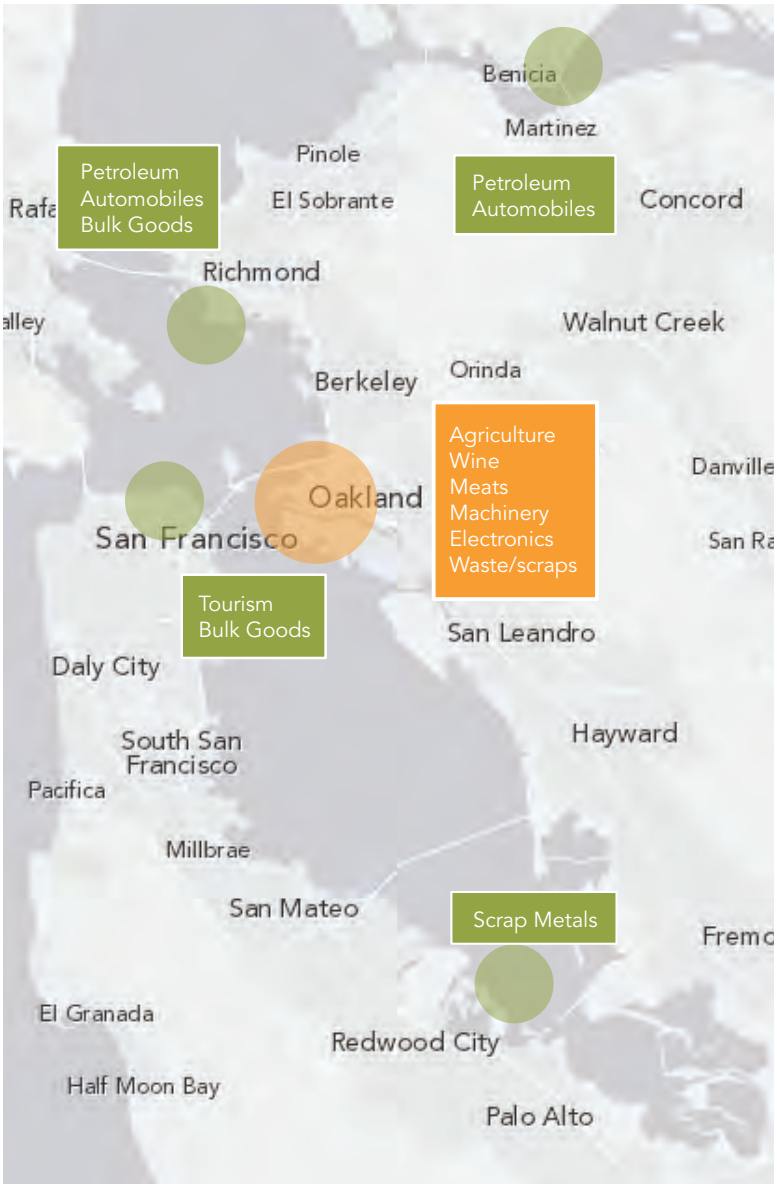
Authority (WETA), along with the Harbor Bay Ferry, the South San Francisco Ferry, and as of 2011, the Vallejo Ferry. According to the most recent data, ridership has been rising across all ferry services.

Livermore Amador Valley Transit Authority (LAVTA) and Union City Transit: LAVTA and Union City Transit are more local transit system services with smaller footprints, but have significant ridership. In 2012, LAVTA ridership totaled nearly 1.7 million, while Union City Transit accommodated 456,000 trips. Both systems are critical connection points for the BART and ACE regional transit systems.

Goods Movement

The Bay Area has a robust and diverse trade profile, covering petroleum, electronics, chemicals, apparel, scrap metal, automobiles, machinery, agricultural products, and wine, among other goods. In 2011, the Bay Area exported an estimated $52 billion in goods and imported over $90 billion.[48]

Measured by weight, 99 percent of Bay Area imports and exports are water-borne and travel through the region's ports.[49] The Port of Oakland is central to Bay Area maritime trade for several reasons. Its trade balance is unique. Its exports, in twenty-foot equivalent units (TEUs), exceed its imports, making the Port a key export node for the United States. The Port is generally the second port of call on the West Coast for Pacific shipping lines, which drop cargo off in Southern California and then travel north with lighter loads to pick up containers in the Bay Area.



- Over the past decade, local and regional markets have comprised a larger amount of the Port of Oakland's trade profile. Rail-borne goods bound for the eastern United States can be offloaded at any major West Coast port. In other words, there is no unique geographic advantage for the Port of Oakland on such goods, and domestic port selection is often dictated by the cost and frequency of rail service.
- The trade outlook with Asia is positive, particularly with China, whose growing middle class is demanding more luxury goods. The Port of Oakland handles 99 percent of Bay Area wine exports, and China and Hong Kong are becoming major recipients.[50] As internal infrastructure in China improves, making the inland transportation of goods easier and cheaper, this trade will likely continue.
- Investments in cold storage are also supporting trade in California's high-value agricultural sector.
- Given the high cost of land in the Bay Area, much warehousing activity has gone inland to the San Joaquin Valley, which positions the Port of Oakland as a gateway destination for goods handled by major distributors, such as Amazon and Costco.

The Port of Oakland also handles 99 percent of *containerized* cargo that flows through Northern California. The Port of Oakland has 20 deepwater berths, which enable it to handle containerized cargo on massive cargo ships. In contrast, the Port of San Francisco has 6 deepwater berths but does not handle containerized cargo anymore due to poor rail access, height restrictions, and other limitations.[51]

[48] Bay Area Council Economic Institute, "International Trade and the Bay Area Economy," 2013; Freight Analysis Framework 2011 export estimates.
[49] Maritime freight is measured in a number of ways. Tonnage refers to the cargo volume and is correlated with the TEU (twenty-foot equivalent unit) measure of cargo containers. However, not all cargo is shipped in containers, so bulk cargo is often converted to an estimated equivalent tonnage. Some databases also measure tons of cargo in weight or mass, using tonnes (metric tons) or short tons (tons in pounds). Value is measured in dollars. TEUs are generally the best measure of trade volume, since weight varies so much by product (automobiles versus electronics) and value can fluctuate with exchange rates, which can change rapidly and are not necessarily correlated with trade product volumes.

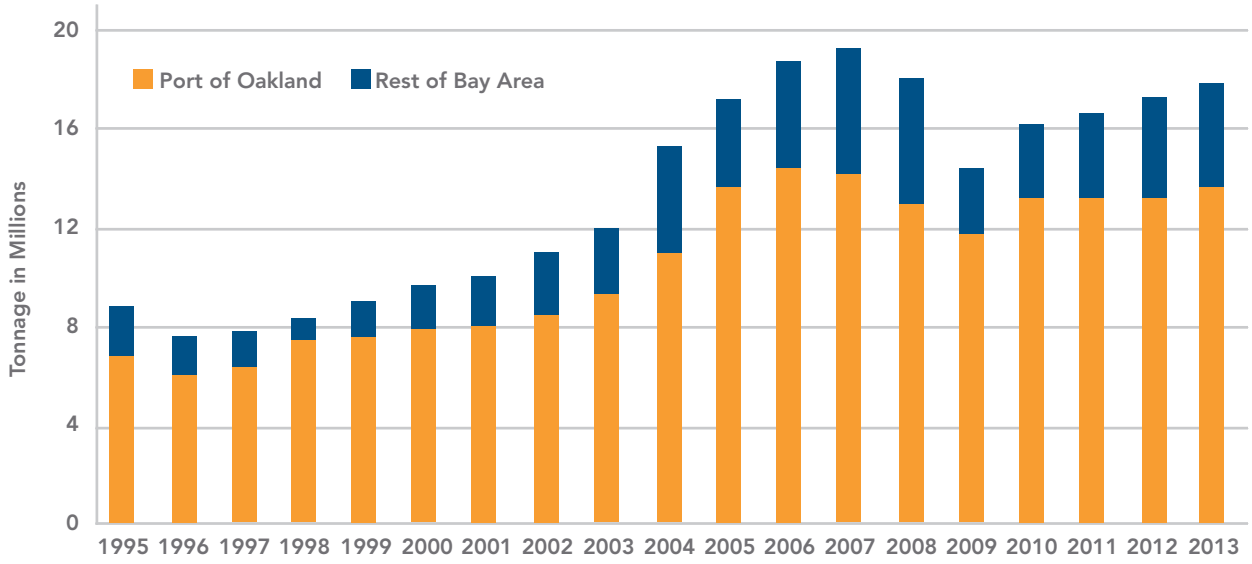
Analysis: Bay Area Council Economic Institute

ACTC_AR0146

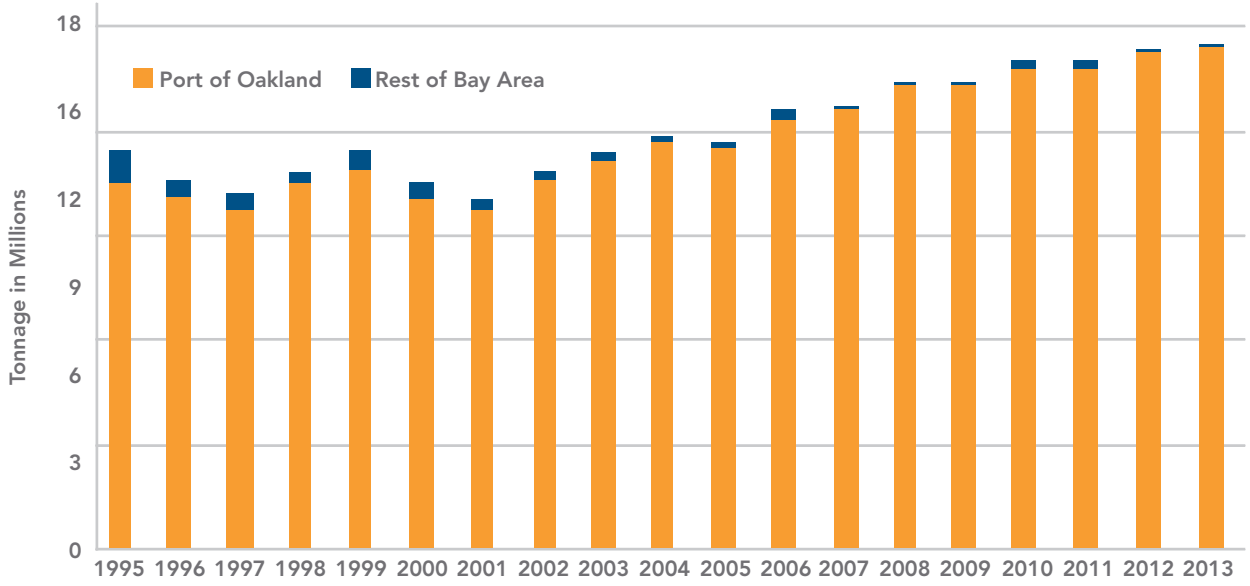


Each of the Bay Area ports has different specializations. The Port of San Francisco specializes in tourism and non-containerized cargo. The Ports of Richmond and Benicia handle crude petroleum exports and automobile imports. The Port of Richmond also handles dry bulk goods. The Port of Redwood City mostly handles construction materials and scrap metal. In contrast, the Port of Oakland handles electronics, machinery, agricultural products, and apparel, as well as scrap metal and paper. Its unique role in Bay Area trade cannot be overstated, and it dominates Bay Area imports and exports.

In addition to its distinctive role in Bay Area trade, the Port of Oakland's maritime operations sustain approximately 29,000 regional jobs, or eight jobs for every 1,000 containers imported or exported.[52] These jobs include those related to port operations – logistics, longshoremen, and waterfront workers – and those related to off-site rail and truck transportation and warehousing. The Port's economic impact reaches far beyond just Alameda County as every container moved at the Port begins and ends with a truck – contributing to job growth throughout the Bay Area and points beyond.

Bay Area Port Trade is Active and Growing

The Port of Oakland's ability to handle containerized cargo has helped Bay Area imports and exports grow over the past decade. The Port of Oakland also handles the majority of Bay Area water-borne foreign imports and exports by value. However, its share of certain product types varies widely, and in many commodity categories it is responsible for almost all Bay Area imports or exports. Most of the valuable Bay Area water-borne trade that does not flow through the Port of Oakland is petroleum and vehicle imports that go through the Ports of Richmond and Benicia and the waste/scrap exports that go through the Port of Redwood City.



Bay Area Port Cargo
Inbound Cargo

ACTC_AR0147

Outbound Cargo

Data Source: US Trade Database; Pacific Maritime Association
Analysis: Bay Area Council Economic Institute

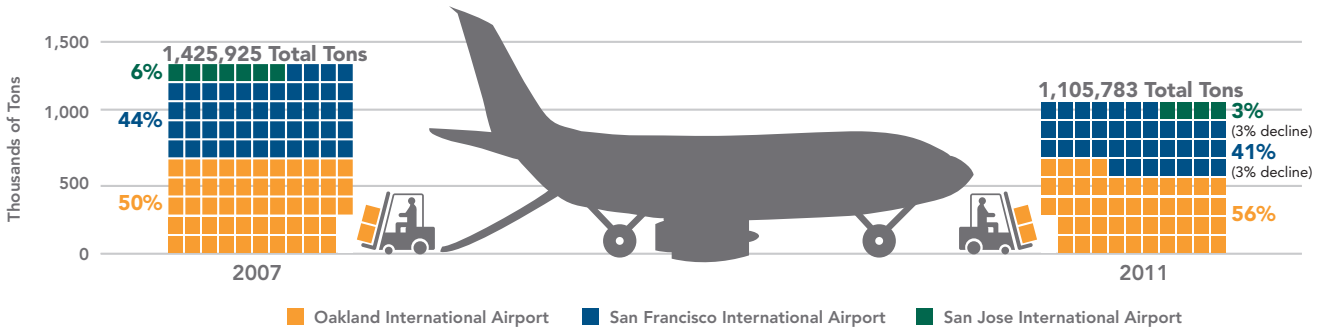
The types of products handled by the Port of Oakland reflect its critical role in supporting the Northern California economy. These products include produce and meats from the Central Valley and the North Bay; electronics and machinery from Bay Area manufacturing companies; medical precision instruments from Silicon Valley and the East Bay; and wine from Napa and Sonoma. Given their reliance on containerization, many of these products would otherwise need to go south to the Ports of Los Angeles or San Diego.

Exports from the Bay Area grew 56 percent by weight from 2007–2011 and 22 percent in value – by approximately $8 billion. This was led by growth in agricultural products, meat, waste/scrap, and machinery. The fact that this growth occurred in the middle of a recession in the US economy implies deepening integration of US food production with the global food supply chain.

Air Freight Connects Bay Area Goods with the Country and the World

Air freight constitutes half of Bay Area imports and exports by value, although it accounts for just a fraction of trade by weight. When analyzing exports alone, air freight moves a 60 percent share of trade by value. The three Bay Area airports support the regional manufacturing sectors specialized in semiconductors, electronics, and high-precision products. Though manufacturing employment has declined in the Bay Area, it still comprised almost 10 percent of total Bay Area employment in 2011.[53]

Measured by weight, air freight has been declining at all Bay Area airports over the past several years, largely due to the economic recession, though the share of air cargo going through Oakland International Airport (OAK) has increased. The California Department of Transportation (DOT) estimates that by 2035, air cargo is expected to increase at OAK by 65 percent.[54]



[53] Bay Area Council Economic Institute, "The Bay Area: A Regional Economic Assessment," 2012.
[54] California DOT, "Oakland International Airport Fact Sheet."

ACTC_AR0148

In 2011, the Oakland International Airport ranked as the 13th largest cargo airport in the nation and was responsible for over 50 percent of Bay Area air freight, estimated in 2011 at 550 kilotons. However, OAK does not handle much international cargo, over 95 percent of which (by weight) travels through San Francisco International Airport (SFO), even though much of that incoming and outgoing cargo will pass through Alameda County on trucks via I-580, I-80, or I-880.[55]

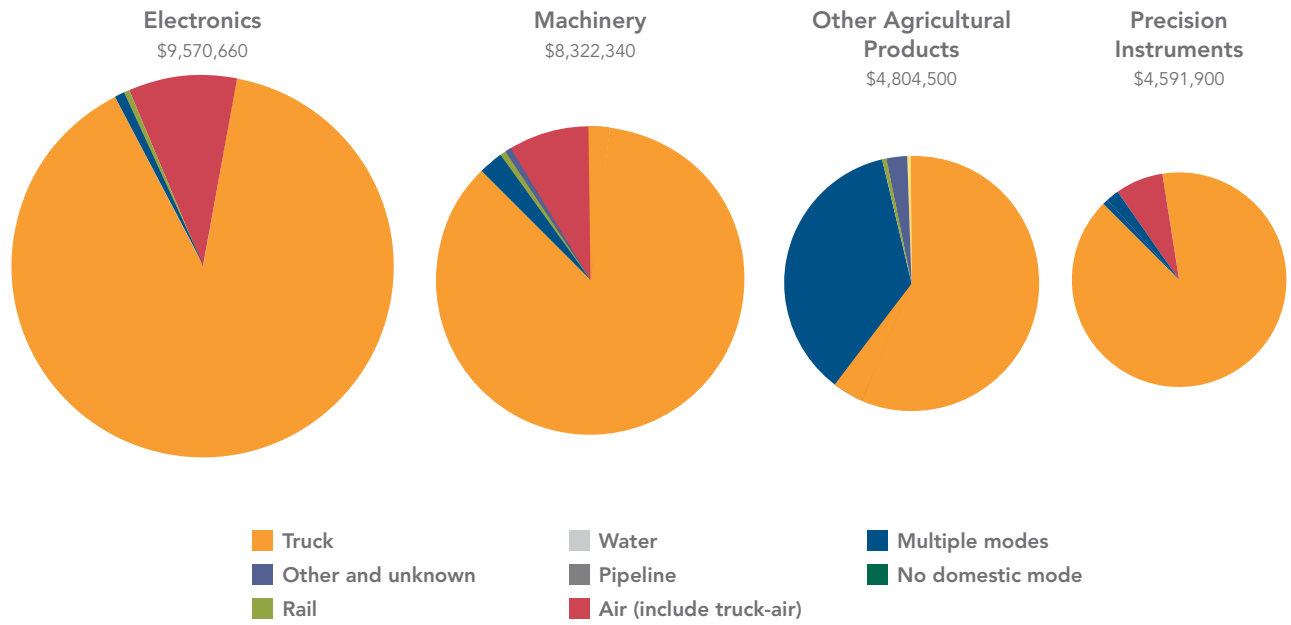
Instead, OAK is central to the Bay Area's domestic air cargo movement, as it is home to FedEx's west coast shipping hub. In 2007, OAK handled 70 percent of domestic air cargo, and in 2011, it handled 80 percent. Domestic air freight from the Bay Area in 2011 was valued at approximately $13.7 billion, primarily in electronics and precision instruments, which combine to deliver over 90 percent of the value of domestic exports. Domestic air trade dipped from 2007 to 2011, likely due to the economic recession.

Bay Area Air Freight
Regional Airports

Data Source: MTC, "Regional Airport Aviation Tracking Report," 2012
Analysis: Bay Area Council Economic Institute

Trucks Play a Critical Role

Alameda County also serves as a major conduit between the Central Valley and the Bay Area via the I-580, I-880, and I-80 highways. These routes are also heavily traveled by trucks conveying Central Valley produce to the Port of Oakland and goods arriving at the port to distribution centers in the Central Valley.



The highway system is also a critical component of Bay Area international trade. Approximately 72 percent of all Bay Area exports, by value, rely on domestic trucks to reach their physical port of exit, and 51 percent of water-borne exports (flowing through regional ports) require trucking.[56] The surface freight system in the Bay Area is therefore critical to the region's trade. Given the Port of Oakland's central role in water-borne exports, much of this surface freight is flowing through Alameda County. Some of the Bay Area's core exports – electronics, machinery, precision instruments, agricultural products, meats and seafood – rely almost exclusively on trucks.

[55] California DOT, San Francisco International Airport Fact Sheet.
[56] Data covering commodity category, mode of travel, and commodity value were determined using the Freight Analysis Framework. Records include all goods leaving the San Francisco Combined Statistical Area (CSA), regardless of point of origin. Data can be filtered by domestic mode of travel and foreign mode of travel. Calculations on the share water-borne international trade relying of trucks are taken from 2011 data.

ACTC_AR0149

2011 Bay Area Exports

Select Commodities by their Domestic Mode of Travel

Data Source: Freight Analysis Framework
Analysis: Bay Area Council Economic Institute

While the Port of Oakland and the Oakland International Airport generate significant numbers of truck trips in Alameda County, goods movement for end consumption domestically also plays a significant role in producing truck traffic. According to the Metropolitan Transportation Commission's 2004 Bay Area Regional Goods Movement Report, trucks haul 80 percent of freight tonnage moving through the Bay Area. The Federal Highway Administration also estimates that by 2040 the tonnage of goods moved in the Bay Area for domestic consumption will grow by approximately 70 percent from 2011 levels. This speaks to the need to invest in Bay Area urban goods movement, while also supporting national and international needs.

Alameda County's roads and highways will continue to be populated by truck traffic as more industrial developments are built in the county. At least eight new industrial centers, totaling about 3.6 million square feet, are under construction or planned in East Bay cities stretching from Fremont north to Richmond.[57] These developments are likely to be highly reliant on Alameda County infrastructure as trucks complete the initial legs in moving their products to customers in the Bay Area, across the nation, and overseas.

[57] San Francisco Business Times, "New industrial frenzy is all about demand." April 4-10, 2014.

ACTC_AR0150

The Sources of Transportation Funding in Alameda County

Infrastructure anywhere in the world is immensely complicated to develop and involves large sums of money. The US is no different. In 2008, the total estimated national budget for highways and mass transit was well over $200 billion dollars.[58]

The system that governs how these dollars are collected and how they are spent is also complex. This section provides an overview of that funding system to contextualize county sales tax measures in the larger scheme of transportation funding trends. Over the past decade, the transportation finance system has undergone significant changes that make future funding uncertain and create a potentially growing funding gap. In addition to allowing Alameda County to plan for the region's growing transportation needs, the 2014 TEP also addresses this funding uncertainty by providing a dedicated source of long-term funding.

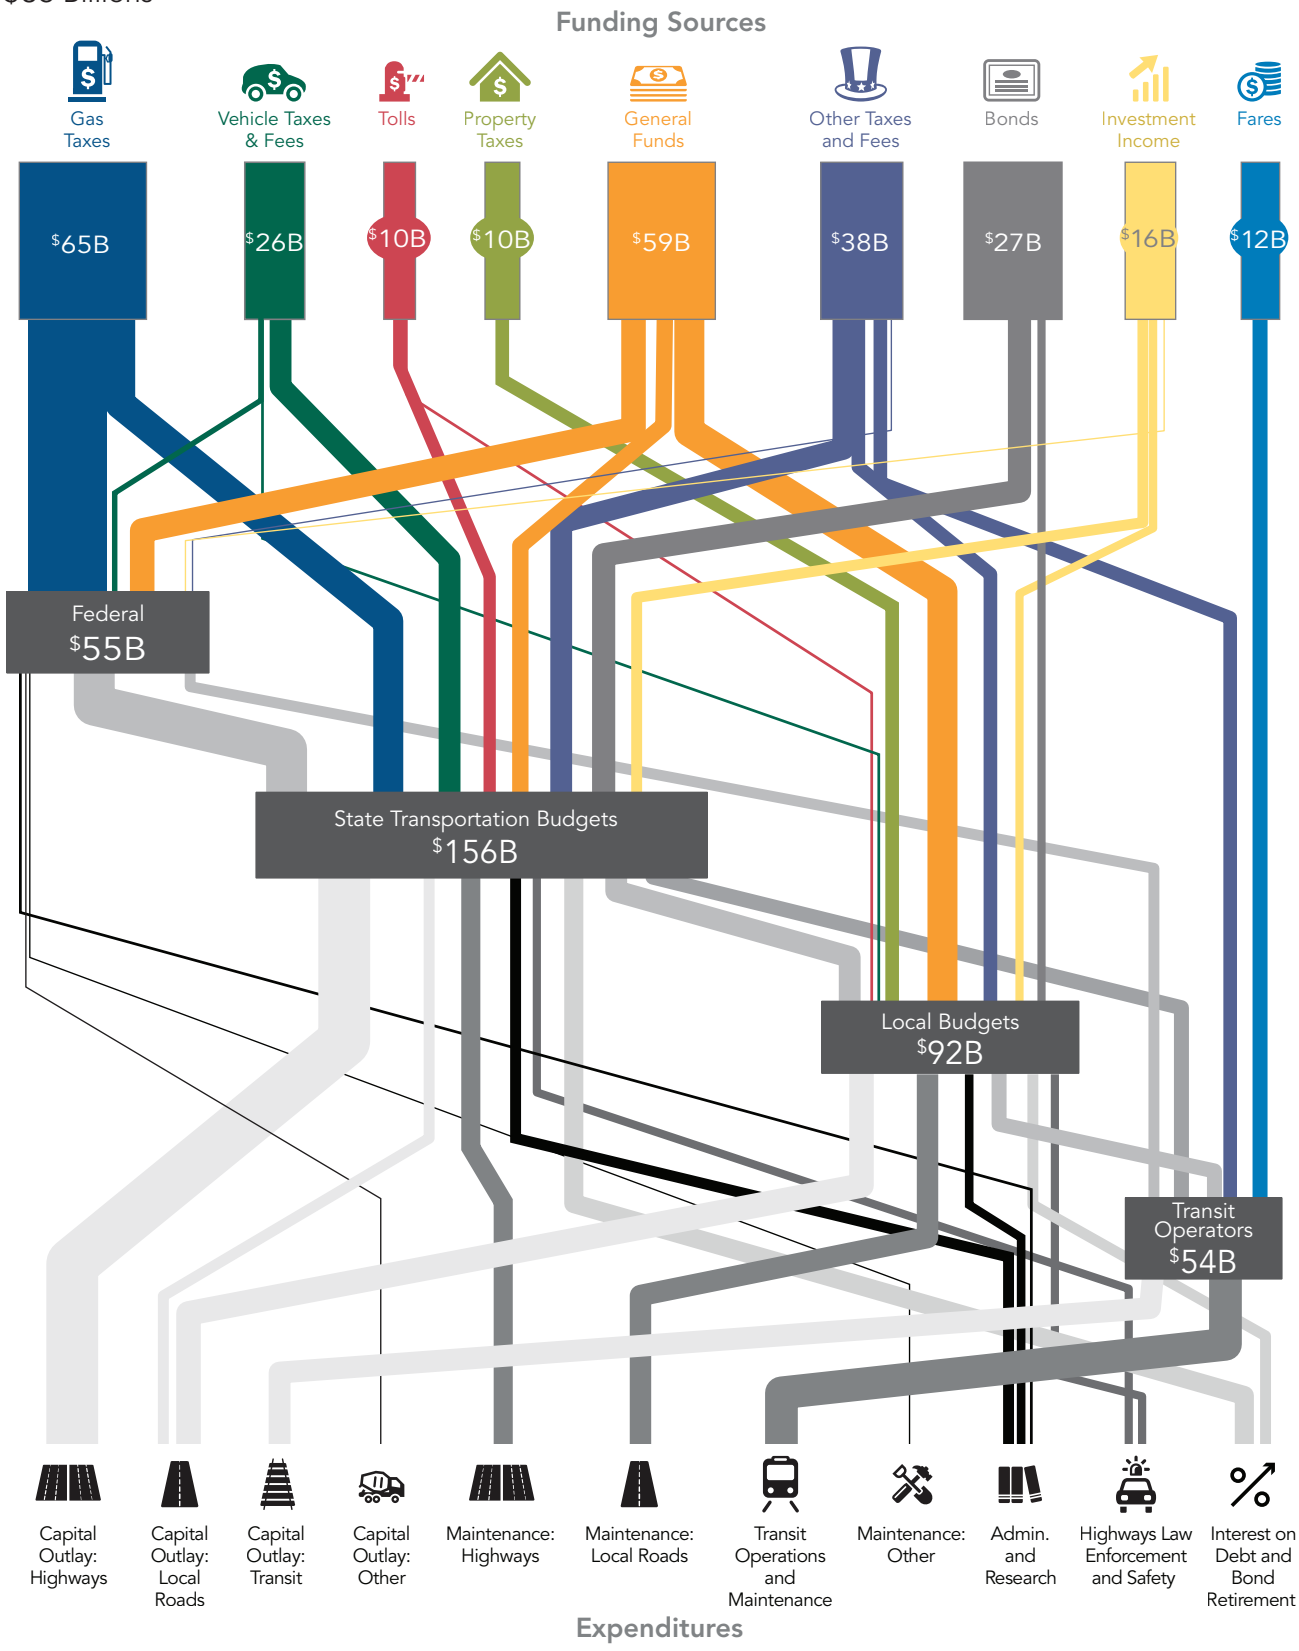
Federal Transportation Funding

At the aggregate national level, the bulk of transportation funds comes from several sources, primarily taxes on gasoline and diesel, taxes on vehicle parts and activities, and general revenues from various levels of governments. In 2010, these together accounted for almost 40 percent of total transportation funding, estimated at over $260 billion across the US at all levels of government.[59] Key sources include the following:

Gas and Diesel Taxes: Federal and state taxes are applied to each gallon of gas consumed in the US. The gas tax comprises the bulk of federal transportation funding and is a major source of state transportation funding. The federal gasoline tax is $0.184 per gallon and has not changed since 1993. California's excise gasoline tax rate was $0.36 per gallon, as of January 2013; additional fees and local taxes add an average of $0.127 per gallon.[60] State gasoline taxes vary widely, from New York's effective average of $0.506 per gallon to Alaska's $0.08 per gallon. The unweighted average across states for state gas taxes was $0.27 per gallon in 2012.

[58] Research and Innovation Technology Administration, Bureau of Transportation Statistics, "Government Transportation Financial Statistics," 2012.
[59] Statistics compiled from National Transit Database and Highway Statistical Series. Given the complexity in data collection, these numbers may be subject to reporting errors.
[60] American Petroleum Institute, "State Motor Fuel Taxes," 2013. Calculating state gas taxes is not as straightforward as it seems. Some states charge sales taxes on gasoline, which fluctuate based on oil prices. Many counties and localities charge additional local taxes, which the American Petroleum Institute averages out across the state. As such, calculations from different sources will vary slightly.

Recent transportation funding measures in Alameda County



Measure B: In 1986, Alameda County voters approved California's second locally enacted county transportation sales tax, known as Measure B, supporting a 15-year investment package. In 2000, 81.5% of Alameda County voters approved the continuation of Measure B and the Transportation Expenditure Plan (TEP) for 20 more years.

Measure B1: Measure B1 was a permanent sales tax measure that lost by a fraction of a percent (721 votes) in 2012. The measure would have augmented and extended the existing sales tax to fund Alameda County transportation improvements according to a new TEP.

2014 TEP: The 2014 Transportation Expenditure Plan proposes approximately $8 billion in investments spread over 30 years.

US Transportation Funding (2010)

$US Billions

Note: Intergovernmental transfers between levels of government create budget amounts that, when taken together, are larger than the funding sources in aggregate. For example, when federal funds are passed down to states, they are counted in both the federal and state budgets as depicted by the boxes.

Data Sources: Highway Statistical Series and National Transit Database

ACTC_AR0152

Vehicle Taxes and Fees: Many vehicle-related sales, such as tires and trailers, carry special taxes earmarked for transportation purposes. Each state also charges its own set of fees and taxes. California charges fees for commercial vehicles based on weight; in FY11–12, these fees generated almost $1 billion.[61]

Tolls: Paying to cross roads and bridges also raises revenues for transportation. While small in the grand scheme of funding, tolls are significant revenue sources in their localities. Tolls also include dynamic pricing mechanisms such as express lanes, which allow lanes to be priced based on traffic conditions and demand.

Property Taxes: Transportation-related property taxes come through many channels, including property taxes around major transportation investments, such as transit stations. Tax increment financing (TIF) and developer fees are two ways in which local jurisdictions can better capture the economic value generated by infrastructure projects in the form of government revenue.

General Funds: Many levels of government supplement transportation funding through general fund transfers. This practice is common at the local level, although the federal government has also appropriated over $50 billion for transportation from its General Fund over the past five years.

Other Taxes: Each state has its own regulations about what goods or services can be taxed for transportation purposes, and revenue sources include developer impact fees, parking charges, and sales taxes. California counties and transit agencies can pass local option sales tax measures to support transportation needs. In California, 20 of the 58 counties currently levy this tax, including Alameda County through Measure B, which was passed in 2000 and expires in 2022.[62]

Bonds: States and localities can issue bonds to fund transportation projects and dedicate revenue streams to pay off bond debt. In 2006, California voters approved Proposition 1B, which authorized almost $20 billion in bonds over 10 years for transportation purposes.

Fares: Purchasing a ticket supports transit operations, although the significance of fares varies greatly by transit agency.

The Growing Burden at the Local Level

The transportation funding system is also highly localized, in that each state and each locality leverages its own funding mechanisms, special taxes and fees, and bonds. In some places, certain revenue sources are much more important. For example, bridge and highway tolls accounted for less than 5 percent of total transportation funds across the US, but they are a significant source of funds in the Bay Area.

In addition, transportation funds are not quite like personal income or many corporate revenues, which can be easily shifted from one use to another. Instead, transportation funding is composed of many smaller funds, the use of which is tightly regulated. For example, at the federal level, most funding is returned directly to states according to a series of formulas; in turn, states pass this money along to local agencies according to their own formulas, although agencies generally must demonstrate that their projects fit within

[61] California Transportation Funding Overview, Legislative Analyst's Office, February 28, 2011.
[62] Transportation Funding in California, Division of Transportation Planning California Department of Transportation, 2014.

ACTC_AR0153

current policy frameworks. These frameworks and the formulas that distribute funds also change over time. Money also flows through various smaller funds that can only be used for particular purposes.

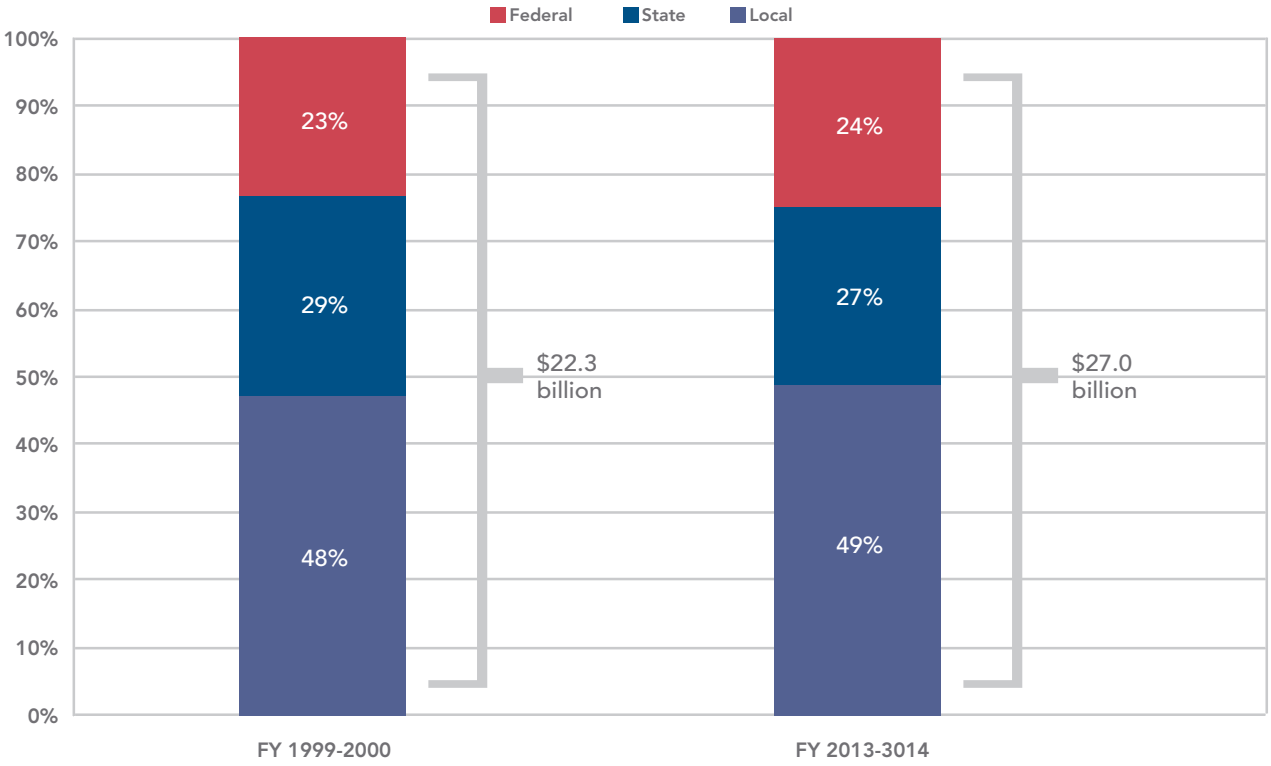
These practices result in complex funding systems that are highly particular to different areas. The federal government establishes transportation policy objectives and guides spending. In California, metropolitan planning organizations and regional transportation planning agencies have transportation plans that are subject to public comment and review. At all levels, transportation plans spell out the anticipated transportation system investments, policy objectives, community aspirations, and the needs to accommodate social, economic, environmental, and regulatory change.

The various layers of the transportation funding system include the following:

- **Congress and the Highway Trust Fund:** The primary instrument of transportation funding at the federal level is the Highway Trust Fund. Established in 1922, it is funded primarily through taxes on fuel. Congress approves multi-year transportation bills that establish policy frameworks, distribution formulas, and overall funding levels. A small portion of federal funding is put into programs that state and local agencies can compete for in a grant-like application process, though not all such funds come from the Highway Trust Fund.

- **State Legislatures:** Legislatures create and pass transportation budgets, apportion parts of the general fund for transportation purposes, and create new funding sources, such as bonds. Each state can set its own fuel tax rates and vehicle fees, and these vary widely across the US. The California Department of Transportation (Caltrans) oversees transportation needs across the state and helps develop the California Transportation Plan (CTP), which sets forth a long-range vision of transportation needs and strategies for addressing them. This plan is updated every five years, and Caltrans is beginning to develop CTP 2040.

- **Regional Metropolitan Planning Organizations:** Each major metropolitan area in California has a metropolitan planning organization (MPO) that helps distribute state and federal money. MPOs are generally pass-through entities, which redistribute money instead of raising it. MPOs also oversee regional transportation plans, which build upon, integrate, and ensure regional coordination among the county plans. The Bay Area's MPO is the Metropolitan Transportation Commission (MTC) and MTC's 2040 Regional Transportation Plan is included as part of Plan Bay Area,[63] an integrated long-range transportation and land use/housing plan that was jointly developed with the Association of Bay Area Governments (ABAG) to meet the regulatory requirements of Senate Bill 375, the Sustainable Communities and Climate Protection Act of 2008. MTC also oversees Bay Area bridge toll revenues.



- **County Agencies:** Many California counties have one or several transportation entities that can raise funding to support county-wide transportation needs. The Alameda County Transportation Commission (ACTC) is one such agency and it helps oversee the Alameda Countywide Transportation Plan (CWTP),[64] which is developed in coordination with residents, communities, and cities. ACTC also manages the transportation expenditure plans (TEPs) that guide the expenditure of revenues from special transportation funding sources, such as Measure B and vehicle registration fee funds approved by voters.

[64] Accessible at http://www.alamedactc.org/app_pages/view/795.

ACTC_AR0154

- **Transit Operators:** Transit operators are generally independent entities responsible for their own budgets, operating practices, and capital plans for long-term system maintenance, upgrades, and expansion. Most rely heavily on funding from federal, state, and local sources, as well as from fares.
- **Cities:** Each city has a department that plans capital projects, infrastructure upgrades, and road maintenance. A citywide General Plan has a transportation component that lays out priorities in the city transportation system.

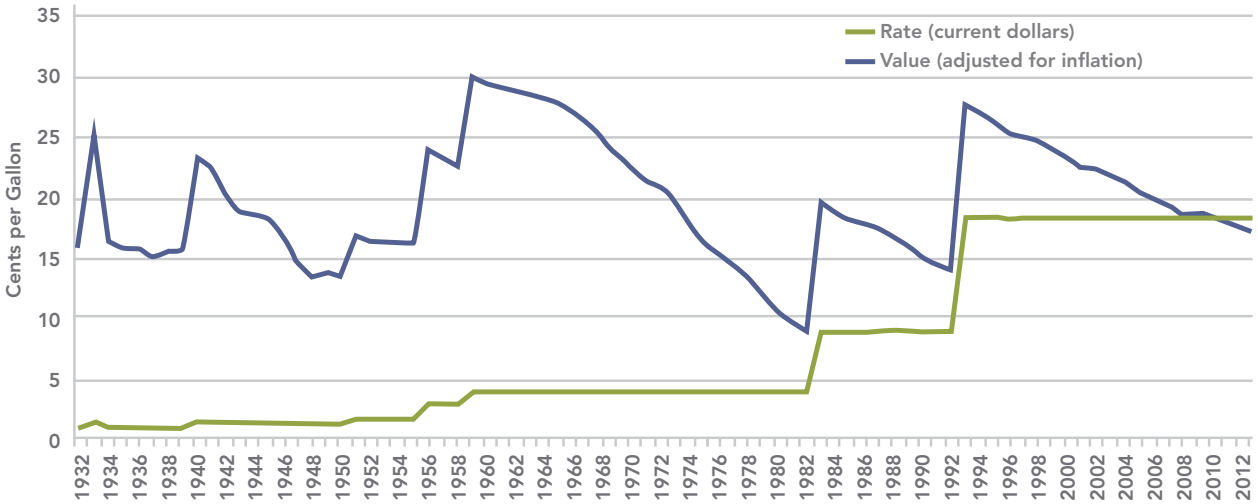
California Transportation Funding
By funding source

Note: Dollar values are inflation-adjusted to show constant 2013 dollars
Data Sources: California Department of Transportation and California Legislative Analyst's Office
Analysis: Bay Area Council Economic Institute

It is important to have this broad system in focus in order to understand how recent developments have impacted this funding system and have helped to shift the burden to local jurisdictions. In the 1960s and 1970s, the federal government was responsible for almost 30 percent of transportation funding for highways nationwide. By the 1990s, that proportion had moved lower, with states and local governments making up the difference. This shift in transportation funding mix has been more pronounced in California, where local option sales taxes to fund transportation have been widely used. In California, local funding makes up nearly half of all transportation spending.

The evolution toward increased local funding continued over the past decade, though the federal government has recently stepped up its role in funding transportation. Following the recent global economic crisis, federal stimulus funds were heavily allocated toward infrastructure. But these funds were for projects that were deemed "shovel ready", and reliance on federal dollars is unlikely to be a sustainable source of

ACTC_AR0155



funding going forward. Looking ahead, the combination of federal and state transportation funding's reliance on taxes from slowing fuel consumption and the growing costs of steel and other construction materials will place greater pressure on local jurisdictions to fill the infrastructure financing gap.

Looking Forward: Trends in Transportation Finance

The current state of the US transportation funding system poses risks for local transportation systems. In 2010, a federal commission evaluated the transportation funding system in the US and found that there was a $172 billion *average annual* investment gap across the US just to properly maintain the current transportation system through 2035. Improving this system with necessary upgrades and investments would produce a $214 billion average annual gap. Just at the federal level, this points to gaps of $78 billion for maintenance and $96 billion for necessary upgrades. Revenue from taxes on gasoline comprises the single biggest source of funding across the system, determined by gas tax rates and by gas gallon purchases. In turn, these are determined by how much people drive and how many gallons of gas are consumed.

The federal gas tax has not increased in 20 years. The gas tax rate at the federal level is $0.184 per gallon, and its value has eroded immensely due to inflation. A 2008 report estimates that the gas tax would need to have been raised by almost $0.10 per gallon just to restore purchasing power it had when it was raised in 1993.[65] This situation has contributed to major shortfalls in the Highway Trust Fund. Over the past decade, the balance has been steadily diminishing, from almost $40 billion in 2000 to almost $9 billion in 2008, and without major and unprecedented contributions from the General Fund, totaling nearly $53 billion since 2008, the Highway Trust Fund would have been insolvent. As of April 2014, the Congressional Budget Office projects that the Highway Trust Fund will have insufficient revenues to meet its obligations starting in the latter part of fiscal year 2014.

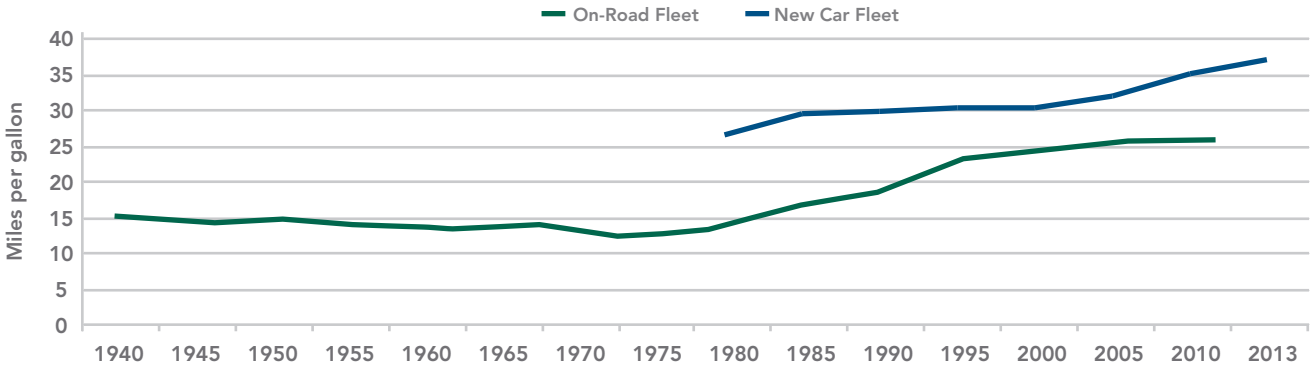
Federal Transportation Funding: Revenues, Expenditures, and the Balance of the Highway Trust Fund, 2000 - 2012



Data Source: Federal Highway Statistical Series, Tables FE-210
Analysis: Bay Area Council Economic Institute

Americans have been driving less – on a per-capita basis and overall. This can partially be explained by the recession, but the trend actually started in 2007. Driving behavior is partially driven by gas prices, which fluctuate in a market environment. Because the gas tax rate is flat, revenues do not increase when gas prices rise. A reduction in driving is theoretically good, but the resulting funding shortfall creates short-term dilemmas. Will vehicle miles traveled (VMT) plateau – and hence make more road investments less necessary? If VMT rises again, cars will be driving on the same system, now lacking billions in unfunded investments. The long-term planning horizon of transportation infrastructure makes this calculation particularly complicated.

Increasing fuel efficiency means Americans can drive more miles on less gas. In the long term, this efficiency will lead to more strain on the transportation system while generating less funding to maintain and manage it. Today, a Toyota Prius averaging 50 miles per gallon, would provide only half the tax revenue of a 1985 25-mile-per-gallon vehicle while still creating the same amount of congestion, road wear and tear, and parking needs. Average US fuel economy has been climbing slowly since the 1970s as individual vehicle models become much more efficient. Looking ahead, radical increases in fuel efficiency through clean-fuel vehicles and higher CAFE standards are likely to improve overall fleet economies.

ACTC_AR0157

The growing use of bonds to fund transportation projects brings risk. Over the past two decades, bonds and general funds at all levels of government have become critical sources of transportation funding, which entails several risks. Bonds create long-term liabilities that can soak up potential revenue sources or strain general funds through interest payments. Relying on general funds makes transportation funding increasingly political and dependent on uncertain budgets, whereas dedicated funding streams smooth out revenues, enabling long-term investment strategies. In addition, general fund budget surpluses do not seem likely in the future, and many public budgets are already burdened by debts and other liabilities.

Bonds as a Percent of Total State and Local Funding for Highways
United States (1985 - 2010)

Data Source: Highway Statistical Series, Tables HF-10
Analysis: Bay Area Council Economic Institute

Political volatility increases funding uncertainty. Over the past several decades, transportation bills have been passed as approximately five-year spending packages, which have guaranteed funding streams for long-term projects and partially insulated transportation from political cycles. However, the last federal transportation act to span a full election cycle, known as SAFETEA-LU, expired in 2009 and was temporarily extended 10 times amid much political wrangling before Congress could agree on a new bill in 2012.[66] The current act, known as MAP-21, has only a two-year lifespan and is set to expire in 2014.

These changes have helped to create a turbulent environment for transportation funding that makes long-range planning difficult, particularly at the local level. Uncertainty over federal funding has shifted risk to local jurisdictions that are ultimately responsible for meeting the mobility needs of residents today and in the future. As infrastructure finance evolves from a national model to one dominated by self-financing regions and localities, the importance of having multiple streams of funding for transportation systems grows. Construction costs continue to outpace inflation[67] and aging infrastructure needs to be updated,[68] leaving local governments looking for new ways to create funding for their necessary transportation improvements. Some experts advocate for long-term reforms that

[66] SAFETEA-LU (Safe Accountable Flexible Efficient Transportation Equity Act – a Legacy for all Users, often referred to as "safety-lew") originally called for almost $200 billion over five years. It was passed in 2005 and was finally succeeded by the current act, MAP-21 (Moving Ahead for Progress in the 21st Century Act) in 2012.

ACTC_AR0158

would shift the bulk of transportation funding directly to users,[69] but given the political complexities of this shift, meeting near-term funding shortfalls requires multiple approaches. Municipalities and counties have increasingly turned to sales tax measures as one way to ensure dedicated funding for a suite of infrastructure enhancements,[70] thereby providing greater transparency to the ultimate use of the tax revenue. Alameda County's 2014 TEP and proposed sales tax increase employ a similar strategy to address the county's transportation needs both now and into the future.

Uncertainty over federal funding has shifted the risk to local jurisdictions that are ultimately responsible for meeting the mobility needs of residents today and in the future.

Transportation Funding in Alameda County

It is difficult to precisely measure transportation revenues and expenditures at the local level, given the inconsistencies and complexities of funding reporting. In many cases, one agency's expenditures are another's revenues, and a given dollar might be counted multiple times as it makes its way from pocket to pavement. In addition, many transportation improvements, such as signal upgrades or some maintenance, are handled through the development process, on a project-by-project basis, and do not enter a city budget. Finally, the local financing scene is full of small funds, benefit districts, special measures, bonds, and other funding vehicles. In the words of a local transportation expert, it is an "unholy hodgepodge."

Transportation funding in Alameda County must be assessed within the broader context of transportation funding in California as a whole. Transportation funds for roads and transit in California in fiscal year 2014 are estimated at $27 billion, with almost half coming from local revenue sources.[71] Approximately 24 percent will come from federal government sources, primarily through MAP-21, and another 27 percent from state sources, primarily through the state gas tax. Over the past 13 years, state funding has come to represent a smaller portion of total funding: in 1999–2000, state funds comprised 29 percent of total funding, federal government 23 percent, and local funds 48 percent.[72]

The sales tax is an important piece of the funding puzzle. It is also a large piece in Alameda County. City transportation budgets in Alameda County totaled $655 million in FY 2010–2011.[73] Transit system operating expenditures in Alameda County were budgeted at $668 million, roughly based on Alameda County ridership.[74] In FY 2012-2013 Measure B direct allocations to cities and transit operators were $64.8 million.[75]

[69] See "Paying Our Way: A New Framework for Transportation Finance," National Surface Transportation Infrastructure Financing Commission, 2008; "CA 2025: Transportation," PPIC; "Infrastructure Productivity: How to save $1 trillion in Infrastructure Spending," McKinsey Global Institute, January 2013.
[70] The Atlanta Regional Transportation Referendum and Los Angeles' Measure R are two recent examples of ballot initiatives that would provide dedicated revenue for pre-approved transportation projects.

ACTC_AR0159

Total Transportation Funding in California

FEDERAL 24%	Reliance on federal sources remains tenuous due to the uncertainty over the Highway Trust Fund and the politically turbulent environment of transportation bills over the past several years.
STATE 27%	At the state level, transportation revenues have nearly doubled over the past 15 years, primarily in the seven years leading up to the recession.[76] Revenue has remained relatively flat since the beginning of the recent recession, with the state's gas tax swap shifting taxation away from the point of sale to production. • Between the early and late 1990s, inflation-adjusted gas tax revenues generally kept pace with vehicle miles traveled, but between 1999 and 2006, these levels diverged, leading to maintenance backlogs as revenues could not keep up with California's growing transportation needs. • In 2006, voters approved Proposition 1B, a $20 billion dollar general obligation bond to fund various transportation needs across the state. Much of that funding has been committed or spent already, so Proposition 1B funds are no longer a readily available funding source. • The State Transportation Improvement Program (STIP) allocates a combination of federal and state revenue to counties for regional road and transit improvements. In FY 2012-2013, Alameda County received $62.5 million of the $4.0 billion allocated statewide for two years worth of investments.
LOCAL 49%	**At the local level, transportation revenues come primarily from transit fares, transportation sales taxes, special transportation tax measures (such as Measure B), property taxes, and bridge tolls.** • The state returns approximately 3 percent of total sales tax revenues to the counties in which they originated, much of which is passed through to cities and agencies. Most of these funds must be used for transit purposes, but they can be allocated to local streets and roads if all transit needs are met. In FY 2012–13, this funding amount was $1.5 billion, barely up from $1.4 billion in FY 2007–2008, and up from $1.1 billion in FY 2002–2003. Alameda County's portion of these funds has not significantly increased over the past 10 years, despite population growth. As the economy climbs out of the recession, sales tax revenues might increase, but this gap has left massive funding shortfalls. • Counties in California can also pass special measures for transportation funding, which generate between $3.5 and $4.5 billion per year. Almost half of that overall amount is generated in Los Angeles County, which has passed three sales tax measures for a combined total rate of 1.5% through 2039. In Alameda County, Measure B receipts are anticipated at $125 million in the current fiscal year. Alameda is one of 20 counties – collectively representing over 80% of Californians – that have transportation sales taxes. These tax revenues have become a large portion of transportation funding in California. • In California, transit fares in 2012 generated an estimated $1.6 billion.[77] The transit systems serving Alameda County generated $437 million, of which $367 million was produced by BART. • Much of the rest of local transportation revenues is composed of general fund transfers, toll revenues, developer impact fees, and various smaller dedicated funds. Developer impact fees are difficult to track and are closely linked to economic cycles. When development slows, funding slows, even though people continue using the transportation system. General funds are not ideal transportation funding sources because they are not dedicated, thereby making long-term projects risky and, accordingly, more expensive.

[76] California Legislative Analyst's Office, "Overview of Transportation Funding in California," 2014.
[77] National Transit Database.

ACTC_AR0160

Forty percent of these funds were allocated for local streets and roads projects, 37 percent for mass transit, 7 percent for bicycle and pedestrian projects, and 16 percent for paratransit.[78]

This does not account for the critical role Measure B funds play on a project-by-project basis. For example, the BART Warm Springs Extension is a 5.4-mile extension of the existing Fremont line into southern Alameda County scheduled to be completed in 2015. The project receives funding from numerous sources, which include state transportation programs, Metropolitan Transportation Commission bridge tolls, and contributions from BART and San Francisco International Airport. The largest source, Alameda County's Measure B, provided funding for just over 25 percent of the $890,000 project. Without these funds serving as an anchor, it is unlikely that the extension would have moved forward, and eventual BART service to Silicon Valley would go unrealized. By leveraging other resources, Measure B funding is critical to the completion of many massive transportation projects in the county.

Measure B projects have leveraged almost $3 billion in external funding sources – almost four times the funding from Measure B to date.

Local taxes play a special role in the overall profile of transportation funding sources in California because they provide dedicated funding, have significant impact, and are approved by residents.

- **Dedicated Funds:** These funds are not subject to political cycles, apportionments, or grant processes, and they provide a level of funding certainty that helps major capital projects get off the ground. While revenues will fluctuate with general economic cycles, dedicated funds cannot be raided or leveraged by other governments. They also serve fundamental maintenance and operations needs.
- **Significant Impact:** According to Caltrans data, these transportation taxes across California provide almost 15 percent of the state's transportation funding. In 2013, Measure B sales tax revenues provided 70 percent of the Alameda County Transportation Commission's budget, and they often comprise the majority or entirety of funding for specific transportation projects. In 2011-2012, cities in Alameda County spent approximately $227 million on streets, highways, and storm drains,[79] and Measure B pass-through funding for these cities was $60.5 million. In short, these funds make a difference.
- **Approved by Residents:** The actual distribution of funds is governed by a Transportation Expenditure Plan, which is developed through stakeholder engagement and voted on as a local tax measure.
- **Local Accountability:** All decisions regarding funding are made by local officials in public meetings. A citizen watchdog committee oversees expenditures to ensure that the funds are being spent in accordance with the plan. It reviews and reports directly to the public on Measure B expenditures, and has found expenditures consistently in line with voter-approved plans since Measure B expenditures began.

ACTC_AR0161

Reviewing the Performance of Measure B, 2000

For over 25 years, Alameda County has benefitted from voter-approved transportation sales tax measures. The most recent, Measure B – the half-cent transportation sales tax approved by 81.5 percent of Alameda County voters in 2000 – has been successful in enabling critical transportation projects.

In accordance with the Alameda County 20-year Transportation Expenditure Plan (TEP), a major portion of Measure B funds (approximately 60 percent) is distributed in direct payments to cities and transit agencies. Over the last five fiscal years, these distributions have totaled $288 million for road maintenance, transit service, paratransit services, and bicycle and pedestrian safety. For example, in FY 2012-2013, Measure B program funds were distributed as follows:

- $25.7 million for local streets and roads
- $24.4 million for mass transit operations
- $10.3 million for special transportation solutions for seniors and people with disabilities
- $4.3 million for bicycle and pedestrian safety funds

The remaining 40 percent of Measure B funds has been spent on capital projects and grant programs for infrastructure upgrades, expansions, extensions, and other local projects. As of 2014, the Alameda County Transportation Commission (ACTC) had delivered on 95.6 percent of all Measure B capital project investments.

Successfully completed improvements include the following examples.

Fruitvale Transit Village: A livable community surrounding the Fruitvale BART station, this mixed-use development, including office, retail, and residential space, is the successful and effective result of a broad-based partnership among public, private, and nonprofit organizations working together to revitalize a community using transit-oriented development.[80]

Local street rehabilitation: In addition to direct funding for maintenance, Oakland and Newark both received a combined $6.7 million to improve local streets, and $6.4 million went to streetscape improvement in downtown Oakland.

SR-84 / I-580 interchange: Caltrans and the City of Livermore designed and constructed a new interchange at I-580 designed to improve the connection from I-580 to the Route 84 alignment along Isabel Avenue.

Fruitvale Transit Village in Oakland *Photo Credit: ACTC*

ACTC_AR0162

Downtown Livermore after Measure B Investment

Photo Credit: ACTC

Measure B funded the re-routing of SR-84 from downtown Livermore to Isabel Avenue, which allowed for revitalization in the downtown area, including new restaurants, retail shops, and a theater. This work also supported existing Measure B funded improvements to SR-84 to ease congestion, increase local traffic circulation, and improve pedestrian and cyclist safety in the area.

Other investments will be completed in the next few years:

I-80 Integrated Corridor Mobility (ICM): This project will implement intelligent transportation systems (ITS) upgrades to the 20-mile stretch of I-80 between the Bay Bridge and the Carquinez Bridge. The new technologies will include adaptive ramp metering, incident management, and digital signs to communicate with drivers. The project area includes the most congested stretch of highway in the Bay Area: I-80 north of the Bay Bridge. ACTC has a variety of projects aimed at improving this corridor.

BART Warm Springs Extension: The Warm Springs Extension is a 5.4-mile extension of the BART Fremont line. The line will run in a tunnel under Fremont Central Park and then at grade to a new station in southern Fremont. Given the growth in commuters from Alameda County to Santa Clara County, extending BART south has the potential to relieve congestion on I-880. This extension is also the first step in a planned BART extension into Silicon Valley.

I-580 Express Lanes: Environmental approval has been received to convert the new HOV lanes on I-580 to high occupancy toll/express lanes over a total distance of 22 miles. The conversion to express lanes will give individual drivers the option to pay an electronic toll while using the lane; carpool users will continue use for free. Dynamic pricing will also be utilized, whereby the cost to use the express lane for individual drivers will vary based on real-time traffic levels and deducted automatically from

ACTC_AR0163

BART Oakland Airport Connector *Photo Credit: ACTC*

Construction on BART Warm Springs Extension *Photo Credit: ACTC*

drivers' FasTrak accounts. The conversion will maximize the efficiency of the HOV lanes and will help reduce congestion by giving drivers an alternative way to speed their trip. Existing HOV lanes will begin their conversion to express lanes in late 2014, to be open for use in 2015. This project builds upon a series of investments including HOV lanes, auxiliary lanes, and new interchanges along the I-580 corridor.

BART Oakland Airport Connector: The Oakland Airport Connector project will provide a 2.2-mile automated guideway transit system to connect the BART Coliseum station with the Oakland International Airport. Those trying to reach the airport from BART were previously shuttled using the AirBART bus system. Vehicle and system testing began in January 2014, while construction of the Coliseum Station Transition Building continues through mid-2014. Revenue service will begin in the fall of 2014.

These projects and improvements have come in the face of Measure B shortfalls. The tax has produced less revenue than originally anticipated,[81] largely due to depressed consumer spending during the Great Recession, which has been the case across California. Even with less revenue, ACTC has executed on 95.6 percent of proposed Measure B capital investments. Because of the availability of the local sales tax funds, ACTC has been able to move projects through the development, right-of-way acquisition, engineering, and construction processes.

With Measure B funding enabling the early phases of project delivery, ACTC has leveraged almost $3 billion in external funding sources – almost four times the funding from Measure B itself. This has included major funding from the $20 billion California transportation bond and from other regional, state, and federal funding sources. The matching requirements of many transportation grants make Measure B funds a critical tool for local transportation finance efforts, and without Measure B funds, it is difficult to estimate how much of this essential funding Alameda County would have been able to secure.

ACTC_AR0164

The Alameda County 2014 Transportation Expenditure Plan

The Alameda County Transportation Commission (ACTC) has developed a plan to address the county's immediate and future transportation needs. Following on the success of the last county spending measure approved by the voters 2000, ACTC has developed a new 2014 Transportation Expenditure Plan (TEP), which lays out the spending for a 30-year sales tax measure to advance the County's transportation.

The proposed 2014 TEP has been developed through extensive public and stakeholder engagement. An independent watchdog committee made up of Alameda County residents will oversee the disbursement of funding to ensure compliance with the TEP.

Following on the last county spending measure approved by voters in 2000, ACTC has developed a new 2014 Transportation Expenditure Plan.

The 2014 Transportation Expenditure Plan responds to emerging needs in Alameda County's transportation system, which supports the broader Bay Area economy and that of Northern California. A growing population, increased global freight, changing mobility patterns, and normal wear and tear already demand major investments. These needs are critical at a time when transportation infrastructure faces major funding shortfalls across the US and California. In addition, as noted before, the future of state and federal funding is uncertain in California. The revenue from the Measure B sales tax has filled a funding gap but has also helped Alameda County compete for these diminishing dollars by providing matching funds for competitive grants. The Measure B funds from the 2000 TEP have been successful in leveraging almost four times their amount in other funding.[82]

Sales tax measures are one of the few levers accessible to local jurisdictions to improve the future of their transportation systems. Across the US, federal funding has averaged around 25 percent of total highway costs and 18 percent of transit costs, with state and local sources making up the difference.[83] As explained above, local funding makes up almost 50 percent of transportation funding in California. In Alameda County, local sources have come to represent over 60 percent of the funding available for transportation, largely a result of Measure B.[84]

The 2014 TEP lays out investments of almost $8 billion over 30 years in key areas designed to increase mobility, relieve congestion, and upgrade technology. The 2014 TEP aims for five objectives, reached through engagement with Alameda County community members.

[82] As of FY 2010 –2011, the Citizens Watchdog Committee reports that $756 million has been distributed to projects totaling $3.55 billion.
[83] National Surface Transportation Infrastructure Financing Commission, "Paying our Way: A New Framework for Transportation Finance," 2008, p 35.
[84] Alameda County Transportation Commission, "2014 Alameda County Transportation Expenditure Plan," January 2014, p 9, http://www.alamedactc.org/files/managed/Document/12934/2014_Transportation_Expenditure_Plan.pdf.

ACTC_AR0165

- **Expand and improve transit services,** which produce fewer emissions, are more convenient than cars for many people, and help to relieve auto congestion for those who choose to drive.
- **Keep fares affordable** for seniors, youth, and people with disabilities – as fares do not cover the full cost of operating and maintaining transit services.[85]
- **Provide traffic relief,** through road maintenance, upgrades, and new traffic management technology.
- **Improve air quality** and clean transportation, by supporting pedestrian, bicycle, and transit infrastructure.
- **Create jobs in Alameda County,** through local contracting – in addition to the economic development benefits that come from well-functioning transportation systems.

Below is a snapshot of these investments and the broader role they will play in the future of Alameda County, the Bay Area, and California.

Expand and Improve Transit Services

Almost half of the planned investments are dedicated to transit in Alameda County. Increased transit ridership meets a broad array of policy goals for people riding transit, driving, cycling, and walking.

- Transit systems can increase property values or, in the case of the most recent recessions, make them more resilient in the face of dipping housing demand. A recent report commissioned by the American Public Transportation Association (APTA) and the National Association of Realtors found in a five-region study that residential properties located in proximity to high-frequency transit (rail, light rail, and bus rapid transit) maintained their value as compared to residential properties without transit access. Across the study regions, the transit shed outperformed the region as a whole by 41.6 percent.[86]
- More riders on transit also means fewer vehicles on the road, relieving congestion for those who choose to drive. The Texas A&M Transportation Institute's 2012 Urban Mobility Report calculates that public transportation in the San Francisco-Oakland metropolitan area annually saves almost 37 million hours of delay and $775.9 million in costs.[87]
- Public transit helps to reduce CO2 emissions and saves energy. A 2007 ICF International report estimated that reduced fuel consumption and congestion relief from public transit saved 37 million metric tons of CO2 in the US. To put that in context, California's 2011 emissions – across all sources of emissions – were estimated at approximately 450 million metric tons, and the goal is to lower that figure to 427 million by 2020.[88]

[85] Just as taxes pay for roads to help subsidize driving, public entities support transit services. In 2012, fares on AC Transit covered just 17% of operating and capital costs.
[86] The Center for Neighborhood Technology, "The New Real-Estate Mantra: Location Near Public Transportation," March 2013.
[87] Texas A&M Transportation Institute, "2012 Urban Mobility Report," December 2012. The San Francisco Oakland MSA, also known as the San Francisco-Oakland-Fremont MSA, includes Alameda, Contra Costa, Marin, San Mateo, and San Francisco counties.
[88] ICF International, "The Broader Connection between Public Transportation, Energy Conservation and Greenhouse Gas Reduction," 2008. Note: Studies have suggested that meeting emissions targets will require a multi-pronged approach, and the discussion above is not meant to imply that public transit is a single solution for California. Such analysis is beyond the scope of this discussion.

ACTC_AR0166

- A high-quality transit system can support riders who have limited options and can attract riders for whom transit is one option among many. A survey of older Americans revealed that 83 percent agree that transit provides them more freedom, mobility, and access to everyday needs.[89]

ALAMEDA-CONTRA COSTA TRANSIT DISTRICT (AC TRANSIT)

The largest recipient of the proposed 2014 TEP funding is AC Transit, which will receive over $1.8 billion for operations and maintenance. Spending related to AC Transit operations and maintenance programs comprises 18.8 percent of total estimated spending put forward by the 2014 TEP. These funds will be used to expand services and to perform maintenance that will allow AC Transit to improve its vehicle fleet. Additionally, the plan calls for AC Transit to receive $348 million to be put toward meeting its responsibilities under the Americans with Disabilities Act. Lastly, a total of $35 million in sales tax funds will be allocated to projects that enhance the reliability and speed of bus transit services in the East Bay. These projects include bus rapid transit along three proposed corridors – the East 14th/International Boulevard project; the Grand/MacArthur bus rapid transit project; and the Alameda to Fruitvale BART rapid bus.

SAN FRANCISCO BAY AREA WATER EMERGENCY TRANSPORTATION AUTHORITY

The San Francisco Bay Area Water Emergency Transportation Authority (WETA) is slated to receive almost $40 million over 30 years from the 2014 TEP. The funds from Alameda County's Measure B were instrumental in supporting the Alameda/Oakland transbay ferry service over the past decade. The 2000 TEP called for over $11 million in funding over 20 years for Alameda/Oakland ferry services, which grew rapidly in ridership over the past decade and in 2010 merged with the Harbor Bay and South San Francisco Ferry services into WETA. In FY12–13, the ferry services received approximately $788,000, which constituted almost 20 percent of the cost of operating the ferries and supplemented the fares received. That year, the ferry services received no federal or state funding for operations, even while supporting over a half million trips.

[89] Harris Interactive, "Older American Attitudes Toward Mobility and Transportation," 2005.

ACTC_AR0167

BAY AREA RAPID TRANSIT (BART)

BART system investments outlined in the 2014 TEP total nearly $1 billion spread across expansion, operations, and maintenance. BART projections call for over 700,000 daily riders by the end of the 30-year TEP period (as compared to approximately 400,000 average daily riders today). The 2014 TEP will provide $710 million in funding to four key projects that will better allow BART to accommodate these additional future riders.

- The BART extension to Livermore will be allocated $400 million to expand transit in the I-580 corridor.
- The Bay Fair Connector/BART METRO project ($100 million for the Alameda County portion) will provide tracks to allow trains to travel directly from the Dublin/Pleasanton line toward the Fremont line and into Santa Clara County.
- BART station modernizations will receive $90 million for improvements at all stations within Alameda County.
- The proposed Irvington BART station along the Warm Springs extension will receive $120 million in funding.

Provide Traffic Relief

Traffic congestion in the Bay Area is a constant struggle. The INRIX Traffic Scorecard ranked the San Francisco-Oakland metro area as the 7th most congested metro area in the world, with Los Angeles as the only US metro area ranked higher.[90] The Texas A&M Transportation Institute's 2012 Urban Mobility Report estimates that congestion in the San Francisco-Oakland metro area translates to 61 hours wasted and 25 gallons of fuel wasted per auto commuter – the equivalent of sitting in a car, not moving, from a Monday morning through Wednesday evening. As noted earlier, average commute times in Alameda County have grown, outpacing California and the nation. In 2012, more than 50 percent of Alameda County drivers endured a commute of at least 30 minutes, with over 10 percent suffering a commute of an hour or more. Congestion plays a critical role in lengthening these commutes.

The 2014 TEP addresses congestion in a variety of ways:

- Increased transit utilization will take cars off the road and make driving easier for those who choose or need to drive.
- Thirty percent of the net revenue will support road maintenance, repair, and local seismic safety. Road maintenance is critical to safety and road performance. The American Society of Civil Engineers estimates that 68 percent of California's major roads are in poor or mediocre condition, and that driving on such roads costs California motorists almost $14 billion a year, or $586 per driver.[91]
- Projects identified for funding will mitigate traffic bottlenecks. For example, major investments at the Ashby and Gilman interchanges north of the Bay Bridge will relieve two critical bottlenecks.

[90] http://scorecard.inrix.com/scorecard/, accessed February 8, 2014.
[91] American Society of Civil Engineers, "2012 Report Card for California's Infrastructure."

ACTC_AR0168

This is the most congested stretch of freeway in the Bay Area. Improvements at these areas will also enable safer and easier access to recreational activities west of I-80, including the Bay Trail. The plan also calls for investments in more efficient interchange infrastructure along I-880, I-580, and State Route 84.

- HOV/express lanes on I-680 will help manage congestion and encourage carpooling.
- Certain interchange improvements will support more efficient goods movement.

HIGH-OCCUPANCY VEHICLE/HIGH-OCCUPANCY TOLL LANES

HOV/HOT lanes are emerging as a preferred strategy for mitigating congestion, expanding transportation choices, and improving efficiency of existing highways, especially when expansion is not feasible or cost effective. Most transportation policy experts have advocated for road charges – effectively pricing congestion – to reflect the various social, economic, and environmental problems that driving causes. While many congestion pricing schemes were initially unpopular with the public, experiments around the world have proven both successful and acceptable to drivers. The 2014 TEP makes modest investments – approximately $80 million over 30 years – to create such lanes. This aligns with transportation policy trends and recommendations from various experts, including RAND, the Public Policy Institute of California, and the National Surface Infrastructure Financing Commission.

Proposed I-580 HOV/HOT Lanes

Source: Alameda County Transportation Commission

Freight and Economic Development

Freight plays a critical role in Alameda County's economy and the economy of Northern California. Over $40 billion worth of imports and exports flowed through the Port of Oakland in 2012, and these goods rely on a surface transportation network to get to and from the Port.

The 2014 TEP includes several critical investments that will support transportation and freight movement:

- Road maintenance will improve truck performance.
- A freight and economic development program will set aside discretionary funds to support critical freight projects that enhance safety, reduce environmental impacts, and relieve freight-related congestion. For example, the proposed Seventh Street grade separation will relieve major delays caused by trains conflicting with arterial roadways in Oakland, allowing more efficient truck flows.

ACTC_AR0169

Artist Rendering of East Bay Greenway

Source: Alameda County Transportation Commission

Bicycle and Pedestrian Paths

Cycling has taken off across the US as a means of transportation, exercise, and recreation. In Alameda County, counts of cyclists increased by 75 percent between 2002 and 2011 along monitored locations. The Bay Area's annual Bike to Work Day has seen increasing participation, and in 2012, over 17,000 cyclists were tallied at energizer stations, up from just over 10,000 in 2009. In addition, the number of female cyclists has been steadily rising in Alameda County over the last five years. Research suggests that women are less likely than men to cycle when facilities are not sufficiently safe. Cycling, safety, and infrastructure are intertwined, and the TEP sets aside funds for bicycle planning, facility expansion and maintenance, and education programs about cycling safety and rules of the road.

Many cities in Alameda County have bicycle plans, developed with community input and support, that can guide local investments. The 2014 TEP also devotes funds for the completion of three key trails: the East Bay Greenway from Oakland to Fremont and the Bay Trail and Iron Horse Trail in Alameda County.

Critical Timing

The investments envisioned in the 2014 TEP come at a critical time. The recession and uncertain state and federal support have contributed to cuts in regional transit services, which are subject to a vicious cycle of scaling back operations – as a transit system becomes less reliable as a means of mobility (fewer routes, less frequency), people stop using it, further eroding financial and public support. The TEP can mitigate against that. The Bay Area remains a desirable location for people and companies around the world, and as populations grow, transportation needs intensify. In 2012, an estimated 309,000 people commuted out of Alameda County, 318,000 commuted in, and 286,000 commuted to jobs from within Alameda County. As the economy grows, the transportation network needs to efficiently connect workers and jobs throughout the region. Finally, the estimated $8 billion in transportation spending will stimulate further economic activity in and around the Bay Area, as described in the following section.

ACTC_AR0170

Transportation Spending: Estimating the Return on Investment

The expenditures laid out in the 2014 Alameda County Transportation Expenditure Plan (TEP) will translate into multiple economic impacts. This spending will stimulate the local economy through local contracting and support on-going operations and maintenance jobs. Further, this funding will allow Alameda County to leverage additional funds for greater investment from other sources and therefore create greater impact. The direct spending will have ripple effects across the economy as dollars change hands and translate into new jobs and new business revenues, totaling $20 billion in estimated economic activity.

Investments planned in the 2014 TEP are estimated to generate $20 billion in economic activity and nearly 150,000 jobs over the 30-year period.

There are multiple aspects to explaining economic impacts. Expenditures associated with a particular activity have the potential to generate significant increases in economic output, local employment, and government tax revenues. There are three different types of impacts that contribute to estimating the full economic impact of an activity. To highlight these impacts, the case of spending to extend a rail transit system provides a useful example. First, there is a direct effect: the number of jobs and dollars in tax revenue that are directly linked to the original expenditure. Second, there is an indirect effect: when a contractor is hired to build new tracks, this stimulates activity directly related to this contractor, but also indirectly stimulates activity at the concrete and steel companies that supply the materials. Finally, there is an induced effect that results from the employees at the construction and steel companies spending their increased take-home pay.

Economic Impact of Spending

The analysis presented below provides an estimate for the broader regional economic impacts of Alameda County's planned spending on transportation. **The total projected impact exceeds $20 billion.**

Broader Economic Impacts
of the Alameda County 2014 Transportation Expenditure Plan

Impact Type	Employment	Labor Income	Total Value Added	Output
Direct Effect	92,380	$8,031,986,888	$275,488,644	$7,788,469,876
Indirect Effect	22,353	$2,002,494,205	$3,464,538,008	$6,675,117,179
Induced Effect	35,175	$2,263,023,798	$3,853,599,195	$5,761,183,609
Total Effect	149,908	$12,297,504,891	$7,593,625,847	$20,224,770,664

Data Source: These figures were calculated using the 2012 IMPLAN database
Analysis: Bay Area Council Economic Institute

ACTC_AR0171

Employment: Expenditures included in the 2014 TEP are projected to produce nearly 150,000 jobs (in equivalent one-year, full-time positions) in the 30-year period, over 60 percent of which are directly related to spending on capital investments, operations, and maintenance. The sectors projected to produce the greatest number of jobs include state and local government passenger transit administration, construction, and maintenance and repair.

Labor Income: These additional jobs will directly produce a corresponding $8 billion in wages. Additionally, income will increase by over $2 billion in related industries, most notably in the wholesale trade and architecture, design, and engineering businesses. The impact of these increased wages stimulating broader economic spending is projected to produce an additional $2 billion, for a total labor income increase of $12.3 billion.

Total Value Added: Value added consists of compensation of employees, taxes on production and imports less subsidies, and gross operating surplus. For example, an industry buys goods and services and remanufactures those goods and services to create a product of greater value than the sum of the goods that goes into it. That increase in value is the value added as a result of the production process. This value added is then used to pay labor and taxes with some remainder for profit.

Breakdowns of project impacts by industry are detailed below.

Economic Impact by Industry
of the Alameda County 2014 Transportation Expenditure Plan

	Direct	Indirect	Induced	Total
Agriculture, Forestry, Fishing, & Hunting	$ -	$ 7,296,834	$ 15,177,010	$ 22,473,844
Mining	$ -	$ 91,574,017	$ 6,021,745	$ 97,595,762
Utilities	$ -	$ 86,296,030	$ 72,427,396	$ 158,723,426
Construction	$4,982,679,780	$ 75,136,489	$ 42,132,327	$5,099,948,597
Manufacturing	$ 15,480,000	$3,071,170,591	$ 486,565,992	$3,573,216,583
Wholesale Trade	$ -	$ 413,473,205	$ 248,991,453	$ 662,464,657
Retail Trade	$ -	$ 98,869,787	$ 572,469,622	$ 671,339,408
Transportation & Warehousing	$ -	$ 243,092,525	$ 128,639,450	$ 371,731,975
Information	$ -	$ 237,904,850	$ 293,504,347	$ 531,409,197
Finance & Insurance	$ -	$ 513,336,799	$ 695,770,631	$1,209,107,430
Real Estate, Rental, & Leasing	$ -	$ 169,011,550	$1,018,399,677	$1,187,411,227
Professional, Scientific, & Technical Services	$ 15,480,000	$1,113,023,978	$ 249,851,713	$1,378,355,691

Public: Primarily Transit Related	65,121*	699	444	66,264
Total	92,380	22,353	35,175	149,908

* Direct TEP spending reported in the broad category of Public Administration consists of direct spending on passenger transit operations, maintenance, transit administration, and paratransit services.
Data Source: These figures were calculated using the 2012 IMPLAN database
Analysis: Bay Area Council Economic Institute

The employment and output impacts of TEP spending were aggregated into sector designations using standard industry categories. While more specific breakdowns are difficult to model, the projected economic impacts and jobs can be described in more detail.

- While the total impact on the Public Administration sector includes a broad spectrum of government jobs, the direct impact in this sector was focused solely on jobs related to local government passenger transit. Jobs in this sector include vehicle operators, maintenance technicians, transit administrators, and paratransit services.
- Direct impacts from Construction projects were split between the non-residential construction sector and maintenance, improvement, and repair construction.
- Direct impacts in Professional, Scientific & Technical Services are from the technical consultant services associated with the technology-spending portion of the TEP. This is also true of the direct impacts in Manufacturing, which assumes the purchase of new road monitoring and navigation equipment as a portion of spending on new technology. The significant indirect impacts in these categories are likely related to engineering, architecture, and environmental services.

ACTC_AR0173

Implications for Tax Revenue

Increased spending in the region brings in additional government revenues with taxes on purchases, payrolls, and incomes. These revenues come from the sources detailed below.

Impact on Tax Revenues
of the Alameda County 2014 Transportation Expenditure Plan

Tax Source	State & Local Impact	Federal Tax Impact	Total Tax Revenue
Employee Compensation	$ 26,332,704	$1,062,148,272	$1,088,480,976
Proprietor Income	$ -	$ 34,338,636	$ 34,338,636
Tax on Production & Imports	$363,942,569	$ 39,814,263	$ 403,756,832
Households	$372,224,197	$ 874,796,183	$1,247,020,380
Corporations	$(79,936,403)	$ (336,096,053)	$ (416,032,456)
Total Tax Source	$682,563,067	$1,675,001,301	$2,357,564,368

Data Source: These figures were calculated using the 2012 IMPLAN database
Analysis: Bay Area Council Economic Institute

Employee Compensation: With $12 billion in labor income increases projected, nearly $1.1 billion will return to government agencies coffers in the form of payroll taxes. Local and state payroll tax receipts are likely to be revolved back into local communities in the form of spending on education, infrastructure, safety, and healthcare.

Households: A significant portion of both the state/local and federal revenues impact stems from income taxes. Seventy percent of the $1.2 billion impact falls into the category of federal taxes, with the remaining 30 percent in the category of state and local taxes.

Tax on Production and Imports: In addition to household taxes, state and local governments produce much of their revenues from production taxes. The approximately $364 million in state and local production tax revenues comes from the following sources: sales taxes, real estate taxes (commercial and residential property), motor vehicle taxes, severance resource taxes, business license and stamp taxes, fines, park fees and donated funds and permits, and excise and gross receipts taxes.

Corporations: The projected decrease in corporate tax receipts offsets the increase in production tax – representing a shift in taxation from corporate profits to corporate spending. Expenditures by businesses related to infrastructure projects are taxed initially at the local level. These increased expenses will lower federal taxable incomes and can generate future tax deductions, thus explaining these reductions in corporate taxes. For example, when a firm buys a new construction vehicle, that purchase is initially taxed at the state level. The firm will account for that expense not immediately but over a period of time through depreciation, which will decrease federal taxable income in the future.

In sum, investing in the transportation systems needed today will not only prepare the Bay Area economy for success in the future, but will also translate into broad economic stimulus in the near term. The ripple effects of this investment begin with the ability to leverage additional funding sources for local projects. Local businesses will experience new demand, suppliers of goods and services will have an increase in activity, new workers will be hired, and their earnings will be spent throughout different corners of the economy.

Appendix B: Methodology

Section 2. Alameda County: A Critical Hub for the Movement of Goods and People in the Bay Area

Bay Area Commute Patterns by County, 2011: Data covering employment status, place of residency, and commute destination was provided by the US Census Bureau's Longitudinal Employer-Household Dynamics database. In defining the universe of workers, only the primary jobs were considered. The line with the county label "Bay Area" is a summation of all the nine preceding counties in the Bay Area and is not representative of commute movement into and out of the Bay Area as a single entity.

Cross County Labor Flows, 2011: Data covering employment status, place of residency, and commute destination was provided by the US Census Bureau's Longitudinal Employer-Household Dynamics database. In defining the universe of workers, only the primary jobs were considered. Net Inflow is the number of workers living outside the county minus the number of residents working outside the county. The line with the county label "Bay Area" is a summation of all the nine preceding counties in the Bay Area and is not representative of commute movement into and out of the Bay Area as a single entity.

Workplace County of Alameda County Residents: Data covering employment status, place of residency, and commute destination was provided by the US Census Bureau's Longitudinal Employer-Household Dynamics database. In defining the universe of workers, only the primary jobs were considered. Counties are ranked by their 2011 commute destination value.

Residence County of Workers in Alameda County: Data covering employment status, place of residency, and commute destination was provided by the US Census Bureau's Longitudinal Employer-Household Dynamics database. In defining the universe of workers, only the primary jobs were considered. Counties are ranked by their 2011 commute destination value.

Commute Flows Through Alameda County: Data covering employment status, place of residency, and commute destination was provided by the US Census Bureau's Longitudinal Employer-Household Dynamics database. In defining the universe of workers, only the primary jobs were considered. Commuter values are the sum of all workers traveling from the indicated county to or from San Francisco County, San Mateo County, or Santa Clara County. Counties are ranked by their 2011 commute destination value.

Employment Trends in Bay Area Metropolitan Areas: Historic data is reported by the California Employment Development Department's Current Employment Statistics (CES). Data is reported by metropolitan statistical area and by metropolitan division.

Means of Commute: Data covering employment status, number of passengers, and means of commute was provided by the US Census Bureau's American Community Survey 1-Year Estimates. The term, "carpool", refers to vehicles with more than one passenger. "Other means" includes motorcycles, taxis, bicycles, and the census category "other means." The term "Bay Area" refers to the nine counties of Marin, Sonoma, Napa, Solano, Contra Costa, Alameda, Santa Clara, San Mateo, and San Francisco.

Commute Times: Data covering employment status, location, and minutes to work was provided by the US Census Bureau's American Community Survey 1-Year Estimates. Data excludes all records reported as "unemployed" and all those with no employment response. The term "Bay Area" refers to the nine counties of Marin, Sonoma, Napa, Solano, Contra Costa, Alameda, Santa Clara, San Mateo, and San Francisco.

ACTC_AR0177

Public Transit Commute Times: Data covering employment status, location, minutes to work, and means of commute was provided by the US Census Bureau's American Community Survey 1-Year Estimates. Only records reported as taking a bus, trolley bus, streetcar, trolley car, subway, elevated rail, railroad, or ferryboat to work were included. Data excludes all records reported as "unemployed" and all those with no employment response. The term "Bay Area" refers to the nine counties of Marin, Sonoma, Napa, Solano, Contra Costa, Alameda, Santa Clara, San Mateo, and San Francisco.

Passenger Vehicle Commute Times: Data covering employment status, location, minutes to work, and means of commute are from the US Census Bureau's American Community Survey 1-Year Estimates. Only records reported as taking a car, van, or truck to work were included. Data excludes all records reported as "unemployed" and all those with no employment response. The term "Bay Area" refers to the nine counties of Marin, Sonoma, Napa, Solano, Contra Costa, Alameda, Santa Clara, San Mateo, and San Francisco.

Average Daily Vehicle Hours on Freeways in Alameda County: Data covering time of day, vehicle miles traveled, vehicle hours traveled, vehicle hours delayed, and highway/freeway boundaries was provided by the Caltrans Mobility Performance Report using the performance monitoring system. The term "vehicle hours delayed" is defined as the number of additional hours vehicles spent on freeways while traveling less than 60 miles per hour. The term "vehicle hours traveled without delay" is defined as the total vehicle hours traveled minus vehicle hours delayed.

Peak Commute Hour Travel Speeds in Miles Per Hour: Data covering time of day, vehicle miles traveled, vehicle hours traveled, and highway/freeway boundaries was provided by the Caltrans Mobility Performance Report using the performance monitoring system. The term "Bay Area" refers to the nine counties of Marin, Sonoma, Napa, Solano, Contra Costa, Alameda, Santa Clara, San Mateo, and San Francisco. "Average annual vehicle speeds for the Bay Area" is a function of total vehicle miles traveled divided by vehicle hours traveled. Peak hours are roughly equivalent to high occupancy vehicle lane operation hours.

Annual BART Ridership and Service Levels: Data covering service effectiveness, number of passengers, and vehicle-revenue hours for the Bay Area Rapid Transit system was provided by the MTC Transit Performance Reports. This chart presents system-wide data.

Annual AC Transit Ridership: Data covering service effectiveness, number of passengers, and vehicle-revenue hours for the Alameda-Contra Costa Transit system was provided by the MTC Transit Performance Reports. This chart presents system-wide data.

Bay Area Port Cargo: Outbound and Inbound cargo tonnage records were provided by US Trade Online database and the Pacific Maritime Association. Bay Area ports include the Ports of San Francisco, Richmond, Redwood City, Oakland, Crockett, Alameda, and Benicia. Cargo data includes containerized cargo, autos, bulk cargo, lumber and logs, and general cargo. Values do not include oil imports or exports.

Bay Area Air Freight: Historic records of tons of trade goods moving through Bay Area airports was provided by the Metropolitan Transit Commission's 2012 Regional Airport Aviation Tracking Report. "Bay Area Air Freight" is defined as all cargo passing through San Francisco International Airport, San Jose International Airport, and Oakland International Airport.

2011 Bay Area Exports: Data covering commodity category, mode of travel, and commodity value was determined using the Freight Analysis Framework. Records include all goods leaving the San Francisco Combined Statistical Area (CSA), regardless of point of origin. Dollar values have been adjusted to 2010.

ACTC_AR0178

Section 3. The Sources of Transportation Funding in Alameda County

US Transportation Funding (2010): Data was obtained from the Highway Statistical Series (Table HF-10) and the National Transit Database (Tables 1 and 7). The Highway Statistics Series is a set of annual reports containing analyzed statistical information on a variety of US highway transportation subjects, including highway finance. Most data is submitted by the states to the Federal Highway Administration and compiled by the Office of Highway Policy Information, and some data is imputed. Funding sources do not count intergovernmental payments, which are captured in expenditures as flows from one government level to another. The National Transit Database (NTD) is a set of statistics on the transit systems of the United States, covering performance, finance, and other system issues. Recipients of federal funding are required to submit data to the NTD. This analysis uses codes given in the Highway Statistical Series, and when categories do not match between the two datasets, values are put into "other taxes and fees." Values are in constant 2010 dollars, adjusted by the CPI from the Bureau of Labor Statistics.

California Transportation Funding: Data for fiscal year 2013-2014 was obtained from the California Department of Transportation, specifically the report titled, "Transportation Funding in California, 2014." Data for fiscal year 1999-2000 was obtained from the California Legislative Analyst's Office, specifically the report titled, "California Travels – Financing Our Transportation, 2007." Inflation adjustments were made using Consumer Price Index information between 1999 and 2013.

Value of the US Gas Tax: Data was obtained from the Tax Foundation and cross-checked across multiple sources. Values were adjusted to constant 2010 dollars.

Federal Transportation Funding: Revenues, Expenditures, and Highway Trust Fund Balance, 2000–2012: Data was obtained from the Highway Statistical Series, Tables FE-210 and HF-10. Data includes both the Highway Account and the Mass Transit Account within the Highway Trust Fund. Values shown for "Expenditures" and "Revenues" do not include general fund transfers, some of which were spent on transportation and some of which went into the balance of the Highway Trust Fund. Values given are in constant 2010 dollars.

Average Fuel Economy of US Passenger Cars: Data was obtained from the National Transportation Statistics, Table 4-23, of the Bureau of Transportation Statistics, and the Highway Statistics Series Summary to 1995, table VM-201a. "Passenger cars" include motorcycles and exclude buses, vans, pickup trucks, and sport/utility vehicles.

Bonds as a Percent of Total State and Local Funding for Highways: Data was obtained from the Highway Statistical Series, Table HF-10. Bond proceeds are often spent erratically, depending on when they are passed and how they are spent; this data was checked against adjacent years to ensure that the graph does not simply show outlier years. Values are given as a percentage of total spending, as reported in Table HF-10. Values given are in constant 2010 dollars.

Total Transportation Funding in California: Data was obtained from the California Legislative Analyst's Office (LAO), specifically the LAO memo, "Overview of Transportation Funding," from March 13, 2014 and in conversations with LAO staff. The California Legislative Analyst's Office only includes revenue funding available for distribution to local and state agencies for transportation purposes and excludes bonds and funding for the Department of Motor Vehicles and the California Highway Patrol. Values given are in constant 2013 dollars and constant 2010 dollars.

ACTC_AR0179

Section 5. Transportation Spending: Estimating the Return on Investment

The Alameda County 2014 Transportation Expenditure Plan (TEP) served as the source of the inputs for the economic impact analysis. Spending for projects outlined in the TEP was broken down into industry categories defined by the IMPLAN model, an industry standard for estimating economic impact, and treated as additional revenues for each sector. Funding was assigned to the following categories:

- Construction projects were divided into two groups: Construction of New Non-Residential Structures and Maintenance/Repair Construction of Non-Residential Structures.
- Operational expenditures for the individual agencies were categorized as State and Local Governmental Passenger Transit.
- Technology spending was split between Scientific and Technical Services, Sensor and Navigation Instruments, Construction of New Non-Residential Structures, and State and Local Governmental Passenger Transit.

Capital purchases of buses and other transit equipment are budgeted through fleet replacement funds which are not included in the TEP project spending.

See Appendix C for the methodology on the IMPLAN modeling system.

ACTC_AR0180

Appendix C: IMPLAN Input-Output Methodology

The IMPLAN modeling system combines the US Bureau of Economic Analysis' Input-Output Benchmarks with other data to construct quantitative models of trade flow relationships between businesses, and between businesses and final consumers. From this data, we can examine the effects of a change in one or several economic activities to predict its effect on a specific state, regional, or local economy (impact analysis). The IMPLAN input-output accounts capture all monetary market transactions for consumption in a given time period. The IMPLAN input-output accounts are based on industry survey data collected periodically by the US Bureau of Economic Analysis and follow a balanced account format recommended by the United Nations.

IMPLAN's Regional Economic Accounts and the Social Accounting Matrices are used to construct region-level multipliers that describe the response of the relevant regional economy to a change in demand or production as a result of the activities and expenditures related to Alameda County Transportation Commission (ACTC) projects. Each industry that produces goods or services generates demand for other goods and services and this demand is multiplied through a particular economy until it dissipates through "leakage" to economies outside the specified area. IMPLAN models discern and calculate leakage from local, regional, and state economic areas based on workforce configuration, the inputs required by specific types of businesses, and the availability of both inputs in the economic area. Consequently, economic impacts that accrue to other regions or states as a consequence of a change in demand are not counted as impacts within the economic area.

The model accounts for substitution and displacement effects by deflating industry-specific multipliers to levels well below those recommended by the US Bureau of Economic Analysis. In addition, multipliers are applied only to personal disposable income to obtain a more realistic estimate of the multiplier effects from increased demand. Importantly, IMPLAN's Regional Economic Accounts exclude imports to an economic area so the calculation of economic impacts identifies only those impacts specific to the economic impact area. IMPLAN calculates this distinction by applying the area's economic characteristics described in terms of actual trade flows within the area.

Impact studies operate under the basic assumption that any increase in spending then has three effects. First, there is a direct effect on that industry itself. Second, there is a chain of indirect effects on all the industries whose outputs are used by the industry under observation. Third, there are induced effects that arise when employment increases and household spending patterns are expanded.

It is clear that there are several aspects to the overall economic impact. First, there is an effect on value added—the take-home pay of all the people affected will be supplemented by that amount. The secondary and tertiary effects of the industry on the rest of the local economy are not very large. Second is the employment effect, with some jobs created in the industry itself, and the others spread throughout the California economy. Third is the output, where the difference between value-added and output is that the former concentrates on people's pay-checks, whereas the latter includes the costs of intermediate inputs. National income accounting avoids double counting by excluding the costs of intermediate inputs.

It is also important to note that different types of capital investment can lead to different multipliers. The reason for this is that a sector can have a large multiplier if it induces economic activity in industries whose employees have a high propensity to spend from take-home pay. Also, if the sector does not import many

ACTC_AR0181

materials from abroad or from out of state, then its multiplier effect on the local economy will be high. In essence, some of the spending in the local economy may "leak out" into other states and countries. If raw materials are imported, then a shock to a local sector will result in decreased economic activity abroad. The same is true if a California business buys inputs from firms in different states.

In sum, our analysis using input-output accounts is based on three important assumptions. First, there are constant returns to scale. This means that a 10 percent cut in spending will be ten times as severe—across every sector in the economy—as a 1 percent cut. Second, there are no supply constraints. This means that any marginal increase in output can be produced without having to worry about bottlenecks in labor markets, commodity markets, or necessary imports. This assumption is quite realistic in a free-market economy like California's, where there is some unemployment. It is even more reasonable in times of high unemployment, such as the present economic environment, because there are many under- and un-utilized resources that can be activated without detracting from other industries. Third, the flow of commodities between industries is fixed.

Explaining Economic Impacts: The Clam Chowder Example

There are multiple aspects to explaining economic impacts. Expenditures associated with a particular activity as discussed in this report, have the potential to generate significant increases in economic output, local employment, and government tax revenues. These effects are measured as having three separate impacts. First, there is a direct effect: how many jobs and how much in tax revenues are directly linked to these expenditures. Second, there is an indirect effect: when a restaurant sells 100 orders of clam chowder in a bread bowl, this stimulates activity directly at the restaurant, but indirectly at the bakeries that provide the bread bowls. Finally, there is an induced effect that results from the employees at the restaurant spending their increased salaries.

Measure BB
on the November 2014 Ballot

Consider the Future of BART

- Improve and expand BART throughout Alameda County
- Modernize and improve access to all BART stations

ALAMEDA
County Transportation Commission

learn more →

In November 2014, Measure BB will be on the ballot to:

- Expand BART throughout Alameda County
- Increase BART capacity and accessibility
- Upgrade technology to keep the system moving
- Keep transportation affordable for students, seniors and people with disabilities
- Improve access to jobs and schools

This detailed plan includes **taxpayer safeguards:**

- ✓ Independent Audits
- ✓ Compliance Reports
- ✓ Independent Watchdog Committee Review and Annual Reports to the Public
- ✓ All funds spent locally to benefit Alameda County

Report on 2014 Alameda Voter Research

Conducted for Alameda County Transportation Commission

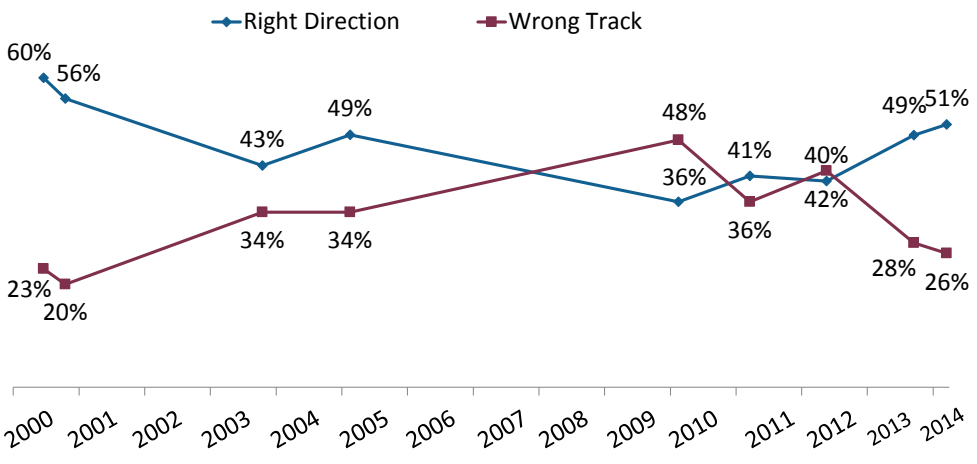
June 26, 2014

2014 Opinion Research

Telephone survey of likely voters in Alameda County

Objective	Details
• Test support for the ballot measure among a representative sample of likely November 2014 voters	• Interviewing conducted April 3-14, 2014
• Test the impact that information has on support for the measure	• 803 total interviews countywide; Margin of error: ± 3.5 percentage points
	• Data is representative of the likely November 2014 voter population

Web-panel survey of voters in Alameda County



Objective	Details
• Test the order of ballot question wording and element order	• Interviewing conducted June 2-8, 2014
• Allow voters to read the ballot language to better simulate how they would react to it when voting	• 400 total interviews; Margin of error: ±4.9 percentage points
	• Data reflects demographics of a likely November 2014 voter population; vote history and voter registration status of web panelists was unavailable

2014 Opinion Research Key Findings

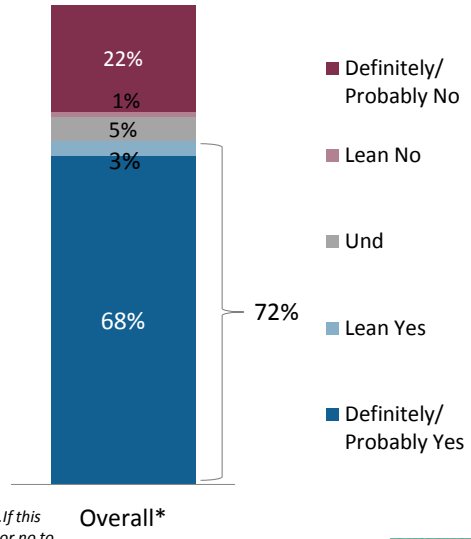
- The revenue measure environment in Alameda County has improved since 2012.
- A measure to augment and extend the existing county transportation sales tax is supported by more than two-thirds of Alameda County voters.
- Elements of the Transportation Expenditure Plan are well supported by the voters.
- Measure support holds up under strong opposition messaging and under the conditions of a low turnout election.
- The ballot question under consideration communicated the components of the measure clearly.

Right Direction/Wrong Track Over Time

Overall optimism has improved significantly since 2012.

Q3:Do you think things in Alameda County are generally going in the right direction, or do you feel that things are pretty seriously off on the wrong track?

Initial Vote

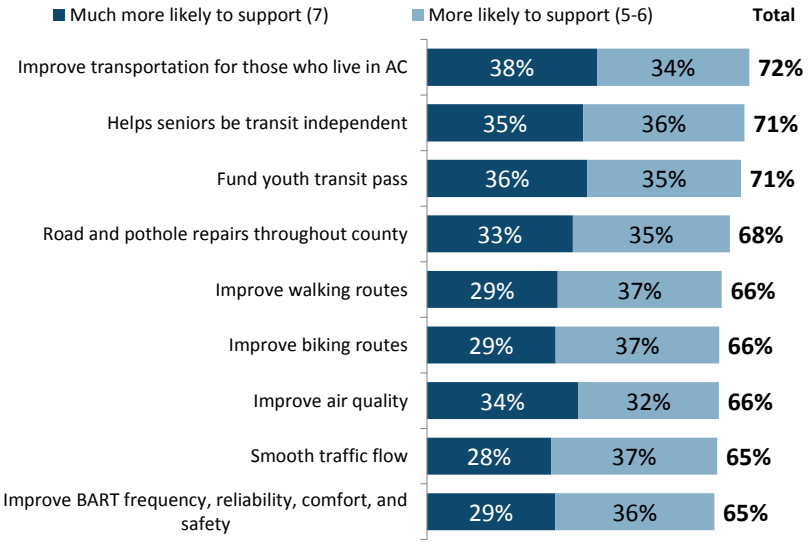


A measure to augment and extend Alameda County's transportation sales tax is supported by 72% of Alameda County voters.

Ballot Question (Sample A)

Shall voters authorize implementing the Alameda County 30 year Transportation Expenditure Plan to:

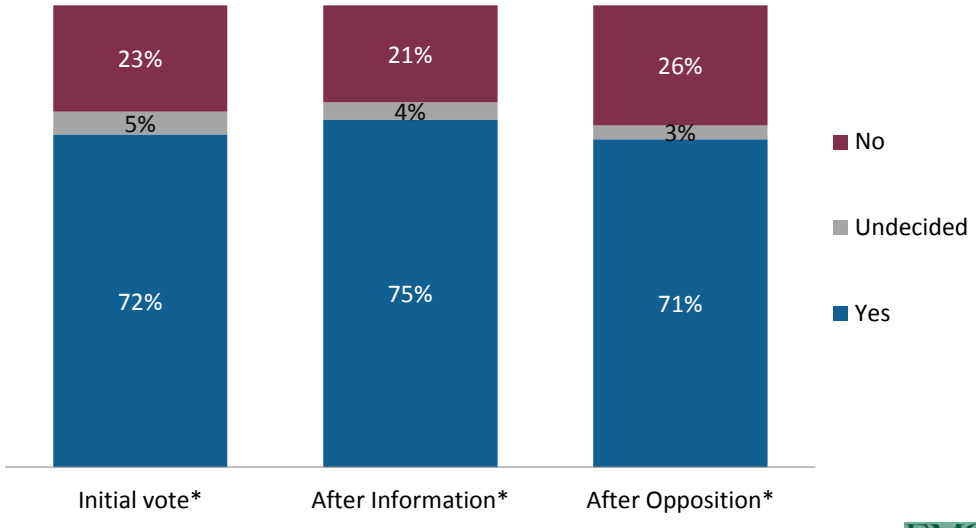
- Expand and modernize BART in Alameda County;
- Improve transit connections to jobs and schools;
- Fix roads, improve highways and increase bicycle and pedestrian safety;
- Reduce traffic congestion and improve air quality;
- Keep senior, student, and disabled fares affordable?



Approval augments and extends the existing County sales tax, with independent oversight and audits. All money will benefit local residents.

The following measure may be on the ballot this year in Alameda County…If this measure were on the ballot today, are you likely to vote yes to approve it, or no to reject it? (Q6, Sample A)
**Shows the combined results from Samples A (Question-led) and B (Elements-led) in April telephone poll.*

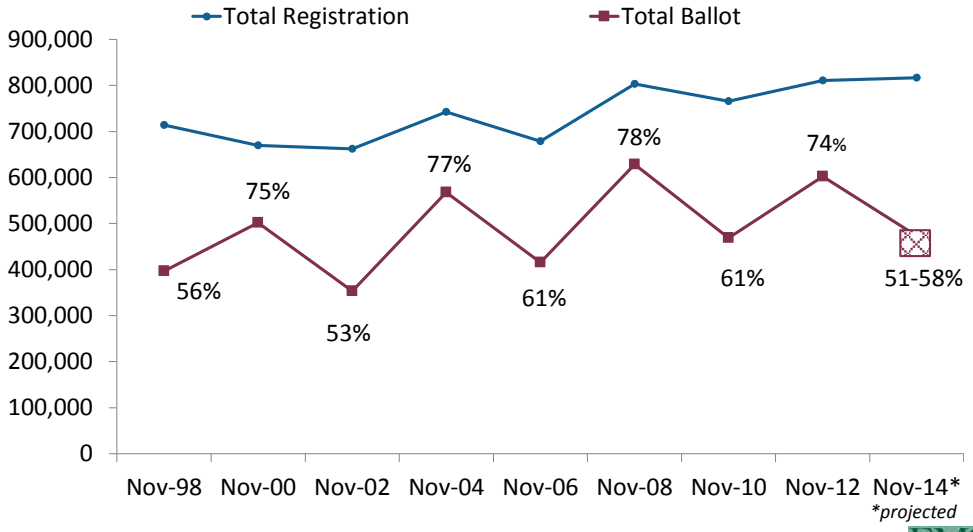
Measure Information



Elements of the expenditure plan are well supported.

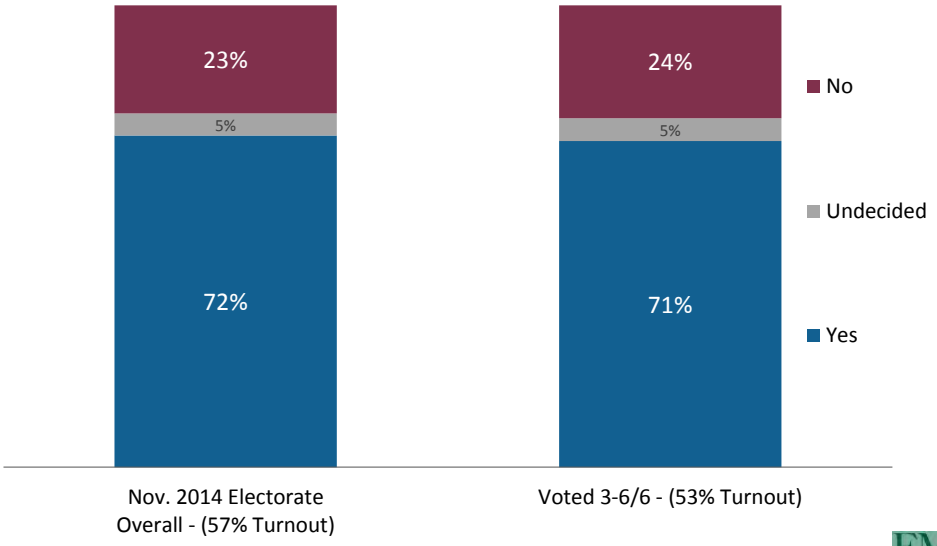
I'm going to read you some things people might say about the transportation sales tax ballot measure. After each statement, please tell me if it would make you less likely or more likely to support this measure…(Q38-54). (April 2014)

Vote Progression



The vote does drop after the opposition messaging, but it stays above the two-thirds mark.

* Combined votes from Samples A & B.



November General Elections Turnout Over Time

Turnout has edged up over the decade, but was lower in 2012 than in 2000.

Initial Vote by Turnout Scenarios

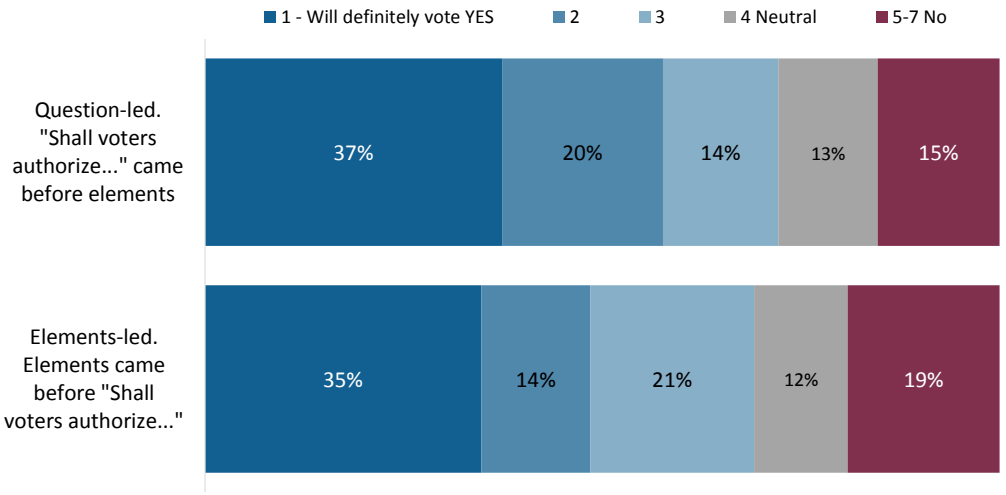
There is a 1 point difference in measure support between a 57% voter turnout election and a more conservative 53% turnout election.

Combined initial vote.

A Closer Look at the Ballot Question

Additional Research Looked at Question Wording

Proposed Ballot Question

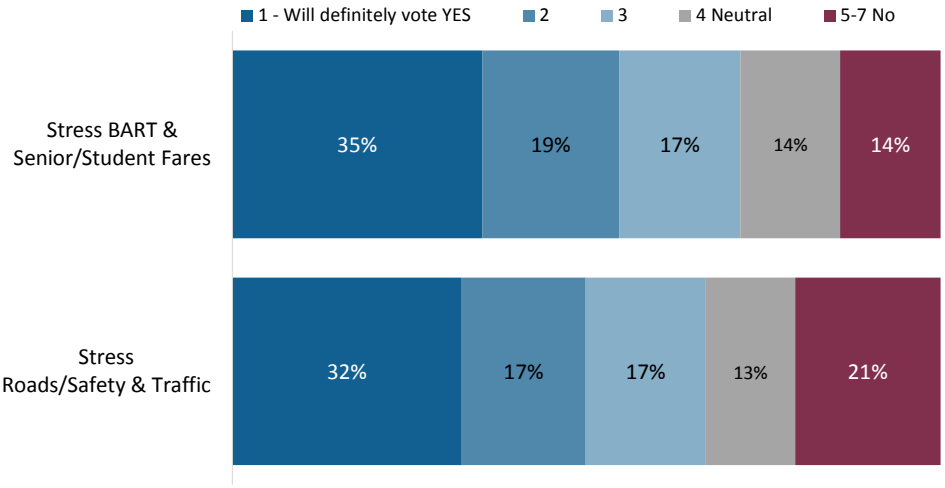


Shall voters authorize implementing the Alameda County 30 year Transportation Expenditure Plan to:

- Expand and modernize BART in Alameda County;
- Improve transit connections to jobs and schools;
- Fix roads, improve highways and increase bicycle and pedestrian safety;
- Reduce traffic congestion and improve air quality; and
- Keep senior, student, and disabled fares affordable?

Approval augments by ½ cent and extends the existing County sales tax, with independent oversight and audits. All money will benefit local residents.

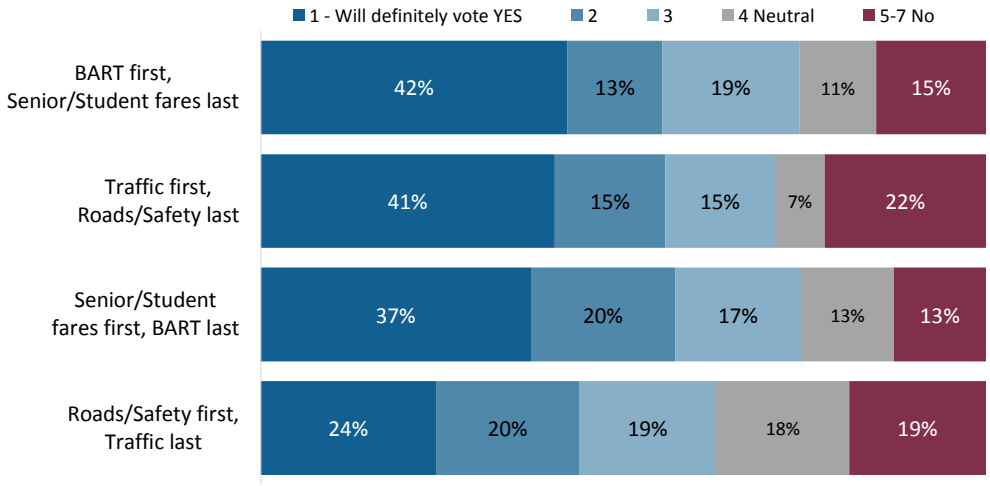
Vote by List Placement



Overall, the question-led wording tested stronger than the elements-led wording.

Please indicate how you would vote on the following measure if it were on the ballot today... (V1-V8)

Vote by Listed Elements Stressed



Reading BART or Senior/Student Fares first tested stronger than reading Roads/Safety or Traffic first.

Please indicate how you would vote on the following measure if it were on the ballot today... (V1-V8)

Vote by Elements Listed First/Last

Leading with BART was the strongest question wording, followed by leading with Traffic. However, leading with Traffic resulted in elevated opposition.

Please indicate how you would vote on the following measure if it were on the ballot today... (V1-V8)

Conclusions

- A measure to augment and extend the existing county transportation sales tax is supported by more than two-thirds of Alameda County voters.
- The proposed ballot question wording is clear and understandable to voters.
- A privately financed communication effort will help bolster support for a measure.
- A low turnout scenario is anticipated, was tested for in this research, and should not significantly impact outcome.

MASTER PROGRAMS FUNDING AGREEMENT
between the
ALAMEDA COUNTY TRANSPORTATION COMMISSION
and the
COUNTY OF ALAMEDA

This Master Programs Funding Agreement ("AGREEMENT"), effective the 1st of April 2015, is entered into by and between the Alameda County Transportation Commission ("ALAMEDA CTC") and the County of Alameda ("RECIPIENT").

RECITALS

A. On November 4, 2014, the voters of Alameda County, pursuant to the provisions of the Local Transportation Authority and Improvement Act, California Public Utilities Code Section 180000 *et seq.*, approved Measure BB, thereby authorizing ALAMEDA CTC to administer the proceeds from the extension of an existing one-half of one percent transaction and use tax scheduled to terminate on March 31, 2022, and the augmentation of the tax by one-half of one percent.

B. The duration of the tax will be 30 years from the initial year of collection, which begins April 1, 2015, with said tax to terminate/expire on March 31, 2045. The tax proceeds will be used to pay for the investments outlined in the 2014 Alameda County Transportation Expenditure Plan ("2014 TEP"), as it may be amended.

C. This AGREEMENT delineates the requirements of the Direct Local Distribution ("DLD") funds; funds which are directly allocated to local jurisdictions and transit operators, as authorized by Measure BB and detailed in the 2014 TEP. Discretionary funds identified in the 2014 TEP are not the subject of this AGREEMENT and RECIPIENT will be required to enter into a separate agreement for those funds.

D. The DLD funds will be available for distribution once an agreement is executed with the State Board of Equalization ("BOE") and the first revenue payment is received from the BOE.

E. This AGREEMENT was originally approved by the governing body of the ALAMEDA CTC on February 26, 2015.

NOW, THEREFORE, it is mutually agreed by and between the parties as follows:

C-2015-51

ARTICLE I: FUNDING ALLOCATIONS

This AGREEMENT authorizes the ALAMEDA CTC to allocate the DLD funds derived from Measure BB as described in the 2014 TEP and summarized in Table A: Measure BB DLD Investment Summary. DLD funds shall be allocated from net revenues after BOE and administration expenses.

TABLE A: MEASURE BB DLD INVESTMENT SUMMARY

Investment Category	Program
Transit: Operations, Maintenance and Safety Program (OMSP)	AC Transit OMSP
	Altamont Commuter Express (ACE) OMSP
	San Francisco Bay Area Rapid Transit District (BART) Maintenance
	San Francisco Bay Area Water Emergency Transportation Authority (WETA) OMSP
	Livermore Amador Valley Transit Authority (LAVTA) OMSP
	Union City Transit OMSP
Affordable Transit for Seniors and People with Disabilities (Paratransit)	City-based and Locally Mandated
	East Bay Paratransit Consortium – AC Transit
	East Bay Paratransit Consortium – BART
Direct Allocation to Cities and County (Local Streets and Roads)	Local streets maintenance and safety program
Bicycle and Pedestrian Infrastructure & Safety	Bicycle and pedestrian direct allocation to cities and Alameda County

A. TRANSIT (OMSP)

ALAMEDA CTC will distribute funds based on set percentages detailed in the 2014 TEP. RECIPIENT's percentage fund distribution, if applicable, is detailed in EXHIBIT A - MEASURE BB DIRECT LOCAL DISTRIBUTION SUMMARY, attached hereto and by this reference made a part of this AGREEMENT.

1. RECIPIENT shall use such funds for maintenance and operations of transit services and may include maintenance of transit services, restoration of service cuts, expansion of transit services, and passenger safety and security.

2. The Transit OMSP funds shall be subject to the requirements for "Measure B Mass Transit Pass-through Funds," as detailed in the ALAMEDA CTC Mass Transit Program Implementation Guidelines, and said guidelines are hereby incorporated into this AGREEMENT by reference.

B. AFFORDABLE TRANSIT FOR SENIORS AND PEOPLE WITH DISABILITIES (PARATRANSIT)

1. City and Local Transit Operator

a. ALAMEDA CTC will distribute funds based on the percentage of the population over age 70 in each of four planning areas for city-based and mandated paratransit services of local bus transit

providers. Funds may be further distributed to individual cities within each planning area based on a formula refined by ALAMEDA CTC's Paratransit Advisory and Planning Committee ("PAPCO"). RECIPIENT's initial percentage fund distribution, if applicable, is detailed in Exhibit A subject to change based on changes in annual population.

b. Each planning area is defined in Exhibit B attached hereto and by this reference made a part of this AGREEMENT.

c. RECIPIENT shall use such funds for implementation of locally developed solutions to address the mobility challenges of older adults and people with disabilities.

2. East Bay Paratransit Consortium

a. ALAMEDA CTC will distribute funds based on set percentages detailed in the 2014 TEP. RECIPIENT's percentage fund distribution, if applicable, is detailed in Exhibit A.

b. RECIPIENT shall use such funds towards meeting RECIPIENT's responsibilities under the Americans with Disabilities Act (ADA).

3. The ALAMEDA CTC Paratransit Program Implementation Guidelines provide program eligibility and fund usage guidelines, definitions, additional requirements, and guideline adoption details. Said guidelines are hereby incorporated into this AGREEMENT by reference.

C. LOCAL STREETS AND ROADS

1. ALAMEDA CTC will distribute funds pursuant to a formula weighted 50 percent by the population of the jurisdiction within the subarea and 50 percent by the number of road miles within the subarea. RECIPIENT's initial percentage fund distribution, if applicable, is detailed in Exhibit A subject to change based on changes in annual population and road mile projections.

2. RECIPIENT shall spend a minimum of 15 percent of all funds received on project elements directly benefitting bicyclists and pedestrians.

3. RECIPIENT shall use such funds for any local transportation need based on local priorities, including street maintenance, bicycle and pedestrian projects, bus stops, and traffic calming.

4. Local Streets and Roads funds are subject to the requirements for "Measure B Local Streets and Roads Pass-through Funds" as detailed in the ALAMEDA CTC Local Streets and Roads Program Implementation Guidelines, and said guidelines are hereby incorporated into this AGREEMENT by reference.

D. BICYCLE AND PEDESTRIAN PATHS AND SAFETY

1. ALAMEDA CTC will distribute funds pursuant to a formula weighted 100 percent by the jurisdiction's share of the population. RECIPIENT's initial percentage fund distribution, if applicable, is

detailed in Exhibit A subject to change based on changes in annual population.

2. RECIPIENT shall use such funds for planning, construction and maintenance of bicycle and pedestrian projects and programs, with focus on high-priority projects described in RECIPIENT's Bicycle and Pedestrian Master Plans.

3. Bicycle and Pedestrian Paths and Safety funds are subject to the requirements for "Measure B Bicycle and Pedestrian Pass-through Funds" as detailed in the ALAMEDA CTC Bicycle and Pedestrian Safety Program Implementation Guidelines, and said guidelines are hereby incorporated into this AGREEMENT by reference.

ARTICLE II: PAYMENTS AND EXPENDITURES

A. ALAMEDA CTC's DUTIES AND OBLIGATIONS

1. Within five working days of actual receipt of the monthly Measure BB sales tax revenues from the BOE, ALAMEDA CTC shall remit to the RECIPIENT its designated amount of DLD funds disbursed on a monthly basis by a set formula for distribution.

2. ALAMEDA CTC shall annually update the Measure BB sales tax revenue projections and the resulting funds allocation formulas to reflect the most current population using the California Department of Finance's annual population estimates (Report E-1 published in May) and maintained road mileage from the Department of Transportation as it is made available. ALAMEDA CTC shall use the updated Measure BB program allocation formulas in the allocations beginning July 1 of each new fiscal year, which is from July 1 to June 30 in the State of California. ALAMEDA CTC shall provide an annual projection of Measure BB DLD estimated to be distributed to each RECIPIENT for each investment category RECIPIENT is eligible to receive before the beginning of each new fiscal year.

3. ALAMEDA CTC shall report monthly the amount of Measure BB revenues distributed to RECIPIENT by each investment category for the fiscal year and for the total program to date.

4. ALAMEDA CTC shall provide for an independent annual audit of its financial statements including revenues and expenditures and also the calculation of the allocation formula for distributing Measure BB DLD funds to various recipients and render an annual report to the ALAMEDA CTC Commission within 180 days following the close of the fiscal year. ALAMEDA CTC shall render an annual report on Measure BB funds to the Citizens Watchdog Committee (Independent Watchdog Committee) as soon thereafter as practical.

5. ALAMEDA CTC shall provide timely notice to RECIPIENT prior to conducting an audit of any expenditure made by RECIPIENT to determine whether such expenditures are in compliance with this AGREEMENT and the 2014 TEP.

B. RECIPIENT's DUTIES AND OBLIGATIONS

1. RECIPIENT shall expend all Measure BB funds distributed to the RECIPIENT in compliance

with the 2014 TEP guidelines, including the ALAMEDA CTC Implementation Guidelines, as they may be adopted or amended by ALAMEDA CTC from time to time.

2. RECIPIENT shall set up and maintain an appropriate system of accounts to report on Measure BB funds received. RECIPIENT must account for Measure BB funds, including any interest accrued, separately from any other funds it receives from ALAMEDA CTC. The accounting system shall provide adequate internal controls and audit trails to facilitate an annual compliance audit for the Measure BB funds and the respective usage and application of said funds. ALAMEDA CTC and its representatives, agents and nominees shall have the absolute right at any reasonable time to inspect and copy any accounting records related to such funds, except to the extent specifically prohibited by applicable law.

3. RECIPIENT hereby agrees to and accepts the formulas used in the allocation of Measure BB revenues as reflected in the ballot measure and the 2014 TEP, and agrees to accept and utilize the California Department of Finance Estimates of Population figures (Report E-1, updated each May) and the maintained road mileage from the Department of Transportation as it is made available for the annual update of the allocation formulas to begin in each new fiscal year.

ARTICLE III: POLICIES ON USE OF FUNDS

A. TIMELY USE OF FUNDS POLICY

Except for those funds properly placed into a reserve fund pursuant to **Section B** below, all Measure BB funds received by RECIPIENT shall be spent expeditiously, and no unexpended funds are allowed, unless a written request is submitted to the ALAMEDA CTC and approved by the Commission through the annual compliance audit and reporting process.

B. RESERVE FUND POLICY

RECIPIENT may reserve funds for specified periods of time, as defined in each reserve program, which ALAMEDA CTC will monitor through the annual compliance audit and reporting process described in **Article IV**. RECIPIENT may establish the following separate types of reserve funds:

1. Capital Fund Reserve

RECIPIENT may establish a specific capital fund reserve to fund specific large capital project(s) that could not otherwise be funded with a single year's worth of Measure BB DLD funds. If a capital fund reserve is established by RECIPIENT, it must be done as part of the Annual Program Compliance Reporting process as defined in Article IV.B.

a. RECIPIENT may collect capital funds during not more than three fiscal years, and shall expend all reserve funds prior to the end of the third fiscal year immediately following the fiscal year during which the reserve was established (e.g., if a reserve is established at any time during fiscal year 2015-2016 (FY 15-16), RECIPIENT may collect reserve funds during some or all of FY 15-16, FY 16-17 and FY 17-18, and must spend the reserve funds prior to the end of FY 18-19).

b. RECIPIENT shall report implementation schedules and funding plans for each proposed project to be funded from the reserve in RECIPIENT's annual program compliance report.

c. RECIPIENT may seek a single one-year extension for a given reserve fund if RECIPIENT demonstrates that unforeseen and extraordinary circumstances have occurred that would justify the extension. RECIPIENT shall submit a request for such an extension in writing to ALAMEDA CTC's executive director. The ALAMEDA CTC Commission, in its sole discretion, will make a determination as to whether to approve or deny the extension request and will notify RECIPIENT of its action in writing.

2. Operations Fund Reserve

RECIPIENT may establish and maintain a specific reserve to address operational issues, including fluctuations in revenues, and to help maintain transportation operations. This fund may not contain more than 50 percent of annual DLD revenues, unless an exception is requested in writing and approved by the ALAMEDA CTC Commission. This fund may be a revolving fund and is not subject to an expenditure timeframe. If an operations fund reserve is established by RECIPIENT, it must be done as part of the Annual Program Compliance Reporting process as defined in Article IV.B.

3. Undesignated Fund Reserve

RECIPIENT may establish and maintain a specific reserve for transportation needs over a fiscal year, such as matching funds for grants, project development work, studies for transportation purposes, or contingency funds for a project or program. This fund may not contain more than 10 percent of annual DLD revenues, unless an exception is requested in writing and approved by the ALAMEDA CTC Commission. If an undesignated fund reserve is established by RECIPIENT, it must be done as part of the Annual Program Compliance Reporting process as defined in Article IV.A.3.

a. RECIPIENT shall report the range of potential uses for the reserve funds in its annual compliance report.

C. RESCISSION OF FUNDS POLICY

If RECIPIENT does not meet the timeliness requirements set forth in Section A and B, ALAMEDA CTC may determine the RECIPIENT does not need the unspent funds. In such case, unless the RECIPIENT requests and ALAMEDA CTC approves an extension to the applicable deadline for the Capital Fund Reserve as described in Article III.B.1, RECIPIENT must return unspent funds and all interest earned thereon to ALAMEDA CTC. All such funds returned to ALAMEDA CTC shall be placed into an account for reallocation to the same programmatic type for transportation improvements in the county.

D. OTHER EXPENDITURE RESTRICTIONS

1. Transportation Purposes Only

RECIPIENT shall use all Measure BB funds solely for transportation purposes as defined by the authorizing ballot measure. Any jurisdiction that violates this provision must fully reimburse all misspent funds, including all interest that would have been earned thereon.

2. Non-Substitution of Funds

RECIPIENT shall use Measure BB funds, pursuant to Public Utilities Code Section 180000 *et seq.*, to supplement and not replace existing property taxes used for transportation purposes.

3. Fund Exchange

Any fund exchanges made using Measure BB must be made for transportation purposes. ALAMEDA CTC will consider exchange proposals on a case-by-case basis.

4. Staff Cost Limitations

Direct costs associated with the delivery of programs and projects associated with Measure BB programs, including direct staff costs and consultant costs, are eligible uses of Measure BB funds. ALAMEDA CTC does not allow indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

ARTICLE IV: REPORTING REQUIREMENTS

RECIPIENT shall comply with each of the reporting requirements set forth below. If RECIPIENT fails to comply with one or more of these requirements, ALAMEDA CTC may withhold payment of further Measure BB funds to RECIPIENT until full compliance is achieved.

A. RECIPIENT shall submit to ALAMEDA CTC, on an annual basis and at the RECIPIENT's expense, an independently audited Measure BB financial statements and a compliance opinion of the funds received and used, including plans and reports of expenditures. RECIPIENT shall complete, certify, and provide the annual audited financial statements and compliance opinion to ALAMEDA CTC within 180 days following the close of each fiscal year.

B. RECIPIENT shall, by December 31 of each year, submit to ALAMEDA CTC, at the RECIPIENT's expense, a compliance report on programs and projects on which RECIPIENT expended Measure BB funds. In such report, RECIPIENT shall state how the funds were used and the benefits derived from the funded programs and projects, and establish fund reserves and amounts remaining in reserves and anticipated program and project expenditures. If RECIPIENT's expenditures in a fiscal year are less than the amount received during such year, RECIPIENT shall explain why revenues exceeded expenditures and RECIPIENT's provide an implementation plan for the unexpended fund balances.

C. To be eligible for receipt of Local Streets and Roads funds, RECIPIENT shall provide ALAMEDA CTC with the certified number of maintained road miles within RECIPIENT's jurisdiction, which shall be consistent with the miles reported to state and federal agencies. RECIPIENT shall provide ALAMEDA CTC with the annual certified number of maintained road miles each fiscal year even if the number of miles for the fiscal year did not change. Road miles reported through the Department of Transportation shall be used in the updated Measure BB sales tax revenue allocation formula for distributing Measure BB funds and the new mileage shall be reflected in the distributions that start on July 1 of each new fiscal year.

D. RECIPIENT shall install or mount signage, such as those identified on the ALAMEDA CTC

website (http://www.alamedactc.org/app_pages/view/5269), adjacent to Measure BB funded construction projects and on vehicles funded with Measure BB funds (e.g., RECIPIENT and ALAMEDA CTC logos; "Your Transportation Tax Dollars Help Fund the Operation of This Vehicle!") where practical, so Alameda County taxpayers are informed as to how RECIPIENT is using Measure BB funds. RECIPIENT shall include a description of signage and number of signs posted in the annual compliance report submitted to ALAMEDA CTC.

E. RECIPIENT shall provide current and accurate information on RECIPIENT's website, to inform the public on how RECIPIENT is using Measure BB funds, and shall also provide a link to ALAMEDA CTC's website.

F. RECIPIENT shall, at least annually, publish an article highlighting a project or program in which RECIPIENT has used Measure BB funds.

G. RECIPIENT shall actively participate in a Public Awareness Program, in partnership with ALAMEDA CTC and/or its community advisory committees, as a means of ensuring that the public has access to and has the ability to know which projects and programs are funded through Measure BB.

H. RECIPIENT shall make its administrative officer or designated staff available on request from ALAMEDA CTC to render a report or answer any and all inquiries in regards to RECIPIENT's receipt, usage, and compliance audit findings of its funds before ALAMEDA CTC's governing board and/or the Citizens Watchdog Committee (Independent Watchdog Committee) or community advisory committees, as applicable.

I. RECIPIENT agrees that ALAMEDA CTC may review and/or evaluate the project(s) or program(s) funded pursuant to this AGREEMENT. This may include visits by representatives, agents or nominees of ALAMEDA CTC to observe RECIPIENT's project or program operations, to review project or program data and financial records, and to discuss the project with RECIPIENT's staff or governing board.

ARTICLE V: OTHER PROVISIONS

A. INDEMNITY BY RECIPIENT

Neither ALAMEDA CTC, nor its governing body, elected officials, any officer, consultant, agent, or employee thereof, shall be responsible for any damage or liability occurring by reason of anything done or omitted to be done by RECIPIENT in connection with Measure BB funds distributed to RECIPIENT pursuant to this AGREEMENT. It is also understood and agreed, pursuant to Government Code Section 895.4, RECIPIENT shall fully defend, indemnify and hold harmless ALAMEDA CTC, its governing body, and all its officers, agents, and employees, from any liability imposed on ALAMEDA CTC for injury (as defined in Government Code Section 810.8) occurring by reason of anything done or omitted to be done by RECIPIENT in connection with Measure BB funds distributed to RECIPIENT pursuant to this AGREEMENT.

B. INDEMNITY BY ALAMEDA CTC

Neither RECIPIENT, nor its governing body, elected officials, any officer, consultant, agent, or

employee thereof shall be responsible for any damage or liability occurring by reason of anything done or omitted to be done by ALAMEDA CTC under or in connection with any work, authority or jurisdiction delegated to ALAMEDA CTC under this AGREEMENT. It is also understood and agreed, pursuant to Government Code Section 895.4, ALAMEDA CTC shall fully defend, indemnify, and hold harmless RECIPIENT, and its governing body, elected officials, all its officers, agents, and employees from any liability imposed on RECIPIENT for injury (as defined in Government Code Section 810.8) occurring by reason of anything done or omitted to be done by ALAMEDA CTC under or in connection with any work, authority or jurisdiction delegated to ALAMEDA CTC under this AGREEMENT.

C. JURISDICTION AND VENUE

The laws of the State of California will govern the validity of this AGREEMENT, its interpretation and performance, and any other claims related to it. All legal actions arising out of this AGREEMENT shall be brought in a court of competent jurisdiction in Alameda County, California and the parties hereto hereby waive inconvenience of forum as an objection or defense to such venue.

D. ATTORNEYS' FEES

Should it become necessary to enforce the terms of this AGREEMENT, the prevailing party shall be entitled to recover reasonable expenses and attorneys' fees from the other party.

E. TERM

The term of this AGREEMENT shall be from April 1, 2015 to June 30, 2016, unless amended or a new Master Programs Funding Agreement is executed with RECIPIENT, whichever date is earlier.

F. SEVERABILITY

If any provision of this AGREEMENT is found by a court of competent jurisdiction or, if applicable, an arbitrator, to be unenforceable, such provision shall not affect the other provisions of the AGREEMENT, but such unenforceable provisions shall be deemed modified to the extent necessary to render it enforceable, preserving to the fullest extent permissible the intent of the parties set forth in this AGREEMENT.

G. MODIFICATION

This AGREEMENT, and its Exhibits, as well as the referenced ALAMEDA CTC Implementation Guidelines, constitutes the entire AGREEMENT. This AGREEMENT may only be changed by a written amendment executed by both parties. Notwithstanding the foregoing, the Implementation Guidelines may be changed from time to time by ALAMEDA CTC.

[Signatures on next page]

IN WITNESS WHEREOF, the parties have executed this AGREEMENT by their duly authorized officers as of the date first written below.

EXHIBIT B

PLANNING AREAS FOR CITY AND LOCAL TRANSIT OPERATOR FUNDING (PARATRANSIT)

Planning Area	Description
North County	Cities of Alameda, Albany, Berkeley, Emeryville, Oakland, and Piedmont
Central County[1]	Cities of Hayward and San Leandro, and the unincorporated area of Castro Valley, as well as other unincorporated lands governed by Alameda County in the Central Area.
South County	Cities of Fremont, Newark, Union City, as well as Union City Transit.
East County[2]	Cities of Livermore, Dublin, and Pleasanton, and all unincorporated lands governed by Alameda County in the East Area, and LAVTA.

Notes:
1. Funding will be assigned to Hayward to serve the unincorporated areas.
2. Funding for Livermore and Dublin will be assigned to LAVTA for their ADA-mandated paratransit program.

ACTC_AR0212

1 Introduction

The Countywide Transportation Plan (CTP)

The Alameda Countywide Transportation Plan (CTP) is a long-range policy document that serves as a guide for future transportation projects, programs, policies, and advocacy for all of Alameda County through 2040. It addresses all parts of Alameda County's complex transportation system, including capital, operating, and maintenance activities for all transportation modes. Transportation programs that serve the needs of specific groups throughout the county, such as paratransit services for seniors and people with disabilities, and safe access to schools are also included. This document establishes a vision for Alameda County's transportation system and a path to implementing that vision. It begins with goals for the system, describes current trends and challenges, inventories needs and available funding, describes solutions and investment strategies and how they help meet the goals, and finally identifies gaps where additional funding is needed.

The CTP informs the Regional Transportation Plan (RTP), called Plan Bay Area, and was developed using the Metropolitan Transportation Commission's (MTC) *Guidelines for Countywide Transportation Plans (2014)* (both are more fully described herein).

Acknowledging that the future is unknown, and that changing conditions in the county will place new demands on the transportation system over time, this plan is updated every four years. The CTP was last adopted in 2012.

Alameda County: Heart of the Region's Transportation System

Alameda County extends from the Bay Area's urban core to its rural periphery including 14 cities and several unincorporated communities. The importance of Alameda County's transportation infrastructure cannot be overstated. The county is home to a major port and international airport that are central to the distribution of goods throughout the Western United States. Alameda County also plays a central role in moving people around the region with every BART line traveling through the county, along with two other regional rail systems—Amtrak Capitol Corridor and Altamont Corridor Express (ACE). With six interstate freeways, 10 state routes, and three major bridges, the county shoulders a disproportionate share of the region's congestion (40% of the congestion and 6 of the 10 most congested freeways). More information about the county's transportation system and its critical role in the region can be found in Chapter 5.

ACTC_AR0213

Background and Requirements for Countywide Transportation Plans

CTPs were originally authorized in 1988 through Assembly Bill 3705[1] (AB 3705) to provide a solid, locally-grounded basis for development of regional transportation plans. CTPs are voluntary, but in the Bay Area, they have served as a foundation of the integrated and coordinated regional transportation planning that ultimately informs Plan Bay Area. The first CTP was adopted for Alameda County in 1994, and has been updated regularly to reflect changing policies and conditions. The CTP plays a critical role in establishing long-range vision and goals for the system, informing priorities for investment, ensuring strong coordination throughout Alameda County, and supporting the Alameda County Transportation Commission (Alameda CTC) in advocating for additional funding at the regional, state, and federal levels.

This CTP conforms to the most recent guidelines[2] for CTPs issued by MTC (2014). These guidelines are heavily influenced by passage of Senate Bill 375 (SB375) [3], known as the Sustainable Communities and Climate Protection Act of 2008, as well as the Moving Ahead for Progress in the 21st Century Act (MAP-21).[4] As such, this update includes components to address climate change, integrate transportation with land use policies and development (see Chapter 4), and advance Complete Streets policies (see Chapter 8).

SB 375 requires all regions in California to reduce greenhouse gas emissions through improving coordination of land use and transportation planning, and to integrate a land use plan, called a Sustainable Communities Strategy (SCS), into the Regional Transportation Plan (RTP), Plan Bay Area.[5] As directed in the law, the CTP has been closely coordinated with development of the regional Plan Bay Area update. It is through the CTP that jurisdictions throughout Alameda County have a voice in the regional planning process; the CTP ensures that the needs of all the diverse users of the county's transportation system are accurately and strongly reflected in regional

[1] County Transportation Plans: AB 3705, codified in Section 66531 of CA government code; AB 1619, Chapter 25, Statutes of 1994. http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=GOV&sectionNum=66531.

[2] 2014 CTP Guidelines: http://mtc.ca.gov/sites/default/files/6b_Attachment-A.pdf.

[3] Sustainable Communities Act: SB 375, Chapter 728, Statutes of 2008. SB 375 requires each of the state's metropolitan areas to reduce greenhouse gas emissions from cars and light trucks through increased coordination of land use and transportation planning and investments. The Bay Area's GHG reduction target is 7% per capita reduction by 2020 and 15% per capita reduction by 2035 (http://www.leginfo.ca.gov/pub/07-08/bill/sen/sb_0351-0400/sb_375_bill_20080930_chaptered.pdf).

ACTC_AR0214

planning. More information on Plan Bay Area, state mandates, and how land use is taken into consideration in the CTP can be found in Chapter 4.

MTC's *Guidelines for Countywide Transportation Plans (2014)* include the development of an equity analysis tailored to minority, low-income, and underserved populations. The equity analysis serves as an update to the county's six Community-Based Transportation Plans developed between 2004-2009, described below and in Chapter 7.

Evolution of the CTP

Alameda CTC launched a new paradigm of transportation planning with the 2012 CTP update. The 2012 update was the first CTP developed by Alameda CTC, which had recently been formed from a merger of the Alameda County Congestion Management Agency (ACCMA) and the Alameda County Transportation Improvement Authority (ACTIA).[6] This union not only eliminated redundancies and created efficiencies, but also launched a new era of thinking more strategically about the role that this countywide body plays in supporting a multimodal, connected and integrated transportation network.

In 2012, Alameda CTC began using a performance-based process to develop the CTP. This process began with extensive input from the public, city and county staff and elected officials, and the Commission adopted a broad-ranging vision and set of goals that encompassed land use, sustainability, economic vibrancy, and equity. To ensure that projects and programs were consistent with this vision, performance measures were used to measure the impacts of the plan to reflect these goals.

The 2012 update was also affected by new state policy mandates designed to promote sustainability and reduce carbon emissions which required the region to develop an integrated land use and transportation plan to support reductions in greenhouse gas emissions, further described in Chapter 4.

The 2012 CTP signaled a change for the direction of Alameda County's transportation system. Changing the focus from designing a transportation network that manages traffic congestion to a network that maximizes performance of the multimodal transportation system as a whole takes time to fully institutionalize into the policies and daily practices of how transportation funding is allocated and how projects are implemented. This evolution continues today.

Ultimately, Alameda CTC will work in close partnership with project sponsors to plan and implement the best projects to move the county's transportation system

[6] ACCMA previously managed the planning and funding and project delivery of transportation projects in Alameda County, and developed the CTP. ACTIA previously managed the transportation sales tax revenues and expenditures and was responsible for development of the Countywide Bicycle and Pedestrian Plans.

ACTC_AR0215

forward, to support its adopted vision and goals. This will impact the types of projects that cities and agencies submit for funding and the types of projects that Alameda CTC sponsors. The next section describes some of the key elements that differentiate this CTP from the 2012 update, and how the CTP relates to other planning efforts.

Interrelationship of Plans

The CTP does not stand alone; it builds on and informs several other county and regional plans. The most salient regional and Alameda CTC planning efforts and their relationship with the CTP are described below.

Modal Plans

Travel patterns and transportation networks cross city boundaries but much of the transportation system is managed by local jurisdictions. One key outcome of the 2012 CTP was a recognition that the connectivity and quality of transportation infrastructure must be looked at beyond the confines of city plans. As a critical next step, the 2012 CTP called for development of a series of countywide plans on different modes.

The agency developed a *Countywide Bicycle Plan* and *Countywide Pedestrian Plan* which looked at cross-jurisdictional connectivity and where gaps existed between networks. These plans were adopted simultaneously with the 2012 CTP. Since 2012, Alameda CTC has developed several additional countywide modal plans that take an in depth look at other modes individually to understand challenges, and opportunities for coordination and investment at the countywide level. The plans are:

- *Transit Plan*: Given the substantial commitment that the local sales tax makes to transit, a countywide Transit Plan has been developed to support an efficient and effective transit network throughout the county. The plan was developed in partnership with transit and paratransit operators and users, local jurisdictions, and the general public, and was designed to complement and support existing planning efforts that are completed or underway in the County. The plan targets a set of improvements in the 14 corridors that are most likely to carry some of the strongest future demand for transit and a set of network recommendations to enable fast, frequent and reliable service (see Public Transit modal strategy in Chapter 6 for more information).
- *Goods Movement Plan*: Given the importance of the Port of Oakland in the regional economy, the impact of trucks on the region's roadways, and the community and environmental impacts created by freight, a countywide Goods Movement Plan was developed to identify efficient and effective freight routes and modes, strategies to support sustainable freight and reduce the impacts of freight movement on residential communities, new technologies for enhancing freight's competitiveness and efficiency, and

ACTC_AR0216

other critical topics related to freight movement (see Goods Movement modal strategy in Chapter 6 for more information).

- *Multimodal Arterials Plan*: Given that arterial roads are often the place where local and regional transportation needs intersect, their importance in connectivity for all modes, and Alameda CTC's responsibility as the Congestion Management Agency (see below), Alameda CTC developed a plan that creates a connected network for all modes of transportation that aims to optimize performance for all modes on the county's arterials. The plan was developed with guidance from Alameda County's 15 jurisdictions, major transit agencies, the California Department of Transportation (Caltrans), and non-agency stakeholders (see Roadways modal strategy in Chapter 6 for more information).

The three recently completed modal plans are performance-based; for each mode they a) set goals and objectives that are aligned with the CTP Vision and Goals, b) set performance measures, c) identify gaps and improvement needs, d) identify strategies to address these needs, e) prioritize strategies through an evaluation process, and f) identify actions to move the plans forward. The modal plan performance measures were one input into development of performance measures for this CTP (see Chapter 2).

The CTP ultimately will represent a synthesis of this modal planning work; however, many projects identified in the modal plans have yet to be developed and are not included in the performance evaluation for this 2016 CTP. Following adoption of this plan, Alameda CTC will continue to work with partner agencies on developing projects and programs as identified in the modal plans. Chapter 8 (Projects and Programs) and Chapter 10 (Moving Forward) summarize this upcoming work, including opportunities for the modal plans to support a next generation of projects and programs in the county.

These modal plans and CTP have been, and will continue to be, very closely integrated. It is through these plans that Alameda CTC is working to be more strategic and visionary in the planning, funding, and delivery of transportation projects and programs. These plans were all highly collaborative efforts working closely with stakeholders, jurisdictions, and communities throughout the county.

Congestion Management Program (CMP)

As the designated congestion management agency for Alameda County, Alameda CTC is legislatively required to develop and regularly update a Congestion Management Program (CMP).[7] Alameda CTC adopted the most recent *Congestion*

[7] Congestion Management Program Legislation, California Government Code, Chapter 2.6. Congestion Management (Section 65088–65089.10), http://www.leginfo.ca.gov/cgi-bin/displaycode?section=gov&group=65001-66000&file=65088-65089.10.

ACTC_AR0217

Management Program Report in October of 2015. It describes the strategies used to assess and monitor the performance of the county's multimodal transportation system, address congestion, improve system performance, and strengthen the integration of transportation and land use planning. [8]

Comprehensive Investment Plan (CIP)

Alameda CTC reinforces the goals in the CTP by integrating them into their funding allocation processes. Alameda CTC funding decisions have all been streamlined into one unified Comprehensive Investment Plan (CIP). Funding decisions are made through a rigorous evaluation process where project applicants must illustrate how the projects and programs they propose support the countywide vision and goals.

The CTP is a policy framework document used to set vision, identify themes and synergies, and set overall priorities, the CIP directly programs funds to specific projects and programs, including those implemented by Alameda CTC and by other agencies. The CIP has a 5-year horizon and is updated every two years.

Capital Project Delivery Program (CPDP)

The Capital Project Delivery Plan (CPDP) was developed to inform the CIP. It identifies the capital projects funded by the local sales tax revenue that will be implemented directly by Alameda CTC as the project sponsor (for more information on funding sources see Chapter 9). Many of the projects recommended by the modal plans need to be implemented at a countywide level, and are included in the CPDP. It recommends programming Measure BB[9] funds for specific projects and project phases including resources for project management, project monitoring, and project controls. The CPDP only addresses programs and projects implemented directly by Alameda CTC.

Community-Based Transportation Plans (CBTPs)

Background

In the early 2000s, the Metropolitan Transportation Commission (MTC) completed the Lifeline Transportation Study (2001) and the Environmental Justice Report (2001). These analyses identified low-income areas throughout the Bay Area with gaps in provision of transportation services and a need to support local planning efforts. Building on these findings, MTC began a regionwide effort to fund Community-Based

[8] The CMP is required to incorporate five key elements: designated CMP roadway network, level of service monitoring, multimodal performance element, land use analysis program, and capital improvement program. Alameda CTC's CMP: http://www.alamedactc.org/app_pages/view/5224.

[9] Ballot Measure BB, approved by Alameda County voters in November of 2014, authorized the implementation of the Alameda County 30 year Transportation Expenditure Plan and renewed and adjusted the sales tax used to fund the plan. See Chapter 9 for more information on funding and related ballot measures.

ACTC_AR0218

Transportation Plans (CBTPs) that identify transportation needs and solutions in historically underserved and disadvantaged communities.

Between 2004 and 2009, Alameda CTC worked closely with communities in Alameda County to complete CBTPs in the following places: Central Alameda County (unincorporated Cherryland and Ashland portions of Hayward and South Hayward, 2004), City of Alameda (2009), City of Berkeley (West and South Berkeley, 2007), and City of Oakland (Central and East Oakland, 2007, and West Oakland, 2006). These plans identified transportation gaps, ways to address these gaps, and potential funding sources for each of these communities.

Update to CBTPs

This CTP serves as an update to the Alameda County CBTPs. As such, equity considerations have been incorporated throughout the planning process rather than as a final step.

First, as part of the development of the plan, the team conducted an equity analysis that compared transportation access and system quality for historically disadvantaged demographic groups and the general population to identify any significant disparities. The methodology for this analysis was rooted in best practices, regional guidance, academic literature, and lessons learned from prior efforts (both regional and nationwide).

A community engagement strategy was developed for this analysis to elicit robust input from communities that were traditionally left out of the conversation. The equity analysis informed both the outreach methods and geographic target areas. Outreach efforts are fully described later in this Chapter.

Using findings from the equity analysis and outreach efforts, the team developed an Equity Strategy (Chapter 7) which updates the CBTPs. The Strategy uses the results of the analysis to identify where transportation gaps persist and additional communities that could be considered for future investments due to transportation inequities burdening their communities. Equity was also a key factor in developing the countywide performance measures (Chapter 2).

Priority Development Area Investment and Growth Strategy

In 2012, the CTP integrated the SCS land use projections, and took a much closer look at coordinating transportation projects and programs with the county's land use patterns than ever before. But it also acknowledged that true integration of land use and transportation would require ongoing efforts in subsequent years. To continue to improve the linkages between transportation and land use, Alameda CTC

ACTC_AR0219

developed a *Priority Development Area (PDA) Investment and Growth Strategy*[10] that outlines strategies, policies, funding allocations, and programs to support focused growth in support of Plan Bay Area. Chapter 4 includes further discussion about state and regional mandates and about Alameda CTC's efforts to coordinate land use and transportation.

Alameda County Transportation Commission

Alameda CTC is responsible for development of the Alameda Countywide Transportation Plan (CTP).

The mission of the Alameda County Transportation Commission (Alameda CTC) is to plan, fund and deliver transportation programs and projects that expand access and improve mobility to foster a vibrant and livable Alameda County.

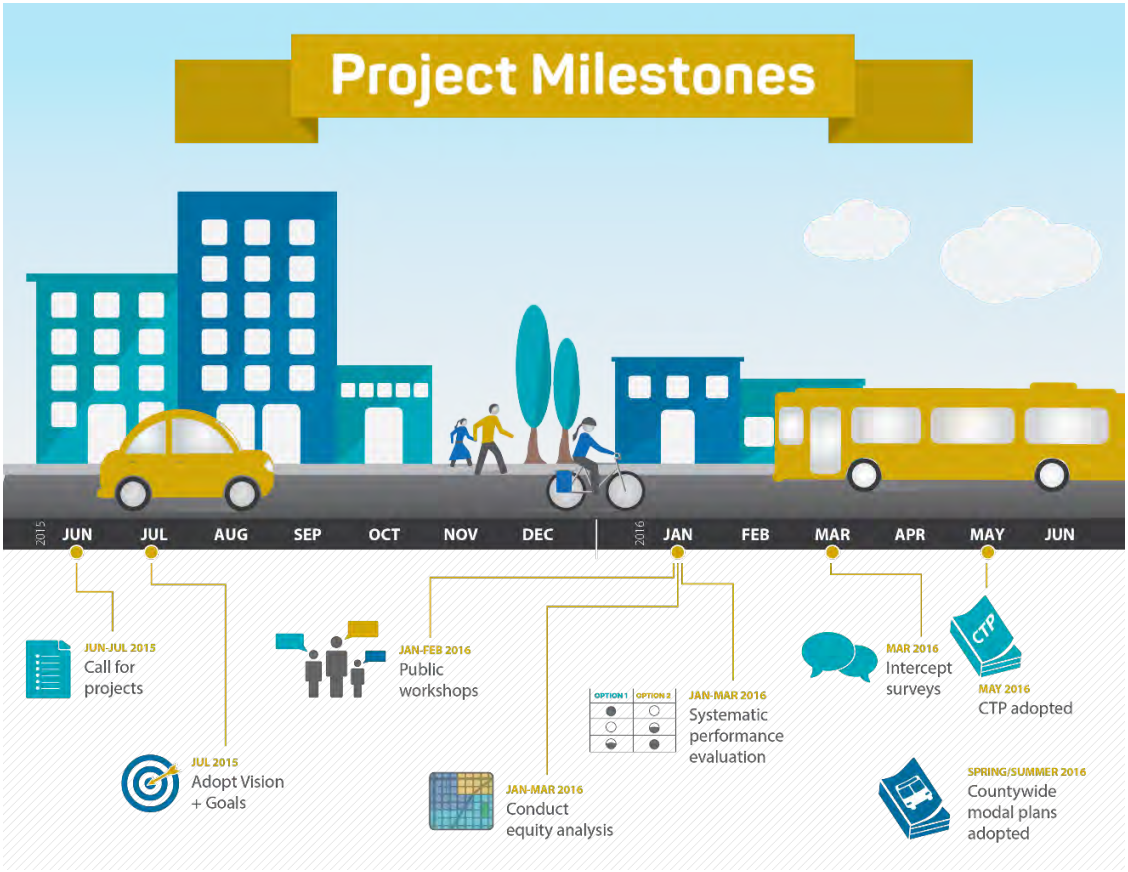
Alameda CTC is responsible for coordinating countywide transportation planning efforts; programming local, regional, state, and federal funding; and delivering projects and programs including those approved by voters in Alameda County transportation expenditure plans for Measure B, Measure BB, and the Vehicle Registration Fee. These three funding sources make up the large majority of funding available for transportation projects in Alameda County.

Alameda CTC is a joint powers authority governed by a 22-member Commission comprised of elected officials from each of the 14 cities in Alameda County, all five members of the Alameda County Board of Supervisors, and elected representatives from AC Transit and Bay Area Rapid Transit (BART).

Alameda CTC's main responsibilities are to:

- **Plan** for the future of transportation in Alameda County.
- **Fund** critical transportation programs that serve the public including youth, seniors, and people with disabilities.
- **Deliver** innovative transportation projects that extend the life of aging infrastructure, protect the environment, improve transportation access for communities and businesses, and improve goods movement.

Alameda CTC was created in July 2010 by the merger of the Alameda County Congestion Management Agency (ACCMA) and the Alameda County Transportation Improvement Authority (ACTIA), to streamline operations, eliminate redundancies, and save taxpayers' dollars. As a result of the merger, Alameda CTC is able to implement more cost-effective methods for planning, funding, and



[10] Alameda County PDA Investment and Growth Strategy: http://www.alamedactc.org/app_pages/view/10385.

delivering programs and projects that benefit Alameda County residents and businesses.

Plan Development

The development of the CTP included the key milestones illustrated in Figure 1-1.

Figure 1-1 Plan Development Milestones

Performance-Based Planning

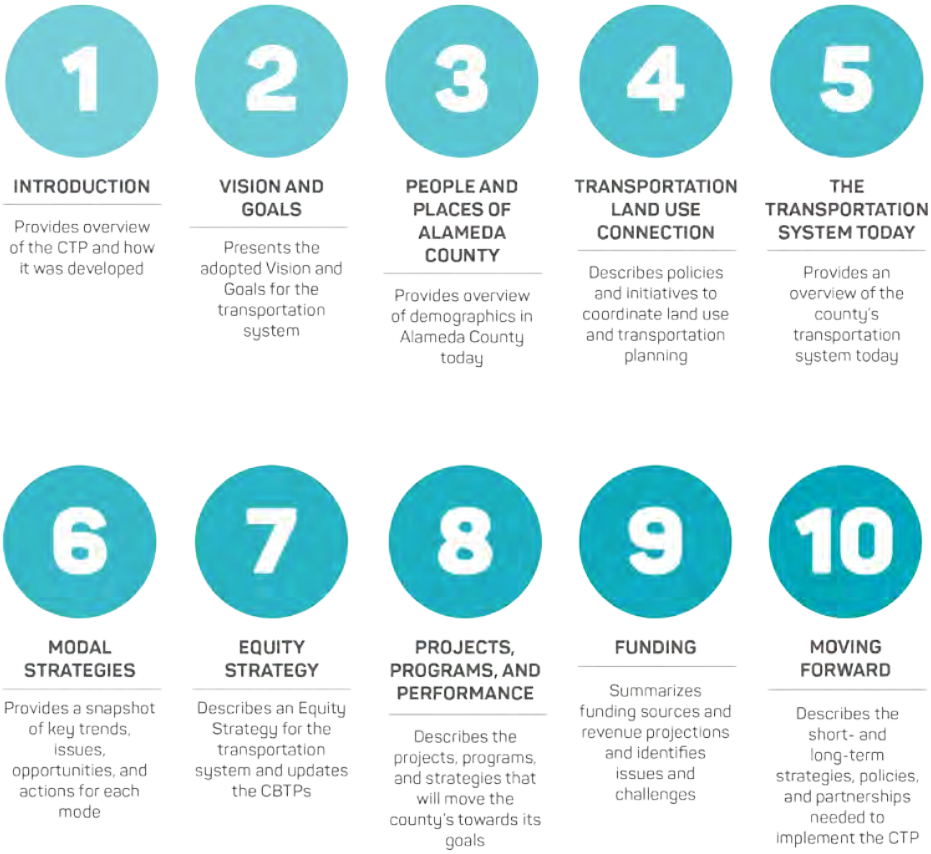
Alameda County and the broader Bay Area region have increasingly moved toward a performance-based planning approach for the past decade. Performance-based planning allows policies and goals to be expressed in quantifiable terms and creates an analytical framework to determine the degree to which investment choices help meet goals. Ongoing monitoring of investment performance helps inform future decision-making and highlights necessary adjustments to be made for the following update. For the purposes of the CTP, performance measures are used to understand how the system as a whole is progressing towards meeting the adopted goals. The specific metrics represent

ACTC_AR0221

issues that are important to measure at a system level, such as greenhouse gas emissions, travel time reliability for all modes, mode share, and job accessibility.

The CTP performance-based analyses were conducted on the entire system and not at a project level basis. Any project that is advanced in Alameda County will go through project-specific planning and analyses pursuant to appropriate environmental and regulatory requirements. Performance measures for this 2016 CTP are described in Chapter 2, and performance results are shown in Chapter 8.

Public Engagement



To ensure the CTP is responsive to community needs throughout Alameda County (and in accordance with MTC guidelines), Alameda CTC engaged in an open and inclusive public participation process. There were two key elements of the process:

1. **Stakeholder engagement in modal plans and CTP development:** public workshops, stakeholder interviews, surveys, and meetings were conducted throughout the development of the modal plans and CTP.
2. **Intercept surveys** conducted in March 2016: This strategy was selected to provide targeted input for the equity strategy, ensuring participation from a broader audience that is normally left out of the planning process—especially minority, low-income, and other disadvantaged communities. Three hundred intercept surveys were conducted in the CBTP communities (East and West Oakland, Central Alameda County, South and West Berkeley, City of Alameda) and Livermore to ensure coverage of the full breadth of needs in Alameda County.

Appendix A includes a full summary of the public engagement process, participation, and results.

ACTC_AR0222

Structure of this Report

ACTC_AR0223

2 Vision and Goals

Introduction

Establishing a vision and a set of goals provides a foundation for developing a comprehensive and measurable Countywide Transportation Plan (CTP) for Alameda County. A compelling vision statement points the way to a better transportation future for the county. Goals further articulate the vision, making it more concrete and creating a basis for a performance-driven, outcome-based approach to making sound transportation investment decisions. Performance measures provide measurable mechanisms to determine the degree to which the CTP is fulfilling its goals for the transportation system.

This chapter includes the vision, goals, and performance measures that have been adopted for this CTP.

Vision and Goals

The vision and goals for the Alameda Countywide Transportation Plan were originally developed during the 2012 CTP update in parallel with development of a new Transportation Expenditure Plan (adopted by over 70% of voters in 2014 as Measure BB). The process was comprehensive and grounded in extensive input from a broad range of stakeholders. As such, the vision statement and goals are comprehensive and capture the broad array of needs and transportation system demands in a county as diverse and large as Alameda County. These goals reflect time-tested values of transportation planning in Alameda County. In July 2015, the Alameda County Transportation Commission (Alameda CTC) reconfirmed and adopted the following vision and goals to guide this 2016 CTP update.

Stakeholder Involvement

The Alameda Countywide vision and goals were developed with the participation of a wide array of stakeholders including residents and groups representing seniors, people with disabilities, bicycle interests, environmental, education and faith-based groups, businesses, labor, and local jurisdictions. Alameda CTC also worked with a Steering Committee, Community Advisory Working Group, and Technical Advisory Working Group. These committees included representatives from 15 local jurisdictions, six transit operators, Caltrans District 4, the Port of Oakland, the Metropolitan Transportation Commission (MTC), and other community and agency stakeholders and the public.

ACTC_AR0225

Figure 2-1 Vision and Goals for Alameda County's Transportation System

ACTC_AR0226

Performance Measures

Based on the goals, Alameda CTC created a set of performance measures to evaluate the performance of the CTP as a whole, shown in Figure 2-2. The Commission adopted these performance measures in January 2016. This performance evaluation is conducted for the system as a whole, not on a project level basis. The process allows Alameda CTC to understand the degree to which projects and programs advance the county towards the adopted vision and goals, and identify where additional efforts are needed.

Performance measures for the 2016 CTP were pulled from and based upon industry best practices, the 2012 CTP, and the performance measures that were used in the countywide modal plans. Utilizing performance measures from the modal plans reinforces the integration of those plans with the CTP and ensures the 2016 CTP is reflective of those efforts. The outcomes of the performance evaluation process are included in Chapter 5.

ACTC_AR0227

3 People and Places of Alameda County

Alameda County is the 7th most populated county in California with 1.57 million residents and nearly 700,000 jobs.[11] Located in the East Bay, the county extends from the San Francisco Bay in the west to the Livermore Valley in the east, borders Contra Costa County to the north, and includes a portion of Silicon Valley in the south, bordering Santa Clara County.

The county is characterized by diversity, in land use patterns and demographic characteristics. No single ethnic group makes up more than 33% of the population and 42% of households in Alameda County are non-English speaking households (equity considerations are discussed in greater detail in Chapter 7). Alameda County's development includes dense, urban cities, suburbs, rural communities, agricultural areas, parklands, and everything in between. This chapter offers an overview of the existing demographic conditions in Alameda County.

Current Demographics in Alameda County

Population

Alameda County is currently home to approximately 1.57 million people (2014) over about 739 square miles of land area. Alameda County has grown by about 64,000 residents since the year 2010.[12]

Ethnicity

Alameda County has long been, and is increasingly, a racially diverse county. In 2014, Caucasians represent the largest racial group at 33% of the population, followed by the Asian population (27%) and Latino (23%).[13]

When looking at a trend line in demographic changes, Figure 3-1 shows demographic changes in ethnicity from 2000 to 2014, and Figure 3-2 shows the percentage composition of ethnic diversity in Alameda County in2014.

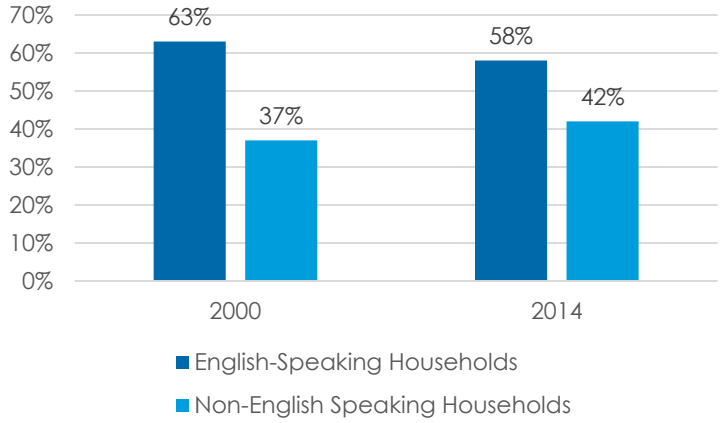
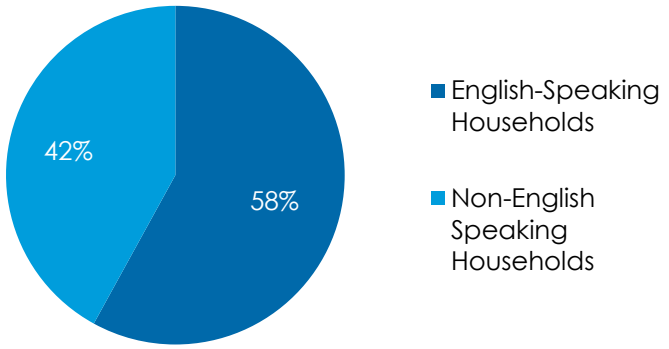
Figure 3-2 Ethnic Diversity in Alameda County (2014)



Source: American Community Survey 2010-2014.

ACTC_AR0230

Language



The diversity of Alameda County is also reflected in the growing number of residents who do not speak English or consider English their secondary language. Today, English is the primary language spoken at home for 58% of households. Following English as a primary language are Asian languages (19%), Spanish (14%). and Indo-European languages (8%).[14] When looking at a trend line of language diversity, Figure 3-3 shows changes from 2000 to 2014 for English compared to non-English speaking households, and Figure 3-4 illustrates percentages in 2014.[15]

Figure 3-3 Increasing Linguistic Diversity: English- and Non-English Speaking Households (2000 and 2014)

Figure 3-4 English- and Non-English Speaking Households (2014)

Source: American Community Survey 2010-2014.

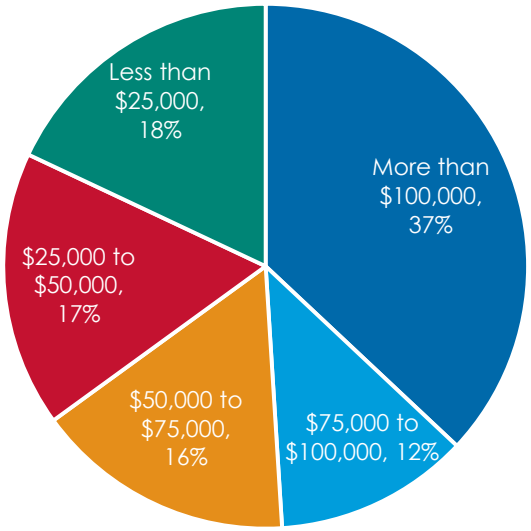
Employment

Alameda County is currently home to nearly 700,000 jobs (2013), which accounts for about 20% of the Bay Area's jobs. The largest share of Alameda County's jobs, about

[14] Indo-European includes middle-eastern languages.

[15] American Community Survey 2010-2014.

ACTC_AR0231



189,000, is located in Oakland. Other important job centers include Berkeley, Hayward, Fremont, Livermore, and Pleasanton.[16]

Alameda County also has one of the most diverse employment bases in the Bay Area, which allows the county to maintain a growing economy and be more resilient in economic downturns. In addition to the goods movement sector, which provides about one-third of the total jobs in the county, Alameda County is home to hubs of manufacturing, technology, education, and health care, among others.[17]

Income

After a period of decline between 2008 and 2011, incomes in Alameda County and throughout the Bay Area have begun to stabilize. Today, the median annual income for an individual worker is $42,700 in Alameda County, compared to $47,000 for the Bay Area. Similarly, the median household income in Alameda County is $72,100 per year, slightly less than that of the Bay Area.

Figure 3-5 Alameda County Annual Household Income (2014)

Compared to other counties in the state, per capita income in Alameda County is the eighth highest in California and 18% higher than the state overall. The largest share of households make more than $100,000 per year (37%), followed by less than $25,000 (18%), demonstrating stark income disparity for Alameda County residents. Over one-third of households make less than $50,000 per year. In a region where many residents experience an increasingly high cost of living, this poses a major challenge to ensure the transportation system remains accessible for all income levels.[18]

[18] American Community Survey 2010-2014.

ACTC_AR0232

Vehicle Ownership

Most people in Alameda County have access to a personal vehicle (90%). In fact, more than half of households (56%) have access to two or more vehicles, and 10% of households do not have access to a personal vehicle at all.[19]

Figure 3-6 Household Vehicle Ownership (2014)

Changing Demographics and Impact on Transportation

Like the entire Bay Area, Alameda County is experiencing growth, both residential and employment. Alameda County is expected to be home to nearly 2 million residents (30% increase) and 1 million jobs (36% growth) by 2040. (See Chapter 4 for more information about growth in Alameda County.) With this growth, there are several demographic trends that will impact the demands placed on the transportation system. First, a higher share of residents will be over 65 years old which will require providing more services that cater to this more vulnerable portion of the population (see Figure 6-1 and discussion in Mobility for Seniors and People with Disabilities modal strategy).[20] Simultaneously, at the other end of the age spectrum, younger generations are showing changing preferences in their use of the transportation system.

Research shows that younger generations are shunning car ownership and adopting multimodal lifestyles at a higher rate than past generations. These preferences manifest in a reduced rate of car ownership and higher use of transit and other modes. The drivers' license rates among Alameda County residents decreased between 2005 and 2014, dropping from 88 licensed drivers per 100 people to 80

[19] American Community Survey 2010-2014.

[20] Plan Bay Area (2013-2040), adopted June 2013.

ACTC_AR0233

licensed drivers. The sharpest decline was in people 30-34 years old, which declined 17% from 96 to 80 licenses per 100 people.[21] Ensuring availability of high quality transit service and other safe and convenient alternatives to driving will be essential to supporting these shifts.

ACTC_AR0234

4 Transportation-Land Use Connection

Overview

In the Bay Area, worsening traffic congestion in a constrained urban environment, changing demographics, and significant population growth have required regional and local agencies to take new approaches to planning efforts to maintain the Bay Area's high quality of life and economic productivity. Transportation tools alone are no longer enough, the region must also look at the location, intensity and form of housing, jobs, and other activity centers to ensure high levels of accessibility.

Therefore, for over a decade, there has been an increasing emphasis on integrating land use planning and transportation investment decisions to allow more people to use transit, walk, or bike for their daily needs. The need to address climate change was also officially introduced into state law with the passage of California Assembly Bill 32 (AB 32, 2006) and Senate Bill 375 (SB 375, 2008), which mandate increasing coordination between land use and transportation planning to reduce greenhouse gas emissions.

Numerous Bay Area organizations have collaborated to respond to these new mandates. The partnership has been led by the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG); other partners include Alameda CTC and jurisdictions throughout the Bay Area. Collectively these agencies have embarked on a process to examine relationships between land use policies, housing locations, job locations, and transportation policies and infrastructure throughout the Bay Area. The outcome of these efforts was the region's first Sustainable Communities Strategy (SCS), a coordinated regional land use vision that has been incorporated into the Regional Transportation Plan (RTP) under the title *Plan Bay Area*.

This chapter provides an overview of the legislative mandates and regional land use and transportation plans and policies that form the basis for a greater emphasis on coordinating transportation projects and programs with land use plans in Alameda County and the Bay Area.

State Policy Context

Assembly Bill 32 (AB 32): The California Global Warming Solutions Act

Passed in 2006, the California Global Warming Solutions Act (AB 32) mandates that greenhouse gas (GHG) emissions be reduced to 1990 levels by the year 2020.[22] AB 32 sets targets for each of the key sectors responsible for GHG emissions, including

[22] Assembly Bill No. 32, http://www.leginfo.ca.gov/pub/05-06/bill/asm/ab_0001-0050/ab_32_bill_20060927_chaptered.pdf.

ACTC_AR0235

land use. The land use sector in the Bay Area must reduce its GHG emissions 7% by 2030 and 15% by 2035. The dominant means to achieve the land use target is reducing vehicle miles traveled (VMT) by cars and light trucks.

It is important to note that land use is only one component of the larger AB 32 strategy to reduce GHG emissions. The targets are aggressive, but acknowledge that due to the magnitude of the existing built environment and transportation infrastructure, change may occur more gradually than in other sectors.

Senate Bill 375 (SB 375): Redesigning Communities to Reduce Greenhouse Gases

Senate Bill 375, Redesigning Communities to Reduce Greenhouse Gases, passed in 2008, defines more concrete requirements and implementation steps to achieve the emissions reduction requirements outlined in AB 32. Namely, SB 375 highlights the connection between land use and transportation as a key component on the path to reductions in GHG emissions.[23]

While near-term development decisions lie mostly with local planning agencies, regional agencies play a major role in development of long-term land use visions and plans. SB 375 proposes a coordinated process between local and regional agencies to integrate the California Environmental Quality Act (CEQA), housing elements, and regional transportation plans. The ultimate goal is to encourage local governments, in coordination with regional planning agencies, to make land use and transportation planning decisions that support the goal of reducing GHG emissions.

SB 375 mandates that each of the 18 major metropolitan areas in California include a SCS in their RTP. Once a region's SCS is in place, certain projects that advance and share goals with the SCS will enjoy streamlined CEQA requirements and other benefits under SB 375. The process and outcomes of the Bay Area's RTP/SCS (Plan Bay Area) are described in the next section.

Regional and Local Policy Context

Regional

Plan Bay Area

Plan Bay Area is the long-range integrated transportation and land-use/housing strategy (SCS/RTP) that has been developed to forecast and plan through the year 2040 in the Bay Area. SB 375 requires that the Plan Bay Area accommodate future population growth in the region, while simultaneously reducing GHG emissions from cars and light trucks. The first Plan Bay Area was approved by ABAG and MTC in 2013

[23] Senate Bill No. 375, http://www.leginfo.ca.gov/pub/07-08/bill/sen/sb_0351-0400/sb_375_bill_20080930_chaptered.pdf.

ACTC_AR0236

after a multi-year process of technical analysis and public outreach in each of the Bay Area's nine counties. MTC and ABAG are currently undertaking the first update to Plan Bay Area, called Plan Bay Area 2040; which is scheduled for adoption in 2017.

Plan Bay Area 2013 anticipated that the Bay Area's population will grow from about 7 million today to about 9 million in 2040. The Plan emphasized that accommodating this growth while reducing GHG emissions will require an intentional, synergized strategy for land use and transportation.

For land use, Plan Bay Area established a focused growth strategy that concentrates employment and housing growth in areas defined as "Priority Development Areas" (PDAs) while also designating "Priority Conservation Areas" (PCAs) to ensure the greenbelt surrounding our urban areas stays intact. Plan Bay Area presented a strategy for meeting 80% of the region's future housing needs in PDAs.

PDAs are development areas near transit with a variety of key characteristics. To qualify, a PDA must be an area within walking distance of frequent transit service that offers access to a variety of housing types, basic amenities, and services (e.g., schools, shopping, parks, recreation, etc.). Each PDA is categorized by the local jurisdiction into one of seven future "place types" using the typology from MTC's Station Area Planning Manual (2007), illustrated in Figure 4-1.

FOCUS Program

Planning for focused growth in the Bay Area precedes SB 375. ABAG developed the FOCUS program in 2006 to guide sustainable planning and development in the region. FOCUS was a voluntary, incentive-based program that invited local governments to identify PDAs—infill sites where greater density could be accommodated near transit stops—and PCAs—areas to be conserved—in their communities. MTC provided financial incentives to communities to prioritize development in their PDAs and to develop plans for the protections of PCAs through coordinated planning, purchase of land, or conservation easements.

The FOCUS program created a strong foundation for Plan Bay Area by establishing areas throughout the Bay Area that local communities had already voluntarily identified as appropriate places for targeted growth.

Plan Bay Area's transportation element (2013) specified how anticipated federal, state, and local funds will be spent through 2040 to advance goals of reduced GHG emissions, including maintaining and expanding the transportation network throughout the region. Maintenance and operations was forecasted to receive the bulk of funding (nearly 87%) including 54% for existing public transit; 32% for existing streets, roads, highways and bridges; 7% for transit expansion; and 5% for roadway expansion.[24]

[24] Plan Bay Area (2013-2040), adopted July 18, 2013, http://files.mtc.ca.gov/pdf/Plan_Bay_Area_FINAL/Plan_Bay_Area.pdf.

ACTC_AR0237

Figure 4-1 MTC's PDA Place Types

ACTC_AR0238

One Bay Area Grant Program

To fulfill the focused growth strategy outlined in Plan Bay Area, a variety of strategies are needed to support and encourage development in PDAs including funding, policies, and multi-jurisdictional coordination. In 2013, MTC created the One Bay Area Grant Program (OBAG)[25] to provide funding to advance the region's focused growth vision. OBAG prioritizes funding in PDAs to support cities willing to take on new growth. The region's Congestion Management Agencies play a large role in determining appropriate distribution of these funds.

MTC Resolution 3434

MTC Resolution 3434, the Transit-Oriented Development Policy for Regional Transit Extension Projects, establishes minimum thresholds for the number of housing units that must exist or be planned within one-half mile of transit stations in order for the transit project to receive regional discretionary funding. If a project does not meet the threshold, a working group is formed to determine if it is possible to increase the planned or existing density nearby. The thresholds only apply to those projects included in the Resolution when it was adopted in 2005.

Alameda County

Growth in Alameda County

Plan Bay Area projects the Alameda County population will continue to grow, reaching nearly 2 million residents by 2040. This represents the largest growth of all nine Bay Area counties, an increase of 30% over the 2010 population. Employment in Alameda County is also expected to grow substantially (36%) by 2040 to nearly 1 million jobs. PDAs are projected to take on a significant share of this projected growth over time, while designated PCAs will ensure preservation of Alameda County's open spaces.

Alameda County's PDAs

Alameda County has 43 locally-nominated PDAs, which vary in character, largely due to the county's diversity, but most are aligned along the county's major bus and rail corridors. These communities encompass a wide range of population densities, land use patterns, and employment opportunities and vary significantly in terms of the income, age, and race of their populations. The PDAs in Alameda County are summarized in Figure 4-2 and mapped in Figure 4-3.

[25] One Bay Area Grant Program: http://mtc.ca.gov/our-work/invest-protect/focused-growth/one-bay-area-grants.

ACTC_AR0239

Figure 4-2 Summary of Alameda County's PDAs

Geographic Area	Number of PDAs	PDA Locations
North County	17	Alameda (2), Albany (1), Berkeley (6), Emeryville (1), Oakland (7)
Central County	12	Hayward (5), San Leandro (3), Castro Valley (1), San Lorenzo (1), Other unincorporated Alameda County/Ashland/Cherryland (2)
South County	7	Fremont (4), Newark (2), Union City (1)
East	7	Dublin (3), Livermore (3), Pleasanton (1)

TOD in Alameda County

In support of the regional focused growth vision and development in PDAs, Alameda CTC is working with local jurisdictions and transit agencies to encourage the creation of Transit-Oriented Communities (TOCs) and Transit-Oriented Development (TOD) through the Countywide Transit Plan. TOCs and TOD provide land use patterns and Complete Streets networks that concentrate destinations and people around transit facilities in a multi-use environment, which results in higher transit ridership and supports achievement of the goals in the CTP.

Benefits of TOCs include:

- Increasing transit mode share and ridership by clustering walkable districts, neighborhoods, and other places around existing transit services and planned transit investments.
- Improving pedestrian, bicycle, and local transit access to major transit corridors and stations, which makes transit service more accessible to major destinations and makes the choice to walk or bicycle to transit as easy as driving.
- Accommodating increased residents and jobs at a lower rate of emissions per person by creating options for living and working near transit stations and supporting the choice to walk or bike rather than drive.
- Supporting a state of good repair for transit, both directly and indirectly. Direct support can come through increased ridership that results from an increase in the density of jobs and residents within TOCs. This improves fare box return and value capture methods. Development around transit stations could provide funding for transit capital projects and/or operations and maintenance (e.g., transportation impact fees). Indirect support for state of good repair could result from the positive experiences that people have from living and working in a TOC and using transit; this could increase their level of support for funding mechanisms to invest in state of good repair.

Many of Alameda County's communities already include TOCs. Some of them were originally developed as neighborhoods and corridors served by streetcars or near

ACTC_AR0240

commuter rail stations. Some are more recent, characterized by compact TODs surrounded by more disperse auto-oriented development. Many of these neighborhoods are captured in the PDA designations. The quality of TOCs will have an effect on deciding where transit investments should be made and the success of transit investments in attracting riders, and attracting funding from regional, state, and federal sources.

The Countywide Transit Plan's recommended framework for TOCs in Alameda County seeks to balance these relationships to support community values, the economics of development, and the need to invest public funds for transit wisely.

Priority Development Area Investment and Growth Strategy

As part of the OBAG program, Alameda CTC has also developed a *Priority Development Area (PDA) Investment and Growth Strategy*[26] that establishes to priority-setting process for distribution of OBAG funds and outlines a series of other strategies, policies, and programs to support PDA development in support of Plan Bay Area.

The Strategy guides the agency in supporting PDA development over a long time horizon. It includes several components:

- **PDA Inventory**: Catalog of existing conditions in the county's PDAs including housing and job growth projections and existing affordable housing policies
- **PDA Readiness Evaluation**: PDA readiness assessment that considers the extent to which planning has been completed and new housing and job growth is likely to occur within a PDA in the near-term
- **Housing Development Assessment**: Assessment of jurisdiction's performance in producing sufficient housing for all income levels through the Regional Housing Needs Allocation (RHNA) process (updated annually)
- **OBAG Priority-setting Process**: A process for prioritizing OBAG funding to support and encourage residential and commercial development in PDAs in both the near and long term
- **Funding Priorities**: PDAs prioritized for transportation capital investments during the current funding cycle
- **Funding Allocations**:
  - **Supportive Transportation Capital Investments**: Process and criteria used to select capital projects for funding and a list of funded projects
  - **PDA Planning and Implementation Funds**: Allocations for the Sustainable Communities Technical Assistance Program created by Alameda CTC to

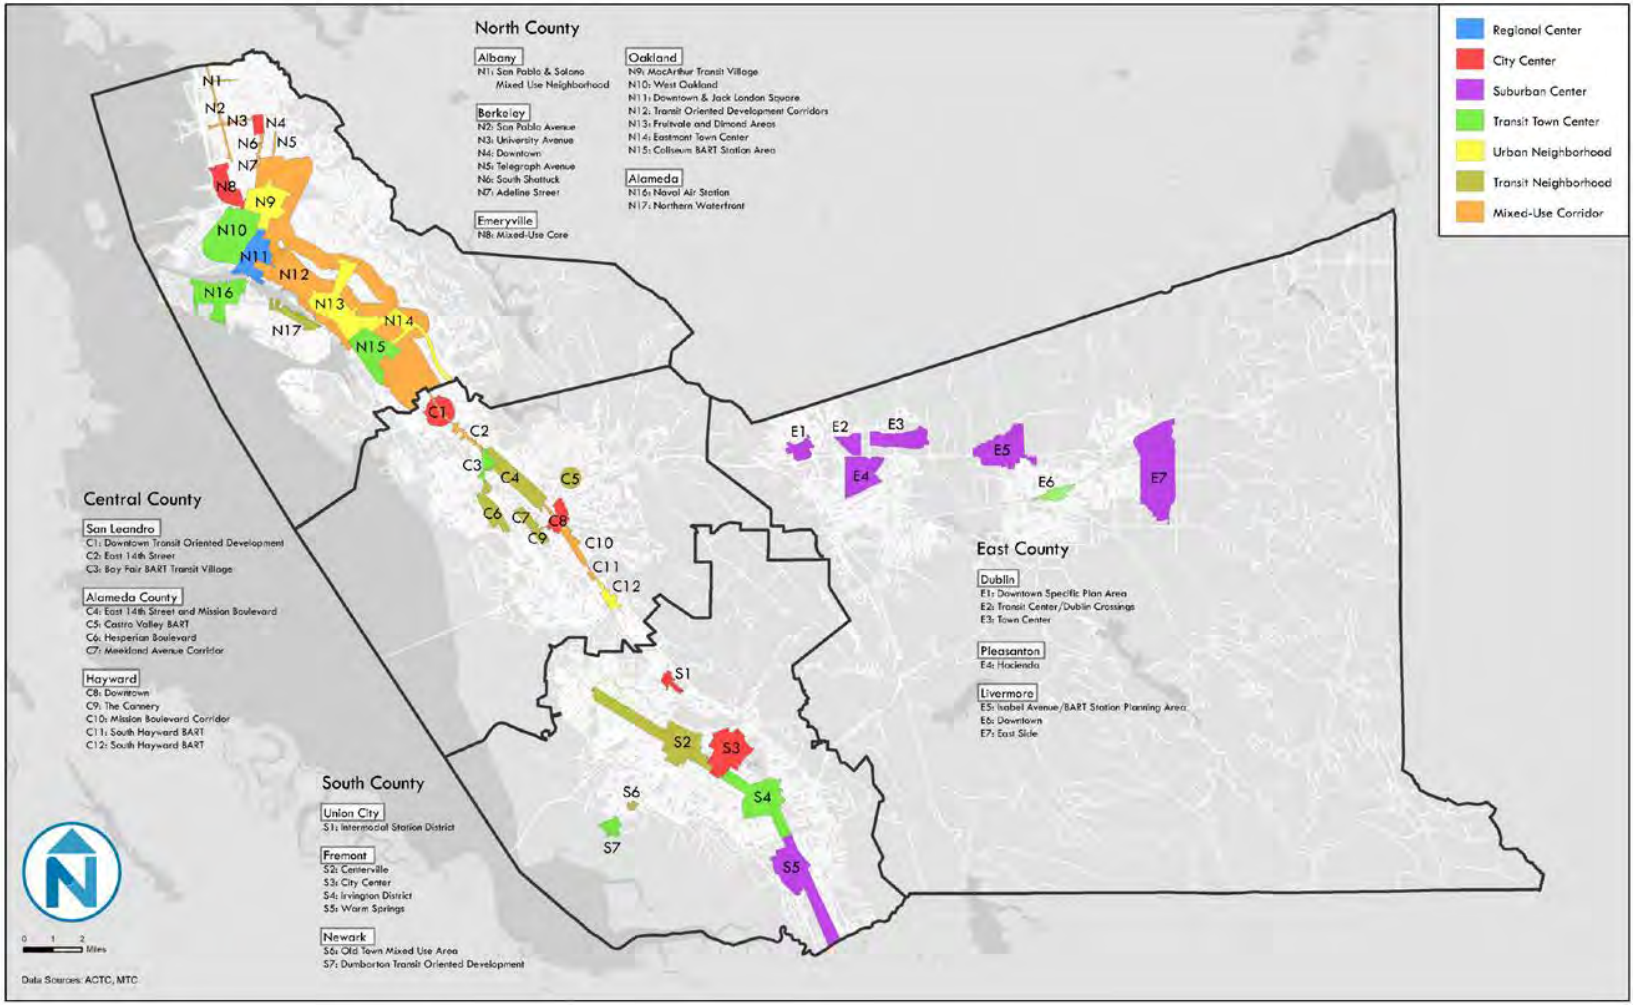
[26] Alameda County PDA Investment and Growth Strategy: http://www.alamedactc.org/app_pages/view/10385.

ACTC_AR0241

support activities such as PDA planning and implementation, implementation of Complete Streets policies, and smaller-scale bicycle and pedestrian technical projects in PDAs

- **Complete Streets and Housing Elements Status**: Status of adoption of Complete Streets elements and updates to General Plan Housing Elements for all cities in Alameda County
- **PDA Strategic Plan**: Describes how PDA growth and development can be supported and monitored in the longer term including how the Strategy is coordinated with other planning efforts
- **PCA Inventory**: Inventory of the PCAs within Alameda County, further described as follows

This strategy is a key repository and guide for Alameda CTC's ongoing efforts to improve the linkages between transportation and land use. Alameda CTC adopted its first *PDA Investment and Growth Strategy* in 2013, and has updated it annually in accordance with MTC requirements in 2014 and 2015.



CTP and Land Use

As a key component to achieving shared sustainability goals, the CTP aims to acknowledge and strengthen linkages between transportation and land use in response to these regional and state policy mandates. This is reflected in several aspects of the CTP's development:

- **Goals**: The CTP has an explicit goal to create a transportation system that is "integrated with land use patterns and local decision-making."
- **Performance Measures**: Building off the goals, the CTP also incorporates land use concepts into its performance measures. Performance measures include employment accessibility, activity center accessibility, and equitable transit availability (see Chapter 2 for CTP goals and performance measures).
- **Demographic and Land Use Projections**: Finally, housing and employment projections are a critical component of the performance evaluation process for the CTP. To ensure alignment with the RTP, and support an environmentally sustainable future, the CTP uses the same focused growth projections as Plan Bay Area.

ACTC_AR0242

Figure 4-3 Map of Alameda County's Priority Development Areas by Place Type

ACTC_AR0243

Alameda County's PCAs

There are 16 PCAs in Alameda County, summarized in Figure 4-4. These include natural landscapes, urban greening areas, regional recreation areas, or agricultural areas of regional significance that have broad community support and an urgent need for protection.

Figure 4-4 Summary of Alameda County PCAs

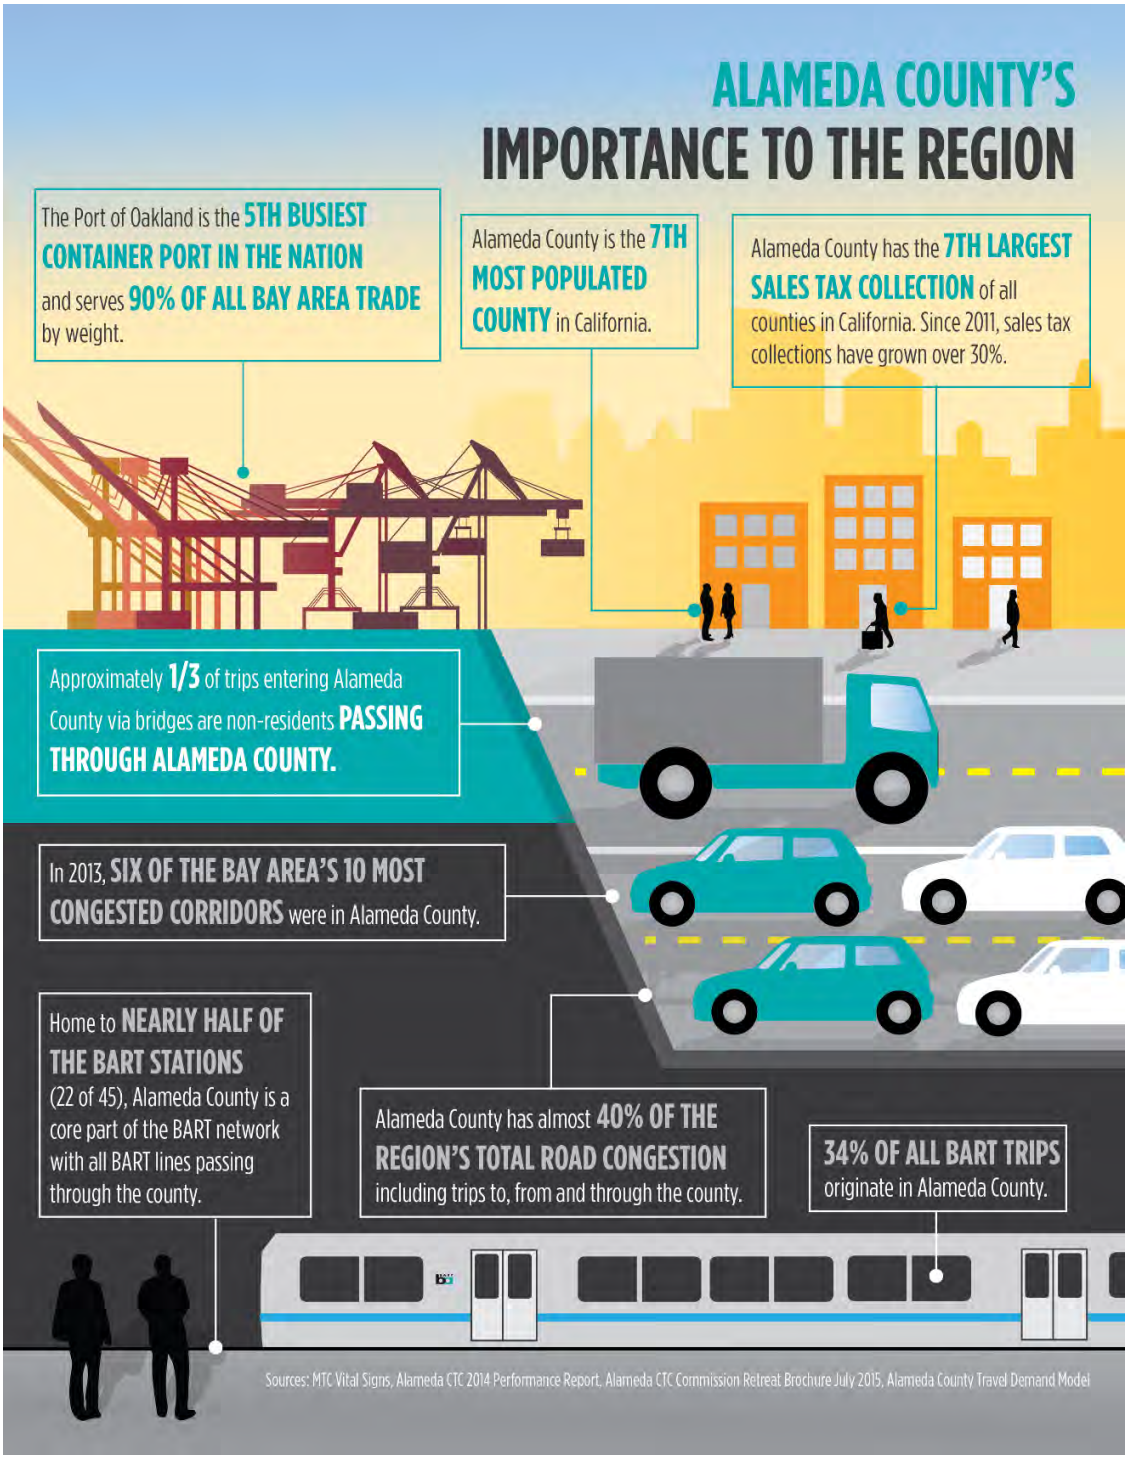
PCA Type	Potential Needs for Protection	PCAs
Large open space areas in East and South County	▪ Land acquisition or easements to protect important habitat, watershed, recreational, and agricultural resources ▪ Public access improvements ▪ "Farm-to-market" and local food system infrastructure needs assessment and feasibility study	▪ Bethany Reservoir, East County ▪ Cedar Mountain, East County ▪ Chain of Lakes, East County ▪ Duarte Canyon, East County ▪ Potential Tesla Area, East County ▪ North Livermore and South Livermore Valley, East County ▪ Coyote Hills, South County
Hillside areas in North, Central and South Alameda County	▪ Land acquisition or easements to protect important habitat, watershed, recreational, and agricultural resources ▪ Public access improvements, including recreational trails	▪ Union City Hillside Area, South County ▪ South Hills, San Leandro Creek, North County [PCA has been protected] ▪ Leona Canyon Creek Tributaries, North County ▪ Ridgemont West, North County ▪ Butters Canyon, Peralta Creek, North County [PCA has been protected] ▪ Temescal Creek/North Oakland, North County ▪ Albany Hill, North County
Major multi-use greenways/trails and urban needs for conservation	▪ Right-of-way acquisition ▪ Trail planning, design, and construction ▪ Land acquisition or easements to protect important habitat, watershed, recreational, and agricultural resources	▪ East Bay Greenway, North, Central, and South County ▪ Potential Oakland Gateway Area, North County ▪ Bay and Ridge Trail Gaps ▪ Livermore Arroyos, Parks and Trails ▪ Oakland Natural Landscapes ▪ Oakland Priority Creek Trails ▪ Oakland Priority Creeks ▪ Oakland Priority Estuaries ▪ Oakland Recreational Trails ▪ Oakland Urban Greening

ACTC_AR0244

5 The Transportation System Today

Introduction

Alameda County's transportation network plays a central role in supporting the region's economic vitality and overall livability. By way of its central location in the Bay Area, Alameda County's transportation system supports a significant share of the Bay Area trips made by all transportation modes, most notably automobile, transit, and goods movement. Alameda County is home to 3,600 miles of roadway comprised of six interstate freeways, multiple major state routes, and numerous arterials and local roads.[27] Vital accessibility is provided by transit in the county, including rail, bus, ferry, and shuttle services operated by both public and private entities. The Port of Oakland and Oakland International Airport serve as major gateways for goods transported throughout the Western United States,

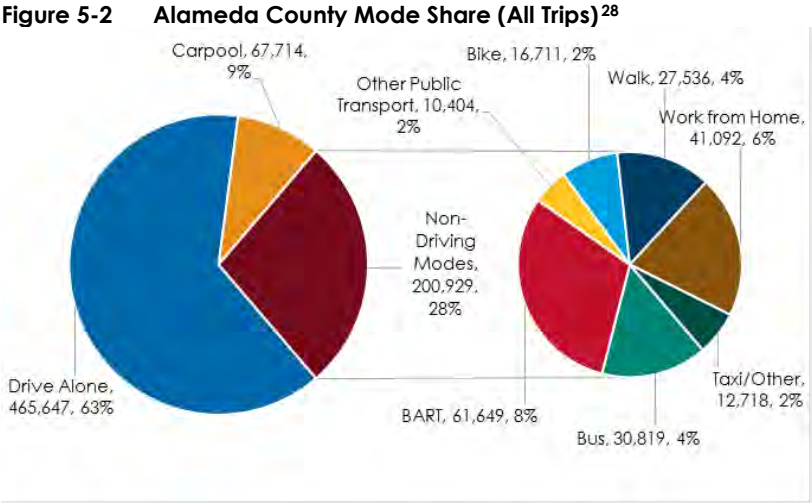


All transportation modes are important to serve the needs of residents and businesses in Alameda County and beyond. The interconnected multimodal system of highways and roads, public transit systems, and active transportation facilities combine to serve the transportation needs of people and goods within and through Alameda County. This chapter offers an overview of the existing transportation conditions in Alameda County.

[27] Highways in Alameda County: Facts, Challenges and Opportunities (fact sheet), 2015.

ACTC_AR0245

Figure 5-1 Alameda County in Context



ACTC_AR0246

How People Travel

Mode Share

Nearly 8 million trips are made in Alameda County each year. The overall mode share for these trips is shown below.

Figure 5-2 Alameda County Mode Share (All Trips)[28]

The majority of work trips are made by driving alone in an automobile (63%), for non-work trips, people are more likely to carpool and use active modes including bicycling and walking. Transit use makes up about 14% of work trips. The trend of work travel mode share changes over time is shown in Figure 5.2.

Transit Use

Alameda County is home to six public transit operators. In 2014, about 99 million riders boarded transit in Alameda County. Bus trips make up about 51% of annual transit boardings, followed by BART at 47% of boardings. Ferry and commuter rail combine for 2% of boardings.[29]

[28] Alameda CTC Performance Report (2015).

[29] Alameda CTC Performance Report (2015).

ACTC_AR0247

Figure 5-3 Long-term Trends in Mode Share, Alameda County Residents[30]

	Mode Share				Difference in Mode Share		Mode Share Margin of Error
	2000	2005	2010	2014	2014 v. 2010	2014 v. 2000	2014
Drive Alone	66.4%	69.8%	66.9%	63.4%	-3.5%	-2.9%	0.9%
Carpool	13.8%	11.1%	10.8%	9.2%	-1.6%	-4.6%	0.5%
Bus	4.5%	4.6%	3.7%	4.2%	0.5%	-0.3%	0.5%
BART	5.3%	5.1%	5.8%	8.4%	2.6%	3.1%	0.4%
Other Public Transport	0.8%	0.8%	1.3%	1.4%	0.2%	0.7%	0.2%
Bike	1.2%	0.9%	1.4%	2.3%	0.9%	1.0%	0.2%
Walk	3.2%	2.9%	3.2%	3.8%	0.5%	0.5%	0.4%
Work from Home	3.5%	3.6%	5.9%	5.6%	-0.3%	2.1%	0.4%
Taxi/Other	1.3%	1.2%	0.9%	1.7%	0.8%	0.4%	0.3%

Active Transportation

Walking and bicycling are on the rise in Alameda County. The travel demand model estimates that over 1 million trips are made by walking or biking every day in the county, though this may not reflect actual numbers due to the travel demand model's tendency to underrepresent trips by these modes. The rate of bicycling to work has nearly doubled in Alameda County over the past 10 years.[31] Further, nearly every trip, regardless of mode, involves walking for some part of the trip, and therefore a safe and pleasant pedestrian environment is an important component of the transportation system.

Goods Movement

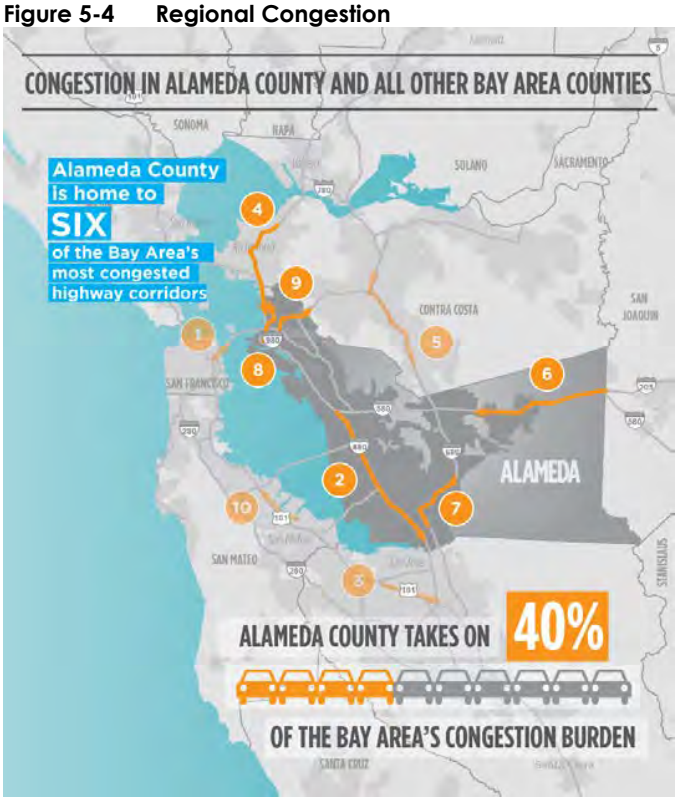
Alameda County is a gateway for the transportation of goods throughout Alameda County, the San Francisco Bay Area, Northern California, and the Western United States. The Port of Oakland and Oakland International Airport serve as the busiest seaport and airport in the Bay Area for goods movement. More than 17 million tons

[30] Alameda CTC Performance Report (2015), American Community Survey, Table B08006.

[31] MTC Vital Signs, Commute Mode, http://www.vitalsigns.mtc.ca.gov.

ACTC_AR0248

of goods[32] and nearly 2.4 million shipping containers moved through the Port of Oakland in 2012 and 2014 respectively.[33] Overall, 99% of containerized cargo from Northern California passes through the Port of Oakland.



In addition to the Port of Oakland and Oakland International Airport, Alameda County's network of railroads, interstate highways, and arterial roads serve as key components of the Bay Area's goods distribution system. Freight movement by truck is a very important part of goods movement in Alameda County as about 72% of goods in tons are moved by truck.[34]

Roadway Conditions

Congestion

Due to its central geographic location within the region, Alameda County experiences a disproportionate share of the region's congestion. From 2000 and 2013, Alameda County has consistently shouldered about 40% of the region's congestion (in vehicle hours of delay).[35] Additionally, Alameda County has consistently been home to many of the region's most congested freeway segments, including, six of the Bay Area's 10 most congested corridors (see map, at right).

Figure 5-4 Regional Congestion

[35] Congestion data sourced from MTC's State of the System reports (2000 through 2008). Vehicle hours of delay are not available from 2009 to 2012. 2013 congestion data sourced from MTC's 2013 Vital Signs Congestion Report.

ACTC_AR0249

In addition to trips made by Alameda County residents, a significant number of trips are made to, from, and through Alameda County by non-residents. Today, the three bridges connecting to Alameda County facilitate approximately 412,000 trips on an average day. Of these, about 35% are estimated to be pass-through trips and 33% are estimated to be trips to Alameda County. The remaining 32% of trips are made from an origin in Alameda County.[36]

Pavement Conditions

Regional growth resulted in more use of Alameda County's roadways and bridges in 2014 than in prior years. In 2014, around 22% of the local streets and roads in Alameda County reported poor or failing pavement conditions (measured by pavement condition index (PCI) of "poor" or "failed").[37] Several cities have overall average pavement conditions considered "at risk" (i.e., PCI less than 60) including Albany, Berkeley, and San Leandro. At the other end of the spectrum, Union City and Dublin have PCIs exceeding 75, which is in the very good/excellent condition range.[38]

[36] Alameda CTC Travel Model.

Newark	78	69	67	71	68	75	76	76	76
Oakland*	52	61	57	58	54	60	61	58	56
Piedmont	66	69	67	72	72	74	67	67	67
Pleasanton	74	75	76	78	77	76	77	78	78
San Leandro	62	60	59	56	56	56	57	57	56
Union City*	76	75	75	79	80	78	80	79	83

Notes: Average PCI is based on a weighted average of functional classifications, with weighting based on centerline mile distance.

* PCI was correlated from an alternate scale prior to 2007.

Safety

The total number of injuries and fatalities from automobile crashes has remained fairly steady in recent years in Alameda County. Since 2006, between 72 and 106 fatalities were reported in Alameda County, with the exception of 2010 and 2011 with 64 and 59 fatalities respectively. In 2012, there were 309 injuries and 77 deaths from automobile crashes, including collisions with pedestrians and bicyclists.[40]

Performance Measurement

Many of the performance measures that were adopted for this plan (Chapter 2) encompass the information presented here. Future results for these measures are described in Chapter 8.

[39] Alameda CTC Performance Report (2015).

ACTC_AR0251

6 Modal Strategies

A. Public Transit

Introduction

Image from Nelson\Nygaard.

Public transit is one of the foundations of our transportation system. It provides numerous economic, environmental, and social benefits. A robust transit system can reduce household costs by enabling households to own fewer vehicles or go car free. High quality transit improves access to employment, education, health care, and other opportunities while enabling employers to have access to a larger pool of employees. More people using transit instead of driving improves air quality and reduces greenhouse gas emissions and energy consumption. Transit allows urban areas to accommodate higher densities where appropriate and reduces demand for parking, freeing up land for higher-value uses.

Successes

Robust Existing System

Transit service in Alameda County includes multiple modes (rail, bus, ferry, and shuttle) and is provided by a number of public and private operators. The two major operators in the county are San Francisco Bay Area Rapid Transit District (BART) and Alameda-Contra Costa Transit District (AC Transit), which account for the vast majority of transit usage (close to 95%), Union City Transit provides local transit service in Union City, and Livermore Amador Valley Transit Authority (LAVTA) operates WHEELS, which provides local bus service in Dublin, Pleasanton, and Livermore. The Amtrak Capitol Corridor and Altamont Corridor Express (ACE) Commuter Rail provide inter-regional service through Alameda County to other nearby cities and counties. The San Francisco Bay Area Water Emergency Transit Authority (WETA) provides ferry service from Oakland and Alameda to San Francisco and South San Francisco. Shuttles also play a significant role in the county's transit network, as they often bridge gaps between employment centers, medical or educational institutions, shopping centers, and BART.

ACTC_AR0253

New Services and Ridership Growth

Alameda County's transit system has experienced some notable successes in Alameda County in recent years which illustrates the strengths of the current system and sets the stage for future growth.

Image from Nelson\Nygaard.

- Transbay ridership has grown significantly on both BART and AC Transit Transbay service - 24% on BART between 2010 and 2014 and 20% on AC Transit between 2013 and 2015.
- Measure BB enables AC Transit to expand service hours for all vehicles, given the number of hours that each vehicle provides service, by approximately 14%.
- AC Transit is constructing the first full Bus Rapid Transit (BRT) route in Alameda County along International Blvd. (see Technology and Innovation section for more information).
- BART now directly serves Oakland International Airport with a fixed-guideway (a line anchored by capital infrastructure such as overhead wires, or in this case, rail investment) connection that operates between the Coliseum BART Station and Oakland Airport. This project received significant funding from Measure B.
- BART is completing construction of an extension from the Fremont station to a new station in Warm Springs South Fremont; this extension is scheduled to open in late 2016 or early 2017.
- Future transit expansions are currently under environmental review including extending BART to Livermore/ACE and ACE Forward, as well as many station area improvements planned throughout Alameda County.

ACTC_AR0254

Countywide Transit Plan

Alameda CTC has developed a Countywide Transit Plan to help Alameda County realize its vision to "create an efficient and effective transit network that enhances the economy and the environment and improves quality of life." This plan is designed to complement and support specific planning efforts completed or underway in the County.

Images from Nelson\Nygaard.

The Transit Plan targeted a set of improvements in the 14 corridors that are most likely to carry some of the strongest future demand for transit. The identification of these corridors can serve primarily as a guidepost for maximizing future transit investments in the county. The Transit Plan also outlines a set of network recommendations with the types of improvements that can enable fast, frequent, and reliable service to capture ridership demand and address the unique needs of each corridor. (All recommendations are provided on a corridor level, and route alignments and stop placements will require extensive further evaluation by operating agencies and local jurisdictions before implementation.)

This plan reflects a collaborative effort among the diverse stakeholders who are invested in improving the future of transit in Alameda County including transit and paratransit operators and users, local jurisdictions, and the general public.

Regional Transit Partnerships

In recognition of the need for transit to serve anticipated growth, increasing attention and resources are being directed to the challenges transit faces. Several studies have been completed and/or are underway, and regional partnerships have formed to start tackling the toughest issues for transit competitiveness and sustainability — examples include the MTC Transit Sustainability Project and Transit Performance Initiative,[41] the MTC Core Transit Capacity Study,[42] LAVTA Wheels

[41] http://mtc.ca.gov/our-work/invest-protect/investment-strategies-commitments/transit-21st-century/transit.

[42] http://mtc.ca.gov/our-work/plans-projects/other-plans/core-capacity-transit-study .

ACTC_AR0255

Comprehensive Operations Analysis, the Capitol Corridor Vision Plan, the WETA Strategic Plan, BART's extension to Livermore/ACE, the Dumbarton Corridor Study, and the AC Transit Plan ACT, which includes a Major Corridors Study (MCS) and Service Expansion Plan.[43] The MCS and the Countywide Transit Plan are developed in alignment with each other.

Trends and Challenges

Alameda County has significant existing transit service and conditions that are supportive of higher transit ridership, yet many challenges remain to realize this ridership potential in support of the Alameda Countywide Transportation Plan goals.

Image from Nelson\Nygaard.

Alameda County Has a Strong Overall Transit Market

The majority of communities in Alameda County have strong transit markets, both now and in the future. Transit markets reflect population and land-use characteristics that can determine the likelihood of trips being taken by transit. Transit market strength was analyzed for the Transit Plan using a Transit Competitiveness Index (TCI) tool. The TCI assessment examined all travel markets and showed an overall transit-competitive market for travel within, into and out of Alameda County.

Looking forward, transit is projected to become increasingly attractive for work and non-work trips throughout the county. The 2010 baseline showed approximately 54% of all trips and 43% of work trips are in transit competitive markets, whereas by 2040 these percentages are expected to rise to 58% and 48% respectively.

While a significant number of existing transit routes in Alameda County operate in strong transit markets, the ridership on these routes does not fully reflect the high potential for transit use. Capturing the trips in these underperforming transit markets is critical to increasing transit ridership in the county and was one of the primary areas of focus of the Transit Plan.

[43] http://www.actransit.org/PLANACT/.

ACTC_AR0256

Issues and Opportunities

While Alameda County has market conditions supportive of a greater share of transit trips, there are significant obstacles to overcome. The following facts provide evidence that improvements are necessary system-wide:

- **Strong transit markets are not resulting in strong transit ridership**: Despite the high overall transit competitive markets shown by the TCI analysis, transit currently captures only 11% of commute trips in the county (Chapter 5).
- **Decade-long trend of flat intra-county bus ridership growth:** Bus ridership within Alameda County declined between 2006 and 2012 and then remained relatively flat until 2014. However, in the transit markets where transit service is frequent, reliable, and highly competitive with vehicle travel times, such as the East Bay-San Francisco Transbay corridor, transit ridership has grown significantly.
- **Rate of ridership growth is not keeping pace with increasing operating costs:** The cost of providing transit service is increasing faster than inflation and outpacing any growth in ridership and fare revenues. Higher operating costs combined with fluctuations in transit funding and revenues have necessitated cutbacks in service which have a negative impact on ridership.
- **Bus speeds and reliability could worsen if no action taken**: Buses stuck in traffic cause longer travel times and unreliable service for customers; this affects both ridership and the financial sustainability of the bus operators. Increasing roadway congestion threatens to increase bus delay and worsen on-time performance. In order to address this trend it is critical to develop ways for bus service to avoid the unpredictability of congestion and road incidents.

Growth

Compounding the existing transit challenges, population and employment are forecast to continue their growth by more than 30% and 36% respectively by 2040. Improving transit's share in the overall transportation market is a fundamental component that will be required to accommodate increases in population and changing mobility needs that are increasing the popularity of transit.

ACTC_AR0257

Needs

The Countywide Transit Plan presents ways in which Alameda CTC can help improve the transit system and service for the future by focusing improvements in areas that have the greatest potential to increase transit ridership. The best opportunities to improve transit performance and increase transit ridership include:

Bus bulbs, like this one in Ottawa, improve the flow of traffic overall.

Image from Nelson\Nygaard.

- **Address geographic and temporal gaps in service:** While transit service generally covers a large area in Alameda County, gaps in hours of operation, frequency of service, and the amount of service on a route can deter ridership growth.
- **Increase speed, frequency, and reliability for bus transit**: For bus corridors identified in the vision Transit Network a variety of potential improvements can improve performance; examples include:
  - Adding an approach to a signalized intersection, known as a "queue jump"
  - Adding "transit lanes" which allow transit to efficiently operate and can be applied during peak periods or all-day; or combined with peak period parking restrictions to avoid taking a lane of travel
  - Retiming traffic signals to prioritize bus flow known as "transit signal priority"
- **Improve transit integration and coordination**: For a transit system to be successful, it needs to have both physical and institutional integration that allow the customer to experience a seamless transit trip. Improving coordination between operators can makes travel more convenient and less costly.

Vision for the Future

Transit Network Recommendations

The Transit Network Recommendations in the Countywide Transit Plan resulted from an in-depth analysis of future travel (year 2040) for 14 study corridors shown to be among the strongest transit markets in the county. Investing in fast and frequent transit service in these corridors is estimated to result in the largest benefits to the network. The Countywide Transit Plan will provide a comprehensive set of

ACTC_AR0258

recommendations for better integrating all tiers of transit service into a fully functional, effective, and efficient transit network.

The Transit Plan network recommendations also included an evaluation of near- and long-term cost and service delivery impacts on Americans with Disability Act (ADA) Paratransit services. This evaluation identified opportunities and strategies to more effectively meet Alameda County ADA Paratransit requirements and other accessibility needs in conjunction with the implementation of the proposed Transit Network Recommendations.

Transit Tiers

The Transit Plan created a transit tier structure consisting of five tiers that form the transit network in Alameda County. Tiers are not intended to denote priorities, rather they are used to describe distinct characteristics of types of transit service. The tiers are shown and described below.

Figure 6-1 Alameda County Transit Tiers

- **Inter-regional –** Longer distance lines, usually greater than 40 miles, such as Amtrak Capitol Corridor and ACE Commuter trains
- **Regional Express –** Service connecting Alameda County with adjacent counties, such as BART and AC Transit Transbay Service
- **Urban Rapid –** Higher capacity routes connecting major nodes, which in Alameda County would likely be bus rapid transit (BRT) routes
- **Local Frequent –** Local bus service along corridors with dispersed origins and destinations

ACTC_AR0259

- **Community Connector –** Service providing community access in less productive areas that can include shuttle services that provide connections between a major transit service and the first and/or last mile of a trip, known as "first and last mile connections"
- **Streets Plus –** All land use characteristics supportive of the remaining transit tiers occurs on our streets network and includes pedestrian and bicycle transit supportive infrastructure, park-and-ride services, and traffic signals, among others.

How to Make Transit Tiers into Transit Oriented Communities

The Transit Plan tiers provide a guidepost for matching appropriate transit improvements to the diverse travel corridors throughout the county; the tiers also offer an important complement for furthering County land use goals. The Transit Plan includes detailed guidance for local jurisdictions on how best to enable Transit Oriented Development (TOD) along the corridors identified in the plan.

Transit Corridors

While every tier in the transit network is critical, the Transit Plan has highlighted the fact that the **Regional Express** and **Urban Rapid** tiers represent the highest potential for improving transit service quality for the most people and thereby increasing ridership throughout Alameda County.

Image from Nelson\Nygaard.

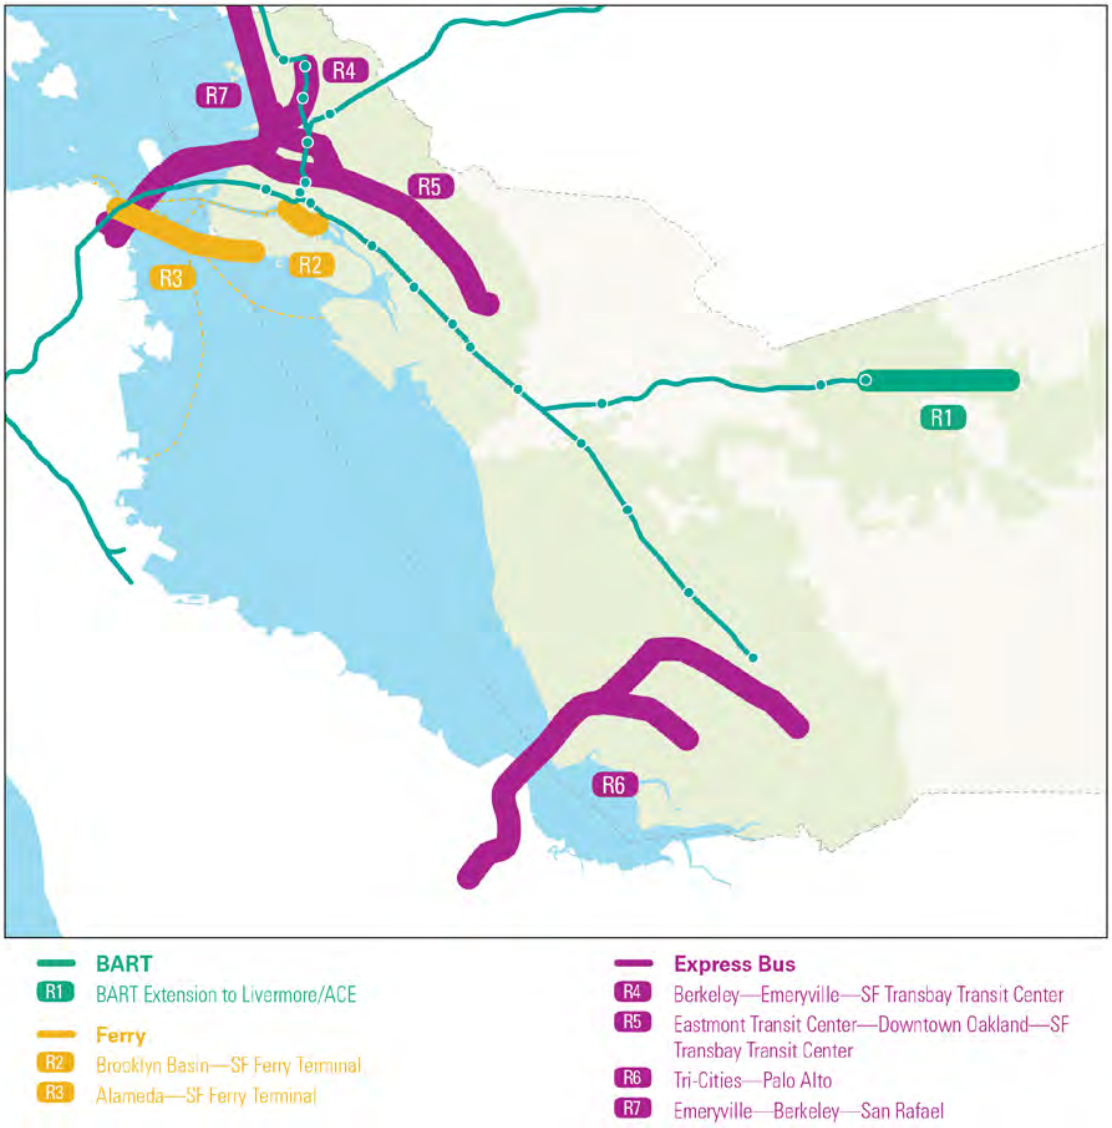
ACTC_AR0260

Regional Express Tier Corridors

BART Corridor:

- **Livermore—Dublin/Pleasanton** to San Francisco/Daly City

Ferry Transit Corridors:



- **Brooklyn Basin—SF Ferry Terminal**: Oakland to Alameda to San Francisco with an extension to Brooklyn Basin (includes Estuary). Brooklyn Basin may also be served by improved bus transit to the existing ferry terminal at Jack London Square as part of Urban Rapid service described as follows.
- **Alameda to SF Ferry Terminal:** Alameda to San Francisco with a new terminal at Alameda Point in addition to the Harbor Bay terminal.

Transbay Surface Corridors:

- **Berkeley—Emeryville—San Francisco Transbay Transit Center:** This route provides Transbay service from Berkeley and Emeryville (generally conforms with AC Transit Route F).
- **Eastmont Transit Center—Oakland—San Francisco Transbay Transit Center:** This routes services the Maxwell Park and Laurel Districts via MacArthur/Grand to downtown Oakland and San Francisco (generally conforms with AC Transit Route NL).
- **Tri-Cities—Palo Alto:** Enhanced improvements in the Tri-Cities area of southern Alameda County serve the Transbay market to Palo Alto (generally conforms with AC Transit Routes U, DB, and DB1).

ACTC_AR0261

Figure 6-2 Regional Express Tier Corridors Map

ACTC_AR0262

Urban Rapid Tier Corridors

Image from Nelson\Nygaard

- **Emeryville—Bay Fair BART Station:** Downtown Oakland-International Blvd. District to San Leandro (generally conforms with AC Transit Route 1R), but potentially extends service to Emeryville
- **Richmond Parkway Transit Center—Jack London Square Amtrak**: From Richmond to downtown Oakland via San Pablo Avenue (generally conforms with AC Transit Route 72R)
- **Berkeley—Brooklyn Basin:** Downtown Berkeley to downtown Oakland and with a potential extension to Brooklyn Basin (generally conforms with AC Transit Route 1R)
- **Berkeley—Fruitvale BART:** Downtown Berkeley via College/Broadway to downtown Oakland and Alameda connecting to Fruitvale BART with an extension to serve Alameda Point (generally conforms with AC Transit Route 51A/51B)
- **Bay Fair BART—Union City BART:** Connecting San Leandro, Hayward, and Union City via Hesperian Boulevard (generally aligns with AC Transit Route 97)
- **Bay Fair BART—Warm Springs BART:** Connecting San Leandro, Hayward, and Fremont via Mission Boulevard (generally aligns with AC Transit Route 99)
- **West Dublin BART—Livermore ACE:** To Los Positas College and downtown Livermore via Stoneridge Mall Rd, Dublin Blvd., North Canyons Parkway and Portola/Livermore Avenue (realignment of existing Rapid service contingent upon proposed extension of Dublin Boulevard)

ACTC_AR0263

Figure 6-3 Urban Rapid Tier Corridors Map

ACTC_AR0264

Complementary Strategies for Transit Network Recommendations

In order to accommodate anticipated population and job growth in Alameda County and achieve greenhouse gas emission goals, the vision transit network developed by the Transit Plan is an absolute necessity. To compliment this vision ongoing efforts and partnerships will be needed to further the following strategies:

Image from Nelson\Nygaard

Inter-regional strategies

- Conduct rail study to address needs of passenger and freight rail

Regional Express strategies

- Target resources to expand Transbay capacity
- Enhance interagency coordination
- Refine corridor plans through clearly defined improvements
- Establish an integrated fare structure
- Develop a regional coordinated schedule across all operators
- Develop programs to reduce costs for transit operators

Urban Rapid strategies

- Enhance interagency coordination to focus transit oriented investments and development along transit corridors
- Provide common information tools

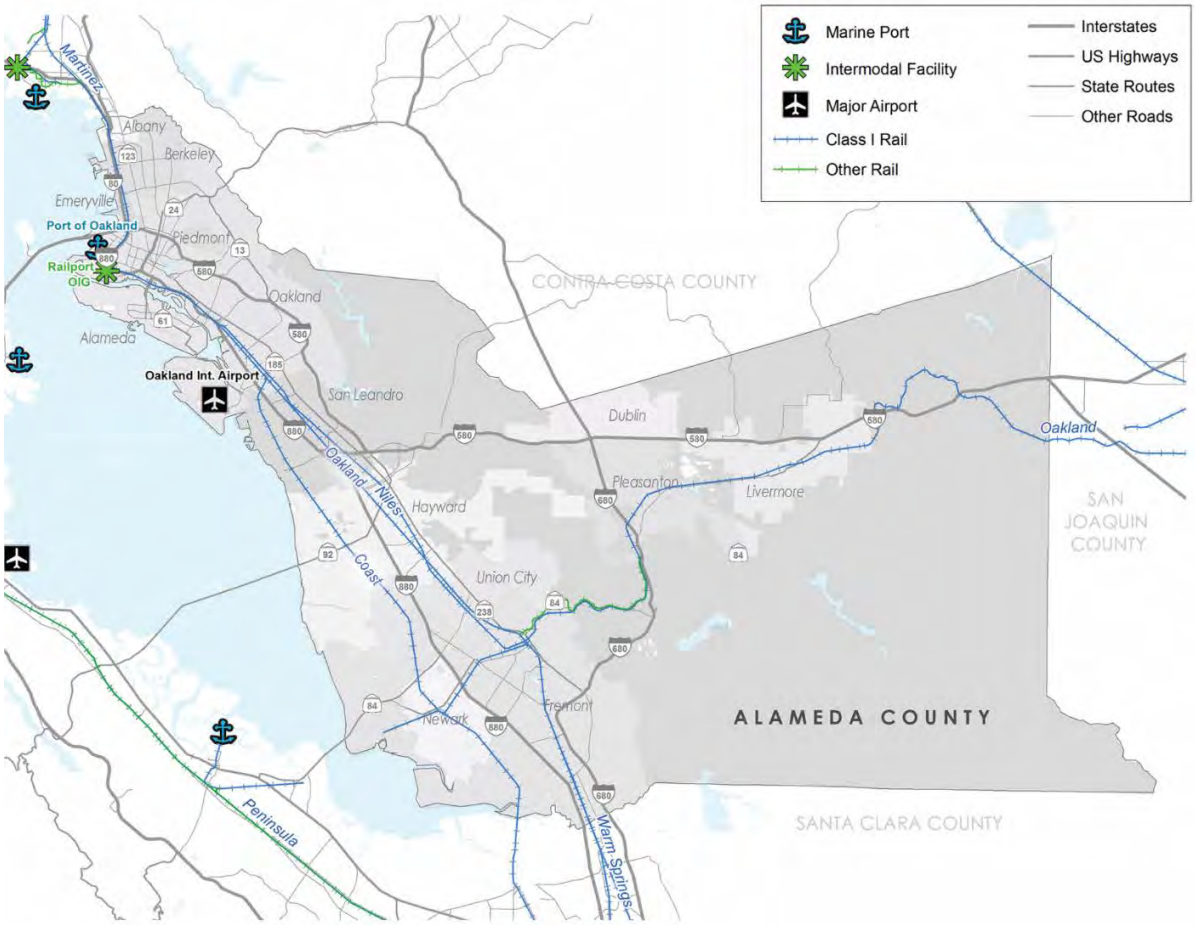
Local Frequent/Community Connector strategies

- Improve access for persons with disabilities in conjunction with fixed route service improvements
- Explore public private partnerships to expand transit network

Streets Plus strategies

- Strengthen inter-modal connections among buses, trains, and alternative modes through targeted roadway and mobility improvements.
- Encourage transit oriented planning along Vision transit network corridors

In summary, The Alameda County transit market shows strong potential for transit use that is significantly higher than actual use. Population and employment growth will only make this potential higher. The Transit Plan outlines a framework of potential improvements that allow transit to fulfill its promised potential. This approach is fundamental to meeting Alameda CTC and the region's economic and environmental goals.



ACTC_AR0265

B. Goods Movement

Introduction

Alameda County enjoys one of the most strategic trade locations in the world, and with its connections to national and international markets, the County serves as a natural hub for goods movement throughout the Bay Area, the surrounding Northern California mega-region, and many parts of the nation. Alameda County provides most of the critical goods movement infrastructure that the rest of the region relies upon to bring goods to and from international and national marketplaces; this includes the Port of Oakland (the Port) which is the 5th largest container port in the nation, Oakland International Airport, and rail and highway infrastructure.

Figure 6-4 Map of Alameda County's Multimodal Goods Movement Infrastructure

Economy and Employment

Goods movement is critical to the County's economy, with about one-third of its employment coming from goods movement-dependent industries; industries such as

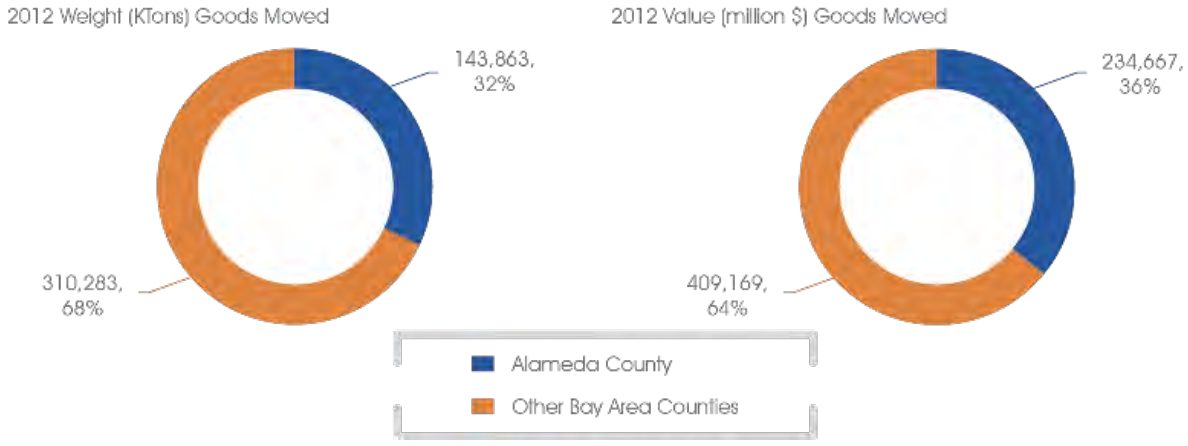
ACTC_AR0266

manufacturing, transportation and warehousing, construction, and retail and wholesale trade. Jobs in the transportation, warehousing, and logistics industries provide critical middle-wage jobs with low educational barriers to entry and career advancement potential.

Supply Chain

Goods movement in Alameda County includes diverse elements of the supply chain—everything from local trucks delivering groceries to area residents, to electronics components that serve as inputs to the County's and region's manufacturers, to California-produced wine, nuts, and cheeses that utilize the Port of Oakland as an agricultural export gateway.

Critical Infrastructure and Connections for Moving Goods



Thirty-two percent of all goods movement by weight (36% by value) in the nine-county Bay Area region has an origin or destination in Alameda County, or uses the County's international gateway infrastructure. An even higher percentage of goods use the County's major highways and rail lines, moving between the Bay Area and the rest of the U.S., supporting the region's growing consumer and business base. The Port of Oakland, its rail yard, and Oakland International Airport are situated centrally to all of the major rail and interstate networks that transport goods to and from the Bay Area, including Union Pacific Railroad (UP) Martinez, Niles, and Oakland rail subdivisions and nearly every interstate highway in the Bay area (except I-280). In short, Alameda County's transportation infrastructure provides critical connections for moving goods between the Bay Area and the rest of Northern California and the rest of the nation.

ACTC_AR0267

Figure 6-5 Port of Oakland Sphere of Influence

Figure 6-6 Alameda County Goods Movement in Context of Bay Area

Source: Cambridge Systematics, Inc.

Quality of Life

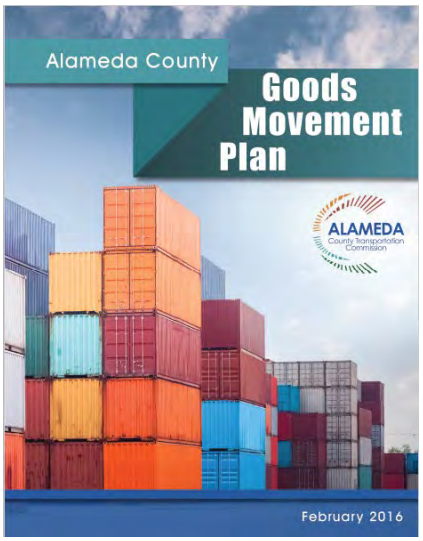
While goods movement is a significant part of the Alameda County and Bay Area economy, it is also an integral component of everyday life in each district and neighborhood. Residents and businesses depend on the smaller scale goods movement infrastructure: online orders are delivered to homes and local business

ACTC_AR0268

sites; and small- and medium-sized stores are supplied by mid-sized delivery trucks. Likewise, local communities are affected by the negative impacts to air quality, noise and vibration disturbances, light pollution, and impacts to safety, especially for pedestrians and cyclists.

The challenge for goods movement planning is to harness the economic engine of freight and related industries while keeping sight of its purpose for improving every day quality of life and maximizing the economic impact in a sustainable manner for our environment and our communities.

Successes



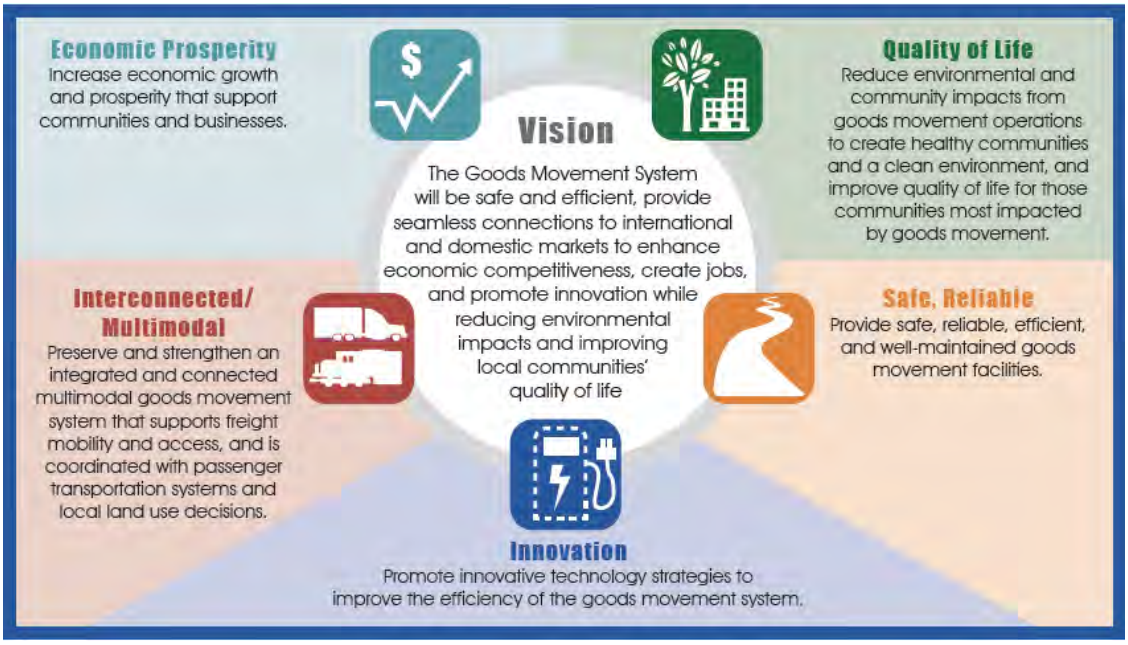
Such a balance can be found, as evidenced by recent successes.

Air Quality Improvements

Recent air quality improvements have been achieved through a partnership of the Port, Bay Area Air Quality Management District, and the California Air Resources Board. In 2005, diesel particulate matter (DPM) concentrations in West Oakland were almost three times higher than the average for the San Francisco Bay Area. DPM emissions were reduced 70% between 2005 and 2012, despite a 3% increase in container volumes. The Port is on track to exceed an 85% reduction target of DPM by 2020. Construction of shore power infrastructure, "no idling" signage along port roadways, new cleaner technology-based trucks and locomotives, and use of reduced sulfur fuel contributed to these gains.

Oakland Army Base Redevelopment

Phase I of the Oakland Army Base Redevelopment, currently under construction, successfully planned, designed, and gathered the necessary $500 million in funding for several improvements, including a new rail manifest and support rail yard, a new bulk marine terminal, 1 million square feet of new warehouse space, new roads and utility infrastructure, soil stabilization and environmental remediation, and a new recycling center.



Countywide Goods Movement Plan

In 2016, Alameda CTC adopted its first ever Alameda County Goods Movement Plan which feeds into the 2016 CTP. The Goods Movement Plan is designed to take advantage of the economic opportunities provided by goods movement for both the County and all of Northern California while continuing to make progress in achieving quality of life goals. The vision and

ACTC_AR0269

goals for the plan are shown below, and its content is further described later in this chapter.

Figure 6-7 Goods Movement Vision and Goals

Source: Cambridge Systematics, Inc.

Trends and Challenges

Goods movement faces several challenges in moving forward into the future.

Port of Oakland Competitiveness, Growth, and Efficiency

The Port of Oakland is the fifth largest container port in the U.S. If it can address several critical operational issues and take advantage of the opportunity to provide new services to shippers associated with the redevelopment of the Oakland Army Base, it can improve its efficiency and achieve a higher competitive standing among other ports on the West Coast of North America. The Port of Oakland has sufficient marine terminal capacity to realize significant growth, and the economic benefits to the County and the nation of being able to service this growth are significant. These economic benefits will be enhanced through the development of modern logistics facilities at the Oakland Global Logistics Center (the Oakland Army Base redevelopment), which can be used to create new jobs through the provision of value-added logistics services. Bay Area international trade volumes are expected to grow from 66 million tons in 2012 to 159 million tons by 2040. The value of these goods is expected to grow from $156 billion to $455 billion in the same time frame.

The new era of bigger post-Panamax ships cause operational bottlenecks that need to be resolved. A large vessel offloads in one day the same amount that a terminal once typically handled over the course of two to three days. Operational issues result in truck queues outside the terminal gates, increasing the amount of time it takes trucks to pick up or drop off a load. Truck turn times from the entrance gate to exit gate are more than 60 minutes for up to 50% of the trucks. Outside of the gates, trucks now wait two to four hours. Whereas truckers were previously making three to four turns at the Port per day, they are now making two turns. At-grade railroad crossings in the Port further slowdown the turnabout of trucks. At Maritime Street both at-grade crossings (one near 7th Street and the other near Middle Harbor Road) can simultaneously be blocked by one train.

As part of the Oakland Global Logistics Center, now under construction, some of these issues are to be resolved. Pressure on truck operations will be reduced through expanded intermodal rail terminal capacity, increased nearby warehousing capacity for the process of transferring cargo from ships to other modes and vice versa, and expanded cold storage and agricultural product terminals, as well as a variety of truck services nearby.

Competing Demands and Congestion on Highway and Rail Corridors

Moving people and goods safely and efficiently is critical for our local economy and communities. Both highway and railroad corridors provide for shared use between passenger and goods movement. Most of the highway corridors in Alameda County experience high levels of peak-period congestion and poor reliability with particularly poor performance on segments of I-80, I-580, I-680, and I-880. While trucks generally try to avoid peak periods, the trips of trucks traveling on these corridors are long enough that it has become increasingly difficult to avoid the peak periods. On the roadway system, there are a number of locations along I-880 and I-580 that have particularly high levels of truck-involved crashes that may be related to operational deficiencies and interchange modernization needs in the corridors.

If traditional rail routing patterns are maintained, there will be insufficient capacity on the UP's Martinez Subdivision from Oakland to Richmond, the busiest rail segment in Northern California. This corridor has limited potential for capacity expansion. However, the rail route south of Oakland, through Niles Canyon and the Altamont Pass, could be expanded to meet future demand. Improvements in the southern rail route could help address highway congestion and emissions by diverting cargo from trucks to trains, while at the same time creating more capacity for commuter rail service expansion, which is a key component of this plan.

Conflicts for Goods Movement in Communities

A substantial amount of goods movement occurs on local streets and roads throughout Alameda County, and this creates challenges and conflicts as large

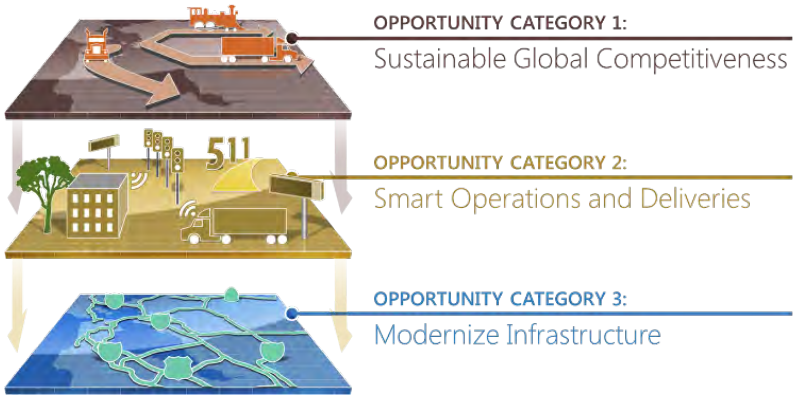
ACTC_AR0271

trucks need to move through local neighborhoods. Specific geographic issues include connectivity to I-580 from the industrial warehouse area in Pleasanton, access to the Fremont industrial area from Mission Boulevard, lack of connectivity between East County and other areas of the county, need for better connectivity to/from the I-880 West industrial areas, and growing amounts of trucks in neighborhoods and commercial areas as a result of e-commerce.

In recent years, there has been a movement throughout the country to develop Complete Streets plans to accommodate all modal users. However, at this time, most of the Complete Streets guidance and standards provide little information about how to accommodate goods movement. This is creating modal conflicts between goods movement and transit, bicycles, and pedestrians on a number of the County's arterial routes. Truck conflicts with other modes are also an issue on rural roads where farm-to-market truck traffic conflicts with growing commuter volumes and recreational cycling. The multimodal arterial plan attempts to resolve some of these conflicts by prioritizing different modes on different streets, when possible.

The movement towards urban development that is more compact and transit-accessible has also created land use conflicts along existing goods movement corridors in older industrial areas that are undergoing redevelopment. There also is a growing need for truck parking in and around the County's major freight hubs and warehouse centers.

Improving Air Quality and Reducing Health Impacts



Safe, clean, and community-supportive goods movement projects and programs are essential to the well-being of our local communities. Emissions from goods movement can create significant health risks, and exposure to noise and light also can adversely affect the health and well-being of residents. Particulate matter and nitrogen oxides are the two pollutants most associated with truck, rail, and ship pollution. Fortunately, in recent years, the risks attributable to these two pollutants have dropped significantly in the Bay Area, in large part due to emission regulations, focused efforts to control emissions by the Port of Oakland, and technological advancements. Due to current regulations, fine particulate matter emissions from on- and off-road motor vehicles are expected to decline significantly until 2020. However, despite tremendous strides in pollution reduction, communities in West Oakland, along with several others along the industrial corridors of Alameda County, suffer from health impacts due to Port operations and proximity to other goods movement activities and non-goods movement activities (e.g., auto traffic on freeways next to these communities that is not goods-movement related). Improving conditions for these most impacted communities is a core focal point of the Goods Movement Plan.

ACTC_AR0272

Needs and Opportunities

In pursuit of the vision of the Goods Movement Plan, Alameda CTC developed three main opportunity themes, each of which are crucially important to the success of this vision. Strategic projects, programs, and policies are combined into "opportunity categories," where the strategies are linked to produce even greater benefits than could be achieved by individual projects.

Figure 6-8 Opportunity Themes for Goods Movement in Alameda County

Source: Cambridge Systematics, Inc.

Opportunity Category #1: Sustainable Global Competitiveness

Building on the unique combination of assets around the Port of Oakland and Oakland International Airport, the redevelopment of the Oakland Army Base focuses investments to improve this complex as a world-class logistics hub. Improvements will support the types of logistics activity most likely to create middle-wage jobs for local residents. A critical element of the infrastructure improvements involves improved rail connections and multimodal operations, with potential to remove over a thousand trucks per day from the most congested freight highway corridors. Technology and operational strategies also are included to reduce impacts of goods movement activity on the health, safety, and quality of life in neighboring communities.

Opportunity Category #2: Smart Deliveries and Operations

Through maximum use of Intelligent Transportation Systems (ITS), connected vehicles, and other technology solutions, we can more efficiently use existing roadway capacity. Embracing new technologies and operating practices will lead to a more sustainable freight system, as well as innovative practices that can help manage local traffic and reduce conflicts. Taking advantage of the innovation economy and technology sectors in the Bay Area, the County can be a national leader by making them an integral provider of the systems needed. Additional efficiency gains on the existing system can be achieved through innovative logistics practices, incentives to

ACTC_AR0273

building owners to encourage off-peak deliveries, and extended gate hours at the region's ports.

Opportunity Category #3: Modernizing Infrastructure

Modernizing the backbone of the freight infrastructure is an opportunity for improvement at the heart of the goods movement plan. Strategies focus on modernizing the road network in industrial corridors, improving safe access to industrial corridors and facilities, reducing land use conflicts along freight corridors, and improving last-mile truck routes and rail connections to existing and emerging industries. Continued growth of e-commerce changes the landscape of retail and last-mile delivery needs, and the importance of pavement conditions and roadway alignments that support goods movement throughout cities, not just on the highways and the designated truck corridor arterials. Many busy retail districts are being redesigned according to Complete Streets guidelines, and there is an opportunity to contribute to this redesign process so that heavy trucks supplying stores and lighter delivery trucks fulfilling e-commerce orders to residences are both accommodated, while rights-of-way no longer necessary for the movement of goods can be returned to other uses.

Vision for the Future

Moving forward with the three opportunity categories will require multi-jurisdictional partnerships with participation by various levels of government and the private sector. This includes both transportation and non-transportation agencies, as well as businesses and community organizations. Alameda CTC initiated these partnerships by convening a Bay Area Goods Movement Collaborative which supported the development of the Goods Movement Plan; now, these partnerships need to be sustained and specific implementation roles codified. The categories require coordination of a wide range of funding sources. Projects to be completed at different times will still need to be coordinated so that the synergies reflected in the categories are fully realized. The plan recommends:

- Developing a formal institutional framework for coordinating implementation.
- Creating a focal point at the highest level possible for coordinating rail investments and negotiations with the private railroads.
- Creating a technology development collaborative to deal with the low emission program, introduce advanced logistics technologies, and develop public-private partnerships for pilot of demonstration technologies.

C. Roadways

Introduction

Highways and roadways are the backbone of the transportation system in Alameda County. They are a fundamental part of providing access to work, school, and other destinations for many modes, and for the distribution of goods throughout the county and beyond.

Alameda County's highway network consists of six interstate highways, three major bridges, and 10 state routes. The six interstate highways passing through Alameda County (I-80, I-238, I-580, I-680, I-880, and I-980) facilitate cross-country, inter- and intra-regional and local accessibility. These highways also support multiple transportation modes including private vehicles, bus transit, and goods movement. As the geographic center of the Bay Area, Alameda County carries the most pass-through trips in the region.[44]

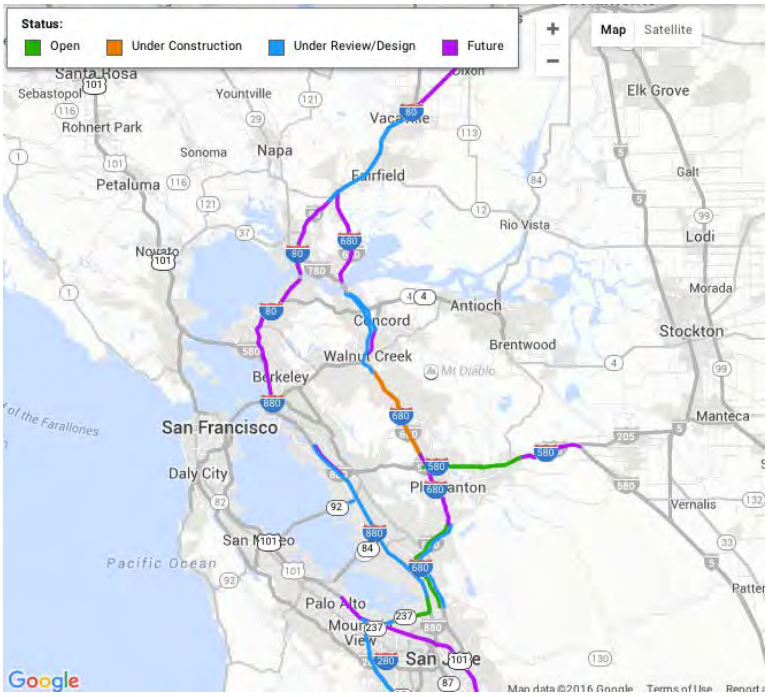
Arterial roadways are the arteries of the transportation system and the highest order roadways that serve all major transportation modes (automobiles, public transit, bicyclists, pedestrians, and trucks). They have traditionally been designed to prioritize the rapid movement of cars and trucks carrying goods, but all modes depend on these critical countywide corridors. Not only are arterials important to transit operations, every transit ride also begins and ends with a walk, so these roads must likewise function well for pedestrians. In fact, the ease and safety of accessing transit is a key deciding factor in people's choice to make a trip on transit at all. In addition to providing pedestrian access to transit, the arterial system also provides pedestrian and bicycle access to commercial and employment destinations, and activities throughout the county.

Successes

Many jurisdictions, including Alameda County, have acknowledged that the traditional approach of building more capacity in the form of additional highway or roadway lanes to meet demand cannot fully address roadway needs. As such, local municipalities and freeway management agencies are exploring and piloting transportation demand management strategies to manage highway and roadway demand. Several examples are described here.

Express Lanes

Alameda County and other regional partner agencies are currently developing and implementing infrastructure as part of the Bay Area Express Lanes Network. Thus far,



[44] Highways in Alameda County: Facts, Challenges and Opportunities (fact sheet), 2015.

ACTC_AR0276

express lane technology has been installed on two freeway segments in Alameda County — I-580 between Dublin and Livermore and I-680 southbound between Routes 84 and 237. Express lanes are highway lanes which solo drivers may choose to pay a toll to use for a more reliable and less congested trip. Express lanes remain free to use for carpool, vanpool, and other toll-exempt vehicles. Upon completion of the full Bay Area Express Lanes Network, the Bay Area will have 550 miles of express lanes.[45]

Installation of the Bay Area's Express Lane Network aims to be complete by 2035. MTC will eventually operate 270 miles of the 550-mile network, converting 150 miles of existing carpool lanes to express lanes and adding 120 miles of new lanes. Three additional freeway segments in Alameda County are slated for express lanes operated by Alameda CTC including I-680 northbound between Milpitas and Route 84, I-680 bidirectional between Route 84 and San Ramon, and I-580 between Livermore and Tracy. A segment of I-880 between Oakland and San Leandro will be operated by MTC.[46]

ACTC_AR0277

I-80 SMART Corridor Project

The I-80 SMART Corridor Project, part of the I-80 Integrated Corridor Mobility Project, is one of the most comprehensive Intelligent Transportation Systems in the state. The project implements a network of integrated electronic signs, ramp meters, and other state-of-the-art elements between the Carquinez Bridge and the Bay Bridge to enhance motorist safety, improve travel time reliability, and reduce accidents and associated congestion. Additional improvements include adaptive ramp metering on 44 on-ramps to reduce merging conflicts and manage traffic volumes on I-80.[47]

Real-time traffic information, such as variable speed signs and blocked lane signs, will allow drivers to make informed decisions in the event of an incident. These ramp meters and real-time message signs along the corridor will contribute to optimized roadway operations and improved safety, and will be integrated with, and managed from, the Caltrans Bay Area headquarters' Traffic Management Center in Oakland. Installation has been ongoing since 2012 and is projected to be operational in Spring 2016.

Image from Highways in Alameda County: Facts, Challenges and Opportunities (factsheet).

Targeted Highway Improvements

In Alameda County, like in many urban areas, highway expansion is largely infeasible due to the constrained built environment. However, strategic targeted highway improvement projects are critical to alleviate bottlenecks to maximize existing capacity and ensuring the safe operation of highway facilities and their interface with local streets.

Multimodal Arterials Plan

Alameda CTC has developed a Multimodal Arterial Plan (MAP), which will be adopted in Summer 2016, to accommodate continued growth in travel and achieve environmental goals by re-balancing these roads to safely and efficiently

[47] I-80 SMART Corridor Project webpage, alamedactc.org.

ACTC_AR0278

accommodate all users and encourage people to shift from driving to transit, walking, and bicycling while better connecting with the surrounding land use.

With guidance from Alameda County's 15 jurisdictions, major transit agencies, Caltrans, and non-agency stakeholders, the MAP identified the performance and needs of the county's arterials. The plan proposes continuous and connected networks for transit, biking, driving, and goods movement, plus a system of pedestrian emphasis areas. Adjacent land use was considered when identifying the modal priorities for each arterial. The result is a 500-mile Multimodal Arterial Network with a set of proposed improvements that, when constructed, aspires to provide a continuous, connected network for each mode throughout Alameda County.[48]

Plan Development Process

The Multimodal Arterial Plan development process was informed and guided by many meetings with stakeholders, including:

Image from Nelson\Nygaard

- The Alameda County Transportation Commission
- Alameda CTC's standing committees—Alameda County Technical Advisory Committee (ACTAC) and the Commission's Planning, Policy, and Legislation Committee (PPLC)
- Other local jurisdictions, transit agencies, and Caltrans
- The general public through workshops and meetings with stakeholders representing the views of various modes and transportation issues

To understand arterial roadway performance, and identify needs and proposed improvements, the MAP relied on massive amounts of data including cross-section measurements for over 600 miles of arterials. Acknowledging that analysis at this macro-scale is not as refined as the knowledge of local agency staff, wherever local agency staff disagreed with the MAP's technical recommendations, the local agency point of view superseded the technical analysis results. The MAP was developed in parallel with the Alameda Countywide Transit and Goods Movement Plans and used many of their findings as a basis for preliminary modal networks. The

[48] The exception is the walking "network," which is nodal in nature, not continuous.

ACTC_AR0279

bicycle and pedestrian networks used the most recent Alameda Countywide Pedestrian and Bicycle Plans, both adopted in 2012, as well as local agency plans.

Despite tremendous analysis and involvement of agencies and other stakeholders, the recommendations of the MAP should be viewed as preliminary, as they have not been vetted with community process that would be affected by the arterial proposals; nor have they been approved by the elected bodies of each jurisdiction. The MAP recommendations are intended to provide a framework for developing continuous and connected networks for each mode, but not as a programming document. The development of the Multimodal Arterial plan involved the following steps:

MAP Vision
Alameda County will have a network of efficient, safe and equitably accessible arterials that facilitate the multimodal movement of people and goods, and help create a strong economy, healthy environment, and vibrant communities, while maintaining local contexts.

1. Articulate plan vision/goals and performance measures/objectives
2. Establish ideal network for each mode
3. Identify the top two priority modes on each arterial roadway segment
4. Identify proposed improvements based on modal performances of each roadway segment
5. Develop Moving Forward plan

Land Use Considerations

In many cases, there is not sufficient right-of-way to implement improvements for the roadway segment to meet performance objectives for all of the modes for which that segment is a priority. To resolve this, the MAP process defined the top two priority modes on each arterial segment. This involved examining the adjacent land use context and determining the "associated modal priorities" for that land use. Transit is the priority mode on all Major Transit Corridors (as defined in the Countywide Transit Plan); the second priority depends on adjacent land use. For instance, in urban settings with high existing or desired volumes of people walking, pedestrians are the second priority mode. In urban settings with less pedestrian-orientation, where the arterial is on the bicycle network, bikes are the second priority mode (see Figure 6-11).

This land use evaluation process has two components:

- Land uses are divided into three broad categories - urban, suburban or rural, and industrial.

ACTC_AR0280

- Three tiers of importance were created for each of the five modes. For example, Major Transit Corridors are tier 1 for transit importance, cross-town routes are tier 2, and local routes are tier 3.

The result was a 15-step evaluation that established the top two modal priorities on each arterial segment (see Figure 6-9).

Figure 6-11 Land Use Categories and Associated Modal Priorities

15. Auto: Neighborhood Connector	15.. Auto: Neighborhood Connector	15. Auto: Neighborhood Connector

Proposed Improvements

For each modal network, the proposed improvements that would result in optimal outcomes for that mode were identified. The team also conducted a network evaluation to identify gaps, continuity, and connectedness in modal networks, along with needed improvements. These gaps resulted from insufficient existing conditions for priority

Image from Nelson\Nygaard.

ACTC_AR0281

modes as well as the consequences of prioritizing segments for some modes but not others.

To acknowledge that travel behavior and technology are evolving, the MAP considered two other future scenarios:

- "Social and behavioral trends" scenario, which assumes lower vehicle miles travelled (VMT) per capita as a result of increasing acceptance and adoption of less auto-dependent and car-free lifestyles
- "Next generation vehicle" scenario, which assumes an effective increase in roadway capacity as a result of autonomous vehicles

In addition to the capital improvements identified in the previous set of steps, the Multimodal Arterial Plan also makes broad recommendations for non-capital programs as follows:

- **Intelligent Transportation Systems:** The MAP describes the potential effect of implementing interconnected and networked signal systems, changeable message signs, technology allowing vehicle-to-infrastructure communications, and other ITS technologies.
- **Transportation Demand Management (TDM) programs:** TDM measures such as incentives and disincentives can reduce single-occupant vehicle demand dramatically (as much as 30% for employment land uses).

Image from Nelson\Nygaard.

- **Transportation Systems Management (TSM) Measures:** Intersection and signal improvements, data collection to monitor system performance, and event management strategies are examples of TSM measures that can enhance travel mobility and reliability.
- **Parking Management:** Management of on-street parking, the most attractive parking, and public off-street parking can reduce auto travel.

ACTC_AR0282

Challenges and Opportunities

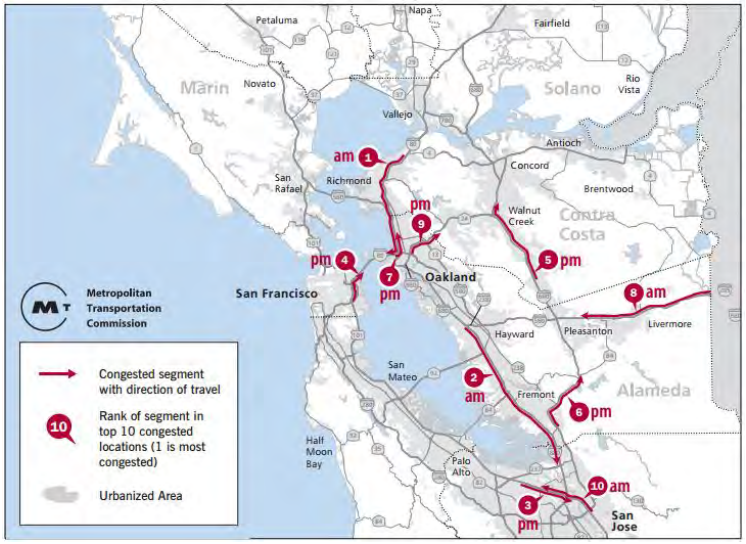

Image from Nelson\Nygaard.

Congestion, safety, and low travel speeds, particularly during peak commute periods, continue to be challenges in Alameda County. While some jurisdictions address these challenges by expanding highway capacity through additional lanes, this strategy is largely not possible in Alameda County, nor is it consistent with the vision set forth in Plan Bay Area. As such, the existing highways and roadways in Alameda County will be expected to carry more people as population grows, and will require the use of more traffic management and technology solutions.

Congestion

Regional economic and employment growth resulted in busier and more congested roadways in 2015. Freeway delay in Alameda County increased by 14% overall from 2014 to 2015. This includes a 12% increase in weekday delay and 31% on weekends.[49] Alameda County consistently has some of the most congested freeway segments in the region. In 2014, six of the 10 most congested corridors were located in Alameda County.[50] As growth continues, the need to stretch the capacity of the system through efficiency improvements and promotion of higher capacity modes (e.g., high-occupancy

Figure 6-12 Top Ten Congestion Corridors

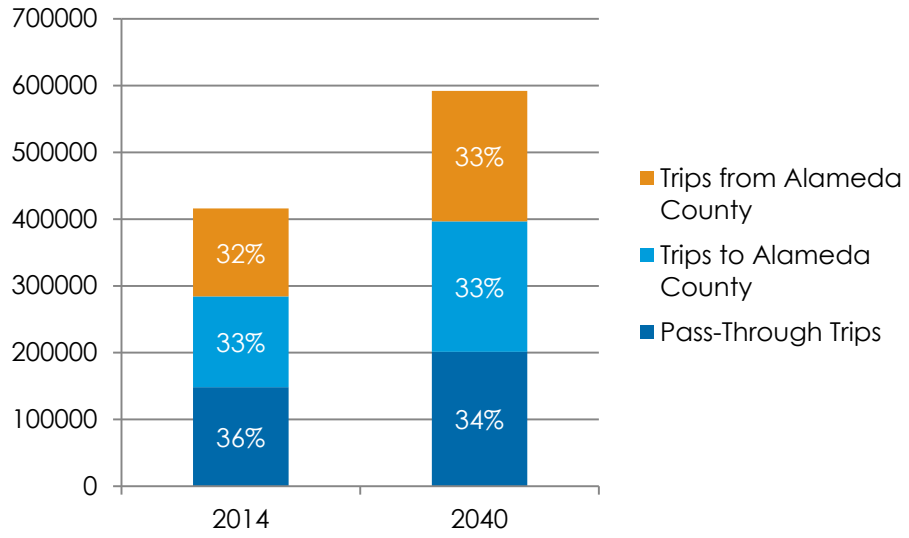
ACTC_AR0283



vehicles (HOV) and public transit) become ever more important to meeting rising demand.

Bridges

Today the three bridges serving Alameda County—Bay Bridge, San Mateo Bridge and Dumbarton Bridge - carry approximately 412,000 motor vehicle trips per day on average. Of the total trips, approximately 281,000 trips (69%) originate outside of Alameda County (including those with final destinations in Alameda County and pass-through trips) and use Alameda County highways and roadways.[51]

By 2040, these three bridges are projected to carry approximately 592,000 motor vehicle trips on an average day, an increase of 44% in traffic volume from 2014 (see Figure 6-10). Of these, 398,000 trips (67%) are projected to originate outside of Alameda County (including pass-through trips) and will travel long distances on Alameda County roadways to reach the bridges.

Figure 6-13 Trips To, From, and Through Alameda County

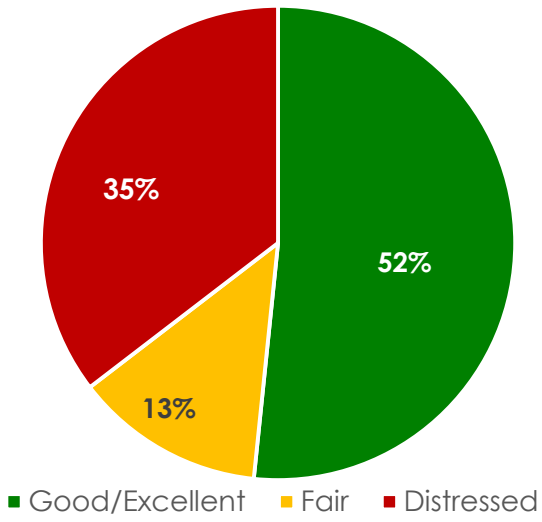
Vehicle Hours of Delay

Highway delay in Alameda County, defined as excess travel time as a result of speeds dropping below 35 miles per hour, has been increasing steadily in recent years. Between fiscal year 2013-14 and fiscal year 2014-15, freeway vehicle delay increased by 14% overall.[52]

[51] 2014 bridge volumes are from Caltrans traffic count book; trips to/from Alameda County were estimated based on Alameda CTC travel model's 2010 trip origin/destination estimation.

[52] Alameda CTC Performance Report (2015).

ACTC_AR0284



Average Travel Speeds

Average freeway speed in most time periods of the day have been declining over the past four years. From fiscal year 2011-12 to fiscal year 2014-15, weekday evening peak period speeds declined by nearly 7% on many key freeway segments in Alameda County. The most significant deterioration in travel speed was seen during the weekend midway period, indicating increasing rates of discretionary travel on weekends.[53]

Maintenance

In 2014, Caltrans found that 35% of state highway miles in Alameda County were distressed in terms of pavement condition (see Figure 6-11).[54] Insufficient roadway maintenance and the poor conditions which result increase delay, cause safety incidents, and contribute to wear and tear on personal vehicles, transit vehicles, and trucks. For public transit agencies, this additional wear and tear further increases the costs of operating transit in Alameda County.

Figure 6-14 Alameda County State Highway Lane Miles Pavement Condition

Source: Caltrans, Alameda CTC 2015 Performance Report.

Roadways and major arterials in Alameda County have similar challenges with respect to maintenance. The pavement condition index rating of local streets and roads in Alameda County has remained relatively constant in recent years as cities have been unable to fund pavement maintenance needs. Today, around 22% of

[53] Alameda CTC Performance Report (2015).
[54] Alameda CTC Performance Report (2015).

ACTC_AR0285

local streets and roads in Alameda County has a PCI rating of "poor" or "failed" and additional miles are "at risk."[55]

Safety

Roadway collisions involving injury and fatality declined steadily between 2002 and 2011, before increasing again in 2012. Roadway collisions resulted in 85 total fatalities in Alameda County in 2014. Alameda County seeks to return to a downward trajectory in terms of the number of fatalities and injuries on highways in future years. Targeted highway improvement projects aim to reduce unsafe intersections and turning movements.

Vision for the Future

The vision for the future of highways and roadways in Alameda County includes an emphasis on smart improvements that foster a better travel experience for all users, while maximizing the efficiency of the existing highway network. This includes installation of Intelligent Transportation Systems and express lanes, as well as the facilitation of movement for higher capacity modes including carpools and public transit. As described earlier in this chapter, planned improvements such as express lanes and the I-80 Smart Corridor Project use technology to maximize capacity and improve safety.

For roadways, the Multimodal Arterials Plan seeks to ensure the re-balancing of roads to safely and efficiently accommodate all users and encourage people to shift from driving to transit, walking, and bicycling while better connecting with the surrounding land use. If an agency wishes to advance a project proposed in the Multimodal Arterial Plan, a crucial first step will be to engage local residents and businesses in a discussion about redesign of the arterial. The MAP modal priorities and proposed improvements may seed this discussion, but should be viewed as technical inputs rather than recommendations.

[55] Alameda County Transportation Commission, *2014 Performance Report: State of the Transportation System in Alameda County.*

ACTC_AR0286

Funding

Locating and procuring funding for highway improvement programs and roadway maintenance, including regular state-of-good-repair maintenance, as well as installation of technology-based solutions such as high-occupancy toll (HOT) lanes, remains difficult in light of shrinking budgets for transportation projects at all levels. Alameda CTC will continue to advocate for new funding sources and options for highway improvements that improve safety and operational efficiency.

Collaboration and Coordination

Alameda County will continue to review and ensure that interface opportunities between highways and local streets continue to improve for the safety and efficient movement of all modes. Ensuring the full roadway network in Alameda County is safe and efficient requires significant coordination and partnership with multiple agencies at the state, region and city levels to design, fund, and operate projects.

Image from Nelson\Nygaard.

ACTC_AR0287

D. Bicycling

Bicycling offers transportation that is low-cost, healthy, and is non-polluting. Combined with transit, bicycling can provide first/last mile access that enhances the usefulness of buses and rail transit throughout Alameda County. Likely due to increasing environmental and health awareness, improving bicycling facilities, and shifting demographics, bicycling is on the rise in Alameda County, particularly for commuting.

The U.S. Census shows that the number of Alameda County residents who commute by bike has almost doubled since 2000 (approximately 8,400 compared to 16,700) and the rate of commuting by bike nearly doubled between 2000 and 2013, from 1.2% to 2%.[56]

Image from www.alamedactc.org.

Collisions involving bicyclists dropped from 2011to 2012, after having increased over the last decade. The rate of bicyclist collisions (i.e., collisions per cyclist) may also be declining, as journey-to-work data suggests that the number of collisions involving cyclists has grown more slowly than participation in cycling.[57]

Fourteen of Alameda County's 15 jurisdictions have adopted bicycle plans within the last five years, or are currently updating them. These plans represent opportunities for each community to develop consensus on a vision for the local bicycle network and supportive programs, including priorities for implementation. Alameda CTC first adopted a countywide bicycle plan in 2001, and updated the plan in 2006 and 2012.[58] The plan's vision is to inspire people of all ages and abilities to bicycle for everyday transportation, recreation, and health by creating an extensive network of safe, convenient bike facilities that connect to each other, to transit, and to other major destinations. To achieve this, Alameda CTC's goals are to focus on facilities that provide access to transit and major activity centers, including schools, and

56 2014 Performance Report, Alameda CTC, p.5.

57 Ibid.

58 See www.alamedactc.org/app_pages/view/5390 for links to the 2001, 2006 and 2012 versions of the Countywide Bicycle Plan.

ACTC_AR0288

improving bicycling conditions in "communities of concern" (see Chapter 7). Beyond investment in capital improvements, the agency prioritizes safety, education, encouragement and enforcement programs, and investment in countywide and local bicycle planning.

Successes

A number of recent and current Alameda CTC-sponsored initiatives are improving the practice of bicycle planning throughout the county.

Safe Routes to Schools

Alameda CTC funds the Alameda County Safe Routes to Schools (SR2S) Program, which includes educational programs, safety projects, the Alameda County SR2S website (alamedacountysr2s.org), and support for Walk and Roll to School Day. The agency is now launching a program to fund capital improvements identified through the program, which, since it began in 2006, has grown to over 160 schools countywide, serving more than 110,000 students.

Image from www.alamedactc.org.

Bike Safety Education

The Alameda County Bicycle Safety Education Program offers free classes throughout the county, helping 4,000 people a year learn safe bike-riding techniques. The program includes classroom and on-road instruction; classes for adults, teenagers, and children; classes in English, Spanish, and Cantonese; and classes for new adult cyclists.

Multimodal Arterial Plan

The Countywide Multimodal Arterial Plan, completed in spring 2016, lays out a 500-mile network of arterial roadways that, when improved as proposed, will provide continuous and connected transit, auto, truck, and bicycle networks (see Roadways modal strategy, Chapter 6). This plan builds on the Countywide Bicycle Plan by identifying on which arterials bikes are considered to be a priority mode and the facilities needed to serve them. The plan's emphasis is on building bicycle corridors throughout Alameda County using the facility types described in the preceding section where possible, so people of all ages feel safe and comfortable bicycling throughout Alameda County.

ACTC_AR0289

Major Trails

Alameda CTC is facilitating the development and completion of three major countywide trails in Alameda County:

- **Iron Horse Trail**: The Iron Horse Trail is a Class I (grade separated) pathway[59], constructed on an abandoned Southern Pacific Railroad right-of-way in eastern Alameda County and along the I-680 corridor in Contra Costa County. The trail will eventually be a continuous 53-mile-long walking and bicycling paved path through the two counties, including 26 miles between Dublin and Livermore. The Alameda County portion is nearly complete in Dublin, has a half-mile gap in south Pleasanton, and is mostly un-built through Livermore. Overcrossings of seven major arterials that intersect the trail in the three cities will also eventually help make it a safer and more inviting facility for trail-users of all ages and abilities.
- **East Bay Greenway**: The East Bay Greenway is an ambitious project to eventually create a 37-mile-long walking and biking trail from Albany to Fremont, roughly following the BART line and Union Pacific Railroad right-of-way.[60] First envisioned in 2008, the trail is modeled on the Ohlone Greenway in northern Alameda (and western Contra Costa) counties. Alameda CTC constructed the first segment of the East Bay Greenway in 2015 and has initiated environmental analysis and preliminary engineering for the 16-mile segment that will eventually connect seven BART stations from Lake Merritt to South Hayward, bringing access and recreational opportunities to residents of some of the lowest-income neighborhoods in the East Bay. Fremont is working to develop the southern section, which will eventually connect to Santa Clara County.
- **Bay Trail**: The San Francisco Bay Trail is a planned 500-mile walking and bicycling pathway around the entire San Francisco Bay. Through Alameda County, the planned 183-mile trail passes through the waterfronts of Albany, Berkeley, Emeryville, Alameda, Oakland, San Leandro, Hayward, Newark, Union City, and Fremont. There are currently significant gaps along the Oakland waterfront and in Alameda; the trail is almost completely un-built in southern Alameda County.

[59] The California Department of Transportation's Highway Design Guide (2015) describes Class I pathways as facilities with exclusive right-of-way and minimal cross traffic from motor vehicles. This type of pathways provides a complete, or near-complete, separation from vehicle traffic, including at crossings, from vehicular traffic.

[60] This alignment includes the existing Ohlone Greenway in Albany and Berkeley and the former Santa Fe right-of-way/West Street pathway in Berkeley.

ACTC_AR0290

Coordination

Three efforts sponsored by Alameda CTC are successfully improving coordination of bicycle planning at the countywide level:

- **Pedestrian/Bicycle Working Group**: Staff of local agencies meet quarterly for education and information-sharing about bicycle (and pedestrian) planning.
- **Association of Pedestrian and Bicycle Professionals (APBP) webinars**: The agency pays for and hosts free monthly webinars of the Association of Pedestrian and Bicycle Professionals.
- **Bicycle and Pedestrian Advisory Committee (BPAC):** The long-standing Countywide Bicycle/Pedestrian Advisory Committee now reviews all Alameda CTC-sponsored capital projects in the scoping, environmental and/or preliminary design phases to find ways for them to improve (and ensure they don't unintentionally hinder) walk and bike access.

Funding

Alameda CTC invests in bicycle infrastructure and programs throughout the county using a variety of funding sources:

- **Direct Local Distributions** (DLD): DLDs come from three local funding sources (Measure B, Measure BB, and the Vehicle Registration Fee) and pay for local transportation improvements. Fifteen percent of DLD local streets and roads funds must be used on bicycle and pedestrian investments.
- **State and federal grants:** Alameda CTC uses local funds (including Measures B and BB) to leverage state Active Transportation Program and federal Transportation Investment Generating Economic Recovery (TIGER) grants, making local money stretch farther and allowing the Commission to deliver transportation solutions earlier than if they had to rely on local funds.
- **Complete Streets:** Alameda County Measure BB has a Complete Streets requirement that helps support bicycle safety and access throughout the County. (See the following section for more information.)

Issues, Trends, and Challenges

Since the Countywide Bicycle Plan was updated, there has been a rapid evolution in the transportation field. Today, engineers and planners are shifting from a goal of facilitating the rapid flow of traffic to a broader emphasis on ensuring the safety and comfort of everyone using the road.

Complete Streets

Another initiative that supports safer roadways and continuous, comfortable networks for bicyclists is Complete Streets: designing roads for all users across a

ACTC_AR0291

broad range of modes and abilities, including pedestrians, public transit users, motorists, people with disabilities, seniors, children, and bicyclists of all skill levels. All of Alameda County's 15 jurisdictions have adopted Complete Streets policies, which commit them to considering accommodation for all modes and all users as a part of all projects and all phases. The Countywide Multimodal Arterial Plan development process has brought these agencies and others to the table to determine how to prioritize modes on a given roadway with limited width, a process necessary to overcome one of the biggest challenges to accommodating bicycles on the County's arterial roadway: insufficient width (see Multimodal Arterial Plan summary, later in this chapter). Many jurisdictions are now updating design guidelines and standards and reforming internal processes to ensure that all projects proactively consider opportunities to implement Complete Streets elements.

New Bicycle Facility Types

Jurisdictions throughout Alameda County have been implementing a wide range of bicycle facility types, including treatments to increase separation from and visibility by motor vehicles. Adding to traditional Class I (separate, off-street bicycle and pedestrian pathway), II (striped bicycle lane) and III (signed bicycle route), today's transportation planners have the following new facility types to choose from, all of which have been implemented in Alameda County:

A buffered bike lane in Washington, DC.

Image from Nelson\Nygaard.

- **Class II Enhanced ("buffered bike lanes"):** Traditional bike lanes plus a striped buffer between the lane and the motor vehicle travel lane
- **Class III Enhanced: ("bicycle boulevards")**: Low-speed, low-volume roadways, parallel to arterials that prioritize bicycle travel with features like traffic diverters that allow through bike travel, stop signs on intersecting streets, and distinctive signs and pavement legends
- **Class IV ("protected bike lanes"):** Traditional bike lanes separated from motor vehicle traffic with a vertical buffer, such as on-street parking, planters, flexible pylons or curb separation

ACTC_AR0292

Bay Area Bike Share

Image from Andrew Nash.

A new initiative to the East Bay, bike sharing, has the potential to dramatically increase the number of people who use bicycles throughout Alameda County. The program, launched in cities across the globe over the past decade, offers bikes for one-way rental from a network of stations. The expansion of this program from San Francisco and the Peninsula is bringing 850 bikes to Oakland, 400 to Berkeley and 100 to Emeryville in 2016-2017. By making bicycles easily accessible and removing concerns about theft, storage, and maintenance, the program is likely to bring many more people to bicycling and many more bikes to the streets.[61]

Interdisciplinary Safety-focused Planning

Vision Zero is a new interdisciplinary movement, originally from Sweden, which aims to reduce the number of fatal and serious injury collisions to zero through coalitions of transportation planners, street designers, schools, police, and public health professionals. Though bicyclists, as some of the most vulnerable road users, especially benefit from this concept, the goal applies to everyone: people in cars, on transit, on bikes, and on foot.

Needs

Image from Nelson\Nygaard.

As increasing numbers of people travel by bicycle; focusing on planning, funding, and delivering bike facilities remains important. This work includes on-road bike lanes, including the new enhanced varieties described above, as well as separate pathways.

Funding

Building a countywide bicycle network is a major undertaking; the 2012 Countywide Bicycle Plan estimated the cost at $943 million dollars and revenue at roughly one third of that, leaving a gap of $619 million. Despite new fund

[61] See https://bikeeastbay.org/campaigns/bikeshare for more information.

ACTC_AR0293

sources such as Measures B and BB, Vehicle Registration Fee (VRF), and the state Active Transportation Program, a broad gap remains. Using the considerable resources available for bicycle facilities most wisely will require better information about where they are most needed.

Reliable Data

Investing effectively in improving biking conditions requires identifying where improvements are most needed. Although the U.S. Census, California Household Travel Survey, and BART Station Profile Study together tell us how many people, on average, bicycle each day countywide, these data sources have significant limitations (available infrequently, only capture commute trips, etc.) and generally there is a dearth of reliable data on where people bike, when, and for what purposes. To augment this information, Alameda CTC performs an annual count program to capture bicycle use at locations throughout Alameda County, as well as gathers data from automatic bicycle count equipment. Alameda CTC plans to reformulate its count program to best realize the strengths of manual count data (which provides great spatial richness but is a short-term snapshot in time) and automatic counters (which provide data over time but for a more limited number of locations) in the coming years.

Vision for the Future

Through funding such as Measures B and BB, VRF, and the One Bay Area Grant, sponsorship of projects, like the county's major trails, and programs, like Safe Routes to Schools, Alameda CTC continues to implement the projects, programs, and plans called for in the Countywide Bicycle Plan. To help implement the plan's most important recommendations, the next plan update should prioritize proposed improvements using a data-driven process.

Image from Nelson\Nygaard.

Meanwhile, the Multimodal Arterial Plan provides detailed direction on making 500 miles of the county's most important arterials more accessible to and safer for biking. The next Countywide Bicycle Plan update should build on the arterial bicycle network identified in the MAP, including revising the countywide bike network as necessary to incorporate emerging types of bike facilities and, where possible, consider planning

ACTC_AR0294

facilities on parallel routes using the modal priority information from the MAP. Finally, the next Countywide Bicycle Plan update should focus on gap closures at high priority barrier locations.

ACTC_AR0295

E. Walking

Walking is the foundation of the transportation system; every trip begins and ends on foot[62]. Walking is the second most common method of transportation in Alameda County after driving, and many people in Alameda County rely solely on this mode. Safety is an important concern for pedestrians, who are the most vulnerable roadway users.

Image from Nelson\Nygaard.

Thirteen out of the county's 15 jurisdictions have adopted pedestrian plans within the last five years or are updating them now. These plans represent each community's consensus on the local pedestrian network and supportive programs, including priorities for implementation. Alameda CTC has adopted two countywide pedestrian plans: the original in 2006 and a 2012 update.[63] The vision set forth in the Alameda Countywide Pedestrian Plan is to inspire people of all ages and abilities to walk for everyday transportation, recreation, and health by creating safe, attractive, and accessible walking routes and districts. To achieve this, Alameda CTC's goals are to focus on facilities that provide access to transit and major activity centers, including schools, and improving walking conditions in "communities of concern" (see Chapter 7). Beyond investment in capital improvements, the agency prioritizes safety, education, encouragement and enforcement programs, and investment in countywide and local pedestrian planning.

[62] Walking is defined broadly here, to encompass travel on foot and with the assistance of wheelchairs, canes, walkers and other mobility devices. Walking includes local trips, integration with transit and walking for physical activity.

[63] See www.alamedactc.org/app_pages/view/5390 for links to the 2006 and 2012 versions of the Countywide Pedestrian Plan.

ACTC_AR0296

Successes

A number of recent and current Alameda CTC-sponsored initiatives are improving the practice of pedestrian planning throughout the county.

Safe Routes to Schools

Alameda CTC funds the Alameda County Safe Routes to Schools Program, which includes educational programs, safety projects, the Alameda County Safe Routes to Schools website (alamedacountysr2s.org), and support for Walk and Roll to School Day. The agency is now launching a program to fund capital improvements identified through the program, which, since it began in 2006, has grown to over 160 schools countywide, serving more than 110,000 students.

Image from Alameda CTC.

Major Trails

Alameda CTC is facilitating the development and completion of three major countywide trails in Alameda County:

- **Iron Horse Trail**: The Iron Horse Trail is a Class I (grade separated) pathway[64], constructed on an abandoned Southern Pacific Railroad right-of-way in eastern Alameda County and along the I-680 corridor in Contra Costa County. The trail will eventually be a continuous 53-mile-long walking and bicycling paved path through the two counties, including 26 miles between Dublin and Livermore. The Alameda County portion is nearly complete in Dublin, has a half-mile gap in south Pleasanton and is mostly un-built through Livermore.

Image from Alameda CTC.

[64] The California Department of Transportation's Highway Design Guide (2015) describes Class I pathways as facilities with exclusive right-of-way and minimal cross traffic from motor vehicles. This type of pathways provides a complete, or near-complete, separation from vehicle traffic, including at crossings, from vehicular traffic.

ACTC_AR0297

Overcrossings of seven major arterials that intersect the trail in the three cities will also eventually help make it a safer and more inviting facility for trail-users of all ages and abilities.

- **East Bay Greenway**: The East Bay Greenway is an ambitious project to eventually create a 37-mile-long walking and biking trail from Albany to Fremont, roughly following the BART line and Union Pacific Railroad right-of-way.[65] First envisioned in 2008, the trail is modeled on the Ohlone Greenway in northern Alameda (and western Contra Costa) counties. Alameda CTC constructed the first segment of the East Bay Greenway in 2015 and has initiated environmental analysis and preliminary engineering for the 16-mile segment that will eventually connect seven BART stations from Lake Merritt to South Hayward, bringing access and recreational opportunities to residents of some of the lowest-income neighborhoods in the East Bay. Fremont is working to develop the southern section, which will eventually connect to Santa Clara County.
- **Bay Trail**: The San Francisco Bay Trail is a planned 500-mile walking and bicycling pathway around the entire San Francisco Bay. Through Alameda County, the planned 183-mile trail passes through the waterfronts of Albany, Berkeley, Emeryville, Alameda, Oakland, San Leandro, Hayward, Newark, Union City and Fremont. There are currently significant gaps along the Oakland waterfront and in Alameda; the trail is almost completely un-built in southern Alameda County.

Multimodal Arterial Plan

The Multimodal Arterial Plan (MAP) lays out a 500-mile network of arterial roadways that, when improved as proposed, will provide continuous and connected transit, auto, truck and bicycle networks. The MAP prioritizes walking facilities in focused nodes located where higher volumes of pedestrians exist or are expected and/or locations where walking serves an important transportation function, such as transit, schools, central business districts, activity centers, inter-jurisdictional trails and access within "communities of concern" as defined in Alameda CTC's Community-Based Transportation Plans (see Roadways modal strategy, Chapter 6).

Funding

Alameda CTC invests in infrastructure and programs throughout the county that encourage and make walking safer using a variety of funding sources:

[65] This alignment includes the existing Ohlone Greenway in Albany and Berkeley and the former Santa Fe right-of-way/West Street pathway in Berkeley.

ACTC_AR0298

- **Direct Local Distributions** (DLD): DLDs come from three local funding sources (Measure B, Measure BB and the Vehicle Registration Fee) and pay for local transportation improvements. Fifteen percent of DLD local streets and roads funds must be used on pedestrian and bicycle investments.
- **State and federal grants:** Alameda CTC uses local funds (including Measures B and BB) to leverage state Active Transportation Program and federal TIGER grants, making local money stretch farther and allowing the Commission to deliver transportation solutions earlier than if they had to rely on local funds.
- **Complete streets:** Alameda County Measure BB has a Complete Streets requirement that helps support pedestrian safety and access throughout the County. (See the following section for more information.)

Coordination

Three efforts sponsored by Alameda CTC are aimed at improving coordination of countywide pedestrian planning:

Image from Nelson\Nygaard.

- **Pedestrian/ Bicycle Working Group**: Staff of local agencies meet quarterly for education and information-sharing about pedestrian (and bicycle) planning.
- **Association of Pedestrian and Bicycle Professionals (APBP) webinars**: The agency pays for and hosts free monthly webinars of the Association of Pedestrian and Bicycle Professionals.
- **Bicycle and Pedestrian Advisory Committee (BPAC):** The long-standing Countywide Bicycle/Pedestrian Advisory Committee now reviews all Alameda CTC-sponsored capital projects in the scoping, environmental and/or preliminary design phases to find ways for them to improve (and ensure they don't unintentionally hinder) walk and bike access.

ACTC_AR0299

Trends and Challenges

Since the Countywide Pedestrian Plan was updated, there has been a rapid evolution in the transportation field. Today, engineers and planners are shifting from a goal of facilitating the rapid flow of traffic to a broader emphasis on ensuring the safety and comfort of everyone using the road, including those on foot.

Images from Nelson\Nygaard.

Complete Streets

Another initiative that supports safer roadways and roadway crossings is Complete Streets: designing roads for all users across a broad range of modes and abilities, including pedestrians, bicyclists of all skill levels, public transit users, motorists, people with disabilities, seniors, and children. All of Alameda County's fifteen jurisdictions have adopted Complete Streets policies, which commit them to considering accommodation for all modes and all users as a part of all projects and all phases. The Countywide Multimodal Arterial Plan development process has brought these agencies and others to the table to determine how to prioritize modes on a given roadway with limited width (see Multimodal Arterial Plan summary, later in this chapter). Many jurisdictions are now updating design guidelines and standards and reforming internal processes to ensure that all projects proactively consider opportunities to implement Complete Streets elements.

Barriers

Even as Alameda County jurisdictions work to help people travel on foot, daunting physical barriers to walking remain, including freeways, railroad tracks, and creeks. A store may be just a few hundred feet from a residential neighborhood, for example, but if a freeway divides them, nearby neighbors will not be able to reach the shop on foot. Barriers like these often require staffing and financial resources that are beyond the capacity of local jurisdictions to overcome.

ACTC_AR0300

In addition, barriers to seniors, people with disabilities, and others as a result of poorly maintained facilities or their wholesale absence in some areas of the county can hinder access to basic services and public transit. Challenges like these require prioritization of walking at the local level and, often, maintenance funding beyond the capacity of local governments. As a result, many have shifted the burden of sidewalk maintenance to the adjacent property owner, which has not accelerated their repair.

Interdisciplinary Safety-Focused Planning

Vision Zero is a new interdisciplinary movement, originally from Sweden, which aims to reduce the number of fatal and serious injury collisions to zero through coalitions of transportation planners, street designers, schools, police, and public health professionals. Though pedestrians, as the most vulnerable road users, especially benefit from this concept, the goal applies to everyone: people in cars, on transit, on bikes and on foot.

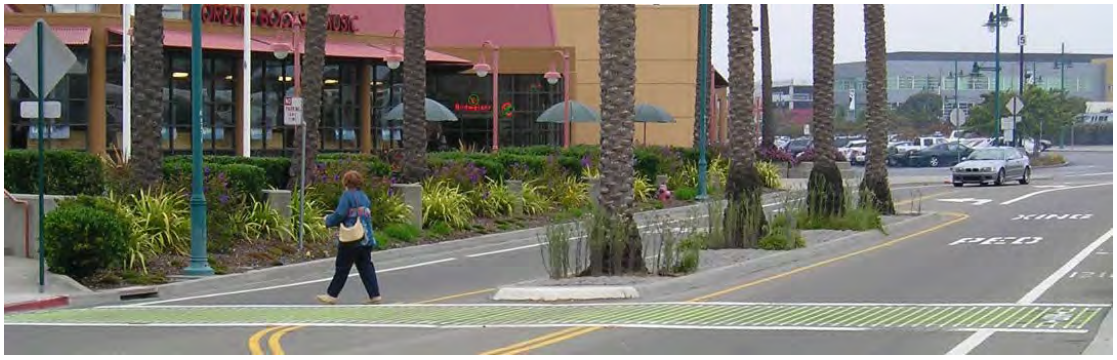


Image from Nelson\Nygaard.

Needs

Creating a truly walkable Alameda County will require more staffing and funding than even Measures B and BB can provide, as well as better information about where improvements will make the biggest differences to walking countywide.

Funding

The 2012 Countywide Pedestrian Plan identified a $1.9 billion gap between estimated costs and expected revenue for needed pedestrian projects, programs, and plans. Between funds from Measures B and BB, VRF, and the state Active Transportation Program, there will be considerably more funding available for projects that improve walking throughout the county, particularly inter-jurisdictional trails, like the Bay Trail, Iron Horse Trail, and East Bay Greenway; however, a substantial shortfall is projected to continue. Using the considerable resources available to improve walking most wisely will require better information about where pedestrian facilities are most needed.

ACTC_AR0301

Reliable Data

Investing effectively in improving walking conditions requires identifying where improvements are most needed. Although the U.S. Census, California Household Travel Survey, and BART Station Profile Study together tell us how many people, on average, walk each day countywide, these data sources have significant limitations (available infrequently, only capture commute trips, etc.) and generally there is a dearth of reliable data on where people walk, when, and for what purposes. To augment this information, Alameda CTC performs an annual count program to capture bicycle use at locations throughout Alameda County, as well as gathers data from automatic bicycle count equipment. Alameda CTC plans to reformulate its count program to best realize the strengths of manual count data (which provides great spatial richness but is a short-term snapshot in time) and automatic counters (which provide data over time but for a more limited number of locations) in the coming years.

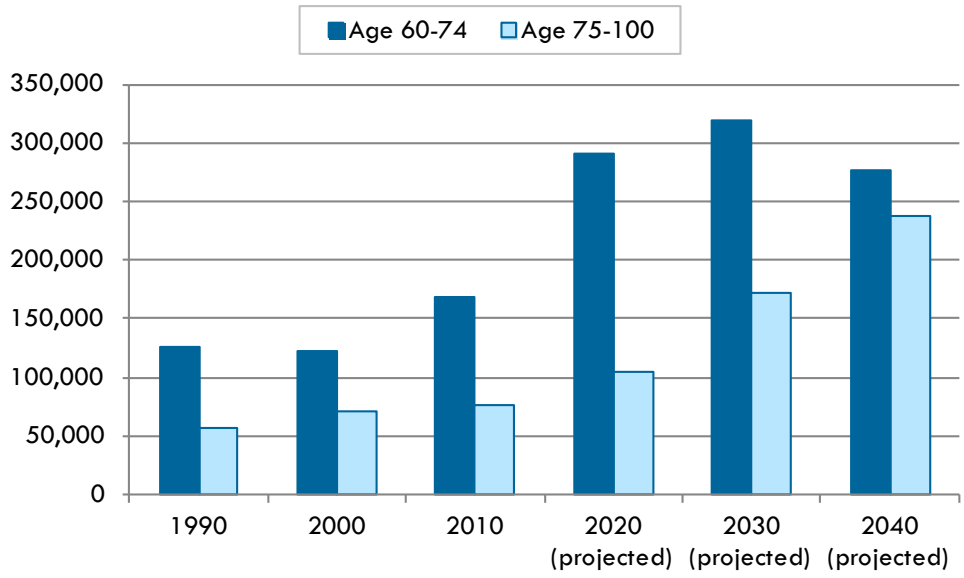
Vision for the Future

Through funding such as Measures B and BB, VRF, and the One Bay Area Grant, sponsorship of projects, like the county's major trails, and programs, like Safe Routes to Schools, Alameda CTC continues to implement the projects, programs, and plans called for in the Countywide Pedestrian Plan. To help implement the plan's most important recommendations, the next update should prioritize them using a data-driven process.

Image from Nelson\Nygaard.

Meanwhile, the Multimodal Arterial Plan provides detailed information on making 500 miles of the county's most important arterials more accessible to and safer for walking. The next Countywide Pedestrian Plan update should build on the arterial pedestrian nodes identified in the MAP, by helping overcome barriers at the highest priority locations.

ACTC_AR0302



F. Mobility for Seniors and People with Disabilities

Introduction

Seniors and people with disabilities represent a significant and rapidly growing cohort of the Alameda County population whose mobility needs cannot always be met by traditional transportation modes, both public and private. Currently, approximately 12% of the population is over 65, and almost 10% of the population has disabilities. The number of Alameda County residents over 65 is expected to double by 2040, reaching over 500,000 residents. With the aid of sales tax funding and other resources, Alameda County provides a number of innovative services specifically targeted to assist seniors and people with disabilities with their transportation needs.

The "Affordable Transit for Seniors and People with Disabilities" funding allocation in Measure BB is the highest percentage allocation of any sales tax in the Bay Area, reflecting the priority placed by County residents and decision-makers on serving these populations. Nevertheless, mobility gaps remain and can be expected to grow unless creative strategies continue to be developed to address these needs.

Figure 6-15 Aging Trends in Alameda County, 1990 – 2040

ACTC_AR0303

Successes

While mobility options in many Bay Area communities are limited to accessible fixed-route transit, paratransit programs, and taxis, Alameda County senior residents and those with disabilities have a broad array of modes to choose from. Some of these are described below.

Alameda CTC sponsors community events like this mobility workshop.

Image from Nelson\Nygaard.

ADA Paratransit

East Bay Paratransit provides service to residents primarily in the north, central, and southern parts of the county to meet both AC Transit and BART ADA requirements. Union City Paratransit serves locations throughout Union City, while WHEELS Dial-A-Ride serves the Livermore-Dublin-Pleasanton area. All services meet ADA paratransit requirements, which mimic fixed-route services in their area in terms of service span, geographic boundaries, and other criteria.[66]

City-Based Programs

Eleven cities in the County provide curb-to-curb or door-to-door service to seniors or people with disabilities aged 18 and older. In addition, some form of subsidized taxi program is available countywide. And many cities, sometimes in partnership with local community-based organizations, also provide travel training programs, volunteer driver programs, and/or shuttle services. Increasingly, cities are following nationwide trends by establishing a mobility management function that matches callers to the program that best fits their mobility needs and functional abilities. Mobility management efforts have been strongly supported by Alameda CTC as a way to ensure user-friendly service provision.

Specialized Same-Day Services

Two innovative programs provide a safety net for those who have more urgent needs than can be met by existing paratransit programs. The Hospital Discharge Transportation Service (HDTS) serves individuals who are discharged from the hospital without having pre-arranged transportation. This program, which is currently active in eight hospitals throughout the County, provides an inexpensive option to both hospitals and patients, and includes wheelchair accessible vehicles. The second

[66] For detailed information on ADA paratransit requirements, see http://www.fta.dot.gov/12876_3906.html.

ACTC_AR0304

program, the Wheelchair/Scooter Breakdown Transportation Service (WSBTS) provides free one-way rides home or to a repair facility to those who have been stranded due to a mechanical breakdown of their wheelchair or scooter. While both these programs are limited in scope, to the individuals who benefit from their services, they provide a critical service at a time when no other options are available. The potential expansion of these programs to serve a wider range of urgent same-day needs is being considered given the ongoing challenge of meeting same-day, accessible trip needs.

Trends and Challenges

While fixed-route bus and train service, paratransit services and programs, and the automobile will continue to serve most of this population's mobility needs, there are a number of recent and anticipated trends that present both challenges and opportunities for serving these needs more creatively and effectively. Some of the key considerations are:

Image from iStockphoto.

- Nationally and locally, the effects of the aging of the Baby Boomer generation can be seen. Operating costs and ridership continue to grow significantly for ADA paratransit programs. These federally mandated programs are more costly to provide on a per trip basis than fixed-route transit, and offer limited flexibility for travelers' needs.
- Paratransit programs both nationwide and in Alameda County are experiencing increased pressure to provide service to dialysis treatment clinics, which patients usually must visit three to four times per week. The number of patients on dialysis nationwide is steadily increasing, and only some of those patients are eligible for Medicare reimbursements for transportation. While these trips consume an increasing proportion of ADA paratransit trips, the lack of cost sharing arrangements with clinics is placing increased pressure on paratransit programs to serve the needs of other riders within constrained budgets.
- Ensuring reliable same-day service availability, especially for consumers who need wheelchair accessible vehicles, has been a long-standing problem that

ACTC_AR0305

will require ongoing attention. Unless required by local regulation, taxi companies tend to have limited availability of accessible, lift-equipped vehicles, and those that do often cannot dispatch them on a reliable, same-day basis due to cost and other operational constraints.

- Changes in the taxi industry are likely to significantly impact the way the senior and disability communities are served. Reductions in taxi driver availability and the shrinking of taxi company profits affects the ability to place greater requirements on taxi companies, such as the purchase of accessible vehicles and updated payment equipment.

Image from Alameda CTC.

- The rapid increase in transportation network companies (TNCs, such as Lyft and Uber) is creating both challenges and opportunities. These may have potential for serving first- and last-mile trips to fixed-route services to those older adults and people with disabilities who can ride transit, but who are unable to access bus stops and rail stations. ADA compliance issues, including the need to provide equivalent service for those needing accessible vehicles, assistance with stowing mobility devices, fare limits, as well as adequate driver screening and training, will need to be addressed to determine how TNCs may serve a role in meeting these communities' mobility needs.

Needs

- **Keep paratransit costs per trip under control.** The need to create more flexible mobility options on less expensive modes for seniors and people with disabilities will be a focus for Alameda County. Opportunities exist to both reduce costs per trip and provide a higher level of service to passengers by shifting some trips from ADA paratransit to other modes.

Image from Alameda CTC.

- **Ensure equitable service as new mobility options arise**. Alameda CTC is paying special attention to ensure that vulnerable populations are not left out of transportation innovations. Local trends in the on-demand transportation market are negatively affecting the availability of taxis, which

ACTC_AR0306

are a critical component of existing city-based paratransit programs. New incentive programs, partnerships, and/or regulatory frameworks will be needed to ensure ongoing availability of on-demand services for seniors and people with disabilities.

- **Same-Day Accessible Transportation.** Whereas subsidized taxi programs are now available countywide for people with disabilities, almost none of those programs can reliably provide same-day transportation for individuals who need to transport wheelchairs or other large mobility devices. This service gap has impacts on the county's ability to address dialysis transportation, non-emergency medical transportation, and paratransit mode shift strategies.
- **Dialysis Transportation.** New solutions for addressing the growing demand for dialysis transportation are needed to address the unique mobility needs of dialysis patients and to ensure that East Bay Paratransit, LAVTA WHEELS Paratransit, and Union City Paratransit (ADA paratransit providers) can continue to offer at least the minimum level of service required to all riders by federal law. Locally, solutions will require strong collaboration across public and private sectors, including Alameda CTC, local ADA providers and city-based programs, social workers, and dialysis clinics.

Image from Alameda CTC HDTS Summary Report 2012.

- **Non-Emergency Medical Transportation.** The county's two existing countywide same-day transportation programs—the Hospital Discharge Transportation Service and the Wheelchair/Scooter Breakdown Transportation Service—go above and beyond what many other counties in the nation provide. However, while providing same-day service is a unique benefit, limiting those trips by purpose reduces market demand and results in high costs per trip to the county. There is potential to reform these programs to increase levels of service to paratransit customers, increase incentives for private providers, and reduce costs per trip.
- **Potential Impacts of Countywide Transit Improvements on Paratransit** Recommendations from Alameda CTC's Countywide Transit Plan will both open up new opportunities for seniors and people with disabilities and create

ACTC_AR0307

some additional financial burdens on the ADA paratransit program. Recommendations for expanded, more efficient bus service on certain corridors will provide more options for the senior and disability communities. However, due to service hour expansions, some transit improvement recommendations will also require accompanying extensions of paratransit service, which will entail increased associated costs. Where necessary there may be a need to examine alternative, lower cost-per-trip models for providing required ADA paratransit service on enhanced bus routes.

Vision for the Future

As the population of people with disabilities and seniors grows, greater attention will need to be paid to creatively serving their mobility needs. Measures B and BB funding place Alameda County in a unique position to explore new options and customize existing programs in order to serve the greatest needs. Achieving greater integration between different transit modes, paratransit, taxis, on-demand services, and other community-based solutions will support freedom of movement for seniors and people with disabilities, and increase cost-efficiencies for public agencies serving the needs of these communities.

To achieve this vision, over the next one to two years, there is opportunity to:

- Establish a same-day accessible taxi incentive program to ensure the availability of on-demand transportation for individuals requiring a wheelchair-accessible vehicle
- Reform the HDTS and WSBTS programs and pilot a new same-day accessible transportation service
- Convene a subcommittee or task force of the Paratransit Technical Advisory Committee to develop solutions for dialysis transportation
- Conduct a countywide needs assessment to identify and determine other needs and solutions to serve seniors and people with disabilities in Alameda County.

ACTC_AR0308

G. Parking and Travel Demand Management

Introduction

Parking and travel demand management are critical and cost-effective strategies for managing congestion and making the most efficient use of the transportation system capacity in Alameda County.

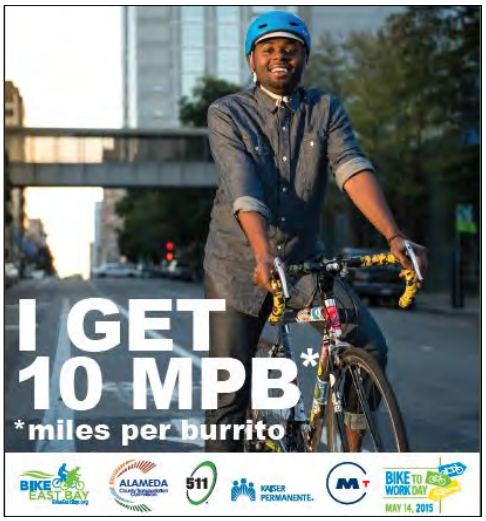


Image from http://www.alamedactc.org.

Successes

Alameda CTC has a long history of promoting and providing travel demand management in Alameda County. TDM is the strategic effort that improves transportation system efficiency and accommodates growing demand by increasing the number of trips people take using non-driving modes compared to single-occupancy vehicles. TDM strategies include promoting ridesharing, bicycling, walking, transit, parking management, and telecommuting.

TDM is a statutorily required component of the Congestion Management Program (CMP) under Section 65089 (b)(3) of the California Government Code. Alameda CTC has historically acted above and beyond this statutory requirement, providing a robust set of TDM programs and planning efforts supportive of TDM. These TDM activities are chronicled in the biannual CMP update as a "Travel Demand Management Element" chapter, which provides an inventory of the past TDM activities accomplished by regional partners, Alameda CTC, and local jurisdictions.

Image from http://www.alamedactc.org.

ACTC_AR0309

Trends and Challenges

Technological advances have brought travelers significantly closer to having access to real-time information about travel conditions and options. Key challenges remain in connecting travelers to these information sources and encouraging behavior change. Programs that incentivize, promote, and encourage use of non-drive-alone travel modes will continue to play a significant role in the transportation landscape.

Parking management and other policies will continue to be some of the most important ways to address drive-alone trips. To further efforts like goBerkeley and SFPark (see sidebar), Alameda CTC must continue to provide technical assistance and planning grants to jurisdictions interested in updating their parking management plans and policies. Because of the sensitivity to changes to parking management that often arises in the public discourse, technical assistance should include elements on process, messaging, and lessons learned by other jurisdictions. This will help to ensure that changes meet the needs of local business and residential districts while making the most of often-scarce parking resources.

Case Studies: Real-time parking pricing and management programs in the region:

San Francisco's SFPark pilot showed how technology can be utilized to create a real-time variable pricing parking program. SFPark provides drivers real-time information on where parking is available and real-time parking prices. However, the cost of implementing and managing the system was very high.

The City of Berkeley has used elements of that approach to develop the goBerkeley program. This program established demand responsive value-pricing of parking in three business districts, "Premium" parking is located closest to business districts and priced higher than "Value" parking, which is located in off-street parking garages and on-street parking in lower demand neighborhoods nearby. As part of this program, the City authorized legislation allowing the transportation department to increase or decrease the price of parking without needing approval from City Council; allowing parking rates to be easily adjusted to meet demand. The pilot program resulted in increased utilization of "Value" parking, and made it easier to find parking. Seventy-eight percent of those surveyed found that parking was easier (an increase of 41% from before goBerkeley implementation).

The regional TDM landscape has a rich history of supporting alternative modes. This landscape is experiencing some shifting; the following summarizes the evolving efforts of our regional partners:

ACTC_AR0310

- **Spare the Air Resource Teams:** There are a total of nine teams in the Bay Area region, two of which are located in Alameda County and listed below. These groups are made up of public, private, and nonprofit stakeholders that work together to distribute promotional materials to advocate for reducing vehicle miles traveled in their communities.
  - **Southern Alameda County Spare the Air Resource Team:** Includes partnerships with 511 Regional Rideshare Program, a transit agency (AC Transit), area businesses (Kaiser Permanente, Fremont Chamber of Commerce), a nonprofit partner (TransForm), County Supervisor Scott Haggerty's Office, school districts (Fremont, Hayward, New Haven, and Newark Unified), and cities (Fremont, Hayward, Newark, and Union City).

The Bay Area Air Quality Management District includes Alameda County and the greater San Francisco Bay area.

Image from Google Maps.

  - **Tri-Valley Spare the Air Resource Team:** Includes public sector transportation agencies and programs (511 Regional Rideshare Program, 511 Contra Costa, Safe Routes to Schools, Altamont Corridor Express, Wheels/Livermore Amador Valley Transit Authority), area private sector partners (Bishop Ranch Transportation Center, Edenred USA/Commuter Check, Enterprise Rideshare, Getaround.com, Hacienda Business Park, RidePal, Roche Molecular, Safeway), nonprofit partners (TransForm), Offices of Supervisor Scott Haggerty and Supervisor Nate Miley, and area cities (Dublin, Livermore, Pleasanton, and San Ramon).
- **The Bay Area Commuter Benefit Program**, which requires employers with 50 or more full-time employees to register and offer commuter benefits to their employees. More than 60% of the Alameda County employers that registered for the program are offering commuter benefits for the first time as a result of the program. MTC and the Bay Area Air Quality Management District are leading the effort to ensure this program becomes permanent and has released an evaluation report[67].
- **The 511 Rideshare Program** supports travelers in the Bay Area by providing information and incentives for ridesharing. The Regional Ridematching System

[67] The Bay Area Commuter Benefit Program pilot evaluation report can be found on Bay Area Air Quality Management District's website at: http://www.baaqmd.gov/rules-and-compliance/commuter-benefits.

ACTC_AR0311

hosted on 511.org pairs riders in static carpools and vanpools, and promotes a select group of qualifying private sector carpool matching smartphone applications.

Marketing and Promotion

Informing commuters of transportation choices and options is an important part of TDM, including information about opportunities and results such as travel time reliability, and time and costs savings afforded by many commute alternatives.

Reliable Data

Funding TDM and parking management programs is much easier when the effectiveness can be shown in the numbers—monitoring the number of trips or drive time reduced given the cost of implementing the program is important for demonstrating the effectiveness of a given approach.

Developing a robust evaluation methodology can often be outside the realm of experience of local jurisdiction staff and where support is needed Alameda CTC could provide monitoring support for TDM programs. Alameda CTC could consider planning and technical assistance funding for supporting reliable and comparable data collection and evaluation.

Vision for the Future

Next Steps for Alameda CTC Strategic TDM Activities

Alameda CTC takes actions to encourage, supplement, and support local governments in their TDM efforts, allocates funds for multimodal transportation improvements, provides guidance and technical assistance to localities in developing their own TDM programs, and monitors compliance with the required program that's part of the TDM element in the CMP. Alameda CTC's planning efforts also consider TDM.

Strategic Planning Activities

- **Funding multimodal transportation infrastructure and services:** The 2012 Countywide Transportation Plan suggests 52% of project funds and 60 % of programmatic funds for transit and bicycle and pedestrian projects and programs. This 2016 Countywide Transportation Plan will similarly suggest improvements in multimodal infrastructure.
- **Planning for multimodal transportation infrastructure and services:** The 2012 Bicycle and Pedestrian Plan updates, and the 2016 modal plans (Transit Plan, Multimodal Arterials Plan, and Goods Movement Plan) outline strategies to increase transit, bicycle and pedestrian mode share.

ACTC_AR0312

Strategic Project and Program Activities

- **HOV/Express Lanes Operations:** Alameda CTC operates two express lanes on the I-680 and I-580 corridors. In addition to managing these lanes Alameda CTC and partners on the corridor have employed promotional programing, which will be discussed further as follows.
- **Guaranteed Ride Home Program (GRH):** The GRH program continues to provide an insurance policy to provide relief to pedestrians, cyclists, carpools/vanpools, and transit riders by way of reimbursement for unplanned trips, such as medical emergencies or unscheduled overtime.
- **Safe Routes to School (SR2S) Program:** The future for SR2S includes continuation of educational programs, safety projects, and support for Walk and Roll to School Day. The program will continue to support the Alameda County SR2S website (alamedacountysr2s.org), which provides information, as well as event postings and news reports to students, parents, and teachers.
- **Affordable Student Transit Pass Pilot Program:** This program will begin in 2016 to develop pilot school sites for providing affordable transit to middle and high school age youth.
- **Bike Safety Education:** Alameda CTC will continue engaging with Bike East Bay to provide free bicycle safety classes for people in Alameda County.

Technical Assistance

- **Technical support for new and existing transportation management associations (TMAs):** TMAs throughout the county are typically comprised of a "group of public and private agencies and firms joined to cooperatively develop transportation-enhancing programs in a given area."[68] Alameda CTC will continue to foster new TMAs and strengthen support for existing TMAs as part of the CMP.
- **Technical assistance:** Through the Sustainable Communities Technical Assistance Program, Alameda CTC supports multimodal planning efforts that focus on priority development areas to implement alternative transportation studies and projects.

[68] National Resource Center for Human Service Transportation Coordination, and Community Transportation Association. "Glossary of Transportation Terms." Accessed March 3, 2016. http://web1.ctaa.org/webmodules/webarticles/articlefiles/TransportationGlossary.pdf.

ACTC_AR0313

- **Commute Choices website:** Launched in 2015, this online platform inventories the full range of commute alternatives and is Alameda CTC's TDM clearinghouse. The opportunities for expansion of this tool include leveraging the existing tools available to commuters and providing a central landing place for Alameda County commuters.

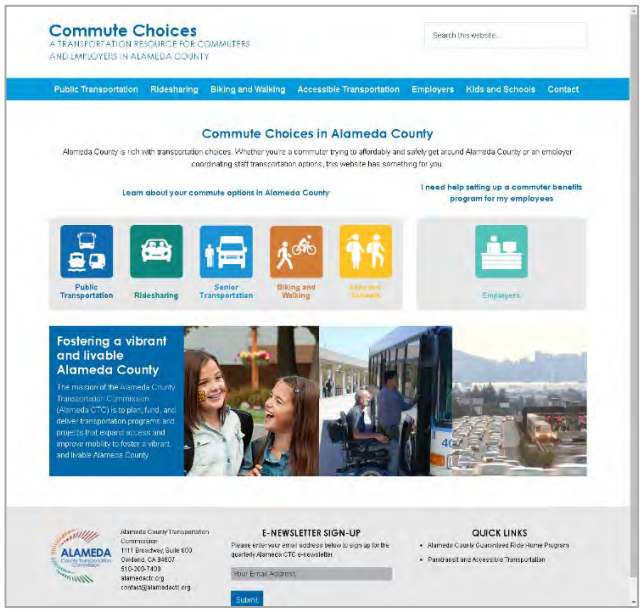

Image from http://commutechoices.alamedactc.org/.

Promotional Programs

- **Walking and biking promotional programs:** Both the "I Walk!" and "I Bike" promotional campaigns have succeeded in prompting active transportation in Alameda County. Since 2008, Alameda CTC has supported the annual Bike to Work Day event.

Corridor-specific Promotional Programs:

- **I-580 and I-680 Express Lane Corridors:** Alameda CTC promotes rideshare opportunities on an ongoing basis within the express lanes it manages in Alameda County.
- **I-80 SMART Corridor:** Alameda CTC is partnering with various state and local agencies to provide real-time traffic information and corridor management along the I-80 corridor and parallel/connecting arterials to reduce congestion. The corridor is managed through adaptive ramp metering, real-time incident management reporting and rerouting. Variable speed signs and blocked lane signs assist drivers in making informed decisions in the event of an incident.

H. Technology and Innovation

Introduction

Image from actransit.org.

Transportation has been changing dramatically over the last few years, from new navigation services that provide real-time traffic conditions (such as Waze and Google Maps), new kinds of privately managed transportation services, to automated vehicles. For public transit, real-time arrival information has become the norm, while smartphone ticketing is now being used by a few transit agencies. Technologies that were once considered unattainable or unrealistic are now a reality. Alameda CTC will need to position the county to take advantage of these while ensuring that services are still available to those that may not have access to computers or smartphones.

Alameda CTC has also been working to improve transportation network operations through implementation of infrastructure (supply) and demand-based technologies. On freeways, permanent variable message signs provide users with information on delays and incidents. Other technology improvements include: signalization improvements, signal priority/preemption, ramp metering, Advanced Traveler Information Systems (ATIS), and incident detection and management. These technologies help reduce congestion and improve safety of existing infrastructure. Through the Travel Demand Management program, Alameda CTC is exploring options to partner with the private sector partners engaged in shared-mobility to expand travel choices in addition to its traditional Guaranteed Ride Home Program.

ACTC_AR0315

Successes

The following Alameda CTC projects show how technology and innovative solutions can help address the county's transportation problems.

East Bay SMART Corridors Program

The East Bay SMART Corridors Program[69] is a collaboration between Alameda CTC, MTC, state highway agencies, AC Transit, and local jurisdictions to improve the functioning of key highway and arterial corridors, including the I-80/San Pablo Avenue Corridor, the I-880 Corridor (which includes the freeway and parallel arterials from Oakland to Union City), and the International Avenue/East 14th Street/Telegraph Avenue Corridor. Specific strategies include ramp metering, signal coordination, and pre-emption, allowing smoother flowing traffic and adjustments to signal timing for transit and emergency vehicles to provide faster services. Managing freeways and nearby arterials together allows greater flexibility to manage normal rush-hour congestion as well as specific traffic incidents. The I-80/San Pablo Avenue SMART corridor is discussed further below.

Image from smartcorridors.com.

[69] Further information on the Alameda County SMART Corridors Program can be found at: http://www.alamedactc.org/files/managed/Document/17311/1407.000_SMARTCorridorsOM_factsheet_CMA9450.pdf.

ACTC_AR0316

I-80 SMART Corridor Project/Integrated Corridor Mobility Project (ICM)

With as many as 270,000 vehicles per day, the I-80 corridor in Alameda County is one of the busiest in the Bay Area. The I-80 SMART Corridor/Integrated Corridor Mobility project[70] manages traffic on I-80 between the Bay Bridge Toll Plaza and the Carquinez Bridge, including San Pablo Avenue and the portions of arterials connecting San Pablo Avenue and I-80. The project includes a network of integrated electronic signage and signals, such as variable message signs, blocked lane signs, ramp meters, and other elements to enhance safety and travel time reliability and reduce accidents and associated congestion.

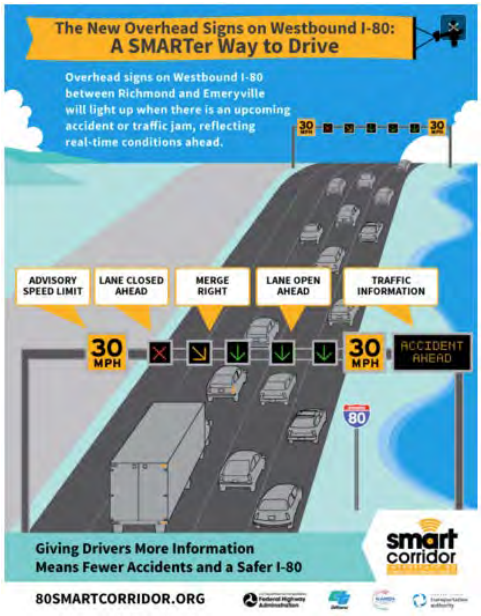

Image from smartcorridor.org.

Express Lanes

Image from bayareafastrak.org.

Alameda CTC pioneered the implementation of Express Lanes in the Bay Area region with the implementation of Northern California's first express lane on the southbound I-680 between SR 84 and SR 237 in 2010. Additionally, the first continuous access Express Lanes in the region were opened on I-580 in the Tri-Valley area of Alameda County in February 2016 between Dublin, Pleasanton, and Livermore. These express lanes are congestion relief strategies that make remaining capacity available to solo drivers that pay a toll while keeping it free to eligible users. Tolls vary depending on congestion levels, and can be paid using a standard FasTrak® transponder. Carpools, vanpools, and eligible clean air vehicles can use the lanes for free like a normal HOV lane by using a FasTrak Flex transponder. These lanes, which use varying tolls according to congestion levels ensure the most efficient use of scarce freeway capacity, prevent slow-downs, and improve enforcement capabilities and the ability for emergency vehicles to quickly access crash sites. MTC is developing a network of Express Lanes[71] throughout the

[70] Information about the I-80/San Pablo Avenue SMART Corridor can be found at http://www.alamedactc.org/app_pages/view/1700.

[71] Further information on all operating and planned Bay Area Express Lanes can be found at http://bayareaexpresslanes.org.

ACTC_AR0317

Bay Area that will convert 150 miles of existing HOV lanes to express lanes, and add 120 additional miles to this network. The ultimate vision will include 550 miles of express lanes.

East Bay Bus Rapid Transit

Bus Rapid Transit (BRT) is a cost-effective way to improve transit performance and increase ridership by giving transit its own dedicated lane and making other improvements to improve reliability, convenience, and attractiveness of the service. Construction will begin in 2016 on the East Bay's first BRT project by AC Transit, the East Bay Rapid Transit Project, which will be constructed between Downtown Oakland and San Leandro, with planned completion by the end of 2017.[72] The project will include elements such as transit signal priority and signal upgrades to improve bus travel times along this critical transit corridor. This is the first BRT project in the East Bay and could potentially serve as a model for future projects to improve the speed and reliability of transit service on major corridors and bus transit trunk lines.

Seattle's BRT expansion features real-time information at stops.

ACTC_AR0318

Trends and Challenges

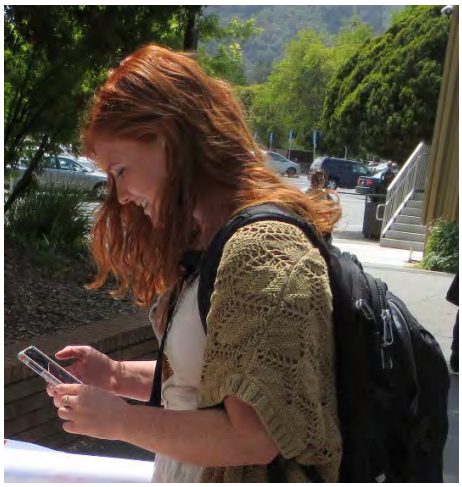

Image from Nelson\Nygaard.

Advancements in technology and the widespread use of smartphones are causing the biggest changes in transportation since the invention of the automobile. Policy makers are forced to contend with issues that have never before existed, but at the same time, these technologies have the potential to solve transportation puzzles that previously seemed intractable. It is critical that Alameda CTC consider these technologies, and their challenges and opportunities, in its long range planning activities. Alameda CTC has not made any policy decisions associated with these trends and recognizes that the regulatory environment is evolving to address safety, accessibility, affordability, and labor issues.

On-demand/Micro-Transit

Image from vta.org.

Flexible on-demand or micro transit is also being aided by technology. The Santa Clara Valley Transportation Authority (VTA) recently launched FLEX, their dynamic transit pilot program, which operates within a 3.25 square mile area in North San Jose and is slated for expansion. Users request rides and pay the fare via their smartphones and drivers are dispatched. The pilot is meant to reduce on- and off-vehicle travel time by providing stops closer to destinations and only stopping where and when rides have been requested. This could be an affordable option in Alameda County for low-density areas, mid-day or late-night services, or services that serve people with special mobility needs. AC Transit will also be testing a flex-service model in southern Alameda County in 2016.

Transportation Network Companies

Transportation Network Companies (such as Lyft and Uber) have become commonplace, providing new options for short-distance trips, first/last mile transit connections, and transportation for people with mobility challenges such as those with disabilities and the elderly. They are easily available in denser urban areas at all times of day or night but often lack availability outside of the urban core, and require use of a smartphone. Other companies such as Chariot, in San Francisco, operate more like transit, using vans on scheduled routes.

ACTC_AR0319

Carpool matching

Private carpool matching apps are also gaining traction, with the ability to flexibly match people into carpools on a per-trip basis. Many of the traditional barriers to carpooling can be overcome with these types of services. 511 Rideshare has developed a partnership program to promote these new technologies to expand carpooling. These new carpool apps provide the opportunity to directly provide incentives to those that are carpooling and confirming that the trip has been taken. They also have the potential to provide new data on areas where higher capacity transit could operate.

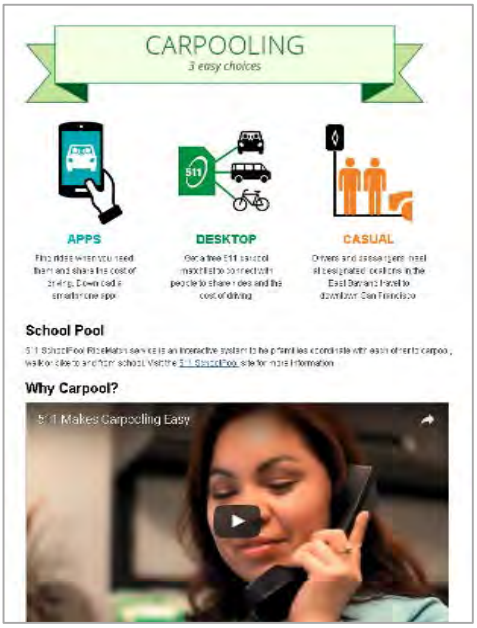

Image from 511.org.

Vehicle and Parking Sharing

While car-sharing has been available for over a decade, new technologies are enabling more sophisticated networks and different types of sharing beyond private car fleets, such as ZipCar and City Carshare. The Bay Area is already home to new vehicle types available for sharing including bike share (Bay Area Bike Share) and scooter share (Scoot), as well as different sharing models, such as private vehicle owners allowing others to user their vehicles when they don't need them as compared to a sharing company owning and maintaining its own fleet of vehicles. Point-to-point car sharing (such as Car2Go) exists elsewhere in the U.S. but is not available yet in the Bay Area due to complications involving parking policies. Carma Carpool and City Carshare have recently joined forces to develop a service that combines carpool matching, shared vehicles, and employer fleet vehicles to maximize usage of car seats, vehicles, and parking spaces. Peer-to-peer parking (where people can rent their driveway or other parking space when they aren't using it) will likely also be something we see in the future. New technology has also allowed improvements in secure bike parking, with card activated bike lockers and secure bike rooms now available at a number of BART stations. These technologies make it easier for people to own fewer cars and use alternative modes, knowing that a vehicle (of any type) is available when needed.

Goods Movement

Existing and emerging technologies are critical for the goods movement sector in several different ways. Through use of Intelligent Transportation Systems, connected

ACTC_AR0320

vehicles, and other technology solutions, existing roadway capacity can be more effectively used to move goods efficiently within and through Alameda County. Technology and operational strategies are also key to reducing impacts of goods movement activity on the health, safety, and quality of life in neighborhoods, as trucks move through these communities. Alameda CTC is creating a technology development collaborative to deal with the low emission program, introduce advanced logistics technologies, and develop public-private partnerships for pilot of demonstration technologies (see Goods Movement modal strategy for further information).

Data Availability

Transportation is by definition a mobile activity. The development and expansion of services that use mobile platforms such as smartphone apps and wearable technology in their operations can provide improved information on where people are going to and coming from, and how they are getting there. Where transportation data was once entirely within the purview of public agencies, now much of this data is being collected by the private sector. Working collaboratively with the owners of this data may allow new insights into where improvements may be needed and whether efforts have led to positive outcomes. Some apps already provide real-time feedback to users such as navigation apps that provide detours around incidents or congestion, and can provide opportunities for incentivizing use of sustainable modes to those that are using them. While these data sources provide expanded opportunities, they may have varied coverage across demographic groups and geographies, and should not be a sole source of information. Working with "big data" also comes with its challenges, such as partnerships with private sector data owners, new types of data sets, as well as the sheer volume of data that also requires new analysis tools and expertise.

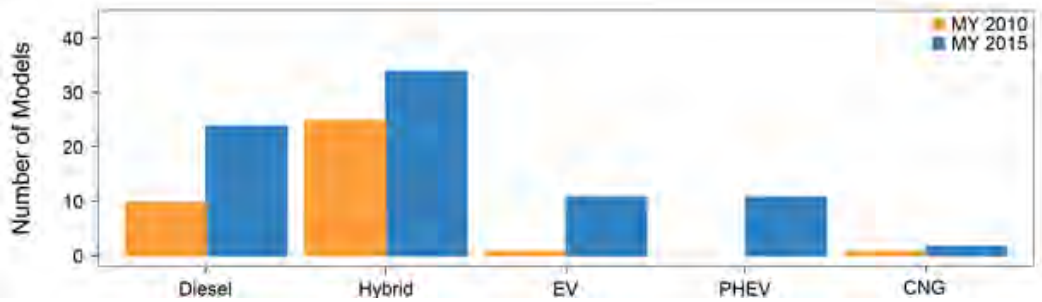
Automation

Automated vehicles and connected vehicles, including vehicle to vehicle (V2V) and vehicle to infrastructure (V2I) technologies, have the potential to change the face of transportation as we know it. It is likely that in the future, fewer people will own cars, more people will regularly ride with strangers, fewer parking spaces will be needed, and the efficiency and safety of the overall system may be improved. While it is difficult to know what the true impacts will be, flexibility can be built into long range plans now so that planners and decision-makers can more quickly respond. As changing technology evolves, Alameda CTC's role could provide technical assistance and trainings on the subject to ensure that jurisdictions plan for potential

ACTC_AR0321

impacts, as well as develop supportive policies in anticipation of these technologies, while ensuring that public needs are addressed.

Vehicle Technology



Increased fuel efficiency, alternative fuel vehicles, and vehicle technology innovations have changed the fundamental assumptions about the environmental impacts of driving. The number of vehicle models using alternative fuels and increased fuel efficiency has increased dramatically in the last several years (see Figure 6-13, below). This is good news for transportation impacts and air quality in Alameda County. Supporting the use of these vehicles includes expanding supporting infrastructure such as EV charging stations in public parking areas.

Electric vehicle recharging stations like this one in Salem, Oregon, support the expansion of electric vehicle usage.

Image from Nelson\Nygaard.

ACTC_AR0322

Needs

Knowledge Sharing

The rate of technological advance means that government agencies are often struggling to keep up. A forum for local agencies to learn about and share, discuss, and identify the impacts and opportunities for new technologies is critical to positioning Alameda County as a transportation leader.

Data

Technology operates on data, and transportation data has historically been the arena of government. Newly available "big data" could provide a wealth of information to improve planning and funding activities across Alameda CTC's many roles. With an increase in available data, it will be important to develop a team focused on working with this data, including aggregation and analysis. This will allow planners and other staff to focus on how to apply insights from the data rather than keep up with the newest data sources, formats, and analysis methods.

ACTC_AR0323

Vision for the Future

Technology and innovation in the transportation arena are taking place at an incredible rate. New transportation options are solving problems previously considered intractable. Government agencies are working to identify their role in this new landscape. Alameda CTC can take the lead by looking for ways to use, promote, and assist in the uptake of technologies that help meet shared goals, while at the same time working to ensure that all communities benefit from them. It will be important to identify areas that will also impact government staffing and revenue early.

Image from Flickr user Thomas Hawk.

- **Develop collaborative relationships** with technology companies that will help Alameda County meet shared transportation goals such as reduced emissions and congestion, and increased use of sustainable modes.
- **Improve data collection and analysis methodologies** by taking advantage of newly available data sources that can provide more detailed information about transportation choices, routes, needs, and the outcomes of planning, service improvement, and promotional efforts.
- **Develop guidance and partnerships with local and regional jurisdictions** and hold webinars and other training sessions on new technology, its impacts to transportation planning, policy implications, and how local jurisdictions can respond. Topics can include vehicle technology and communications and potential impacts to local transportation, staff, and budgets; infrastructure requirements; and data collection and analysis. Develop partnerships across agencies and jurisdictions to address data and policy issues.
- **Work with local jurisdictions and transit agencies** to identify ways that new technologies can improve transit service to traditionally underserved populations such as low-density areas, elderly, and people with disabilities.

ACTC_AR0324

- **Continue to develop innovative connected corridors** that can improve safety and reduce congestion, and expand implementation of congestion pricing based on real-time conditions. Support policies and projects for vehicle to vehicle (V2V) and vehicle to infrastructure (V2I) communications.
- **Support pilot programs** that can test technological solutions that can support Alameda CTC's transportation vision and goals.
- **Identify ways that technology can be used** to further advance planning processes, such as providing public information and soliciting input to and from those most interested and affected by specific projects.

ACTC_AR0325

7 Equity Strategy

Introduction

Ensuring that our transportation system serves everyone is a fundamental goal of Alameda CTC, and ensuring people of all backgrounds have access to the Bay Area's vibrant economy will only strengthen the county's and region's abilities to compete in the global economic system. This equity strategy and the analysis that undergirds it aim to position Alameda CTC to inform partners and to address existing transportation equity issues through the agency's planning efforts and funding programs. The equity strategy will be a component of future CTP updates to ensure this work is sustained over time.

Alameda County is one of the most diverse counties in California, with large populations from a variety of racial and ethnic backgrounds. The richness of this diversity, and the benefits it brings to our communities, underscores the need for equitable, accessible, and affordable transportation options. Alameda County is also home to many individuals for whom it may be more difficult to navigate the transportation system due to language barriers, economic hardship, mobility challenges, or simply by circumstance of age. Nearly 20% of the county's population has limited proficiency with English, and language limitations can create barriers to accessing information about mobility options. More than a third of the county's households earn less than $50,000 per year,[74] making it a challenge for many to afford daily transportation costs. Alameda County communities also include many young people and a rapidly increasing population of elderly individuals. Both of these groups also face a unique set of mobility and transportation challenges.

Transportation is, of course, typically a means to an end rather than the end goal—it is the way we travel from home to work, school, shopping, and leisure by a variety of different routes and modes. As such, transportation improvements are influenced by a variety of different factors: land use and transportation policy decisions; local, state, and federal funding availability; and, of course, system performance. While the equity analysis examines the ways the existing transportation system meets the needs of Alameda County travelers today and addresses goals for the future, our transportation system is also shaped by historical investment policies and ongoing challenges. This equity analysis reveals no substantial inequities in the investment of Alameda CTC's local funding. Improving our transportation system with limited funds presents ongoing challenges that affect each mode and each community differently, particularly given historical policies.

[74] Defined as "low-income" for this analysis, as the closest approximation of 200% of the federal poverty line for a family of four. Source: Alameda County travel demand model.

ACTC_AR0327

Alameda CTC is committed to addressing the complex nature of these challenges with our partners, and the equity strategy represents a key step in doing so. The analysis detailed in this chapter looks at how members of the populations described herein are distributed geographically and compares that to the ways in which the performance of the transportation system and the system's negative impacts vary across the county. It also considers the results of community outreach efforts, through which members of these communities identified priorities for the transportation system, including:

- Ensuring safe travel for all modes, particularly pedestrians and bicyclists
- Implementing solutions to manage traffic congestion
- Enhancing the county's bicycle network and creating more opportunities to store bikes securely
- Increasing bus service and improving bus travel time and reliability
- Addressing transportation needs specific to aging populations
- Improving access to/from BART stations for pedestrians
- Making public transit more affordable and accessible for students
- Improving intersection design for all travelers
- Ensuring easy connections between transit operators and routes

The equity strategy responds to these issues and represents an effort to begin developing ways to narrow and, ultimately, address transportation disparities over the life of the Countywide Transportation Plan. Specifically, the equity strategy seeks to:

- **Illustrate whether countywide transportation inequities exist in communities with concentrations of the equity factors identified.** This illustration will be presented both in terms of the equity of "inputs," or transportation investments, and in terms of the equity of the "outputs" in terms of levels of transportation performance.
- **Educate local jurisdictions on transportation equity issues identified** by providing mapping analysis on all disadvantage factors analyzed. This geographic analysis expands the focus beyond the MTC-identified Communities of Concern and the Community-Based Transportation Plan (CBTP) communities, recognizing that there are more people in Alameda County that might be included in the equity analysis factors than located only in these defined areas.
- **Ensure future programming is supportive of the needs identified in the equity analysis**; while the CTP is not a programming document, and is not directly linked to funding, it can be used as a framework for understanding equity disparities.

It is important to remember that many of the equity issues highlighted in this chapter are about more than just transportation, and some factors contributing to these

ACTC_AR0328

conditions are beyond the control of Alameda CTC and this Countywide Transportation Plan. Alameda CTC is committed to addressing disparities through the levers of influence available to the agency. However, eliminating disparities will require effort from a range of public and private actors and institutions, supported by policies at every level of government that address the underlying causes of these issues.

Relationship to Community-Based Transportation Plans and Lifeline Transportation Program

This equity strategy functions as an integrated Alameda County Community-Based Transportation Plan update. The Lifeline Transportation Program provides an important source of funding for investments and services that meet the transportation needs of economically disadvantaged populations throughout the region. To be eligible for the grant program, projects must address a need identified through a CBTP or "other substantive local planning effort involving focused outreach to low-income populations."[75] This analysis looks at more than just economic disadvantages, also considering things like race-, age-, language-, and mobility-related factors that might also create disadvantages. Still, the analysis below aims, in part, to identify which communities meet Lifeline's eligibility criteria while expanding the range of communities considered for program funding beyond those identified during previous CBTP development efforts.

To date, the county's CBTPs have focused on five communities in North and Central Alameda County. This effort builds off that work by acknowledging that those communities have ongoing needs while also calling attention to other neighborhoods with less concentrated but still notable disadvantaged communities in other parts of the County. It broadens the more traditional approach by looking at transportation needs and performance gaps across the county, not just in CBTP communities. This more holistic approach opens up a wider range of potential strategies and solutions to meet identified needs and gaps.

Equity Analysis

Background

It has only recently become more common for countywide or regional long-term planning studies to directly factor the ways in which disadvantaged populations experience the transportation system into decisions about long-term improvements or the ongoing administration of transportation programs. MTC has been a pioneer in considering these types of populations in its long-range planning efforts, completing equity analyses as part of its two most recent Regional Transportation Plans (RTPs). MTC recently recommended that each of the nine Bay Area counties also complete

[75] http://mtc.ca.gov/sites/default/files/LTP4_guidelines.pdf, page 18.

ACTC_AR0329

equity analyses as part of their next countywide transportation planning efforts, as defined in MTC's CTP guidelines.

Past equity analyses have taken a variety of forms, but they typically attempt to estimate how transportation spending accrues to different population groups and whether the transportation system's performance is generally worse for those groups, based on the geographic areas in which they are concentrated. Alameda CTC's approach is grounded in research on best practices and lessons learned from past efforts and uses a combination of spatial and statistical analysis tools to understand nuances across populations, communities, and geography.

Methodology

The analysis included racial, Limited English Proficiency (LEP), and low-income populations consistent with Federal Title VI analyses, as well as a small number of additional groups deemed to be potentially disadvantaged, including zero-car households, young people who are old enough to travel independently, and seniors. A limited number of metrics were selected on which transportation system performance would be measured based on how effectively they represent one's overall experience with the transportation system, how well they reflect the goals of the Alameda CTC Countywide Transportation Plan, and data availability. To examine the distribution of positive and negative impacts across these groups multiple test methods were explored, in order to determine which would be most robust. Testing multiple approaches led to the most inclusive methodology that could be applied with the data available to the team—incorporating groups that were adversely affected whether

Assessing Correlations between Demographics and Performance—a primer on the methodology

The equity analysis used a series of statistical tests to determine whether areas with higher concentrations of a demographic group were correlated with worse outcomes on performance. Two of the statistical tests (difference of means and chi-squared) compared the performance of Census tracts with a substantial concentration of each demographic group to all other tracts, while one of the tests (regression) looked continuously at whether increasing concentrations of a given demographic group was correlated with worse performance on a given metric. If *any* of the three statistical tests revealed a negative disparity or a trend toward worse performance, it was deemed an equity issue.

Using just one of these tests could leave the analysis vulnerable to missing some disparities. Relying on two tests that compare transportation conditions in a group of tracts with high concentrations of a given demographic group to those with low concentrations of the group might have missed patterns that would be revealed if the thresholds defining high versus low concentrations were set differently. Likewise, if the analysis relied entirely on regression, it might have missed some disparities that could be masked by correlations between the demographic variables (i.e. if two demographic groups tend to live in the same areas or if certain demographic variables overlap significantly) or the effects of unevenly distributed data (i.e. if performance is particularly good or bad in fewer tracts, that could skew regression results).

ACTC_AR0330

they were members of multiple groups of one group, or were affected by one factor or many factors.

Demographic Groups

Traditionally, disadvantaged populations have been considered in an aggregated way, with a focus on areas with populations with multiple or *overlapping* concentrations of people from those disadvantaged or vulnerable backgrounds. While this approach has strengths and has enabled the identification of communities with the most extreme concentrations of disadvantaged populations, it also has limitations, obscuring challenges specific communities face and excluding people from vulnerable demographic groups who happen to live in areas with lower concentrations of such populations.

The adopted approach for the CTP sought to mitigate these limitations by analyzing transportation performance for each population individually across various factors, in order to examine whether any specific group experiences disproportionately poor transportation conditions. In other words, the approach tried to identify groups for which, no matter where members of the group live, the transportation system tends to perform worse than it does for people in the general population.

This analysis focused on the historically underserved demographic groups shown in Figure 7-1. Groups were included based on the Federal Transit Administration's Title VI guidance, U.S. Census Bureau categories and thresholds, and/or inclusion in Plan Bay Area.[76]

[76] The analysis also initially considered women a vulnerable demographic group, given historic disadvantages, but did not find major differences in women's population share across neighborhoods, nor notably worse transportation performance for the group on most metrics.

ACTC_AR0331

Figure 7-1 Groups Included in Equity Analysis

Equity Factors	Demographic Groups	Reference for Inclusion
Racial/Ethnic	American Indian and Alaska Native Asian[77] Black or African American Hispanic or Latino Native Hawaiian or Other Pacific Islander[78]	FTA Title VI Guidance (Circular 4702.1B)
Income/Affordability	Up to 200% of federal poverty line ($50,000/household as estimate)[79]	U.S. Census Bureau Poverty Thresholds
Age	Mobile Youth (10-19 years)[80] Senior (>75 years)[81]	Youth: U.S Census and California DMV Senior: Plan Bay Area equity category
Language Skills	Limited English Proficiency[82]	Plan Bay Area
Mobility	Zero-Car Households	Plan Bay Area

Performance Metrics

The analysis looked at transportation system "inputs," i.e., how transportation dollars are spent, and "outcomes," i.e., the accessibility, quality, and usability of the transportation system that result from investment patterns of the transportation system in Alameda County, and how equitably they are distributed today.

[77] Includes, per FTA Circular 4702.1B: "People having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Malaysa, Pakistan, the Philippine Islands, Thailand, and Vietnam."

[78] Includes, per FTA Circular 4702.1B: "People having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands."

[79] Given the structure of Census data, this is the closest possible approximation of 200% of poverty for a family of four. The poverty line for a family of two adults and two related children was $24,008, according to the most recent thresholds released in 2014. The 200% federal poverty line metric was chosen to maintain consistency with federal funding guidelines using this threshold to identify low-income people. (http://www.census.gov/hhes/www/poverty/data/threshld/thresh14.xls and http://factfinder.census.gov/bkmk/table/1.0/en/ACS/13_5YR/S1901/0500000US06001).

[80] The selected census age groups represent the age range at which minors are generally independently mobile but lack an automobile. DMV license data was used to confirm that this bracket should include people in their late teens – this cohort gets drivers licenses at much lower rates than other age brackets.

[81] Per Plan Bay Area, 75 represents advanced enough age that mobility might start to be limited for a significant portion of this cohort.

[82] Per FTA Circular 4702.1B: "Includes people who reported to the U.S. census that they speak English less than very well, not well, or not at all."

ACTC_AR0332

The equity analysis used five areas of transportation performance that could be readily analyzed based on available data. The performance areas and the specific metrics are shown in Figure 7-2.

Figure 7-2 Equity Performance Metrics

Topic Area	Metric	Source
Motorized Accessibility	Job Accessibility[83] via Transit (45 minutes) vs. Auto (30 minutes)	Alameda CTC Travel-Demand Model and U.S. Census Bureau Longitudinal Employer-Household Dynamics (LODES) Data
Motorized Accessibility	Difference in Peak and Off-Peak Job Accessibility Ratios	Alameda CTC Travel-Demand Model and U.S. Census Bureau Longitudinal Employer-Household Dynamics (LODES) Data
Bicycle and Pedestrian Safety	Pedestrian and Bicycle-Involved Collisions	Caltrans Statewide Integrated Traffic Records System (SWITRS)
Bicycle Comfort	Average Level of Traffic Stress on Nearby Arterials	Alameda CTC Arterial Plan
Air Quality	Diesel Particulate Matter (PM)	CalEnviroScreen 2.0
Air Quality	Asthma ER Visit Rate	CalEnviroScreen 2.0
Pavement Condition	Share of Roadway Miles Deemed "At Risk" or Worse	MTC StreetSaver

Findings

As noted above, the equity analysis examines the ways the existing transportation system meets the needs of Alameda County travelers today, recognizing that these results are from historical investment policies outside of Alameda CTC's decision-making control. This equity analysis reveals no substantial inequities in the investment of Alameda CTC's local funding.

Figure 7-3 summarizes the outcomes of the equity analysis. Cells in the matrix with a diamond indicate that at least one of the statistical tests identified a disparity or trend toward worse performance for the particular demographic group on the

[83] Job accessibility is defined as the number of jobs in specific categories that residents of a given tract can reach within the specified travel time for each mode. Jobs included in this analysis included jobs in low-wage and mid-range industries, based on MTC Prosperity Plan Jobs Housing Report categorizations: Retail trade, administrative support, waste management, remediation, arts, entertainment, recreation, accommodation and food services, other services (not public administration), construction, manufacturing, wholesale trade, transportation and warehousing, real estate, rental, leasing, educational services, health care/social assistance, and public administration.

ACTC_AR0333

particular performance metric. Areas with higher concentrations of African American/Black residents showed disparities or negative trends on each of the metrics, more than any other demographic group. Other groups seeing poorer performance across most of the metrics include low-income households, individuals with limited English language proficiency, and households without private cars.

The difference in the reach of transit, relative to automobiles, between peak and off-peak periods might be particularly important for low-income and zero-car households, which are more likely to depend on transit for their economic well-being. People with low incomes may also disproportionately hold jobs with arrival and departure hours that do not fall in traditional peak periods, making the difference between peak and off-peak service particularly challenging for them.

Several metrics showed equity issues for a majority of the demographic groups. These included air quality (rates of emergency room visits related to asthma), as well as access to comfortable bicycle facilities. These results align with anecdotal information, background research associated with transportation inequities, and the following data from the surveys conducted as part of this effort. Many individuals in the targeted populations tend to be concentrated in areas with wider streets, more traffic, and proximity to air pollution sources, including goods movement facilities and regional freeways.

ACTC_AR0335

The equity analysis used the ratio of jobs in certain categories accessible by transit to the number of jobs accessible by auto. This functions as a measure of the availability of a variety of good travel options. It is important to note, however, that transit accessibility was much lower than auto accessibility across the county, even in the areas with the best transit service. This condition is by nature a potential transportation equity issue, given that low-income households are less able to afford the expenses related to private automobiles than higher-income households. In other words, job access is an issue for disadvantaged communities countywide because of the disparities in access between transit and private automobiles.

The equity analysis highlights the countywide trends as a way of understanding the biggest performance issues and gaps, but the results do not mean that the issues highlighted here manifest identically in every community. Moving from analysis to response requires looking at results on a more fine-grained level, community-by-community. The equity strategy, detailed later in this chapter, lays out a path forward on this important next step.

Analysis of Inputs: Funding

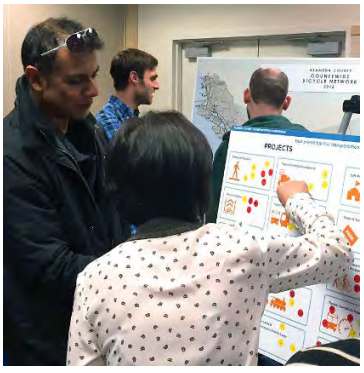
The team also looked at key *inputs* that help the transportation system evolve over time—Alameda CTC's major funding programs. This analysis was intended to take a snapshot of how the largest proportion of funding (local direct distribution funds to cities, the County, and transit operators) is distributed in Alameda County; however, it does not take into all transportation funding sources allocated to projects and programs in Alameda County, such as regional, state, and federal sources, nor does it take into account many capital projects because of the regional network nature of those investments. This portion of the analysis involved analyzing how equitably formula funds are distributed across the demographic groups included in the analysis. The team looked at how Vehicle Registration Fee and Measure B/BB funding has been distributed, on average, over the last four fiscal years among various cities and programs. To conduct the analysis, the team also used the demographic makeup of the user-bases of recipients of direct local distribution funds (e.g., populations of cities and ridership of transit agencies) and survey data for transit and paratransit.

This analysis of "inputs" did not highlight any significant inequities in Alameda CTC investments. However, there are major limitations to this analysis, including a lack of consistently available data for all jurisdictions and programs in the county that could allow for a granular analysis of investment benefit by population group. The analysis also excluded fund sources over which Alameda CTC has less direct control, including both state and federal grant and formula funding programs that make up a significant share of total transportation-related spending in the county.

ACTC_AR0336

Outreach Findings

Community Outreach



To supplement the quantitative analysis, the CTP team conducted targeted outreach to the individuals in the economic, linguistic, racial, mobility, and age groups identified as a disadvantage factor. The 2016 Countywide Transportation Plan process included an extensive, successful outreach campaign that spanned the entire life of the project. Information regarding updates and events was frequently distributed via email communications, and through local media, and over 30 different materials, including stakeholder letters, reports, and e-newsletters, were produced and distributed throughout the process. There were also over 60 focus group activities held including meetings with individuals, stakeholders, and ad hoc committees, as well as business, community, and advocacy organizations. Most importantly, community members were brought together to help shape the project at over 80 public meetings and events that were held throughout the life of the project. In total, the 2016 Countywide Transportation Plan made hundreds of thousands of connections with stakeholders and community members through nearly 250 distinct outreach activities.

More recently, the team partnered with AC Transit to hold four open houses and conducted hundreds of intercept surveys in communities across the county. These activities are described here, and the results are summarized later in this chapter.

ACTC_AR0337

Transportation Open Houses

Alameda CTC held four transportation open house workshops in early 2016, one in each planning area (Dublin, Oakland, Hayward, and Fremont). Participants were asked to give input on the future of transportation and their investment priorities. Attendees were invited to view and comment on the contents of poster boards and maps and to ask questions of transportation planners. Participants ranked their priorities on an activity board and expressed additional thoughts, preferences, and priorities on comment cards (results are summarized below).

Figure 7-4 2016 Open House Participation

Open House Location	Number of Attendees	Comment Cards Received
Dublin	40	27
Oakland	41	12
Hayward	54	22
Fremont	57	5
Total	**192**	**66**

Intercept Surveys

The team also conducted a series of intercept surveys in March 2016 to encourage and ensure participation by individuals in the economic, linguistic, racial, mobility, and age groups identified as an equity factor in the analysis. The intercept survey effort aimed to understand the transportation patterns and priorities of a diverse set of county population groups, as well as "ground-truth" assumptions and findings of the equity analysis to ensure it matched the experience of economically-disadvantaged residents in Alameda County.

Intercept surveys were conducted in six parts of Alameda County in an effort to ensure participation by diverse segments of the population. Survey locations were selected based on CBTP communities and equity analysis findings; survey locations were:

- East Oakland
- West Oakland
- Central Alameda County
- South and West Berkeley
- City of Alameda
- Livermore

ACTC_AR0338

The intercept survey effort included a total of 300 interviews. Surveys were conducted in English, Spanish, and Chinese to allow participants to converse in their native language or the language they are most comfortable speaking.

Findings

Outreach conducted through intercept surveys and workshops gleaned insight into the current gaps in transportation service and the priorities for improvements of low income communities and communities of color in Alameda County.

Common themes, priorities, and ideas shared by participants at the open houses included:

- Ensure safe travel for all modes, but particularly pedestrians and bicyclists
- Implement solutions to traffic congestion
- Install additional bike lanes and bike racks
- Increase bus frequency and reduce number of stops to improve travel time
- Address transportation needs specific to aging populations
- Improve access to/from BART stations for pedestrians
- Make public transit more affordable and accessible for students
- Improve intersection design for all modes
- Ensure easy connections between transit operators and routes

On the intercept surveys, respondents cited the following issues most frequently as transportation challenges:

- Poor pavement quality
- The expense and convenience of transit services
- Bicycle and pedestrian safety

Respondents also identified the following areas as top priorities:

- Improving pavement conditions
- Making transit service more affordable and increasing transit coverage
- Improving walking and biking conditions by fixing sidewalks, slowing traffic, adding bike lanes and other facilities, and creating more safe crossing opportunities

Equity Strategy

Alameda CTC recognizes that there is a lot of work to do to ensure that the county's transportation system functions equitably. The agency will pursue a multi-pronged strategy over the coming years to address the issues identified in this analysis, with the support of its partner agencies in transportation, land use, and economic development, as well as county policymakers.

ACTC_AR0339

This effort starts with the development of a database that will attempt to bring the countywide results to a local scale. The database will catalogue, at the tract level, where high concentrations of a given population and poor performance on one of the metrics included in this analysis overlap. The database can help prepare the county and local jurisdictions to address the issues by pinpointing areas in which certain improvements might be most effective in addressing equity issues. The database can also help inform the selection of projects.

Identifying other ways in which this analysis can inform Alameda CTC activities will be an ongoing effort. Examples of other programs that could be targeted to address equity issues include:

- Safe Routes to Schools Program
- Affordable Student Transit Pass Program
- Goods Movement community impact reduction program
- Bike and pedestrian program funding
- Community development funds
- Technology and Innovation
- Direct Local Distribution funds
- Lifeline Transportation Program

Chapter 10 (Moving Forward) discusses other potential next steps for addressing issues raised through this analysis.

Conclusion

This is the first equity strategy developed by Alameda CTC. There is more work to be done to develop meaningful and effective responses to the findings of the equity analysis. This analysis has served not only to broaden the population groups that might be included in future analyses, it has also revealed ways that we might collect or monitor changes in performance and impacts across the County. Follow on activities will also help to develop new ways to address existing and historic concerns in transportation access or performance, through the development of targeted, neighborhood-based studies and plans.

Equity will be an ongoing focus of Alameda CTC moving forward (see Chapter 10), with partners in the transportation sector and our counterparts in other sectors.

ACTC_AR0340

8 Projects, Programs, and Performance

Introduction

Vision

Alameda County will be served by a premier transportation system that supports a vibrant and livable Alameda County through a connected and integrated multimodal transportation system promoting sustainability, access, transit operations, public health, and economic opportunities.

One of the primary purposes of the Countywide Transportation Plan is to identify the transportation projects and programs that are needed to maintain and enhance the county's transportation system and make progress towards the vision and goals articulated in Chapter 2. The CTP does not program funding to specific projects, rather, it is a long-range planning document that catalogs all the funding needs in Alameda County and the projects that are moving through the pipeline in the context of the multimodal needs of all users in Alameda County. In addition to providing a framework for transportation improvements, the CTP is developed, in part, to inform the 2017 update of the Regional Transportation Plan, Plan Bay Area 2040 (PBA 2040), regarding long-term transportation improvements for Alameda County.

This chapter describes the projects and programs included in the CTP, the process used to identify these improvements, and the expected benefits that can be derived from implementation of these projects in the form of performance results. It also describes the vision of what the future holds as Alameda CTC moves towards a more strategic, collaborative planning model and the benefits that are anticipated to accrue from this work.

Integrated Implementation

In order to more strategically pursue the vision and goals, Alameda CTC and its partners have begun to think differently about the transportation system. Rather than considering a list of discrete projects one-by-one in isolation, Alameda CTC approaches the implementation of projects, programs, and policies in concert. Often, linking several projects together can produce even greater benefits than can be achieved by any individual projects or programs alone. These "categories" or "packages" can also include technologies, operational strategies, and planning practices to ensure that benefits are fully realized. This integrated approach not only provides a unified and effective way to move projects and programs forward, it can also help to communicate the county's needs to the public and key decision makers, both within and outside of Alameda County in a more coherent and compelling way.

ACTC_AR0341

Opportunity Themes

To set the stage for CTP projects and programs and the vision scenario which outlines plans beyond this CTP, it is useful to take a step back to consider the overarching themes which define our transportation system. Beyond the adopted vision and goals, which encompass a broad range of aspirations for Alameda County's transportation system, it is also useful to simplify, down to the most basic level, the purpose the county's transportation system serves - to move people and goods in support of building strong communities. Improvements can be seen as falling under one of two overarching themes: a) Community: transportation infrastructure and services that move people throughout local neighborhoods on a fine-grained network of local streets and roads, and b) Regional: larger-scale transportation infrastructure that moves large quantities of people and goods between cities and to/from Alameda County. These two opportunity themes are described as follows.

What are projects and programs?

The CTP categorizes improvements into two primary categories:

a) *Projects*, which are discrete capital improvements with a defined scope and cost, such as extending a rail line or improving an interchange, and

b) *Programs*, which are pots of funding dedicated to a specific purpose, e.g., road maintenance or operating transit service. A significant amount of investment in the transportation network occurs through funding programs. Programmatic funding is used for operations and maintenance activities, as well as groups of projects such as bicycle improvements. Funding for programs is allocated over time via competitive grants or "passed through" (direct local distributions) to different agencies by formula (e.g., based on population or road miles in each jurisdiction). Allocations to specific projects within a programmatic category are made at a later time, either through Alameda CTC's local jurisdictional or transit operator's fund allocation processes, e.g., Alameda CTC's Comprehensive Investment Plan (scheduled for summer 2016).

Beyond these two core themes, we must also recognize that we find ourselves in a significant, and somewhat disruptive, transition period for transportation with new technologies and approaches rapidly changing the nature of mobility in vast, and often unexpected, ways. Change will continue to happen not only in terms of the availability of a broader array of modal choices, but the availability of new tools to understand more accurately and at a finer-grained level how changes will impact the system (e.g., utilizing "big data" and innovative partnerships with the tech sector). This salient current theme of innovation and change is also described as follows.

Multimodal Transportation for Local Communities

Communities throughout Alameda County are affected by the transportation system in many ways, through the accessibility and mobility it provides, and secondary impacts it creates. At the local community level, quality is paramount. Alameda CTC and its partners can profoundly impact people's quality of life through

ACTC_AR0342

neighborhood connectivity and safety investments, as well as provision of high quality services and educational programs.

Most of these types of improvements occur on local streets and roads (or arterials where they serve a local transportation function) e.g., bicycle lanes, crosswalks, street repaving, or adding pedestrian refuge islands. To truly achieve the promise of making streets safer for all users in Alameda County will require far more than construction of bike lanes and sidewalks; however, it will require fundamentally changing the way street projects are designed from concept through implementation, which entails adjustments to policies, design standards, and implementation practices at every level of government. A key theme of planning in coming years will be to fully integrate Complete Streets policies into daily practices of the transportation departments of the county and its individual cities.

Services are another key part of high quality community-serving transportation, including local fixed-route transit, shuttles, paratransit, and other services designed to provide safer and better access to schools, workplaces, senior centers, hospitals, and other social service destinations. Continuing to improve the quality and effectiveness of these types of services and their ability to reach their target populations is critical in coming years.

Finally, coordinating transportation with land use planning, e.g., through TOD projects, is also fundamental to ensuring that the transportation system integrates seamlessly into people's daily lives. These efforts have begun, but there is much more work to be done.

Community-scale improvements are largely captured in programs, such as:

- New Bicycle and Pedestrian Facilities (expansion)
- Multimodal Streetscape (system management)
- Minor Transit (system management)
- Land Use (system management)
- Rehabilitation (preservation)
- Routine Operation and Maintenance (operations)
- Travel Demand Management (system management)
- Safety and Security (system management)

Efficient and Safe Regional Movement of People and Goods

Alameda County's infrastructure is integral to ensuring that goods and people can move easily throughout the region. At this scale, efficiency is paramount. The ability to move large quantities of people and goods efficiently undergirds the health of the regional economy, particularly given Alameda County's central locality and its transportation infrastructure.

ACTC_AR0343

This regional-scale system is comprised primarily of highways, arterial roadways, passenger rail, and freight rail. Investments in intelligent transportation systems and other technology solutions to incentivize efficient use of existing infrastructure and roadway capacity are also fundamental to this theme.

Projects and programs that fall into this category encompass major infrastructure improvements such as building out the region's express lane network, implementation of high-capacity and high-performance transit services, and other freeway and arterial improvements focused on efficiency. Many goods movement projects fall into this category, aimed at better, safer, and more efficient transport of goods within, through, and outside Alameda County, e.g., improving the interrelationship between passenger and freight rail in order to reduce operational impacts each has on the other. These types of projects enhance the competitiveness of the Port of Oakland and Oakland International Airport, two of the region's major economic generators.

Examples of projects in this category include:

- East Bay BRT Project – This project repurposes one of AC Transit's busiest corridors from a rapid service to bus rapid transit with dedicated bus lanes.
- 7th Street Grade Separation Project – This project separates rail facilities from one of the primary access roads to the Port for trucks.

Some programs also relate to this theme, including:

- Management Systems (system management)
- Intersections (system management)
- Minor Highway (system management)
- Minor Freight (system management)

Embracing and Adapting to Innovation

Change in transportation traditionally occurs slowly due to the time required for major infrastructure projects, and the challenges associated with people's daily behavioral patterns. However, in recent years, advancements in technology have begun to converge in the transportation sector. These emerging technologies and services are disrupting the transportation status quo in cities and counties throughout the world. Examples of these innovations include new ways of using existing transportation modes such as ride hailing (transportation network companies), shared mobility options like bike sharing and car sharing, and on-demand or micro-transit. It also includes innovations that are functionally new modes such as self-driving cars. It further includes innovations that will profoundly impact the effects that transportation system has on communities, e.g., emissions of ground-level pollutants, and the environment (e.g., carbon dioxide emissions), such as electric vehicles and fuel economy standards. See the Technology and Innovation modal strategy in

ACTC_AR0344

Chapter 6 for more information on these types of projects. Finally, innovations will need to address sustainability and resiliency of the transportation system.

CTP Projects and Programs

For this update, MTC requested that each congestion management agency in the Bay Area coordinate project submittals from its county and define a "financially constrained" list of projects and programs that fits within the allocated "discretionary budget" for the county and a vision list of additional projects that would require additional funding.

Financially Constrained List

Development of the CTP began with a "call-for-projects" application process held in June-July 2015 to collect projects, programs, and plans to be considered for the 2016 CTP and PBA 2040. In response to the call, Alameda CTC received 332 applications for a total project cost of $26.2 billion and a funding request of $21.3 billion.

In October 2015, Alameda CTC submitted this list of projects and programs to MTC to inform Alameda County's portion of transportation funding in PBA 2040 (shown in Appendix B). This list identified a total of $9.47 billion as the funding need for Alameda County. Based upon funding estimates developed for the local sales tax funding, the identified funding need of $9.47 billion for the Alameda County projects and programs is met with the estimated local funding ($6.82 billion of local discretionary funds from Measures B and BB and the Vehicle Registration Fee) plus the $2.65 billion county share of federal and state funding, which is Alameda County's share allocated by MTC for PBA 2040 (see Figure 8-1). The list of projects and programs that was adopted by the Commission in October 2015 was carried forward into the evaluation process with no changes; this is the financially constrained list of projects for the 2016 CTP.

Figure 8-1 CTP Discretionary Funding Breakdown

Project category	Alameda County's share of regional funding	% of regional discretionary budget	Local funding	Total funding allocation
Programmatic projects	$1.14M	43%	$3.28M	**$4.42M**
Local/ Countywide projects	$1.51M	57%	$0.715M	**$2.23M**
Regional	n/a	n/a	$2.82M	**$2.82M**
Total	**$2.65M**	**100%**	**$6.82M**	**$9.47M**

Implementation of the modal plans is not captured in these costs and funding allocations. Actual funding needs will become clearer over time as modal plan recommendations advance through project development. As a result, significant

ACTC_AR0345

additional funding will be required to fully implement the projects, programs, plans, and vision defined here, and a mix of funding sources to meet the full range of multimodal needs.

Per guidance from MTC, submitted applications were sorted into four categories:

- **Projects**
  - ***Regional***: Projects that are regionally significant, defined as serving more than a single county.
  - ***Committed***: To qualify as a committed project, projects must either a) be 100% locally funded, or b) include a full funding plan[84] and environmental clearance by September 30, 2015.
  - ***Local/Countywide***: All remaining projects are considered local or countywide.
- **Programmatic improvements**: MTC requested that CMAs bundle projects, programs, and plans into programmatic categories where possible; these groups of similar types are included under a single listing in Plan Bay Area 2040.[85] Per MTC's guidance, projects were grouped into 14 programmatic categories, which are:
  - New Bicycle and Pedestrian Facilities (expansion)
  - Management Systems (system management)
  - Safety and Security (system management)
  - Travel Demand Management (system management)
  - Intersections (system management)
  - Multimodal Streetscape (system management)
  - Minor Highway (system management)
  - Minor Transit (system management)
  - Minor Freight (system management)
  - Land Use (system management)
  - Planning (system management)
  - Emission Reduction (system management)
  - Rehabilitation (preservation)
  - Routine Operation and Maintenance (operations)

These lists of projects, programs, and plans are shown in Appendix B.

[84] Full funding plan can include local and discretionary funds.

[85] Capital projects and programs that are not capacity increasing and exempt from air quality conformity requirements and/or categorically except from CEQA or documented categorical exemption from NEPA,

ACTC_AR0346

Benefits and Performance of the CTP

A key issue to consider when developing the CTP is how the identified projects and programs "perform." In other words, how they help the county progress towards its transportation vision and goals. To answer this question and facilitate an evaluation of the projects and programs in the CTP, in January 2016 the Commission adopted performance measures based on the CTP Vision and Goals, as described in Chapter 2.

Background

With the 2012 CTP update, Alameda CTC launched a new paradigm of transformative transportation planning initiatives that are performance-driven and take an integrated, system-wide, multimodal approach. This new paradigm affects all areas of how transportation planning is done in the county, and sets a framework for future investment considerations as described in the next section. A change of this magnitude takes time to fully integrate into policies and daily practices of how transportation funding is allocated and how projects are planned and implemented.

Since 2012, an enormous amount of strategic smart growth and multimodal planning integrating Complete Streets concepts has been done at the countywide level, by cities, and by other agencies. Initial analysis indicates that these changes should have big impacts on the efficiency, sustainability, equity, and effectiveness of the transportation system. However, this planning work is largely not yet reflected in the projects that were submitted to the CTP and therefore cannot be modeled in the performance evaluation. The CTP project submissions were much the same as in 2012; many of the new projects submitted that are different from 2012 submissions are programmatic and therefore are either more difficult or not able to be analyzed in the travel demand model, as discussed further as follows. The 2016 CTP illustrates that some progress occurred in the last four years, and represents a large step towards the vision taken by Alameda CTC, local jurisdictions, and transit agencies.

Context

The results were generated through the Alameda County travel demand model and other off-model processes, and were developed for two model scenarios:

- Current Baseline (2015)
- Financially Constrained/CTP Projects (2040) – Committed projects and CTP projects

Committed Projects were identified based on MTC's Resolution 4182 for the Plan Bay Area 2040 that defines committed projects as projects that have a certified Environmental Impact Report or Record of Decision for Environmental Impact Statement before September 30, 2015, and a full funding plan.

ACTC_AR0347

Some key context that is critical to understand for interpreting the evaluation results:

- **Major growth is projected**: The 2040 results include the growth projections from Plan Bay Area which anticipates nearly half a million new residents (470,000) in Alameda County and over a quarter of a million (286,000) new jobs. This growth means a significant increase in demand and a lot more people using the transportation infrastructure—so a result of no change or minor changes from 2015 to 2040 on indicators like travel time and reliability for auto and transit trips mean that efficiency in projects and programs that are planned can have a big effect.
- **Transportation system is mature**: Alameda County's transportation system is largely built out; the projects that are being proposed represent a fraction of the built value of the existing system and this poses limitations in the magnitude of impact that any capital project can have.
- **Travel demand model does not measure programmatic improvements**: The countywide travel demand model, which is used for the performance measurement, focuses on modeling capital projects, and is limited in how it can account for programmatic improvements (e.g., countywide bicycle plan and pedestrian plan implementation). Programmatic improvements by their nature are not defined as specific capital projects, and therefore, cannot be modeled. Once specific projects are defined from programmatic improvements, they can be modeled. However a large percentage of Measure B and BB is programs, and these programs are anticipated to make large changes in how the transportation system functions. So, the model is limited in how it can capture the impacts of a large portion of the improvements. Further, the model does not capture regular fluctuations in the economy or fuel prices, both of which are known to have major impacts on travel behavior.
- **Modal plans and other innovative work will be captured in future updates**: Development of countywide modal plans (Goods Movement Plan, Multimodal Arterial Plan, and Transit Plan) were a major outcome of the 2012 CTP. Alameda CTC and its partners have done significant and innovative work in the past three years to develop these plans; however, project development work still needs to be completed to submit projects for funding. Therefore these projects are not reflected in these results. Other partner agencies have also been doing innovative planning work, such as the AC Transit Major Corridors Study, interagency corridor-planning work, and Complete Streets planning and implementation at cities throughout Alameda County. Most of this work is also not reflected in these results, but will be captured in future CTP updates.

ACTC_AR0348

Performance Results for the 2016 CTP

Most evaluation results are trending in the right direction between existing (2015) and 2040 with implementation of CTP projects and programs, including:

- **More people are projected to bike, walk, and take transit.** Non-auto mode share increases 4% (to 23%) for all trips reflecting significant increases in transit service and bike facilities.
  - Bus ridership increases 72%.
  - Transit efficiency increases (46 to 52 passengers/hour).
- **Network connectivity for non-auto modes projected to improve.**
  - The number of miles of bicycle facilities is projected to increase by up to 43%.
  - The amount of higher frequency transit service is projected to nearly double.
- **Safety is expected to improve** based on vehicle miles travelled per capita going down.
- **Access to jobs improves, especially for transit riders.**
  - Access to jobs increases 7% by auto and 49% by transit reflecting significant increases in transit service, significant job growth, and more compact job growth with good access to transit facilities.
- **Access improves significantly for transit-dependent populations.** A higher number of low-income households are expected to have access to higher frequency transit service in the future.
- **Vehicle miles traveled and emissions (CO_2 and PM 2.5) trend downward on a per capita basis**. The evaluation shows significant impacts from fuel efficiency and fuel economy standards in lowering greenhouse gas emissions.

The evaluation showed mixed results for other metrics including system efficiency and maintenance:

- **Congested roadways are projected to increase, but this results in minor increases in travel time on average.** This is primarily due to major projected growth in population (30%) and employment (36%) in Alameda County. The planned CTP improvements and efficient future land use patterns moderate the impacts of this projected growth on the county transportation system.
  - 7% increase in congestion is projected overall.
    - ~80% of congested lane miles are on freeways.
    - ~20% of congested lane miles are on arterials.
  - Auto travel time is projected to increase by an average of 2 minutes in the peak and 1 minute in the off-peak.

ACTC_AR0349

  - Transit travel time is projected to increase by on average of 2 minutes in the peak and d*ecrease* by an average of 1 minute in the off-peak.
- **Significant maintenance needs are projected** and many communities show **funding shortfalls** to maintain a basic state of good repair on their roadways.

Full results of the CTP evaluation process are shown in Appendix C. It is important to emphasize that this system-level performance analysis is not a substitute for the detailed project level analyses which will be required as each project goes through its development phases. Projects will be required to conduct appropriate environmental and equity analyses prior to implementation. The level and type of analysis required will be determined by the size of the project and the type of funding it receives.

Vision

The three countywide modal plans—Goods Movement Plan, Transit Plan and Multimodal Arterial Plan—envision a new way of conceptualizing and addressing the multimodal transportation system problems which is more integrated and holistic and goes beyond transportation capital projects included in the 2016 CTP update. The Commission adopted the Goods Movement Plan in February 2016 and the other two plans are scheduled to be adopted in spring/summer of 2016. Much of the change that is envisioned is going to come about through programmatic improvements that are focused on maximizing the efficiency and effectiveness of our existing multimodal infrastructure and shifting travel behavior to different modes and times of day while supporting economic development. Examples include advanced and integrated corridor management, allocating capacity to high capacity transit services, implementation of Complete Streets, new rail strategies for passenger and freight rail, and ultimately ensuring countywide complete and connected network for all modes.

The Goods Movement Plan, which the Commission adopted in February 2016, is a good illustration of this new approach. The recommendations are presented in the form of opportunity themes which contain projects, programs, and policies that are implemented in concert to maximize synergies and co-benefits. The plan contains targeted capital improvements that are complemented by programs and policies aimed at changing behavior and incentivizing efficient use of the system. Plans like this represent the progressive future that is envisioned for Alameda County's transportation system. Summarized as follows are highlights of the adopted/potential strategies from the modal plans and some initial projected outcomes of these plans that illustrate the potential for more fundamental shifts in how the system performs.

Goods Movement Plan

The Alameda County Goods Movement Plan outlines a long-range strategy for how to move goods effectively within, to, from, and through Alameda County by roads,

ACTC_AR0350

rail, air, and water. It developed short- and long-term strategies and project lists to support goods movement in Alameda County. The adopted plan, if implemented as described in the opportunity packages, indicated these outcomes:

- Elimination of 21 million truck vehicle miles traveled per year.
- Annual savings to shippers from reduced trucking costs of approximately $59.2 million.
- Elimination of more than 1,280 truck trips per day on I-580 and I-880. Assuming that each truck is the equivalent to 2.5 passenger cars (PCE), the reduction in PCE from this strategy would be approximately 3,200 per day.
- Creation of middle-wage jobs from transloading (the process of transferring cargo from one form of transportation to another) and associated value-added activities.

Countywide Transit Plan

The Countywide Transit Plan's vision is to create an efficient and effective transit network that enhances the economy and the environment and improves quality of life. The Transit Plan identified 14 corridors as potential transit focus corridors across the county to provide or invest for a comprehensive transit improvement. While the Transit Plan draft network recommendations focus on where investments are needed to create fast, frequent transit service in the future, the Plan also considers how different types of transit service or transit tiers work together to create a complete transit network that serves different travel needs. Initial assessment of the draft improvement recommendations for the Plan period of 2040 support these outcomes:

- Doubling of daily passenger trips
- Over 40% increase of households within half mile of transit stops
- Over 50% increase in number of jobs located within half mile of transit stops

Countywide Multimodal Arterial Plan:

The Countywide Multimodal Arterial Plan's vision is to develop a network of efficient, safe, and accessible arterials that facilitate the multimodal movement of people and goods, and help create a strong economy, healthy environment, and vibrant communities, considering local context. This Plan coordinates with and supports the outcome of the Countywide Goods Movement and Transit Plans. In this context, this Plan ensures a connected and continuous network for all modes across the county. It identified over 500 miles of major arterials as a core Arterial Network for the county and proposed initial multimodal improvements.

- Transit Network improvements primarily focused on the AC Transit and LAVTA major corridors. About 38 miles of dedicated transit lane and 52 miles of Rapid Bus improvements are proposed that will support the transit outcomes as described in the Transit Plan.

- About half of the Arterial Network (250 miles) was identified as having high bicycle priority. About 121 miles of Class 4 protected bicycle lanes are proposed; advancing connections to transit, improving safety, and increasing non-motorized share of transportation.
- For pedestrian improvements, about 50 miles of either new sidewalk or widening of existing sidewalks are proposed along with nearly 150 miles of crosswalk enhancements. These improvements focus on high-pedestrian emphasis areas (downtowns and large commercial districts) and around BART station areas to increase safety and improve access to transit and activity centers.
- An Advanced Intelligent Transportation System, including a connected vehicles option, has been identified for nearly 150 miles, which will support goods movement and transit improvements described previously, and improve travel efficiency and reliability.
- Accommodation of truck traffic proposed on top tier arterial goods movement routes, supporting innovative goods movement delivery identified in the Goods Movement Plans.

Conclusion

This future vision will require embracing new perspectives, models, and tools, and embarking on new ways of working together with existing and new stakeholders, e.g., new technology-based private transportation sector stakeholders. Key steps for advancing partnerships and moving modal plan initiatives forward are outlined in Chapter 10.

ACTC_AR0352

9 Funding

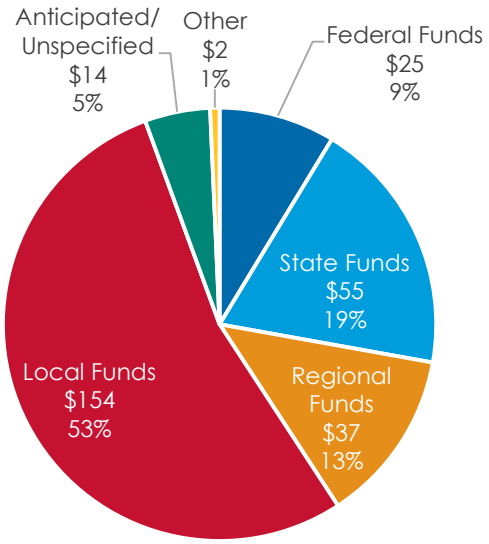
Introduction

Image from Nelson\Nygaard.

Funding remains one of the most significant challenges in bringing Alameda County's goals and transportation vision to fruition. Given the significant growth anticipated for the county, and the breadth of the future vision described in Chapter 8, including transformative projects and programs outlined in the modal plans, significant additional funding will be needed. Leveraging local and regional funding to attract contributions from state and federal funding sources will be crucial in delivering on Alameda County's vision and goals for the future transportation network.

This chapter offers a basic overview of the framework and context for funding transportation in Alameda County, it summarizes the existing state of transportation funding both in Alameda County and throughout the nation, and highlights key issues for consideration and discussion as Alameda County makes its transportation funding decisions in the future.

Overview of Transportation Funding in Alameda County



Consistent with the county's transportation needs, Alameda County makes use of a variety of sources to fund its transportation system. Funding is necessary to implement new projects, operate existing and new facilities, and to maintain the existing transportation system. Each new project or program requires numerous planning processes, studies, and usually many sources of funding in order to be successful. Almost every transportation project—from a freeway interchange to a bicycle lane to paratransit service—uses funding from multiple sources to build a complete funding package through planning, design, construction, and ongoing maintenance and operations.

Transportation dollars in Alameda County and throughout the nation come primarily from federal, state, regional, and local sources. However, in recent years there has been a dramatic shift towards a funding system that is much more reliant on sources of local funding. This shift is primarily the result of declining investment at the federal and state levels.

ACTC_AR0353

As of October 2015, Plan Bay Area 2040 funding projections show "outside sources" (state and federal sources) accounting for only about one-third of the Bay Area's projected transportation revenues beginning in FY 2016-17. As shown in Figure 9-1, approximately $191 billion in transportation funding over the next 23 years will come from local and regional sources, as opposed to approximately $80 billion from the federal and state levels. This is consistent with the trend of reduced contributions from federal sources, representing a 26% reduction in federal funding since the 2012 Countywide Transportation Plan.

Figure 9-1 Projected 28-Year Regional Revenues (Billions of dollars)

Source: Association of Bay Area Governments, *Plan Bay Area 2040 Draft Revenue Forecast*, October 2, 2015, http://abag.ca.gov/abag/events/agendas/o100915a-Item%2005C,%20PBA%202040%20Draft%20Revenue%20Forecast.pdf.

It appears that the shift to local and regional funding is a permanent one. The systemic budget challenges at the state level and the ongoing federal debate over spending and revenue will likely not be resolved any time soon for reliable and growing funding sources. Moving forward, Alameda County will have to continue to rely on local and regional funding mechanisms as a means to finance its current and future transportation system.

ACTC_AR0354

Federal

In 2015, the U.S. Congress passed and the President signed the Fixing America's Surface Transportation (FAST) Act, a five-year authorization of federal transportation funding programs. This was preceded by a three-year transportation funding bill called MAP-21 (Moving Ahead for Progress in the 21st Century Act) signed into law in 2012. Prior to this, a multi-year bill at the federal level had been absent since 2009 when the Safe, Accountable, Flexible, Efficient Transportation Equity Act—A Legacy for Users (SAFETEA-LU) expired. Short-term extensions of the SAFETEA-LU bill had filled the gaps since 2009, but the amount and the longevity of funding was limited. The FAST Act authorizes $305 billion for federal surface transportation programs, including $226 billion for highway programs, $61 billion for transit programs, and $10 billion for passenger rail over five years.[86]

One major source of uncertainty in the discussion of the future of transportation funding is what role the federal government will play. Despite passage of the FAST Act, the long-term strategy for funding transportation projects remains a critical point of discussion at the federal level. The federal gas tax has been used to fund transportation projects since the 1930s. However, since its last increase in 1993, it has not been indexed to inflation, resulting in a loss of buying power. Coupled with an increase in the number of hybrid and electric vehicles on the road and increasing fuel efficiency, gas tax revenues have not kept up with demand and are declining. Despite vigorous debate in the U.S. Congress about other sources of revenues, increasing the gas tax, or indexing the gas tax to inflation, the FAST Act passed instead with $70 billion in transfers from General Funds fully "paid for" or offset by unrelated savings.

[86] https://www.transportation.gov/fastact/.

ACTC_AR0355

State

Similar to the federal funding structure, much of California's transportation dollars come from taxes and fees. Prior to changes in 2010, the state collected a sales tax and excise tax on gasoline and diesel fuels, as well as truck weight fees. In 2010, measures AB 6 and AB 9, better known as the "gas tax swap" changed the funding mechanism in California. Changes included elimination of the statewide sales tax on gasoline and an increase in the statewide gasoline excise tax, as well as a 1.75% increase in the sales tax on diesel fuel and a reduction in the excise tax on diesel.

Gasoline and Diesel Taxes

State Bonds

Greenhouse Gas Reduction Fund

Statewide bonds have also contributed to funding transportation, most recently with the passage of 2008's Proposition 1A to provide $9.95 billion to fund California High-Speed Rail and Proposition 1B in 2006 to provide $19.925 billion for a variety of transportation projects.

In 2014/15, funding from California's Greenhouse Gas Reduction Fund—funded by the cap-and-trade program—began to be used to fund projects designed to reduce carbon emissions in the state. Funding is generated through the sale and trade of permits to exceed the pollution cap of certain industries. Beneficiaries of cap-and-trade funding so far include the California High-Speed Rail project, as well as other transit services and affordable housing projects throughout the state.[87]

California is also exploring a vehicles miles traveled-based road charging model. Under this model, a fee would be levied on drivers based on how many miles they drive, not how much gasoline they purchase. A pilot study of this model will launch in California in summer 2016 with 5,000 volunteer driver participants.[88]

[87] http://www.arb.ca.gov/cc/capandtrade/auctionproceeds/ggrfprogrampage.htm.

[88] *Exploring a Road Charge for California – One Mile at a Time* factsheet, http://www.dot.ca.gov/road_charge/documents/road_charge_fact_sheet_011216.pdf.

Regional and Local

With the reduction in transportation funding coming from the federal level in recent decades, regional and local funding has become critically important for transportation projects in Alameda County and throughout the Bay Area. Regional and local funding sources now comprise a significant share of the resources available for funding transportation projects. They include taxes, fees, tolls, and fares from local transit agencies. For example, Bay Area voters have passed multiple bridge toll increases with the understanding that the revenue is used to fund road and other transportation improvement projects, referred to as Regional Measure 1 and Regional Measure 2. Local entities like Alameda County must increasingly rely on funding sources that are generated locally.

Alameda County

Alameda County has a long history as a strong "self-help" county where voters have agreed to tax themselves in order to raise funds for critical transportation projects. Sales taxes earmarked for transportation are very powerful and present significant opportunities to fund and advance transportation projects locally. Tax-based measures require both development of a detailed expenditure plan and strong public support, i.e., approval by 2/3 of voters. The local transportation sales tax has become one of the most stable and reliable funding sources for transportation in Alameda County.

Alameda County has passed three sales tax measures for transportation. The first was Measure B in 1986 which funded projects and programs throughout the county. The second, also known as Measure B, extended the existing ½-cent sales tax, and was approved by over 81% of voters in 2000. Measure B funds a multitude of transportation projects including highway, local roads, transit expansion, transit operations, paratransit, and bicycle/pedestrian facilities.

In November 2014, Alameda County voters approved a supplementary transportation sales tax, Measure BB, by over 70%. Measure BB authorized a one-cent sales tax in Alameda County, augmenting and extending the ½-cent tax passed in 2000 to 2045. It is estimated to generate over $8 billion for transportation projects and programs in the county and is projected to generate $20 billion in economic activity

ACTC_AR0357

in the region. The measure will expand BART, bus, and commuter rail in the county; keep fares affordable; provide traffic relief; improve air quality; and create thousands of jobs in Alameda County, among other benefits.

Alameda County voters also passed Measure F in November 2010, which increased annual vehicle registration fees by $10 to fund road, transit, non-motorized, and transportation technology projects and programs. The funds generated by these local sources are critical to advancing and executing the vision outlined in this Countywide Transportation Plan.

Funding Sources and Revenue for Alameda County

This section provides an overview of funding sources that could be used for projects and programs identified in this Countywide Transportation Plan by a variety of agencies. This includes a summary of the most common funding mechanisms at various levels of government. These sources are administered by various agencies in Alameda County.

Federal

- **Federal Highway Administration programs** are generally administered by State Departments of Transportation and Metropolitan Planning Organizations, with recommendations on funding for projects from congestion management agencies for some fund sources. The largest programs include the National Highway Performance Program, the Surface Transportation Block Grant Program, the Congestion Mitigation and Air Quality Improvement Program, and the Highway Safety Improvement Program. The FAST Act includes a new National Highway Freight Program as well as set asides for bicycle and pedestrian projects and recreational trails within the Surface Transportation Block Grant Program.
- **Federal Transit Administration programs** provide a source of funding for transit agencies across the county. The largest programs include the Urbanized Area Formula program, the State of Good Repair Formula Program, and Capital Investment Grants—also called New Starts and Small Starts. The FAST Act increased funding for the Bus and Bus Facilities program, including new discretionary grants and an emphasis on low or no emission bus deployment.
- **Grant programs**, such as the TIGER Discretionary Grant Program and the Fostering Advancements in Shipping and Transportation for the Long-term

ACTC_AR0358

Achievement of National Efficiencies (FASTLANE) Grant Program are administered by the United States Department of Transportation.

- **Federal financing** is available through the Transportation Infrastructure Finance and Innovation Act (TIFIA) program and the Railroad Rehabilitation and Improvement Financing (RRIF) program. The TIFIA Program provides federal credit assistance to eligible surface transportation projects, including highway, transit, intercity passenger rail, and some types of freight rail, intermodal freight transfer facilities, and ports. The RRIF program provides direct loans and loan guarantees to finance development of railroad infrastructure.

State, Regional, and Local

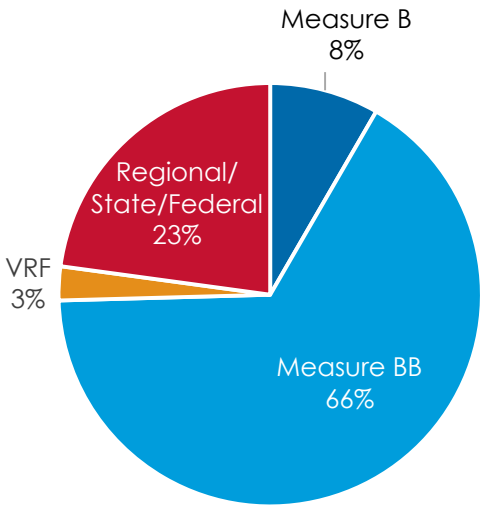
A wide variety of funding mechanisms exist at the state, regional, and local levels, which are listed below. Additional discussion of these sources is include in the overview section and new funding opportunities are described at the end of this chapter.

State

- State Highway Account
- State Transit Assistance
- State Transportation Improvement Program/Regional Transportation Improvement Program
- State Transportation Development Act (TDA)
- TDA, Article 3 (Bike/Pedestrian projects)
- State Proposition 1B
- Caltrans Local Assistance Programs, including Safe Routes to School
- Caltrans Planning Grants Program
- Highway Users Tax Account (gas tax subvention)
- Greenhouse Gas Reduction Fund (cap and trade)

Regional and Local

- Gas tax subventions
- Seismic bridge tolls
- Regional Measure 2 bridge tolls
- Transportation Fund for Clean Air (TFCA) – vehicle registration fees
- Measure B – local sales tax measure
- Measure BB – local sales tax measure
- Measure F – Vehicle Registration Fee



ACTC_AR0359

- AB 1107 half-cent sales tax for transit (BART and AC Transit)
- Bicycle Facility Program – funded through TFCA monies
- Regional Bicycle and Pedestrian Program
- HOT lanes or Express Lanes
- Property taxes
- Various impact and development fees

Revenue Projections for Alameda County

Due to passage of Measure BB, the funding picture in Alameda County has changed dramatically since the 2012 Countywide Transportation Plan. Figure 9-3 shows the draft discretionary budget for Alameda County through 2040. It includes estimates for the major state and federal funding sources as well as estimates for regional and local funding sources. As shown, local funding is a major share (about 77%) of the total funds estimated to be available for the county's transportation needs, and Measure BB represents a significant portion of that source in coming decades. The subtotal of regional/state/federal funding is identified as part of the Plan Bay Area 2040 draft budget.

Figure 9-2 Funding Breakdown FY 15/16-FY 39/40

ACTC_AR0360

Figure 9-3 Alameda County 25-Year Projected Funds (FY 15/16 – FY 39/40)

Year	Funds	Percentage
Measure B	$969 M	8%
Measure BB	$7,680 M	66%
VRF	$300 M	3%
Subtotal Alameda County Local	**$8,948 M**	**77%**
Subtotal Regional/State/Federal (*MTC Discretionary Budget*)	**$2,650 M**	**23%**
Grand Total	$11,598 M	

Note: Local funding projection as of March 2016, assumes a 2% growth rate.

Funding Challenges and Opportunities

Despite recent wins, including the five-year FAST Act at the federal level and the passage of Measure BB in Alameda County, funding will continue to be an area that will require ongoing attention. The Bay Area is growing, placing increasing demand on the region's transportation system, and Alameda County with its central regional location will be the most impacted by the region's growth more than any other county in the region.

Core transportation infrastructure that we have depended on for decades is in need of major repair and rehabilitation, and competition for funding at all levels is expected to continue to become more and more intense, with more entities vying for a narrowing pot of money. It remains true that for the transformative transportation solutions included in this Countywide Transportation Plan, significant new funding is needed.

Demands Are Increasing on an Aging System

The Bay Area is growing rapidly, and this growth is projected to continue in years to come. Meanwhile, much of the Bay Area's transportation system was built 40-60 years ago and is in need of major reinvestment. BART is an illustrative example. As the spine of the Bay Area's public transit network, BART transports 400,000 to 500,000 people around the region every day, making it a foundation of the region's economy and mobility. Ridership is at all all-time high and projected to continue to rise while the 40+ year-old system is in dire need of reinvestment. Service delays are on the rise, as aging equipment cannot keep up with ever-increasing ridership.

BART and WETA, which operates ferry service on the San Francisco Bay, both have fleets consisting of vehicles that are at or beyond the typical useful life of such types of vehicles. BART is in the process of acquiring new vehicles but are currently

ACTC_AR0361

providing service with the oldest train cars of any other major heavy rail service in the U.S. For its part, AC Transit unveiled a shipment of new buses in 2014.[89]

Identifying sufficient funding to meet maintenance and rehabilitation needs while also recognizing that growing demands will require new and expanded mobility choices, including extensions of existing transit systems, presents a difficult balancing act. Asking the public to support major funding allocations just to keep the existing system running is a more challenging ask than funding for new infrastructure. Further, if funding is identified, staging the reinvestment in the existing system in such a way to minimize disruption to daily transportation will be critical.

Importance of Leveraging Additional Funds

Robust local funding sources cannot simply be viewed as new sources to fund projects. It remains critically important that Alameda CTC, the region, and all the county's municipalities leverage local and regional transportation dollars to attract and match funding from other sources at the state and federal level. As an example, Measure B resulted in $4.1 billion in total transportation funding by leveraging $2.6 billion of federal, state, regional, and other local funding sources thanks to $1.5 billion in contributions from Measure B.[90]

Leveraging funding will continue to be a critical part of the transportation funding strategy in Alameda County as a way to maximize transportation funding and in order to meet the requirements of certain grants. Many federal grants, among other sources, require that a portion of project funding come from or be matched by local dollars. Leveraging remains a critical component of delivering the $8 billion Measure BB package.

Fluctuating Revenue Sources

Local sales tax-based funding sources are volatile and dependent on consumer spending and a strong economy at all levels. Revenue from Measure B, for example, was negatively impacted by economic challenges since the early 2000s. As Alameda County's funding relies more and more heavily on these sources, these fluctuations could affect transportation system funding.

Ballot Measure Uncertainty

It is important to note that local and regional funding sources require two-third voter approval. Bay Area voters have historically been willing to support measures for transportation, such as sales taxes, bridge tolls, and vehicle fees, as was most recently evident with the passage of Measure BB in Alameda County. However,

---

[89] Alameda County Transportation Commission, *2014 Performance Report: State of the Transportation System in Alameda County.*

[90] Alameda CTC Commission Retreat brochure, July 17, 2015.

ACTC_AR0362

there is no guarantee that this will be the case with future ballot measures. Several of Alameda CTC's partner agencies are considering ballot measures in 2016 to fund infrastructure needs; voters' willingness has the potential to reach a limit as more and more demands are put on local funding options. This represents another layer of uncertainty for longer-term transportation funding in Alameda County.

Constraints on the Use of funding

A significant challenge beyond planning transportation projects and identifying funding sources is developing a package of funding which is compliant to the specific ways each dollar can be spent. These constraints are often described as matching funding needs with the "color of money" available. It is common for funding sources to place limitations on the type of projects which can be funded with the money or the portion of the project cycle when it can be spent. For example, federal transit funding is generally available only for capital expansions, not ongoing operations. State funding is generally limited to capital needs, though maintenance is included as an acceptable use. It is less common to find funding for transit operations, for example, so transit agencies tend to rely heavily on local taxes to fund operations. In recognition of this fact, a significant share of Measure BB is dedicated to supporting transit operations.

New and Innovative Funding Opportunities

In the decline or absence of traditional funding mechanisms, new and innovative opportunities for transportation project funding are emerging. While none of these opportunities alone will solve all funding challenges, they may provide assistance in augmenting the resources already available through traditional funding mechanisms. Alameda County can begin developing a strategy for pursuing these sources through collaboration with partner agencies throughout the region as necessary. A list of opportunities for new funding sources, though not exhaustive, is described in more detail in the rest of this section. It should be noted that many of the following opportunities are likely to face resistance or require cooperation with the public, private interests, elected officials, and/or partner agency officials.

Taxes and Tolls

Bay Area Gas Tax

The introduction of an additional regional tax on gasoline could significantly augment the current revenue collected at the state level. Per 1997 state legislation, MTC has the authority to impose a tax of up to 10 cents per gallon on gasoline sold in the Bay Area. Alameda County would be expected to receive a significant portion of this revenue, as 95% of revenue must be "returned to source."

Key considerations include:

- Political viability

ACTC_AR0363

- Two-thirds voter approval and detailed expenditure plan required
- Significant coordination required between local, regional, and state governments
- Revenue tied to purchase of fuel, which is likely to continue declining with increasing popularity of fuel-efficient vehicles

Additional Bridge Toll Increases

Bridge tolls on bridges throughout the Bay Area have been increasing steadily in recent years thanks to voter-approved Regional Measures 1 and 2. There is potential to raise tolls additionally.

Key considerations include:

- Political viability, especially given recent suite of increases
- Legislative and/or voter approval required
- Revenue source is dependent on bridge traffic
- Potential for Alameda County to receive larger share since significant portion of traffic on the Bay Crossing bridges travel on and impact Alameda County roads.

User Fees

Vehicle Miles Traveled Fee

As opposed to the existing gas taxes, VMT fees have the benefit of tying financial obligations of drivers more directly to the impact of driving on the transportation network. A VMT fee is also regarded as a more stable source of revenue than the gas tax as it would not be tied to the type or amount of fuel a vehicle uses. Finally, a VMT fee aligns well with the region's larger goals of reducing driving and encouraging use of alternative modes.

California will explore the potential for a VMT-based driving fee as part of a pilot study occurring with 5,000 volunteer drivers in the summer of 2016. Results of the pilot will be made available by summer 2017.[91]

Key considerations include:

- Requires legislation and strong champions at local, regional, and state levels
- Political viability
- Start-up technology costs and development of processes and fee collection system
- Perceived and real concerns about privacy from stakeholders

[91] *Exploring a Road Charge for California – One Mile at a Time* factsheet, http://www.dot.ca.gov/road_charge/documents/road_charge_fact_sheet_011216.pdf.

ACTC_AR0364

- Would not be a quick solution to the region's funding challenges

High-Occupancy Toll (HOT/Express) Lanes

HOT lanes allow non-carpool vehicles to pay and drive in the carpool lane when there is available capacity for a fee that varies according to demand (dynamic pricing). Carpool vehicles continue to drive for free or reduced price. Two corridors of Express Lanes are currently operating on freeways in Alameda County, including I-580 in the Tri-Valley on both eastbound and westbound directions and on southbound I-680 over the Sunol Grade. Express Lanes are an attractive option because they provide a new revenue source and enable the pricing of travel behavior to reduce congestion.

Key considerations include:

- Political viability, including public appetite for additional fees
- Revenue is based on traffic levels
- Expenditure plans regarding use of excess funds

Congestion Pricing

Congestion pricing involves charging a motorist a fee to drive in congested areas or corridors. Revenue from congestion charges are typically used to fund public transit and other non-motorized travel improvements with the ultimate goal of the reducing vehicle trips and reducing congestion. Congestion pricing has been successfully implemented in multiple cities in Europe and a congestion pricing scheme was studied for San Francisco in the early 2010s. Congestion pricing is an attractive mechanism because it can be used to support larger goals around mobility, accessibility and sustainability.

Key considerations include:

- Political viability, including public acceptance for additional fees
- Congestion pricing works best in dense, urban areas with strong public transit and alternative options to driving; it may not be appropriate for all parts of Alameda County
- Revenue is volatile as it is based on traffic levels
- Start-up technology costs and development of processes and fee collection system

Strategic Parking Management

Parking management strategies can have the dual benefit of easing the ability of drivers to find and pay for parking, while also providing an additional revenue source. Parking fees can be re-invested in the surrounding area through creation of a "parking benefit district" or PBD which can be used to fund streetscape or transportation improvements.

ACTC_AR0365

Key considerations include:

- Public acceptance for changes to traditional parking management
- Parking policy is made at local, municipality level
- Capital and operations costs of parking technology

Public-Private Partnerships

Public-private partnerships (PPP) have become more popular in recent years both as a means of filling funding gaps and achieving buy-in to new transportation investments. PPP arrangements may include financing assistance, direct contributions to capital or operating expenses of projects, and/or project sponsorships. The ideal PPP offers a benefit to both the public and private party. Examples include a private company building, operating and collecting revenue from a toll road, or a private company sponsorship of a bike share system for brand visibility.

Key considerations include:

- Locating parties interested in forming such partnerships
- Public acceptance for such arrangements
- Long-term viability can be uncertain

Impact Fees

Bay Area entities have long believed and set precedents to ensure that private parties, such as residential or commercial development companies, who benefit from public investments in transportation should contribute to those investments. In Alameda County this occurs in the form of developer impact fees. Existing impact fees include the Alameda County Cumulative Traffic Impact Mitigation Fee and the Tri-Valley Transportation Development Fee.

In April 2016, the Oakland City Council approved the introduction of development impact fees on those building housing or commercial property in Oakland. This will take effect in September 2016.

Key considerations include:

- Overcoming public or private industry resistance to additional fees
- Proposition 26, approved in 2010, requires a two-thirds voter approval rate to pass such measures
- The connections between fees and projects usually require additional studies
- Revenue is volatile depending on economic conditions
- Fees often apply only to new development, which may limit revenue to more "built out" areas
- Fees are usually intended only for capital projects

ACTC_AR0366

- Fees are typically established at a local jurisdiction level; regional or country consensus will be difficult

Summary of New Funding Opportunities

While a number of possible new revenue sources are available for further evaluation, it is clear that there are several common barriers to their implementation that would have to be overcome.

- **Action would be required at the local, district, regional, state, or federal level**: Alameda County itself would be unable to implement many new funding measures on its own. Some measures, such as market-based pricing of parking, might have to be implemented at the local level, and some, such as sponsorships for transit infrastructure or services, might have to be implemented at the district level. Measures such as a mileage fee would require legislation at the state level and would likely have to be implemented statewide (although under current law, the region may implement its own gas tax).
- **Resistance from private parties**: Private entities would likely be unwilling to contribute funding in the absence of a clear benefit or mandate. Experience from other areas does suggest, however, that they will do so if value can be demonstrated—that is, if businesses or property owners can be convinced that they will see returns on their investments.
- **Resistance from voters and/or elected officials**: Some proposed revenue sources may prove highly controversial, including those with broad impacts (such as taxes on the general public or user fees for motorists), those that would price a resource that has previously been heavily subsidized (such as new tolls), and those that would affect interest groups able to exert influence on policy discussions. Even measures that require direct voter approval or that would be voluntary in nature, such as sponsorships, could prove controversial.

Conclusion

The transportation funding challenges faced by Alameda County are not unique; other large counties in California face similar issues. Alameda County continues to advocate for funding at the regional, state, and federal levels, as well as explore the benefits of developing partnerships with other counties and jurisdictions throughout the state to demonstrate needs, share best practices, and advocate for funding. Ongoing coordination and partnership will allow for exerting influence and targeting advocacy efforts effectively to yield results.

ACTC_AR0367

10 Moving Forward

The CTP sets a direction for Alameda County's transportation system. To accomplish what is described herein and continue the evolution towards a more sustainable, equitable, and effective transportation system will take time, careful creation and consideration of projects and programs, policy changes, and strong investment strategies. Moving the CTP forward will include identification of transportation funding, coordination with land use policy changes, new ways of funding and implementing projects, new partnerships, and ongoing performance monitoring across the system. In some cases, additional studies or legislative advocacy will be necessary to realize the vision described in this plan.

In the course of preparing this CTP, and developing the modal plans, several key opportunity themes emerged. Primary among them is a desire to ensure that implementation proceeds in an integrated manner, such that Alameda CTC continues to advance efforts to pursue the implementation of projects, programs, and policies in a concerted way. This approach will enable synergies that can produce outcomes that are greater than the sum of their parts. In addition to pursuing more integrated implementation, other themes include the recognition that projects, programs, and policies affect many goals encapsulated in this plan at both a community level and a regional level. Rather than solely considering projects in one sphere or another, this CTP enables Alameda County to reaffirm its approach to multimodal improvements that enhance the travel experience for those moving goods and people across the county and region, as well as the quality of life for communities and neighborhoods in Alameda County.

The way forward is described herein in terms of short- and long-term measures to deliver project and programs across the system. This CTP includes ways to progress the endeavors envisioned in our modal plans, in our CIP, and within this document in order to see real improvement in our communities, in multimodal mobility, in goods movement, and in technology and innovation. Part of these steps include measures that will continue to strengthen our collaborations with other sectors within the county and collaboration with partners throughout the region.

Advancement of Projects and Programs

Projects and programs included in this plan are eligible to receive local, regional, and federal funding. In all cases, additional steps are required before construction or implementation can occur, including securing full funding, acquiring right-way and getting final project permits, final design, conducting environmental review, and Title VI or other equity analysis where required. The schedule for beginning construction on specific capital projects depends on funding availability, project readiness, and many other factors. The 2016 CTP is a policy document that provides a list of needs for projects and programs and identifies funding sources; however, it is

ACTC_AR0369

not an explicit project approval document that directs a specific course of action on a project. As such, the CTP does not propose project "approvals" and is therefore, according to state statutes and case law, not subject to CEQA. As required by state law and other regulatory requirements, all projects included in the CTP will undergo independent project development according to all applicable environmental and regulatory approval processes.

The CTP is updated every 4-5 years, to ensure that we have a strong blueprint for the future and to reflect changes in the countywide and regional network, policy direction, and applicable regulations. The following outlines steps Alameda CTC can take to advance projects and programs in this plan and prepare the next batch of projects for the future, beginning with the years until the next update of the CTP.

Short term (1-2 years):

- Implement Capital Improvement Plan (CIP) 1.5 which supports project development and funds projects/programs that are most ready for implementation/construction, as independently approved by Alameda CTC
- Conduct CIP 2.0 in summer 2016 to identify the next round of projects ready for implementation
- Utilize the robust countywide GIS database that was created as part of the Multimodal Arterial Plan to strategically target funds to projects that support multimodal improvements and complete streets to advance an integrated and connected network of multimodal transportation systems in Alameda County that support Alameda CTC's vision and goals (this database incorporates all the modal plan work and the CTP projects and programs); ensure integration of the equity findings into the countywide GIS database
- Implement high-priority projects sponsored by Alameda CTC and identified in the CPDP (Capital Projects Delivery Program described in Chapter 1) as independently approved by the Commission, including working on and identifying new corridor-specific planning efforts to identify and develop projects that support multimodal transportation solutions
- Develop strategic implementation plans for projects and programs that identify priorities, funding needs, funding opportunities and implementation strategies
- Work with MTC and project sponsors to shape projects to increase their ability to attract regional and federal funds; actively seek opportunities to leverage local funds with regional, state, and federal funds
- Work with project sponsors to ensure that they complete all appropriate project development and equity analyses, including addressing and assessing project benefits and impacts on minority and low income

ACTC_AR0370

communities, as required; use of the CTP equity analysis GIS mapping can assist local jurisdictions with this effort

- Define and implement next steps to move modal plan recommendations forward, including those in the Goods Movement, Transit, Multimodal Arterial and Bicycle and Pedestrian Plans
- Key steps on program implementation include:
  - Define and implement remaining programs in the 2014 Transportation Expenditure Plan (Measure BB)
  - Implement Affordable Student Transit Pass pilot programs
  - Expand Safe Routes to Schools program beyond education to incorporate capital infrastructure projects in collaboration with stakeholders (e.g., safety and access projects)
  - Evolve the paratransit program to respond to new demands and an evolving transportation landscape, including conducting a countywide needs assessment to identify and determine high-priority needs and solutions to serve seniors and people with disabilities in Alameda County and increasing same-day accessible trip availability
  - Continue to take actions to encourage, supplement, and support local governments in their TDM efforts, through funding multimodal transportation improvements and providing guidance and technical assistance to localities in developing their own TDM programs

Longer term (3-5 years):

- Complete implementation of CIP 2.0 and conduct future CIPs to continue moving projects through the concept, planning, design, review, and construction process
- Continue project development and delivery as approved by voters and as identified through strategic implementation plans
- Move forward with modal plan recommendations
- Move from pilot to permanent Student Transit Pass program by effectively leveraging funds
- Advance paratransit programs that support a suite of services for seniors and people with disabilities over a spectrum of ages and abilities
- Update the CTP to incorporate new projects and programs to inform the regional transportation plan and establish a future transportation framework for Alameda CTC

ACTC_AR0371

Planning and Studies

The strategies necessary to achieve the vision for the future articulated in the CTP will continue to evolve over time. Regular updates of the CTP will be necessary to respond to changing demographics and transportation needs, fluctuations in funding availability, and new technologies. Major uncertainties include the success of local, regional, and federal efforts to generate and secure additional transportation funds and the rapid evolution of technology sector as it affects transportation.

Future planning will also include taking the next steps towards implementation of the modal plan recommendations to get projects ready for future rounds of funding. Ongoing planning and project development efforts can help to better position the county for future iterations of the RTP and CTP and ensure that appropriate projects are adequately defined so as to be ready for submission in future plan development processes. Key steps include:

Short term (1-2 years):

- Conduct project development on high-priority projects recommended in the countywide modal plans; advance projects that further the vision of a continuous, connected network for each mode in Alameda County
- Conduct a series of comprehensive corridor studies that carry the improvements recommended as part of the Multimodal Arterial Plan and other modal plans through conceptual design; engage local residents and businesses in a community-driven design process that uses the MAP modal priorities and proposed improvements to inform the discussion
- Orient future planning and project implementation towards addressing equity disparities identified in the equity analysis
  - Educate cities and other DLD recipients on how to integrate equity analysis findings into the planning and implementation of projects and programs, e.g., cities could consider programming DLD funds to the neighborhoods and/or transportation performance areas in which countywide equity trends show up most significantly on the local level
- Conduct additional detailed planning studies to refine and establish how to advance modal plan strategies, such as the rail strategy that was initiated as part of the Goods Movement Plan
- Implement complete streets policies through Alameda CTC's grant programs and the DLD Local Streets and Roads program (i.e., the Central County Complete Streets implementation project, currently underway, is intended to serve as a model for the rest of the county when completed)
- Develop new ways of integrating projects with programs and policies to maximize benefits

ACTC_AR0372

Longer term (3-5 years):

- Incorporate comprehensive updates to the modal plans, equity strategy, and CBTPs into future updates of the CTP
- Further evolve the equity strategy in future updates
- Fully integrate Complete Streets policies into daily practices of jurisdictions

Collaborations and Partnerships

Moving forward, partnerships will be more important than ever before. The future vision outlined in Chapter 8 will require embracing new perspectives, models, and tools, and embarking on new ways of working together with different and new stakeholders, particularly the new technology based private transportation sector stakeholders. Key steps for advancing partnerships and moving modal plan initiatives forward include:

Short term (1-2 years):

- Continue meetings of the Goods Movement Collaborative and begin regular meetings of the Commission's Goods Movement Committee to shift the focus to implementation:
  - Develop a formal institutional framework for coordinating implementation
  - Create a focal point at the highest level possible for coordinating rail (freight and passenger) improvements and negotiations with the private railroads
  - Create a technology development collaborative to address low emissions program, introduce advanced logistics technologies, and develop public-private and public-public partnerships for pilot of demonstration technologies
  - Further define and implement programs identified in the Goods Movement Plan
- Begin regular meetings of the Commission's Transit Committee to advance recommendations of the Transit Plan
- Partner with Alameda County's transit agencies to advance Transit Plan recommendations and address other transit needs in the county; convene partners to improve integration of transit service delivery to support Transit Plan recommendations (Public Transit modal strategy, Chapter 6)
- Develop new and strengthened partnerships with non-traditional partners such as private sector technology companies to pilot new ways of integrating technological innovations into the transportation system
  - Develop collaborative relationships with technology companies and other transportation agencies to better understand the implications of new technologies, develop pilot projects to test new technological solutions, and

ACTC_AR0373

develop improved data collection and analysis methodologies based on newly available data sources

- Work with local jurisdictions and transit agencies to identify ways that new technologies can improve transportation efficiencies for all modes.
- Work with local jurisdictions and transit agencies to identify ways that new technologies can improve transit service to traditionally underserved populations such as low-density areas, elderly, and people with disabilities

Longer term (3-5 years):

- Use partnership structures to strategize, plan, and advocate for policies, projects, and programs that support the CTP vision
- Use established partnerships to actively leverage funds to deliver transportation solutions in Alameda County

Land Use Coordination

This CTP and Plan Bay Area seek to strengthen transportation and land use linkages by focusing on development that brings together mobility choices, housing, and jobs. Measure BB includes dedicated funding for infrastructure development that supports existing or proposed land use in and around transit hubs, which provides initial financing to support specific TOD and PDA developments throughout Alameda County, as well as activities that better link transit, housing, and employment.

The following are intended to support local jurisdictions and regional governments in implementing land use plans that can be efficiently and effectively served by all modes.

Short term (1-2 years):

- Partner with cities to implement CEQA/LOS reform, e.g., provide technical assistance to cities to come into compliance with SB 743
- Collaborate with local jurisdictions (planning, public works, economic development) to better coordinate land use/transportation planning
- Continue to monitor development activity and "readiness" throughout the county in the *Priority Development Area Growth and Investment Strategy* and use this as a basis to support integrated transportation and land use planning
  - Update the PDA Action Plan on a regular basis
- Provide funding, technical, and policy support to local jurisdictions to support infrastructure in designated PDAs and TODs

ACTC_AR0374

Longer term (3-5 years):

- Continue to develop new modeling and evaluation tools that adequately assess the interactions between land use and transportation improvements
- Monitor the effectiveness of this plan using the adopted performance measures and the assumptions regarding land use as the plan develops; some performance measures may require further refinement over time as tools are developed

Funding

With Measure BB, approved by voters in 2014, Alameda County is in a much better place with regards to funding than it was during the 2012 CTP update. However, to bring the future vision articulated in Chapter 8 to fruition will require significant additional funding. Leveraging local and regional funding to attract contributions from state and federal funding sources will be crucial in delivering on Alameda County's vision and goals for the future transportation network. Specific steps include:

Short term (1-2 years):

- Leverage existing local and regional funds to attract additional funding from outside sources
  - Work with transit operators to identify and support stable revenue sources to address transit capital and operating needs
  - Work with local and regional agencies to secure new funds to make up the shortfalls in other transportation improvements identified in the plan such as road maintenance
- Continue to advocate for a federal transportation policies and programs that support the values expressed in this plan, including increased funding for transit, pedestrian, and bicycle infrastructure, operations and maintenance, as well as stability of funding
- Develop strategic plan that identifies funding needs on projects and programs and strategies to close funding gaps

Longer term (3-5 years):

- Support new funding sources in collaboration with local jurisdictions, transit operators, regional and state agencies, and private sector partners and/or peer agencies and develop and/or influence expenditure plans as necessary

Ongoing Monitoring and Performance-based Planning

Performance-based planning does not stop with publication of the CTP document. Alameda CTC will continue to monitor the county's transportation performance in

ACTC_AR0375

coming years and in preparation for the next CTP. Ongoing performance monitoring helps Alameda CTC measure the impact of investments on transportation performance over time, ensures progress is being made towards CTP goals, and reveals emerging trends and future needs.

Alameda CTC already publishes an annual performance report containing a variety of multimodal transportation performance measures consistent with CTP goals. Alameda CTC has also been developing more robust performance measures for direct local distribution funds, this work is ongoing. Specific actions include:

Short term (1-2 years):

- Conduct ongoing performance monitoring to determine the degree to which investments are moving the County towards the adopted vision and goals

Longer term (3-5 years):

- Continue to update the existing travel demand model and continue to develop new tools that provide additional clarity about attainment of performance goals
- Continue to work with MTC, ABAG, and local planning departments to refine land use assumptions in the travel demand model and continue to refine the SCS land use
- Continue to address new data sources and methodologies to understand travel behavior and identify methods for incorporating into future model updates and CTP development

ACTC_AR0376

Executive Summary

Background and Context

Public transit is one of the foundations of our transportation system. It provides numerous economic, environmental, and social benefits. A robust transit system can reduce household costs by enabling households to own fewer vehicles or go car free. High quality transit improves access to employment, education, health care, and other opportunities while enabling employers to have access to a larger pool of employees. More people using transit instead of driving improves air quality, and reduces greenhouse gas emissions and energy consumption. Transit allows urban areas to accommodate higher densities where appropriate and reduces demand for parking, freeing up land for higher-value uses.

Alameda County's central location, diverse population and workforce, and extensive transportation network, make it a critical part of the San Francisco Bay Area. It features a mosaic of diverse travel markets and is served by an array of travel modes. Alameda County's 14 cities and unincorporated areas (Figure ES 1) have a combined population of 1.6 million[1]. Its population and worker base are growing and Alameda County recognizes that continuation of its economic vitality is closely tied to the ability to efficiently move people and goods throughout the region. The number of Alameda County residents commuting to areas outside the county has been increasing for several years due, in part,

Figure ES 1: Study Area

[1] Report E-4 Population Estimates for Cities, Counties, and the State, 2011-2015, with 2010 Benchmark. California Department of Finance. http://www.dof.ca.gov/research/demographic/Estimates/

to significant job growth in San Francisco and the Peninsula/South Bay. As housing needs continue to increase throughout the Bay Area, a significant amount of high-density, multi-family residential development is planned along several of Alameda County's primary transportation corridors.

Increasing transit mode share and growing rail, bus and ferry ridership are critical to meeting the mobility needs of the county today and in the future. Meeting current and future demands for fast, frequent, and reliable transit will require careful planning and deliberate actions on the part of the agencies, jurisdictions, and entities that serve Alameda County and the Bay Area.

Alameda County's multimodal transportation network includes seven transit agencies that provide bus, rail, and ferry services in the county and across county lines (Figure ES 3). There are also a multitude of shuttle services that are either fully or partially privately funded. Land use characteristics, commuting patterns, population density and growth, and economic conditions have created strong markets for transit today. These conditions and trends point toward an increasing demand for transit use in the future.

Transit is a competitive mode choice in most Alameda County communities based on favorable transportation and land use characteristics, such as limited parking availability, population and employment densities and projected growth, and roadway congestion. The presence of strong transit markets in Alameda County, however, has not always translated to high transit ridership. Only 14 percent of commute trips currently take place on transit[2] and the rate of ridership growth on most of the county's transit services has not kept pace with increasing operating costs. These trends have pointed to the need to assess how Alameda County's transit agencies can better take advantage of transit-competitive markets and capture a larger percentage of trips, including commute trips.

Further, for a decade there has been minimal ridership growth on intra-county bus service. Bus agencies may be better able to increase market share in strong transit markets with faster, more frequent, and more reliable bus service. Improving speed and reliability, however, will be challenging given projections of worsening congestion and travel times on county roadways.

Therefore, the Countywide Transit Plan has been developed to establish a framework for Alameda CTC and Alameda County's jurisdictions and transit agencies to align transit, land use, and economic development goals and objectives. It identifies needs and near- and long-term transit capital and operating priorities for fixed route and paratransit services. The Transit Plan is designed to work in concert with the Multimodal Arterial Plan— which lays out the approach to accommodating all modes traveling on major streets within the county— and the Countywide Goods Movement Plan— which addresses the critical importance of

ABOUT ALAMEDA CTC

The Alameda County Transportation Commission (Alameda CTC) was created as a joint-powers authority in 2010 by its predecessor agencies (ACCMA and ACTIA), AC Transit, BART, Alameda County and its constituent cities. It was established to plan, fund, and deliver transportation programs and projects that expand access and improve mobility in Alameda County. Alameda CTC also serves as Alameda County's congestion management agency. The CTC's governing board is comprised of 22 elected officials representing the county's 14 cities, the five members of the County Board of Supervisors, and one representative, respectively, from BART and AC Transit.

[2] 2014 Performance Report – State of the Transportation System in Alameda County. Alameda County Transportation Commission.

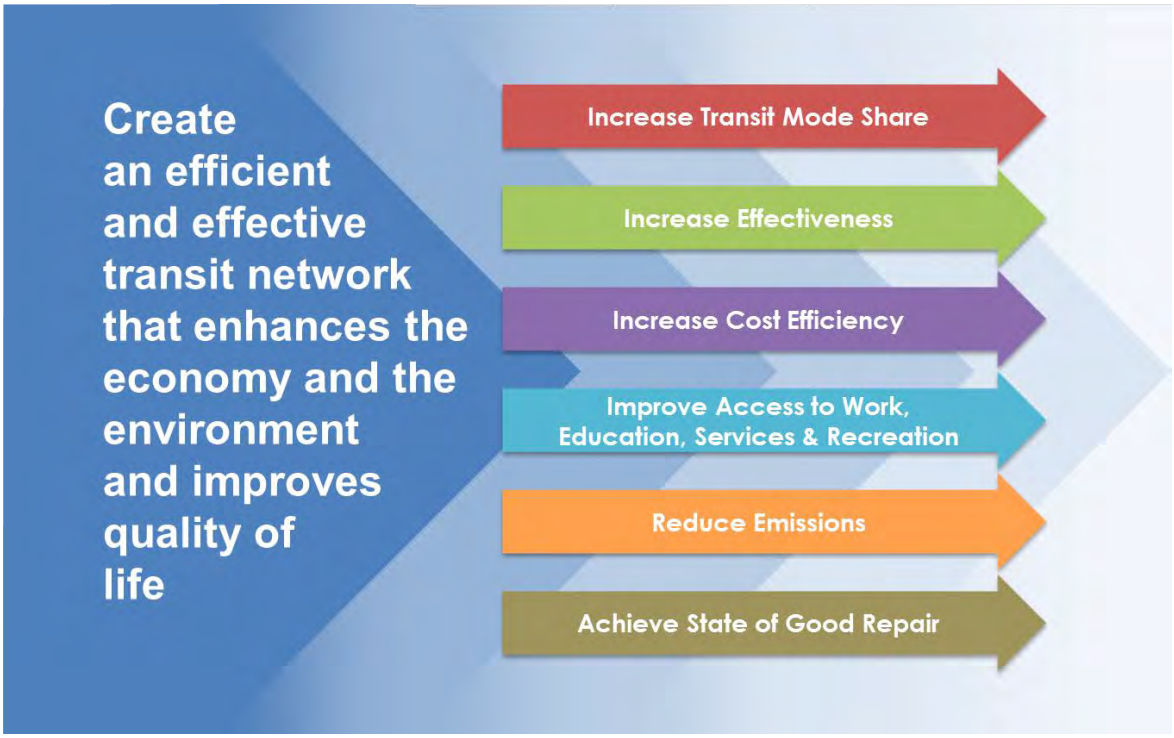
ACTC_AR0406

regional goods movement in the county and the interplay between the movement of goods and people on the county's rail and roadway systems.

By articulating a clear vision and priorities for transit in Alameda County, the Countywide Transit Plan will enable Alameda CTC and stakeholders to leverage existing funds and advocate for additional resources to improve local, regional, and inter-regional transit. Moving forward with the recommendations and strategies for better agency coordination will raise the bar for provision of transit service and travel options for residents, visitors, and workers in Alameda County. While the plan envisions a fully built out system by 2040, incremental provision of enhancements over time will result in a steady increase in ridership and service between now and 2040.

Vision and Goals

Alameda CTC works to create a transportation system that promotes environmental sustainability and economic vitality while facilitating mobility and connectivity. Alameda CTC recognizes the need to achieve financial sustainability by allocating limited transportation resources in a way that results in enhanced efficiency for transit operations and produces the most effective results for investments. The Countywide Transit Plan's vision was developed to reflect these considerations (Figure ES 2).



Based on the vision and an understanding of the current conditions in the county and region, seven transit goals for the Countywide Transit Plan were adopted by Alameda CTC (Figure ES 2).

Transit Market Analysis

Central to the development of the Countywide Transit Plan is a transit market analysis. The market analysis employed a Transit Competitiveness Index (TCI) tool that identifies locations and markets where transit service can effectively compete with other travel modes.

Over half of all Alameda County trips occur in strongly competitive transit travel markets based

Figure ES 2: Vision and Goals

TRANSIT COMPETITIVENESS INDEX

To design an effective transit system, it is useful to identify locations and markets where transit service can be competitive relative to automobile use. The Transit Competitiveness Index (TCI) tool assesses the underlying market conditions and location characteristics, independent of current or proposed transit service. It provides a quantitative measure of transit ridership potential by aggregating the conditions that contribute to successful transit service into a single number. The TCI analysis uses land use density and diversity, roadway congestion, parking cost and search time, household characteristics, trip purpose, central business district characteristics, and tolls as factors to determine transit market competitiveness. The TCI tool is derived primarily from data obtained from the 2014 Alameda CTC travel demand model.

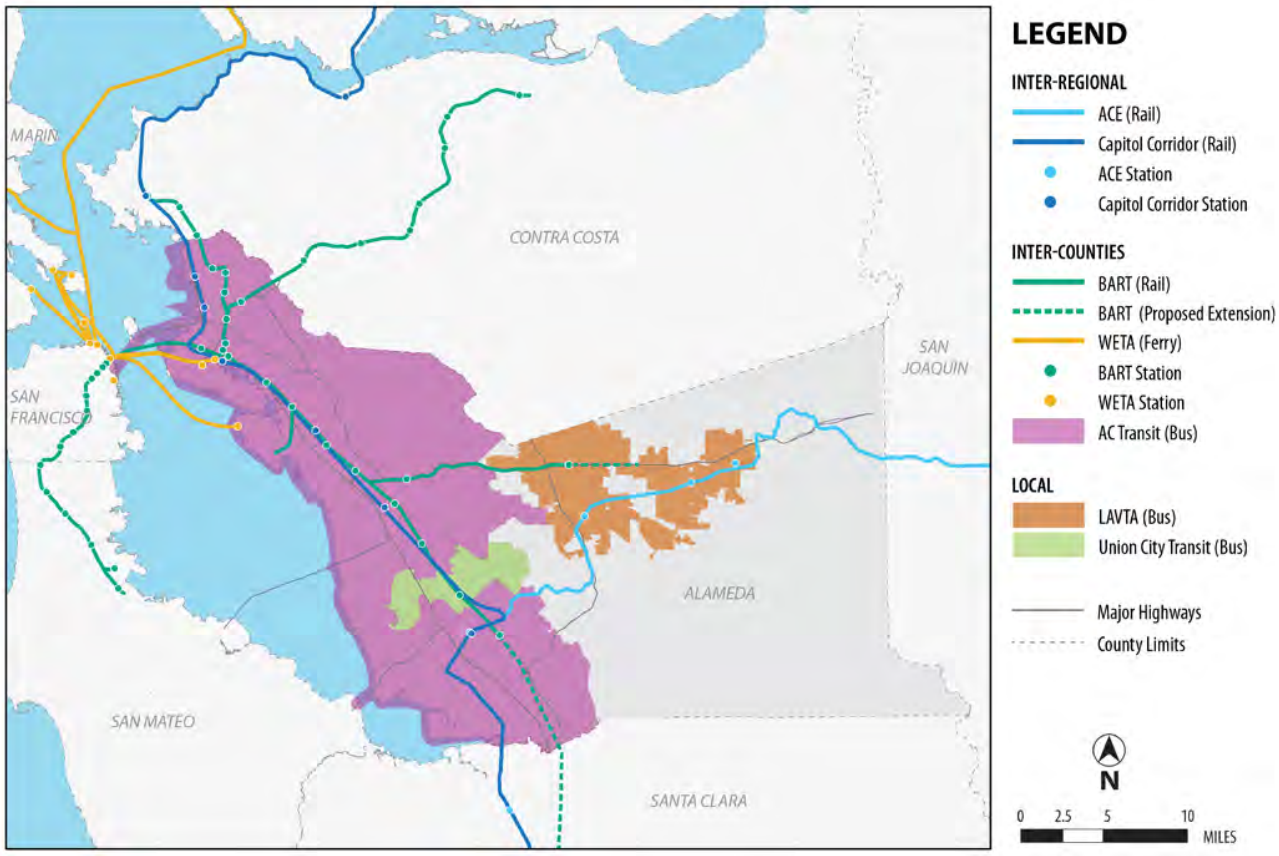
on factors including increasing roadway congestion and concentration of future land use growth, primarily in Priority Development Areas (PDAs), which are places that local jurisdictions have identified for potential infill development near transit.

Across the region, transit competitiveness is expected to increase due to increasing residential densities and congestion, decreasing vehicle availability per household, and smaller households. Population and employment in Alameda County are forecast to grow by more than 30% by 2040[3]. Improving transit's market share is necessary to accommodate a growing population and its mobility needs.

While total daily trips are forecasted to increase significantly, only a minimal expansion in roadway capacity is anticipated to occur during this period. Despite some expected changes in land use, no major changes in travel patterns are anticipated.

Existing Conditions, Issues, and Challenges

There is extensive transit service operating in Alameda County and conditions in Alameda County are supportive of transit, however, transit serves a relatively small share of total trips made within, to, from, or through Alameda County, and single occupant vehicles are the dominant mode of travel. The cost of providing transit service is increasing, while service levels and ridership in some markets are declining. Deteriorating traffic congestion on roadways could increase bus delays and worsen on-time performance. These and other key themes that emerged from analysis of existing conditions of the transit system are summarized below.



Strong Transit Markets are not resulting in Strong Transit Ridership

The presence of strong transit markets in Alameda County has not yet translated to high transit ridership. Single-occupant vehicles are the predominant mode of travel accounting for slightly less than three-quarters of all work trips originating in Alameda County. Transit serves a relatively small share of total trips made within, to, from, or through Alameda County. Only 14 percent of commute trips in the county currently take place on transit (Figure ES 4) and an even smaller proportion of *total* trips (including non-work trips) take place on transit.

A significant majority of transit routes in Alameda County currently operate in transit-competitive markets. However, transit ridership in areas with a high TCI are lower than what would be expected given the "competitive" transit conditions. Many of the transit routes serving these areas have

[3] Plan Bay Area, Metropolitan Transportation Commission, 2013. Alameda County population is expected to increase by over 30% and employment by 36% between 2010 and 2040.

Figure ES 3: Transit Network in Alameda County

Note: AC Transit also serves parts of Contra Costa County, however, service area outside Alameda County is not shown in the map above.

mode shares below that suggested by the TCI—suggesting that untapped transit markets or latent passenger demand exists within or near these transit routes.

Similarly, whereas over two-thirds of *all* trips (trips on all modes) associated with Alameda County take place entirely within the county, only one third of trips *served by transit* take place entirely within in the county, which indicates a potential untapped market for intra-county transit trips (see next theme). The other two thirds of transit trips are regional trips that cross county boundaries (Figure ES 5). These regional trips occur between Alameda County and adjacent counties. .

In particular, a high level of Transbay coverage is provided to San Francisco. Although San Francisco is not the most significant regional destination for all trips to and from Alameda County (it is second compared to Contra Costa County), it is the market with the richest transit service and high demand due to congestion on the San Francisco Oakland Bay Bridge, the concentration of employment sites in downtown San Francisco, and the cost and availability of parking in San Francisco.

While transit service coverage extends throughout the county, transit service operations and frequency (i.e., routes and schedules) are most concentrated in the inner East Bay's urban core, with the system becoming less dense and service less frequent in the southern and eastern parts of the county (Figure ES 3).

Among all transit agencies, BART and AC Transit combined carry nearly 97 percent of all trips made on transit (Figure ES 6). The other transit services in Alameda County carry the remaining three percent.

Figure ES 4: Mode-share for Commute Trips

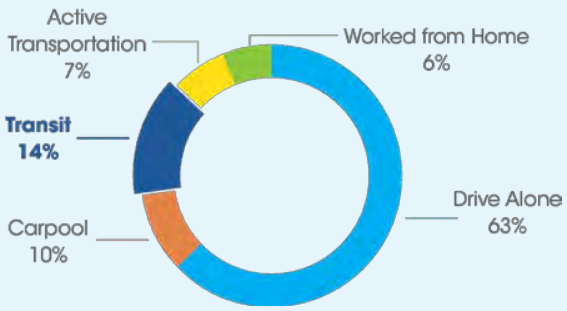


Figure ES 5: All Transit Trips by Type

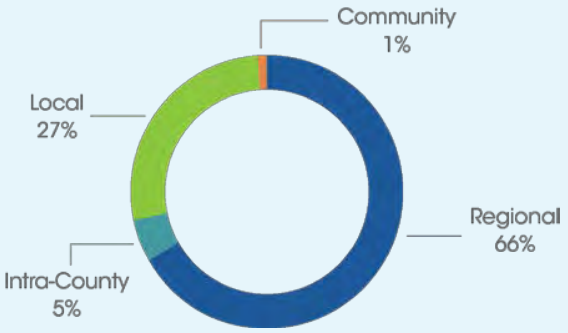

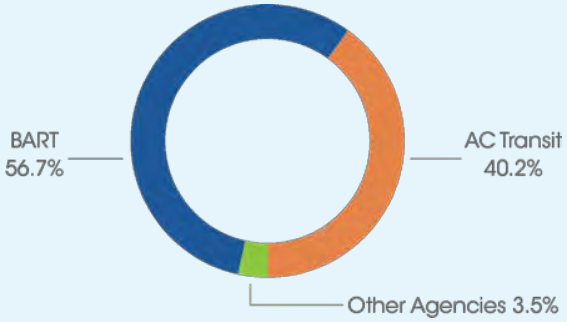

Figure ES 6: Ridership by Transit Agency

Source: Ridership data provided by transit agencies

Decade-Long Trend of Flat Intra-County Bus Ridership Growth

Despite positive market conditions for transit in Alameda County, bus ridership declined between 2006 and 2012; it remained relatively flat until 2014, the most recent year for which data was collected. This trend may be linked to the recession, service cuts and congestion-related on-time performance problems[4]. Where transit markets are strong and transit service is frequent, reliable, and highly competitive with the auto, such as the East Bay-San Francisco Transbay corridor, transit ridership has grown significantly.

Transit Speed and Reliability Could Worsen if No Actions Are Taken

Improving bus speeds will present a challenge given that traffic congestion and auto travel times are projected to worsen as population and density increases in many areas of the county.

Increasing roadway congestion threatens to increase bus delay and worsen on-time performance. In order to address this trend it is critical to develop ways for bus service to avoid the unpredictability of congestion and road incidents.

Rate of Ridership Growth is Not Keeping Pace with Increasing Operating Costs

The cost of providing transit service is increasing faster than inflation and outpacing growth in ridership and fare revenues. Higher operating costs combined with fluctuations in transit funding and revenues due to the recession have necessitated cutbacks in service which have a negative impact on ridership. This situation also presents on-going challenges to maintain existing services and provide new service where it is needed most. At the same time, population and employment in Alameda County have continued to grow, but transit ridership has not kept pace.

[4] Alameda CTC 2014 Performance Report

ACTC_AR0410

Despite Extensive Coverage, Transit Gaps Still Exist

Gaps are areas deficient in transit service, and occur in the form of either spatial, temporal, or service-level gaps. There is a lot of work underway by many transit operators and transportation agencies to address temporal and spatial gaps in service. For example, trips to and from Contra Costa County and Santa Clara County are served by only a few transit routes. Ongoing efforts like the AC Transit's Major Corridors Study and Service Expansion Plan seek to close the Contra Costa County gap, and the BART Silicon Valley extension proposes to extend BART service to San Jose and Santa Clara.

An example of a temporal, service-level transit gap exists in the Alameda County-San Francisco market, where existing supply of transit does not meet demand during commute hours resulting in crowding on trains and buses. The MTC Core Capacity Transit Study focuses on investments to transport more commuters on BART, AC Transit, and WETA from the East Bay (including Alameda County), and it explores potential new connections across the Bay.

These gaps, issues, and challenges support the need for additional network improvements and development of strategies to achieve a more physically and insitutionally integrated transit system in the future.

Opportunities

One critical outcome of the Plan is the recommendation for a *Vision Network* designed to help Alameda County realize its vision for public transportation. The Vision Network focuses on how Alameda CTC can improve the transit system and transit service by focusing investments in those areas that will have the greatest benefit to existing riders and the potential to attract new riders.

Network Recommendations

The Vision Network recommendations include short-and long-range solutions designed to improve the transit system. They are the result of a thorough consideration of existing conditions, current plans and studies, and market and transit operational analyses. They are also designed to support Alameda CTC's vision and goals for transit. Fourteen core Vision Network recommendations were developed in response to the evaluation of current transit service, current and forecasted transit market conditions, and other on-going planning studies.

The Vision Network recommendations are not intended to identify new routes; rather, based on market analyses, they identify a network of transit corridors that have the potential to capture the greatest market share of transit riders throughout the county. This will inform where transit funding investments can be made to best capture increased market share.

The Plan also identifies capital improvements to facilitate improved frequency and reliability of services. Since the recommendations focus on a network of corridors, a critical next step for moving the Plan forward will be to identify specific corridor improvements for the recommended corridors linked to improvements identified in Alameda CTC's Multimodal Arterial Plan and projects identified in the 2014 Transportation Expenditure Plan. Agency partnerships and public and business outreach will be essential to move forward the Vision Network recommendations.

Transit Tiers

A tiered structure forms the framework for the Vision Network recommendations. Five tiers were identified (Figure ES 7). The tiered structure is an organizational tool to frame the discussion of the existing array of transit services, the methodology used to identify future needs, and the recommendations themselves. The structure does *not* imply a hierarchy of importance among the transit services or tiers. Rather, the five tiers of

Figure ES 7: Transit Tiers

service function as an integrated system to deliver effective transit options to the community.

Policy Strategies

The Plan also includes recommended strategies intended to provide a guiding framework for agencies to consider how to begin strategically implementing the recommended improvements (Table ES 1). The strategies are conceptual. Refinements and additional actions will be necessary to achieve a more physically and institutionally integrated transit system through policy modifications, service coordination, finance approaches, land use considerations, and additional study where needed. The transit tier structure forms the framework for targeting policy strategies.

Moving Forward

A series of important steps will be necessary to move the recommendations and strategies forward, secure funding for delivery, and determine coordination and collaboration opportunities.

The transit system in Alameda County is a mature system, and many major system infrastructure elements need capital rehabilitation or replacement. At the same time, rapid change and growth calls for expansion of the transit system to ensure continued, adequate access to transit in Alameda County. Striking the right balance between these needs will be critical.

Taken as a whole (excluding the BART extension to Livermore/ACE), the estimated capital cost of the Vision Network recommendations is $2.6 billion (in 2015 dollars). Annual operating and maintenance costs (2015 dollars) are estimated at $149 million.

Development of precise financing strategies will require more detailed analysis as each project goes through its specific planning and engineering phases, but should be based on five overall approaches:

1. Develop consensus on phased implementation.
2. Develop a funding strategy team
3. Identify funding sources and financing options
4. Develop a financial model and identify several funding and financing scenarios
5. Develop funding strategy and timeline.

This plan's recommendations and strategies will serve the mobility needs of the county today and in the future capitalizing on the strength of transit markets and abundance of opportunities for improving transit service in Alameda County. Some of the recommendations and strategies would require rethinking the transit capital project and transit service delivery practices. Successfully utilizing the potential funding sources and financing mechanisms to move the recommendations and strategies forward will require further project development and extensive interagency coordination.

Project Development – The Vision Network recommendations are based on market analysis that relies on existing transit performance, future land use plans, and demographic projections. As these recommendations are further analyzed and developed, and specific capital and service improvements are identified, specific funding and implementation strategies will need to be developed.

Project Schedule – Each corridor served by the Vision Network recommendations is unique in its strengths and challenges that would affect the project delivery timeline. Project specifics and delivery schedules, created during the course of project development, will be key in identifying specific funding sources and financing mechanisms that are best aligned to meet the projects financial needs.

Interagency Coordination – One of the biggest challenges to developing and financing multi-jurisdictional transit projects is the coordination of various interested parties, including transit agencies, local jurisdictions, residents, businesses, private property owners and other stakeholders. A politically and economically feasible 'project' may require extensive outreach efforts and a new funding and delivery mechanism.

Pilot Programs – Some of the strategies could be tested out through pilot programs conducted at agency- or county-level. A pilot program could be used to test heavily discounted transfers across transit agencies. Pilot programs could also be deployed to explore arrangements that maximize the public benefit from integration of public-private partnerships, such as services offered by transportation network companies.

Advocacy – For strategies that are best implemented at the regional level, Alameda CTC, transit agencies, and local jurisdictions could coordinate their advocacy efforts. A regionally-focused universal fare program would be ideal for such advocacy efforts.

ACTC_AR0413

Table ES 1: Summary of Tier Based Policy Strategies

Tier	Strategies	
All Tiers	Maintain assets, including transit facilities and vehicles,, to maximize useful life and enhance safety	- Conduct State of Good Repair (SOGR) assessments at each agency
Inter-Regional	Separate goods movement and passenger rail service	- Conduct a detailed study on passenger and freight rail needs
Regional Express	Target resources to expand Transbay service capacity	- Prioritize funding for supplemental Transbay bus and ferry service; address implications to facilities and labor; evaluate differently from local services - Conduct additional analysis to determine the extent of need and fleet requirements
	Enhance interagency coordination	- Explore potential Intergovernmental Agreements - Create/expand committee for interagency coordination - Encourage funding integration
	Refine corridor plans through clearly defined improvements	- Coordinate corridor plans with parallel planning initiatives including the Goods Movement Plan and Arterial Plan
	Establish an integrated fare structure and policy allowing riders to transfer between systems and routes	- Upgrade regional passes (Clipper card) - Eliminate transfer penalties - Implement mobile ticketing
	Develop a regional coordinated schedule across all operators to improve service connections and address possible overlaps in service	- Synchronize service spans (hours of operation/frequency) - Synchronize schedules to minimize wait time between buses - Share seasonal and special condition service change information - Create a joint information platform to merge real-time information
	Expand affordable fare strategies	- Expand the use of fare programs to employers and institutions - Consider results of MTC's means-based fare study
	Develop programs to reduce costs	- Improve coordination among transit agencies - Support full implementation of common set of service standards - Require audits, peer comparison and value engineering on all projects
Urban Rapid	Enhance interagency coordination to focus investments and development	- Establish corridor working groups to coordinate planning and investments around specific transit corridors

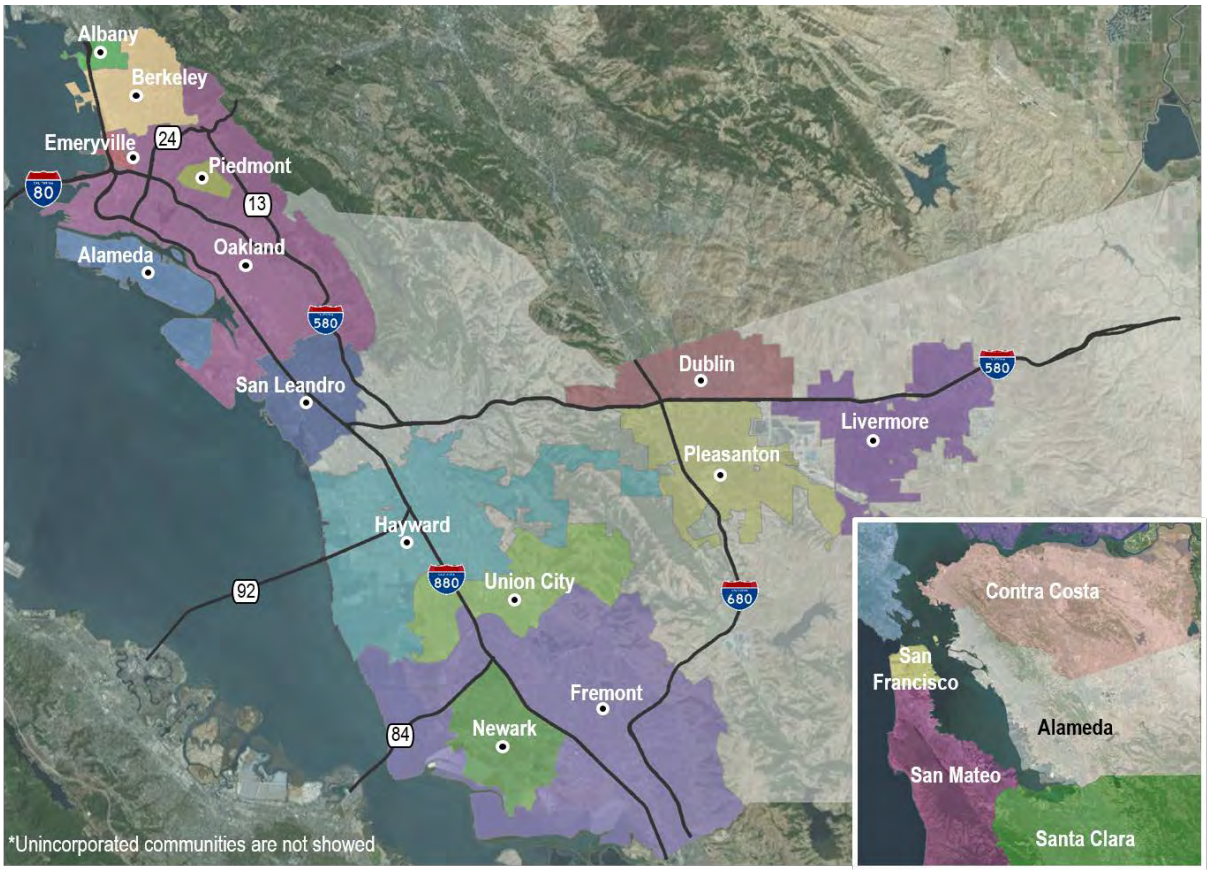
...continued on next page

Tier	Strategies	
Urban Rapid *(continued from prior page)*	along transit corridors and in Transit Oriented Communities	- Coordinate and link Transit Oriented Communities programs with active transportation and complete streets programs - Create Transit Oriented Development programs to encourage planning for higher density development at transit hubs and stations - Identify funding resources to facilitate the prioritization of transportation infrastructure programs
	Provide common Information tools and shared branding and marketing	- Create one-call, one-click information for all services - Create a countywide transit map and common graphic and information system
Local Frequent and Community Connector	Expand access for persons with disabilities in conjunction with fixed route service improvements (e.g. increase in service area coverage, hours of operation, transit hub and station upgrades)	- Improve access to transit hubs and stations - Enhance travel training programs - Coordinate inter-agency paratransit scheduling for regional trips
	Explore public-private partnerships to expand the reach of the transit network	- Explore pilot programs at outer portions of routes to assess demand, operational considerations and contractual issues
Streets Plus	Strengthen intermodal connections among buses, trains, and alternative modes through targeted roadway and non-motorized transportation improvements	- Establish on-street priority for transit operations, facilities, and pedestrian access - Provide priority for transit services by upgrading traffic signal systems - Establish transit priority zones in areas of heavy bus flows and transfer activity - Establish on-street priority and separation of transit from traffic to improve access to transit hubs, rail stations and park-and-ride facilities - Prioritize pedestrian improvements and bicycle access to transit - Enhance transfer hubs by minimizing walk lengths and impediments to pedestrian and bicycle access -
	Encourage Transit Oriented Community planning along transit corridors and transit-dense areas	- Encourage local jurisdictions and developers to place highest intensity uses in closest proximity to transit - Encourage a mix of uses to support walking and bicycling in "complete street" communities - Manage parking supply and demand

Intentionally Left Blank

1

Background and Context



1.1. About Alameda County

Alameda County's central location, diverse population and workforce, and extensive transportation network, make it an integral part of the San Francisco Bay Area. The county has diverse travel markets served by an array of travel modes. Alameda County's 14 cities and unincorporated areas (Figure 1) have a combined population of 1.6 million[5]. Its population and worker base are growing and Alameda County recognizes that continuation of its economic viability is closely tied to the ability to efficiently move people and goods throughout the region. The number of Alameda County residents commuting to areas outside the county has been increasing for several years due, in part, to job growth in San Francisco and the Peninsula and South Bay. As housing needs continue to increase throughout the Bay Area, a significant amount of high-density, multi-family residential development is planned along several primary transportation corridors.

Meeting future demands for fast, frequent, and reliable transit will require careful planning and deliberate actions on the part of the agencies, jurisdictions, and entities that serve Alameda County and the Bay Area.

Alameda County's multimodal transportation network includes seven transit agencies that provide bus, rail, and ferry services in the county and across county lines (Figure 2), as well as a

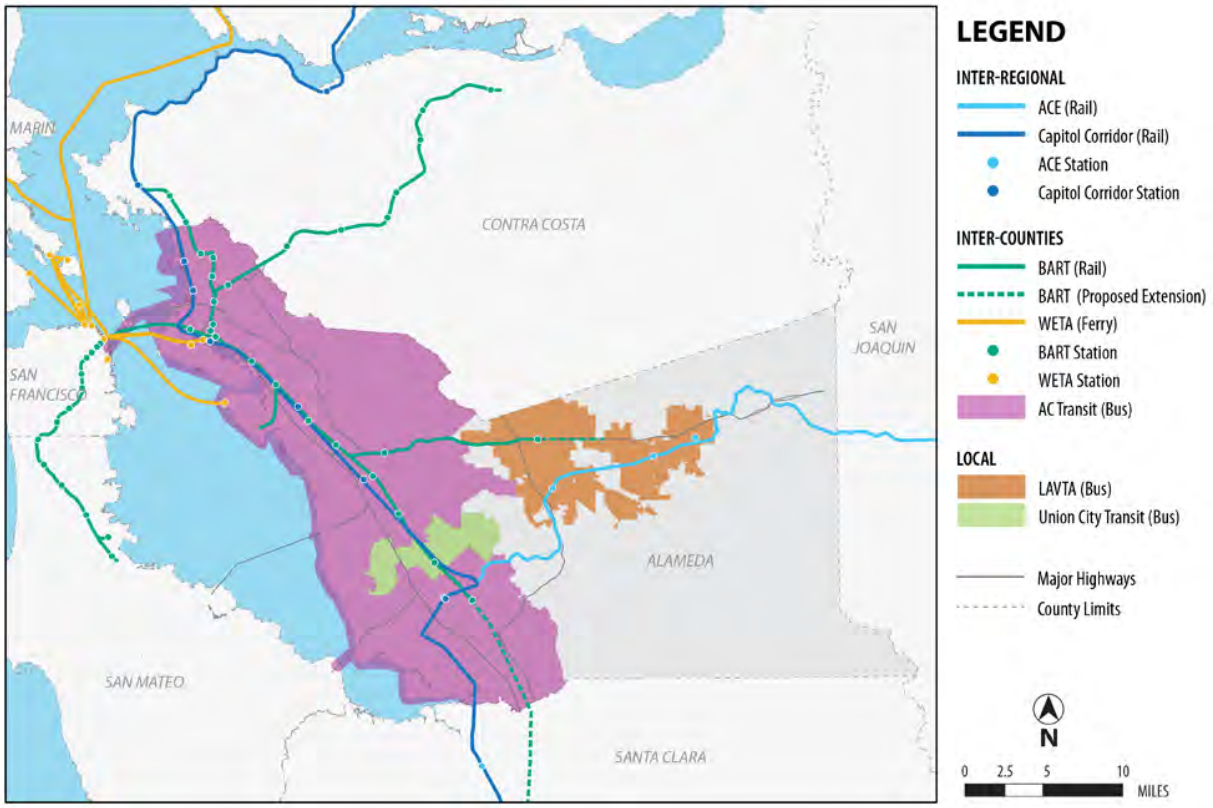


Figure 1: Study Area

1 Background and Context

Figure 2: Map of Transit Agencies Serving Alameda County

Note: AC Transit also serves parts of Contra Costa County, however, service area outside Alameda County is not shown in the map above.

multitude of shuttle services that are either fully or partially privately funded. Land use, commuting patterns, population density and growth, and economic conditions have created strong markets for transit today. These same conditions and growth trends point toward an increasing demand for transit use in the future.

Transit is a competitive mode choice in most Alameda County communities based on favorable transportation and land use characteristics, such as limited parking availability, population and employment growth, and roadway congestion. In 2010, almost 54 percent of all Alameda County trips were in transit-competitive markets; this is expected to increase to 58 percent by 2040[6].

The presence of strong transit markets in Alameda County, however, has not always translated to

ABOUT ALAMEDA CTC

The Alameda County Transportation Commission (Alameda CTC) was created as a joint-powers authority in 2010 by its predecessor agencies (ACCMA, ACTA, and ACTIA), AC Transit, BART, Alameda County and its constituent cities. It was established to plan, fund, and deliver transportation programs and projects that expand access and improve mobility in Alameda County. Alameda CTC also serves as Alameda County's congestion management agency. The governing board is comprised of 22 elected officials representing the county's 14 cities, the five members of the County Board of Supervisors, and one representative, respectively, from BART and AC Transit.

[6] Appendix B - *Existing Conditions and Market Analysis*

ACTC_AR0420

COUNTYWIDE TRANSIT PLAN AND OTHER PLANS

Alameda CTC, along with its predecessor agencies, has led the way in transportation investments and funding for projects in Alameda County for almost 30 years. Until recently, Alameda CTC and its predecessor agencies employed a conventional approach for prioritizing projects in the Countywide Transportation Plan. Alameda CTC began performance based planning with the adoption of the 2012 ***Countywide Transportation Plan*** *(CTP) to evaluate transportation performance against a set of goals to evaluate how the county is moving towards fulfilling its adopted transportation vision.*

The 2012 CTP also called for the development of specific modal plans to more fully understand the needs, challenges, and opportunities for transportation improvement in Alameda County. This Countywide Transit Plan was one of the identified modal plans to be created as a next step for developing projects, programs, and policies to improve transit in Alameda County.

The Transit Plan was developed in close coordination with other modal plans, particularly the Goods Movement Plan and the Multimodal Arterials Plan. Transit Plan and Goods Movement Plan teams collaborated to develop a white paper to inform the development of a comprehensive passenger and freight rail strategy for Alameda County. Similarly, recommendations of the Transit Plan were considered in identifying appropriate typology and modal priorities for relevant street segments in the Multimodal Arterials Plan.

high transit ridership. Only 14 percent of commute trips currently take place on transit[7]. Increasing transit mode share and growing rail, bus and ferry ridership are critical to meeting the mobility needs of today's and tomorrow's population. However, the rate of ridership growth on most of the county's transit services has not kept pace with increasing operating costs. These trends have pointed to the need to assess how Alameda County's transit agencies can better take advantage of transit-competitive markets and capture a larger percentage of trips, including commuter trips.

The decade-long trend of generally flat ridership growth on intra-county bus service is also a key issue. Bus agencies may be better able to increase market share in strong transit markets with faster, more frequent, and more reliable service. Improving speed and reliability will be a challenge given projections of worsening congestion and travel times.

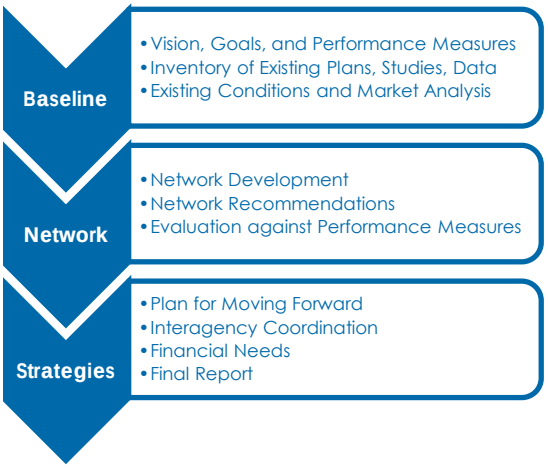
Therefore, the Countywide Transit Plan has been developed to establish a framework for Alameda CTC and Alameda County's jurisdictions and transit agencies to align transit, land use, and economic development goals and objectives. It

[7]Alameda County Transportation Commission, 2014 Performance Report – State of the Transportation System in Alameda County.

ACTC_AR0421

identifies needs and near- and long-term transit capital and operating priorities for fixed route and paratransit services. The plan is designed to work in concert with the Multimodal Arterial Plan (which lays out the approach to accommodating all modes traveling on major streets within the county) and the Countywide Goods Movement Plan (which addresses the critical importance of regional goods movement in the county and the interplay between the movement of goods and people on the county's rail and roadway systems). By articulating a clear vision and priorities for transit in Alameda County, the Countywide Transit Plan will enable Alameda CTC and stakeholders to leverage existing funds and advocate for additional resources to improve local, regional, and inter-regional transit.

The Plan identifies a Vision Network of enhanced infrastructure and transit services for the future. Moving forward with the Vision Network recommendations and strategies for better agency coordination will raise the bar for provision of transit service and travel options for residents, visitors, and workers in Alameda County. While the plan envisions a fully built out system by 2040, incremental delivery of enhancements over time can result in a steady increase in ridership and service between now and 2040.



1.2. Plan Development Process

The framework for transit's future in Alameda County started by developing an inventory of existing plans, studies, and data (Appendix A); by thoroughly analyzing existing and future market conditions (Appendix B); and by identifying transit performance issues and system integration opportunities (Appendix B). Based on this baseline analysis, the Countywide Transit Plan established a vision to create an efficient and effective transit network that enhances the economy and the environment to improve the quality of life in Alameda County. Extensive market analysis was conducted, enabling identification of areas where travel and land use patterns, as well as employment and population densities, indicate strong market demand for enhanced transit services.

The Vision Network recommendations were developed to focus on these strong transit market areas. The recommendations consist of infrastructure improvements to facilitate provision of improved transit service within and to these areas. Network recommendations were evaluated against performance measures derived from the vision and goals (Appendix E). The performance evaluation included assessment of network components, as applicable, and the network as a whole, and assessed the potential of the recommendations to achieve the adopted goals.

The Countywide Transit Plan identifies physical and institutional strategies to move both the transit network vision and the specific recommendations forward. The strategies address transit performance issues and system integration opportunities, and focus on the physical and institutional needs to provide high quality transit services. The importance of collaboration among agencies to move the recommendations and strategies forward is recognized. The plan identifies key roles and responsibilities of partner agencies, as well as strategies for interagency coordination. The plan also lays out the federal,

Figure 3: Plan Development Process

state, regional, and local funding sources and financing programs potentially available to advance the recommendations and strategies.

Stakeholder outreach was an essential part of the plan development process. Outreach efforts engaged both "technical" and "public" groups by providing information and feedback opportunities tailored to their respective needs. To reach a broad stakeholder base, multiple stakeholder and technical team meetings with community, city leaders and transit agency staff were conducted. To address the community at large, a series of community workshops/open houses across Alameda County was conducted. Requests for stakeholder input was also communicated across multiple platforms, including websites, media, newsletters, fact sheets, handouts, and engagement exercises.

OUTREACH

The Technical Teams included staff from Alameda CTC, the California Department of Transportation (Caltrans), the Metropolitan Transportation Commission (MTC), local jurisdictions, and transit agencies.

Interest groups included businesses, civic and community groups, educational and healthcare institutions, faith-based organizations, youth, and both frequent and occasional transit users.

Figure 4: Transportation Open House

ACTC_AR0423

Intentionally Left Blank

2

Vision For the Future

2.1. Vision

Alameda CTC works to create a transportation system that promotes environmental sustainability and economic vitality while facilitating mobility and connectivity. Alameda CTC recognizes the need to achieve financial sustainability by allocating limited transportation resources in a way that enhances the efficiency of transit operations and produces the most effective results for investments.

Vision for the Countywide Transit Plan: Create an efficient and effective transit network that enhances the economy and the environment while improving the quality of life in Alameda County.

The intent of the Countywide Transit Plan is to understand the challenges facing Alameda County's transit agencies and transit users and to work collaboratively on approaches to provide more effective and sustainable transit services.

2.2 Goals

Based on the vision and an understanding of the current conditions in the county and region, seven transit goals for the Countywide Transit Plan were adopted by Alameda CTC: (See Appendix C for more information about development of the Vision and Goals.)

1. Increase Transit Mode Share

Transit's market share of total trips made within, to, or from Alameda County is relatively small. While some travel markets have higher numbers of trips on transit, such as the work commute between the East Bay and San Francisco, the overall number of trips using transit on a per capita basis will need to increase to reduce dependence on auto travel and help absorb growing travel demand.

In addition, the number of people living and working in Alameda County is growing significantly faster than the number of people using transit. By offering travelers more choices, the potential exists to capture a larger share of all trips on transit and reduce reliance on single occupancy vehicle (SOV) driving.

The potential to capture more trips on transit can also be improved by promoting land use patterns that provide a mix of uses and greater density around transit hubs and/or activity centers.

2. Increase System Effectiveness

Demand for some peak hour services-- such as Transbay BART service, Transbay AC Transit, and WETA ferry services-- exceeds capacity. Use of the system is constrained by lack of supply. Conversely, much of the current supply of transit in off-peak hours is underutilized. To achieve a more financially sustainable transit system, supply should match demand by location, service type, frequency, time of day and day of week.

3. Increase the Effectiveness of Inter-Regional Transit Travel

Alameda County is a key crossroads in the San Francisco Bay Area. A significant portion of inter-regional trips begin, pass through, and end in the county. As a result, the county's transportation system serves a significant number of through trips with no origin or destination points within Alameda County. More effective inter-regional transit service has the potential to shift some of these inter-regional trips from roads and highways onto rail, bus and shuttle transit services.

ACTC_AR0427

4. Increase Cost Efficiency

The rate of increase in the cost to provide transit service is outpacing the rate of increase in service and ridership. Resources must be used as efficiently as possible to maintain current transit service levels, as well as to increase frequency and service hours. As the demand for transit dollars increases and resources become increasingly competitive, a greater emphasis must be placed on transit investments that achieve the greatest return for the dollars spent.

5. Improve Access to Work, Education, Services, and Recreation

The transit system should make it easy for people to travel without reliance on private automobiles.

While several transit markets in Alameda County are in transit competitive environments, they are performing below their market potential. Gaps in transit service (including both temporal and physical), poor connectivity between different transit agencies, and lack of a well-integrated fare structure are conditions that can make transit use costly, time-consuming, and inconvenient, thereby discouraging ridership. Additional factors include limited availability of transit information, safety and security concerns, limited service hours and frequency in some areas, and poor reliability of service as a result of congestion and other factors.

Improved access can be accomplished by fostering a coordinated transit network that integrates modes, services (public and private), routes, schedules, service periods, fares and fare payment types to provide fast, reliable connections. Easily accessible and fully integrated information on all services, including first and last mile options, must be available in a user friendly manner. Points of connection between modes and routes must be safe, pleasant and facilitate easy transfers. Implementation of innovative and flexible services can also more effectively meet transportation needs in areas that cannot be efficiently served by fixed route transit.

Improved access also means providing safe and convenient connections and facilities for pedestrians, bicyclists and persons with disabilities—as well as transit buses, vans, and shuttles—to transit stops and stations.

6. Reduce Emissions

Transportation- dominated by SOV travel-- is the single largest contributor to emissions (greenhouse gases and air pollutants[8]). By creating an accessible, reliable, safe and efficient transit network, transit can capture a larger mode share, resulting in less reliance on SOV driving and lower emissions.

7. Achieve a State of Good Repair

To provide a safe and reliable transit experience for the user, the transit system needs to be in good working condition. With limited resources, the maintenance of existing transit facilities and fleets must be balanced with system expansion.

Much of Alameda County's transit infrastructure is old and in need of refurbishment or replacement. BART's infrastructure dates from the 1960s and 1970s, with rail cars placed in service over 40 years ago still in service. Similarly, AC Transit and other transit agencies have identified the need for significant investments to maintain their existing assets in a state of good repair. There is a need to obtain new assets, such as vehicles, to meet projected demand.

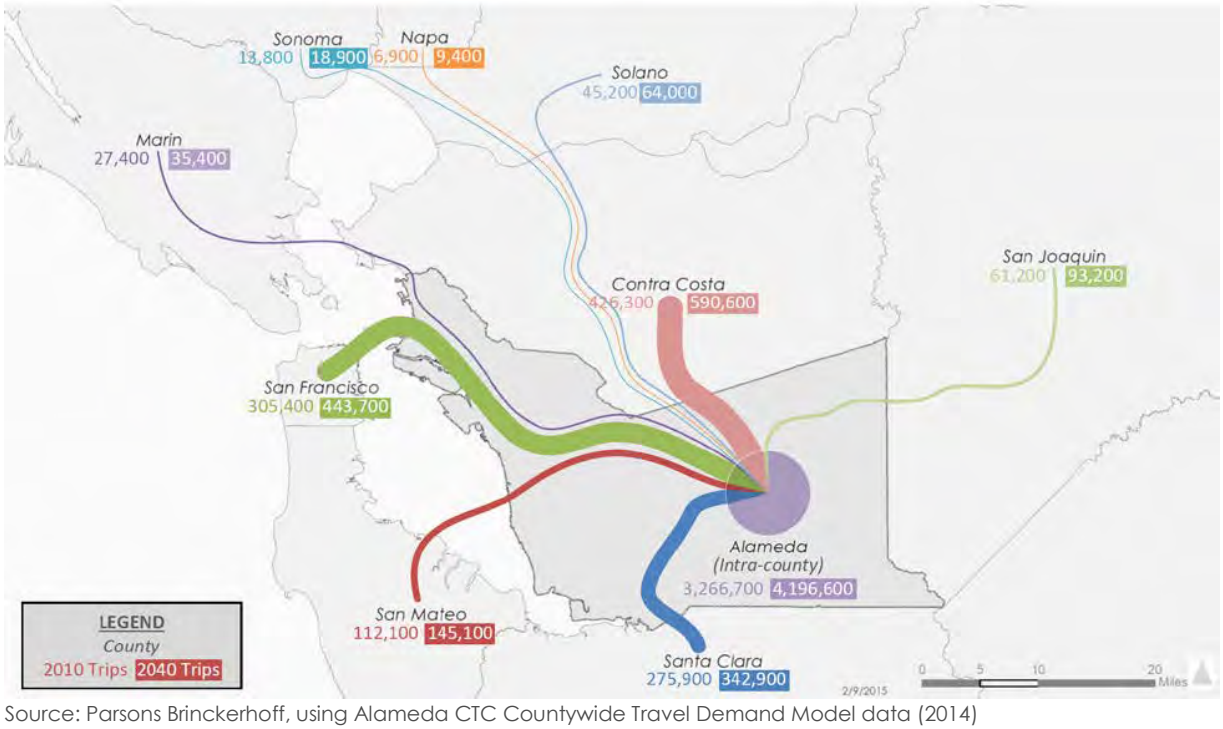
[8] State of California, Sustainable Communities and Climate Protection Act of 2008

ACTC_AR0428

3

Existing Conditions

3.1. Context



Alameda County's transit system is extensive and diverse, consisting of multiple modes and transit agencies. The context in which transit is operated and investments are made involve legislative mandates, several policies and implementing agencies, and complex inter-relationships among all entities. The transit system also reflects, and responds to, the area in which service is provided in terms of land use patterns, population, demographics, and development. Transit in Alameda County is also provided within the broader context of the Bay Area metropolitan area, with travel patterns and services that cross county lines.

3.2. Land Use and Travel Patterns

Alameda County is characterized by a diverse range of land uses and densities. North County encompasses the inner East Bay's urban core, with the most intense development in and around its major downtowns. Development is more dispersed in the hills and away from the downtowns. Central County is a mix of older urban and newer suburban neighborhoods. South County has land-use characteristics similar to those of Central County, consisting of medium- and lower density neighborhoods and communities, and in some communities is beginning to focus on strategic urban growth. East County features lower-density suburban communities and also has rural and agricultural areas.

The Alameda County Travel Demand Model, reports approximately 4.5 million total trips a day in 2010 and projected nearly 6 million total daily trips by 2040 (Figure 5). In both the baseline and future scenarios over two-thirds of these trips are intra-county trips occurring entirely within the county. Trips to/from neighboring counties of Contra Costa, San Francisco, Santa Clara, and San Mateo account for most of the rest. There are also a significant number of trips travelling to/from San Joaquin County. Trips between Alameda

Figure 5: All Daily Trips to and from Alameda County (All Modes)

Source: Parsons Brinckerhoff, using Alameda CTC Countywide Travel Demand Model data (2014)

County and the North Bay counties of Marin, Napa, Sonoma and Solano account for only a small percentage of the total.

3.3. Transit Services and Plans

Alameda County's multimodal transportation network includes seven transit agencies that provide bus, rail, and ferry services in the county and across county lines. While service coverage extends throughout the county, operations and frequency (i.e., routes and schedules) tend to be concentrated in the inner East Bay's urban core. The system becomes less dense and service less frequent in the southern and eastern parts of the county. The following summarizes the transit operators in Alameda County and recent plans completed by these agencies (see Appendix A for full summary of existing plans).

Inter-Regional

Inter-regional services in Alameda County are defined as services operating across the boundary of the Bay Area region; they currently consist of two passenger rail services—ACE and Capitol Corridor.

Altamont Corridor Express (ACE)

ACE*forward*: This plan focuses on modernizing existing service and extending it to downtown Modesto and downtown Merced to connect with the proposed California High Speed Rail service. All of the program's capital projects are located outside of Alameda County but would potentially have a positive impact on ridership within the county. ACE*forward* is currently in the scoping stage of the environmental review process.

Figure 6: ACE*forward* Program of Projects

Source: SJRRC, ACE*forward* Fact Sheet 2014

Capitol Corridor

Capitol Corridor Vision Plan: This plan lays out a short- and long-term vision for upgraded service. A key component is operating 30-minute

Altamont Corridor Express (ACE)

ACE is an intercity passenger train service between Stockton and San Jose along an 86-mile rail corridor, parts of which pass through Alameda County. It serves four stations in Alameda County (Vasco Road, Livermore, Pleasanton, and Centerville/Fremont). ACE operates four morning westbound and four afternoon/evening eastbound trips on weekdays; weekend service is not provided. Through a Cooperative Services Agreement, the San Joaquin Regional Rail Commission (SJRRC) was created to develop and operate ACE. Annual ridership is approximately 1.2 million (2014).

Capitol Corridor

Capitol Corridor is an intercity train service in a 170-mile rail corridor along the congested I-80 and I-880 freeways. It connects Alameda County with Sacramento and Auburn to the north and San Jose to the south. The Capitol Corridor serves six stations in Alameda County (Berkeley, Emeryville, Oakland Jack London Square, Oakland Coliseum, Hayward, and Fremont / Centerville). Capitol Corridor service consists of 15 morning eastbound and 15 afternoon/evening westbound trips on weekdays. Weekend and holiday service consists of three morning and eight afternoon/evening eastbound trips and three morning and eight westbound trips. Six of the region's transit agencies partnered to create the Capitol Corridor Joint Powers Authority (CCJPA) to develop and operate the Capitol Corridor, with management support from BART. Annual ridership is 1.42 million (2014).

ACTC_AR0432

headways between Oakland and San Jose. The plan also includes extending service to Salinas/Monterey and Truckee/Reno; adding new stations in Vacaville/Fairfield, Hercules, and North Sacramento; maintaining 90 percent on time performance; increasing daily service frequency; and reducing travel time by 12 percent through implementation of a positive train control system.

INTER-COUNTY

Inter-county services within Alameda County are defined by those operating primarily within the Bay Area region and serving Alameda County.

BART

BART's service expansion plan includes extensions to East Contra Costa County (eBART), Livermore (BART to Livermore/ACE currently under environmental reviews), and Santa Clara County/San Jose (Silicon Valley Extension). BART's Sustainable Communities Operational Analysis and the Future BART and BART Vision Plan, guide its improvement and growth, and are relevant to the Countywide Transit Plan:

BART Sustainable Communities Operational Analysis (SCOA): BART ridership is expected to increase by more than 50 percent by 2025. Much of this growth is expected to be concentrated in Priority Development Areas (PDAs) adjacent to BART stations and in the San Francisco and Oakland downtowns as reflected in Plan Bay Area.

The SCOA further develops these service strategies into service plans and identifies the improvements needed over the coming years for BART to maintain its current quality of service and meet the projected ridership increases. Improvements focus on capacity upgrades, efficiency projects, fleet increases and other related capital investments.

Future BART and BART Vision Plan: In 2012, faced with increasing ridership and deteriorating infrastructure, BART initiated Future BART, an effort to explore the role of BART in the region's future. The BART Vision Plan focuses on BART's longer-term future, including where significant investments in new lines or new "infill" stations along existing lines should be made. Both initiatives are currently in progress.

AC Transit

AC Transit has undertaken specialized planning efforts to improve efficiency and increase ridership:

AC Transit Short Range Transit Plan (SRTP): Completed in 2015, the SRTP covers the period from FY 2014-2015 to FY 2023-2024. This planning document provides overarching guidance to the agency's other plans and studies and

Bay Area Rapid Transit (BART)

BART is the region's heavy rail system, serving San Francisco, Contra Costa, San Mateo, and Alameda counties. BART operates a high frequency schedule 365 days a year. It comprises about half of the region's total transit passenger miles. BART has five lines and serves 45 stations, 22 of which are in Alameda County. BART operates within its own dedicated right of way.

Annual ridership on BART is 127 million (2015).

Alameda-Contra Costa (AC) Transit

AC Transit is California's third-largest public bus system, serving 13 cities in Alameda and Contra Costa Counties (including Union City, although it is not a member of AC Transit and operates its own local system) and adjacent unincorporated areas. It serves about 1.5 million people in a 364 square mile service area. AC Transit also provides inter-county service to Milpitas and Pinole, and Transbay service to Menlo Park, Palo Alto, Foster City, San Mateo, and San Francisco.

Annual ridership on AC Transit is 57.5 million.

ACTC_AR0433

incorporates the District's goals and standards, operating and capital budgets, and service plan.

AC Transit Service Expansion Plan (SEP): The agency conducted a comprehensive operations analysis which involved a detailed review of its bus routes and schedules. The SEP was approved by AC Transit's Board, with recommendations being implemented starting in summer 2016.

AC Transit Major Corridors Study: The Major Corridors Study is the agency's long-range planning document that examines potential short-term and long-term investment strategies for its highest-ridership corridors, which are summarized in Table 1. The study evaluates potential capital improvement strategies for the corridors using a number of criteria, including potential ridership gains, cost effectiveness, and others. The AC Transit Board will review the study's final report in summer 2016.

AC Transit East Bay BRT: A BRT line is being constructed on International Boulevard and East 14th Street from 20th Street (Oakland) to the San Leandro BART station. This nine-mile project will consist of about 85 percent bus-only lanes, enhanced stations, improved landscaping, level boarding, and other features. Service is expected to be operational in 2017.

AC Transit Line 51 Corridor Delay Reduction and Sustainability Project: This project provides immediate-term recommendations for service design and operational changes to Lines 51A and 51B to improve travel time and reliability, including changes to existing bus stops, such as stop optimization and construction of bus bulbs; changes to intersections and signals, including the addition of queue jumps and adaptive signal priority; and changes to the roadway, including construction of queue bypass and bus turn provisions, such as shared right-turn lanes.

AC Transit South Alameda County Major Corridors Travel Time Improvement Project: The project examines the installation of adaptive traffic control systems, adaptive signal priority, and relocation of key bus stops on Hesperian Boulevard, Union City Boulevard and Alvarado Niles in southern Alameda County.

Table 1: Study Corridors for AC Transit's Major Corridors Study

East 14th Street/ Mission Boulevard
Adeline Street
Fruitvale Avenue/ Park Street

WETA

WETA's core system-wide goal is to plan, implement and operate productive, effective and cost-efficient regional ferry transit services consistent with demand and available resources. It has developed a plan to guide its growth:

Water Emergency Transportation Authority (WETA)

WETA operates daily ferry service serving 3 terminals in Alameda County: Alameda, Oakland, and Harbor Bay. WETA provides service to San Francisco, Angel Island, and South San Francisco. Service is provided every 30-70 minutes on weekdays; it is less frequent on weekends.

Annual ridership is 2.14 million (2014-2015).

ACTC_AR0434

WETA Short Range Transit Plan: The SRTP identifies seven potential new ferry terminals (including one in Alameda County, in Berkeley), expansion of the San Francisco Downtown ferry terminal, and two new maintenance facilities, one of which would be located at Alameda Point. The SRTP identifies three new near-term service routes, including a route to Berkeley in Alameda County.

Local Bus Service

Local buses operate on a specific territory within Alameda County and their services are within the boundary of one or several cities. In addition to AC Transit, these bus services include Union City Transit and LAVTA.

Union City Transit (UCT)

UCT Short Range Transit Plan (SRTP): The UCT SRTP recommended modifications to enhance productivity and ridership.

Union City Transit (UCT)

UCT is a bus service operating in Union City. Routes and schedules are coordinated with BART schedules at the Union City BART Station. Union City Transit also provides connections with AC Transit and the Dumbarton Express. The main transfer points for Union City Transit are located at the Union City BART Station and the Union Landing Transit Center.

Annual ridership is approximately 500,000.

Livermore Amador Valley Transit Authority (LAVTA)

LAVTA provides the Wheels public bus transit service in the cities of Dublin, Livermore, Pleasanton, and in unincorporated areas of Alameda County. Several Wheels routes provide connections to BART, ACE and Central Contra County Transportation Authority (County Connection).

Annual ridership is 1.67 million (2015).

LAVTA

LAVTA Short Range Transit Plan: The Wheels SRTP serves as a management and policy document for LAVTA. It includes a recently approved round of schedule and service revisions. In May 2016, LAVTA also adopted the recommendations of a Comprehensive Operational Analysis of its service.

Shuttle Service

Service is also provided by private shuttles, such as those operated for private employers, office parks, and hospitals. This service is especially important in those areas where public transit is limited or unavailable. Often shuttle services provide critical first and last-mile connections to train stations.

San Francisco Shuttle Partners Program: With the large growth in privately-operated shuttles in the Bay Area in recent years, the potential for conflicts with existing public transit operations has also increased. The City of San Francisco has initiated a "Shuttle Partners Program" to address the concerns of the public and the San Francisco Municipal Transportation Agency (SFMTA) regarding these potential conflicts.

Private Shuttle Service and Public Transit Coordination: MTC, in coordination with the Bay Area Council, is developing a private shuttle report to assess and quantify the amount of trips provided by private shuttle services in the Bay Area. Once complete, this report may provide insight regarding trips provided by the private

Shuttle Service

Shuttles are playing increasing roles in the county's transit network. They bridge gaps in public transit between employment centers, medical/educational institutions, shopping centers, and BART. These shuttles include both publically and privately funded and operated shuttles. While these shuttles serve a critical need in Alameda County, they also present potential conflicts at existing transit stations and bus stops.

ACTC_AR0435

industry that are currently not accounted for in travel demand modeling in the Bay Area.

Transit and Human Service Transportation

ADA-mandated Paratransit and complementary city-based programs exist throughout the county to provide service to seniors and people with disabilities. These services are fully described in Appendix A.

MTC Coordinated Public Transit-Human Service Transportation Plan: MTC's recently updated Coordinated Public Transit-Human Service Transportation Plan outlines a comprehensive strategy for public transportation service to meet the needs of individuals with disabilities, older adults, and individuals with limited income.

3.4. Transit Market Analysis

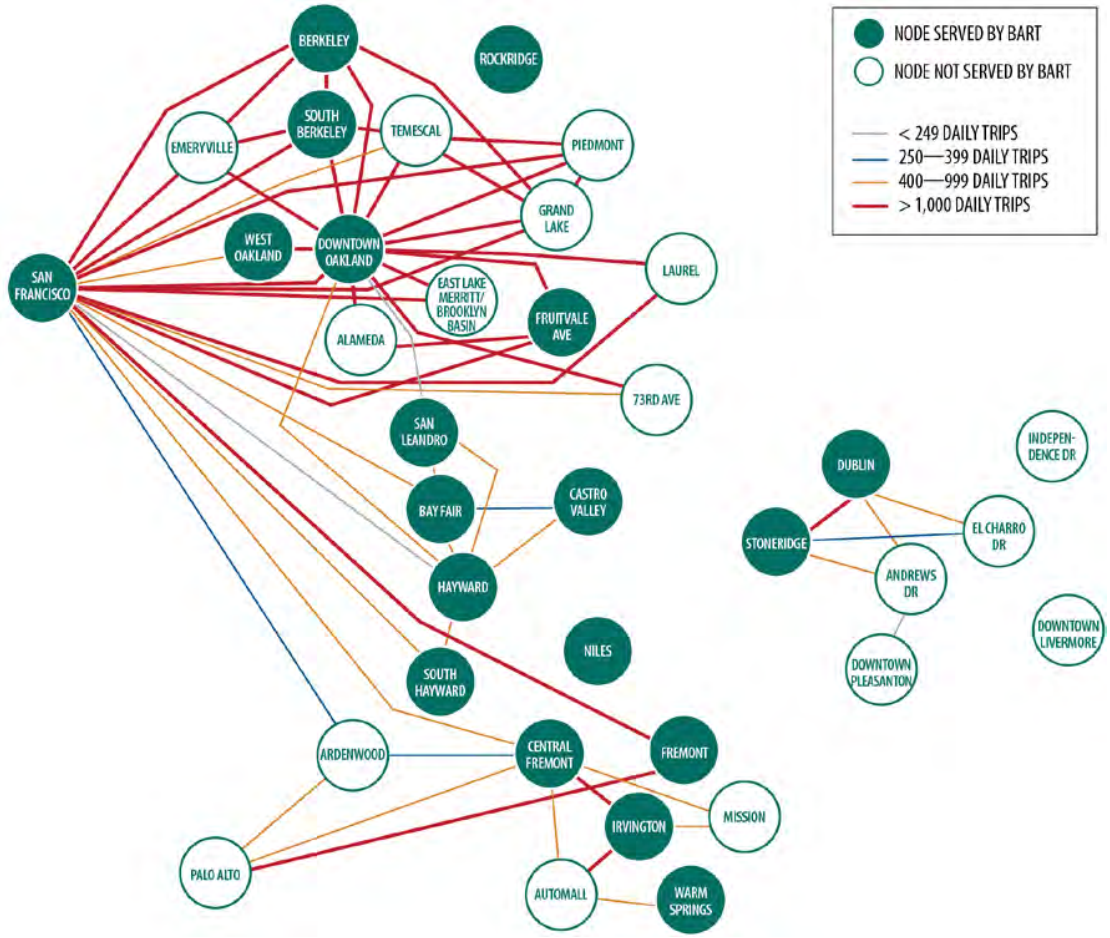
The transit market analysis is a central part of the Countywide Transit Plan. A Transit Competitiveness Index (TCI) tool identified locations and markets where transit service can effectively compete with other modes. (See Appendix B for a complete description of the TCI and market analysis findings.)

Over half of all Alameda County trips occur in strongly competitive transit travel markets based on several factors including increasing roadway congestion and aggressive concentration of future land use growth, primarily in the Priority Development Areas (PDAs).

Across the region, overall transit competitiveness is expected to increase due to increases in residential densities and congestion, decreasing vehicle availability per household, and smaller households. Population and employment in Alameda County are forecasted to grow by more than 30% by 2040[9]. Improving transit's market share is necessary to accommodate a growing population and its mobility needs. While total daily trips are forecasted to increase to 7.5 million by 2040, only a minimal expansion in roadway capacity is anticipated to occur during this period. Despite some expected changes in land use expected to occur, no major changes in travel patterns are anticipated.

TRANSIT COMPETITIVENESS INDEX

To design an effective transit system, it is useful to identify locations and markets where transit service can be competitive relative to automobile use. The Transit Competitiveness Index (TCI) tool assesses the underlying market conditions and location characteristics, independent of current or proposed transit service. It provides a quantitative measure of the transit ridership potential by aggregating the conditions that contribute to successful transit service into a single number. The TCI analysis uses land use density and diversity, roadway congestion, parking cost and search time, household characteristics, trip purpose, central business district characteristics, and tolls as factors to determine transit market competitiveness. The Alameda CTC TCI tool is derived primarily from data obtained from the recently updated Alameda CTC travel demand model.



3.5. Current State of Transit in Alameda County

Several key themes that emerged from analysis of existing conditions of the transit system are summarized below.

[9] Plan Bay Area, Metropolitan Transportation Commission, 2013. Alameda County population is expected to increase by over 30% and employment by 36% between 2010 and 2040.

ACTC_AR0436

Figure 7: Projected 2040 Trip Densities between Major Origin-Destination Nodes

Source: Arup, 2015

Note: Diagram only includes trip levels greater than 200 weekday trips. Diagram is not to scale.

Strong Transit Markets are not resulting in Strong Transit Ridership

The presence of strong transit markets in Alameda County has not yet translated to high transit ridership. A significant majority of transit routes in Alameda County currently operate in transit-competitive markets. However, transit ridership in areas with a high TCI are lower than what would be expected given the "competitive" transit conditions. Many of the transit routes serving these areas have mode shares below that - suggested by the TCI - indicating that an untapped transit market or latent passenger demand exists within or near these transit routes.

Despite positive market conditions for transit in Alameda County, transit serves a relatively small share of total trips made within, to, from, or through Alameda County. Only 14 percent of commute trips in the county currently take place on transit (Figure 8). An even smaller proportion of total trips (including non-commute trips) are served by transit. Single-occupant vehicles remains the predominant mode of travel accounting for slightly less than three-quarters of all work trips originating in Alameda County.

Whereas over two-thirds of *all* trips (trips on all modes) associated with Alameda County take place entirely within the county, only one third of trips *served by transit* take place entirely within in

the county. Two thirds of transit trips are regional trips that cross county boundaries (Figure 9). These regional trips occur between Alameda County and adjacent counties, including those to and from San Francisco. In particular, a high level of Transbay coverage is provided to San Francisco.

Among all transit agencies, BART and AC Transit combined carry nearly 97 percent of all trips made on transit (Figure 10). The other transit services in Alameda County carry the remaining three percent.

Decade-Long Trend of Flat Intra-County Bus Ridership Growth

Where transit markets are strong and transit service is frequent, reliable, and highly competitive with automobile travel times, such as the East Bay-San Francisco Transbay corridor, transit ridership has grown significantly. However, ridership for intra-county bus lines has remained flat.

Bus ridership actually declined between 2006 and 2012; it remained relatively flat until 2014, the most recent year for which data was collected. This trend may be linked to the recession, service cuts and congestion-related on-time performance problems[10].

Transit Speed and Reliability Could Worsen if No Actions Taken

Improving bus speeds will present a challenge. Traffic congestion and auto travel times are projected to worsen as population and density increases in many areas of the county. Increasing roadway congestion threatens to increase bus delay and worsen on-time performance. In order to address this trend it is critical to develop strategies for bus service to avoid the unpredictability of congestion and road incidents.

Figure 8: Mode-share for Commute Trips

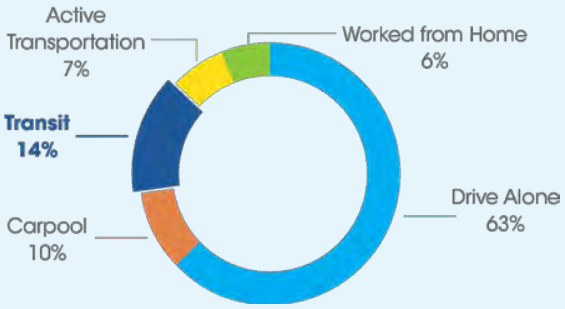


Figure 9: All Transit Trips by Type

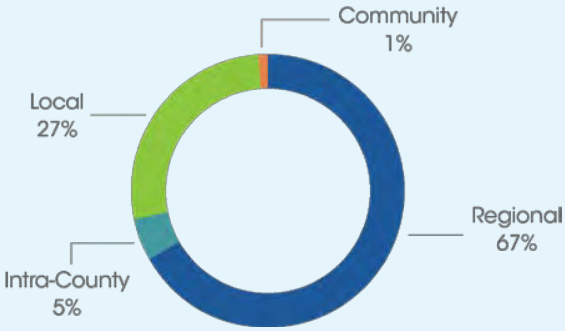

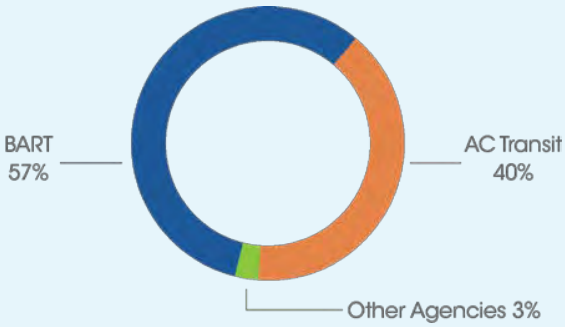

Figure 10: Ridership by Transit Agency

Source: Ridership data provided by operators

[10] Alameda CTC 2014 Performance Report

ACTC_AR0438

Rate of Ridership Growth is Not Keeping Pace with Increasing Operating Costs

The cost of providing transit service is increasing faster than inflation and outpacing any growth in ridership and fare revenues. Higher operating costs combined with fluctuations in transit funding and revenues due to recession have necessitated cutbacks in service which have a negative impact on ridership. This situation also presents on-going challenges to maintain existing services and provide new service where it is needed most. At the same time, population and employment in Alameda County have continued to grow, but transit ridership has not kept pace.

3.6. Policy Context

Existing policies, plans, studies, and other data inform the Countywide Transit Plan by shaping vision, goals, and objectives; identifying performance measures; and outlining improvements projects. They also provide the base understanding of the context, and strategies for transit projects.

Several state, regional and county-based initiatives, programs, and implementation mechanisms have been developed that directly impact the direction, design, operation, and performance monitoring of transit in Alameda County. In many instances, they recognize and facilitate the link between transportation, air quality, and land use.

Federal

The federal government's role in transit policy and planning is governed by the Fixing America's Surface Transportation (FAST) Act of 2015. It authorizes $305 billion over fiscal years 2016 through 2020 for highway, highway and motor vehicle safety, public transportation, motor carrier safety, hazardous materials safety, rail, and research, technology, and statistics programs.

As with its predecessor legislation, MAP-21, FAST includes a wide range of formula and discretionary or competitive funding programs, primarily for capital needs although some operating and maintenance expenses are eligible. Implementation and compliance monitoring is the responsibility of the Federal Transit Administration (FTA).

State of California

Over the past decade, the State of California has established a regulatory framework to reduce greenhouse gas (GHG) emissions by linking transportation planning and investments with land use patterns. The mandates resulted in regional and local jurisdictions developing more sustainable approaches to land use development and transportation services. In addition, the state is responsible for developing a multitude of statewide plans and programs, many of which address transit, including the California Transportation Plan, Interregional Transportation Strategic Plan, Freight Mobility Plan, State Rail Plan, the High Speed Rail Transit Interconnectivity Program and many others. Key state legislation addressing the reduction of greenhouse gas emissions include:

Assembly Bill (AB) 32

AB 32, the California Global Warming Solutions Act of 2006, requires that California reduce GHG emissions to 1990 levels by 2020. The California Air Resources Board (CARB) is responsible for adopting regulations to reduce GHG emissions based on feasible technology and cost-effective measures, including enhance use of transit. Cap and trade funding is an outcome of AB 32 as a result of a cap and trade program approved under this bill.

Senate Bill (SB) 375

SB 375, the Sustainable Communities and Climate Protection Act of 2008, targets GHG emission reductions by integrating land use and transportation planning. It requires regions to prepare a Sustainable Communities Strategy (SCS) that demonstrates how plans and programs

ACTC_AR0439

would achieve the targets or develop an alternative planning strategy that identifies how the targets would be met through other means. SCSs identify land use, housing, and transportation strategies aimed at helping the region meet GHG targets set by CARB.

Regional: Metropolitan Transportation Commission (MTC)

MTC, the metropolitan planning organization for the nine-county San Francisco Bay Area, is responsible for five critical transportation documents that guide transit decisions and funding in the Bay Area:

Regional Transportation Plan (RTP)/Plan Bay Area

Adopted in 2013, the current RTP-- known as Plan Bay Area-- is an integrated transportation and land use strategy. By linking transportation and land use decision-making through a Sustainable Communities Strategy (SCS), Plan Bay Area is the region's first long-range plan (covering the period through 2040) to address SB 375 requirements.

Regional Transit Expansion Program (RTEP)

RTEP, or Resolution 3434, identified specific bus, rail, and ferry priority projects for transit expansion. Resolution 3434 is a multi-year transit expansion program to enhance the Bay Area's transit network with 140 miles of new rail, 600 miles of new express bus routes, and a 58 percent increase in transit service levels in existing corridors. Resolution 3434 built upon Resolution 1876 that delivered new BART service to Dublin and Bay Point in the East Bay.

The RTEP does not identify or provide new sources of funds but seeks to identify an integrated program of new rail transit starts and extensions that could be primarily funded with local and regional sources of funds. MTC has developed a Transit-Oriented Development (TOD) companion policy for the expansion program.

Regional Measure 2 (RM2) Traffic Congestion Relief Program

RM2 was passed in 2004 to raise tolls on seven state-owned bridges in the Bay Area. Its goal is to reduce congestion along bridge corridors. RM2 created the Regional Traffic Relief Plan, identifying specific transit operating assistance and capital projects and programs eligible for RM2 funding.

As a requirement of the RM2 Program, MTC adopted the Regional Rail Plan in 2007. The plan presented a long-range vision for improving the regional passenger rail system.

Transit Sustainability Project (TSP)

MTC launched the TSP in 2010 to assess the major challenges facing transit and identify a path toward an affordable, efficient and well-funded transit system that more people will use as the region seeks to focus growth around transit. The three primary goals of the TSP are:

- Improve transit financial conditions by containing costs, covering a greater percentage of operating and capital costs with farebox revenues, and securing more reliable streams of public funding.
- Improve customer service by upgrading the system to function as an accessible, user-friendly and coordinated network for transit riders, regardless of mode, location or jurisdiction.
- Attract new riders to the system to advance emission reduction goals and support ridership growth through land use and pricing policies.

Core Capacity Transit Study

The Bay Area Core Capacity Transit Study (CCTS) is a collaborative effort to find and prioritize investments that will improve travel on public transportation to and from the San Francisco Core.

The study, scheduled to be completed in 2017, will bring the major transit operators (including BART, AC Transit, and WETA that serve Alameda County), together to address the regional issue of

ACTC_AR0440

moving hundreds of thousands of people into and out of San Francisco's core. The Study Area includes two primary transit corridors: the Transbay Corridor and the San Francisco Muni Metro Corridor. The Transbay Corridor focuses on investments to transport commuters on BART, AC Transit and WETA from the East Bay (including Alameda County), and it explores potential new connections across the Bay.

The study will look at investments that could help steadily upgrade the overall transportation system and keep pace with anticipated population growth for the next quarter century. The operators are independently considering various improvements and investments to their respective systems.

ALAMEDA CTC

Alameda CTC collects and administers three major funding sources:

Measure B

Measure B was enacted in 1986 and reauthorized in 2000 to collect and distribute half-cent sales tax in Alameda County for transportation purposes. It is expected to generate over $1.4 billion in revenues between 2002 and 2022. Alameda CTC disburses Measure B direct local distribution funds on a monthly basis to Alameda County agencies and jurisdictions for their transportation improvement programs.

Measure BB

An extension and augmentation of Measure B was enacted in 2014, resulting in a 1 percent sales tax for transportation improvements. Referred to as Measure BB, it is projected to generate approximately $8 billion in revenues from 2015 to 2045.

Vehicle Registration Fee

Measure F is a $10 annual vehicle registration fee, expected to generate $11 million per year to sustain the county's transportation network and reduce traffic congestion and vehicle-related pollution.

Alameda CTC is also responsible for the development of several major transit-related documents:

Transportation Expenditure Plan (TEP)

The 2014 TEP guides the use of Measure BB revenues toward capital projects and programs that improve the countywide transportation system. Priorities are to:

- Expand BART, bus, ferry and rail services
- Keep fares affordable for youth, seniors and persons with disabilities
- Provide traffic relief by improving local streets and roads and highway corridors
- Improve air quality and provide clean transportation by expanding bicycle and pedestrian paths and the regional rail network
- Create good jobs within Alameda County by requiring local contracting and supporting community developments that improve access to jobs and schools.

The 2014 TEP includes up to $3.7 billion, or about 48 percent of total funding, for BART, bus, senior, and youth transit. It allocates funding for operations and maintenance to transit agencies serving the county.

Countywide Transportation Plan Update (CTP)

Every four years Alameda CTC updates the Countywide Transportation Plan. The 2016 CTP Update develops a performance-based, long-range plan through 2040 for Alameda County's multimodal transportation network. The 2016 CTP vision and goals are aligned with the Transit Plan adopted vision and goals, and a summary of this Transit Plan is included in the 2016 CTP Update.

Congestion Management Program (CMP)

As the CMA for Alameda County, Alameda CTC develops and updates the legislatively required CMP.

The CMP consists of five main elements:

ACTC_AR0441

- Setting level of service (LOS) standards for roadways and monitoring LOS trends.
- Establishing and reporting on multimodal performance measures.
- Exploring ways to manage travel demand.
- Analyzing the impact of land development on transportation.
- Developing a Capital Improvement Program.

Community-Based Transportation Plans (CBTPs)

To address findings in MTC's *Lifeline Transportation Network Report* (2001) and *Environmental Justice Report* (2001), Alameda CTC developed five CBTPs:

- Alameda (2009)
- Central and East Oakland (2007)
- West and South Berkeley (2007)
- West Oakland (2006)
- Central Alameda County (2004, includes communities of Cherryland, Ashland, South Hayward).

The plans identified transportation gaps in underserved communities and transportation solutions and potential funding sources to address them. Most of the funding for public transit related projects in CBTPs is derived from state and federal formula funds that are distributed through Alameda CTC based on population and ridership.

The 2016 CTP update also serves as the update to the CBTPs.

ACTC_AR0442

4

Gaps, Issues and Challenges

4.1. Gaps, Issues, and Challenges

Conditions in Alameda County are supportive of transit and there is a lot of work underway by many transit operators and transportation agencies to address temporal and spatial gaps in service. However, transit serves a relatively small share of total trips made within, to, from, or through Alameda County, and single occupant vehicles are the dominant mode of travel. The cost of providing transit service is increasing, while service levels and ridership are remaining flat. Deteriorating traffic congestion on roadways could increase bus delays and deteriorate on-time performance.

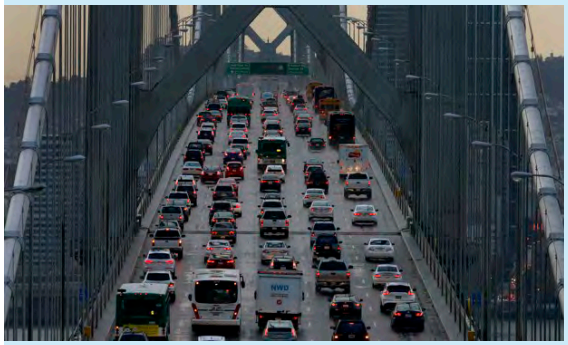
Gaps are areas deficient in transit service, and occur in the form of either spatial, temporal, or service-level gaps. For example, trips to and from Contra Costa County and Santa Clara County are served by only a few transit routes. Ongoing efforts like the AC Transit Major Corridors Study and the Service Expansion Plan seek to close the Contra Costa County gap, and the BART Silicon Valley extension proposes to extend the BART service to San Jose and Santa Clara.

An example of a temporal, service-level transit gap exists in the Alameda County-San Francisco market, where existing supply of transit does not meet demand during commute hours resulting in crowding on trains and buses. The MTC Core Capacity Transit Study focuses on investments to transport more commuters on BART, AC Transit, and WETA from the East Bay (including Alameda County), and it explores potential new connections across the Bay.

Transit service coverage and apparent gaps in service can be measured by two primary metrics:

- Network coverage and connectivity, including connections between trip origins and destinations, transit agencies, and first- and last-mile connections at key transit hubs
- Operational characteristics, such as hours of service operation or frequency of service.

4.2. Network Coverage



The highest density of transit service coverage in Alameda County is in the inner East Bay corridor between Albany and Oakland. Several transit agencies (AC Transit, BART, WETA, and Capitol Corridor) provide service along this corridor within Alameda County and to San Francisco and Contra Costa counties. Density of service coverage corresponds to the high density of population and employment land use patterns in the older inner East Bay cities.

Transit coverage diminishes in the lower density areas of Central, South, and East County. Because these areas have lower ridership, fewer trunk services are provided. With less ridership and longer distance between activity centers, service is more costly to provide.

Transbay Service Demand is Exceeding Service Supply

Travel between Alameda County and the neighboring counties of Marin (via the Richmond-San Rafael Bridge), San Francisco (via the Bay Bridge), and San Mateo and Santa Clara (via Dumbarton Bridge) involves crossing San Francisco Bay. Of these Transbay markets, the San Francisco County market is the largest. Although the Transbay market between Alameda County and San Francisco is not the most significant

Figure 11: Congestion on the Bay Bridge

Source: City Lab

ACTC_AR0445

regional destination for all trips to and from Alameda County (it ranks second to Contra Costa County), it is the most attractive in terms of ridership potential due to congestion on the San Francisco Oakland Bay Bridge (Figure 11) and Dumbarton Bridge, the concentration of employment sites in downtown San Francisco, and the cost and (lack of) availability of parking in San Francisco.

The transit gap between Alameda County and San Francisco is related to transit supply and reliability of service. The existing supply does not meet demand, particularly during commute hours, resulting in standing room-only conditions on BART trains and AC Transit buses.

Conditions are projected to worsen as ridership demand is projected to grow. It is estimated that by 2050, BART will carry over 800,000 daily passengers--1.5 times more than today.[11]

Service is Limited Between Alameda, Contra Costa, Santa Clara, and San Joaquin Counties

Trips to and from Contra Costa County and Santa Clara County make up the first and third largest shares, respectively, of all Alameda County-oriented regional trips. However, currently only a few transit lines provide intra-county service:

- Capitol Corridor, BART, AC Transit, and one Wheels route provide connections to Contra Costa County
- Capitol Corridor, AC Transit, and four VTA bus routes provide connections to Santa Clara County
- ACE provides access into San Joaquin County

Except for San Francisco, the counties adjacent to Alameda County generally have lower-density land uses with dispersed trip destinations that may not be able to support a robust fixed-route transit network with a high level of coverage. Some of these trips are currently being served by private employer shuttles to serve their employees.

Some of these regional gaps will be addressed by planned projects such as the BART extensions to Livermore/ACE and San Jose. However, depending on the distribution of major origins and destinations within each county, local service additions to these major planned transit projects may be needed to provide sufficient and competitive transit connectivity.

Despite Extensive Coverage, Intra-County Transit Gaps Exist

Temporal and service area gaps in transit service persist at the intra-county level as well. Some are related to the lower-density and more disperse nature of land use in parts of Alameda County. However, transit demand in the next several years may shift as population, employment, and residential and commercial development increase, redistribute, and concentrate in certain areas.

First- and Last-Mile Trips Remain a Challenge in Many Areas

Transit gaps related to local and community trips often involve first-and-last-mile connections. They are the "bookends" of all trips taken by transit - from point of origin, such as home, to a transit stop or station and from a transit stop or station to final destination, such as workplace.

In some case, first-mile/last-mile gaps are short and either walkable or bikeable. However, where distances are longer (or where walking or bicycling conditions are not favorable) other options would be preferred by travelers. In some instances, first mile/last-mile connections are provided by publicly-subsidized shuttles open to the public, privately-operated shuttles restricted to a targeted clientele such as employees of a major employer, or private transportation network companies (TNCs) such as Uber and Lyft. The result is uneven or unavailable first mile/last mile

[11] MTC, Regional Rail Plan, 2007

ACTC_AR0446

service that renders use of the transit system inconvenient or makes using transit not an option, forcing reliance on private autos and exacerbating highway congestion.

Paratransit Services Correspond to Fixed Route Services

Federal guidelines require the provision of paratransit service for persons with disabilities who are unable to use fixed route service. Service must be provided within ¾ mile on either side of a fixed transit line during all hours the fixed route service is provided. Although this technically results in no "official" paratransit service gaps, the same gaps in first-mile/last-mile connections on the fixed route system can carry over to paratransit coverage. Service needs are sometimes filled by programs provided by local agencies, but not guaranteed as they would be under ADA-related requirements for public transit services.

4.3. Connectivity

While there is significant transit service in Alameda County, it can be difficult to travel throughout Alameda County on transit relatively quickly and conveniently for many trips. In the county and throughout the Bay Area, the lack of full integration between transit agencies is reflected in poor connectivity in some areas, multiple fare structures and ticketing, and poorly integrated transit information.

This lack of seamless transitions between agencies discourages transit use for those who have alternative choices and makes transit travel less convenient and more costly for those who need to use transit. Recent efforts, such as MTC's TSP, recognize that a consistent fare structure across multiple transit systems can boost transit ridership and improve the customer experience.

Non-coordinated Connections Impact Travel Time

Transferring between services can be time-consuming. For AC Transit and LAVTA, which have relatively large service areas the ease of transfers depends upon frequencies of service. For low-frequency areas transfers can also add travel time. First- and last-mile connections are also challenging in locations that with dispersed employment locations and lack a concentration of residential activity.

While BART stations and other activity centers serve as transit hubs throughout the county, schedules are not always timed to maximize customer transfers between agencies.

Lack of an Integrated Fare System Compounds Connectivity Challenges

Although some reciprocal fare agreements exist, transit users may have to pay an additional fare each time they transfer between agencies. AC Transit and Union City Transit have a BART-to-bus transfer program that offer discounts on bus fares to riders transferring from BART. LAVTA Wheels offers free transfers to riders transferring from other Wheels or County Connection routes, or from ACE trains, and discounted fares for riders transferring

Figure 12: Transit vehicle equipped with bicycle

ACTC_AR0447

from BART trains, and both WETA and Capitol Corridor offer transfers to local bus operators. However, BART and ACE do not offer such discounts to riders transferring from bus services. In addition, the regional Clipper Card has not yet become fully integrated into all Alameda County transit operations. Union City Transit currently does not have Clipper and the transfers noted above are not counted for patrons using the Clipper Card.

Parking Demand Exceeds Supply

Many users access transit by driving to a park and ride facility located at a stop or station. For BART, many of these parking facilities are at capacity during a typical weekday. The parking capacity, in addition to the line capacity, limits BART use in some locations due to lack of adequate pedestrian and bicycle access to the station (Figure 13).

Figure 13: High Demand for Park-and-Ride Facilities

Public Understanding of How the Regional System Works is Limited

Most users access scheduling and mapping tools provided by 511 and private mapping companies. However, the lack of a posted, uniform transit map of the systems that operate in Alameda County means that users who do not have access to such services must use different maps from each agency. This limits their ability to understand service connectivity, and restricts their ability to effectively use available service.

4.4. Operations

While some areas of Alameda County may have good route coverage, service frequency may be low, the span of service limited, and travel times very slow. As a result, the potential of the transit market is constrained.

Infrequent Service Discourages Transit Use

For example, if a route operates 30 to 60 minute headways, or if service is provided only during peak hours or does not continue into the evening and late night hours, the flexibility for using transit service as a viable alternative to the auto diminishes significantly.

During commute hours, the speed of transit travel may be constrained by congestion occurring on surface streets, making a transit trip with multiple stops much longer than a comparable trip by auto.

AC Transit provides major trunk line services with headways of 15-minutes or less. Major travel corridors, such as Broadway in downtown Oakland, also function as major transit corridors, with frequent headways and features that make transit use a viable option. However, other strong transit markets in Alameda County are underperforming due to limited transit coverage or lack of frequent and reliable transit service. Examples of the underperforming corridors include Grand Lake to downtown Oakland and Stoneridge Mall-Dublin Boulevard - downtown Livermore.

Transit Speed and Reliability Could Worsen if No Actions Are Taken

A current lack of priority treatments for buses—such as transit lanes, signal priority queue jumps and bus bulbs— results in bus travel being negatively impacted by auto congestion and accidents, which can cause delay and frustration for riders. Delay and slow operating speeds also mean additional vehicles and drivers are needed to maintain current service frequencies. As a

result, resources available to expand service and realize potential ridership gains are reduced. These problems will become more acute as traffic congestion on roadways and auto travel times are projected to worsen as density increases in many areas of the county. Increasing roadway congestion could further increase bus delay and worsen on-time performance. In order to address this trend it is critical to develop ways to reduce the impacts of auto traffic congestion and the unpredictability of road incidents on transit service.

At the same time, much of the county's core infrastructure, especially BART, is approaching the end of its useful life. Major capital investments are required to keep BART infrastructure in good working order. Without major investments, system failures could become more frequent and lead to significant decrease in reliability and service quality.

Systemwide Operating Costs are Increasing Faster Than Ridership and Revenues

The trend of real operating costs rising at a faster rate than inflation, ridership, and farebox revenues threatens the financial sustainability of the County's transit agencies. MTC's TSP is focused on addressing this trend.

4.5. Land Use

Some individual transit markets in Alameda County exhibit characteristics that make it more competitive for transit, and make it more likely that transit is the preferred mode for travelers.

Common attributes of the most competitive transit markets include:

- Medium to high density land uses
- A concentrated mix of uses and activities
- Limits on free parking
- Congested roadways that slow auto travel

Conversely, some travel markets have disadvantages that make transit less competitive. Disadvantages include:

- Low density land uses (which make it more challenging to concentrate people in a single area to use transit)
- Free and plentiful parking
- An unpleasant pedestrian environment[12]

Land Use and Transportation Decision-Making are Not Yet Fully Integrated

Although state and regional mandates have greatly improved coordination between transportation and land use decision-making, existing conditions in many areas are still not conducive to transit operations and customer access. Priorities and values vary by community and area, and the ease of access to and from transit stations and stops for pedestrians, bicyclists and persons with disabilities varies as well. The lack of clear-cut and standardized guidleines may also restrict the ablity of communities and developers to design new developments or retrofit existing development and street patterns to allow for better transit access and operations.

Physical Connections Between Transit Services Can Restrict Regional Use of the System

Due in part to the development of transit hubs and facilities prior to awareness of the need to improve physical connections between modes and services, the ability of passengers to transfer between systems can be hampered by poor and inconvenient pedestrian and/or bicycle connections.

[12] Metropolitan Transportation Commission, Transit Sustainability Project. *TCI Draft Primer.* http://www.mtc.ca.gov/planning/tsp/TCI-DRAFT-PRIMER.pdf.

ACTC_AR0449

4.6. Ridership Response

Market Analysis Identifies Opportunities to Capture More Ridership

While high ridership levels can be found on some routes, in general, the transit systems in Alameda County have more empty seats than what market analyses suggest. Despite the extent of overall transit service, transit currently only captures 14 percent of the commute trips in Alameda County.

Bus Ridership Has Remained Flat

Despite positive market conditions for transit in Alameda County, bus ridership declined between 2006 and 2012; it remained relatively flat until 2014, the most recent year for which data was collected.

In corridors where transit ridership has grown significantly, such as the East Bay-San Francisco Transbay corridor, transit markets are strong and transit service is frequent, reliable, and highly competitive with vehicle travel times and costs.

ACTC_AR0450

5

Opportunities

5.1. OPPORTUNITIES

One critical outcome of the Countywide Transit Plan is the recommendation for a Vision Network designed to help Alameda County realize its vision to "create an efficient and effective transit network that enhances the economy and the environment and improves quality of life."[13]

The Vision Network focuses on how Alameda CTC can help to improve the transit system and service for the future by focusing investments in those areas that have the greatest benefit to existing riders and potential to attract new riders. The main opportunities to improve transit performance and increase transit ridership are summarized here.

Improve **speed** and **reliability**

Poor on-time performance and variable transit travel times currently experienced on many bus routes is primarily linked to roadway congestion. Bus speed and reliability can be addressed by implementing transit-related improvements on roadway (e.g. queue jumps, bus bulbs, transit lanes, adaptive signal priority). These types of improvements will need to be coordinated closely with transit agencies, local jurisdictions, and Caltrans.

Enhance **transit integration**

Successful transit systems require both physical and institutional integration to enable the customer to experience a seamless trip even if it involves multiple carriers and different modes.

Improve **frequency and service span,** and **reduce gaps** in service coverage

Although transit service coverage is generally high in Alameda County, gaps in hours of operation, frequency of service, and in route capacity can inhibit ridership in areas underserved by transit. Capacity constraints on current transit systems are a particularly acute problem in the Transbay corridor to San Francisco. Improving frequency and service span, and reducing service gaps can attract more riders.

Leverage **robust transit markets**

In addition to focusing on opportunities for improvement to transit options and existing service, the network development process also reviewed travel patterns between major origins and destinations to identify key transit markets for investment.

5.2. VISION NETWORK RECOMMENDATIONS

The Vision Network recommendations are the result of a thorough consideration of existing conditions, current plans and studies, and market and transit operational analyses. They are also designed to support Alameda CTC's vision and goals. Fourteen projects were developed in response to the evaluation of current transit service and current and forecasted transit market conditions. The evaluation was also informed by other on-going planning studies.

The recommendations are not intended to focus on identifying new routes; rather, based on market analyses, the recommendations identify a network of transit corridors that have the potential to capture the greatest market share of transit riders throughout the county. This information helps to inform where transit funding investments can be made to best capture increased market share.

Further, capital improvements are identified to facilitate improved frequency and reliability of services (see Table 2). The recommendations focus on the network of corridors; a critical next

[13] Appendix C - *Vision and Goals*

ACTC_AR0453

step for moving forward will be to identify specific improvements for each corridor that are linked to the improvements identified in Alameda CTC's Multimodal Arterial Plan and to the projects identified in the 2014 Transportation Expenditure Plan. Agency partnerships and public and business outreach will be essential to move the Vision Network recommendations forward. Additional information about the Vision Network recommendations and their development can be found in Appendix D.

Service Tiers

A tiered structure forms the framework for the Vision Network recommendations. Five tiers were identified, as shown in Figure 14. The tiered structure is an organizational tool to frame the discussion of the existing array of transit services, the methodology used to identify future needs, and the recommendations themselves. The structure does *not* imply a hierarchy of importance among the transit services or tiers.

Four of the tiers are transit-focused; the fifth involves the underlying street network. All five serve important functions in the delivery of transit services.

The Inter-Regional tier and its travel markets extend beyond Alameda County; improvements to inter-regional services are planned within the context of the statewide rail system and Northern California region. Capitol Corridor and ACE are in the process of developing future service improvements and expansion in concert with the communities that they serve and their adopted visions. Consequently, no new specific recommendations for Inter-Regional service are provided. The Countywide Transit Plan will ultimately incorporate the outcomes of those ongoing planning efforts.

The recommendations in the Regional Express and Urban Rapid service tiers provide a guidepost to where the market is demanding increased capacity. The recommendations and strategies provide a framework for how agencies can create a fast, frequent, and reliable network throughout the county. These recommendations are also in alignment with and supportive of the on-going planning and project delivery work of

Figure 14: Transit Tiers

ACTC_AR0454

MARKET ANALYSIS

The market analysis identified that the greatest potential to affect transformative changes to transit to support Alameda CTC's adopted vision and goals lies in the Regional Express and Urban Rapid tiers. The Transit plan recommendations therefore focus on the core markets in these two tiers, and highlight corridors served by BART, WETA, AC Transit, and LAVTA.

This analysis provides a framework to focus investments through 2040 on the corridors within the Regional Express and Urban Rapid tier markets with the greatest potential to capture more transit riders by building a fast, frequent, and reliable transit network.

transit agencies in Alameda County as described in Chapter 3.

The Local Frequent and Community Connector tier focuses on services that link to the Regional Express and Urban Rapid tiers and do not require the same level of capital investment to improve transit service. Rather than make specific recommendations for the numerous Local Frequent and Community Connector tier routes, Chapter 6 discusses the role the tiers play in creating a cohesive transit network.

REGIONAL EXPRESS TIER

Distinguishing features of the Regional Express Tier include:

- Transit serves multiple counties and longer distance trips (e.g. Alameda to downtown San Francisco).
- There is substantial point to point travel between major nodes and services provide access to major employment centers (e.g. Downtown Oakland, Berkeley, and San Francisco).
- Transit stations act as hubs for intermodal connections and can serve as a catalyst for Transit Oriented Development (TOD).
- Constitutes a large portion of county's transit trips.

Although services in the Regional Express Tier extend beyond Alameda County, they form the backbone of Alameda County's transit system and carry a significant portion of the county's transit riders.

Based on the market analysis, in the context of on-going regional planning efforts, seven major improvements are recommended in the Regional Express Tier, as shown in Figure 15. The market analysis identified regional travel from the Berkeley and Oakland areas to San Francisco as this tier's strongest transit market. Other strong transit markets include San Leandro, Hayward, and Fremont. A strong regional market was also identified between Fremont and Palo Alto. There is also an established market for BART services in East Alameda County; it is assumed that this market will continue to be served by BART which has planned improvements in that area, including connections to ACE, currently under environmental review.

R1 – BART Extension to Livermore/ACE

The project proposes to extend the BART rail line from the existing Dublin/Pleasanton Station to a new station near the Isabel Avenue interchange and then to a connection with ACE. The City of Livermore is developing a land use and circulation plan for the area surrounding the proposed BART station. Both projects are currently undergoing development and/or environmental review and are included in this plan by reference. Outcomes of these reviews will be addressed in updates to this plan.

R2 – Brooklyn Basin – San Francisco Ferry Terminal

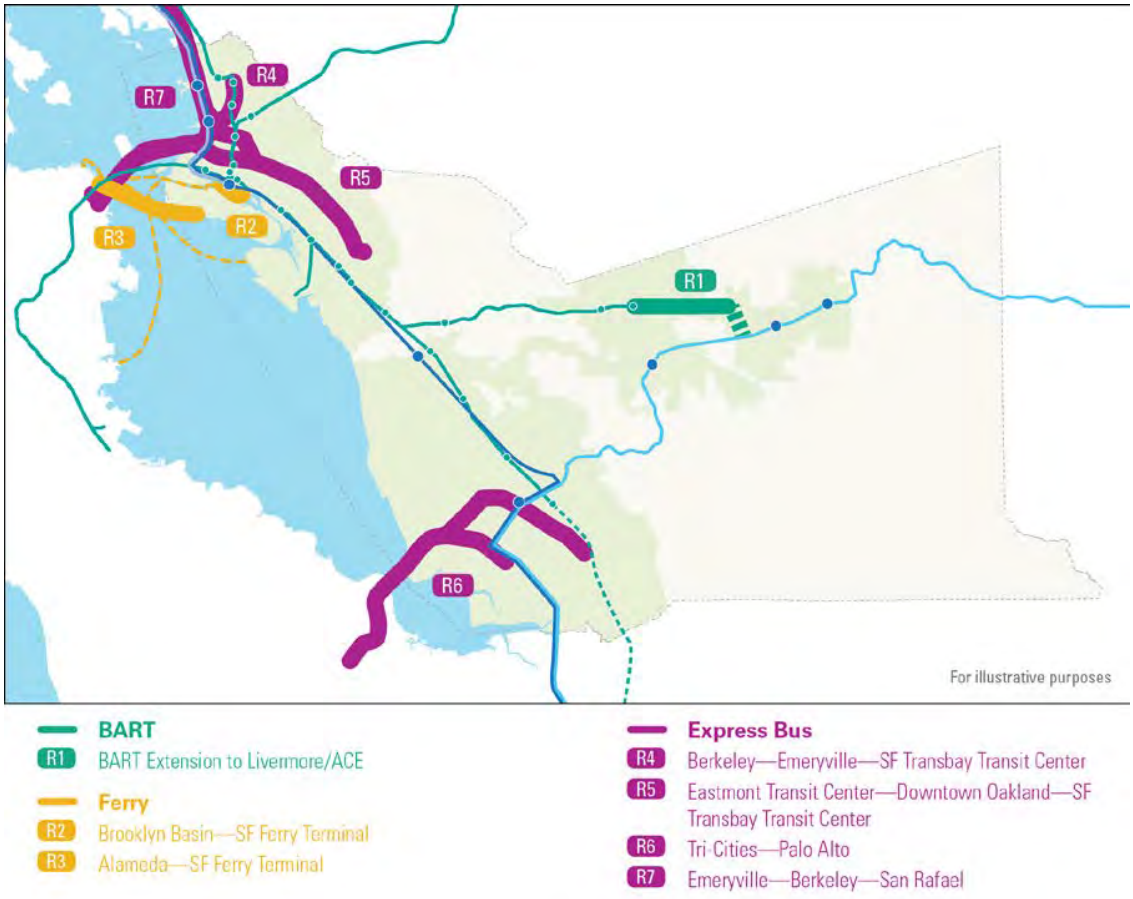
This recommendation would improve service between San Francisco and Brooklyn Basin, a location anticipated to experience significant growth by 2040. Service could be provided

ACTC_AR0455

through an extension of water transit services to Brooklyn Basin. This would likely require new vessels as well as a new ferry terminal and support facilities in Brooklyn Basin. Service could also be provided through improved bus transit services to the existing ferry terminal at Jack London Square from Brooklyn Basin.

R3 – Alameda – San Francisco Ferry Terminal

This recommendation would add a new ferry terminal at the Seaplane Lagoon as envisioned in the redevelopment plans for Alameda Point. It would facilitate direct access to San Francisco from the Alameda Point development.



R4 – Berkeley – Emeryville – San Francisco Transbay Transit Center

This recommendation would upgrade both local and Transbay services that operate between Berkeley and San Francisco through Emeryville through a combination of transit priority features including bus bulbs, queue jumps, and limited segments of transit lanes.

R5 – Eastmont Transit Center – Downtown Oakland – San Francisco Transbay Transit Center

This recommendation would introduce transit priority features to an existing Transbay and local bus service corridor from East Oakland through

Figure 15: Regional Express Tier

Note: All recommendations presented in this plan are intended to be a conceptual framework, and all routing and stop alignments will require further technical evaluation and public input.

ACTC_AR0456

Downtown Oakland to San Francisco to improve reliability and on-time performance. Priority features would enhance transit service to the activity nodes around 73rd Street, the Laurel District in East Oakland, and downtown Oakland. Improvements would also include transit priority features on Grand Avenue to create a "transit spine" to facilitate operations for local and transbay buses as well as future express buses coming from Contra Costa and Solano Counties. Potential improvements could include transit lanes, and adaptive traffic signal control.

R6 – Tri Cities – Palo Alto

This recommendation would address the rapidly increasing demand for high quality transit services across the Dumbarton Bridge due to significant job growth on the peninsula and housing growth in Alameda County. The market analysis indicated that Central Fremont and Union City would be major activity nodes and could support a significant level of transit service across the bridge. Capital improvements could include a combination of transit lanes, adaptive traffic signal control, and expanded park-and-ride facilities.

R7 – Emeryville - Berkeley – San Rafael

This recommendation would provide service between San Rafael and Emeryville through Berkeley and Albany. It is based on a recently-launched Golden Gate Transit pilot service between San Rafael and Emeryville designed to serve large employment centers in Marin County.

URBAN RAPID TIER

Of all the tiers in the Alameda County transit network, this tier has the highest potential to capture more transit riders given the land uses and urban form along these corridors. Distinguishing features of the Urban Rapid Tier include:

- Travel options between major nodes from productive major transit origins to concentrated destinations are provided. Access is also provided to major employment centers, universities, and other major trip generators.
- A broad spectrum of roadway and stop improvements (Table 2) can be supported.
- Serves trips primarily within Alameda County, but could combine or overlap with Transbay service or other intra-county service.

Routes could be separately branded and feature additional amenities at stops including high quality shelters, lighting, and next bus arrival displays.

The Urban Rapid Tier includes transit only lanes and Rapid Bus services as well as Enhanced Bus improvements, which represent a lower level of capital investment.

Transit service envisioned for the Urban Rapid Tier has the potential to:

- Effectively **improve the frequency and reliability** of bus service when properly implemented.
- **Address gaps** needed to better serve strong transit markets.
- **Increase ridership** with an appropriate level of service.
- Be **adaptable** to unique characteristics of each corridor, including key destinations, intermodal hubs, and roadway network.
- **Be cost effective** when compared to other more capital-intensive modes, such as light rail.

Seven potential corridors have been identified for Urban Rapid improvements (Figure 16).

U1 – Emeryville – Bay Fair BART Station

This recommendation extends the planned East Bay BRT capital improvements and service enhancements (currently planned for San Leandro to downtown Oakland) north to Emeryville to serve the travel markets from Emeryville to Downtown Oakland and to Downtown San Leandro. This would improve schedule reliability and on-time performance in the corridor. This includes capital improvements

ACTC_AR0457

such as transit lanes, transit signal priority, adaptive traffic signal control, improved stations, and off-board fare collection.

U2 - Richmond – Jack London Square

This recommendation would serve a high transit demand market between West Contra Costa County, Berkeley, South Berkeley, central Oakland, and downtown Oakland to improve reliability and on-time performance. AC Transit bus service currently extends into Contra Costa County, and capital improvements and other features would be coordinated with local and regional jurisdictions in that county. Improvements on this corridor would feature a combination of improvements including transit lanes or transit lane segments, transit signal priority, adaptive traffic signal control, improved stops or stations, and off-board fare collection.

U3- Berkeley – Alameda

The recommendation would upgrade transit service on Telegraph Avenue, linking downtown, central and south Berkeley with north and downtown Oakland and the City of Alameda. The corridor could also provide a connection to the planned Alameda Point BRT project. Potential improvements include transit lanes or transit lane segments, transit signal priority and adaptive traffic signal control, improved stations, and off-board fare collection.

Figure 16: Urban Rapid Tier

Note: All recommendations presented in this plan are intended to be a conceptual framework, and all routing and stop alignments will require further technical evaluation and public input.

ACTC_AR0458

U4 – Berkeley – Fruitvale

This recommendation would provide connections from Berkeley to Rockridge, downtown Oakland, Alameda, and Fruitvale Avenue, with the potential to connect to the planned BRT line to Alameda Point. Potential improvements include bus bulbs, queue jumps, stop/station enhancements, off-board fare collection, segments of transit lanes, transit signal priority, and adaptive traffic signal control.

U5 – Bay Fair BART - Union City BART

This recommendation is based on AC Transit's Major Corridors Study for capital investments in the corridor connecting Bay Fair BART in San Leandro to Union City BART station via Hesperian Boulevard. Improvements include bus bulbs, queue jumps, stop/station enhancements, off-board fare collection, transit signal priority, and adaptive traffic signal control.

U6 – Bay Fair BART – Warm Springs BART

This recommendation is based on AC Transit's Major Corridors Study in the corridor linking the Bay Fair and Fremont BART stations via 14th Street and Mission Boulevard, with service to Warm Springs as development in that area fills in. The line would serve intensifying land uses around the BART stations along Mission Boulevard. Potential improvements could include bus bulbs, queue jumps, off-board fare collection, segments of transit lanes, transit signal priority, and adaptive traffic signal control.

U7 – West Dublin/Pleasanton BART – Livermore/ACE

This recommendation would realign service to serve more of the development along the I-580 corridor, Dublin Boulevard, and Independence Drive, contingent upon the extension of Dublin Boulevard to North Canyons Parkway. Potential improvements could include a combination of transit lanes and transit lane segments and selected transit priority treatments such as transit signal priority and adaptive traffic signal control.

Recommended Improvements

Key characteristics of proposed improvements for both Regional Express and Urban Rapid Tier recommendations include frequent all-day

Table 2: Potential Roadway and Stop Improvements

Treatment	How Treatment Improves Transit
Transit Signal Priority	Applications include bus detection technologies that distinguish buses from general traffic
Adaptive Traffic Signal Control	This improvement improves traffic flow. Travel time improvements are a function of existing signal delay but can be substantial at congested intersections
Transit Lanes	Can be implemented during peak periods or all-day; can be combined with peak period parking restrictions to avoid taking a lane of travel
Bus Turn Provisions	Safety concerns may require changes to signalization for bus-only movement
Queue Jump	Advance green at the intersection facilitates exit from queue jump lane
Bus Bulbs	These curb and sidewalk extensions can improves pedestrian safety while there are potential impacts to general traffic
Transit Stop/Station Enhancements	Improves comfort and safety for transit riders; potential impacts to general traffic
Off-board Fare Collection	Reduces boarding time. Requires additional infrastructure at stations and random fare inspection

ACTC_AR0459

service, transit signal priority (TSP), and roadside preferential treatments including bulbs, bus queue jumps and transit lanes (Table 2). It is important to note that all of the Vision Network recommendations presented here are conceptual. In other words, specific routing alignments and termini have not been determined, and subsequent studies and environmental analyses will be required to determine potential alignments, specific routing, and specific capital and operating improvements. See Appendix D for other transit priority recommendations.

5.3. Performance Evaluation

Performance measures were developed to assess how the Vision Network recommendations individually and collectively support implementation of the adopted transit vision and goals. Performance measures apply to two types of evaluations:

- **Project:** considers the costs and benefits of both capital and operating activities associated with each recommended project.
- **Network:** quantifies the anticipated benefits cumulatively resulting from the recommendations with respect to each goal.

The transit goals and their associated quantitative performance measures are shown in Table 3. The recommended projects were also evaluated using a set of qualitative performance measures to capture benefits not readily modeled or forecasted.

The qualitative measures are:

- Support of TOD strategies
- Intermodal connectivity
- Customer experience
- Compatibility with Arterials Plan recommendations

Project Evaluation

Results were prepared for each of the projects in the Vision Network. Ratings are intended to facilitate the comparison between the projects to help understand relative costs, ridership, and travel time savings. These evaluations can provide useful information when considering future planning and funding opportunities in the county. Results are presented in Figure 20 (more information on the evaluation process can be found in Appendix F). Some of the general findings from the evaluation include:

- **All of the corridors included in the Vision Network support increased daily ridership:** They also improve customer experience and are compatible with the recommendations of the Arterials Plan.
- **The net new riders measure varies:** All corridors show increases; however, they range from a low of 230 daily new riders for R7 (Emeryville-Berkeley-San Rafael) to a high of 21,900 daily new riders for U3 (Berkeley-Alameda). The three projects with the lowest estimated net new riders (R6, R7, and U7) also have the highest costs per net new rider at $28, $44, and $71 respectively.
- **Total daily ridership increases:** All corridors increase transit ridership; however at different rates. New riders and total ridership are generally correlated, however it should be noted that the ability to generate net new riders does not always correspond to total daily ridership. For example, U3 (Berkeley-Alameda) generates 21,900 net new daily riders and a total of 35,600 daily passenger trips. U4 (Berkeley-Fruitvale BART) generates far fewer new riders (8,900 net new riders) but has higher overall ridership of 38,300 daily passenger trips.
- **Travel time improves**: With the exception of R7, all projects provide significant efficiency improvements through travel time reductions ranging from 10% to 48%. These travel time savings represent significant benefits to both existing and new riders that should be

ACTC_AR0460

Table 3: Quantitative Performance Measure in Relation with Goals

Goals	Performance Measures		
	Network-Level	Project-Level Capital	Project-Level Operating
Increase transit mode share	Per capita daily transit ridership		Net new riders
	Percentage of intra-county passenger trips on transit		
Increase effectiveness (including inter-regional travel)	Passenger trips per revenue vehicle mile		Passenger trips per revenue vehicle mile
	Miles of bus lanes	Miles of bus lanes	
	Daily passenger trips (unlinked)		Daily passenger trips (unlinked)
		Reduction in transit travel time (peak/off-peak)	
		Number of transit hubs served, including inter-regional hubs	
Increase cost efficiency		Capital cost per net new rider	
			Operating cost per passenger trip
Improve access	Number of households/jobs within one-half mile of transit stops		
	Number of Communities of Concern affected		
Reduce emissions	Greenhouse gas emissions		
State of good repair		Asset lifecycle is considered in annualized capital cost estimates	

Note: Cells shaded in grey indicate where the performance measures were not applied.
Source: Parsons Brinckerhoff, 2015

considered when evaluating projects. Generally, projects with more segments of transit lanes tend to provide greater reductions in travel time. However, even projects without transit lanes (U4 and U5, for example) still have the potential to generate significant travel time savings (17% and 22%, respectively) through the implementation of other transit operational improvements.

- **Operating costs are generally below $10 per passenger trip:** High projected ridership results in high productivity (e.g. cost/trip) on all corridors except R7 (Emeryville-Berkeley-San Rafael), which is estimated at $25/passenger trip primarily due to being on the lower end of estimated ridership as compared to the other network corridors.

ACTC_AR0461

- **Capital costs vary widely:** They range from a low of $66 million for the ferry projects to a high of $392 million for U6 Bay Fair BART – Warm Springs BART, a 16-mile-long transit lane.
- **Capital cost per net new** rider varies: Costs range from a low of $1 for U1 (Emeryville-Bay Fair BART) to a high of $71 for U7 (West Dublin/Pleasanton BART-Livermore).

Vision Network Evaluation

The evaluation of the proposed plan at the network level provides insight into the combined effect of implementing all the proposed projects on the entire transit network in Alameda County. It also provides insight into the underlying growth in transit demand expected to occur over the next 25 years as well as the estimated effect of the Vision Network over and above current plans and expected growth.

Table 4 provides a comparison of the Existing Conditions Network (2010) and the Vision Network (2040) alternatives.

Table 4: Network Alternatives

Existing Conditions, 2010	Land use and transportation conditions as they were in 2010 per the updated Countywide Travel Demand Model
Vision, 2040	Set of all improvements identified in the Countywide Transit Plan

The comparison of the key metrics for Existing Conditions (2010) and Baseline Conditions (2040) shows a strong increase in transit use with a 90% increase in daily passenger trips driven by increases in population, employment, and congestion (see Figure 17).

The Vision Network responds to this increased demand for transit by providing key improvements to routes serving some of the most promising markets. The result is a network that provides travel time savings and service quality

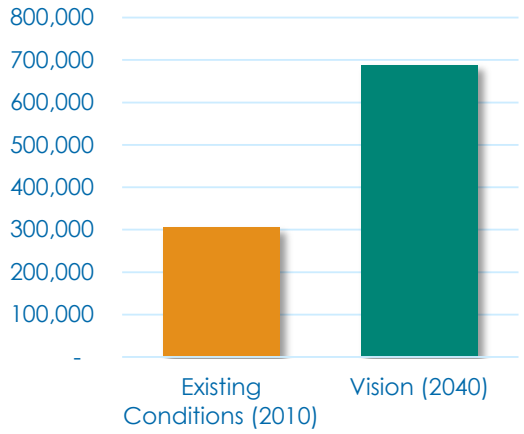


Figure 18: Key Benefits of the Vision Network

improvements to almost 700,000 riders and also generates an additional 100,000 daily passenger trips when compared to the 2040 Baseline Network.

Another change in the key metrics is the drop in GHG emissions from 2010 to the 2040 Vision Network. This drop is the result of multiple factors. State and federal regulations and standards aimed at lowering GHG emission rates by promoting use of cleaner vehicle and fuel technologies require significant reductions of GHGs from motor vehicles and mandate the incorporation of a greater number of zero-emission vehicles. In addition, the California Air

Figure 17: Daily Passenger Trip

ACTC_AR0462

Resource Board is developing proposals to achieve full zero emission transit fleet by 2040. These and other regulations will not only offset the increase of GHG due to growth between 2010 and 2040, but help significantly reduce the GHG emissions in Alameda County.

The Vision Network would offer fast, frequent, and reliable transit alternatives to driving. Moving the recommendations of this plan forward would also reduce future GHG emissions by reducing miles traveled in private vehicles.

A summary of the network evaluation is shown in Figure 19, and individual corridor evaluation is shown in Figure 20.

ACTC_AR0463

Figure 19: Network Evaluation Results

		EXISTING CONDITIONS (2010)	VISION (2040)
	PER CAPITA DAILY TRANSIT RIDERSHIP	0.20	0.35

6

Policy Strategies

6.1. Guiding Framework

The Vision Network recommendations include short- and long-range solutions designed to improve the transit system and service by focusing investments in those areas that have the greatest benefit to existing riders and potential to attract new riders. The recommendations resulted from a thorough consideration of existing conditions, current plans and studies, a market and transit operational analysis, and an understanding of the Alameda CTC's transit vision and goals.

The strategies provided here are intended to provide a guiding framework for agencies to consider how to begin strategically implementing the recommended improvements that will be the most effective. These strategies are conceptual. Refinements and additional actions will be necessary to achieve a more physically and institutionally integrated transit system through policy modifications, service coordination, finance approaches, land use considerations, and more detailed additional study where needed.

The transit tier structure forms the framework for targeting policy strategies. The Vision Network recommendations within each service tier respond to physical and jurisdictional areas, and the five tiers of service must also function as an integrated system to deliver effective transit options to the community.

6.2. Strategies for Moving Transit Forward

Transit service functions best when planned and operated as a complete network. Coordinated routing and scheduling, for instance, takes into account rider demand and transfers between routes. Therefore, system integration strategies involve both physical connections between transit services and the street network and institutional coordination of services and information. Their intent is to break down barriers, enhance convenience, and maximize the effectiveness of the region's financial investment in transportation.

System integration starts at the planning level and ends with the actual user experience. It is multi-faceted and incremental. Strategy development, fare and fee structures, fare and fee payment, service availability and schedules, information and communications, land use coordination, and on-going efficiency programs are among the tools available to achieve an efficient and effective transit network that enhances the economy and the environment, and improves the quality of life in Alameda County. Table 5 summarizes all the strategies for moving transit forward.

All Tiers

Maintaining assets of operators within all tiers is essential to provide safe, reliable and cost effective service.

All Tiers Strategy 1: Maintain all assets in their optimal condition

Conduct State of Good Repair (SOGR) assessments: Conducting SOGR assessments will better position each agency, regardless of size and type of service provided, to maximize the return on investment by maintaining and, where possible, extending the useful life of fixed assets, such as transit centers, park and ride facilities, maintenance facilities, and vehicles.

Inter-Regional Tier

Inter-Regional Tier services pass through multiple counties and frequently share rights-of-way with freight rail services. Planning for improving and enhancing these services is primarily carried out by multi-county agencies such as regional joint power authorities/boards and/or the State of California.

ACTC_AR0469

6 Policy Strategies

Inter-Regional Strategy: Separate **goods movement** and **passenger rail** service

To address growing demand for both freight and passenger service, Alameda CTC recently adopted a Countywide Goods Movement Rail Strategy that can be the platform to conduct more focused rail strategies, including:

Conduct a detailed study on passenger and freight rail needs: To realize the vision of enhanced passenger and freight rail services, a study should be conducted to identify and prioritize investments in intermodal and mainline capacity, system connectivity, passenger and freight separation, and localized infrastructure and operational upgrades. The study should address the opportunities available in the county to develop high capacity passenger and freight rail corridors to meet the growing population mobility needs and projected increased freight flows.

The Goods Movement Plan supports the more efficient utilization of Alameda County's rail network to provide additional capacity for the future.

Regional Express Tier

Because this tier involves other counties and crosses San Francisco Bay, other county transportation authorities will be heavily involved. Implementation of the proposed Regional Express capacity improvements will serve to supplement, and in some cases directly connect with BART, ACE, and Capitol Corridor. These agencies should participate in the policy and technical committees for interagency coordination to focus on the short- and mid-range responses to the Transbay passenger capacity issue to suggest resource sharing and allocation to meet this pressing challenge.

Regional Express Strategy 1: Target resources to expand **Transbay** service **capacity**

Capacity limitations of BART, AC Transit, and WETA must be addressed to provide short-term mitigation and long-term solutions.

Prioritize funding for supplemental Transbay bus and ferry service: A unified and coordinated approach to obtain capital and operating funds should be developed to provide additional ferry and bus service to increase capacity in the Transbay corridor. Performance measures need to be developed that recognize this service as different from other services, the high level of utilization as well as the high operating costs due to the distance and time required to cross the bay, peak direction ridership patterns, and fares. In addition, existing facilities and labor issues need to be addressed as part of this strategy.

Conduct additional analysis to determine the extent of need and fleet requirements: A detailed study would identify precise bus and ferry fleet needs based on ridership estimates, operational considerations, and service standards for passenger capacity.

Regional Express Strategy 2: Enhance **interagency coordination**

The institutional environment in which public transit must operate in the Bay Area is complex and multifaceted, especially so in Alameda County. Therefore, creating seamless connections and programs between transit systems and modes will require better coordination among agencies. Improved coordination will allow implementation of integration strategies involving dissemination of transit information, fares, and fare payment systems. (Strategies may change as specific recommendations move forward.)

ACTC_AR0470

Table 5: Summary of Tier-Based Policy Strategies

Tier	Strategies	
All Tiers	Maintain assets, including transit facilities and vehicles,, to maximize useful life and enhance safety	- Conduct State of Good Repair (SOGR) assessments at each agency
Inter-Regional	Separate goods movement and passenger rail service	- Conduct a detailed study on passenger and freight rail needs
Regional Express	Target resources to expand Transbay service capacity	- Prioritize funding for supplemental Transbay bus and ferry service; address implications to facilities and labor; evaluate differently from local services - Conduct additional analysis to determine the extent of need and fleet requirements
	Enhance interagency coordination	- Explore potential Intergovernmental Agreements - Create/expand committee for interagency coordination - Encourage funding integration
	Refine corridor plans through clearly defined improvements	- Coordinate corridor plans with parallel planning initiatives including the Goods Movement Plan and Arterial Plan
	Establish an integrated fare structure and policy allowing riders to transfer between systems and routes	- Upgrade regional passes (Clipper card) - Eliminate transfer penalties - Implement mobile ticketing
	Develop a regional coordinated schedule across all operators to improve service connections and address possible overlaps in service	- Synchronize service spans (hours of operation/frequency) - Synchronize schedules to minimize wait time between buses - Share seasonal and special condition service change information - Create a joint information platform to merge real-time information
	Expand affordable fare strategies	- Expand the use of fare programs to employers and institutions - Consider results of MTC's means-based fare study
	Develop programs to reduce costs	- Improve coordination among transit agencies - Support full implementation of common set of service standards - Require audits, peer comparison and value engineering on all projects
Urban Rapid	Enhance interagency coordination to focus investments and	- Establish corridor working groups to coordinate planning and investments around specific transit corridors

...continued on next page

ACTC_AR0471

Tier	Strategies	
Urban Rapid *(continued from prior page)*	development along transit corridors and in Transit Oriented Communities	- Coordinate and link Transit Oriented Communities programs with active transportation and complete streets programs - Create Transit Oriented Development programs to encourage planning for higher density development at transit hubs and stations - Identify funding resources to facilitate the prioritization of transportation infrastructure programs
	Provide common Information tools and shared branding and marketing	- Create one-call, one-click information for all services - Create a countywide transit map and common graphic and information system
Local Frequent and Community Connector	Expand access for persons with disabilities in conjunction with fixed route service improvements (e.g. increase in service area coverage, hours of operation, transit hub and station upgrades)	- Improve access to transit hubs and stations - Enhance travel training programs - Coordinate inter-agency paratransit scheduling for regional trips
	Explore public-private partnerships to expand the reach of the transit network	- Explore pilot programs at outer portions of routes to assess demand, operational considerations and contractual issues
Streets Plus	Strengthen intermodal connections among buses, trains, and alternative modes through targeted roadway and non-motorized transportation improvements	- Establish on-street priority for transit operations, facilities, and pedestrian access - Provide priority for transit services by upgrading traffic signal systems - Establish transit priority zones in areas of heavy bus flows and transfer activity - Establish on-street priority and separation of transit from traffic to improve access to transit hubs, rail stations and park-and-ride facilities - Prioritize pedestrian improvements and bicycle access to transit - Enhance transfer hubs by minimizing walk lengths and impediments to pedestrian and bicycle access -
	Encourage Transit Oriented Community planning along transit corridors and transit-dense areas	- Encourage local jurisdictions and developers to place highest intensity uses in closest proximity to transit - Encourage a mix of uses to support walking and bicycling in "complete street" communities - Manage parking supply and demand

CINCINNATI STREETCAR PEER REVIEWS

The use of peer reviews and value engineering were among the pre-planned tools to maximize the effectiveness of financial resources of the design, engineering and construction of a new streetcar line in Cincinnati, Ohio. Two peer reviews were conducted: near the project outset, technical representatives of rail transit systems, including Cleveland, OH, met in Cincinnati to review planning documents and provide invaluable advice of infrastructure design and operations. Prior to the completion of the design phase, the city and regional transit authority invited the American Public Transportation Association to conduct a broad-based peer review of the estimated price of the streetcar project of the estimated price and bid price. The panel consisted of project managers of similar projects in Atlanta and Denver. The panel identified $10 million in scope and price reductions that allowed the project to proceed without the need for additional funding.

Explore potential Intergovernmental Agreements (IGAs): IGAs can address a range of coordination strategies, from mergers to agreements regarding operations or funding of capital improvements. Implementation of major transit corridor projects typically requires several IGAs to document the responsibilities for planning, design, construction, and ongoing operation and maintenance of the corridor project. Memoranda of Understanding may also be used.

Create a committee for interagency coordination: This committee can undertake institutional-related initiatives through formal agreements and partnerships that define roles and cost/staff sharing. A policy-level committee can be useful for coordinated decision-making and information sharing for activities such as capital projects, operational plans, and customer information across jurisdictional boundaries. The policy-level committee would be responsible for setting up permanent and ad hoc staff/technical level committees. This type of committee would need to consider partners outside of Alameda County, including other counties and state agencies, due to the inter-county and inter-regional nature of current and future transit services.

Encourage funding integration: Funding from multiple sources can be combined to fund a project and can lead to "buy-in" from each of the funding agencies. Funding for projects can also be stretched by coordinating planned improvements, including for marketing and branding services

Regional Express Strategy 3: Refine **corridor plans** through clearly defined improvements

Corridor-specific studies should be conducted in partnership with local jurisdictions and transit agencies to define specific investment strategies, and coordinate with parallel planning initiatives.

Coordinate corridor planning efforts with parallel planning initiatives including Alameda CTC's Goods Movement Plan and Arterial Plan: All investment-related studies that involve major corridors should take into full account, coordinate with, and collaborate with parallel efforts. This will maximize the effectiveness of the studies, their outcomes, future corridor utilization, and funding and ensure that appropriate jurisdictional and transit needs are fully taken into consideration.

ACTC_AR0473

Regional Express Strategy 4: Establish an **integrated fare structure** and policy allowing riders to transfer between systems and routes

Specific strategies to establish an integrated fare structure include:

Upgrade regional passes: Taking the Clipper card to the next generation of customer conveniences will require an initial agreement on cost and revenue sharing based on estimated usage by jurisdiction. This effort is currently being undertaken by MTC.

Eliminate transfer penalties: Passengers should be able to complete a trip requiring multiple legs without having to pay an additional full fare.

Implement mobile ticketing: Mobile ticketing (passes available on mobile and smart phones) can enhance passenger convenience and reduced boarding time, thereby helping to improve operating speeds an on-time performance.

Regional Express Strategy 5: Develop a regional **coordinated schedule across** all operators to improve service connections and address possible overlaps in service

It is realistic to achieve better schedule coordination to minimize transfer walks and wait times so that journeys can be completed as quickly and seamlessly as possible. This can be accomplished by service and facility coordination among interfacing agencies:

Synchronize service spans: Hours of operations among interfacing routes operated by different agencies in major corridors should be matched as closely as possible to maximize utility of the entire regional system.

Synchronize schedules to minimize wait time: Service frequencies, or headways among interfacing routes operated by different agencies should be coordinated to facilitate seamless regional travel.

Share seasonal and special condition service change information: Coordinated procedures should be established among agencies to coordinate regularly scheduled seasonal service adjustments and changes to maintain convenient and reliable connections between routes and services for passengers.

Create a joint information platform to merge real-time information: Next bus information of all connecting agencies should be accessible via regional and agency websites and apps to allow passengers to track real-time location and arrival estimates for connecting services.

Regional Express Strategy 6: Expand **Affordable Fare** Strategies

Affordable fare strategies should be implemented to expand access to transit for low-income passengers. Strategies include:

Expand the student fare program and existing employer programs: A permanent funding strategy for the continuation and expansion of the Affordable Student Pass pilot program for middle school and high school students in Alameda County, with the potential to expand to other school grades, should be identified. AC Transit's Easy Pass program could be expanded in Alameda County.

Consider results of MTC's means-based fare study: Coordinate with MTC on its mean-based fare study outcomes. Move toward a more consistent regional standard for fare discounts, including student discounts.

Regional Express Strategy 7: Develop programs to **reduce costs**

The MTC Transit Sustainability Project (TSP) initiative highlighted opportunities for greater efficiency and coordination between agencies.

ACTC_AR0474

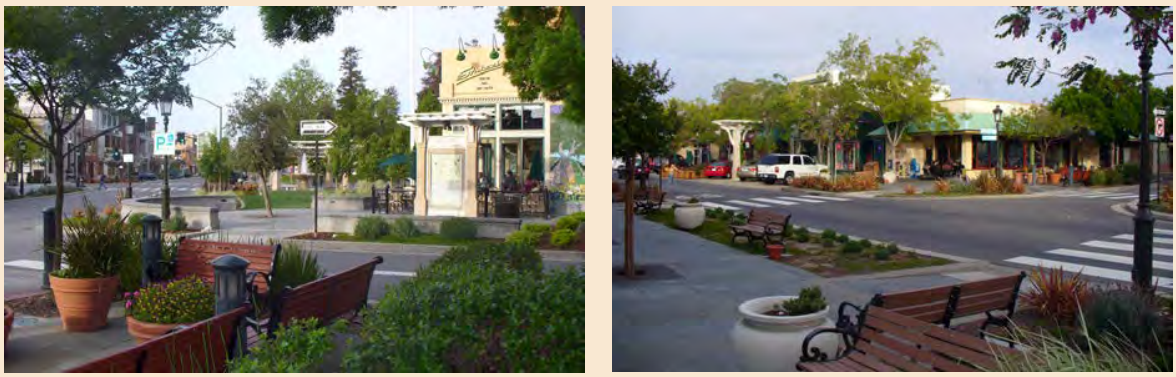
Require audits, peer comparisons and value engineering on all projects: Value engineering could be used to determine if capital costs can be reduced without compromising safety, customer benefit, environmental impacts, or aesthetics. Operating costs could be compared with peers to identify areas where efficiencies can be achieved and a performance management system implemented to achieve efficiencies.

Improve coordination among transit agencies: Information sharing of best practices, cost savings techniques and programs, branding and marketing, and service changes should be conducted among regional agencies on a regular basis.

Full implementation of common service standards: MTC's TSP supports common service standards and Alameda CTC's Mass Transit Program Performance Measures for Direct Local Distribution include common performance measures that are evaluated annually. This will facilitate easier evaluation between operators and over time.

URBAN RAPID TIER

The characteristics of Urban Rapid Tier are frequent all-day bus service combined with a variety of transit-preferential treatments with respect to signalization, lane usage, and roadside upgrades. The Urban Rapid Tier includes transit that operates largely within Alameda County. The proposed improvements directly connect with BART, ACE, and Capitol Corridor in most cases.



Agencies responsible for transit planning and operations, as well as the regional and local street and traffic networks, public works, and planning should be represented on the policy and staff/technical interagency committee for coordination to facilitate implementation of major improvements such as the Multimodal Arterial Plan. Where applicable, Caltrans should also be engaged on corridor improvements.

Urban Rapid Tier Strategy 1: Enhance interagency coordination to focus investments and development **along transit corridors** and in Transit Oriented Communities (TOC)

Regional planning efforts that integrate transit and land use investments are an important initial step to help coordinate local plans, programs, and policies, ensuring that the region has a shared vision for places that, by their design, help enable people to drive less and walk and use transit more, known as Transit Oriented Communities (TOCs).

The MTC's *Plan Bay Area: Strategy for a Sustainable Region* places CMAs in a coordinating role with local jurisdictions and transit agencies to build and implement the plan. Strategies include:

Figure 21: 1st Street in Livermore - Transit-Oriented Walkable Street

Source: CD+A

ACTC_AR0475

KANSAS CITY AREA AUTHORITY INTERACTIVE REGIONAL TRANSIT MAP

The lack of regional public transportation coordination was a long-standing issue in the Kansas City metropolitan area. Five agencies, including the Kansas City Area Transportation Authority in Missouri and Johnson County Transit in Kansas, provide transit service in the region. To create a seamless regional system, Ride KC was created in 2013 as a partnership of the transit agencies and policy organizations with the mission of "building a single, interconnected transit system that gives people the ability to seamlessly move around our region." One of Ride KC's first actions was to develop an interactive regional transit map and schedules that allows users to see the extent of regional service and click on any line to find the route number, name and schedule. Although each agency retains fiscal and operational control, Ride KC has also established a unified brand and graphics standard, fare structure, and fare payment system.

Establish corridor working groups to coordinate planning and investments around specific transit corridors: Alameda CTC should partner with MTC to enhance their roles as conveners to bring together local governments, foundations, transit agencies and other stakeholders to prioritize and provide technical assistance to support public- and private-sector strategic investments along major transit corridors in Alameda County.

Coordinate and link Transit Oriented Community (TOC) programs with active transportation and complete streets programs: Alameda CTC can refine, coordinate, and develop new programs to establish criteria and guidelines to foster the development of TOCs, which expand the scope of Transit Oriented Development (TOD) to include entire communities.

Create TOD programs to encourage planning for higher intensity development at transit hubs and stations: Grants can be provided for transit and/or infrastructure improvements to target areas that the region has prioritized for future population and employment growth and development designed to foster transit use.

Identify funding resources to facilitate prioritization of transportation infrastructure programs: While many infrastructure projects are likely to be funded through combinations of existing local, state, and federal revenue sources, there are also opportunities to raise additional revenues from new development in transit areas, using property-based financing tools including special assessment and taxing districts, developer contributions, and value capture tools.

Urban Rapid Tier Strategy 2: Provide **common information** tools and shared branding and marketing.

Connectivity can be enhanced by presenting information on networks, routes, and schedules in common, shared and joint formats. Strategies include:

Create one-call/one-click information access for all services: The existing 511 web address and telephone number service should be enhanced with current technology platforms to provide access to information, schedules and other notices of all regional agencies.

Create a countywide transit map and common graphic and information system: A countywide transit map should focus on consistent graphics that clearly and uniformly illustrate routes, services, and passenger facilities and landmarks to facilitate seamless regional travel.

Local Frequent and Community Connecter Tier

Local Frequent and Community Connector Tier includes transit that serves local trips within Alameda County's local jurisdictions. Alameda CTC has not identified specific recommendations for this tier. It is assumed that local jurisdictions and

ACTC_AR0476

Figure 22: New Buses and Enhanced Stations Improve Access

Source: *Appendix G - Complementary ADA Paratransit Strategies*

transit agencies will have the primary responsibility for planning and operating these services. Alameda CTC could fund increases in service frequency, span, and/or coverage as planned by these entities. Transit agencies should identify opportunities that improve connectivity between services in this and the other tiers as well as within this tier to maximize the number of destinations conveniently reached by transit. Coordination will be focused among transit agencies, jurisdictions, and first- and last-mile transportation option providers.

Local Frequency Tier Strategy 1: Improve access **for persons with disabilities** in conjunction with fixed route service improvements

Federal regulations designed to implement the Americans with Disabilities Act (ADA) are highly prescriptive and closely monitored for compliance. It is essential that as transit service improvements are made, corresponding improvements in accessibility for persons with disabilities improve as well including both ADA and city-based programs.

Improve access for persons with disabilities to transit hubs and stations: Distances between fixed route (rail and bus) stops and platforms and paratransit berths should be minimized. Signage, designed in accordance with ADA-based guidelines, should provide clearly understood wayfinding for persons with disabilities.

Enhance travel training programs: Develop programs, such as enhanced travel training programs and facilities, to support people who could be paratransit riders on fixed-route service as physical and developmental disabilities allow.

Local Frequency Tier Strategy 2: Explore public-private partnerships to expand the reach of the transit network

Transit agencies can capitalize on the rapid growth in the availability and usage of private companies, such as TNCs, for commuter and other trips to provide first mile/last mile connections to areas with low densities and/or insufficient transit service. Demand for first mile/last mile connections may be needed at transit hubs and stations but would generally be focused at route and service terminus points.

ACTC_AR0477

Figure 23: Planned Improvements-BART-AC Transit Hub in Berkeley

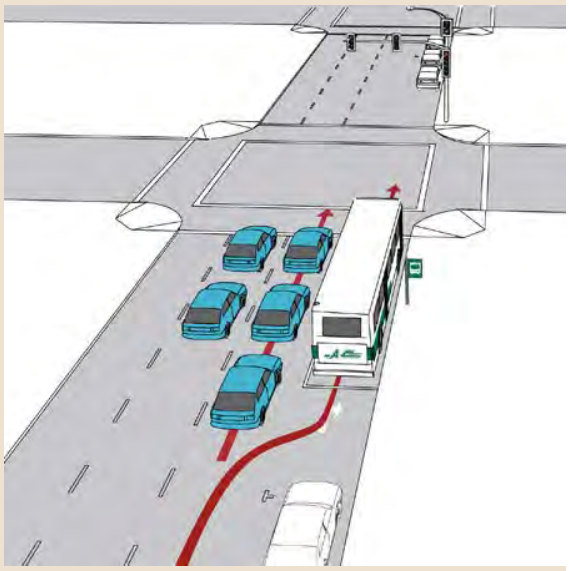
Source: BART

Develop pilot programs to assess demand, operational considerations and contractual issues: Area-specific pilot programs, rather than systemwide or countywide programs, are a prudent way to develop public-private coordination given the sudden and tremendous growth and evolution of the TNC industry and corresponding regulatory environment. Pilots should focus on expanding access to transit to support the Countywide Transit Plan's goal of increasing transit mode share.

Streets Plus Tier

Local jurisdictions have primary responsibility for improvements that fall under the Streets Plus Tier. Regular coordination, including locally oriented permanent or ad hoc committee meetings, should be undertaken so that the needs of all stakeholders are addressed when issues are identified and solutions are developed. It should be noted that the Streets Plus tier strategies can be applied to all other tiers and are designed to work in concert with local land use planning efforts.

Streets Plus Tier Strategy 1: Strengthen **inter-modal connections** among buses, trains, and alternative modes through targeted roadway and non-motorized transportation mobility improvements



Inter-modal connections can be enhanced not only through service coordination, but better physical connectivity between routes, services, and modes.

Enhance transfer hubs by minimizing walk lengths and impediments to pedestrian and bicycle access: Potential enhancements include reassignment of designated bus bays to provide close proximity among routes with high transfer affinities and careful placement of bicycle storage facilities and accessible pedestrian improvements.

Establish on-street priority for transit operations, and align facilities for improved bicycle and pedestrian access: Treatments such as bus lanes or bus lane segments, re-striping to allow bus queue jumps at congested intersections are among the priority treatments that require close coordination with jurisdictions responsible for street design and operations (Figure 24). Access

ACTC_AR0478

Figure 24: Queue Jumps

Source: AC Transit

improvements to transit stops also require coordination efforts with local jurisdictions.

Provide priority for transit services by upgrading traffic signal systems: Modernized ITS and global signal improvements can be developed along corridors at key intersections to help enable buses to enhance schedule reliability.

Establish transit priority zones in areas of heavy bus flows and transfer activity: Priority zones can help reduce pedestrian-bus-traffic conflicts and enhance safety where high levels of bus and bus passenger traffic exist.

Establish on-street priority and separation of transit from traffic to improve access to transit hubs, rail stations and park and ride facilities: Because transit facilities experience a high level of activity, especially during peak periods, the potential to allow priority treatments for transit will improve service reliability and transfer connections.

Improve bicycle access to transit: Strategies include providing bicycle facilities on transit vehicles and at major stops and stations, building bike routes, lanes, and paths and, supporting bicycle sharing programs.

Prioritize pedestrian improvements: Because most transit users access a transit station or hub on foot at one or both ends of their trip, convenient, safe, and secure pedestrian access is an essential component of transit facility design.

Streets Plus Tier Strategy 2: Encourage TOD planning along transit corridors and transit-dense areas

Using the TOD guidelines, described at the *Appendix I* of this report, direction can be provided to local jurisdictions, stakeholders, and developers to create urban environments that accommodate the movement of passengers, both on board transit vehicles through street design and priority treatments and development that facilitates pedestrian and bicycle access. Approaches include:

Encourage local jurisdictions and developers to place highest intensity uses in closest proximity to transit: Large volumes of transit users form a significant customer base for many businesses and land uses at stations; conversely, higher development intensity, including retail and residential, can help build a broader base of transit ridership.

Encourage a mix of uses to support walking and bicycling in "complete streets" communities: Assessing corridors and parallel routes is important to address complete streets needs because not all modes can be fully accommodated on every street. Accommodations for pedestrians and bicyclists as part of complete street programs can enhance access to transit hubs and stations, and create activity centers for transit users who walk or bike to their destinations.

Manage parking supply and demand: Localized analysis of parking patterns and habits, such as parking needs for residential units adjacent to transit hubs and stations, can lead to a more effective placement and utilization of parking facilities and greater opportunities for on-street, mixed use development.

ACTC_AR0479

6.3. Coordinating Partner Roles and Responsibilities

The reality of Alameda County, the Bay Area, and metropolitan regions throughout the country is that jurisdictional boundaries and institutional requirements exist, and that issues, priorities, capabilities, and responses vary by agency and area. In terms of regional connectivity, the result of this reality is often inconvenience at best, and barriers to implementation at worst.

Each partner agency that will be involved in moving the recommendations forward was chosen to undertake specific responsibilities. They cover defined geographical and political jurisdictions, while their functional responsibilities include strategy development, funding and financing, monitoring, and service provision. Table 6 summarizes the key roles and responsibilities of partner agencies. Their roles and responsibilities intersect, overlap, and interact with one another. Coordination of the responsibilities is necessary to seek common purpose, maximize efficient use of resources, avoid duplication of efforts, and provide optimal transportation infrastructure and service. To move the recommendations and strategies forward, collaboration will be essential.

CASE STUDY: NORTHWEST TRANSIT ALLIANCE

The Northwest Transit Alliance comprises five transit agencies operating and marketing under a single brand that crosses jurisdictional boundaries. The intent of the Alliance was to remove barriers to transit use through better connecting communities and improving coordination of routes, schedules, and fare structures among the five operators. Each of the five agencies retains ownership of all its assets and operation of all its services, but they share resources such as transit stops and improve the convenience and cost effectiveness of regional transit services through coordinated transfers and shared staff resources.

ACTC_AR0480

Table 6: Roles and Responsibilities of Local and Regional Entities Related to Transit

Alameda CTC	Metropolitan Transportation Commission
• Collects and administers countywide transportation sales taxes and voter-approved vehicle registration fees • Allocates funding from regional and state sources • Sets programmatic and project priorities for Measures B and BB and the Vehicle Registration fee, Measure F • Adopts Direct Local Distribution performance measures • Develops countywide plans and establishes short- and long-range vision for transportation • Provides policy guidance for transportation investments • Serves as a convener/facilitator for local, regional, and federal agencies • Advocates for Alameda County at regional, state, and federal levels • Delivers major capital projects and programs such the Affordable Student Transit Pass Program, Safe Routes to Schools and Senior and Disabled Transportation services	• Develops regional transportation plans and Sustainable Communities Strategy • Allocates funding from federal, state, and bridge toll sources • Administers grant programs • Develops the Bay Area Regional Transportation Plan, Plan Bay Area • Performs specific planning studies • Develops and delivers system management services, facilities, and operations • Promotes and facilitates service improvements, fare integration among transit operators, including regional fare card (Clipper) and ridesharing and commuter information • Serves as convener/facilitator for other regional agencies and stakeholders • Advocates for Bay Area at state and federal levels
Transit Providers	**Cities**
• Receive local, regional, state, and federal funds • Provide local, regional, or interregional bus (*AC Transit, LAVTA, and Union City Transit*), rail (*BART, ACE, and Capitol Corridor*), or ferry (*WETA*) services • Plan system upgrades and extensions ▪ Major Corridor Study and Service Expansion Plan (*AC Transit*) and Comprehensive Operational Analyses (LAVTA, AC Transit) ▪ System preservation and maintenance and extensions including Silicon Valley and Livermore extensions (*BART)* ▪ New routes and terminals (*WETA*) ▪ ACE Forward • Conduct service and strategic planning • Own land, facilities, and equipment, including stations, parking, park and ride lots, maintenance facilities • Manage and operate paratransit services • Manage transfer facilities at rail stations (*BART*)	• Control and plan land use (zoning, development, design) • Own, manage, and maintain streets and bicycle/pedestrian facilities • Lead and implement complete streets projects • Own and operate an independent local transit system (Union City only) • Fund operations and maintenance of local transportation system (including some local shuttle services) • Plan and operate local senior and disabled transportation services

...continued

ACTC_AR0481

Table 6: Roles and Responsibilities of Local and Regional Entities Related to Transit (*continued*)

Alameda County	Caltrans/High-Speed Rail Authority (HSR)
• Controls and plans land use in unincorporated areas (zoning, development, design, etc.) • Owns and manages/maintains roads, bridges, and bicycle/pedestrian facilities in unincorporated areas • Leads and implements complete streets projects • Performs and collaborates on countywide planning	• Administers state and federal funds, including those expended by local agencies through the Local Assistance Program (Caltrans) • Owns, operates, and maintains state highway system, including arterials and bridges (Caltrans) • Plans for state transportation investments, including development of long-range plans, new projects, operations, and maintenance (Caltrans) • Works with local jurisdictions to make improvements (Caltrans) • Responsible for planning, designing, building and operation of the high-speed rail system in California (HSR)
Private and Non-Profit Sector	**Federal Agencies**
• Offers transit incentives and devises policies for and provides private parking and transportation demand management programs (e.g., discount transit passes, subsidies for last-mile transportation options, parking cash-out, or limited resident or employee parking per occupant, employee, square footage, or similar measurement) • Provides private transit services to their facilities • Works with transit operators to support transit service to their facilities • Builds infill or higher density development around transit nodes • Designs buildings and campuses in a bicycle and pedestrian-friendly manner • Provides transit-enhancing amenities such as shade, shelters, benches, maps, and schedule information • Provides personalized and private on-demand transportation service (taxis and Transportation Network Companies)	• Allocate federal funding from formula and discretionary programs • Review and monitor federally funded programs • Develop policies related to transit and paratransit regulations

ACTC_AR0482

7

Moving Forward

7.1. Moving Forward

A series of important steps will be necessary to move the recommendations and strategies forward, secure funding for delivery, and determine coordination and collaboration opportunities. Section 7.2 provides an overview of funding, costs, phase, and financing options which are described in more detail in subsequent sections.

7.2. Phasing and Financing

Taken as a whole (excluding the BART extension to Livermore/ACE), the estimated capital cost of the Vision Network recommendations is $2.6 billion (in 2015 dollars). Annual operating and maintenance costs (2015 dollars) are estimated at $149 million (see Section 7.3, Table 8 for more information on cost estimates).

Development of precise financing strategies will require more detailed analysis as each project goes through its specific planning and engineering phases, but should be based on five overall approaches:

Phasing and Financing Strategy 1:
Develop consensus on a phased implementation program

The individual transit corridor projects will need to be phased due to funding, staff resources, and operational limitations. Identifying planning priorities between recommendations presented in this plan will require considerable additional analysis developed in conjunction with local partners and in consideration of more detailed cost estimates and funding availability. Phasing should be based on types of improvements recommended and acknowledge the benefits of coordinating similar types of strategies where cost or institutional savings may be possible. Some features or improvements may lend themselves to implementation prior to other planned elements. For example, broad implementation of transit priority improvements across multiple corridors may be an efficient option for implementing that type of system and would yield immediate benefit to transit operations.

Another phased implementation option may be to build common sections of transit corridors (segments that are used by multiple corridors), independent of and before corridor projects. Those segments will provide immediate benefits and will simplify future corridor development.

While individual transit corridor projects are often implemented as discrete projects, the type of big picture thinking described above will allow each corridor planning effort to be more effective. While many corridor planning efforts funded by the Federal Transit Administration (FTA) are linked to a particular complete transit corridor, these corridors should be considered in concert where possible.

Staggered Start Delivery of Vision Network Recommendations: Most of the proposed recommendations fall under the Urban Rapid service tier. For example, AC Transit's Major Corridor Study examined eleven transit corridors, six of which will be considered by the AC Transit Board of Directors for BRT-type improvements and four for Rapid Bus-type improvements. AC Transit is recommending a staggered start for the more significant projects identified in its Major Corridors Study. The staggered start works well for staffing of projects and with anticipated funding streams. Although multiple projects would not typically be in the same phase (planning, design, or construction) at the same time, there would be multiple corridor projects in development (at different phases) concurrently. The staggered start option can allow all projects to be completed by 2040.

ACTC_AR0485

Phasing and Financing Strategy 2: Develop a funding strategy team

Alameda CTC should convene a funding strategy team comprised of current and potential funding partners for the new capital projects, to discuss specific funding strategies and how best to position each project for success.

Phasing and Financing Strategy 3: Identify funding sources and financing options

The array of funding sources on the federal, state, and regional levels would be analyzed for applicability and likelihood of success for each capital project. Funding by communities/cities along corridors would be analyzed, including value capture opportunities.

Phasing and Financing Strategy 4: Develop a financial model and identify several funding and financing scenarios

A detailed financial model would be developed for each project that integrates the various funding sources and financing mechanisms and compares to costs. It must be capable of assessing the viability of different scenarios by project and for the Vision Network overall.

The following are several initial strategies by funding type that could be considered by the funding strategy team mentioned above:

Federal Funding: The greatest opportunity for funding new capital projects is the FTA's Fixed Guideway Capital Investment Grants program. Five of the recommended projects qualify for New Starts funding based on their preliminary capital cost estimate of $300 million or more:

- R5: Eastmont Transit Center – Oakland- San Francisco Transbay Center
- R6: Tri-Cities – Palo Alto (Union City BART)
- R7: San Rafael - Emeryville
- U2 Richmond Parkway Transit Center – Jack London Square
- U6: Bay Fair BART – Warms Springs BART
- U7: Dublin/Pleasanton BART – Livermore ACE

The remaining six recommended projects qualify for Small Starts funding component, which is a more streamlined FTA approval and project development process.

These capital projects should be prioritized by year and considered during discussion of phasing, since it is more difficult for one agency to secure more than one FTA New Starts or Small Starts per federal funding cycle.

Regional and State Funding: The State Cap and Trade program has the most significant amount of new, uncommitted funding for transit projects. Alameda CTC should consider the Transit and Intercity Rail Capital (TIRC) Program for the heavy rail (BART), ferry (WETA) and BRT (AC Transit) projects that will generate the most air quality improvements (generally those with higher ridership potential) and the Affordable Housing and Sustainable Communities (AHSC) Program for projects where Alameda CTC, and transit agencies, can partner with a city/community with housing authority and affordable housing needs along transit corridors.

In addition, Alameda County can continue to be competitive with MTC regional funding, especially with its high priority projects with strong local stakeholder and city support. Future funding opportunities for transit could be part of future bridge toll (regional measure) discussions.

Local Funding: Local funding, including Measure BB, should be reserved for matching state or federal funds or funding projects that are either not eligible or not competitive for other funding as well as on project development activities to leverage other funds for construction. Various transit agencies are also pursuing dedicated local funding for their operations and capital needs through mechanisms such as

ACTC_AR0486

property taxes and bond measures. These mechanisms are considered critical components of sustaining current operations and implementing capital improvements, including capital maintenance and set aside as matching funds for capital projects.

Financing and Value Capture Funding: Several options are available for financing and value capture funding the network capital projects. Local financing should be reserved for leveraging Measure BB funds. Federal financing, such as Transportation Infrastructure Finance and Innovation Act (TIFIA) loans, should be reserved for the projects that are eligible and competitive for New Starts funding. Value capture options require a strong partnership with cities/communities along the transit corridors and stakeholders at station sites; they are ideal tools to fund BRT projects in collaboration with local funding partners. Value capture mechanisms include:

- Tax Increment Financing (TIF): TIF involves the creation of a special district to raise revenue for public improvements by capturing a portion of the additional assessed value generated by private sector development.
- Payments in Lieu of Taxes (PILOT): An alternative approach to TIF is PILOT Increment Financing which provides more revenue and is easier to borrow against than standard TIF applications.
- Special Assessment: A special assessment is an additional property tax applied to parcels of land that receive a special benefit from one or more public improvements funded by assessment revenues. The additional tax is applied to both existing and future properties.
- Joint Development: Joint development is a partnership between a public entity and a private developer created to develop certain assets.
- Air Rights: Air rights refer to the right to develop, occupy, and control the vertical space above a property. Air rights can be bought, leased, or transferred.
- Developer Contributions: Developers often provide in-kind or monetary contributions to facilitate construction of infrastructure that would result in a positive impact on property values.

Phasing and Financing Strategy 5: Develop consensus around a funding strategy and timeline.

A funding strategy timeline for the county would require consensus from county stakeholders. This could be developed to build a cohesive strategy on how to secure the maximum amount of funding for planning and projects. This would include increased coordination around advocating a shared legislative agenda and timeline for securing each funding source.

7.3. Funding Needs Assessment

The transit system in Alameda County is a mature system, and major system infrastructure elements need capital rehabilitation or replacement. At the same time, rapid change and growth calls for expansion of the transit system to ensure continued, adequate access to transit in Alameda County.

Existing Services

The total capital needs for six major transit entities operating within Alameda County between FY 2017 and FY2040, (excluding Capitol Corridor) are estimated at about $23 billion (Table 7, 2015 dollars), and reflect the need to replace all existing assets nearing the end of their useful lives[14]. The capital cost estimate also includes rehabilitation work on the remaining assets in accordance with the recommended lifecycles for each asset type. The estimate is based on

[14] Draft Plan Bay Area 2040 Preliminary Transit Needs Assessment Memorandum (January 2016)

ACTC_AR0487

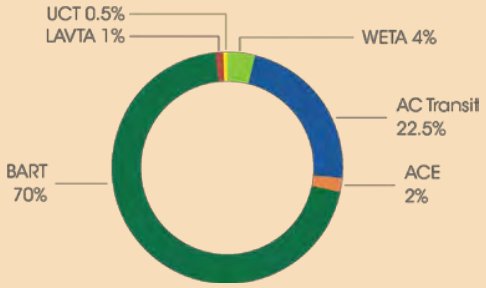
projections prepared by each agency for existing services and committed expansion with the exception of projects currently under environmental review.

The estimated operating costs during this same period total $50 billion (Table 7). The operating needs of BART and AC Transit combined comprise 93 percent of the project operating needs in Alameda County, with BART comprising 66 percent of the total; AC Transit comprising 27 percent. Total combined capital and operating cost by operating entity is illustrated in Figure 25.

Vision Network Recommendations

The total capital needs for the Vision Network recommendations, not counting transit project currently under environmental review (i.e. BART extension to Livermore/ACE) are estimated at another $2.6 billion (Table 8). These conceptual cost estimates cover design, engineering, and construction/fabrication of roadway, stations, support facilities, and systems; property acquisition; vehicles; professional services; and a 35 percent contingency. Annual operating costs for recommendations, not counting the BART extension to Livermore/ACE recommendation, add up to $149 million.

Table 7: Existing Services Projected Capital and Operating Costs FY2017-FY2040



Operator	Total Maintenance Needs	Total Operating Needs
AC Transit	$2,934	$13,445
ACE	$291	$1,300
BART	$18,121	$33,112
LAVTA	$183	$522
Union City	$32	$211
WETA	$1,442	$1,413
TOTAL	**$23,003**	**$50,003**

Source: MTC, Draft Plan Bay Area 2040, Preliminary Transit Needs Assessment Memorandum (January 2016)

Note: All costs in year of expenditure dollars (in millions)

[15] Memorandum to Partnership Technical Advisory Committee regarding Plan Bay Area 2040 Needs Assessment Update, January 2016

Figure 25: Total Projected Capital and Operating Costs by Agency (FY2017-FY2040)

7.4. Funding Options

A wide array of funding sources and financing mechanisms are available to meet the capital and operating needs of the Vision Network recommendations (Table 9 and Table 10).

Existing Services – Operating and Maintenance (O&M) Funding

Several funding sources can be used to pay for the operating needs of existing services. Most are committed and include dedicated local revenues controlled by the agencies. They include fares, non-operating revenues such as advertising, and property and county sales taxes. Committed sources also include funds - such as federal grants, Transportation Development Act (TDA) funds, and bridge tolls - which pass through or are typically estimated by the MTC.

For FY 2017 through FY 2040, MTC's draft Plan Bay Area 2040[15] includes preliminary committed operating revenue projections of $49.87 billion for the agencies in Alameda County. This leaves a gap of approximately $367 million (less than one percent).

ACTC_AR0488

Table 8: Vision Network Recommendations Capital and Operating Cost Estimates

Project		Mode	Capital Cost (2015 $M)	Annual Operating Cost (2016 $M)
R1	BART Extension to Livermore/ACE	Rail	-NA-	-NA-
R2	Brooklyn Basin - SF Ferry Terminal	Ferry	$66	$4
R3	Alameda - SF Ferry Terminal	Ferry	$66	$4
R4	Berkeley - Emeryville - SF Transbay Transit Center	Bus	$150	$15
R5	Eastmont Transit Center - Oakland - SF Transbay Transit Center	Bus	$319	$15
R6	Tri-Cities - Palo Alto (Union City BART)	Bus	$337	$12
R7	Emeryville - Berkeley - San Rafael	Bus	$70	$4
U1	Emeryville – Bay Fair BART station	Bus	$89	$17
U2	Richmond Parkway Transit Center - Jack London Square	Bus	$357	$16
U3	Berkeley - Alameda	Bus	$170	$10
U4	Berkeley - Fruitvale BART	Bus	$141	$17
U5	Bay Fair BART - Union City BART	Bus	$89	$13
U6	Bay Fair BART – Warm Springs BART	Bus	$393	$17
U7	Dublin/Pleasanton BART - Livermore ACE	Bus	$372	$5
		Total	**$2,619**	**$149**

Similarly, various revenue sources are dedicated to capital replacement and rehabilitation by statute or policy. They include federal formula grants, bridge tolls, and certain county transportation sales taxes. For FY 2017 through FY 2040, MTC's draft Plan Bay Area 2040 estimates preliminary committed capital revenue projections of $9.18 billion for the six agencies in Alameda County. This leaves a gap of approximately $13.83 billion (60 percent) from amount shown on Table 8.

The following major funding sources could be used for such O&M needs.

Federal- Section 5307 Urbanized Area: Funding is provided nationwide to urbanized areas for public transportation capital, planning, and preventative maintenance activities. It is allocated on a formula-basis with a minimum required 20 percent local match.

Federal- Section 5337 State of Good Repair: Available to fixed guideway facilities in operation for at least seven years, Section 5307 funds may only be used on existing fixed guideway transit in need of asset replacement or modernization; Section 5337 cannot be used for a new transit investment. There are two sub-programs: High Intensity Fixed Guideway (including rail, BRT, and passenger ferries) and High Intensity Motorbus (such as buses operating in high occupancy vehicle lanes). Funds are allocated between the two programs using a 97/3 percent split and required a minimum 20 percent local match.

Federal- Section 5339 Bus and Bus Facilities: Section 5339 is for capital investments in bus and bus facilities, primarily allocated by formula. Remaining funds are competitively allocated with no single grantee receiving more than 10 percent of the annual discretionary program. A sub-program provides grants for bus and bus facility projects that support low and zero-emission vehicles. A minimum 20 percent local match is required.

ACTC_AR0489

State- Transportation Development Act (TDA): Passed in 1971, the TDA involves multiple major funding sources and planning, operating and capital programs[16]:

Local Transportation Fund (LTF): The TDA allows counties to levy a sales tax (0.25 percent) for transit purposes through the LTF.

Public Transportation Account (PTA): The PTA is the primary source of the State Transit Assistance (STA) fund. Funding for the STA is derived from an additional portion of the state diesel fuel tax (1.75%) for capital and operating expenses.

Proposition 1A: Funding is directed to provide connectivity to the state's planned high speed rail system.

Proposition 1B: Passed on 2006, this bond act provides funding for a wide range of transportation projects, including rail projects and performance improvements on highly congested corridors. Most Proposition1B funds are directed to Caltrans.

Regional- Bridge Tolls: Regional measures and assembly bills that generate toll revenues to fund public transportation projects within the Bay Area include:

Regional Measure 2 (RM2): increased the toll rate by $1 on for the region's seven state-owned toll bridges to fund transportation projects that improve congestion.[17] Eligible projects include transit capital improvement projects and operations.

AB 664: allocates toll revenue collected on the San Francisco-Oakland Bay, Dumbarton, and San Mateo-Hayward bridges to transportation projects near the bridges. The funds are programmed annually by MTC to provide partial local match to federal Section 5307 and 5337 formula grant funds. They are split 70 percent for the East Bay and 30 percent for the West Bay.

Local- San Francisco County Transportation Authority (SFCTA) Proposition K Sales Tax: A half-cent sales tax in San Francisco County is dedicated to transit and paratransit improvements, streets and traffic safety, and transportation system management.

Local- Contra Costa Measure J: This half-cent retail sales tax is for transportation projects in Contra Costa County through 2034.

Local - Measures B and BB: Alameda County has passed three sales tax measures for transportation. The first was Measure B in 1986 which funded projects and programs throughout the county. The second, also known as Measure B, extended the existing ½-cent sales tax, and was approved by over 81% of voters in 2000. Measure B funds a multitude of transportation projects including highway, local roads, transit expansion, transit operations, paratransit, and bicycle/pedestrian facilities.

In November 2014, Alameda County voters approved a supplementary transportation sales tax, Measure BB, by over 70%. Measure BB authorized a one-cent sales tax in Alameda County, augmenting and extending the ½-cent tax passed in 2000 to 2045. It is estimated to generate over $8 billion for transportation projects and programs in the county and is projected to generate $20 billion in economic activity in the county.

The 30-year Alameda Countywide Transportation Expenditure Plan (2014 TEP) includes $7.8 billion to improve and maintain transportation infrastructure and systems. The two largest portions are $3.7 billion for public transit and paratransit and $2.3 billion for street maintenance. In addition, $400 million is earmarked for a BART extension to Livermore/ACE.

ACTC_AR0490

Table 9: Funding Sources (Federal Programs)

Funding Source	Description	Eligible Uses	Responsible Agency
FTA: Section 5307 (Urbanized Area Formula)	Grants to Urbanized Areas (UZAs) for capital, planning, and operating expenses in certain circumstances.	Operating (preventive maintenance and ADA) and maintenance expenses for existing services; capital funding for new projects.	MTC/FTA
FTA: Section 5337 (State of Good Repair)	High Intensity Fixed Guideway (97% of funding) and High Intensity Motorbus (3% of funding).	Replacement and rehabilitation of existing fixed-guideway systems and high-intensity bus	MTC/FTA
FTA: Section 5339 (Bus and Bus Facilities)	Capital investments in bus and bus facilities.	Capital funding for existing and new bus transportation projects	MTC/FTA
FTA: Section 5309 (Capital Investment Grants)	Grants for fixed guideway investments such as new and expanded rapid rail, commuter rail, light rail, streetcar, BRT, and ferry.	Capital funding for new projects	FTA
FHWA: Surface Transportation Block Grant Program (STBG)	Program funds to states and metropolitan planning organizations (MPOs).	Maintenance expenses for existing services; capital funding for new projects	MTC, California Transportation Commission
FHWA: Congestion Mitigation and Air Quality (CMAQ)	Program funds to air quality maintenance or non-attainment areas (regions that do not meet the National Ambient Air Quality Standards for ozone, carbon monoxide, or particulate matter).	Maintenance expenses for existing services; capital funding for new projects; a portion of funds can be used for operations to support a demonstration or pilot project for a period of three years	MTC, California Transportation Commission
US DOT: Transportation Investment Generating Economic Recovery (TIGER)	Highly competitive, discretionary grant program for capital costs of road, rail, transit, and port projects.	Replacement of existing systems; capital funding for new projects	US DOT
Financing: Transportation Infrastructure Finance and Innovation (TIFIA)	Credit program to provide assistance to eligible major transportation projects of critical national and regional importance.	Financing mechanism for new capital projects	US DOT

ACTC_AR0491

Table 10: Funding Sources (Regional/State, Local, and Private Programs)

Funding Source	Description	Eligible Uses	Responsible Agency
Regional / State			
Transportation Development Act (TDA)	Allocation of sales tax revenue under the California Transportation Development Act of 1971, for transportation purposes.	O&M expenses for existing services (not to exceed 50% of the operating budget of any individual transportation service entity); capital funding for new projects	MTC, Local Operators
Regional Measure 2 (RM2)	Funded by revenues from tolls on the region's seven state owned toll bridges.	Capital funding for existing and new projects	Bay Area Toll Authority (BATA), MTC
Assembly Bill (AB) 664, Bridge Tolls	Bridge toll revenues and are programmed annually by MTC for partial local match to Federal Section 5307 and 5337 formula grant funds.	Mainly used to match transit capital projects programmed for FTA formula funds in the Transportation Improvement Program	MTC
Cap-and-Trade	The Greenhouse Gas Reduction Fund (GGRF) is appropriated to state agencies for 1) Sustainable Communities and Clean Transportation Funding, 2) Clean Energy and Energy Efficiency Funding, and 3) Natural Resources and Waste Diversion.	Rail and bus capital projects; operational improvements that result in increased ridership and reduced greenhouse gas emissions	Multiple state agencies
Financing: State Infrastructure Bank	Flexible project funding through loans, debt service guarantees, lines of credit, and other capital financing support.	New capital projects	Caltrans
Local			
San Francisco County Transportation Authority (SFCTA) Proposition K Sales Tax	Half-cent sales tax for transportation projects in San Francisco County.	O&M expenses for BART, transit capital improvements	SFCTA
Contra Costa Measure J Sales Tax	Half-cent retail sales tax in Contra Costa County (25-years).	O&M expenses for BART, transit capital Improvements	Contra Costa
Alameda County Transportation Expenditure Plans, Vehicle Registration Measure BB	2014 extension for the existing Measure B in Alameda County.	O&M expenses for existing services, transit capital improvements	Alameda CTC
Private			
Value Capture	Strategies to capture new and increased value of existing land and properties generated as a result of a major transit capital investment.	Funding/financing for new capital projects	Multiple Agencies

ACTC_AR0492

The 2014 TEP guides the revenues of the voter approved sales tax toward capital projects and programs that improve the countywide transportation system. As such, priorities of Measure BB include:

- Expanding BART, bus, ferry, and rail services
- Keeping fares affordable for youth, seniors, and people with disabilities
- Providing traffic relief by improving local streets, roads, and highway corridors
- Improving air quality and providing clean transportation by expanding bicycle and pedestrian paths and the regional rail network
- Creating good jobs within Alameda County by requiring local contracting and supporting community developments that improve access to jobs and schools.

Local agencies and transit jurisdictions receive Measures B and BB direct local distributions of revenues, as stated in the respective TEPs. In addition, the 2014 TEP also designates funding to additional programs (Figure 26).

The most relevant of these O&M programs is the BART, Bus, Senior, and Youth Transit component. It constitutes about half the investment and includes separate sub-programs that could be used to fund ongoing operating and maintenance costs of the Vision Network recommendations:

Transit Operations, Maintenance, and Safety: Funds will be distributed periodically, emphasizing demonstrations or pilot projects which can leverage other funds.

Affordable Transit for Seniors and People with Disabilities: Funding will be provided to transit agencies to provide specialized transportation service mandated under the Americans with Disabilities Act (ADA). Funds will be provided to each part of the County based on its population of residents over age 70 for local.

Alameda County voters also passed Measure F in November 2010, which increased annual vehicle registration fees by $10 to fund road, transit, non-motorized, and transportation technology projects and programs.

The funds generated by these local sources are critical to advancing and executing the vision outlined in this plan.

Vision Network Recommendations Capital Funding

The Vision Network recommendations are expected to have access to several revenue streams. For example, each project will generate fare revenue and revenues for non-operating expenses, and will have access to additional local, regional, or federal formula grants. However, it is expected that the projects will add to the projected operating and capital maintenance unfunded gap.

Closing the gap will most likely be addressed, in part, by allocating discretionary funding sources, where applicable, or to increase funding sources to help sustain the existing transportation network. Preliminary estimates for total transportation revenues forecasted for MTC's draft Plan Bay Area 2040 are approximately $287 billion between FY 2017 and FY 2040. These revenues are available for numerous transportation uses including local streets and roads, state highways, and transit operating and capital needs. Nearly all of this funding is for committed transportation projects and programs; however, approximately 15 percent ($43 billion) is also available for discretionary purposes.

A portion of the discretionary funds is typically used for closing funding gaps for existing services. The remaining discretionary funds are focused on strategic investments in the region's transportation network. Alameda County represents approximately 21 percent of the Bay Area's population and employment[18]. As such, it could compete for the discretionary funds to help pay for the recommended transit network.

[18] Source: Association of Bay Area Governments (2013)

ACTC_AR0493

The following major funding sources could also be used for capital expansion needs.

Federal- Section 5309 Fixed Guideway Capital Investment Grants (CIG): FTA's largest discretionary resource for funding major transit capital investments has three sub-programs:

New Starts: Fixed guideway projects (heavy rail, light rail transit, commuter rail, streetcars) costing more than $300 million *or* requiring more than $100 million in CIG funding are eligible for New Starts funding. The CIG share of a total project cost cannot exceed 60 percent, although in practice the CIG share rarely exceeds 50 percent of capital costs.

Small Starts: Projects costing less than $300 million and requiring less than $100 million in CIG funding fall in the Small Starts funding category.

Core Capacity: This program involves capital investment projects of any cost to add capacity to existing rail or BRT systems.

Projects are evaluated and rated according to several project justification and local financial commitment. A project's rating, however, is only one of several important technical factors that FTA considers when recommending CIG funding to Congress. A project's readiness and the technical capacity of the sponsor are other key factors.

Federal- Surface Transportation Block Grant Program (STBG): STBG is distributed by the federal Highway Administration (FHWA) to states and MPOs using a highway-based funding formula.

Federal- Congestion Mitigation and Air Quality Improvement Program (CMAQ): Distributed by FHWA on a formula basis to air quality maintenance or non-attainment areas, CMAQ funds are for transportation projects and programs to reduce congestion and improve air quality. They can be used for the capital costs of transit projects and up to three years of the operating costs of new transit service.[19]

Federal- Transportation Investment Generating Economic Recovery (TIGER) Program: Administered by the U.S. Department of Transportation, TIGER helps support capital costs of road, rail, transit, and port projects that have a significant impact on the nation, a region, or a metropolitan area.

TIGER is highly competitive. Compliance with its evaluation criteria, demonstrated commitment of local match, and broad local consensus - including support from both traditional and non-traditional partners - are key requirements. Preferred projects have performed considerable project development such as, completion of environmental clearance, engineering, right of way acquisition. The TIGER program typically delivers $10 -$20 million in capital funding based upon project requests.

State - Cap and Trade: Cap and Trade is a market-based approach to gradually reduce greenhouse gas (GHG) emissions. Participating entities are incentivized to invest in cleaner technologies that will decrease carbon emissions to reduce their need for allowances. The following programs represent 2016 allocation amounts.

The Greenhouse Gas Reduction Fund (GGRF): The fund is appropriated to State agencies for designated purposes. These appropriations are classified by three categories. The most relevant of these categories is the Sustainable Communities and Clean Transportation Funding Program in which 40 percent is allocated at the discretion of the state and 60 percent are allocated among four different sub-programs.

Affordable Housing and Sustainable Communities (AHSC): This program funds "sustainable community" initiatives such as TODs. AHSC will receive 20 percent of annual proceeds, half of

[19] http://www.artba.org/newsline/wp-content/uploads/2015/12/ANALYSIS-FINAL.pdf

ACTC_AR0494

which must be spent on affordable housing projects.

Low Carbon Transit Operations Program (LCTOP): Administered by Caltrans, LCTOP provides operating and capital assistance to transit agencies to reduce GHG emissions and improve mobility. Eligible recipients include transportation planning agencies, county transportation commissions, and transit agencies. LCTOP will receive 5 percent of annual proceeds.

Transit and Intercity Rail Capital (TIRC): Working in coordination with the California State Transportation Agency (CSTA), TIRC funds bus and rail capital improvements that target disadvantaged communities, expand rail systems, reduce GHG emissions, improve safety, and enhance connectivity to high-speed rail. The program will receive 10 percent of annual proceeds.

High Speed Rail Projects: This program covers certain costs of the high-speed rail projects. This program will receive 25 percent of annual proceeds.

MTC created a funding framework that assigns Cap-and-Trade funds over the next 26 years[20] to six comprehensive program categories:

- **One Bay Area Grants (OBAG)**: a competitive program is administered by congestion management agencies at the county level to fund complete streets, and bicycle and pedestrian improvements.
- **Transit Core Capacity Grant Program**: focuses on the region's highest priority capital needs-vehicle replacement and expansion and facilities improvements at AC Transit, BART and SFMTA.
- **Transit Operating and Efficiency Program**: is responsible for improving transit services with a 40 percent distribution to core capacity transit agencies (AC Transit, BART, and SFMTA) and 60 percent to the remaining transit agencies.
- **Climate Innovation**: supports safe routes to school programs, which include streets and roads. Eligible categories include technology advancements and strategies to reduce demand for driving.
- **Goods Movement Program**: aims to improve the efficiency of the movement of goods within and through the region or mitigate the associated environmental impacts.
- **High Speed Rail Program**: to support high-speed rail efforts

State Transportation Improvement Program: The California Transportation Commission administers the State Transportation Improvement Program (STIP).The STIP is updated every two years during even years. Alameda CTC submits recommended programming of the Alameda County share of the Regional Improvement Program (RIP) portion of the STIP cycle to MTC, which in turn, submits the region's proposed STIP programming to the California Transportation Commission for adoption into the STIP. Transit capital may be funded with the STIP.

- **Other:** Many other state and regional sources are available to support some capital and operating funds, including, but not limited to Jobs Access and Reverse Commute (JARC), Transportation Fund for Clean Air (TFCA), State Transit Assistance Funds (STA), Transportation Development Act (TDA), and transit agency sales tax and/or property tax revenues.

Local - Measures B and BB: Measures B and BB fund capital projects as well as O&M of eligible programs, including highway, local roads, transit and paratransit expansion, and bicycle/pedestrian facilities (Figure 26).

The 30-year Alameda Countywide Transportation Expenditure Plan (2014 TEP) includes $7.8 billion to improve and maintain transportation infrastructure and systems. In addition, $400

[20] http://mtc.ca.gov/sites/default/files/Cap_and_Trade_Fact_Sheet.pdf

ACTC_AR0495

million is earmarked for a BART extension to Livermore. The 2014 TEP guides the revenues of the voter approved sales tax toward capital projects and programs that improve the countywide transportation system. As such, capital priorities of Measures B and BB include:

- Expanding BART, bus, ferry and rail services
- Providing traffic relief by improving local streets and roads and highway corridors
- Improving air quality and provide clean transportation by expanding bicycle and pedestrian paths and the regional rail network
- Creating good jobs within Alameda County by requiring local contracting and supporting community developments that improve access to jobs and schools.

The Bus, Senior, and Youth Transit component constitutes about half of investment and includes separate sub-programs that could be used to fund some of the construction costs of the Vision Network Recommendations:

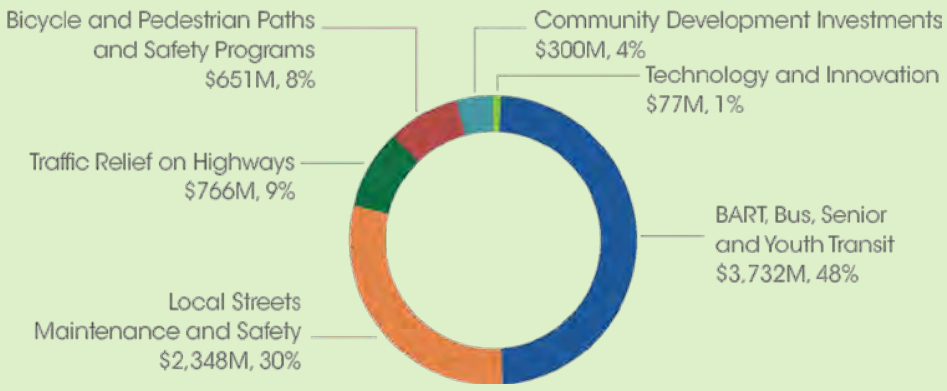
Rapid Bus and Transit Improvements: Funds may be used for project development, design, construction, access and enhancement of the rapid transit corridors as local matching funds to attract outside funds to the other corridors which are currently under development.

BART Extension and System Improvements: Funds may be used for projects that increase the capacity and utility of the existing system and provide local funding for a proposed BART extension in the eastern part of the county.

Major Transit Corridor and Commuter Rail Improvements: Investments include maintenance and service enhancements on exiting rail lines and the development of transportation investments for the future high speed rail connecting Alameda County to the Bay Area.

Local- Measure F, Vehicle Registration Fee: Measure F funds can be used for capital including road, transit, non-motorized, and transportation technology projects and programs.

As with the O&M funding programs, the funds generated by these local sources are critical to advancing and executing the vision outlined in this plan.



Financing Mechanisms

In addition to the funding opportunities, financing mechanisms are also available to meet the capital needs. Financing is a debt mechanism that consists of borrowing against future funding sources to meet current needs, by overcoming the drawdown limitations associated with funding options.

Available financing mechanisms include:

Federal: Transportation Infrastructure Finance and Innovation (TIFIA): This credit program provides assistance to eligible major

Figure 26: Alameda County 2014 Transportation Expenditure Plan (Measure BB)

ACTC_AR0496

transportation projects of critical national and regional importance including highways and bridges, intelligent transportation systems, intermodal connectors, transit vehicles and facilities, intercity buses and facilities, freight transfer facilities, and passenger rail vehicles and facilities. State departments of transportation, transit agencies, special authorities, local governments and private firms are eligible applicants. US DOT offers three types of credit assistance: direct loans, loan guarantees, and standby lines of credit.

Federal/State- State- State Infrastructure Bank (SIB): California participates in this US DOT pilot program which provides flexible project funding through loans, debt service guarantees, lines of credit, and other capital financing support. California's SIB is the Transportation Finance Bank, which offers loans of up to six years to public and private entities for any stage of eligible highway construction or transit capital project.[21]

Local- Value Capture Mechanisms: An array of financing strategies could be used to capture new and increased value of existing land and properties generated as a result of a major transit capital investment. A portion of this increase in value can then be recovered by local jurisdictions to help offset the costs of such improvements.

Tax Increment Financing (TIF): Involving the creation of a special district to raise revenue for public improvements, TIF captures a portion of the additional assessed value generated by private sector development. The tax base is frozen at predevelopment levels, and all or a portion of property tax revenues derived from increases in assessed values (the tax increment) are applied to a special fund created to retire tax-exempt bonds originally issued for development of the district. The initial TIF revenue yield is relatively low. However, revenue generally increases over time as redevelopment and escalation leads to increased property values. TIFs are often applied for periods of 20 to 30 years. While most TIFs capture the incremental increase in property values, some states allow the capture of other taxes as well.

However, when redevelopment agencies were dissolved by the California state legislature in 2011, TIFs became more difficult to do. There is a new option for California whereby the assignment of property taxes or assessments can be made to a Joint Powers Authority, who, in turn, can make infrastructure improvements. This also is an effective structure when multiple taxing entities and/or assessment district revenues must be allocated through a single entity to accommodate bonding.

The Enhanced Infrastructure Financing District (EIFD) act provides for the creation of a new governmental entity by existing taxing entities that after adoption of an Infrastructure Financing Plan, may allocate incremental property taxes to fund transportation projects. A Public Financing Authority is the legislative body that governs an EIFD. Authorization to issue bonds requires a 55% voter approval of either registered voters or landowners within the EIFD.

Special Assessment: An additional property tax can be applied to parcels of land that receive a special benefit from one or more public improvements funded by assessment revenues. The additional tax is applied to existing and future properties. Special assessments are typically applied for a 20- to 30-year period and generate a consistent revenue stream.

In California, the most common assessment district approach is through Community Facility Districts (CFDs). A CFD is created by an affirmative vote of two-thirds of the qualified registered voters. The annual assessments for each parcel are established through an analysis of the benefit to the property owners. The liens supporting the assessment have the same standing as property taxes and are subject to the same foreclosure process as property taxes for

[21] http://www.dot.ca.gov/docs/reports/Report_CaliforniaInfrastructureBank_ACC.pdf

ACTC_AR0497

failure to pay the annual assessment. The annual assessment are the security for the issuance of bonds, or may be committed to a Joint Powers Authority utilizing revenues from other sources to fund transportation projects as described in the previous section.

Joint Development: Partnerships between a public entity and a private developer can be formed to develop certain assets. According to FTA guidance, the development and the property must have a physical and a functional relationship. Joint development can occur when an agency owns land that can be leased to the developer for a long period of time. This enables the developer to build on the land with a low risk of losing the capital investment. In exchange, rents are paid to the agency, creating a revenue stream that can be bonded against to support the development of a transit improvement. The revenue potential can vary depending on market conditions. Joint development can also take the form of the sale of development rights for upfront capital funding.

Air Rights: Refer to the right to develop, occupy, and control the vertical space above a property. Air rights can be bought, leased, or transferred. This is most often seen in transit projects where the space above a transit station is developed by a private developer to build Transit Oriented Developments (TODs).

Developer Contributions: Often provide in-kind or monetary contributions to facilitate construction of infrastructure that results in a positive impact on property values. Contributions are often negotiated to reflect the benefit the developer derives from the project. If funding is negotiated, project sponsors often request the money during the early portion of the debt service period. This enables the project sponsor to better leverage other funding options. In some instances, developers receive increased density allowances in return for their contributions.

7.5. The Roadmap

Phased implementation of the Vision Network recommendations involves two different but converging and complementary paths.

Longer Term Strategy

Five of the Transit Network recommended projects qualify for New Starts funding based on their preliminary $300 million+ capital cost estimate. New Starts funding is highly competitive and it is atypical for a region to have two concurrent New Starts projects in the development phase. To position Alameda County for New Starts funding, three actions are recommended:

Conduct a New Starts project rating assessment for each eligible project: It is assumed that each of the five major projects eligible for New Starts can meet meets FTA's definition of what constitutes an eligible New Starts project. In order to receive New Starts funding, projects must be evaluated and rated by FTA according to specific project justification and local financial commitment criteria (Table 11).

Table 11: New Starts Criteria

Category	Criteria
Project Justification	• Mobility Improvements • Cost effectiveness (cost per rider) • Congestion relief • Environmental benefits • Land use • Economic development
Local Financial Commitment	• Contingency amounts • Funding stability, reliability, availability • Funding to operate, maintain, recapitalize system

ACTC_AR0498

Each criterion is rated on a five-point scale, from Low to High. To qualify for funding, projects must achieve an overall rating of at least Medium (point three on the five point scale) and receive at least Medium summary ratings for both project justification and local financial commitment.

As each of the five major corridors proceeds through the project development phase, an assessment should be conducted to determine how it potentially rates in criteria and category. Achieving Medium or better scores is not essential to enter the New Starts process. The assessment is designed, however, to identify strengths and areas in which improvement is necessary, proving Alameda CTC and its partners to focus attention and resources and better position the projects for funding eligibility.

Determine regional New Starts priorities: Conducting an initial New Starts rating assessment will help Alameda CTC, MTC, transit agencies, and other regional partners to prioritize projects to further develop and advance as candidate New Starts projects.

Although the project with the highest estimated rating would be a likely candidate for advancement, other considerations could include geographical distribution of New Starts projects throughout the Bay Area, as decision-making on the federal levels can be based, in part, on evenly distributing funds throughout the U.S. For example, projects in Alameda County and San Mateo County may have similar levels of justification and support within the Bay Area, but federal decision-makers opt to consider only one New Starts project for the Bay Area as a whole.

Therefore, achievement of regional consensus on which projects to pursue as New Starts requires collaboration and consistency of project scope and analysis among the Bay Area's policy and funding entities.

Determine what other federal and non-federal funds can be applied to a New Starts project: New Starts projects can also include other federal funding sources such as transportation formula grants, fixed guideway modernization grants, bus and bus-related equipment and facilities grants (Section 5339) and flexible funding from the federal highway program. These funds are not allowed to be used as the non-federal share, but can help reduce the amount requested of the New Starts program and, therefore, make the project more competitive for New Starts funding. CMAQ is used by several agencies nationwide to supplement funding for their New Starts projects because of its flexibility for use on several different types of projects and components. TIFIA, which was created to help finance large projects, is an additional option.

On a local and regional level, similar decisions would need to be made, such as reserving Measure BB funds as matching funds for New Starts.

As with achieving consensus of regional New Starts priorities, similar collaboration among regional policy and funding entities, including Alameda CTC, will enhance New Starts competitiveness

Shorter Term Strategy

Implementation of the Transit Network recommendation is by no means restricted to competing on a national level for New Starts funding to cover the entire federal share. Four approaches are recommended:

Seek Small Starts funding for smaller projects: Six of the Transit Network recommended projects qualify for Small Starts funding. This is an important consideration as Small Starts projects are subject to fewer interim FTA approvals and a more streamlined project development process.

Develop New Starts-scale projects incrementally through Small Starts: Small Starts is awarded as a single grant per project. However, if proposed improvements along a longer corridor are divided into separate projects, each of which has independent utility and meets the requirements of the Small Starts program,

ACTC_AR0499

each project could potentially apply for a separate Small Starts grant.

Develop projects incrementally using other federal sources: Projects can be funded by separate New Starts grants on a segment-by-segment basis—as long as the initial segment(s) have independent utility, New Starts is not designed to fund a project on a piecemeal basis by cost category.

Four federal programs are worth pursuing on an annual basis for shorter term solutions

STBG: for streetscape projects, including complete streets solutions, signal synchronization and other streetscape improvements along the corridors.

CMAQ: for transit-related projects that improve air quality such as queue jumps and signal priority.

TIGER Program: for innovative street and transit projects along the corridor.

Active Transportation Program (ATP): for bikeway and pedestrian improvements in the corridor.

Projects can still be eligible for New Starts funding but developed incrementally. Non-New Starts funding can be used, for example, to construct bus lanes or help develop a Transit Signal Priority system. These improvements would result in three significant benefits:

- Improvements in the operation of the existing system that can be quickly realized.
- Build capacity, ridership, and interest in additional improvements in the corridor, including New Starts and Small starts investments.
- Reduce the level of New Starts funding requested, thereby enhancing the project's competitiveness.

Whereas the STBG and CMAQ funds are distributed through MTC's Regional Transportation Improvement Program, which is approved every two years for a three to five year program of projects, TIGER and ATP are discretionary grant programs programmed generally on an annual basis.

Develop projects incrementally using other state and local sources: The state Cap and Trade program has the most significant amount of new, uncommitted funding for transit projects. Alameda CTC should consider the Transit and Intercity Rail Capital (TIRC) Program for the network projects that will generate the most air quality improvements (generally those with higher ridership potential) and the Affordable Housing and Sustainable Communities (AHSC) Program for projects where Alameda CTC can partner with a city/community with a housing authority and affordable housing needs along transit corridors.

MTC also has a variety of streets and roads funding programs that could be used to improve the corridors in the near term.

7.6. Next Steps

Recognizing the strength of transit markets and opportunities for improving transit service in Alameda County, this plan's next generation of recommendations and strategies will serve the mobility needs of the county in the future. Some of these recommendations and strategies would require rethinking the transit capital project and transit service delivery practices. In order to successfully utilize the potential funding sources and financing mechanisms to move the recommendations and strategies forward would require further project development and extensive interagency coordination.

Project Development – The Vision Network recommendations are based on market analysis that relies on existing transit performance, future land use plans, and demographic projections. As these recommendations are further analyzed and developed, and specific capital and service improvements are identified, specific funding and implementation strategies will need to be developed.

Project Schedule – Each corridor served by the Vision Network recommendations is unique in its strengths and challenges that would affect the project delivery timeline. Project specifics and

ACTC_AR0500

delivery schedules, created during the course of project development, will be key in identifying specific funding sources and financing mechanisms that are best aligned to meet the projects financial needs.

Interagency Coordination – One of the biggest challenges to developing and financing multi-jurisdictional transit projects is the coordination of various interested parties, including transit agencies, local jurisdictions, residents, businesses, private property owners, and other stakeholders. A politically and economically feasible 'project' may require extensive outreach efforts and a new funding and delivery mechanism.

Pilot Programs – Some of the strategies could be tested out through pilot programs conducted at agency- or county-level. A pilot program could be used to test heavily discounted transfers across transit agencies. Pilot programs could also be deployed to explore arrangements that maximize the public benefit from integration of public-private partnerships, such as services offered by transportation network companies.

Advocacy – For strategies that are best implemented at the regional level, Alameda CTC, transit agencies, and local jurisdictions could coordinate their advocacy efforts. A regionally-focused universal fare program would be ideal for such advocacy efforts.

1.0. Introduction

1.1. Study Process

This Technical Memorandum documents the performance measures and methods that will be used to evaluate the Draft Transit Network Recommendations described in Technical Memorandum #5. The purpose of the memo is to:

- Provide structure and consistency to the evaluation process, and
- Provide decision makers with a procedure for identifying key differences among proposed recommendations.

The evaluation methodology builds on the transit vision and goals adopted by Alameda CTC in March 2015[1], and will be applied to the draft recommendations and proposed network modifications.[2]

Transit Vision and Goals

The performance measures for the Alameda Countywide Transit Plan are derived from the transit vision and goals documented in Technical Memorandum #3. That document provides a description of the linkage between the vision and goals for the Transit Plan and Alameda CTC's vision and goals from the 2012 Countywide Transportation Plan.

Transit Vision

The adopted vision focuses on the challenge to improve transit network efficiency and effectiveness, while providing environmental and economic benefits and is as follows:

"Create an efficient and effective transit network that enhances the economy and the environment and improves the quality of life."

A simple, focused vision sets the stage for an effective performance framework. The strategic goals define what the vision needs to accomplish through a set of separate, yet integrated elements that support the vision.

Transit Goals

Based on the vision, and an understanding of the current conditions in the county, a set of seven transit goals were identified:

[1] See Technical Memorandum #3: Vision and Goals, Alameda Countywide Transit Plan, March 2015
[2] See Revised Draft Technical Memorandum #5: Transit Network Methodology, Alameda Countywide Transit Plan, August 2015

1. **Increase transit mode share**. The number of people living in Alameda County and their auto trips are growing significantly faster than the number of people that are riding transit. If this trend continues, congestion will continue to increase over time and air quality will continue to degrade. To realize a more environmentally sustainable future, transit ridership will need to increase at a rate faster than auto trips. The goal is to not only increase transit ridership, but to increase the per capita use of transit for all types of trips.
2. **Increase effectiveness**. The transit effectiveness goal seeks to increase the number of transit users for the available transit capacity. To achieve a more financially sustainable transit system, it is important to ensure that major transit investments benefit and are used by the greatest number of people, and that supply matches demand.

   Because transit serves multiple purposes in a community, transit effectiveness must also take into account the need to provide a basic level of transit service. During peak hours, transit provides a critical alternative to private auto trips and to travel on highly congested roadways. Transit also serves as the lifeline for transit-dependent populations that may have no other transportation option. Effectiveness (developing transit facilities and services that match demand and generate the highest ridership) must always be balanced with the need to maintain a basic level of service coverage.
3. **Increase effectiveness of inter-regional transit.** One of the roles of transit service in Alameda County is to provide connections to adjacent regions and to the statewide rail network. These services provide alternatives to auto travel on some of the most heavily congested corridors in Alameda County. The Capitol Corridor provides an alternative to travel on I-80 and I-880 from Contra Costa, Solano, Yolo, and Sacramento counties, and ACE provides an alternative to travel on the I-580 corridor from San Joaquin County.

   By maximizing the effectiveness of these transit services that link the state rail network to regional and local transit services, the demand for inter-regional travel on the county's freeway system, as well as vehicle miles traveled and greenhouse gas emissions, is reduced.
4. **Increase cost efficiency**. The cost of providing transit service is increasing in the county without a commensurate increase in service levels or passengers. To maintain and expand transit services, and to increase frequency and service hours, resources must be used as efficiently as possible.
5. **Improve access to work, education, services and recreation**. The transit system should make it easier for people to travel without having

to rely on a car. Integration with appropriate land use and enhanced first- and last-mile connectivity will increase transit viability and overall accessibility.

6. **Reduce emissions**. Alameda County has adopted a goal to reduce greenhouse gas emissions to 1990 levels. With transportation being the single largest contributor to greenhouse gas emissions, shifting travel away from cars and onto transit can help reduce emissions and enhance the quality of life and the environment in Alameda County.
7. **Achieve a state of good repair**. To provide a safe and reliable transit experience for the user, the transit system needs to be in good working condition. Maintenance of the existing transit facilities and fleet need to be balanced against system expansion.

   This is a particularly acute issue for BART, which is the backbone of the county's transit system, but it is also important for the delivery of reliable bus and ferry service. Maintenance of the core network is critical to being able to accommodate future growth of the system.

1.2. Development of Projects Included in Transit Network

In many transit studies, projects included in the evaluation process are proposed by communities, elected officials, or transit advocates as part of a community visioning process and represent a wide range of improvement ideas. Typically, a high-level screening is applied to the initial set of projects to eliminate those that are infeasible or do not meet the goals and objectives as well. This is not the case for the Alameda Countywide Transit Plan. For this planning effort, the Draft Transit Network Recommendations defined during the creation of the network vision were developed through a strategic technical analysis based on a thorough review of existing conditions, existing plans and studies, a market and transit operational analysis, and an understanding of the Alameda CTC's transit vision and goals. As a result, the evaluation of the transit vision network begins with a relatively limited set of Draft Transit Network Recommendations described in Technical Memorandum #5. [3]

The qualitative and quantitative performance measures, described in the rest of this memorandum, represent a refined set of measures that will be used to provide a more robust picture of the performance of the transit vision network as a whole and for individual draft recommendations. The focus of the evaluation will be to provide information regarding the characteristics of

[3] See Revised Draft Technical Memorandum #5: Transit Network Methodology, Alameda Countywide Transit Plan, August 2015

each draft recommendation rather than the development of a rank-ordered list of recommendations. In that context, relationships or inter-dependencies between recommendations will be discussed in detail.

1.3. Network Alternatives

Task 5 generated a set of draft recommendations to help the county make progress towards achieving the transit vision and goals. These draft recommendations are collectively referred to as the transit "vision" network. The vision network will be compared against existing conditions and a future baseline network that is consistent with the projects contained in MTC's Regional Transportation Plan (see Table 1 below).

Table 1: Network Alternatives

#	Network Alternatives	Year	Description
1	Existing Conditions	2010	Land use and transportation conditions as they were in 2010 per the updated Countywide Travel Demand Model.
2	Baseline Conditions	2040	Consistent with MTC's regional transportation plan.
3	Vision	2040	Set of all improvements identified in the Countywide Transit Plan

SOURCE: Parsons Brinckerhoff, 2015

2.0. Evaluating Performance

2.1. Performance Measures

The performance measures were developed to assess how the transit vision network and draft recommendations support implementation of the adopted transit vision and goals. These measures were compared with selected recent transit studies to validate the scope and completeness of the measures used. In particular, the following studies were reviewed when developing the performance measures presented below:

- Sound Transit Long-Range Plan/ST2 Planning: System and Project Evaluation Methodology Report 02/2006
- Sound Transit: North Corridor Transit Project Alternatives Analysis Report 09/20/2011

- City of Seattle and Sound Transit: Ballard to Downtown Seattle Transit Expansion Study 05/30/2014
- SANDAG 2050 Regional Transportation Plan: Technical Appendix 4 – Transportation Project Evaluation Criteria and Rankings
- City of Seattle Transit Masterplan Final Summary Report April 2012
- Community Transit Long Range Plan, 2011
- Federal Transit Administration National Transit Database, updated annually

Performance measures will be used for two types of evaluations, which will be documented in a future technical memorandum:

- **Network:** This evaluation will quantify the anticipated benefits cumulatively resulting from the draft recommendations with respect to each identified goal. Performance measures will be applied to the existing and future baseline alternatives as well as the "Vision" network in order to gauge the relative effect of each network alternative.
- **Project:** The assessment will consider the costs and benefits of both capital and operating activities associated with each draft recommendation or proposed project. General assumptions will be made regarding capital and operating costs for each proposed network recommendation. (Those projects that are already in the project development or environmental phase will not be evaluated.) These cost assumptions will be used only for comparative purposes and are intended to provide information that can be used in prioritizing and/or phasing of project implementation.
    - **Capital:** This evaluation will allow Alameda CTC to do a comparative assessment of capital projects with respect to each identified goal.
    - **Operations**: A significant portion of the county's funds will continue to support operations and maintenance of transit services. The operating performance varies significantly across transit operators. This evaluation will allow Alameda CTC to evaluate operations practices of transit operators.

Both quantitative and qualitative performance measures have been identified for network and project evaluation. These are described below.

Quantitative Performance Measures

Quantitative performance measures for each goal are summarized in Table 2 and are described in the following section.

ACTC_AR0514

Table 2: Quantitative Performance Measures

#	Goals	Performance Measures		
		Network-Level	Project-Level Capital	Project-Level Operating
1	Increase transit mode share	Per capita daily transit ridership	Net new riders	
		Percentage of intra-county trips on transit		
2	Increase effectiveness (including inter-regional travel)	Passenger trips per revenue vehicle mile		Passenger trips per revenue vehicle mile
		Miles of dedicated right-of-way	Miles of dedicated right-of-way	
		Daily transit trips (unlinked)	Daily transit trips (unlinked)	
			Reduction in transit travel time (peak/off-peak)	
		Number of transit hubs served, including inter-regional hubs		
3	Increase cost efficiency		Capital cost per net new rider	
			Total cost per boarding	
		Operating cost per boarding		Operating cost per boarding
4	Improve access	Number of HH/jobs within half-mile of transit stops within each service tier	Number of HH/jobs within half-mile of transit stops	
		Number of Communities of Concern affected		
5	Reduce emissions	GHG emissions		
6	State of good repair		Cost of mid-life overhaul and/or replacements before 2045 to be included in cost estimates	

SOURCE: Parsons Brinckerhoff, 2015

The definitions for the quantitative performance measures are as follows:

- **Per capita daily transit ridership**: This measure will be used to compare transit usage normalized with population over time (2010 vs. 2040). For evaluation of networks, ridership and population data will be taken from the travel demand estimation process (using both the Alameda County Travel Demand Model as well incremental approaches to ridership forecasting as detailed in the Attachment B of Technical Memorandum #7 - Evaluation of Alternatives). For evaluation of operations, ridership data reported by transit agencies and population estimates/projections prepared by state or regional agencies will be used.
- **Percentage of intra-county trips on transit**: This measure will be used to track progress towards increasing transit mode share for intra-county trips.

For evaluation of networks, intra-county ridership data will be taken from the travel demand estimation process (using both the Alameda County Travel Demand Model as well incremental approaches to ridership forecasting as detailed in the Attachment B of Technical Memorandum #7 - Evaluation of Alternatives).

- **Net new riders**: This measure will be used to compare the ability of a project to attract new riders to transit. This measure will be used for evaluation of projects only and will use estimates of net new riders from the travel demand estimate process.
- **Passenger trips per revenue vehicle mile**: This measure will be used to assess the utilization of service for both networks and projects. For network and project evaluations, the passenger trips will come from the travel demand estimation process, while the revenue vehicle mile data will be derived from proposed service levels.
- **Miles of dedicated right-of-way**: This measure is a proxy for the reliability of transit service under the assumption that exclusivity reduces schedule variability associated with intermittent general purpose traffic congestion. The measure will be used for both network and project evaluations. The data will come from each project definition.
- **Daily transit trips**: This measure will show the transit trips associated with the project and will be aggregated at the network level. This measure is being used in addition to net new riders to allow for comparison to other transit agencies and provide input to efficiency metrics such as passenger trips per revenue vehicle miles. This data will come from the travel demand estimation process.
- **Reduction in transit travel time**: Transit travel time improvements will be estimated based on the type of physical changes proposed for the corridor. This measure will be applied at the project level. This data will come from a combination of synthetic and incremental modeling exercises (as detailed in Section 2.2 and the Attachment B of Technical Memorandum #7 - Evaluation of Alternatives).
- **Number of transit hubs served, including inter-regional hubs:** This measure will show the "interconnectivity" of a particular transit line. This data will come from project definition evaluated against the existing and planned transit hubs. This metric identifies "interconnectivity" opportunities (in terms of the number of hubs served or connected) and will be considered in combination with the qualitative metric, "intermodal connectivity" to identify the full potential benefits of a transit improvement project.
- **Capital cost per net new rider**: This measure will be applied at the network and project level. Capital costs will be estimated from data bases that

have compiled costs for comparable types of improvements in Alameda County and in other regions.

- **Operating cost per boarding**: This measure will be applied at the network and project level. Operating costs will be estimated from current operating costs for comparable types of service in Alameda County and other regions.
- **Total cost per boarding:** This measure will provide the total cost per boarding, and will be calculated based on total boardings, capital costs, and operating costs reported by the appropriate measures.
- **Number of households (by income level) and jobs within a half-mile of transit stops**: This measure provides useful information related to the potential overall market and equity issues associated with proposed service changes. It will be applied at the network and project levels. It also provides a measure that helps provide context for the comparison of proposed projects in Alameda County to similar transit projects implemented elsewhere in the US.
- **Number of Communities of Concern affected:** This measure will help to establish whether the proposed modification will have a positive impact on Communities of Concern, i.e. those communities that face particular transportation challenges, either because of affordability, disability, or because of age-related mobility limitations. These may also be defined as those areas covered by Community Based Transportation Plans. A qualitative assessment of the extent to which proposed transit improvements benefit these communities will also be performed.
- **GHG emissions:** This measure will be applied on the network-level only and is generated based on output from the travel forecasting process (using both the Alameda County Travel Demand Model as well incremental approaches to ridership forecasting as detailed in the Attachment B of Technical Memorandum #7 - Evaluation of Alternatives).
- **Cost of mid-life overhaul and/or replacements before 2045:** In order to reflect the goal of state of good repair, project cost estimates will take into account the cost of a mid-life overhaul and capital replacement required before 2045 as appropriate depending on asset type. This information will be obtained from individual transit operators as well as form the consultant team's database of relevant transit capital projects.

Qualitative Performance Measures

In addition to the quantitative measures listed above, the projects will also be evaluated using a set of qualitative performance measures to capture those

benefits that cannot be readily modeled or forecasted so as to provide a quantitative metric. Qualitative measures include:

- **Support TOD strategy:** Linking transit investment with supportive land use patterns is critical to the success of transit. This performance measure will assess the characteristics of land uses adjacent to the proposed transit project to assess the potential for transit success.
  - *Density* – Are high density development and housing affordability requirements in place for development near transit stations/stops?
  - *Mix of Uses* – Does the local jurisdiction have policies that encourage mixed-use development, such as, zoning codes that allow a mix of uses, form-based development codes (which generally facilitate mixed use development or co-locations of different uses better than conventional zoning approaches), innovative jobs/housing balance policies and programs, shared parking allowances or requirements?
  - *Parking Management Policies* – Does the local jurisdiction have progressive parking policies, such as, value or demand priced parking, reduced parking requirements in areas served by transit, parking maximums, shared parking policy, reduced parking for affordable housing units, provision of free or reduced-cost transit passes, and a tracking system to monitor these programs?
- **Number of existing or planned major activity nodes served:** Major activity nodes with high levels of transit demand serve as anchors for transit routes. Generally, major activity nodes are locations where there are a concentrate number of trip destinations and/or origins, such as colleges or universities, downtown central business districts, shopping centers, and large medical centers. The routes that are most productive, not only have major anchors at each end of the route, but also have the potential to generate robust transit demand along the route.

  Proposed projects will be evaluated in terms of how well they serve multiple existing or planned major activity nodes (including active PDA's).
- **Intermodal connectivity**: Projects will be evaluated in terms of how effectively they connect different types of transit services within the transit network. This will be evaluated by assessing the number of transit service tiers served and the ease of access between different transit modes, including first- and last-mile connecting services.
- **Customer experience:** Customers' expectations evolve as amenities and services become available to them. Most transit agencies in Alameda County have carried out customer satisfaction surveys to identify factors that affect their decisions to use transit. Most agencies have also adopted

performance measures to track customer satisfaction over time. A qualitative assessment will be made of each project's impact to the rider's experience based on factors such as: service reliability, ease of transfers, ease of access to transit information and whether or not the proposed project has the potential to improve customer satisfaction.

- **Compatibility with Arterials Plan recommendations**: Coordination with the Arterials Plan typologies will ensure consistency between both plans.

2.2. Modeling Considerations

Because forecasts of transit demand associated with individual or groups of draft recommendations are a critical input to several of the most important evaluation criteria, it is important to understand the advantages and disadvantages of different modeling procedures and how the results should be interpreted. Therefore, a brief discussion of travel demand modeling and the proposed combined approach is provided below.

This evaluation employs a combination of **synthetic** and **incremental** approaches to forecasting transit ridership.

The **synthetic** evaluation method uses a travel demand model (in this case, the 4-step Alameda County Travel Demand Model), which forecasts both travel mode choice and route choice based on statistical estimates of origins and destinations given future land use and transportation system changes.

Incremental approaches to transit ridership forecasting are based on observed transit usage. They forecast transit ridership changes by applying demand elasticities to whatever type of change is being made (fares, frequency, etc.).

An FTA-sponsored survey of MPOs found that 63 percent of the respondents used service elasticities to forecast ridership and 51 percent used 4-step travel models, with many using both in combination. The primary reason for using both is that each method has important limitations that can be overcome through the use of the other method. This can be seen in the comparison table below (see Table 3).

Table 3: Network Alternatives

Synthetic Methods (4-step models)	Incremental Methods (elasticities)
Advantages • Sensitive to changes in land uses and to transportation projects, including improvements in other modes • Can forecast ridership for new modes or extension of an existing mode to areas not previously served	Advantages • Use of route-level survey data eliminates the upstream error (land use data, income data, etc.) found in travel models. The base ridership will be accurate • Can be used to forecast changes for small-scale projects
Weaknesses • Intended to function at a large scale; incapable of forecasting effects of micro-scale projects such as queue jumps • Provides reasonable forecasts for transit as a whole but not for individual bus routes	Weaknesses • Critically dependent on data for existing conditions, so cannot be used where service does not already exist • Insensitive to other changes in the network such as improvements to a parallel freeway

SOURCE: Parsons Brinckerhoff, 2015

As is the case with virtually all synthetic approaches which rely on travel demand models, the Alameda CTC travel demand model is much more accurate for auto travel than for transit, especially bus transit. However, the model is validated (tested for accuracy) at the level of daily ridership by transit operator.[4] In other words, the model is expected to provide a good estimate of total daily ridership for each transit operator, but is not validated for more detailed levels of analysis, such as ridership on individual bus lines at different times of the day.

Many of the draft recommendations to the Alameda County transit network involve a combination of small-scale improvements to bus routes and specific roadways (e.g. transit signal priority, bus bulbs, transit queue jumps, etc.). Synthetic models are not sensitive to these types of changes even though there are examples of transit ridership gains as the result of transit speed and reliability improvements.[5] For the evaluation phase of this project, a combination of synthetic and incremental approaches will be utilized in order to capture the advantages of each analysis approach and overcome the limitations that either approach would have if used alone.[6]

ACTC_AR0520

2.3. Application of Performance Measures

Results from the evaluation of draft recommendations using quantitative and qualitative performance measures will be presented in a matrix format. The transit vision network will also be evaluated against existing conditions and baseline conditions networks. For each performance measure, results will be presented on a three-point scale (low, medium, high). Each performance measure will be assigned weights determined through discussions with Alameda CTC. Table 4 shows a sample evaluation matrix.

ACTC_AR0521

1.0. Introduction

1.1. Study Process

This Technical Memorandum discusses the evaluation of transit alternatives and the development of short- and long-range investment strategies for Alameda County.

The purposes of this memorandum are as follows:

- Apply the updated countywide transportation model and elasticity based-model assessment tools as an initial assessment of the effectiveness of the transit investment strategies.
- Estimate ridership, vehicle miles and hours traveled, travel times, and mode shares for investments using the Alameda County Transportation Commission (CTC) updated travel demand model and/or other methodology developed in cooperation with Alameda CTC to effectively evaluate the proposed investments.
- Assess cost and financial feasibility based on qualitative measures identified in Task 6.

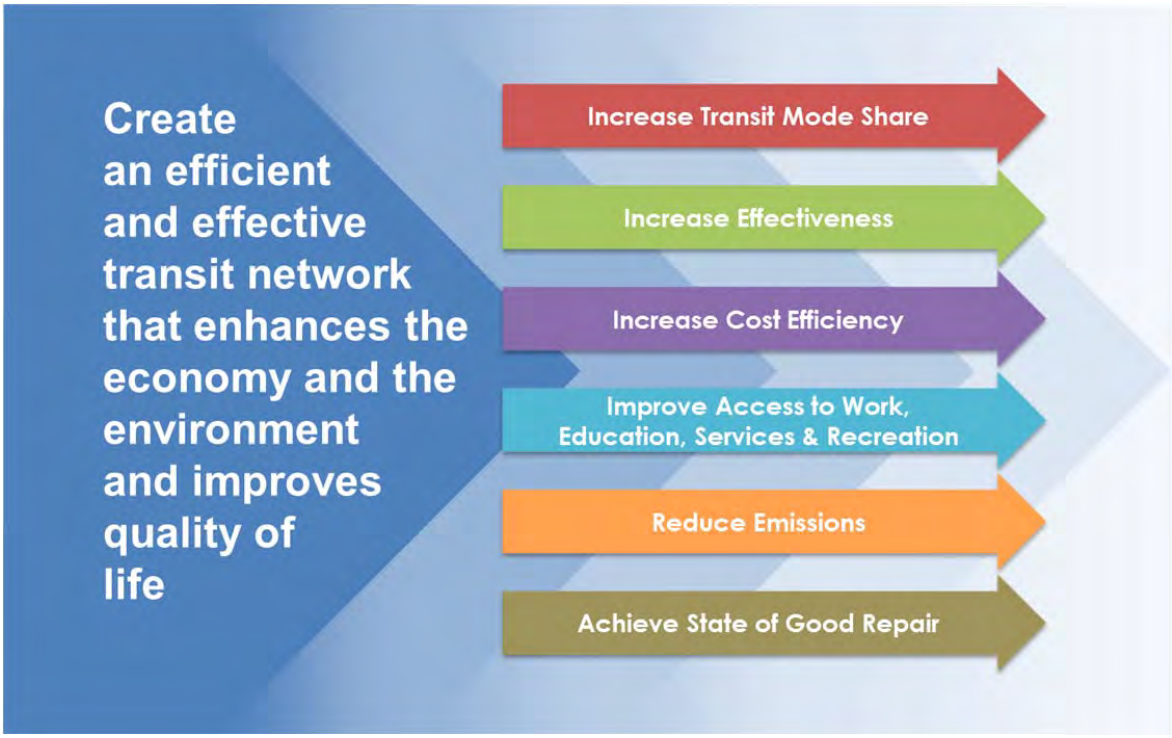
This evaluation builds on the transit vision and goals adopted by Alameda CTC in March 20151, which were applied to the draft recommendations and proposed network modifications.

Transit Vision and Goals

The performance measures for the Alameda Countywide Transit Plan are derived from the transit vision and goals documented in Technical Memorandum #3, which describes the linkage between the vision and goals for the Transit Plan and Alameda CTC's vision and goals from the 2012 Countywide Transportation Plan.

Transit Vision

The adopted vision focuses on the challenge to improve transit network efficiency and effectiveness while providing environmental and economic benefits. The vision is as follows:



> *"Create an efficient and effective transit network that enhances the economy and the environment and improves the quality of life."*

A simple, focused vision sets the stage for an effective performance framework. The strategic goals define what the vision needs to accomplish through a set of separate, yet integrated, elements that support the vision.

ACTC_AR0529

Transit Goals

Based on the vision, and an understanding of the current conditions in the county, a set of six transit goals were identified:

1.2. Projects Included in Transit Network

For this planning effort, the Draft Transit Network Recommendations defined during creation of the network vision were developed through a strategic technical analysis based on a thorough review of existing conditions, existing plans and studies, a market and transit operational analysis, and an understanding of Alameda CTC's transit vision and goals. As a result, the evaluation of the transit vision network begins with a relatively limited set of Draft Transit Network Recommendations described in Technical Memorandum #5.[1]

The qualitative and quantitative performance measure evaluation, described in the remainder of this memorandum, represents a refined set of measures that were used to provide a more robust picture of the performance of the transit vision network as a whole and for individual draft recommendations. The focus of the evaluation was to provide information regarding the characteristics of each draft recommendation rather

[1] See *Revised Draft Technical Memorandum #5: Transit Network Methodology*, Alameda Countywide Transit Plan, August 2015

than the development of a rank-ordered list of recommendations, as well as to evaluate how all the recommendations performed on a network level.

The following projects have been evaluated as part of Task 7 and are illustrated in Figures 1 and 2:

- Regional Express Tier
  - R1 Bay Area Rapid Transit (BART) Extension to Livermore/ Altamont Commuter Express (ACE)
  - R2 Brooklyn Basin – San Francisco (SF) Ferry Terminal
  - R3 Alameda – SF Ferry Terminal
  - R4 Berkeley – Emeryville – SF Transbay Transit Center
  - R5 Eastmont Transit Center – Downtown Oakland –SF Transbay Transit Center
  - R6 Tri-Cities – Palo Alto (with Southeast and Irvington extensions)
  - R7 – Emeryville – Berkeley – San Rafael
- Urban Rapid Tier
  - U1 Emeryville – Bay Fair BART Station
  - U2 Richmond – Jack London Square
  - U3 Berkeley – Alameda
  - U4 Berkeley – Fruitvale BART
  - U5 Bay Fair BART – Union City BART
  - U6 Bay Fair BART – Warm Springs BART (with Warm Springs extension)
  - U7 W. Dublin/Pleasanton BART – Livermore/ACE

U7 W. Dublin/Pleasanton BART—Livermore/ACE

1.3. Network Alternatives

Task 5 generated a set of draft recommendations to help the county make progress toward achieving the transit vision and goals. These draft recommendations are collectively referred to as the transit vision network. The vision network was compared against existing conditions and a future baseline network that is consistent with the projects contained in the Metropolitan Transportation Commission's (MTC's) 2035 Regional Transportation Plan (Table 1).

ACTC_AR0533

Table 1: Network Alternatives

Source: Parsons Brinckerhoff, 2015

2.0. Performance Evaluation

2.1. Performance Measures

The performance measures were developed in Task 6 to assess how the transit vision network and draft recommendations support implementation of the adopted transit vision and goals. These measures are described in more detail in *Technical Memorandum #6 Evaluation Methodology and Performance Measures*.

Performance measures apply to two types of evaluations:

- **Network:** This evaluation quantifies the anticipated benefits cumulatively resulting from the draft recommendations with respect to each identified goal. Performance measures were applied to the 2010 baseline as well as the 2040 vision network in order to gauge the relative effect of each network alternative.
- **Project:** This assessment considers the costs and benefits of both capital and operating activities associated with each draft recommendation or proposed project. General assumptions were made regarding capital and operating costs for each proposed network recommendation. (Projects that are already in the project development or environmental phase were not evaluated.) These cost assumptions were used only for comparative purposes and are intended to provide information that can be used in prioritizing and/or phasing of project implementation.
    - **Capital:** This evaluation will allow Alameda CTC to conduct a comparative assessment of capital projects with respect to each identified goal.
    - **Operations**: A significant portion of the county's funds will continue to support operations and maintenance of transit services. The operating performance varies significantly across transit operators. This evaluation

ACTC_AR0534

will allow Alameda CTC to evaluate operations practices of transit operators.

Both quantitative and qualitative performance measures have been identified for network and project evaluation. These are described below.

Quantitative Performance Measures

Quantitative performance measures for each goal are summarized in Table 2 and are described in the following section.

Table 2: Quantitative Performance Measures

#	Goals	Performance Measures		
		Network-Level	Project-Level Capital	Project-Level Operating
1	Increase transit mode share	Per capita daily transit ridership	Net new riders	
		Percentage of intra-county passenger trips on transit		
2	Increase effectiveness (including inter-regional travel)	Passenger trips per revenue vehicle mile		Passenger trips per revenue vehicle mile
		Miles of dedicated right-of-way	Miles of dedicated right-of-way	
		Daily passenger trips (unlinked)	Daily passenger trips (unlinked)	
			Reduction in transit travel time (peak/off-peak)	
			Number of transit hubs served, including inter-regional hubs	
3	Increase cost efficiency		Capital cost per net new rider	
				Operating cost per passenger trip
4	Improve access	Number of households/jobs within one-half mile of transit stops		
		Number of Communities of Concern affected		
5	Reduce emissions	Greenhouse gas emissions		
6	State of good repair		Asset lifecycle is considered in annualized capital cost estimates	

Note: Performance measures shaded in gray are not applicable for this type of evaluation.
Source: Parsons Brinckerhoff, 2015

The definitions for the quantitative performance measures are as follows:

- **Per capita daily transit ridership**: This measure was used to compare transit usage normalized with population over time (2010 vs. 2040). For evaluation of networks, ridership and population data were taken from the travel demand estimation process. A combination of the Alameda County Travel Demand Model (ACTDM) and existing ridership data was used to estimate 2040 baseline ridership. Specifically, the model was used to forecast the growth in ridership on each network corridor and the growth factor was then applied to actual measured existing ridership. This method was applied to forecasts for all transit providers, and reported on the project level only.
- **Percentage of intra-county passenger trips on transit**: This measure was used to track progress toward increasing transit mode share for intra- county trips. For evaluation of networks, intra-county ridership data were taken from the travel demand estimation process.
- **Net new riders**: This measure was used to compare the ability of a project to attract new riders to transit. This measure was used for evaluation of projects only and uses estimates of net new riders from the travel demand estimate process.
- **Passenger trips per revenue vehicle mile**: This measure was used to assess the utilization and cost effectiveness of service for the vision network and between proposed projects. For both network and project evaluations, the passenger trips were derived from the ACTDM estimation process, while the revenue vehicle mile data were derived from proposed service levels.
- **Miles of dedicated right-of-way**: This measure is a proxy for the reliability of transit service under the assumption that exclusivity reduces schedule variability associated with intermittent general purpose traffic congestion. This metric is applied only for the project level and focused on ROW width assumptions to support transit. Implementation of any of the network recommendations will require close coordination with local jurisdictions to address ROW and traffic operational needs. . . . . .
- **Daily passenger trips**: This measure shows the passenger trips associated with each proposed transit project and is also aggregated to the network level.
- **Reduction in transit travel time**: Transit travel time improvements were estimated based on the type of physical changes proposed (e.g., bus lanes, queue jumps, Transit Signal Priority, off-board fare collection, raised platforms, etc.) for the corridor. This measure was applied at the project level.
- **Number of transit hubs served, including inter-regional hubs:** This measure shows the "interconnectivity" of a particular transit line. The transit hubs within approximately 300 feet of the project alignments in Alameda and Contra Costa counties were counted. Transit hubs include commuter rail stations, rapid rail stations, ferry terminals, municipal airports, transit centers, and park-and-ride lots.

- **Capital cost per net new rider**: This measure was applied at the network and project level. Capital costs were estimated from databases that have compiled costs for comparable types of improvements in Alameda County and in other regions. Costs were then annualized based on the life cycle for major elements within the cost estimate (e.g., roadway improvements, systems, vehicles). These costs are expressed in 2015 dollars.
- For the recommended projects, ridership forecasts were prepared for a future year baseline network and future year with the project with the difference between the two forecasts being the net new riders. These daily ridership forecasts were also annualized. Annualized capital cost estimates were then divided by annualized forecasts of ridership to yield cost per net new rider expressed in 2015 dollars.
- **Operating cost per passenger trip**: This measure was applied at the network and project level. Operating costs were estimated from current operating costs (2016) for comparable types of service in Alameda County and other regions. In order to calculate operating costs per rider, an annualization factor of 300 was used to convert daily ridership into annual which was then applied to annual operating costs. The ridership annualization factor takes into account variations ridership over time (e.g. weekday vs. weekend) for the types of transit services being proposed in the plan.
- **Total cost per passenger trip:** For this evaluation, total cost is defined as the annualized capital cost plus the annual operating cost based on service assumptions used in the ridership forecasting process.
- **Number of households and jobs within one-half mile of transit stops**: This measure provides useful information related to the potential market with proposed service changes. It was applied at the network and project levels. For the network level evaluation, households and jobs in Alameda and Contra Costa counties were calculated for 2010 and 2040. For the project level, the number of households and jobs in Alameda and Contra Costa counties were calculated based on the 2040 population and employment forecast. Transit stop locations are subject to change; therefore, the number of households and jobs were calculated within one-half mile of the transit alignments rather than one-half mile of transit stops.
- **Number of Communities of Concern affected:** This measure helps to establish whether the proposed modification could have a positive impact on Communities of Concern (i.e., those communities that face particular transportation challenges, either because of affordability, disability, or age-related or other mobility limitations) as defined by MTC. Data from MTC[2] was used to identify census tracts containing Communities of Concern in Alameda and Contra Costa counties.

[2] Metropolitan Transportation Commission. 2014. Communities of Concern website and 2012 data table. *http://gis.mtc.ca.gov/samples/Interactive_Maps/cocs.html* Accessed Feb. 9, 2016

ACTC_AR0537

- **Greenhouse gas (GHG) emissions:** This measure was applied on the network level only and is generated based on output from the travel forecasting process. This measure is reported in metric tons of CO_2 per year.
- **Cost of mid-life overhaul and/or replacements before 2045:** In order to reflect the goal of state of good repair, asset lifecycle is considered in annualized capital cost estimates.

Qualitative Performance Measures

In addition to the quantitative measures listed above, the projects were also evaluated using a set of qualitative performance measures to capture those benefits that cannot be readily modeled or forecasted so as to provide a quantitative metric. Qualitative measures include the following:

- **Support transit-oriented development (TOD) strategy:** Linking transit investment with supportive land use patterns is critical to the success of transit. This performance measure assesses the characteristics of land uses adjacent to the proposed transit project to determine the potential for transit success. Key elements of this measure include density, mix of uses, pedestrian and bicycle access, and parking management policies.
- **Number of existing or planned major activity nodes served:** Major activity nodes with high levels of transit demand serve as anchors for transit routes. Proposed projects were evaluated in terms of how well they serve multiple existing or planned major activity nodes (including active Priority Development Areas and locally identified infill development areas near transit).
- **Intermodal connectivity**: Projects were evaluated in terms of how effectively they connect different types of transit services within the transit network. This was evaluated by assessing the number of transit service tiers served and the ease of access between different transit modes, including first- and last-mile connecting services.
- **Customer experience:** A qualitative assessment was made of each project's impact to the rider's experience based on factors such as service reliability, ease of transfers based on distance between stations, ease of access to transit information, and whether the proposed project has the potential to improve customer satisfaction.
- **Compatibility with Arterials Plan recommendations**: Coordination with Alameda CTC's Arterials Plan typologies will ensure consistency between both plans. The Arterials Plan is anticipated to be updated to reflect consistency with the Countywide Transit Plan.

3.0. Evaluation Results

Results from the evaluation of draft recommendations using quantitative and qualitative performance measures are presented in a matrix format. For each

performance measure, results are presented on a three-point scale (low ○ medium ◑ and high ●).

3.1. Interpreting Evaluation Results

Evaluation results are presented at both the network and project levels. The intent of the evaluation is to provide a robust picture of the attributes and effects of each proposed project and the network as a whole on a consistent set of key measures that would assist Alameda CTC decision-making during future phases of program implementation.

Several factors should be considered when interpreting the evaluation results for both the network and project-specific summaries:

- Corridor length should be taken into account especially when considering demographic evaluation measures such as households and employment within one-half mile of transit stops.
- While the ACTDM includes all nine Bay Area counties, the geographic extent of the analysis is focused on Alameda and Contra Costa counties as this fostered a more efficient modeling effort. Results for households, jobs, communities of concern, and number of transit hubs highlight only these two counties.
- In the evaluation of proposed transit improvements, the focus can often fall onto a subset of the measures (e.g., net new riders or mode shift). However, it is important to also consider the positive impact of these projects to existing riders who will receive the benefits of travel time savings, reliability, and increased access to other transit facilities or job centers.

Notes on Project-Specific Ratings

Results for each evaluation measure were prepared for each of the proposed projects. The low, medium, and high ratings shown below in Table 3 are intended to facilitate the comparison between proposed projects. These ranges were developed using a relative scale which reflected the range of results witnessed for each measure, using a natural breaks method. The following table summarizes the ranges used to convert the results by measure into the low, medium, or high rating scale shown in the tables for each proposed project.

ACTC_AR0539

Table 3: Rating ranges used in project evaluation

Measure	Low	Medium	High
Net New Riders	0 - 5,000	5,000 - 10,000	>10,000
Passenger Trips per Revenue Vehicle Mile	0 - 5	6 - 20	> 20
Daily Passenger Trips	0 - 5,000	5,000 - 25,000	>25,000
Capital Cost per Net New Rider	>$30	$30 - $10	<$10
Operating Cost	>$10	$10 - $5	<$5
Total Cost per Passenger Trip	>$30	$30 - $10	<$10
Miles of Dedicated Right-of-Way (% of Total Length)	0 - 40%	40% - 70%	>70%
Reduction in Transit Travel Time	<10%	10% - 20%	>20%
Number of Transit Hubs Served	0 - 2	3 - 4	>4
Intermodal Connectivity	0 - 2	3	>3
Number of Households within One-Half Mile of Transit Stops	0 - 10,000	10,000 - 80,000	>80,000
Number of Jobs within One-Half Mile of Transit Stops	0 - 25,000	25,000 - 100,000	>100,000
Support TOD Strategy	Not Applicable		
Number of Communities of Concern Affected	0 - 4	5 - 30	>30
Number of Existing or Planned Major Activity Nodes Served	0 - 2	3	> 3
Customer Experience	Not Applicable		
Compatible with Arterials Plan	All Are Compatible		

Note: ranges apply to results presented in Figure 4 through Figure 19

3.2. Network Evaluation

The intent of presenting an evaluation of the proposed plan at the network level using the measures described above is to provide insight into the combined effect of implementing all the proposed projects on the entire transit network in Alameda County. For the network evaluation, a comparison was made among the Existing Conditions Network (2010) and the Vision Network (2040). Comparing these networks provides insight into the underlying growth in transit demand expected to occur over the next 25 years.

The Alameda CTC model's 2040 baseline condition represents planned land development, major service improvements planned as part of AC Transit's Service Expansion Plan, and transit and highway improvements reflected in the 2040 base scenario of the Alameda CTC model, consistent with Plan Bay Area. The Alameda CTC model includes all local transit improvements in Plan Bay Area in Alameda County as well as all major improvements on all region-serving transit operators. The Vision Network includes all elements of the Baseline Network plus the modifications for the individual projects discussed in Section 1.2.

A comparison of the key metrics for Existing Conditions (2010) and Vision Conditions (2040) shows a strong increase in transit demand with over 100% increase in daily

ACTC_AR0540

passenger trips driven by increases in population, employment, and congestion, as discussed in detail in Technical Memorandum #2. The Vision Network responds to this increased demand for transit by providing key improvements to routes serving some of the most promising markets. The result is a network that provides travel time savings and service quality improvements to over 600,000 riders and also generates an additional 383,000 daily passenger trips when compared to the 2010 Existing Conditions. A summary of the network evaluation is shown in Figure 3.

Figure 3: Network evaluation results

	EXISTING CONDITIONS (2010)	VISION (2040)
PER CAPITA DAILY TRANSIT RIDERSHIP	0.20	0.35
PERCENTAGE OF INTRA-COUNTY TRIPS ON TRANSIT	4.8%	8.0%
PASSENGER TRIPS PER REVENUE VEHICLE MILE	3.1	4.6
DAILY PASSENGER TRIPS	305,000	688,000
MILES OF NEW RIGHT-OF-WAY DEDICATED TO TRANSIT FOR VISION NETWORK	-	73.6* MILES
NUMBER OF HH/JOBS WITHIN HALF-MILE OF TRANSIT STOPS	648,000 HH / 813,000 JOBS	855,000 HH / 1,140,000 JOBS
NUMBER OF COMMUNITIES OF CONCERN AFFECTED**	150	161
GHG EMISSIONS (IN METRIC TONS PER YEAR)	5,572,000	4,232,000

* Depending on implementation, overlap in routes could potentially reduce total miles of dedicated right-of-way
** Assumes the same locations in the future

NOTE: All recommendations presented in this memo are intended to be a conceptual framework, and all routing and stop alignments will require further technical evaluation and public input.

3.3. Project Evaluation

Projects were not ranked for level of importance or for implementation priority in the evaluation process. Future actions will require consideration of project inter-relationships and funding opportunities and constraints that will also play a part in the selection of which projects are implemented and when. Instead, projects were evaluated based on the set of performance measures described in Section 2 to inform the plan development process.

Earlier technical memoranda have established a set of transit service tiers as an organizing structure that has been used to describe and categorize different types of existing and proposed changes to the transit system in Alameda County. The projects included in this evaluation come from two specific transit tiers due to the strong market analysis results that identified these tiers as those where Alameda County has the greatest potential to capture more transit market share: the Regional Express tier and the Urban Rapid tier. To inform future decisions regarding which of the proposed projects will be implemented and in what order, evaluation measures are presented for each project with ratings developed based on a comparison with all other proposed projects. A separate set of ratings is provided in Figures 20 and 21 at the end of this section with ratings based on a comparison of projects only within its respective tier. This second set of tier-specific ratings is provided to allow comparison of similar types of transit service. In particular, the nature of Regional Express type service with more point-to-point longer-distance trips tends to result in lower ridership than the Urban Rapid service tier.

Regional Express Tier

Project-specific evaluation summaries for the Regional Express tier are presented in Figures 4 through 10.

3.4. Summary evaluation and comparison of projects

Figures 18 and 19 provide a comparison of the results of the project performance measures and the ratings of projects by measure when compared against all other proposed projects. Figure 18 in particular provides a wealth of information that facilitates comparison of individual projects against others and provides insight into characteristics of groups of projects. The following are some general findings based on a review of the summary evaluation:

- Capital costs range from a low of $66 million for the ferry projects to a high of $392 million for U6 Bay Fair BART – Warm Springs BART, a 16-mile-long dedicated busway.
- Operating costs per passenger trip are generally below $10/passenger trip, with the exception of R7 (Emeryville-Berkeley-San Rafael), which is estimated at $25/passenger trip primarily due to low estimated ridership.
- The net new riders measure varies dramatically from a low of 230 daily new riders for R7 (Emeryville-Berkeley-San Rafael) to a high of 21,900 daily new riders for U3 (Berkeley-Alameda).
- Although they are generally correlated, the ability to generate net new riders does not always correspond to total daily ridership. For example, U3 (Berkeley-Alameda) generates 21,900 net new daily riders and 35,600 daily passenger trips. U4 (Berkeley-Fruitvale BART) generates far fewer new riders (8,900 net new riders) but has higher overall ridership at 38,300 daily passenger trips.
- All projects, with the exception of R7, provide significant efficiency improvements with travel time reductions ranging from 10% to 48%. These travel time savings represent significant benefits to both existing and new riders that should be considered when evaluating projects.
- Generally, projects with more dedicated right-of-way for transit tend to provide greater reduction in travel time. However, even projects without dedicated transit lanes (U4 and U5, for example) generate significant travel time savings (17% and 22%, respectively) through the implementation of other transit operational improvements.
- Capital cost per net new rider varies from a low of $1 for U1 (Emeryville-Bay Fair BART) to a high of $71 for U7 (W. Dublin/Pleasanton BART-Livermore).
- The three projects with the lowest estimated net new riders (R6, R7, and U7) also have the highest costs per net new rider at $28, $44, and $71 respectively.

ACTC_AR0560

Figure 19: Summary of evaluation ratings, comparing all projects

ACTC_AR0561

Secondary comparison of projects relative to respective tiers

In this section project ratings of low, medium, and high values were assigned based on a rating scale developed specifically for each tier, using a similar natural breaks method that was used when comparing all projects. Note, the Regional Express tier and the Urban Rapid tier present some challenges for interpretation of the comparisons between the projects, which related to large differences in scale for the types of projects recommended. The Regional Express Tier contains two ferry projects that are very unique in their operating characteristics, and R5, which contains characteristics of both the Urban Rapid tier and the Regional Express tier. The differences between the tiers and projects present challenges to comparisons, but the analysis still determined it is relevant to compare projects within (in addition to across) tiers.

In general, the tier-specific ratings shifted some of the ratings, but the relative patterns did not vary dramatically. Examples of specific changes are the improvement of R5 from a medium score for Daily Net New Riders to a high score, and R2, R3, R4, and R6 from a low rating to a medium. Another example of a ratings change resulting from the tier-specific comparison are projects U4, U5, and U6, which change from all high ratings when compared to all projects for the operating cost per passenger trip but were only rated as low, medium, and low, respectively, when compared only against Urban Rapid tier projects.

Attachment A – Technical Notes

Notes on Analysis for Selected Measures

Attachment A provides additional detail regarding the methods used to calculate and summarize the selected performance measures for the proposed projects.

Measures:

- Number of households and jobs within one-half mile of transit stops
- Number of Communities of Concern affected
- Number of transit hubs served

Analysis Notes:

GIS software was used to compute statistics for each potential project to assess the number of households, jobs, Communities of Concern, and transit hubs. A one-half-mile buffer (radius) was applied around the alignment centerline for each proposed project. For any census tracts or traffic analysis zones that were partially within a buffer, a relative percentage was applied. For example, if 43% of a traffic analysis zone was within the buffer for a given project, 43% of the zone's jobs were assumed to be within the buffer area.

Measure:

- Capital costs

Analysis Notes:

Unit costs, design, and contingency assumptions for the capital cost analysis are shown in the following table in 2015 dollars.

Category	Element	Assumptions	Unit	Quantity	Cost per Unit	Cost
Roadway/Track	Light rail track		Mile	0	$ 125,900,000	$ -
	Exclusive Bus Lanes	Concrete lanes	Mile	0	$ 7,460,000	$ -
	Semi-Exclusive Bus Lanes	Concrete lanes	Mile	0	$ 3,030,000	$ -
	Mixed Flow		Mile	0	$ -	$ -
	Transit Priority Zone	Bus mall (allows autos)	Mile	0	$ 470,000	
	Bus turntable		Each	0	$ 1,000,000	$ -
	Queue jumps		Each	0	$ 320,000	$ -

Contingency		**Assume 35% of total**	**Percentage**	35.0%		$ -
Total Cost (Current Year Dollars)						$ -

Measure:

- Operating cost per passenger trip.

Analysis Notes:

Cost information provided by transit operators.

Measure:

- Total cost per passenger trip

Analysis Notes:

Both operating costs and capital costs were annualized and then divided by forecasts of annual passenger trips. Capital cost annualization factors were based on the following assumed lifespans for the major categories of the unit cost elements.

Major Cost Category	Assumed Life Span (in years)
Roadway	30
Stations	30
Support Facilities	30
Systems	10
Property	30
Vehicles	12
Marketing/Project Development	30
Contingency	30

Notes on Project-Specific Ratings

Results for each evaluation measure were prepared for each of the proposed projects. Ratings are intended to facilitate the comparison between proposed projects and were therefore developed using a relative scale developed after reviewing the results for all projects and using a natural breaks method to group results into appropriate rating categories. The following table summarizes the ranges used to convert the results by measure into the low, medium, or high rating scale shown in the tables for each proposed project. The concept of natural breaks or cluster analysis was used to assign project ratings. The analysis includes the task of grouping a set of objects (or in this case scores) in such a way that objects in the same group (called a cluster) are more similar (in some sense or another) to each other than to those in other groups (clusters). Analysis of clusters itself is not one specific algorithm, but the general task to be solved. It can be achieved by various algorithms that differ significantly in their notion of what constitutes a cluster and how to efficiently find them. This type of analysis is not an automatic task, but an iterative process of knowledge discovery or interactive multi-objective optimization that involves trial and failure.

Measure	Low	Medium	High
Net New Riders	0 - 5,000	5,000 - 10,000	>10,000
Passenger Trips per Revenue Vehicle Mile	0 - 5	6 - 20	> 20
Daily Passenger Trips	0 - 5,000	5,000 - 25,000	>25,000
Capital Cost per Net New Rider	>$30	$30 - $10	<$10
Operating Cost	>$10	$10 - $5	<$5

Attachment B – Modeling and Evaluation Methodology

General Modeling Methodology

There are two general approaches to transit forecasting. **Synthetic** methods forecast ridership based on information on land uses, travel behavior, and the modes and routes available to travelers. These are usually combined into a four-step model such as the Alameda CTC Travel Demand Model**.**

Incremental approaches, in contrast, are based on observed transit usage and forecast changes using elasticities for whatever type of change is being made (fares, frequency, etc.). The forecast change in ridership is then applied to the base ridership to get the forecast of ridership after the change in fares, frequency, etc.

Both methods are considered valid by FTA but there are situations where one is preferred over the other. Generally speaking, synthetic methods function best when forecasting the effects of large- scale changes such as the growth in regional population and employment over a multi-decade period. Synthetic methods are preferred when forecasting the effects of small-scale projects that are not represented in regional models, such as queue jumps and bulb-outs.

For the current study, a combination of synthetic and incremental approaches was used to capture the advantages of each and overcome the limitations that either approach would have if used alone. The synthetic approach was used to estimate 2040 baseline ridership as well as analyze proposed changes to route alignment or line extensions. Incremental methods were then used to estimate the likely percentage changes to travel time and ridership from improvements such as frequency of service, stop reduction, transit lanes, bulb-outs, and queue jumps. These percentage changes were then applied to the 2040 baseline ridership and travel times.

The Alameda CTC model was created in 2007 based on MTC's BAYCAST model. The model covers the entire MTC region, but has added detail within Alameda County. The model was subsequently updated in 2009 with new land use forecasts, a new truck model, and a post-processor to estimate travel-related greenhouse gas emissions. The mode split component of the ACTC model was copied from the VTA model, which has more detail than the BAYCAST model. Specifically, within the transit portion of the mode split model, the ACTC model has five modes with walk access (local bus, express bus, light rail, commuter rail, and BART) and two modes with drive access (park and ride, kiss and ride). The current version was released in 2015 and includes the land use and

transportation assumptions in the current Regional Transportation Plan/Sustainable Communities Strategy[3].

Generally, the travel model was used to forecast 2040 Baseline conditions, and incremental methods were used for 2040 Plus Project conditions. Travel times were estimated first, so changes in travel time could inform the ridership forecasting through the incremental method.

Transit Travel Time Methodology

Existing peak and uncongested travel times for each corridor were used as the starting point for calculating the change in travel time for each alternative and to form the baseline travel time comparison for the alternatives. AC Transit staff provided existing peak and uncongested travel times for most of their corridors. For Adeline and all corridors with other operators actual performance data was not available, so existing travel times were based on transit schedules.

Travel times for the 2040 Baseline scenario were estimated by applying the percentage change in travel time between the 2010 model and 2040 model to the existing peak travel times. This represents the change in travel delay due to the increase road congestion anticipated in 2040. Uncongested average speeds were assumed to stay the same as existing, with the only changes in uncongested travel time being those that result from changes in route length or alignment.

The incremental method was used to examine most changes that are planned for each corridor and develop estimates for changes in travel time resulting from those changes. The travel time savings computed for each corridor were calculated based on the aggregate accumulated travel time savings of the individual improvements. The travel time savings generated by each element were based on an analysis of the time savings for that improvement using observations from various transit systems found in literature. Given the preliminary nature of the work at this point, the exact number and specific location of the various elements was not known for some corridors. In those instances, an estimate, based on the type of corridor improvement, was developed. For example, it was assumed that there will typically be three stops per mile along a Rapid Bus corridor. Parsons Brinckerhoff worked with AC Transit to develop these assumptions used in situations where more specific information is not available at this planning stage of project development.

The elements which were analyzed for travel time savings are as follows:

[3] *Plan Bay Area, Strategy for a Sustainable Region,* Metropolitan Transportation Commission, Adopted July 18, 2013

- Curb extensions
  - Computed as eight seconds saved per curb extension[4] multiplied by the number of curb extensions on the corridor
- Queue-jump lanes
  - Computed as 8.5 seconds saved per queue-jump lane[5] multiplied by the number of queue-jump lanes on the corridor
- Tranist lanes and Transit Priority Zones
  - First the delay due to congestion (minutes/mile) was computed as the difference between peak and uncongested travel time divided by distance.
  - Transit lanes were assigned a transit lanes factor to reduce congestion delay. The factors were 0.8 for exclusive transit lanes and light rail track and 0.5 for semi- exclusive (curb-running) lanes and Transit Priority Zones. The 0.8 factor for exclusive lanes means that buses operating in those lanes would escape congestion delay 80% of the time but would still be affected by congestion 20% of the time, such as at signalized intersections.
  - Time savings was computed as congestion delay per mile multiplied by the miles of transit lanes multiplied by the transit lanes factor.
  - This resulted time savings per mile consistent with values from other studies[6].
  - Transit travel in mixed traffic was assumed to have no travel time savings compared to the Baseline condition (*i.e.* transit lanes factor = 0).
  - The LRT scenario for the Telegraph corridor was assumed to be entirely exclusive lanes.
- Transit Signal Priority (TSP) and Adaptive Signal Control (ASC)
  - Calculated per signalized intersection
  - Assumed an average of six seconds savings per signalized intersection[7]
  - Benefits of TSP and ASC have been shown to not be additive[8]
- Dwell time at stops/stations

[4] TCRP Synthesis 83 - Bus and Rail Transit Preferential Treatments in Mixed Traffic, TRB 2010 - Table 24

[5] TCRP Synthesis 83 - Bus and Rail Transit Preferential Treatments in Mixed Traffic, TRB 2010 - Chapter 6, Page 67

[6] TCRP Synthesis 83 - Bus and Rail Transit Preferential Treatments in Mixed Traffic, TRB 2010 – Chapter 6, Page 69

[7] TCRP Synthesis 83 - Bus and Rail Transit Preferential Treatments in Mixed Traffic, TRB 2010 - Figures 49 through 52

[8] Integrating Transit Signal Priority within Adaptive Traffic Signal Control Systems, Research Paper by Dion & Rakha, 2005

  - Enhanced and Rapid bus assume current average dwell times of 25 and 20 seconds respectively.
  - BRT assumes a 15-second dwell time per stop as a result of off-board fare collection allowing multi-door boarding, raised passenger platforms providing level boarding, faster access for people using wheelchairs, and faster access for those bringing bicycles on board. The 15 second dwell time was based on experience from Lane Transit District and Community Transit BRT lines which have similar BRT features at their stations. BRT vehicles were assumed to have the same benefit as curb extensions in regard to stopping and re-entering the traffic stream as curb extensions for a savings of 8 seconds per stop. This yields a total of 18-seconds travel time savings per BRT stop. These assumptions apply to projects: R4, R5, U1, U2, U3 and U6.

- Stop spacing
  - Stop spacing for Urban Rapid and Regional Express tiers was assumed to be one-third-mile with exceptions for special conditions (e.g. cross-bay bridges) and the Hesperian corridor.
- Changes in route alignment
  - For changes in route alignment and route extensions, travel time was assumed to change proportionally with change in route length (*i.e.* travel speed would be similar).

Travel time savings for items such as transit lanes and transit signal priority vary from corridor to corridor depending on traffic congestion, the number of signalized intersections, speed limits, and other specific corridor attributes. Uncongested travel time is less subject to other vehicles on the roadway or intersection delays and so the benefits of congestion-avoidance measures, such as exclusive lanes, are smaller during uncongested hours. Benefits of transit lanes were therefore not credited to uncongested travel time. Curb extensions, TSP/ASC intersections, and queue jump lanes were assumed to have half the travel time savings at uncongested travel times as during peak times.

Travel time comparisons between existing service, Year 2040 Baseline, and the Year 2040 with corridor improvements are complicated by changes in routing, including several corridors that are to be extended. For this reason, travel time was analyzed in two ways. In order to provide an assessment of the impact of the proposed corridor improvements, travel time was considered using common sections of the corridor, allowing for an "apples to apples" comparison. In addition, full corridor travel time, including any extensions, was also calculated to provide the basis for determining corridor operating cost and vehicle requirements.

Ridership Estimating Methodology

AC Transit's bus routes are represented in the model as a series of points along the road system, some of which are designated as stops. Ridership is estimated based on comparison of the overall cost of using transit versus using some other mode, for each origin-destination pair. The costs of taking the bus include:

- If walk access, then walk time from home to bus stop. If kiss-and-ride access, then drive time. If park-and-ride access, then drive time and parking costs. Access costs occur at both the origin end and the destination end of the trip.
- Wait time at the bus stop, which is a function of service frequency. The model allows for different headways for peak- and off-peak hours.
- Bus travel time, which is computed based on auto travel time, for example 30% more than auto travel time along the same roadway segment. This formulation allows the model to reflect the effect of congested conditions on both auto and bus travel times.
- Fares

Each model run generates two ridership figures. One is based on AM weekday peak period conditions (traffic levels, headways, etc.) and is used to represent the six peak hours of the day (three hours in the AM and three hours in the PM). The other figure is based on weekday mid-day conditions (speeds, headways, etc.) and represents all off-peak hours. Weekends, holidays, and special events are not represented in the Alameda CTC model.

As is the case with virtually all four-step models, the Alameda CTC model is much more accurate for auto travel than for transit, especially bus transit. The model is validated (tested for accuracy) at the level of daily ridership by transit operator. In other words, the model is expected to provide a good estimate of total daily ridership for each transit operator, but is not validated for more detailed levels of analysis, such as ridership on individual lines at different times of the day.

Knowing this, forecasters use models of this type mainly for comparative purposes. For example, the model may be 40% off on its base forecast for ridership on a route, but can still give a reasonable forecast of the percentage increase in ridership from shortening the headways, which can then be applied to the actual ridership. It can also provide a reasonable indication of which of three alternative routes, A, B, or C, is likely to attract the most riders. But this model cannot provide accurate forecasts of the effects of microscale changes such as queue jumps or curb extensions, whose effects are small in relation to the model's margin of error.

A combination of the Alameda CTC model and existing ridership data was used to estimate 2040 baseline ridership. Specifically, the model was used to forecast the

growth in ridership on each route, and the growth factor was then applied to actual measured existing ridership.

The Alameda CTC model's 2040 baseline condition represents planned land development, major service improvements planned as part of AC Transit's Service Expansion Plan (SEP), and transit and highway improvements reflected in the 2040 base scenario of the Alameda CTC model, consistent with Plan Bay Area. The Alameda CTC model includes all local transit improvements in Plan Bay Area in Alameda County as well as all major improvements on all region-serving transit operators (such as BART and AC Transit).

Growth in ridership between the base year (2010) and future year (2040) was applied to the known existing ridership on a line-by-line basis consistent with the ratio method or the difference method.[9] The ratio method and the difference method eliminate certain types of imperfections in the forecast of background traffic and therefore improve the accuracy of traffic forecasts. Because existing ridership data is from 2014, growth between 2010 and 2040 was factored down to reflect 26 years of growth rather than the 30 years represented in the model. Where there is no existing service, the modeled 2040 value was directly used.

Changes in ridership and travel time due to new/extended routes were synthetically modeled with a modified Project 2040 version of the Alameda CTC model that includes all project changes. Service frequency and transit lanes were also represented in the Plus Project model run in order to quantify system-wide performance.

The incremental method was used to examine the change in ridership resulting from changes in travel time, frequency, and other qualitative enhancements. Using established ridership elasticities, estimates were made for the ridership impact of the specific improvements, which were then aggregated to determine the ridership impact

[9] The ratio method and the difference method are two ways to correct for some of the error inherent in a model, which is by definition a simplification of reality. Essentially, the methods compute either the ratio or arithmetic difference between the modeled version of existing conditions and actual measured existing values. Then the ratio or difference is applied to the future modeled conditions. Another way to think about the application of the two methods is that we want to isolate the changes in travel patterns that occur between two modeled scenarios (one of which represents existing conditions) and apply those changes to actual existing conditions to produce forecasts of the scenario condition. In most cases the ratio method was used, except when doing so produced unrealistic forecasts (i.e., when the base condition model values are very small). (Both methods are described in more detail NCHRP Report 255, *Highway Traffic Data for Urbanized Area Project Planning and Design*, Transportation Research Board, 1982.)

Ratio: Forecast = Existing value X (Scenario model value / Base model value)
Difference: Forecast = Existing value + (Scenario model value – Base model value)

for the corridor. The ridership elasticity with respect to travel time was set as -0.6[10], which means that a 10% reduction in travel time would yield a 6% increase in ridership. The ridership elasticity for headways was set as -0.5[11], or in other words, a 10% decrease in headways would result in a 5% increase in ridership.

In addition, elements such as real-time passenger information and branding, which do not result in direct travel time savings, have been shown to have positive ridership impact. The FTA has established equivalent travel time credits for these elements that were used to determine the ridership impact of those improvements. Consistent with FTA, we assumed that real time traveler information (dynamic scheduling) would have a travel time credit of one-minute. The travel time elasticity was then applied to this additional one-minute savings to find the expected increase in ridership. This benefit was assumed for corridors that would add this enhancement and not already have it in the 2040 Baseline condition. Note that this equivalent one-minute time savings was only used for estimating ridership, and not counted toward the travel time forecast.

Route extensions, such as the Warm Springs extension on U6 Bay Fair BART to Warm Springs BART, were forecast separately, using the model to obtain a forecast volume for the last segment of the existing route and for the proposed extension. The existing ridership for the last segment of the existing route was compared with the forecast ridership to obtain a factor for how much the model is over- or underestimating ridership at the end of the line. The factor was then applied to the forecast ridership for the extension.

VMT and RVH Methodology

Vehicle-miles-traveled (VMT) is a key input in evaluating greenhouse gas (GHG) emissions. VMT was estimated for buses, autos, and ferries for existing, 2040 Baseline, and 2040 Plus Project conditions. The unit of analysis was Alameda County. For autos this means all VMT on roads within Alameda County. All VMT for transit vehicles that travel to/from or within Alameda County for AC Transit, LAVTA, Union City, and WETA are included.

In parallel to estimating VMT for transit, revenue-vehicle-hours (RVH) was also estimated.

Existing Conditions

[10] John F. Kain and Zvi Liu (1999), "Secrets of Success," *Transportation Research A*, Vol. 33, No. 7/8, Sept./Nov. 1999, pp. 601-624.

[11] Todd A. Litman (2013), "Understanding Transport Demands and Elasticities: How Prices and Other Factors Affect Travel Behavior." Victoria Transport Policy Institute, 2013. page 52; at www.vpti.org/elasticities.pdf

Existing VMT for Alameda County was found from existing sources for each mode.

Bus

Total annual bus revenue-vehicle-miles (RVM) for AC Transit, LAVTA, and Union City was 18,880,734. The following ratios of deadhead miles relative to revenue-miles were used to calculate total vehicle miles from revenue miles.

- AC Transit: 0.155 (2013 Annual Performance Report Data)
- LAVTA: 0.140 (2014 Operating Statistics)
- Union City: 0.155 (data unavailable, assumed to be the same as AC Transit)

Accounting for the deadhead miles, the existing total annual bus travel was computed as 21.8M vehicle-miles.

Similarly, existing RVH was obtained from operator statistics, with a total annual RVH of 1.68M.

Auto

Alameda County daily auto VMT was 40,243,280 in 2013 according to Caltrans[12]. This VMT number was annualized by a factor of 365 days/year. A distribution of Alameda County VMT by 5-mph-speed strata was taken from the ACTC model.

Ferry

Alameda County serving ferries traveled 155,000 vehicle-miles annually according to WETA who report 122,697 revenue-miles and a 0.261 deadhead to revenue ratio for fiscal year 2015. Existing annual RVH for WETA service servicing Alameda County is 8,430.

2040 Baseline

Bus

Ideally, vehicle-miles for buses would be added up from each line based on the number of trips and length of route. Because this information is not readily available for the 2040 baseline scenario, we used the transit coding in the travel model to estimate the change in service between the base and future years. The model does represent peak and off-peak headways and distances for each line, but does not represent hours of service, or headways for other time periods such as late night or weekends. The service-miles modeled for 2010 and 2040 baseline scenarios were summarized and a

[12] Caltrans, California Public Road Data 2013: Statistical Information Derived from the Highway Performance Monitoring System. November 2014. Page 16. Available at: http://www.dot.ca.gov/hq/tsip/hpms/hpmslibrary/prd/2013prd/2013PRD-revised.pdf

ACTC_AR0578

21% increase in service was found. This increase was applied to the existing bus vehicle miles traveled to compute an estimate of 2040 Baseline bus-miles.

Similarly, the amount of RVH was extracted from the base and future ACTC models to find a percentage increase from existing. The resulting 27% increase in bus service was applied to the existing RVH to calculate 2040 Baseline RVH.

Auto

The ACTC model summarizes daily VMT by county. The amount of VMT growth was calculated from the 2010 and 2040 Baseline models, and used to estimate the auto VMT in Alameda County for 2040. This number was also annualized by a factor of 365 days/year. A distribution of auto VMT by speed was also extracted from the ACTC model for 2040 as it was for 2010. These distributions were applied to 2040 auto VMT as part of the GHG analysis.

Ferry

Revenue vehicle hours for the planned San Francisco—Berkeley ferry were added to the existing ferry RVH to find total ferry RVH for 2040 Baseline.

2040 Plus Project

Bus

The VMT and RVH for project corridors was estimated for both the 2040 Baseline and 2040 Plus Project conditions, and the net new bus VMT and RVH were added to the 2040 bus VMT and RVH. For AC Transit corridors (including the Dumbarton Express), AC Transit provided calculations of annual revenue-miles for the Plus Project condition based on the number of buses per weekday and weekend-day and route lengths. AC Transit also provided calculations for annual RVH based on run times and number of buses. WSP | PB performed similar calculations for the LAVTA and GGT corridors as well as the 2040 Baseline condition for the AC Transit corridors. Revenue-miles were converted to bus VMT using the deadhead to revenue mile ratio, and the bus VMT and RHV were annualized based assuming 255 weekdays and 110 weekend days/holiday. Then the net new bus VMT, or difference between Baseline and Plus Project VMT, was added to the 2040 Baseline bus VMT to yield 2040 Plus Project bus VMT. The same procedure was then used to determine 2040 Plus Project bus RVH.

ACTC_AR0579

Auto

The Alameda CTC model covers too large a region to accurately measure the VMT effects of corridor-specific transit improvements.[13] The change in auto VMT was therefore estimated based on the number of trips switching to transit from driving.

The travel model results show that the total number of person trips will be the same with and without the transit projects, indicating that trips shift mode from auto to transit. This means that person-trips by auto would be reduced by the same amount as the net new transit trips taken as the total from the corridors-level (off-model) ridership forecasts.

A vehicle occupancy rate of 1.2 persons per vehicle was applied to estimate the number of vehicle trips replaced by transit trips. An average vehicle trip length was determined based on the average trip length for Alameda County transit trips (9.1 miles) in the travel model, because these trips would be the same length as auto trips which are eligible for a mode-shift to transit. The reduction in auto VMT was computed as the number of eliminated auto trips X the average trip length. Applying the reduction to the 2040 Baseline auto VMT yields 2040 Plus Project auto VMT.

Ferry

The project modifies ferry service between San Francisco and Oakland/ Alameda and extends service to Brooklyn Basin. Based on the planned frequencies, distances, and service hours, the project generates a net increase in ferry VMT by 53,500 annually. This net increase was added to the 2040 Baseline ferry VMT to find the 2040 Plus Project ferry VMT. The same process was used to determine 2040 Plus Project RVH.

[13] Specifically, the model's estimate of a 0.07% reduction from 2040 Baseline conditions to 2040 Plus Project conditions is too small in relation to the model's margin of error to be considered a reliable estimate. The problem is that the model covers an area with millions of auto trips and the random calculation errors in model runs (rounding, etc.) for such high volumes swamps the effect of local transit improvements.

Attachment C – GHG Emissions Evaluation Methodology

MEMORANDUM

To:	Sudhish Verma
From:	Ivy Edmonds-Hess
Date:	March 17, 2016
Project Name:	Alameda CTC Countywide Transit Plan
Project Number:	13347A
Subject:	Greenhouse Gas Emissions Evaluation

As part of the evaluation process for the Alameda Countrywide Transit Plan, performance measures are being used to compare the plan to existing conditions (2010) and future baseline conditions (2040). One of the performance measures is reduction of greenhouse gas (GHG) emissions.

This memo summarizes the evaluation methodology followed and the results of the analysis.

Evaluation Methodology

The Plan has the potential to affect GHG emissions from changes in roadway traffic and passenger ferry service. The Plan's impact on roadway traffic is reflected in changes in the region's vehicle miles traveled (VMT) and associated vehicle speeds. Changes to passenger ferry service can also affect the miles traveled by the ferries and the associated consumption of fuel.

Gases that trap heat in the atmosphere are often referred to as GHGs. As concentrations of GHGs increase, the Earth's temperature also increases. While some GHGs occur naturally, many are generated by human activities such as the burning of fossil fuels. Since more than 80 percent of the total amount of greenhouse gases is carbon dioxide (CO_2)[1], changes to CO_2 emissions from the proposed Plan were used as an indicator of impacts from all greenhouse gases.

CO_2 emissions were calculated and are presented in Attachment 2 to this memo. The calculations for on-road motor vehicles are based on VMT in the study area, travel speed distributions, and emission factors determined by the EPA-approved emission factor model EMFAC2014, developed by the California Air Resources Board (CARB). It is assumed that all buses will be zero emissions by 2040.

[1] U.S. Energy Information Administration, Emissions of Greenhouse Gases in the U.S., March 31, 2011.

Since the EMFAC2014 model only addresses emissions from on-road motor vehicles, a different methodology was used to address emissions from passenger ferries. In January 2016, CARB released Draft Greenhouse Gas Quantification Methodology for the California State Transportation Agency Transit and Intercity Rail Capital Program[2]. In Appendix E of this document ferry emission factors are provided by fuel type. Since the amount of fuel to be consumed by current and future ferry service was not readily available, information in an article in Issue 2001-4 of Energies magazine entitled "Comparison of Ferry Boat and Highway Bridge Energy Use"[3] was used. Table 1 of this article presented 2008 diesel fuel consumption rates for selected U.S. ferry boat operators. This survey included the fuel consumption rate of 0.12 mile per gallon of diesel fuel for the Golden Gate Ferry Service. This was used as estimate for the ferries specified in the Plan.

Evaluation Results

CO_2 emissions estimated based on the 2010 Existing, 2040 Baseline, and 2040 Plus Project VMT are presented in the table below. The emissions are summarized by autos, trucks, buses, and ferries.

It was estimated that the 2010 Existing condition generates 5.57 million metric tons of CO_2. The 2040 Baseline condition, with an estimate of 4.27 million metric tons of CO_2, shows an improvement compared to the 2010 Existing condition. The EMFAC2014 model assumes that future emission factors will be reduced as more GHG regulations and programs are implemented and newer, cleaner vehicle technologies come to market. These improvements in emissions are more than enough to offset the increase in VMT between 2010 and 2040 due to growth.

The Project would generate approximately 4.23 million metric tons of CO_2, a slight decrease of about 40,000 metric tons or 0.9 percent compared to the 2040 Baseline condition.

CALCULATIONS:

VMT ADJUSTMENTS

ON-ROAD GHG EMISSIONS

AND

FERRY GHG EMISSIONS

Project:	Alameda CTC Transit Plan	**Prepared by:**	Ivy Edmonds-Hess
Subject:	VMT Summary and Adjustments	**Date:**	3/17/2016

Annual VMT

	2010 Existing	2040 Baseline	2040 Plus Project
Alameda County Non-Bus VMT	14,688,695,000	17,685,710,000	17,436,415,000
Bus VMT	21,807,000	26,431,000	35,080,000
Ferry VMT	155,000.00	256,000	310,000

17% of Non-Bus VMT are heavy-duty trucks

Speed Distribution

Speed	2010 Percent	2040 Percent
5 mph	0.3	0.4
10 mph	0.1	0.1
15 mph	0.3	0.5
20 mph	2.3	3.5
25 mph	5.4	6.1
30 mph	10.2	11.5
35 mph	9.6	11.4
40 mph	7.4	13.3
45 mph	5.0	14.0
50 mph	10.3	10.6
55 mph	11.5	13.2
60 mph	25.5	11.8
65 mph	12.1	3.6
Total	100.0	100.0

Source: Daniel Block, WSP|Parsons Brinckerhoff, March 2, 2016 and March 17, 2016

To calculate GHG emissions, the on-road VMT needs to be convert to additional vehicle classes and by speed using the speed distribution information.

The California Department of Transportation provided guidance on how to adjust VMT by vehicle class in their Air Quality Technical Analysis Notes, published in June 1988.

Light-duty auto VMT = 81% of Non-heavy truck VMT
Light-duty truck VMT = 14% of Non-heavy truck VMT
Medium-duty truck VMT = 5% of Non-heavy truck VMT
Heavy-duty truck VMT should be divided into 70% diesel and 30% gasoline based on 2014 Alameda County Truck Survey Data

Adjusted On-Road VMT

2010 Existing

Speed	Light-duty Auto	Light-duty Truck	Medium-duty Truck	Heavy-duty Gas Truck	Heavy-duty Diesel Truck	Bus

* Since the speed limit for heavy-duty trucks is 55 mph, VMT for 60 and 65 mph will be added to the 55 mph VMT
An assumption is that the project will not reduce heavy-duty vehicles, so their VMT is being held the same as the baseline

MASTER PROGRAMS FUNDING AGREEMENT
between the
ALAMEDA COUNTY TRANSPORTATION COMMISSION
and the
CITY OF FREMONT

This Master Programs Funding Agreement ("AGREEMENT"), effective as of the 1st of July 2016, is entered into by and between the Alameda County Transportation Commission ("ALAMEDA CTC") and the City of Fremont ("RECIPIENT").

RECITALS

A. On November 7, 2000, the voters of Alameda County, pursuant to the provisions of the Local Transportation Authority and Improvement Act, California Public Utilities Code Section 180000 et seq. (the "Act"), approved the reauthorization of Measure B, thereby authorizing Alameda County Transportation Improvement Authority ("ACTIA") to administer the proceeds from a continued one-half cent transaction and use tax ("Measure B").

B. The duration of the Measure B sales tax will be 20 years from the initial year of collection, which began April 1, 2002, with said tax to terminate/expire on March 31, 2022. The tax proceeds will be used to pay for the programs and projects outlined in Alameda County's 20-Year Transportation Expenditure Plan (the "Measure B Expenditure Plan"), as it may be amended.

C. The Measure B Expenditure Plan authorizes the issuance of bonds to expedite delivery of transportation projects and programs. Costs associated with bonding will be borne only by the capital projects included in the Measure B Expenditure Plan and by any programs included in the Measure B Expenditure Plan that utilize the bond proceeds.

D. On November 2, 2010, the voters of Alameda County approved Measure F, the Vehicle Registration Fee ("VRF") Program, pursuant to Section 65089.20 of the Government Code, thereby authorizing the Alameda County Congestion Management Agency ("ACCMA") to administer the proceeds from a $10 per year vehicle registration fee on each annual motor-vehicle registration or renewal of registration in Alameda County, starting in May 2011, six months following approval of Measure F. Vehicles subject to the VRF include all motorized vehicles, including passenger cars, light-duty trucks, medium-duty trucks, heavy-duty trucks, buses of all sizes, motorcycles, and motorized camper homes, unless vehicles are expressly exempted from the payment of the VRF.

E. Funds raised by the VRF will be used exclusively for local transportation purposes in Alameda County that have a relationship or benefit to the owners of motor vehicles paying the VRF, including projects and programs identified in the expenditure plan approved by the voters as part of Measure F (the "VRF Expenditure Plan").

F. On June 24, 2010, ACTIA and ACCMA took the final actions to create ALAMEDA CTC, which has assumed the responsibilities of ACTIA and ACCMA, including duties related to Measure B and the VRF.

G. On November 4, 2014, the voters of Alameda County, pursuant to the Act, approved Measure BB, thereby authorizing ALAMEDA CTC to administer the proceeds from the extension of the existing Measure B one-half of one percent transaction that is scheduled to terminate on March 31, 2022, and the augmentation of the tax by one-half of one percent.

H. The duration of the Measure BB sales tax will be 30 years from the initial year of collection, which begins April 1, 2015, with said tax to terminate/expire on March 31, 2045. The tax proceeds will be used to pay for the investments outlined in Alameda County's 30-Year Transportation Expenditure Plan ("Measure BB Expenditure Plan"), as it may be amended.

I. This AGREEMENT delineates the requirements of the Measure B/Measure BB/VRF Direct Local Distribution ("DLD") funds that are directly allocated to local jurisdictions and transit operators, as authorized by the Measure B Expenditure Plan, the VRF Expenditure Plan, and the Measure BB Expenditure Plan. Discretionary funds identified in these expenditure plans are not the subject of this AGREEMENT, and RECIPIENT will be required to enter into a separate agreement for those funds.

J. This AGREEMENT was originally approved by the governing body of the ALAMEDA CTC on February 25, 2016.

NOW, THEREFORE, it is mutually agreed by and between the parties as follows:

ARTICLE I: FUNDING ALLOCATIONS

1. This AGREEMENT authorizes the ALAMEDA CTC to allocate the DLD funds derived from Measure B, Measure BB, and VRF receipts as described in their respective voter-approved expenditure plans and as summarized in Table A: DLD Investment Summary and described below for different fund types.

Table A: DLD Investment Summary	
DLD Program	**Fund Program**
Bicycle and Pedestrian Program	Measure B and Measure BB
Local Streets and Roads Program	Measure B, Measure BB, and VRF
Mass Transit Program	Measure B and Measure BB
Paratransit Program	Measure B and Measure BB

2. All DLD distributions pursuant to this AGREEMENT shall be effective as of July 1, 2016.

A. BICYCLE AND PEDESTRIAN PROGRAM

1. ALAMEDA CTC will distribute Measure B and Measure BB DLD funds pursuant to a formula weighted 100 percent by the jurisdiction's population within the subarea. RECIPIENT's allocations are subject to change based on variations in annual population figures.

2. The Bicycle and Pedestrian Program Implementation Guidelines provide program eligibility and fund usage guidelines, definitions, additional requirements, and guideline adoption details. Said guidelines are hereby incorporated into this AGREEMENT by reference.

B. LOCAL STREETS AND ROADS (LOCAL TRANSPORTATION) PROGRAM

1. ALAMEDA CTC will distribute Measure B and Measure BB DLD funds pursuant to a formula weighted 50 percent by the jurisdiction's population within the subarea and 50 percent by the number of road miles within the subarea. RECIPIENT's allocations are subject to change based on variations in annual population and road mile figures.

2. ALAMEDA CTC will distribute VRF DLD funds pursuant to a formula weighted 50 percent by the jurisdiction's population within the subarea and 50 percent of the number of registered vehicles in the subarea. RECIPIENT's allocations are subject to change based on variations in annual population and number of registered vehicle figures, as they are made available.

3. The Local Streets and Roads Program Implementation Guidelines provide, program eligibility and fund usage guidelines, definitions, additional requirements, and guideline adoption details. Said guidelines are hereby incorporated into this AGREEMENT by reference.

4. RECIPIENT shall expend a minimum of 15 percent of all Measure BB funds received on project elements directly benefiting bicyclists and pedestrians.

C. MASS TRANSIT PROGRAM

1. ALAMEDA CTC will distribute Measure B and Measure BB DLD funds pursuant to set percentages detailed in the Measure B Expenditure Plan and the Measure BB Expenditure Plan. RECIPIENT's percentage fund distribution, if applicable, is detailed in the Measure B and Measure BB Mass Transit Direct Local Distribution Summary, attached hereto as Exhibit A and incorporated into this AGREEMENT by reference. RECIPIENT's allocations are subject to change based on transit service changes.

2. The Mass Transit Program Implementation Guidelines provide program eligibility and fund usage guidelines, definitions, additional requirements, and guideline adoption details. Said guidelines are hereby incorporated into this AGREEMENT by reference.

D. PARATRANSIT PROGRAM

1. ALAMEDA CTC will distribute Measure B and Measure BB DLD funds by subarea pursuant to percentages in the Measure B Expenditure Plan, and the Measure BB Expenditure Plan. RECIPIENT's percentage fund distribution by subarea, if applicable, is shown on Exhibit B attached hereto and is incorporated into this AGREEMENT by reference.

a. Measure BB distributions to cities and local transit operators are based on a percentage of the population over age 70 in each of the four planning areas for city-based and mandated paratransit services of local bus transit providers.

b. ALAMEDA CTC will distribute Measure BB to the East Bay Paratransit Consortium pursuant to set percentages in the Measure BB Expenditure Plan to assist the Alameda-Contra Costa Transit District and the San Francisco Bay Area Rapid Transit in meeting its responsibilities under the American with Disabilities Act (ADA).

c. Measure B and BB DLD funds may be further distributed to individual cities within each planning area based on a formula refined by PAPCO, and approved by the ALAMEDA CTC Commission (the "Commission"). RECIPIENT's allocations are subject to change based on updated annual population figures.

2. The Paratransit Program Implementation Guidelines provide program eligibility and fund usage guidelines, definitions, additional requirements, and guideline adoption details. Said guidelines are hereby incorporated into this AGREEMENT by reference.

ARTICLE II: PAYMENTS AND EXPENDITURES

A. ALAMEDA CTC'S DUTIES AND OBLIGATIONS

1. Within five working days of actual receipt of the monthly Measure B and Measure BB sales tax revenues and VRF revenues from the State Board of Equalization ("BOE"), the bond trustee or the California Department of Motor Vehicles, Alameda CTC shall remit to the RECIPIENT its designated amount of available DLD funds disbursed on a monthly basis by the formulas described above.

2. ALAMEDA CTC shall annually update the Measure B, Measure BB, and VRF fund revenue projections and the resulting fund allocation formulas to reflect the most current population using the California Department of Finance's annual population estimates (Report E-1 published in May); maintained road mileage from the California Department of Transportation; and the number of registered vehicles in each Alameda County subarea, using registered vehicle data provided by the California Department of Motor Vehicles, as it is made available. ALAMEDA CTC shall use the updated Measure B, Measure BB, and VRF program allocation formulas in the allocations beginning July 1 of each new fiscal year, which is from July 1 to June 30.

3. ALAMEDA CTC shall report monthly to the public the amount of Measure B, Measure BB, and VRF revenues distributed to RECIPIENT by each fund type monthly and for the fiscal year.

4. ALAMEDA CTC shall provide for an independent annual audit of its financial statements including revenues and expenditures and also of its calculation of the allocation formula for distributing Measure B, Measure BB, and VRF revenues to various recipients and render an annual report to the ALAMEDA CTC Commission within 180 days following the close of the fiscal year.

5. ALAMEDA CTC shall provide timely notice to RECIPIENT prior to conducting an audit of expenditures made by RECIPIENT to determine whether such expenditures are in compliance with this AGREEMENT, the Measure B Expenditure Plan, the Measure BB Expenditure Plan, or the VRF Expenditure Plan.

B. RECIPIENT'S DUTIES AND OBLIGATIONS

1. RECIPIENT shall expend all Measure B, Measure BB, and VRF funds received in compliance with the applicable guidelines and Plan(s), including the Implementation Guidelines and performance measures, as they may be adopted or amended by ALAMEDA CTC from time to time.

2. RECIPIENT shall set up and maintain an appropriate system of accounts to report on Measure B, Measure BB, and VRF funds received. RECIPIENT must account for Measure B, Measure BB, and VRF funds, including any interest received or accrued, separately for each fund type, and from any other funds received from the ALAMEDA CTC. The accounting system shall provide adequate internal controls and audit trails to facilitate an annual compliance audit for each fund type and the respective usage and application of said funds. ALAMEDA CTC and its representatives, agents and nominees shall have the absolute right at any reasonable time to inspect and copy any accounting records related to such funds, except to the extent specifically prohibited by applicable law.

3. RECIPIENT shall expend Measure B, Measure BB, and VRF funds in compliance with the Timely Use of Funds Policies for Direct Local Distributions, as approved by the Commission, and as they may be adopted or amended by ALAMEDA CTC from time to time.

4. RECIPIENT hereby agrees to and accepts the formulas used in the allocation of Measure B, Measure BB, and VRF revenues as reflected in the ballot measures, the Measure B Expenditure Plan, the Measure BB Expenditure Plan, and the VRF Expenditure Plan, and agrees to accept and utilize the California Department of Finance Estimates of Population figures (Report E-1, updated each May) for California cities and counties for the annual update of the sales tax allocation formulas to begin in each new fiscal year and registered vehicle data provided by the California Department of Motor Vehicles when available.

C. OTHER EXPENDITURE RESTRICTIONS

1. **Transportation Purposes Only:** RECIPIENT shall use all Measure B, Measure BB, and VRF funds solely for transportation purposes as defined by the authorizing ballot measures. Any jurisdiction that violates this provision must fully reimburse all misspent funds, including all interest which would have been earned thereon.

2. **Non-Substitution of Funds:** RECIPIENT shall use Measure B and Measure BB funds, pursuant to the Act, and VRF funds to supplement and not replace existing property taxes used for transportation purposes.

3. **Fund Exchange:** Any fund exchanges made using Measure B, Measure BB, or VRF funds must be made for transportation purposes. ALAMEDA CTC will consider exchange proposals on a case-by-case basis.

4. **Staff Cost Limitations:** Direct costs associated with the delivery of programs and projects associated with Measure B, Measure BB, and VRF programs, including direct staff costs and consultant costs, are eligible uses of Measure B, Measure BB, and VRF funds. ALAMEDA CTC does not allow indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

ARTICLE III: REPORTING REQUIREMENTS

A. REQUIREMENTS AND WITHHOLDING

RECIPIENT shall comply with each of the reporting requirements set forth below. If RECIPIENT fails to comply with one or more of these requirements, ALAMEDA CTC may withhold payment of further Measure B, Measure BB, and/or VRF funds to RECIPIENT until full compliance is achieved.

1. RECIPIENT shall, by December 31st of each year, submit to ALAMEDA CTC, at the RECIPIENT's expense, separate independently audited financial statements for the prior fiscal year ended June 30 of Measure B, Measure BB, and VRF funds received and used.

2. RECIPIENT shall, by December 31st of each year, submit to ALAMEDA CTC, at the RECIPIENT's expense, annual program compliance reports (covering the prior fiscal year) regarding programs and projects on which RECIPIENT expended Measure B, Measure BB, and VRF funds.

3. RECIPIENT shall document expenditure activities and report on the performance of Measure B, Measure BB, and VRF funded activities through the annual program compliance reporting process, or through other ALAMEDA CTC performance and reporting processes as they may be requested, including but not limited to the annual performance report, annual program plan, planning monitoring reports. Program Performance Measures are attached hereto as Exhibit C.

4. RECIPIENT shall install or mount signage adjacent to Measure B, Measure BB, and VRF funded construction projects and on vehicles funded with Measure B, Measure BB, and VRF funds (e.g., RECIPIENT and ALAMEDA CTC logos; "Your Transportation Tax Dollars Help Fund the Operation of This Vehicle!") where practical, so Alameda County taxpayers are informed as to how RECIPIENT is using Measure B, Measure BB, and/or VRF funds.

5. RECIPIENT shall provide current and accurate information on RECIPIENT's website, to inform the public about how RECIPIENT is using Measure B, Measure BB, and/or VRF funds.

6. RECIPIENT shall, at least annually, publish an article highlighting a project or program funded by Measure B, Measure BB, and/or VRF funds.

7. RECIPIENT shall actively participate in a Public Awareness Program, in partnership with ALAMEDA CTC and/or its community advisory committees, as a means of ensuring that the public has access

to the ability to know which projects and programs are funded through Measure B, Measure BB, and/or VRF funds.

8. RECIPIENT shall make its administrative officer or designated staff available upon request to render a report or answer any and all inquiries in regard to RECIPIENT's receipt, usage, and/or compliance audit findings regarding Measure B, Measure BB, and/or VRF funds before the Commission and/or the Independent Watchdog Committee or community advisory committees, as applicable.

9. RECIPIENT agrees that ALAMEDA CTC may review and/or evaluate all project(s) or program(s) funded pursuant to this AGREEMENT. This may include visits by representatives, agents or nominees of ALAMEDA CTC to observe RECIPIENT's project or program operations, to review project or program data and financial records, and to discuss the project with RECIPIENT's staff or governing board.

ARTICLE IV: OTHER PROVISIONS

A. GEOGRAPHIC BREAKDOWN

In all cases the geographic breakdown by subarea is as follows:

1. North Area refers to the Cities of Alameda, Albany, Berkeley, Emeryville, Oakland, and Piedmont.

2. Central Area includes the Cities of Hayward and San Leandro, and the unincorporated area of Castro Valley, as well as other unincorporated lands governed by Alameda County in the Central Area.

3. South Area includes the Cities of Fremont, Newark, and Union City.

4. East Area includes the Cities of Livermore, Dublin, and Pleasanton, and all unincorporated lands governed by Alameda County in the East Area.

B. INDEMNITY BY RECIPIENT

Neither ALAMEDA CTC, nor its governing body, elected officials, any officer, consultant, agent, or employee thereof shall be responsible for any damage or liability occurring by reason of anything done or omitted to be done by RECIPIENT in connection with the Measure B, Measure BB, or VRF funds distributed to RECIPIENT pursuant to this AGREEMENT. It is also understood and agreed, pursuant to Government Code Section 895.4, RECIPIENT shall fully defend, indemnify and hold harmless ALAMEDA CTC, its governing body, and all its officers, agents, and employees, from any liability imposed on ALAMEDA CTC for injury (as defined in Government Code Section 810.8) occurring by reason of anything done or omitted to be done by RECIPIENT in connection with the Measure B, Measure BB, or VRF funds distributed to RECIPIENT pursuant to this AGREEMENT.

C. INDEMNITY BY ALAMEDA CTC

Neither RECIPIENT, nor its governing body, elected officials, any officer, consultant, agent, or employee thereof shall be responsible for any damage or liability occurring by reason of anything done or

omitted to be done by ALAMEDA CTC under or in connection with any work, authority or jurisdiction delegated to ALAMEDA CTC under this AGREEMENT. It is also understood and agreed, pursuant to Government Code Section 895.4, Alameda CTC shall fully defend, indemnify, and hold harmless RECIPIENT, and its governing body, elected officials, all its officers, agents, and employees from any liability imposed on RECIPIENT for injury (as defined in Government Code Section 810.8) occurring by reason of anything done or omitted to be done by ALAMEDA CTC under or in connection with any work, authority or jurisdiction delegated to ALAMEDA CTC under this AGREEMENT.

D. JURISDICTION AND VENUE

The laws of the State of California will govern the validity of this AGREEMENT, its interpretation and performance, and any other claims to which it relates. All legal actions arising out of this AGREEMENT shall be brought in a court of competent jurisdiction in Alameda County, California and the parties hereto hereby waive inconvenience of forum as an objection or defense to such venue.

E. ATTORNEYS' FEES

Should it become necessary to enforce the terms of this AGREEMENT, the prevailing party shall be entitled to recover reasonable expenses and attorneys' fees from the other party.

F. TERM

The term of this AGREEMENT shall be from July 1, 2016 to June 30, 2026, unless amended in writing or a new Master Programs Funding Agreement is executed between ALAMEDA CTC and RECIPIENT.

G. SEVERABILITY

If any provision of this AGREEMENT is found by a court of competent jurisdiction or, if applicable, an arbitrator, to be unenforceable, such provision shall not affect the other provisions of the AGREEMENT, but such unenforceable provisions shall be deemed modified to the extent necessary to render it enforceable, preserving to the fullest extent permissible the intent of the parties set forth in this AGREEMENT.

H. MODIFICATION

This AGREEMENT, and its Exhibits, as well as the referenced Implementation Guidelines, constitutes the entire AGREEMENT, supersedes all prior written or oral understandings regarding Measure B, Measure BB, and VRF program funds (but not project funding agreements), including but not limited to ALAMEDA CTC Measure B/BB/VRF Master Programs Funding Agreements, which former agreements are terminated as of the effective date hereof. This AGREEMENT may only be changed by a written amendment executed by both parties. Notwithstanding the foregoing, the Implementation Guidelines, Performance Measures, and Timely Use of Funds Policies related to Measure B, Measure BB, and VRF funds may be changed from time to time by the ALAMEDA CTC.

[Signatures on next page]

IN WITNESS WHEREOF, the parties have executed this AGREEMENT by their duly authorized officers as of the date first written below.

MEASURE B AND MEASURE BB
MASS TRANSIT DIRECT LOCAL DISTRIBUTION SUMMARY

Alameda CTC distributes Measure B and Measure BB Mass Transit Direct Local Distribution funds based on the distribution percentages for net Measure B and Measure BB Revenues specified in the Measure B Expenditure Plan and Measure BB Expenditure Plan, as shown below.

Table 1: Measure B

Agency	Area	Percentage of Net Revenues
AC Transit	North County	9.48%
AC Transit	Central County	4.74%
AC Transit	South County	1.61%
AC Transit Welfare to Work	North County	1.24%
AC Transit Welfare to Work	Central County	0.22%
LAVTA	East County	0.69%
Union City Transit	South County	0.34%
ACE	East/South County	2.12%
SF WETA	Alameda County	0.78%

Table 2: Measure BB

Agency	Area	Percentage of Net Revenues
AC Transit	Alameda County	18.80 %
ACE	East/South County	1.00 %
BART	Alameda County	0.50 %
LAVTA	East County	0.50 %
Union City Transit	South County	0.25 %
SF WETA	Alameda County	0.50 %

Countywide Local and Feeder Bus Service: Provides funding for countywide local and feeder bus service in every region of the county to link neighborhoods and commuters to BART, rail, and express bus connections throughout the county. Welfare to Work programs dedicate 1.46 percent of overall Measure B net sales tax revenues to enhancing transportation opportunities for persons making the transition from welfare to work.

Other Mass Transit Programs: Provides funding to San Francisco Water Emergency Transportation Authority (WETA) Transbay Ferry Service to expand transbay ferry service from Alameda. Provides funding to Altamont Commuter Express (ACE) for capital and operating costs for operations in South and East Alameda County.

Transit Operations: Provides funding to transit operators for maintenance of transit service, restoration of service cuts, expansion of transit service, and passenger safety and security. The transit operators will determine the priorities for these funds through public processes and will submit an annual audit to Alameda CTC.

AC Transit agrees to allocate 1.46 percent of overall net Measure B sales tax receipts to enhancing transportation opportunities for persons making the transition from welfare to work. These "welfare to work" funds can be used by AC Transit for service restoration and expansion or implementation of improved bus

service to facilitate travel to and from work. AC Transit will prioritize the restoration and development of new service to meet the employment-related transit needs of low-income residents in northern and central Alameda County.

Additionally, these funds may be used, at the determination of AC Transit, to provide subsidies of regular bus fares for individuals living in northern and central Alameda County who are transferring from welfare to work as well as those who are economically disadvantaged. In the event that sufficient funds are otherwise available to AC Transit to meet these needs then "welfare to work" funds can be used for other general passenger service purposes in northern and central Alameda County.

AC Transit will work together with and actively seek input from bus riders, business leaders, mayors and other elected officials in San Leandro, Hayward, and the unincorporated areas in Central Alameda County to ensure that the additional transit funds in Central County are used for bus improvements such as night, weekend, and more frequent service, connections to residential growth areas, and access to major employment centers, including enhancement of east-west corridors.

AC Transit will continue to provide transit service similar to the Department of Labor-funded shuttle to and from job sites in East and West Oakland, as needed. AC Transit, Alameda County, the City of Oakland, the Port of Oakland and other entities will look for additional money from outside sources to fund the service. If needed, Measure B funds may be used.

EXHIBIT B

MEASURE B AND MEASURE BB
PARATRANSIT DIRECT LOCAL DISTRIBUTION SUMMARY

Alameda CTC distributes Measure B and Measure BB paratransit funds to County subareas/planning areas and to AC Transit and BART based on the distribution percentages in the Measure B Expenditure Plan and the Measure BB Expenditure Plan, as shown below. Distributions to jurisdictions for non-mandated services within each subarea are based on allocation formulas refined by Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.

Table 1: Measure B	
Area/Agency	**Measure B Percentage[1]**
North County (non-mandated) *Cities of Alameda, Albany, Berkeley, Emeryville, and Oakland*	**1.24%**
Central County (non-mandated) *Cities of Hayward and San Leandro*	**0.88%**
East County (non-mandated) *LAVTA and City of Pleasanton*	**0.21%**
South County (non-mandated) *Cities of Fremont, Newark, and Union City*	**1.06%**
North County[2] (ADA-mandated) *AC Transit and BART*	**4.53%**
Central County[2] (ADA-mandated) *AC Transit and BART*	**1.10%**

1. Percentage of Measure B funds required to be distributed to each area in the County. Funding for special transportation for seniors and people with disabilities is provided for services mandated by the ADA to fixed-route public transit operators who are required to provide that service. Funds for the South County are allocated between mandated and non-mandated programs on an annual basis by the cities in that part of the County.
2. Americans with Disabilities Act (ADA) mandated services are allocated to AC Transit and BART according to the percentages included in the Expenditure Plan.

Table 2: Measure BB	
Area/Agency	**Percentage[1]**
City-based and Locally Mandated	**3.0%**
North County *Cities of Alameda, Albany, Berkeley, Emeryville, and Oakland*	
Central County[2] *Cities of Hayward and San Leandro, and unincorporated area of Castro Valley, as well as other unincorporated lands governed by Alameda County in the Central Area.*	
South County *Cities of Fremont, Newark, Union City, as well as Union City Transit.*	
East County[3] *Cities of Livermore, Dublin, and Pleasanton, and unincorporated lands governed by Alameda County in the East Area, and LAVTA.*	
AC Transit - East Bay Paratransit[4]	**4.5%**
BART- East Bay Paratransit[4]	**1.5%**

1. Funds are distributed based on the percentage of the population over age 70 in each of the four planning areas for city-based and mandated paratransit services. Funds can be further allocated to individual cities within each planning area based on a formula refined by PAPCO.
2. Funding will be assigned to Hayward to serve the unincorporated areas.
3. Funding for Livermore and Dublin will be assigned to LAVTA for their ADA-mandated paratransit program.
4. Measure BB funds are dispersed to AC Transit and BART to operate the East Bay Paratransit Consortium.

EXHIBIT C

PERFORMANCE MEASURE SUMMARY

Direct Local Distribution recipients are to document the performance and benefits of the projects and programs funded with Measure B, Measure BB, and/or Vehicle Registration Fee funds. The following performance measures are a selection of performance standards that must be documented at minimum by the recipients, as applicable. Additional performance measures may be requested by the Alameda CTC.

Performance reporting will be done through Alameda CTC's reporting processes including the annual program compliance reports, annual performance report, and various planning activities, as they are requested and applicable. Performance will be evaluated periodically through the aforementioned evaluation reports to determine the effectiveness of investments and to inform future investment decisions.

BICYCLE AND PEDESTRIAN PROGRAM PERFORMANCE MEASURES

Performance Measure	Performance Metric and Standard	Evaluation Horizon & Method	Corrective Action	Potential Improvements to Correct Deficiency
Current Master Plans Maintain a current Bicycle/Pedestrian Master Plan (BPMP) that features required core elements	Plan(s) no more than 5 years old, based on adoption date.	Annually via Compliance Report	Any agency without a current plan is required to explain and provide anticipated schedule and funding to achieve plan update.	- Schedule for update
Infrastructure Investment - Number of linear feet or lane miles of bicycle facilities built or maintained (bike lanes, bike routes, multi-use pathways) - Number of pedestrian projects completed (linear feet of sidewalks, number of crossing improvements, quantify traffic calming items, lighting, landscaping/streetscape, number of curb/ADA ramps, linear feet of trail/pathway built or maintained)	- Bikeway projects completed by roadway segment and facility type - Pedestrian projects completed by category (or categories) of improvement; increased quantity of specific improvements i.e. crossing improvements, striping, signage, curb ramps, pathways.	Annually via Compliance Report	N/A; Report on investments	N/A
Capital Project and Program Investment Amount expended on capital projects and programs by phase (design, row, con and capital support)	Investment into capital projects and programs is greater than funding program administration (outreach, staffing, administrative support)	Annually via Compliance Report	Any agency expending less on capital investments compared to other activities must explain how capital investments will be addressed in subsequent years	N/A

EXHIBIT C *(cont.)*

LOCAL TRANSPORTATION PROGRAM (Local Streets and Roads)
PERFORMANCE MEASURES

Performance Measure	Performance Metric and Standard	Evaluation Horizon & Method	Corrective Action	Potential Improvements to Correct Deficiency
Pavement State of Repair	Maintain a city-wide average Pavement Condition Index of 60 (Fair Condition) or above Track PCI reported based on regional data: http://www.mtc.ca.gov/news/street_fight/	Annually via Performance Report	Any agency falling under 60 PCI must provide an explanation and/or identify corrective action will need to increase PCI to target levels	Develop corrective actions
Complete Streets Implementation - Expenditure of LSR funds on bicycle and pedestrian projects elements (for Measure BB funds only) - Number of exceptions to adopted local complete streets policies issued	- Maintain a 15% annual minimum LSR investment to support bicycling and walking - Number of projects where accommodation for all users and modes of transportation not included	Annually via Compliance Report	Fund expenditures: Any agency not achieving the target percentage must explain or identify future plan. Policy exceptions: N/A	N/A
Capital Project and Program Investment Amount expended on capital projects and programs by phase (design, row, con and capital support) and by key corridors	Investment into capital projects and programs is greater than funding program administration (outreach, staffing, administrative support)	Annually via Compliance Report	Any agency expending less on capital investments compared to other activities must explain how capital investments will increase in the subsequent years	Develop corrective actions
Corridor-level Vehicle Speed and Reliability Historic trend of vehicle speed and reliability (V/C) during AM/PM peak hours on key corridors with Capital or Operational Investments	Speed and reliability trends should maintain or improve if corridor had Capital or Operational investments since the last Alameda CTC's Level of Service (LOS) Reporting period.	Bi-annually via Alameda CTC's (LOS) Report	Any agency that shows worsening speed or reliability trend after improvements must provide an explanation and identify corrective steps.	Develop corrective actions

EXHIBIT C *(cont.)*

MASS TRANSIT PROGRAM
PERFORMANCE MEASURES

Performance Measure	Performance Metric and Standard	Evaluation Horizon and Method	Corrective Action	Potential Improvements to Correct Deficiency
Ridership/Service Utilization - Annual Ridership - Passenger trips per revenue vehicle hour/mile	Change in annual ridership and passenger trips per revenue vehicle hour/mile and qualitative explanation for possible reasons	Annually via Performance Report	N/A	N/A
On-time Performance: System wide Average and Key Trunk Lines On time performance of transit system	- Average on-time performance based upon the mode of transit with a target of 75% to 90% or based on the transit agency's adopted performance goals and standards - Agencies are expected to maintain or increase on-time performance annually	Annually via Performance Report	Any agency not meeting this target must prepare a deficiency plan with short- and long-term actions to correct, and explain what would be required to provide this level of service. The deficiency plan should include the involvement of agencies that have jurisdiction over areas that may be impacting transit performance, where applicable.	Through the deficiency plan, identify any corrective actions, responsibilities, and funding opportunities to improve system performance.
Travel Time Speed and reliability (peak vs non-peak) of key trunk lines (bus operators only)	Average speeds at least 50 percent of prevailing auto speed or maintain or increase speed annually	Bi-annually via Alameda CTC's LOS Monitoring Report	Any agency not meeting this target must prepare a deficiency plan with short- and long-term actions to correct, and explain what would be required to provide this level of service. The deficiency plan should include the involvement of agencies that have jurisdiction over areas that may be impacting transit performance, where applicable.	Through the deficiency plan, identify any corrective actions, responsibilities, and funding opportunities to improve system performance.
Cost Effectiveness - Operating Cost per Passenger - Operating Cost per Revenue Vehicle Hour/Mile	Maintain operating cost per passenger or per revenue vehicle hour/mile; percentage increase less than or equal to inflation as measured by CPI	Annually via Performance Report	Any agency with significant increase in costs must provide an explanation	N/A
Transit Fleet State of Good Repair - Distance between breakdowns/service interruptions - Missed trips - Miles between road-calls	- Maintain or increase average distance between break downs or road calls - Maintain or reduce the number of missed trips	Annually via Performance Report	Any agency not meeting expected performance must provide an explanation	N/A
Service Provision - Frequency and service span on major corridors or trunk lines - Revenue hours - Revenue miles	- 15 minute or better frequencies on major corridors or trunk lines: 10 minute or better frequencies during weekday peak periods - Service span of 7 days/week, 20 hours per day - Maintain or increase revenue hours/miles	Annually via performance report	Any agency not meeting expected performance must provide an explanation and a description of how service provision will be met in the future	N/A

EXHIBIT C *(cont.)*

PARATRANSIT PROGRAM
PERFORMANCE MEASURES

Performance Measure	Performance Metric and Standard	Evaluation Horizon and Method	Corrective Action	Potential Improvements to Correct Deficiency
Service Operations and Provisions Number of people served or trips provided	Track number of individuals served by program. - Service types such as ADA mandated paratransit, door-to-door service, taxi programs, accessible van service, shuttle service, group trips, travel training, meal delivery	Annually via Compliance Report and Program Plan Review	N/A; Report on ridership or service data.	N/A
Cost Effectiveness Cost per Trip or Cost per Passenger Total Measure B/BB program cost per one-way passenger trip divided by total trips or total passengers during period.	Maintain cost per trip or per passengers - Service types such as ADA mandated paratransit, door-to-door service, taxi programs, accessible van service, shuttle service, group trips	Annually via Compliance Report and Program Plan Review	Any agency with significant increase in costs must provide an explanation	Develop corrective actions

Note: The Paratransit Program Implementation Guidelines contains additional listing of performance measures by program type.

Alameda County Transportation Commission
Implementation Guidelines
For the Bicycle and Pedestrian Safety Program funded through
Measure B, Measure BB, and Vehicle Registration Fees

Section 1. Purpose

A. To delineate the eligible uses of Bicycle and Pedestrian Safety Funds authorized under Alameda County Transportation Commission Master Program Funding Agreements, these implementation guidelines have been developed to specify the requirements that local jurisdictions must follow in their use of Measure B, Measure BB, and VRF Direct Local Distribution and discretionary funds. These guidelines are incorporated by reference in the Master Program Funding Agreements. All other terms and conditions for programs are contained in the agreements themselves. The intent of the implementation guidelines is to:

1. Provide guidance on Bicycle and Pedestrian Safety funds eligible uses and expenditures.
2. Define the terms in the Master Program Funding Agreements.
3. Guide Bicycle and Pedestrian Program implementation.

Section 2. Authority

A. These Implementation Guidelines have been adopted by the Alameda County Transportation Commission (Alameda CTC) and set forth eligible uses and expenditures for the Bicycle and Pedestrian Safety funds. The Alameda CTC may update these guidelines on an as-needed basis and will do so with involvement of its technical and community advisory committees (as applicable). Exceptions to these guidelines must be requested in writing and be approved by the Alameda CTC.

Section 3. Background

A. Alameda CTC developed Implementation guidelines for the Bicycle and Pedestrian Safety Funds to clarify eligible fund uses and expenditures in association Master Programs Funding Agreements for the November 2000 voter-approved Measure B Direct Local Distribution funds (formally known as "pass-through funds"). In 2012, the Master Programs Funding Agreements were updated to include the voter approved Measure F - Vehicle Registration Fee (VRF) program. In November 2014, voters approved the 2014 Transportation Expenditure Plan, Measure BB, and new Master Programs Funding Agreements were subsequently developed to incorporate Measure BB funds.

Section 4. Definition of Terms

A. **Alameda CTC:** The Alameda County Transportation Commission is a Joint Powers Authority created by the merger of the Alameda County Congestion Management Agency, which performed long-range planning and funding for countywide transportation projects and programs, and the Alameda County Transportation Improvement Authority, which administered the voter approved half-cent transportation sales taxes in Alameda County (the 1986 and 2000 approved Measure B sales tax programs)

B. **Capital project:** A bicycle and pedestrian capital investment that typically requires the following phases: planning/feasibility, scoping, environmental clearance, design, right-of-way, construction, and completion.

C. **Complete Street:** A transportation facility that is planned, designed, operated, and maintained to provide safe mobility for all users, including bicyclists, pedestrians, transit vehicles, truckers, and motorists, appropriate to the function and context of the facility. Complete street concepts apply to rural, suburban, and urban areas. (Caltrans definition)

D. **Complete Streets Act of 2008:** The California Complete Streets Act (Assembly Bill 1358) was signed into law in September 2008. It requires that local jurisdictions modify their general plans as follows:

> "(A) Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.
>
> (B) For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors."

E. **Construction:** Construction of a new capital project, including development of preliminary engineering and construction documents, including plans, specifications, and estimates.

F. **Cost Allocation Plans (CAPs):** CAPs and Indirect cost rate proposals (IDCs) are plans that provide a systematic manner to identify, accumulate, and distribute allowable direct and indirect costs to Bicycle and Pedestrian Safety programs funded through the Alameda CTC Master Programs Funding Agreements.

G. **Direct cost:** A cost completely attributed to the provision of a service, operations, a program, a capital cost, or a product. These costs include documented hourly project staff labor charges (salaries, wages and benefits) which are directly and solely related to the implementation of the Alameda CTC-funded Bicycle and Pedestrian Safety Funds, consultants, and materials. These funds may be used for travel or training if they are directly related to the implementation of the Bicycle and Pedestrian Safety Funds.

H. **Direct Local Distribution Funds:** Funds are allocated based upon a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter approved measure and provided to eligible jurisdictions on a regularly schedule basis (such as a regular monthly payment).

I. **Environmental Documents**: Preparation of environmental documents, such as those related to the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA), or permits required by state or federal permitting agencies.

J. **Grants**: Funding for plans, programs or projects based upon a competitive call for projects, an evaluation process based on adopted evaluation criteria and allocated based upon a reimbursement basis.

K. **Indirect cost:** Also known as "overhead," any cost of doing business other than direct costs. These costs include utilities, rent, administrative staff, officer's salaries, accounting department costs and personnel department costs, which are requisite for general operation of the organization, but are not directly allocable to a particular service or product.

L. **Local Bicycle Master Plan/Local Pedestrian Master Plans:** Locally adopted plans that, at a minimum, examine existing conditions for walking and/or bicycling, and provide recommendations on improving the walking and/or bicycling environment, and prioritize these improvements. These plans may be stand-alone bicycle and pedestrian plans or may be a joint plan that addresses both walking and bicycling.

M. **Maintenance:** Repairs, renovation, or upgrade of existing facility or infrastructure.

N. **Measure B:** Alameda County's half-cent transportation sales tax, originally approved in 1986, then reauthorized by voters in November 2000. Collection of the sales tax began on April 1, 2002. Administered by the Alameda CTC, Measure B funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

O. **Measure BB:** Alameda County voters approved Measured BB, the 2014 Transportation Expenditure Plan, in November 2014. It authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015. Administered by the Alameda CTC, Measure BB funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

P. **Operations:** Provision of services that operate transportation facilities and programs. Operations costs do not include the costs to operate community outreach or other programs not directly related to a specific transportation service, program, or product.

Q. **Direct Local Distribution Funds:** Funds are allocated based upon a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter approved measure and provided to eligible jurisdictions on a regularly schedule basis (such as a regular monthly payment).

R. **Planning:** Identification of project and program current conditions and needs and development of strategies and plans to address the identified needs.

S. **Project Completion/Closeout:** Inspection/project acceptance, final invoicing, final reporting, and processes for closing out project.

T. **Scoping and Project Feasibility:** Early capital project phases that identify project needs, costs and implementation feasibility.

U. **Vehicle Registration Fee (VRF):** Measure F, Alameda County's VRF Program, approved by the voters in November 2010 with 63 percent of the vote. It will generate approximately $12 million per year through a $10 per year vehicle registration fee. Administered by the Alameda CTC, the VRF funds four main types of programs (with the funding distribution noted in parenthesis): local streets and roads (60 percent); transit (25 percent); local transportation technology (10 percent); and bicycle and pedestrian projects (5 percent).

Section 5. Bicycle and Pedestrian Safety Fund Allocations

A. These implementation Guidelines provide guidance on two types of Bicycle and Pedestrian Safety allocation processes for Measure B and Measure BB funds: 1) Direct Local Distribution funds and grants.

1. Bicycle and Pedestrian Direct Local Distribution (DLD) Funds

a. *General:* The Bicycle and Pedestrian DLD Funds are distributed to cities in the county and to Alameda County to be spent on planning and construction of bicycle and pedestrian projects, and the development and implementation of bicycle and pedestrian programs. These funds are intended to expand and enhance bicycle and pedestrian facilities in Alameda County, focusing on high priority projects like gap closures and intermodal connections.

For Measure B, the DLD funds constitute seventy-five percent of the total Measure B bicycle/pedestrian funds. For Measure BB, three percent of total net Measure BB revenues are identified for the Measure BB bicycle/pedestrian DLD program. Each city and Alameda County will receive their proportional share of the DLD based on population over the life of the Measure (which share shall be adjusted annually as described in the Master Programs Funding Agreement). These funds are allocated on a monthly basis directly to each city and the County.

b. *Eligible Uses:* The Measure B and Measure BB Bicycle/Pedestrian DLD funds may be used for capital projects, programs, or plans that directly address bicycle and pedestrian access, convenience, safety, and usage. Eligible uses for these funds include, but are not necessarily limited to:

1) Capital Projects, including:

a. New pedestrian facilities (e.g. sidewalks, curb ramps, countdown signals, accessible signals)

b. Improvements to existing pedestrian facilities

c. New bikeways (such as bicycle routes, boulevards, lanes, multi-use pathways)

d. Improvements or upgrades to existing bikeways

e. Maintenance of bicycle and pedestrian facilities

f. Crossing improvements (at intersections, interchanges, railroads, freeways, etc.) for pedestrians and bicyclists

g. Bicycle parking facilities, including construction, maintenance and operations

h. ADA on-street improvements

i. Signage for pedestrians and/or bicyclists

j. Pedestrian and bicycle access improvements to, from and at transit facilities

k. Traffic calming projects

l. All phases of capital projects, including feasibility studies, planning, and environmental

2) Development of Local Bicycle and/or Pedestrian Master Plans, and updates of Plans

3) Compliance with complete streets policies, to comply with the California Complete Streets Act of 2008, as specified in Section 6.

4) Design and implementation of education, enforcement, outreach, and promotion programs

5) Direct staff and consultant costs to develop, plan, implement, operate, and maintain the bicycle and pedestrian projects and programs.

6) Maintenance of the portion of the street most often used for bicycling (such as bicycle lanes)

7) Bicycle/pedestrian capital projects on non-city property, such as on school district property.

8) Direct staff and consultant costs that support eligible activities, including the end-of-year compliance report

9) Crossing guards

10) Direct staff training costs directly related to implementation of projects, plans, or programs implemented with the Bicycle and Pedestrian Safety Funds

c. *Ineligible Uses:* The following is a list of ineligible uses of Measure B Bicycle/Pedestrian pass-through funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities not related to transportation

2) Repaving of the entire roadway (see "Eligible Uses" above for exceptions)

3) Capital projects, programs, or plans that do not directly address bicycle and pedestrian access, convenience, safety, and usage

4) Projects or programs that exclusively serve city/county staff

5) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan

d. *List of Projects/Programs:* All projects and programs that use Measure B and Measure BB Bicycle and Pedestrian Safety DLD funds must receive governing board approval prior to the jurisdiction expending the DLD funding on the project/program. This approval allows the opportunity for the public to provide input on planning for bicycle and pedestrian safety. These projects and programs may be included in any of the following, as long as they have been adopted by the jurisdiction's governing board:

1) List of projects on which to specifically spend Measure B/BB funds

2) Local Bicycle and/or Pedestrian Master Plan with priority projects

3) Capital Improvement Program

4) A resolution, such as to submit a grant application

2. Bicycle and Pedestrian Grant Funds

a. The Alameda CTC will administer a bicycle and pedestrian discretionary grant program using a portion of each of the Measure B, Measure BB, and the VRF Bicycle and Pedestrian Safety funds. The Alameda CTC will adopt *Grant Program Guidelines* before each grant cycle that will establish the guiding policies for that grant cycle, and will publicize each grant funding cycle.

b. Local jurisdictions, transit operators and Community Based Organizations (CBO) in Alameda County may be eligible for these competitive funds as determined by the Alameda CTC discretionary processes and the *Grant Program Guidelines.*

Section 6. Complete Streets Policy Requirement

A. To receive Measure B. Measure BB, and VRF funds, local jurisdictions must do both of the following with respect to Complete Street policies:

1. Have an adopted complete streets policy

2. Comply with the California Complete Streets Act of 2008. The California Complete Streets Act (AB1358) requires that local general plans do the following:

a. Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.

b. For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors.

The Governor's Office of Planning and Research has developed detailed guidance for meeting this law: *Update to the General Plan Guidelines: Complete Streets and the Circulation Element* (http://www.opr.ca.gov/planning/docs/Update_GP_Guidelines_Complete_Streets.pdf).

Section 7. Local Bicycle/Pedestrian Master Plan Requirement

A. To receive Measure B, Measure BB, and VRF funds, local jurisdictions must do all of the following with respect to local bicycle and pedestrian master plans. The Alameda CTC will provide technical assistance and funding to local jurisdictions to meet these requirements through the competitive Bicycle and Pedestrian Safety Grant Program. Jurisdictions may also use DLD funds for the development of local bicycle and pedestrian master plans.

1. Have an adopted Local Pedestrian Master Plan AND Local Bicycle Master Plan, OR have an adopted combined Local Pedestrian and Bicycle Plan; or demonstrate that the plan is being developed and will be adopted.

2. Each plan must be updated, at a minimum, every five years.

3. Each plan must include core elements to ensure that the plan is effective, and that plans throughout the county are comparable, to the extent that is reasonable, to facilitate countywide planning. The Alameda CTC will develop and maintain guidelines outlining these core elements.

Section 8. Advancement of Direct Local Distribution Funds

A. The Alameda CTC may consider advancing future year Direct Local Distribution funds, with the goal of seeing improvements made in the near term. If a jurisdiction is interested in this option, a written request to the Alameda CTC's Director of Finance and Administration and a copy to the Deputy Director of Projects and Programs, indicating the amount of funds requested and the projects on which the funds will be spent, is required. Requests will be considered on an individual basis.

Section 9. Adoption of Implementation Guidelines

A. Implementation Guidelines are adopted by the Alameda CTC on an as-needed basis. Changes to Implementation Guidelines will be brought through the Alameda CTC's Technical Advisory Committee for review and comment, as well as any other Alameda CTC committees as necessary, before changes are adopted by the Alameda CTC's Commission.

Alameda County Transportation Commission Implementation Guidelines for the Local Streets and Roads Program Funded through Measure B, Measure BB, and Vehicle Registration Fees

Section 1. Purpose

A. To delineate the eligible uses of Local Streets and Roads funds authorized under Alameda County Transportation Commission Master Program Funding Agreements, these implementation guidelines have been developed to specify the requirements that local jurisdictions must follow in their use of Measure B, Measure BB, and Vehicle Registration Fees (VRF) Direct Local Distribution funds. These guidelines are incorporated by reference in the Master Programs Funding Agreements. All other terms and conditions for programs are contained in the agreements themselves. The intent of the implementation guidelines is to:

1. Provide guidance on Local Streets and Roads funds eligible uses and expenditures.
2. Define the terms in the Master Programs Funding Agreements.
3. Guide Local Streets and Roads Program implementation.

Section 2. Authority

A. These Implementation Guidelines have been adopted by the Alameda County Transportation Commission and set forth eligible uses and expenditures for the Local Streets and Roads funds. The Alameda CTC may update these guidelines on an as-needed basis and will do so with involvement of its technical and community advisory committees (as applicable). Exceptions to these guidelines must be requested in writing and be approved by the Alameda CTC Commission.

Section 3. Background

A. Alameda CTC developed Implementation Guidelines for the Local Streets and Roads funds to clarify eligible fund uses and expenditures in association with Master Program Funding Agreements for the November 2000 voter-approved Measure B Direct Local Distribution funds (formally known as "pass-through funds". The Expenditure Plan allocates 22.34 percent of Measure B funds for Local Streets and Roads programs and projects. In 2012, the Master Programs Funding Agreements were updated to include the voter approved Measure F - Vehicle Registration Fee (VRF) program. The VRF includes 60 percent of net revenues for a Local Streets and Roads Program. In November 2014, voters approved the 2014 Transportation Expenditure Plan, Measure BB, which allocates 20.00 percent of funds for a Local Streets and Roads program. New Master Programs Funding Agreements were subsequently developed to incorporate Measure BB funds.

Section 4. Definition of Terms

A. **Alameda CTC:** The Alameda County Transportation Commission is a Joint Powers Authority created by the merger of the Alameda County Congestion Management Agency, which performed long-range planning and funding for countywide transportation projects and programs, and the Alameda County Transportation Improvement Authority, which administered the voter-approved, half-cent transportation sales taxes in Alameda County (the Measure B sales tax programs approved in 1986 and 2000).

B. **Bike parking:** Bike racks and lockers, bike shelters, attended bike parking facilities, and bike parking infrastructure.

C. **Bikeways and multiuse paths:** Bike lanes, bike boulevards, sidepaths, bike routes, multiuse pathways, at-grade bike crossings, and maintenance of bikeway facilities.

D. **Bridges and tunnels:** Crossings above or below grade for bicycles, pedestrians, and/or autos and transit.

E. **Capital project:** A capital investment that typically requires the following phases: planning/feasibility, scoping, environmental clearance, design, right-of-way, construction, and completion.

F. **Complete Street:** A transportation facility that is planned, designed, operated, and maintained to provide safe mobility for all users, including bicyclists, pedestrians, transit vehicles, truckers, and motorists, appropriate to the function and context of the facility. Complete street concepts apply to rural, suburban, and urban areas. (Caltrans definition)

G. **Complete Streets Act of 2008:** The California Complete Streets Act (Assembly Bill 1358) was signed into law in September 2008. It requires that local jurisdictions modify their general plans as follows:

"(A) Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.

(B) For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors."

H. **Construction:** Construction of a new capital project, including development of preliminary engineering and construction documents, including plans, specifications, and estimates (PS&E).

I. **Cost Allocation Plans (CAPs):** CAPs and indirect cost (IDC) rate proposals are plans that provide a systematic manner to identify, accumulate, and distribute allowable direct and indirect costs to Local Streets and Roads programs funded through the Alameda CTC Master Programs Funding Agreements.

J. **Direct cost:** A cost completely attributed to the provision of a service, operations, a program, a capital cost, or a product. These costs include documented hourly project staff labor charges (salaries, wages, and benefits) that are directly and solely related to the implementation of the Alameda CTC-funded Local Streets and Roads projects, consultants, and materials. These funds may be used for travel or training if they are directly related to the implementation of the Local Streets and Roads funds.

K. Direct Local Distribution Funds: Funds are allocated based upon a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter approved measure and provided to eligible jurisdictions on a regularly schedule basis (such as a regular monthly payment).

L. **Education and promotion:** Marketing, education, information, outreach, and promotional campaigns and programs.

M. **Environmental documents**: Preparation of environmental documents, such as those related to the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA), or permits required by state or federal permitting agencies.

N. **Equipment and new vehicles:** Purchase or lease of vehicles and equipment for service improvements, such as information dissemination, fare collection, etc.

O. **Grants**: Funding for plans, programs, or projects based on a competitive call for projects; evaluated based on adopted evaluation criteria; and allocated based on a reimbursement basis.

P. **Indirect cost:** Also known as "overhead," any cost of doing business other than direct costs. These costs include utilities, rent, administrative staff, officers' salaries, accounting department costs, and personnel department costs, which are requisite for general operation of the organization but are not directly allocable to a particular service or product.

Q. **Maintenance:** Repairs, renovation, or upgrade of existing facility or infrastructure.

R. **Measure B:** Alameda County's half-cent transportation sales tax, originally approved in 1986, and reauthorized by voters in November 2000. Collection of the sales tax began on April 1, 2002. Administered by the Alameda CTC, Measure B funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

S. **Operations:** Provision of services that operate transportation facilities and programs. Operations costs do not include the costs to operate community outreach or other programs not directly related to a specific transportation service, program, or product.

T. **Pedestrian crossing improvements:** At-grade pedestrian crossing improvements such as crosswalks, roadway/geometric changes, or reconfiguration specifically benefiting pedestrians.

U. **Planning:** Identification of project and program current conditions and needs and development of strategies and plans to address the identified needs.

V. **Planning area:** Four geographical sub-areas of the county (Planning Areas 1, 2, 3, and 4). The sub-areas of the county are defined by the Alameda CTC as follows:

1. Planning Area 1 – North Area: Cities of Alameda, Albany, Berkeley, Emeryville, Oakland and Piedmont
2. Planning Area 2 – Central Area: Cities of Hayward and San Leandro, and the unincorporated areas of Castro Valley and San Lorenzo, as well as other unincorporated lands in that area
3. Planning Area 3 – South Area: Cities of Fremont, Newark, and Union City
4. Planning Area 4 – East Area: Cities of Dublin, Livermore, and Pleasanton, and all unincorporated lands in that area

W. **Project completion/closeout:** Inspection/project acceptance, final invoicing, final reporting, and the processes for closing out a project.

X. **Scoping and project feasibility:** Early capital project phases that identify project needs, costs, and implementation feasibility.

Y. **Sidewalks and ramps:** New sidewalks, sidewalk maintenance, curb ramps, and stairs/ramps for pedestrian and Americans with Disabilities Act access.

Z. **Signage:** Warning, regulatory, wayfinding, or informational signage.

AA. **Signals:** New traffic signals or crossing signals, signal upgrades, countdown signals, audible signals, or signal timing improvements.

BB. **Street resurfacing and maintenance:** Repaving and resurfacing of on-street surfaces, including striping.

CC. **Traffic calming:** Infrastructure primarily aimed at slowing down motor vehicle traffic.

DD. **Vehicle Registration Fee (VRF):** Measure F, Alameda County's VRF Program, approved by the voters in November 2010 with 63 percent of the vote. It will generate approximately $12 million per year through a $10 per year vehicle registration fee. Administered by the Alameda CTC, the VRF funds

four main types of programs and the distribution percentage is as follows: local streets and roads (60 percent); transit (25 percent); local transportation technology (10 percent); and bicycle and pedestrian projects (5 percent).

Section 5. Local Streets and Roads Fund Allocations

A. These Implementation Guidelines provide guidance on the Local Streets and Roads Fund allocation process for Measure B, Measure BB, and VRF Direct Local Distribution funds.

1. Measure B and Measure BB Local Streets and Roads Direct Local Distribution (DLD) Funds

a. *General:* Alameda CTC distributes Measure B and Measure BB Local Streets and Roads DLD funds to cities in the county and to Alameda County to be spent on transportation capital improvements for surface streets and arterial roads, and maintenance and upkeep of local streets and roads, including repaving streets, filling potholes, and upgrading local transportation infrastructure. These funds are intended to maintain and improve local streets and roads in Alameda County, and may be used for any local transportation need based on local priorities, including streets and roads projects, local transit projects, bicycle and pedestrian projects, projects (sponsored by others) that require local agency support, and other transportation uses as approved through a public process by the jurisdiction.

The DLD funds constitute 100 percent of the total Measure B and Measure BB Local Streets and Roads funds. Each city and Alameda County will receive their proportional share (which share shall be adjusted annually as described in the Master Programs Funding Agreement) of the local transportation DLD funds within their sub-area based on a formula weighted 50 percent by the population of the jurisdiction within the sub-area and 50 percent on the number of road miles within the sub-area. These funds are allocated on a monthly basis directly to each city and the County. DLD funds must be placed in separate accounts for the Measure B, Measure BB, and VRF programs.

b. *Eligible Uses:* The Measure B and Measure BB Local Streets and Roads DLD funds may be used for capital projects, programs, maintenance, or operations that directly improve local streets and roads and local transportation. Eligible uses for these funds include, but are not necessarily limited to:

1) Capital projects, including:

a) All phases of capital projects, including feasibility studies, planning, and environmental

b) Upgrades to or installation of new local streets and roads infrastructure including installation of streets, roads, and highways

c) Street resurfacing and maintenance including repaving and resurfacing of on-street surfaces including striping

d) Improvements or upgrades to bridges and tunnels

e) Installation of or upgrades to sidewalks and curb ramps

f) Americans with Disabilities Act (ADA) on-street improvements, including sidewalk upgrades and curb ramp installations

g) Purchase or lease of equipment or new vehicles for local streets and roads improvements

h) Crossing improvements including traffic signals, signage, and traffic lights (at intersections, interchanges, railroads, freeways, etc.) for drivers, pedestrians, and bicyclists

i) Improvements to or installation of new pedestrian facilities (e.g., sidewalks, curb ramps, countdown signals, accessible signals, at-grade bike crossings)

j) Improvements or upgrades to or installation of new bikeways (such as bicycle routes, boulevards, lanes, multi-use pathways)

k) Maintenance of or installation of bicycle and pedestrian facilities, including construction, maintenance, and operations of bike parking facilities.

l) Pedestrian and bicycle access improvements to, from and at transit facilities

m) Traffic calming projects

2) Transit system operations, operations of traffic signal system controls and interconnections, and corridor monitoring and management

3) Mass transit project operations including bus, ferry, shuttle, rail, and Welfare to Work services

4) Paratransit services

5) Direct staff and consultant costs that support eligible activities, including the end-of-year compliance report

6) Direct staff training costs directly related to implementation of projects or programs implemented with the Local Streets and Roads Funds

c. *Ineligible Uses:* The following is a list of ineligible uses of Measure B Local Streets and Roads DLD funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities not related to transportation

2) Capital projects, programs, maintenances, or operations that do not directly improve local streets and roads and local transportation

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan

d. *List of Projects/Programs:* All projects and programs that use Measure B and Measure BB Local Streets and Roads DLD funds must receive governing board approval prior to the jurisdiction expending the DLD funding on the project/program. This approval allows the opportunity for the public to provide input on planning for local streets and roads projects. These projects and programs must be included in any of the following, as long as they have been adopted by the jurisdiction's governing board:

1) List of projects on which to specifically spend Measure B funds

2) Local Streets and Roads Master Plan with priority projects

3) Capital Improvement Program

4) A resolution, such as to submit a grant application

2. VRF Local Streets and Roads DLD Funds

a. *General:* Alameda CTC distributes VRF Local Streets and Roads DLD Funds to cities in the county and to Alameda County to be spent on transportation capital improvements for surface streets and arterial roads, and maintenance and upkeep of local streets and roads. These funds are intended to maintain and improve local streets and roads as well as a broad range of facilities in Alameda County (from local to arterial facilities).

The DLD funds constitute 100 percent of the total VRF Local Streets and Roads funds and are distributed among the four planning areas of the county. VRF local streets and roads DLD funds within the geographic planning area are based on a formula weighted 50 percent by the population of the jurisdiction within the planning area and 50 percent of the number of registered vehicles in the planning area. VRF local streets and roads funds will be distributed by population within a planning area. Allocations may change in the future based on changes in population and number of registered vehicle figures. Recipients are not required to enter into a separate agreement with Alameda CTC prior to receipt of such funds. Agencies will maintain all interest accrued from the VRF Local Road Program DLD funds within the program. These funds are allocated on a monthly basis directly to each city and the County. DLD funds must be placed in separate accounts for the Measure B, Measure BB, and VRF programs.

b. *Eligible Uses:* The VRF Local Streets and Roads DLD funds may be used for improving, maintaining, and rehabilitating local roads and traffic signals. It will also incorporate the Complete Streets practice that makes local roads safe for all modes, including bicyclists and pedestrians, and accommodates transit. Eligible uses for these funds include, but are not necessarily limited to:

1) Street repaving and rehabilitation, including curbs, gutters and drains

2) Traffic signal maintenance and upgrades, including bicyclist and pedestrian treatments

3) Signage and striping on roadways, including traffic and bicycle lanes and crosswalks

4) Sidewalk repair and installation

5) Bus stop improvements, including bus pads, turnouts and striping

6) Improvements to roadways at rail crossings, including grade separations and safety protection devices

7) Improvements to roadways with truck or transit routing

c. *Ineligible Uses:* The following is a list of ineligible uses of VRF Local Streets and Roads DLD funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities that are not related to transportation

2) Projects or programs that are not directly related to streets and roads improvements

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

Section 6. Complete Streets Policy Requirement

A. To receive Measure B and VRF funds, local jurisdictions must do both of the following with respect to Complete Streets policies:

1. Have an adopted Complete Streets policy.

2. Comply with the California Complete Streets Act of 2008. The California Complete Streets Act (AB1358) requires that local general plans do the following:

   a. Commencing January 1, 2011, upon any substantial revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of the streets, roads, and highways for safe and convenient travel in a manner that is suitable to the rural, suburban, or urban context of the general plan.

   b. For the purposes of this paragraph, "users of streets, roads, and highways" means bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors.

   The Governor's Office of Planning and Research has developed detailed guidance for meeting this law: *Update to the General Plan Guidelines: Complete Streets and the Circulation Element* (http://www.opr.ca.gov/planning/docs/Update_GP_Guidelines_Complete_Streets.pdf).

Section 7. Pavement Condition Index Reporting

A. To receive Measure B, Measure BB, and VRF funds, local jurisdictions must do both of the following with respect to the reporting of an agency's pavement condition (PCI) index:

1. Annually report on the citywide pavement condition index (PCI), which rates the "health" of local streets from 1 to 100, in the Annual Program Compliance Report Form. Where applicable, this information will be consistent with material provided for MTC reporting requirements.

2. If the PCI falls below a total average index of 60 (fair condition), specify in the Annual Program Compliance Report what funding amounts, policies, or other needs are required to enable increasing the recipient's PCI to 60 or above.

Section 8. Advancement of Direct Local Distribution Funds

A. The Alameda CTC may consider advancing future year DLD funds, with the goal of seeing improvements made in the near term. If a jurisdiction is interested in this option, a written request to the Alameda CTC Director of Finance and Administration and a copy to the Deputy Director of Projects and Programs, indicating the amount of funds requested and the projects on which the funds will be spent, is required. Requests will be considered on an individual basis.

Section 9. Adoption of Implementation Guidelines

A. Implementation Guidelines are adopted by the Alameda CTC on an as-needed basis. Changes to Implementation Guidelines will be brought through the Alameda CTC's Technical Advisory Committee for review and comment, as well as any other Alameda CTC committees as necessary, before changes are adopted by the Alameda CTC Commission.

Alameda County Transportation Commission
Implementation Guidelines for
the Mass Transit Program Funded through
Measure B, Measure BB, and Vehicle Registration Fees

Section 1. Purpose

A. To delineate eligible uses of Mass Transit funds authorized under Alameda County Transportation Commission Master Program Funding Agreements, these implementation guidelines have been developed to specify the requirements that local jurisdictions must follow in their use of Measure B, Measure BB, Vehicle Registration Fees (VRF) Direct Local Distributions and discretionary funds. These guidelines are incorporated by reference in the Master Programs Funding Agreements. All other terms and conditions for programs are contained in the agreements themselves. The intent of the implementation guidelines is to:

1. Provide guidance on Mass Transit funds eligible uses and expenditures.
2. Define the terms in the Master Programs Funding Agreements.
3. Guide Mass Transit Program implementation.

Section 2. Authority

A. These Implementation Guidelines have been adopted by the Alameda County Transportation Commission and set forth eligible uses and expenditures for the Mass Transit funds. The Alameda CTC may update these guidelines on an as-needed basis and will do so with involvement of its technical and community advisory committees (as applicable). Exceptions to these guidelines must be requested in writing and be approved by the Alameda CTC Commission.

Section 3. Background

Alameda CTC developed Implementation Guidelines for the Mass Transit funds to clarify eligible fund uses and expenditures in association with Master Programs Funding Agreements for the November 2000 voter-approved Measure B Direct Local Distribution funds (formally known as "pass-through funds"). In 2012, the Master Programs Funding Agreements were updated to include the voter approved Measure F - Vehicle Registration Fee (VRF) program. In November 2014, voters approved the 2014 Transportation Expenditure Plan, Measure BB, and new Master Programs Funding Agreements were subsequently developed to incorporate Measure BB funds.

Section 4. Definition of Terms

A. **Alameda CTC:** The Alameda County Transportation Commission is a Joint Powers Authority created by the merger of the Alameda County Congestion Management Agency, which performed long-range planning and funding for countywide transportation projects and programs, and the Alameda County Transportation Improvement Authority, which administered the voter-approved, half-cent transportation sales taxes in Alameda County (the Measure B sales tax programs approved in 1986 and 2000).

B. **Capital project:** A capital investment that typically requires the following phases: planning/feasibility, scoping, environmental clearance, design, right-of-way, construction, and completion.

C. **Construction:** Construction of a new capital project, including development of preliminary engineering and construction documents, including plans, specifications, and estimates (PS&E).

D. **Cost Allocation Plans (CAPs):** CAPs and indirect cost (IDC) rate proposals are plans that provide a systematic manner to identify, accumulate, and distribute allowable direct and indirect costs to Mass Transit programs funded through the Alameda CTC Master Programs Funding Agreements.

E. **Direct cost:** A cost completely attributed to the provision of a service, operations, a program, a capital cost, or a product. These costs include documented hourly project staff labor charges (salaries, wages, and benefits) that are directly and solely related to the implementation of Alameda CTC-funded Mass Transit projects, consultants, and materials. These funds may be used for travel or training if they are directly related to the implementation of the Mass Transit funds.

F. **Direct Local Distribution funds:** Funds allocated based on a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter-approved measure and provided to eligible jurisdictions on a regularly scheduled basis (such as a regular monthly payment).

G. **Education and promotion:** Marketing, education, information, outreach, and promotional campaigns and programs.

H. **Environmental documents**: Preparation of environmental documents, such as those related to the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA), or permits required by state or federal permitting agencies.

I. **Equipment and new vehicles:** Purchase or lease of vehicles. Equipment for service improvements, such as information dissemination, fare collection, etc.

J. **Express bus service:** Either of these types of rapid bus service:

1. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone.

2. Service that provides a simple route layout, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, signature identification of the rapid buses such as color-coded buses and stops, and enhanced stations.

K. **Grants**: Funding for plans, programs, or projects based on a competitive call for projects; evaluated based on adopted evaluation criteria; and allocated based on a reimbursement basis.

L. **Indirect cost:** Also known as "overhead," any cost of doing business other than direct costs. These costs include utilities, rent, administrative staff, officers' salaries, accounting department costs, and personnel department costs, which are requisite for general operation of the organization but are not directly allocable to a particular service or product.

M. **Maintenance:** Repairs, renovation, or upgrade of existing facility or infrastructure.

N. **Measure B:** Alameda County's half-cent transportation sales tax, originally approved in 1986, and reauthorized by voters in November 2000. Collection of the sales tax began on April 1, 2002. Administered by the Alameda CTC, Measure B funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

O. **Measure BB:** Alameda County voters approved Measured BB, the 2014 Transportation Expenditure Plan, in November 2014. It authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015. Administered by the Alameda CTC, Measure BB funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

P. **Operations:** Provision of services that operate transportation facilities and programs. Operations costs do not include the costs to operate community outreach or other programs not directly related to a specific transportation service, program, or product.

Q. **Planning:** Identification of project and program current conditions and needs and development of strategies and plans to address the identified needs.

R. **Planning area:** Four geographical sub-areas of the county (Planning Areas 1, 2, 3, and 4). The sub-areas of the county are defined by the Alameda CTC as follows:

1. Planning Area 1 – North Area: Cities of Alameda, Albany, Berkeley, Emeryville, Oakland and Piedmont
2. Planning Area 2 – Central Area: Cities of Hayward and San Leandro, and the unincorporated areas of Castro Valley and San Lorenzo, as well as other unincorporated lands in that area
3. Planning Area 3 – South Area: Cities of Fremont, Newark, and Union City
4. Planning Area 4 – East Area: Cities of Dublin, Livermore, and Pleasanton, and all unincorporated lands in that area

S. **Project completion/closeout:** Inspection/project acceptance, final invoicing, final reporting, and the processes for closing out a project.

T. **Safety improvements:** Safety or security improvements for operators, passengers, service users, facilities, and infrastructure or property.

U. **Scoping and project feasibility:** Early capital project phases that identify project needs, costs, and implementation feasibility.

V. **Vehicle Registration Fee (VRF):** Measure F, Alameda County's VRF Program, approved by the voters in November 2010 with 63 percent of the vote. It will generate approximately $11 million per year through a $10 per year vehicle registration fee. Administered by the Alameda CTC, the VRF funds four main types of programs and the distribution percentage is as follows: local streets and roads (60 percent); transit (25 percent); local transportation technology (10 percent); and bicycle and pedestrian projects (5 percent).

W. **Welfare to Work:** Transit services to enhance transportation opportunities for persons making the transition from welfare to work.

Section 5. Mass Transit Fund Allocations

A. These Implementation Guidelines provide guidance on the Mass Transit Fund allocation process for Measure B and Measure BB Direct Local Distribution funds and Measure B Express Bus Services Grant Program and VRF Transit for Congestion Relief Program funds.

1. Measure B Mass Transit Direct Local Distribution (DLD) Funds

a. *General:* Alameda CTC distributes Measure B and Measure BB Mass Transit DLD Funds to transit operators in Alameda County to be spent on maintenance of transit services, restoration of service cuts, expansion of transit services, and passenger safety and security. Transit operators in Alameda County receive their proportional share of mass transit DLD funds based on percentages of net revenues generated by the Measure B and Measure BB sales and use taxes (which share shall be adjusted annually as described in the Master Programs Funding Agreement). These funds are allocated on a monthly basis directly to each transit operator.

b. *Eligible Uses:* The Measure B and Measure BB Mass Transit DLD funds may be used for capital projects, programs, maintenance, or operations that directly improve mass transit services. Eligible uses for these funds include, but are not necessarily limited to:

1) Capital projects, including:

a) All phases of capital projects, including feasibility studies, planning, and environmental

b) Upgrades to or expansions to bus, ferry, rail, and shuttle infrastructure

c) Purchase or lease of equipment or new vehicles for transit services

2) Mass transit system operations and services, including commuter rail; express, local, and feeder bus; and ferry

3) Paratransit services

4) Welfare to Work services

5) Direct staff and consultant costs to develop, plan, implement, operate and maintain transit projects and programs

6) Direct staff and consultant costs that support eligible activities, including the end-of-year compliance report

7) Direct staff training costs directly related to implementation of projects or programs implemented with the Mass Transit Funds

c. *Ineligible Uses:* The following is a list of ineligible uses of Measure B and Measure BB Mass Transit DLD funds:

1) Non-transportation projects such as fees charged to capital construction projects for services or amenities not related to transportation

2) Capital projects, programs, maintenances, or operations that does not directly improve mass transit services

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

2. Measure B Express Bus Services Grant Program Funds

a. The Measure B Expenditure Plan dedicates 0.7 percent of net revenues for the Countywide Express Bus Service fund for express bus service projects. The Alameda CTC will administer a Measure B Countywide Express Bus Services discretionary grant program. The Alameda CTC will adopt *Grant Program Guidelines* before each grant cycle that will establish the guiding policies for that grant cycle, and will widely publicize each grant funding cycle.

b. Two agencies are eligible to receive express bus services grant funds:

1) Alameda-Contra Costa Transit District (AC Transit)

2) Livermore Amador Valley Transit Authority (LAVTA)

Fund recipients must enter into a separate agreement with Alameda CTC.

3. VRF Transit for Congestion Relief Program Funds

a. The VRF Expenditure Plan dedicates 25 percent of net revenues for transit projects that provide congestion relief. Alameda CTC awards VRF Transit for Congestion Relief Grant Program funds on a discretionary basis. These funds are intended to make it easier for drivers to use public transportation, make the existing transit system more efficient and effective, and improve access to schools and jobs. The goal of this program is to decrease automobile usage and thereby reduce both localized and area-wide congestion and air pollution. Fund recipients must enter into a separate agreement with Alameda CTC.

b. *Eligible Uses:* VRF Transit for Congestion Relief Grant Program Guidelines provide program eligibility and fund usage guidelines and requirements, definitions of terms, evaluation criteria, award details, and monitoring requirements.

Section 6. Advancement of Direct Local Distribution Funds

A. The Alameda CTC may consider advancing future year DLD funds, with the goal of seeing improvements made in the near term. If a jurisdiction is interested in this option, a written request to the Alameda CTC Director of Finance and Administration and a copy to the Deputy Director of Projects and Programs, indicating the amount of funds requested and the projects on which the funds will be spent, is required. Requests will be considered on an individual basis.

Section 7. Adoption of Implementation Guidelines

A. Implementation Guidelines are adopted by the Alameda CTC on an as-needed basis. Changes to Implementation Guidelines will be brought through the Alameda CTC's Technical Advisory Committee for review and comment, as well as any other Alameda CTC committees as necessary, before changes are adopted by the Alameda CTC Commission.

Alameda County Transportation Commission Implementation Guidelines for the Paratransit Program Funded through Measure B and Measure BB

Section 1. Purpose

A. To delineate eligible uses of Paratransit funds authorized under Alameda County Transportation Commission Master Programs Funding Agreements, these implementation guidelines have been developed to specify the requirements that local jurisdictions must follow in their use of Measure B and Measure BB Direct Local Distributions funds and discretionary funds. These guidelines are incorporated by reference in the Master Programs Funding Agreements. All other terms and conditions for programs are contained in the agreements themselves. The intent of the implementation guidelines is to:

1. Provide guidance on Paratransit funds eligible uses and expenditures.
2. Define the terms in the Master Programs Funding Agreements.
3. Guide Paratransit Program implementation.

Section 2. Authority

A. These Implementation Guidelines have been adopted by the Alameda County Transportation Commission and set forth eligible uses and expenditures for the Paratransit funds. The Alameda CTC may update these guidelines on an as-needed basis and will do so with involvement of its technical and community advisory committees (as applicable). Exceptions to these guidelines must be requested in writing and be approved by the Alameda CTC Commission.

Section 3. Background

A. Alameda CTC developed Implementation Guidelines for the Paratransit funds to clarify eligible fund uses and expenditures in association Master Programs Funding Agreements for the November 2000 voter-approved Measure B Direct Local Distribution (formally known as "pass-through funds"). In November 2014, voters approved the 2014 Transportation Expenditure Plan, Measure BB, and new Master Programs Funding Agreements were subsequently developed to incorporate Measure BB funds. The expenditure plans allocates 10.45 percent of Measure B funds and 10 percent of Measure BB funds for special transportation for seniors and people with disabilities (paratransit) programs and projects.

Section 4. Definition of Terms

A. **Alameda CTC:** The Alameda County Transportation Commission is a Joint Powers Authority created by the merger of the Alameda County Congestion Management Agency, which performed long-range planning and funding for countywide transportation projects and programs, and the Alameda County Transportation Improvement Authority, which administered the voter-approved, half-cent transportation sales taxes in Alameda County (the Measure B sales tax programs approved in 1986 and 2000).

B. **Americans with Disabilities Act (ADA):** According to the U.S. Equal Employment Opportunity Commission, originally passed in 1990 and revised in 2008, a law that prohibits private employers, state and local governments, employment agencies and labor unions from discriminating against qualified individuals with disabilities in job application procedures, hiring, firing, advancement, compensation, job training, and other terms, conditions, and privileges of employment. The ADA also requires reasonable accommodations for individuals with disabilities and has resulted in the removal of many barriers to transportation and in better access for seniors and people with disabilities.

C. **Capital project:** A capital investment that typically requires the following phases: planning/feasibility, scoping, environmental clearance, design, right-of-way, construction, and completion. For paratransit programs, may be an investment in vehicles or equipment directly related to providing paratransit services.

D. **Construction:** Construction of a new capital project, including development of preliminary engineering and construction documents, including plans, specifications, and estimates (PS&E).

E. **Cost Allocation Plans (CAPs):** CAPs and indirect cost (IDC) rate proposals are plans that provide a systematic manner to identify, accumulate, and distribute allowable direct and indirect costs to Paratransit programs funded through the Alameda CTC Master Programs Funding Agreements.

F. **Customer service and outreach:** Customer service functions as well as costs associated with marketing, education, outreach, and promotional campaigns and programs.

G. **Direct cost:** A cost completely attributed to the provision of a service, operations, a program, a capital cost, or a product. These costs include documented hourly project staff labor charges (salaries, wages, and benefits) that are directly and solely related to the implementation of the Alameda CTC-funded Paratransit projects, consultants, and materials. These funds may be used for travel or training if they are directly related to the implementation of the Paratransit funds.

H. **Direct Local Distribution funds:** Funds allocated based on a funding formula (such as population, registered vehicles, roadmiles, or a combination thereof) defined in a voter-approved measure and provided to eligible jurisdictions on a regularly scheduled basis (such as a regular monthly payment).

I. **Education and promotion:** Marketing, education, information, outreach, and promotional campaigns and programs.

J. **Environmental documents**: Preparation of environmental documents, such as those related to the California Environmental Quality Act (CEQA) or the National Environmental Policy Act (NEPA), or permits required by state or federal permitting agencies.

K. **Grants**: Funding for plans, programs, or projects based on a competitive call for projects; evaluated based on adopted evaluation criteria; and allocated based on a reimbursement basis.

L. **Group trips:** One-way passenger trips considered group trips. Includes vehicle operation and contracts. See individual demand-response trips.

M. **Indirect cost:** Also known as "overhead," any cost of doing business other than direct costs. These costs include utilities, rent, administrative staff, officers' salaries, accounting department costs, and personnel department costs, which are requisite for general operation of the organization but are not directly allocable to a particular service or product.

N. **Individual demand-response trips:** Taxi service, door-to-door trips, and van trips that passengers request on demand. Includes actual operation cost and contracts for vehicle operation, scheduling, dispatching, vehicle maintenance, supervision, and fare collection (including ticket or scrip printing and sales) for the purpose of carrying passengers.

O. **Maintenance:** Repairs, renovation, or upgrade of existing facility, infrastructure, or vehicles.

P. **Management:** Direct staffing costs and benefits to manage programs, projects, and services.

Q. **Meal delivery:** Service that includes costs associated with vehicle operation, scheduling, dispatching, vehicle maintenance, and supervision for the purpose of delivering meals, whether provided in-house, through contracts, via taxicab, or by grantees. See Meals on Wheels.

R. **Meals on Wheels:** Service that is part of a Senior Nutrition Program and provides delivery of meals to seniors and people with disabilities. See meal delivery.

S. **Measure B:** Alameda County's half-cent transportation sales tax, originally approved in 1986, and reauthorized by voters in November 2000. Collection of the sales tax began on April 1, 2002. Administered by the Alameda CTC, Measure B funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

T. **Measure BB:** Alameda County voters approved Measured BB, the 2014 Transportation Expenditure Plan, in November 2014. It authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015. Administered by the Alameda CTC, Measure BB funds four types of programs in 20 local jurisdictions: bicycle and pedestrian, local streets and roads, mass transit, and paratransit.

U. **Operations:** Provision of services that operate transportation facilities and programs. Operations costs do not include the costs to operate community outreach or other programs not directly related to a specific transportation service, program, or product.

V. **Paratransit Advisory and Planning Committee:** Originally named by the Measure B Expenditure Plan as the Alameda County Paratransit Coordinating Council, the Alameda CTC committee that meets to address funding, planning, and coordination issues regarding paratransit services in Alameda County. Members must be an Alameda County resident and an eligible user of any transportation service available to seniors and people with disabilities in Alameda County. PAPCO is supported by a Technical Advisory Committee comprised of Measure B and Measure BB-funded paratransit providers in Alameda County.

W. **Paratransit service:** Transportation services for seniors and people with disabilities including ADA-mandated or non-mandated shuttle or fixed-route services, including door-to-door services, group trips, and individual demand-response trip services; taxi programs; Meals on Wheels or meal delivery; volunteer driver programs; and purchase of EBP tickets.

X. **Planning:** Identification of project and program current conditions and needs and development of strategies and plans to address the identified needs.

Y. **Project completion/closeout:** Inspection/project acceptance, final invoicing, final reporting, and the processes for closing out a project.

Z. **Scoping and project feasibility:** Early capital project phases that identify project needs, costs, and implementation feasibility.

AA. **Shuttle or fixed-route trips:** Shuttle service or fixed-route bus service, for example. Includes vehicle operation and contracts. See individual demand-response trips.

Section 5. Paratransit Fund Allocations

A. These Implementation Guidelines provide guidance on the Paratransit Fund allocation process for Measure B and Measure BB Direct Local Distribution funds and Paratransit Gap Grant Program funds.

1. Measure B and Measure BB Paratransit Direct Local Distribution Funds

a. *General:* Alameda CTC distributes Measure B and Measure BB Paratransit Direct Local Distribution (DLD) Funds to fixed-route public transit operators that are required to provide transportation services mandated by the ADA; and to cities in Alameda County and the County to provide non-mandated services, aimed at improving mobility for seniors and persons with disabilities.

1) A portion of the funds as defined in the Master Programs Funding Agreement are local DLD funds distributed to Alameda County cities to provide non-mandated transportation services for seniors and people with

disabilities allocated to each city operating paratransit service through a census-based funding formula that is developed by PAPCO and approved by the Alameda CTC Commision.

2) A portion of the funds as defined in the Master Programs Funding Agreement are DLD funds distributed to Alameda County's primary mandated ADA service provider, East Bay Paratransit Consortium.

b. *Eligible Uses:* The Measure B and Measure BB Paratransit DLD funds may be used for capital projects, programs, maintenance, or operations that directly improve paratransit services. Eligible uses for these funds include services as defined in Attachment A, as well as, but not limited to:

1) Direct staff and consultant costs to develop, plan, implement, manage, operate and maintain paratransit projects and programs

2) Direct staff and consultant costs to provide customer service and outreach for paratransit projects and programs

3) Direct staff and consultant costs that support eligible activities, including the end-of-year compliance report

4) Direct staff training costs directly related to implementation of projects or programs implemented with the Paratransit Funds

c. *Ineligible Uses:* The following is a list of ineligible uses of Measure B and Measure BB Paratransit DLD funds:

1) Non-transportation projects or services such as fees charged to capital construction projects for services or amenities not related to transportation

2) Capital projects, programs, maintenance, or operations that do not directly improve paratransit services

3) Projects or programs that exclusively serve city/county staff

4) Indirect costs, unless the RECIPIENT submits an independently audited/approved Indirect Cost Allocation Plan.

2. Measure B and Measure BB Paratransit Discretionary Grant Program Funds

a. The Measure B Expenditure Plan dedicates 1.43 percent of the funds for gaps in services to be recommended by PAPCO to reduce differences that might occur based on the geographic residence of any individual needing services. The Alameda CTC will administer a Measure B Paratransit discretionary grant program.

b. The Measure BB Expenditure Plan dedicates 1.0 percent of the funds for paratransit coordination and services to meet the needs of seniors and people with disabilities. The Alameda CTC will administer a Measure B Paratransit discretionary grant program.

c. The Alameda CTC adopt Grant Program Guidelines through its programming and allocation processes.to guide the grant allocations.

d. Gap funds provide Alameda County with the opportunity to be innovative and explore alternative service delivery mechanisms in the face of a senior and disability population expected to grow substantially over the next 30 years. The population of people likely to need paratransit service is expected to outpace the growth in sales tax revenues that fund

paratransit programs in Alameda County, including city-based programs and ADA-mandated services.

e. Gap funds provide an opportunity to minimize the differences in service experienced by consumers based on their geographic location.

Section 6. Advancement of Direct Local Distribution Funds

A. The Alameda CTC may consider advancing future year DLD funds, with the goal of seeing improvements made in the near term. If a jurisdiction is interested in this option, a written request to the Alameda CTC Director of Finance and Administration and a copy to the Deputy Director of Projects and Programs, indicating the amount of funds requested and the projects on which the funds will be spent, is required. Requests will be considered on an individual basis.

Section 7. Adoption of Implementation Guidelines

A. Implementation Guidelines are adopted by the Alameda CTC on an as-needed basis. Changes to Implementation Guidelines will be brought through the Alameda CTC's Technical Advisory Committee for review and comment, as well as any other Alameda CTC committees as necessary, before changes are adopted by the Alameda CTC Commission.

Implementation Guidelines and Performance Measures – Special Transportation for Seniors and People with Disabilities Program

Implementation Guidelines

These guidelines lay out the service types that are eligible to be funded with Alameda County Measure B (2000), Measure BB (2014) and Vehicle Registration Fee (VRF, 2010) revenues under the Special Transportation for Seniors and People with Disabilities Program (Paratransit). All programs funded partially or in their entirety through these sources, including ADA-mandated paratransit services, city-based non-mandated programs and discretionary grant funded projects, must abide by the following requirements for each type of paratransit service.

Fund recipients are able to select which of these service types are most appropriate for their community to meet the needs of seniors and people with disabilities. Overall, all programs should be designed to enhance quality of life for seniors and people with disabilities by offering accessible, affordable and convenient transportation options to reach major medical facilities, grocery stores and other important travel destinations to meet life needs. Ultimately, whether a destination is important should be determined by the consumer.

The chart below summarizes the eligible service types and their basic customer experience parameters; this is followed by more detailed descriptions of each.

Service	Timing	Accessibility	Origins/ Destinations	Eligible Population
ADA Paratransit	Pre-scheduled	Accessible	Origin-to-Destination	People with disabilities unable to ride fixed route transit
Door-to-Door Service	Pre-scheduled	Accessible	Origin-to-Destination	People with disabilities unable to ride fixed route transit and seniors
Taxi Subsidy	Same Day	Varies	Origin-to-Destination	Seniors and people with disabilities

Service	Timing	Accessibility	Origins/ Destinations	Eligible Population
Specialized Accessible Van	Pre-scheduled & Same Day	Accessible	Origin-to-Destination	People with disabilities using mobility devices that require lift- or ramp-equipped vehicles
Accessible Shuttles	Fixed Schedule	Accessible	Fixed or Flexed Route	Seniors and people with disabilities
Group Trips	Pre-scheduled	Varies	Round Trip Origin-to-Destination	Seniors and people with disabilities
Volunteer Drivers	Pre-scheduled	Generally Not Accessible	Origin-to-Destination	Vulnerable populations with special needs, e.g. requiring door-through-door service or escort
Mobility Management and/or Travel Training	N/A	N/A	N/A	Seniors and people with disabilities
Scholarship/ Subsidized Fare Programs	N/A	N/A	N/A	Seniors and people with disabilities
Meal Delivery Programs	N/A	N/A	N/A	Meal delivery programs currently funded by Measure B may continue, but new programs may not be established.
Capital Expenditures	N/A	Accessible	N/A	Seniors and people with disabilities

Service	Timing	Accessibility	Origins/ Destinations	Eligible Population
Hospital Discharge Transportation Service (HDTS)/Wheelchair Scooter Breakdown Transportation Service (WSBTS)	Same Day	Accessible	Origin-to-Destination	People with disabilities using mobility devices that require lift- or ramp-equipped vehicles

Note on ADA Mandated Paratransit: Programs mandated by the American's with Disabilities Act are implemented and administered according to federal guidelines that may supersede these guidelines; however all ADA-mandated programs funded through Measure B and BB or the VRF are subject to the terms of the Master Programs Funding Agreement.

Interim Service for Consumers Awaiting ADA Certification: At the request of a health care provider, or ADA provider, city-based programs must provide interim service through the programs listed below to consumers awaiting ADA certification. Service must be provided within three business days of receipt of application.

Note on Capital Expenditures: Any capital expenditures within the eligible service categories must be consistent with the objectives of the Alameda CTC Special Transportation for Seniors and Peoples with Disabilities (Paratransit) Program described above and are subject to review by Alameda CTC staff prior to implementation.

City-based Door-to-Door Service Guidelines	
Service Description	City-based door-to-door services provide pre-scheduled, accessible, door-to-door trips. Some programs allow same day reservations on a space-available basis. They provide a similar level of service to mandated ADA services. These services are designed to fill gaps that are not met by ADA-mandated providers and/or relieve ADA-mandated providers of some trips. This service type does not include taxi subsidies which are discussed below.
Eligible Population	Eligible Populations include: 1. People 18 and above with disabilities who are unable to use fixed route services. Cities may, at their discretion, also provide services to consumers with disabilities under the age of 18, and 2. Seniors 80 years or older without proof of a disability. Cities may provide services to consumers who are younger than age 80, but not younger than 70 years old. *Cities may continue to offer "grandfathered" eligibility to program registrants below 70 years old who have used the program regularly in FY 11/12, as long as it does not impinge on the City's ability to meet the minimum requirements of the Implementation Guidelines.* *Program sponsors may use either ADA eligibility, as established by ADA-mandated providers (incl. East Bay Paratransit, LAVTA, Union City Transit) or the Alameda County City-Based Paratransit Services Medical Statement Form, as proof of disability. Program sponsors may, at their discretion, also offer temporary eligibility due to disability.*
Time & Days of Service	At a minimum, service must be available any five days per week between the hours of 8 am and 5 pm (excluding holidays). At a minimum, programs must accept reservations between the hours of 9 am and 5 pm Monday – Friday (excluding holidays).
Fare (Cost to Customer)	Fares for pre-scheduled service should not exceed local ADA paratransit fares, but can be lower, and can be equated to distance. Higher fares can be charged for "premium" same-day service.

City-based Door-to-Door Service Guidelines	
Other	Door-to-Door programs must demonstrate that they are providing trips at an equal or lower cost than the ADA-mandated provider on a cost per trip basis. Cost per trip is defined as total cost (all sources) during a reporting period divided by the number of one-way trips, including attendant and companion trips, provided during period. Programs may impose per person trip limits to due to budgetary constraints, but any proposed trip limitations that are based on trip purpose must be submitted to Alameda CTC staff for review prior to implementation.

Taxi Subsidy Program Guidelines	
Service Description	Taxis provide curb-to-curb service that can be scheduled on a same-day basis. They charge riders on a distance/time basis using a meter. Taxi subsidy programs allow eligible consumers to use taxis at a reduced fare by reimbursing consumers a percentage of the fare or by providing some fare medium, e.g. scrip or vouchers, which can be used to cover a portion of the fare. These programs are intended for situations when consumers cannot make their trip on a pre-scheduled basis. The availability of accessible taxi cabs varies by geographical area and taxi provider, but programs should expand availability of accessible taxi cabs where possible in order to fulfill requests for same-day accessible trips.
Eligible Population	Eligible Populations include: 1. People 18 and above with disabilities who are unable to use fixed route services. Cities may, at their discretion, also provide services to consumers with disabilities under the age of 18, and 2. Seniors 80 years or older without proof of a disability. Cities may provide services to consumers who are younger than age 80, but not younger than 70 years old. *Cities may continue to offer "grandfathered" eligibility to program registrants below 70 years old who were enrolled in the program in FY 11/12 and have continued to use it regularly, as long as it does not impinge on the City's ability to meet the minimum requirements of the Implementation Guidelines.* *Program sponsors may use either ADA eligibility, as established by ADA-mandated providers (incl. East Bay Paratransit, LAVTA, Union City*

Taxi Subsidy Program Guidelines	
	Transit) or the Alameda County City-Based Paratransit Services Medical Statement Form, as proof of disability. Program sponsors may, at their discretion, also offer temporary eligibility due to disability. *ADA-mandated providers that are not also city-based providers (East Bay Paratransit and LAVTA) are not required to provide service to seniors 80 years or older without ADA eligibility.*
Time & Days of Service	24 hours per day/7 days per week
Fare (Cost to Customer)	Programs must subsidize at least 50% of the taxi fare. Programs can impose a cap on total subsidy per person. This can be accomplished through a maximum subsidy per trip, a limit on the number of vouchers/scrip (or other fare medium) per person, and/or a total monetary subsidy per person per year.
Other	Programs may also use funding to provide incentives to drivers and/or transportation providers to ensure reliable service. Incentives are often utilized to promote accessible service. Planned expenditures on incentives are subject to review by Alameda CTC staff prior to implementation.

City-based Specialized Accessible Van Service Guidelines	
Service Description	Specialized Accessible van service provides accessible, door-to-door trips on a pre-scheduled or same-day basis. This service category is not intended to be as comprehensive as primary services (i.e. ADA-mandated, City-based Door-to-Door, or Taxi programs), but should be a complementary supplement in communities where critical needs for accessible trips are not being adequately met by the existing primary services. Examples of unmet needs might be a taxi program without accessible vehicles, medical trips for riders with dementia unable to safely take an ADA-mandated trip, or trips outside of the ADA-mandated service area. When possible, a priority for this service should be fulfilling requests for same-day accessible trips. This service may make use of fare mediums such as scrip and vouchers to allow consumers to pay for rides.
Eligible Population	At discretion of program sponsor with local consumer input.

Time & Days of Service	At discretion of program sponsor with local consumer input.
Fare (Cost to Customer)	At discretion of program sponsor with local consumer input.
Other	Specialized Accessible van programs must demonstrate that they are providing trips at an equal or lower cost to the provider than the ADA-mandated provider on a cost per trip basis, except if providing same-day accessible trips. Cost per trip is defined as total cost (all sources) during a reporting period divided by the number of one-way trips, including attendant and companion trips, provided during period.

Accessible Shuttle Service Guidelines	
Service Description	Shuttles are accessible vehicles that operate on a fixed, deviated, or flex-fixed route and schedule. They serve common trip origins and destinations visited by eligible consumers, e.g. senior centers, medical facilities, grocery stores, BART and other transit stations, community centers, commercial districts, and post offices. Shuttles should be designed to supplement existing fixed route transit services. Routes should not necessarily be designed for fast travel, but to get as close as possible to destinations of interest, such as going into parking lots or up to the front entrance of a senior living facility. Shuttles are often designed to serve active seniors who do not drive but are not ADA paratransit registrants.
Eligible Population	Shuttles should be designed to appeal to older people, but can be made open to the general public.
Time and Days of Service	At discretion of program sponsor with local consumer input.
Fare (Cost to Customer)	At discretion of program sponsor, but cannot exceed local ADA paratransit fares. Fares may be scaled based on distance.

Accessible Shuttle Service Guidelines	
Cost of Service	By end of the second fiscal year of service, the City's cost per one-way person trip cannot exceed $20, including transportation and direct administrative costs. Cost per trip is defined as total cost (all sources) during a reporting period divided by the number of one-way trips, including attendant and companion trips, provided during period.
Other	Shuttles are required to coordinate with the local fixed route transit provider. Shuttle routes and schedules should be designed with input from the senior and disabled communities and to ensure effective design, and any new shuttle plan must be submitted to Alameda CTC staff for review prior to implementation. Deviations and flag stops are permitted at discretion of program sponsor.

Group Trips Service Guidelines	
Service Description	Group trips are round-trip rides for pre-scheduled outings, including shopping trips, sporting events, and community health fairs. These trips are specifically designed to serve the needs of seniors and people with disabilities and typically originate from a senior center or housing facility and are generally provided in accessible vans and other vehicle types or combinations thereof.
Eligible Population	At discretion of program sponsor.
Time and Days of Service	Group trips must begin and end on the same day.
Fare (Cost to Customer)	At discretion of program sponsor.
Other	Programs can impose mileage limitations to control program costs.

Volunteer Driver Service Guidelines	
Service Description	Volunteer driver services are pre-scheduled, door-through-door services that are typically not accessible. These programs rely on volunteers to drive eligible consumers for critical trip needs, such as medical trips. Programs may use staff to complete intake or fill gaps. This service meets a key mobility gap by serving more vulnerable populations and should complement existing primary services (i.e. ADA-mandated, City-based Door-to-Door, or Taxi). Volunteer driver programs may also have an escort component where volunteers accompany consumers on any service eligible for paratransit funding, when they are unable to travel in a private vehicle.
Eligible Population	At discretion of program sponsor.
Time and Days of Service	At discretion of program sponsor.
Fare (Cost to Customer)	At discretion of program sponsor.
Other	Program sponsors can use funds for administrative purposes and/or to pay for volunteer mileage reimbursement purposes (not to exceed Federal General Services Administration (Privately Owned Vehicle) Mileage Reimbursement Rates) or an equivalent financial incentive for volunteers.

Mobility Management and/or Travel Training Service Guidelines	
Service Description	Mobility management services cover a wide range of activities, such as travel training, escorted companion services, coordinated services, trip planning, and brokerage. Mobility management activities often include education and outreach which play an important role in ensuring that people use the "right" service for each trip, e.g. using EBP from Fremont to Berkeley for an event, using a taxi voucher for a same-day semi-emergency doctor visit, and requesting help from a group trips service for grocery shopping.
Eligible Population	At discretion of program sponsor.

Mobility Management and/or Travel Training Service Guidelines	
Time and Days of Service	At discretion of program sponsor.
Fare (Cost to Customer)	N/A
Other	For new mobility management and/or travel training programs, to ensure effective program design, a plan with a well-defined set of activities must be submitted to Alameda CTC staff for review prior to implementation.

Scholarship/Subsidized Fare Program Guidelines	
Service Description	Scholarship or Subsidized Fare Programs can subsidize any service eligible for paratransit funding and/or fixed-route transit for customers who are low-income and can demonstrate financial need.
Eligible Population	Subsidies can be offered to low-income consumers with demonstrated financial need who are currently eligible for an Alameda County ADA-mandated or city-based paratransit program. Low income requirements are at discretion of program sponsors, but the requirement for household income should not exceed 50% AMI (area median income).
Time and Days of Service	N/A
Fare (Cost to Customer)	N/A
Other	Low-income requirements and the means to determine and verify eligibility must be submitted to Alameda CTC staff for review prior to implementation. If program sponsors include subsidized East Bay Paratransit (EBP) tickets in this program, no more than 3% of a program sponsor's Alameda CTC distributed funding may be used for the ticket subsidy. Other services or purposes proposed for scholarship and/or fare subsidy must be submitted to Alameda CTC staff for review prior to implementation.

Meal Delivery Funding Guidelines	
Service Description	Meal Delivery Funding programs provide funding to programs that deliver meals to the homes of individuals who are generally too frail to travel outside to congregate meal sites. Although this provides access to life sustaining needs for seniors and people with disabilities, it is not a direct transportation expense.
Eligible Population	For currently operating programs, at discretion of program sponsor.
Time and Days of Service	For currently operating programs, at discretion of program sponsor.
Fare (Cost to Customer)	For currently operating programs, at discretion of program sponsor.
Other	Currently operating funding programs may continue, but new meal delivery funding programs may not be established.

Capital Expenditures Guidelines	
Description	Capital expenditures are eligible if directly related to the implementation of a program or project within an eligible service category, including but not limited to, purchase of scheduling software, accessible vehicles and equipment and accessibility improvements at shuttle stops.
Eligible Population	N/A
Time and Days of Service	N/A
Fare (Cost to Customer)	N/A
Other	Capital expenditures are to support the eligible service types included in the Implementation Guidelines and must be consistent with objectives of the Alameda CTC Special Transportation for Seniors and Peoples with Disabilities (Paratransit) Program. Planned expenditures are subject to review by Alameda CTC staff prior to implementation.

Hospital Discharge Transportation Service (HDTS)/ Wheelchair Scooter Breakdown Transportation Service (WSBTS)	
Service Description	These are specialized Countywide services providing accessible, door-to-door trips on a same-day basis in case of hospital discharge or mobility device breakdown. These services are overseen by the Alameda CTC.
Eligible Population	At discretion of Alameda CTC. Targeted towards seniors and people with disabilities without other transportation options who need trips on a same-day basis in case of hospital discharge or mobility device breakdown.
Time & Days of Service	At discretion of Alameda CTC.
Fare (Cost to Customer)	No cost to consumer.

Implementation Guidelines and Performance Measures – Special Transportation for Seniors and People with Disabilities Program

Performance Measures

The Alameda CTC collects performance data from all programs funded with Alameda County Measure B (2000), Measure BB (2014) and Vehicle Registration Fee (VRF, 2010) revenues. All programs funded partially or in their entirety through these sources must at a minimum report annually through the Annual Compliance Report for Direct Local Distribution (DLD) funding on the performance measures identified within the Implementation Guidelines for each DLD program.

The performance measures for the Measure B and Measure BB Direct Local Distribution (DLD) funding distributed through the Special Transportation for Seniors and People with Disabilities (Paratransit) Program, which funds ADA-mandated paratransit services, city-based non-mandated paratransit programs and discretionary grant-funded projects, are identified below. Additional performance-related data may be required through separate discretionary grant guidelines or to report to the Alameda CTC's Commission or one of its community advisory committees.

ADA-mandated Paratransit
• Number of one-way trips provided • Total Measure B/BB cost per one-way trip *(Total Measure B/BB program cost during period divided by the number of one-way trips provided during period.)*

City-based Door-to-Door Service
• Number of one-way trips provided • Total Measure B/BB cost per one-way trip *(Total Measure B/BB program cost during period divided by the number of one-way trips provided during period.)*

Taxi Subsidy Program
• Number of one-way trips provided • Total Measure B/BB cost per one-way trip *(Total Measure B/BB program cost during period divided by the number of one-way trips provided during period.)*

City-based Specialized Accessible Van Service
• Number of one-way trips provided • Total Measure B/BB cost per one-way trip *(Total Measure B/BB program cost during period divided by the number of one-way trips provided during period.)*

Accessible Shuttle Service
• Total ridership *(One-way passenger boardings)* • Total Measure B/BB cost per one-way passenger trip *(Total Measure B/BB program cost during period divided by the total ridership during period.)*

Group Trips Service
• Number of one-way passenger trips provided • Total Measure B/BB cost per passenger trip *(Total Measure B/BB program cost during period divided by the number of passenger trips provided during period.)*

Volunteer Driver Service
• Number of one-way trips provided • Total Measure B/BB cost per one-way trip *(Total Measure B/BB program cost during period divided by the number of one-way trips provided during period.)*

Mobility Management Service
• Number of contacts provided with mobility management support • Total Measure B/BB cost per individual provided with mobility management support *(Total* Measure B/BB *program cost during period divided by the number of individuals provided with support during period.)*

Travel Training Service
• Number of individuals trained • Total Measure B/BB cost per individual trained *(Total Measure B/BB program cost during period divided by the number of individuals trained during period)*

Scholarship/Subsidized Fare Program
• Number of unduplicated individuals who received scholarship/subsidized fares • Number of one-way fares/tickets subsidized • Total Measure B/BB cost per subsidy *(Total Measure B/BB program cost during period divided by the number of subsidized fares/tickets during period)*

Meal Delivery Funding
• Number of meal delivery trips • Total Measure B/BB cost per meal delivery trip *(Total Measure B/BB program cost during period divided by the number of meal delivery trips during period)*

BART to Livermore Extension

AUGUST 2018

PROJECT OVERVIEW

The San Francisco Bay Area Rapid Transit (BART) District, in partnership with the Alameda County Transportation Commission (Alameda CTC), proposed a 4.8-mile extension of the Dublin/Pleasanton line along Interstate 580 (I-580) to the City of Livermore with a new station in the vicinity of the Isabel Avenue/ I-580 interchange.

I-580 is a vital commute and freight corridor linking economic centers in the Bay Area with the Central Valley. The project was originally funded through the initial phases of project development, which included project scoping and a program level environmental impact report (EIR). Since the successful passage of Alameda County's Measure BB, BART moved forward with a Project level environmental document and in May 2018, the final EIR was certified. Measure BB would contribute an additional $400 million for the construction phase of the project.

Due to Assembly Bill 758, future planning is directed to the Tri-Valley-San Joaquin Valley Regional Rail Authority, which is tasked to establish a connection between BART and ACE.

PROJECT NEED

- An affordable and effective inter-regional and inter-modal link is needed from the existing BART system to inter-regional rail service and priority development areas (PDAs) in Livermore. This connection was identified as an important inter-regional link in the San Francisco Bay Area Regional Rail Plan (2007).
- Regional and inter-regional congestion in this corridor continues to grow.
- An alternative to traffic congestion along the I-580 corridor is needed to improve air quality and reduce greenhouse gases and other emissions associated with automobile use.

PROJECT BENEFITS

- Extends BART 4.8-miles from existing Dublin/Pleasanton Station along I-580 in the median.
- A new station near I-580/Isabel Avenue interchange.
- Links BART to inter-regional rail service at the Downtown Livermore and Vasco Road ACE train stations and to local PDAs via express bus service.
- Provides an efficient BART-to-bus transfer service.
- Accessible to bicyclists and pedestrians of all ages and abilities.
- Supports regional goals of integrating transit and land use policies.

BART traversing the median on Interstate 580, a vital commute and freight corridor that links Bay Area economic centers with the Central Valley.

Bay Area BART station.

Bay Area BART tracks in construction.

STATUS

Implementing Agency: BART

Current Phase: Scoping/Project-Level Environmental

The program level EIR was certified in July 2010.

In May 2018, BART Board of Directors certified the final EIR in accordance to the California Environmental Quality Act. The BART Board voted to not select an alternative for advancement. For more information, including other proposed alternatives, visit www.bart.gov/about/project/liv.

Information related to the Tri-Valley-San Joaquin Valley Regional Rail Authority's efforts, visit: www.acetobart.org.

COST ESTIMATE BY PHASE ($ X 1,000)

Scoping/PE/Environmental	$18,656
Final Design – Plans, Specifications and Estimates (PS&E)	TBD
Right-of-Way	TBD
Utility Relocation	TBD
Construction[1]	$400,000
Total Expenditures	**$418,656**

[1]$400,000 are Measure BB funds earmarked for construction only once a project alternative has been identified.

FUNDING SOURCES ($ X 1,000)

Measure BB[2]	$400,000
Measure B	$4,583
State	$1,700
Regional	$12,373
Total Revenues	**$418,656**

[2]Measure BB funds are available for the construction phase only.

SCHEDULE BY PHASE

	Begin	End
Preliminary Engineering/ Environmental Impact Review (EIR)	Summer 2008	Summer 2010
Scoping	Winter 2010	Summer 2012
Scoping/Project-Level Environmental	Summer 2012	Spring 2018

PARTNERS AND STAKEHOLDERS

2020 Comprehensive Investment Plan Summary

Background:

On June 17, 2019, the Commission approved the 2020 Comprehensive Investment Plan (2020 CIP which included approximately $222M programmed from fiscal year 2019/20 through 2023/24, and $163M allocated over the first two years.

The 2020 CIP shifts previous the five-year programming horizon to encompass fiscal years 2019/20 through 2023/24. The 2020 CIP programming strategy includes the following categories.

1. Programming to Allocation Conversions: Of the $105M in local funds programmed through the 2018 CIP, Alameda CTC staff recommends $70.5M be converted to allocation based on project sponsors' request for allocations and project readiness.

2. New programming and allocations: In the Spring 2019, Alameda CTC conducted a call for projects for the Seniors and People with Disabilities (Paratransit) Program, TFCA program, and invited new programming requests from project sponsors for transportation projects that merited immediate programming in the 2020 CIP based on the 2020 CIP framework approved by the Commission. Alameda CTC evaluated each proposal, and recommends $41.9M in new programming of Measure B, BB, Vehicle Registration Fee (VRF) and Transportation Fund For Clean Air (TFCA) funds, of which $36.5M is allocated in the first two years of the 2020 CIP.

3. General programming adjustments: These adjustments include reprogramming funds to an outer year and deprogramming funds due to project implementation issues resulting from project delays, cancelled projects, project savings, or revised sponsor project delivery strategies. It also includes changing/consolidating fund sources in an effort to maximize funding investments.

The policies, procedures and guidelines for the 2020 CIP Update have remained changes. The full policies, procedures and guidelines can be found on the website: https://www.alamedactc.org/funding/funding-opportunities/

Planning, Policy and Legislation Committee Meeting Agenda
Monday, May 11, 2020, 11:30 a.m.

Due to the statewide stay at home order and the Alameda County Shelter in Place Order, and pursuant to the Executive Order issued by Governor Gavin Newsom (Executive Order N-29-20), the Commission will not be convening at its Commission Room but will instead move to a remote meeting.

The technology for this meeting may not be able to accommodate verbal comments from the public over the telephone or webcast connection and therefore we request that you submit public comments electronically. Your comments will be read aloud to the Commission and those listening telephonically or electronically. Submit comments to: vlee@alamedactc.org in advance or during the meeting.

Committee Chair:	Elsa Ortiz, AC Transit	Executive Director:	Tess Lengyel
Vice Chair:	Barbara Halliday, City of Hayward	Staff Liaison:	Carolyn Clevenger
Members:	Jesse Arreguin, Keith Carson, Marilyn Ezzy Ashcraft, Scott Haggerty, Rebecca Kaplan, Nick Pilch, Richard Valle	Clerk of the Commission:	Vanessa Lee
Ex-Officio:	Pauline Russo Cutter, John Bauters		

Location Information:

Virtual Meeting Information:	**https://zoom.us/j/96447793311** **Webinar ID: 950 8606 6465**
For Public Access Dial-in Information:	**(669) 900-6833** **Webinar ID: 950 8606 6465**

To request accommodation or assistance to participate in this meeting, please contact Vanessa Lee, the Clerk of the Commission, at least 48 hours prior to the meeting date at: vlee@alamedactc.org

Notes:

- All items on the agenda are subject to action and/or change by the Commission.
- To comment on an item not on the agenda (3-minute limit), submit a speaker card to the clerk.
- Call 510.208.7450 (Voice) or 1.800.855.7100 (TTY) five days in advance to request a sign-language interpreter.
- If information is needed in another language, contact 510.208.7400. Hard copies available only by request.
- Call 510.208.7400 48 hours in advance to request accommodation or assistance at this meeting.
- Meeting agendas and staff reports are available on the website calendar.
- Alameda CTC is located near 12th St. Oakland City Center BART station and AC Transit bus lines. Directions and parking information are available online.

ALAMEDA County Transportation Commission

Memorandum

1111 Broadway, Suite 800, Oakland, CA 94607 • 510.208.7400 • www.AlamedaCTC.org

DATE:	May 4, 2020
TO:	Planning, Policy and Legislation Committee
FROM:	Tess Lengyel, Executive Director Carolyn Clevenger, Deputy Executive Director of Planning and Policy
SUBJECT:	Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

Recommendation

It is recommended that the Commission approve the Tri-Valley-San Joaquin Valley Regional Rail Authority (TVSJVRRA) request (Attachment A) for an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP) to: 1) acknowledge TVSJVRRA as a new agency in Alameda County that can be an eligible recipient of Measure BB funds; 2) remove the BART to Livermore project and associated $400 million Measure BB funding; 3) add Valley Link in Alameda County project with $400 million in Measure BB funding; and 4) make associated technical amendments. Approval of this item will initiate a 45-day comment period by jurisdictions in Alameda County on the proposed amendment, which would then return to the Committee and Commission for final action. This is an action item and requires 2/3 approval at the Commission meeting per the Implementing Guidelines of the 2014 TEP.

Summary

The 2014 Measure BB TEP included $400 million for BART to Livermore. Since that time, a significant number of developments have occurred on the project and in the project area, as detailed in the Project Background section of this memo. The TVSJVRRA was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and commuter rail service in the Tri-Valley and San Joaquin County that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities.

In 2017, BART released the Draft Environmental Impact Report for BART to Livermore. In May 2018 the BART Board voted to certify the Final EIR. The Board also passed a motion directing the General Manager to not advance an alternative, effectively passing over to the TVSJVRRA the ability to plan for a connection to the Dublin/Pleasanton BART Station in July 2018. The TVSJVRRA then assumed the lead role for the project, now known as Valley Link.

The TVSJRRA has requested Alameda CTC to amend the TEP to add Valley Link and move the $400 million from the BART to Livermore TEP project to Valley Link. The TEP amendment process, as detailed later in this memo, requires a 45-day comment period by jurisdictions in Alameda County. This recommended action would authorize the initiation of the 45-day comment period. Staff will then return to PPLC and the Commission after the completion of the comment period for final action on the proposed TEP amendment. Once a final amendment is recommended to the Commission after the comment period, a 2/3 vote by the Commission is needed per the TEP Implementing Guidelines.

The proposed amendment includes the following elements, which are documented in Attachments B and C:

1) Acknowledgement of the TVSJVRRA as a new agency in Alameda County that is an eligible recipient of Measure BB funds (Attachment B, Plan Amendment Resolution).
2) Removal of the BART to Livermore Project: The amendment would remove reference to the BART to Livermore project, which was a named capital project in the BART Expansion and Maintenance program of the TEP and the associated $400 million.
3) Addition of the Valley Link project: The amendment would add the Valley Link project as a new named capital project under the Commuter Rail Improvements program of the TEP and would include $400 million in Measure BB funding.
4) Technical Adjustments: The amendment would make minor technical adjustments, such as updating maps and tables, to reflect the changes noted above (as shown in Attachment C, TEP Redline Markups).

Project Background

A BART extension to Livermore has been a longstanding project, dating back in concept to the 1960s when the BART system was originally envisioned. Over the years, there have been efforts by many residents, local elected officials, and other stakeholders to extend the BART alignment to Livermore, including planning, funding and project development efforts.

Regional and State Rail Planning

In 2007, the San Francisco Bay Area Regional Rail Plan developed by the Metropolitan Transportation Commission (MTC) identified the BART to Livermore extension as an important inter-regional rail connection. The Regional Rail Plan envisioned that BART should connect to the ACE train service in Livermore in order to provide a reliable and fast transit option for the growing congestion over the Altamont Pass and along the I-580 corridor. The importance of rail service between the Tri-Valley and San Joaquin Valley was reiterated in the 2018 California State Rail Plan, which calls for a Tri-Valley rail hub and increased rail frequencies and connectivity over the Altamont Corridor.

BART to Livermore Project

By the 1980s, the extension of BART further east in the Tri-Valley was already under serious consideration. In the mid-1980s, BART purchased a potential site for a future station near the Isabel Avenue and Interstate 580 interchange and a site in the vicinity of Greenville Road and Interstate 580 for purposes of preserving land for a potential station and yard/maintenance facility. In 1997, the Dublin/Pleasanton line was opened, with a West Dublin station added in 2011.

Numerous local and regional transportation measures have included support for BART to Livermore, starting with the 1986 Alameda County Measure B, which included $170 million for a "Rail extension to Dublin Canyon". The 2000 TEP included funding of $8.7 million for "I-580 Corridor/BART to Livermore Studies". Measure BB included $400 million in the 2014 TEP for "BART to Livermore". The project also received Regional Measure 1 bridge toll funding to advance planning and environmental work. In June 2018, Bay Area voters approved Regional Measure 3, which includes $100 million for "Tri-Valley Transit Access Improvements."

In 2010, after two years of analysis, BART completed a Program Environmental Impact Report (EIR) that evaluated the feasibility of five potential station sites and 10 different alignments for the BART to Livermore extension. In 2012, the BART Board of Directors directed its staff to advance the conceptual engineering and environmental review of a one-station extension to Isabel Avenue (Proposed Project), as well as to coordinate with the City of Livermore on the land use planning around the future station site.

In 2014, Alameda County voters approved Measure BB to fund the 2014 TEP, which includes $400 million in dedicated funding for the BART to Livermore extension. Measure BB commits funds to support construction of the extension of BART in the I-580 corridor using the most effective and efficient technology.

On July 31, 2017, BART released the Draft Project EIR evaluating the Proposed Project and alternatives. In May 2018, BART released the Final Project EIR. The BART Board certified the Final Project EIR on May 24, 2018 and directed staff to not advance a specific project.

As major transportation project planning and analysis was underway, cities also advanced land use planning around future rail service. The City of Livermore prepared the Isabel Neighborhood Plan and program-level EIR for development around a new station. The Livermore City Council adopted the Isabel Neighborhood Plan and certified the EIR for the Plan in May 2018.

ACEforward Program

The San Joaquin Regional Rail Commission (SJRRC) ACEforward program outlined a vision for a phased rail infrastructure and service improvement plan to increase frequency, increase service reliability, and enhance passenger facilities along the existing ACE service corridor from San Jose to Stockton, and to extend ACE service to Modesto and Merced. The (SJRRC) released a Draft EIR in May of 2017 that was later rescinded; however, the technical

documents developed by the SJRRC for the ACEforward Draft EIR were made available to the TVSJVRRA for advancement of the Valley Link Project Feasibility Report and Draft EIR.

Creation of TVSJVRRA

In 2017 Assemblymembers Catharine Baker and Susan Eggman authored AB 758, which created the TVSJVRRA. The TVSJVRRA is led by a 15-member governing Board comprised of representatives from the counties of Alameda and San Joaquin; the cities of Dublin, Livermore, Pleasanton, Danville, San Ramon, Tracy, Lathrop, Stockton, and Manteca; Mountain House Community Services District; the Livermore Amador Valley Transit Authority (LAVTA), BART, and the San Joaquin Regional Rail Commission (SJRRC). The goal established for the TVSJVRRA is to deliver a cost-effective connection from the San Joaquin Valley to the BART system and the ACE system that reflects regional consensus and meet the goals and objectives of the San Joaquin Valley and Tri-Valley communities, consistent with a feasibility report.

AB 758 specifically stated that the TVSJVRRA would only assume planning, development and delivery of a rail extension should the BART Board fail to adopt a preferred alternative for a BART extension by June 30, 2018. When the BART Board voted to not advance the BART to Livermore project, the TVSJVRRA assumed responsibility to advance the project per AB 758. The TVSJVRRA adopted several goals and policies to guide the development of the project.

A key requirement of AB 758 was that the TVSJVRRA Board approve a Feasibility Report for the project. The Final Feasibility Report was approved in October 2019. The TVSJVRRA has continued to work to advance the project, initiating the environmental impact analysis and preliminary design engineering work.

TVSJVRRA Adopted Project Goals:

The following goals were adopted by the TVSJVRRA to address identified regional and economic and transportation challenges:

- Improve connectivity within the Bay Area Megaregion: connecting housing, people and jobs.
- Establish rail connectivity between the Bay Area Rapid Transit District's rapid transit system and the Altamont Corridor Express commuter service.
- Pursue project implementation that is fast, cost-effective and responsive to the goals and objectives of the communities it will serve.
- Be a model of sustainability in the design, construction, and operation of the system.
- Support the vision of the California State Rail Plan to connect the Northern California Megaregion to the State rail system.

Valley Link Project Development Policies

The TVSJVRRA adopted several policies to guide the development framework of the project, including the following sustainability and transit-oriented development policies:

- Sustainability Policy: Identifies implementing strategies to achieve a zero emissions system. The adopted Sustainability Policy includes a commitment to encourage engagement in planning and decision-making for the project to ensure a meaningful level of participation from disadvantaged communities and low-income communities and households. It further directs maximizing benefits to these communities and households in the project planning and design of Valley Link. Four of the proposed stations in San Joaquin County are within disadvantaged community geographic areas and/or designated as low-income communities.
- Transit Oriented Development (TOD) Policy: Support the regional goals of both San Joaquin County and the Bay Area to support the advancement of transit-oriented development (TOD) in Valley Link station areas. The policy mirrors the TOD guidelines outlined in MTC Resolution 3434 TOD guidelines and identifies key policy objectives and strategies to:
    - Develop and implement station area plans that meet or exceed a corridor-level threshold of 2,200 housing units within a half mile radius of stations.
    - Develop station area plans that, at a minimum, define the land use plan for the area, zoning, design standards, parking policies and station access plans.

The intent of these policies is to develop strategies to create vibrant and livable station area communities within the proposed station environs. The advancement of transit-oriented development adjacent to stations aims to further reduce Vehicle Miles Traveled (VMT) and greenhouse gas emissions (GHG) for the project. Station area plans are currently under development at the Isabel, Downtown Tracy and River Islands stations. The Dublin/Pleasanton and Isabel Stations are in established MTC Priority Development Areas (PDA) and an application for a Southfront Station PDA was recently submitted by the City of Livermore to MTC/ABAG as a new PDA.

Valley Link Project Description

Valley Link is a proposed new rail service between Alameda and San Joaquin Counties that will provide passenger rail services between the existing Dublin/Pleasanton BART Station and the City of Stockton. The proposed project includes seven stations on a 42-mile alignment that is expected to run along the existing I-580 corridor (11.5 miles), through the Altamont Pass using the Alameda County-owned former Southern Pacific Railroad corridor (12.5 miles) and on existing UPRR rail corridor (17.5 miles) into San Joaquin County. Design work is currently underway as part of the EIR process and will examine detailed project right-of-way needs and potential impacts in more detail.

Attachment D includes a summary fact sheet and diagram of the proposed project.

The project costs included in the Final Feasibility Report range from a low year of expenditure cost of $2.4 billion to a high year of expenditure cost of $3.2 billion. The project is currently in the EIR process, and will begin both the Caltrans project development process and NEPA environmental clearance process in 2020 and 2021 respectively.

To date, a total of $628 million is identified by the TVSJVRRA as available for the project: $400 million in Measure BB funds (per a 2014 TEP amendment), $188 million in Bridge Toll funds (including $100 million in Regional Measure 3 funds) and $40 million in impact fees from the City of Livermore. The project is expected to compete for regional, state and federal funds to close the funding need. Other revenue measures in the Bay Area and San Joaquin County, if passed by voters, could be additional revenue sources for the project.

Other Agency Actions

Given the project traverses two counties, two Metropolitan Planning Organization regions, and affects an interstate system, Express Lanes system, and existing rail system and service providers, the TVSJVRRA established an Executive Steering Committee (ESC) comprised of MTC, the San Joaquin Council of Governments (SJCOG), SJRRC, BART, Alameda CTC and Caltrans to provide input on the development of the feasibility report and project development. Alameda CTC's executive director participates in these meetings. Several of these agencies have taken actions to support development of the project:

- MTC: In September 2018, MTC allocated $10.12 million to the TVSJVRRA for CEQA documentation and preliminary engineering on the Valley Link rail project, from the $95 million in AB1171 Bridge Tolls committed to Tri-Valley Transit Access Improvements through MTC Resolution Number 3434. In March 2020, MTC approved an additional allocation of $3 million in AB1171 Bridge Toll funds to the TVSJVRRA for the environmental phase and updates to the preliminary engineering plans.
- SJCOG: In April 2020, the SJCOG Board approved an amendment to its 2018 Regional Transportation Plan to include the Valley Link project, including identification of $163.9 million for the project in the plan from future measures and state funds.
- BART: BART has committed staff to directly lead the early development of the project due to its expertise in developing and delivering similar projects, such as the e-BART extension to Antioch.
- Alameda CTC, the SJRRC and Caltrans have provided technical reviews of preliminary design plans and documents. In addition, the TVSJRRA is in discussion with the City of Tracy regarding donation of a key 200-acre parcel under City of Tracy ownership to the project to be used for an operations and maintenance facility. The property has an estimated value of $20 million and is currently being appraised.

Project Considerations

The project construction will have significant impacts on the I-580 Express Lanes, with major impacts anticipated during construction. The TVSJVRRA staff have been working with Alameda CTC, as well as Caltrans, to identify design and construction considerations. Alameda CTC staff have held several workshops with the project design team to evaluate the preliminary design plans and will continue to be engaged through the ESC and technical groups to provide policy and technical feedback during design development to ensure minimal impacts to the I-580 Express Lanes. Alameda CTC will continue to work closely with the TVSJVRRA as the project design advances, and will also conduct financial analysis to understand potential impacts to toll revenues during construction to ensure revenue losses are addressed.

Proposed Amendments

The amendment that has been requested to be made to the 2014 TEP includes two elements as follows:

- Amend to include the new entity of the TVSJVRRA
- Amend to include the Valley Link Project for $400 million

Existing TEP Language to be Amended

The following is the current language in the 2014 TEP (page 18 of 2014 TEP):

BART Extension and System improvements ($710 M)

The capital projects funded as part of the BART System Modernization and Expansion investments include projects that increase the capacity and utility of the existing system, as well as provide local funding for a proposed BART extension in the eastern part of the county.

> BART to Livermore ($400 M)
>
> This project funds the first phase of a BART Extension within the I-580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology. Funds for construction for any element of this first phase project shall not be used until full funding commitments are identified and approved, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Proposed Changes Throughout the TEP

The 2014 TEP has many references to BART to Livermore or a BART extension and requires changes to several pages in the 2014 TEP. The proposed changes include moving the project from page 18 from the BART section of the TEP to page 20 under the section "Major Transit Corridor and Commuter Rail Improvements", remove references to BART as

the agency leading the rail extension, change references from the BART to Livermore project to Valley Link on pages 2, 3, 14, 18, 19 (map) and add Valley Link to the map on page 21 (see Attachment C).

Specific Changes to Project Description

This following description will be included on page 20 of the 2014 TEP under Major Transit Corridor and Commuter Rail Improvements as shown on Attachment C.

> Valley Link Rail in Alameda County ($400 M)
>
> This project funds the first phase of a Valley Link rail extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Implementing Guidelines Related to this TEP Amendment

Once the 2014 TEP amendments are complete, all the implementing guidelines will be applicable to the project and project sponsor similar to all other TEP projects. Specifically, for this TEP amendment, the following guidelines describe requirements for the amendment as well as the new project sponsor.

4. Amendments Require 2/3 Support: To modify and amend this Plan, an amendment must be adopted by a two-thirds vote of the Alameda CTC Commissioners. All jurisdictions within the county will be given a minimum of 45 days to comment on any proposed Plan amendment.

8. Strict Project Deadlines: To ensure that the projects promised in this plan can be completed in a timely manner, each project will be given a period of seven years from the first year of revenue collection (up to December 31, 2022) to receive environmental clearance approvals and to have a full funding plan for each project. Project sponsors may appeal to the Alameda CTC Commissioners for one-year time extensions.

Note: any new amendments that add a project must comply with this provision and the start date of the seven years will be from the date of the adopted amendment.

11. Commitments from Fund Recipients: All recipients of funds allocated in this expenditure plan will be required to sign a Master Funding Agreement, which details their roles and responsibilities in spending sales tax funds and includes local hiring requirements. Funding agreements will include performance and accountability measures. All funds will be allocated through open and transparent public processes. In

addition, fund recipients will be required to have an annual audit conducted by an independent CPA to ensure that funds are managed and spent according to the requirements of this Plan.

14. No Expenditures Outside of Alameda County: Under no circumstances may the proceeds of this transportation sales tax be applied to any purpose other than for transportation improvements benefitting Alameda County. Under no circumstances may these funds be appropriated by the State of California or any other governmental agency, as defined in the implementation guidelines.

18. New Agencies: New cities or new entities (such as new transit agencies) that come into existence in Alameda County during the life of the Plan may be considered as eligible recipients of funds through a Plan amendment.

Next Steps

Upon Commission approval to initiate the TEP amendment process, a 45-day comment period for jurisdictions in Alameda County will commence. Staff will return to the Commission to report on the comments received and to recommend final action by the Commission later this year.

Fiscal Impact: There is no fiscal impact for this item associated with the requested action.

Dear Chair Cutter,

This letter is intended to supersede the information in the letter written to Chair Valle on September 11, 2019 (attached) as it relates to the language to be amended in the 2014 Transportation Expenditure Plan currently found on page 18. Please use the following language for the amendment:

Valley Link Rail in Alameda County ($400 M)
This project funds the first phase of a Valley Link Rail Extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Thank you,

Alameda County Supervisor Scott Haggerty, Chair

September 11, 2019

Supervisor Richard Valle, Chair
Alameda County Transportation Commission
111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Valle,

In May of 2018 the BART Board decided not to extend conventional BART to Livermore in favor of deferring the development of a rail extension project to the newly established Tri-Valley – San Joaquin Valley Regional Rail Authority ("Authority").

In the statute that created the Authority, AB 758 (Eggman/Baker), the Legislature addressed the transfer of local funds to the Authority for the Valley Link project in Section 132658:

> "the unencumbered balance of all local funds programmed for the completion of the BART Livermore extension or that have otherwise been identified for the connectivity shall be transferred to the authority and be considered resources available to effectuate the authority's purposes pursuant to this chapter, except that local funds controlled by the Alameda County Transportation Commission to be used for completion of the BART Livermore extension or that have otherwise been identified for the connectivity shall continue to be programmed and allocated by the Alameda County Transportation Commission pursuant to measures approved by the voters of Alameda County pursuant to Division 19 (commencing with Section 1800000)."

Over the past 18 months, the Authority has been actively engaged in the planning of Valley Link, a passenger rail project that connects with the Dublin/Pleasanton BART station and travels eastward to Livermore and beyond to communities in the Northern San Joaquin Valley. A key element of the Valley Link Funding Plan for the Dublin/Pleasanton connection with BART and rail construction to Livermore is the $400 million in Measure BB that is currently listed in the Alameda County 2014 Transportation Expenditure Plan ("Plan") for the BART to Livermore project. Per the requirements of the Plan, The Tri-Valley – San Joaquin Valley Regional Rail Authority requests the following amendments:

1. The Tri-Valley – San Joaquin Valley Regional Rail Authority, established by AB 758,be included as an eligible recipient of funds.
2. That the following, specific language be amended:

   Move and amend the following language from Page 18 of the Plan to Page 20:

Tri-Valley ▲ San Joaquin Valley

~~BART to Livermore~~ Valley Link to Livermore ($400 M)
The project funds Valley Link ~~the first phase of a BART to extension~~ within the I-580 Corridor freeway alignment from the Dublin/Pleasanton BART station to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology. Funds for construction of or any element of this ~~first phase~~ project shall not be used until full funding commitments are identified and approved, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

In accordance with the Alameda County 2014 Transportation Expenditure Plan Implementing Guidelines, the Tri-Valley – San Joaquin Valley Regional Rail Authority understands and can fully comply with the requirements of recipients of Measure BB funds, including, but not limited to, annual audits and compliance reporting, the establishment of separate accounting funds for Measure BB funds, independent Watchdog reviews, performance measures, environmental clearance timelines, timely use of funds, contracting requirements, public reviews and approvals.

Thank you for your consideration,

Alameda County Supervisor Scott Haggerty, Chair

ALAMEDA COUNTY TRANSPORTATION COMMISSION
Resolution No. 20-007

Resolution of the Alameda County Transportation Commission Amending the 2014 Transportation Expenditure Plan to Delete the BART to Livermore Project and add the Valley Link Project

WHEREAS, by action of the governing body ("Commission") of Alameda County Transportation Commission ("Alameda CTC") at a regular Commission meeting on January 23, 2014, Alameda CTC approved the 2014 Transportation Expenditure Plan ("2014 TEP"), and in November 2014, the voters of Alameda County approved Measure BB, a sales tax measure intended to provide funding for the 2014 TEP.

WHEREAS, the 2014 TEP allocated $400 million to a project identified as "BART to Livermore," constituting the first phase of a San Francisco Bay Area Rapid Transit District ("BART") extension within the I-580 Corridor to serve residents and **businesses in that Corridor.**

WHEREAS, on May 24, 2018, the BART Board certified the Final Environmental Impact Report for the BART to Livermore project, but declined to approve the project as proposed nor any alternative for the project.

WHEREAS, Assembly Bill (AB) 758, as adopted by the State legislature and signed by the Governor, created the Tri Valley San Joaquin Valley Regional Rail Authority ("TVSJVRRA"), an entity led by a 15-member governing Board comprised of representatives from the counties of Alameda and San Joaquin; the cities of Dublin, Livermore, Pleasanton, Danville, San Ramon, Tracy, Lathrop, Stockton, and Manteca; Mountain House Community Services District; the Livermore Amador Valley Transit Authority (LAVTA), BART, and the San Joaquin Regional Rail Commission (SJRRC). The goal of TVSJVRRA is to deliver a cost-effective connection from the San Joaquin Valley to the BART system and the ACE system in the Tri-Valley, to address regional economic and transportation challenges.

WHEREAS, AB 758 specifically stated that the TVSJVRRA would only assume planning, development and delivery of a rail extension should the BART Board fail to adopt a preferred alternative for a BART extension by June 30, 2018. When the BART Board voted to not advance the BART to Livermore project, the TVSJVRRA assumed responsibility to advance a rail extension in the Corridor, now identified as "Valley Link."

WHEREAS, a key requirement of AB 758 was that the TVSJVRRA Board approve a Feasibility Report for the project. The Final Feasibility Report was approved in October 2019. The TVSJVRRA has continued to work to advance the project, initiating the environmental impact analysis and preliminary design engineering work.

WHEREAS, the Valley Link project costs included in the Final Feasibility Report range from a low year of expenditure cost of $2.4 billion to a high year of expenditure cost of $3.2 billion. The project is currently in the EIR process, and will begin both the Caltrans project development process and NEPA environmental clearance process in 2020 and 2021.

To date, a total of $628 million is identified by the TVSJVRRA as available for the project: $400 million in Measure BB funds (subject to approval of this amendment to the 2014 TEP by the Commission), $188 million in Bridge Toll funds (including $100 million in Regional Measure 3 funds) and $40 million in impact fees from the City of Livermore. The project is expected to compete for regional, state and federal funds to close the funding need. Other measures in the Bay Area and San Joaquin County, if passed by voters, could be additional revenue sources for the project.

WHEREAS, given that the Valley Link project traverses two counties, two Metropolitan Planning Organization regions, and affects an interstate system, Express Lanes system, and existing rail system and service providers, the TVSJVRRA established an Executive Steering Committee (ESC) comprised of MTC, San Joaquin Council of Governments (SJCOG), San Joaquin Regional Rail Commission (SJRRC), BART, Alameda CTC, and Caltrans to provide input on the development of the feasibility report and project development. Alameda CTC's executive director participates in these meetings. Several of these agencies have taken actions to support development of the project, as outlined below:

MTC: In September 2018, MTC allocated $10.12 million to the TVSJVRRA for CEQA documentation and preliminary engineering on the Valley Link rail project, from the $95 million in AB1171 Bridge Tolls committed to Tri-Valley Transit Access Improvements through MTC Res. No. 3434. In March 2020, MTC approved an additional allocation of $3 million in AB1171 Bridge Toll funds to the TVSJVRRA for the environmental phase and updates to the preliminary engineering plans.

SJCOG: In April 2020, the SJCOG Board approved an amendment to its 2018 Regional Transportation Plan to include the Valley Link project, including identification of $163.9 million for the project in the plan from future measures and state funds.

WHEREAS, the 2014 TEP and Public Utilities Code Section 180207 together provide that the 2014 Plan may be modified if an amendment is approved by a two-thirds vote of the Commission.

NOW THEREFORE, BE IT RESOLVED that the 2014 Transportation Expenditure Plan is amended to delete the BART to Livermore Project and all references to that Project;

BE IT FURTHER RESOLVED that the Tri Valley San Joaquin Valley Regional Rail Authority be recognized as an eligible agency for recipient of funds in the 2014 TEP;

BE IT FURTHER RESOLVED that the Valley Link Rail Project in Alameda County with an allocation of $400 Million is placed in the 2014 TEP, described as follows:

This project funds the first phase of a Valley Link rail project from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

BE IT FURTHER RESOLVED that the 2014 TEP be amended to include the following specific description of the Valley Link Project:

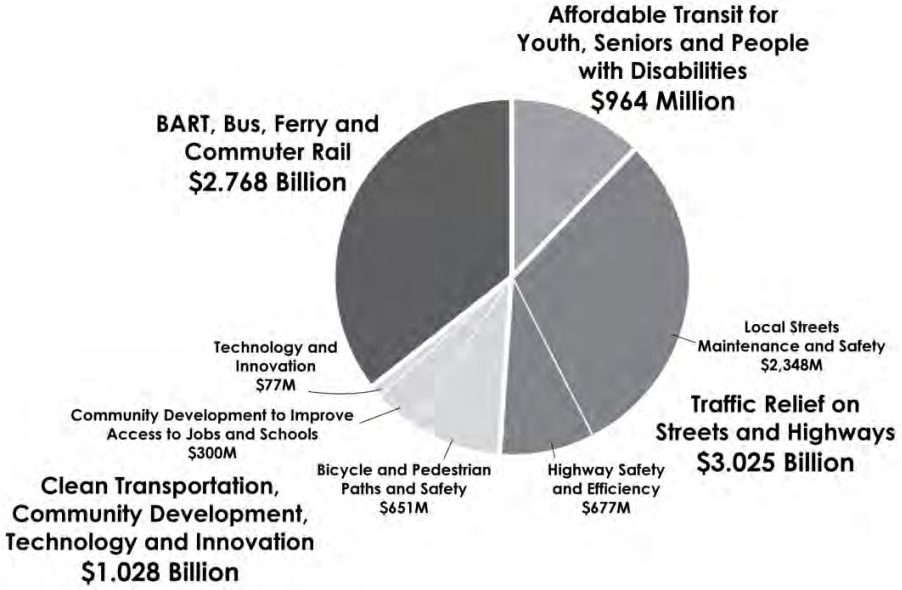
A proposed new rail service between Alameda and San Joaquin Counties that will provide passenger rail service between the existing Dublin/Pleasanton BART Station and the City of Stockton. The proposed project includes seven stations on a 42-mile alignment that is expected to run along the existing I-580 corridor (11.5 miles), through the Altamont Pass using the Alameda County-owned former Southern Pacific Railroad corridor (12.5 miles) and on existing UPRR rail corridor (17.5 miles) into San Joaquin County. Design work is currently underway as part of the EIR process and will examine detailed project right-of-way needs and potential impacts in more detail. The project is generally shown on the diagram below:

DULY PASSED AND ADOPTED by the Alameda CTC Commission at the regular Commission meeting held on Thursday, May 28, 2020 in Oakland, California, by the following vote:

AYES: NOES: ABSTAIN: ABSENT:

SIGNED: Attest:

_____ _____



Pauline Russo Cutter, Vanessa Lee,

Chair, Alameda CTC Clerk of the Commission

Summary of Investments	FUNDS ALLOCATION* ($ x million)
BART, Bus, Ferry and Commuter Rail for Reliable, Safe and Fast Services	**$1,587**
BART Expansion and Maintenance	$349 ~~$749~~
Bus Operations, Maintenance and Rapid Bus Projects	$1,548
Commuter Rail Improvements	$832 ~~$432~~
Ferry Services in Alameda County	$39
Affordable Transit for Youth, Seniors and People with Disabilities	**$964**
Affordable Youth Transit to School and Transit Innovation	$190
Affordable Transit for Seniors and People with Disabilities	$774
Traffic Relief on Streets and Highways	**$3,025**
City and County Streets*	$2,348
Highway Safety and Efficiency	$677
Clean Transportation, Community Development, Technology and Innovation	**$1,028**
Bicycle and Pedestrian Paths and Safety Projects and Educational Programs*	$651
Community Development Projects to Improve Access to Jobs and Schools	$300
Technology and Innovation	$77
TOTAL INVESTMENTS (YEAR 2015 TO 2045)**	**$7,785**

Notes:
*15% of city and county streets funding will support bicycle and pedestrian paths and safety improvements on local streets.
**Estimated funds from 2015 to 2045 are anticipated to be almost $8 billion.

$7,785 in Total Investments Year 2015 to 2045

See Table 1 for a detailed list of transportation investments.

Table 1: List of Investments

Type	Investment Category	Project/Program	Amount ($ x millions)	% of Total Funds
BART, Bus, Senior, and Youth Transit (48%)	Transit: Operations, Maintenance, and Safety Program	AC Transit	$1,455.15	18.8%
		Altamont Commuter Express	$77.40	1.0%
		BART Maintenance	$38.70	0.5%
		San Francisco Bay Area Water Emergency Transportation Authority	$38.70	0.5%
		Livermore Amador Valley Transit Authority	$38.70	0.5%
		Union City Transit	$19.35	0.25%
		Innovative grant funds, including successful student transportation programs	$174.63	2.24%
	Affordable Transit Program for Students and Youth	Affordable Student Transit Pass Program	$15.00	0.19%
		Subtotal	**$1,857.63**	**24%**
	Affordable Transit for Seniors and People with Disabilities	City-based and Locally Mandated	$232.20	3.0%
		East Bay Paratransit - AC Transit	$348.31	4.5%
		East Bay Paratransit - BART	$116.10	1.5%
		Coordination and Service Grants	$77.40	1.0%
		Subtotal	**$774.01**	**10%**
	Rapid Bus Projects	Telegraph Avenue/East 14th/ International Boulevard project	$10.0	**14%**
		Alameda to Fruitvale BART Rapid Bus	$9.0	
		Grand/MacArthur BRT	$6.0	
		College/Broadway Corridor Transit Priority	$10.0	
		Subtotal	**$35.0**	
	BART System Modernization and Expansion	Irvington BART Station	$120.0	
		Bay Fair Connector/BART METRO	$100.0	
		BART Station Modernization and Capacity Program	$90.0	
		~~BART to Livermore~~	~~$400.0~~	
		Subtotal	**$~~710.0~~310.0**	
	Major Transit Corridor Enhancements and Rail Connections	Dumbarton Corridor Area Transportation Improvements	$120.0	
		Union City Intermodal Station	$75.0	
		Railroad Corridor Right of Way Preservation and Track Improvements	$110.0	
		Oakland Broadway Corridor Transit	$10.0	
		Capitol Corridor Service Expansion	$40.0	
		Valley Link	$400.0	
		Subtotal	**$~~355.0~~755.0**	
	TOTAL		**$3,731.64**	**48%**

Notes: Priority implementation of specific investments and amounts for fully defined capital projects and phases will be determined as part of the Capital Improvement Program developed through a public process and adopted by Alameda CTC every two years and will include geographic equity provisions.
BART Maintenance funds will require an equal amount of matching funds and must be spent in Alameda County.
All recipients of sales tax funds will be required to enter into agreements which will include performance and accountability measures.

ACTC_AR0739

BART, BUS, SENIOR AND YOUTH TRANSIT

A total of 48% of net revenue will be dedicated to BART, bus, commuter rail, and senior and youth transit investments. Funds for operations and maintenance will be provided to transit operators in the county (AC Transit, BART, Union City Transit and Livermore Amador Valley Transit Authority (LAVTA)) as well as to ferries and the Altamont Commuter Express (ACE) rail service. In addition, these funds will substantially increase Alameda County's commitment to the growing transportation needs of older adults and people with disabilities, essentially doubling the funds available for targeted services for this important group. Grant funds are also available to support affordable transportation access to schools. Major capital investments include upgrades to the existing ~~BART~~ rail system and BART extensions, adding bus rapid transit routes to improve the utility and efficiency of transit, and providing funding for transit improvements serving the Dumbarton Corridor Area.

TRANSIT OPERATIONS, MAINTENANCE, AND SAFETY PROGRAM (24% OF NET REVENUE, $1,857 M)

This program provides transit operators with a consistent funding source for maintaining, restoring and improving transit services in Alameda County. Transit operators will allocate these funds in consultation with their riders and policy makers with the goal of creating a world class transit system that is an efficient, effective, safe and affordable alternative to driving.

This funding will support the following:

Transit Operations and Maintenance Program (21.55% of net revenue, estimated at $1.668 M)

Funds are disbursed to AC Transit, BART, ACE, the Water Emergency Transportation Authority (WETA), LAVTA and Union City Transit. The relative percentage of net revenue being allocated to these agencies is as follows:

Agency	% of Net Total Revenue	Total 2015-2045 (est.) $Millions
AC Transit	18.8%	$1,455
ACE	1.0%	$77
BART Maintenance	0.5%	$39
WETA (ferries)	0.5%	$39
LAVTA (WHEELS)	0.5%	$39
Union City Transit	0.25%	$19
Total Transit Operations	**21.55%**	**$1,668**

Affordable Youth Transit Pass Program ($15 million)

This program is for the purposes of funding one or more models for a student transit pass program. The program would be designed to account for geographic differences within the county. Successful models determined through periodic reviews will have the first call for funding within the innovative grant program, as described below.

Innovative Grant Program including successful student transportation programs (2.24% of net revenue, estimated at $175 M)

These grant funds, administered by Alameda CTC, will be used for the purposes of funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this category.

Funds will be periodically distributed by Alameda CTC for projects and programs with proven abilities to accomplish the goals listed below:

- Increase the use of public transit by youth riders (first priority for funding) and increase youth access to school
- Enhance the quality of service for transit riders
- Reduce costs or improve operating efficiency
- Increase transit ridership by improving the rider experience
- Enhance rider safety and security

BART STATION ~~EXTENSION~~ AND SYSTEM IMPROVEMENTS ($37~~7~~10 M)

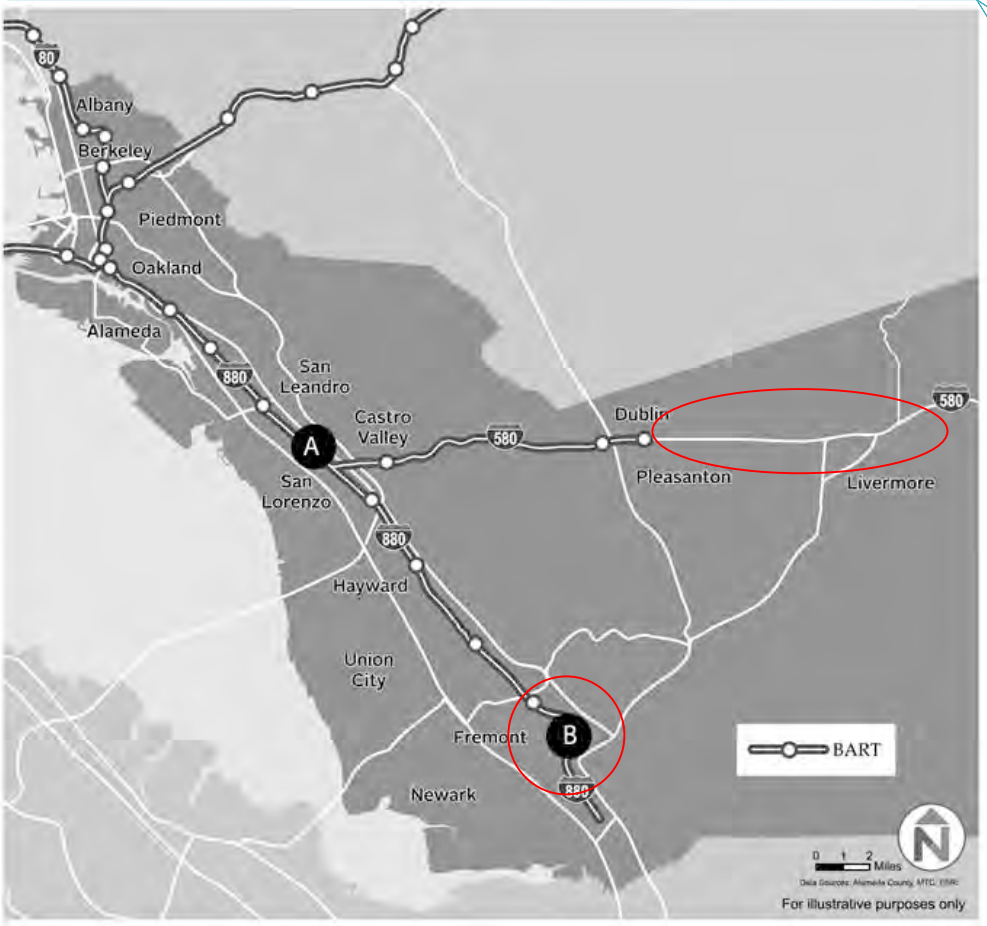
The capital projects funded as part of the BART System Modernization and Expansion investments include projects that increase the capacity and utility of the existing system~~, as well as provide local funding for a proposed BART extension in the eastern part of the county.~~

~~BART to Livermore ($400 M)~~

~~This project funds the first phase of a BART Extension within the I-580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology. Funds for construction for any element of this first phase project shall not be used until full funding commitments are identified and approved, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.~~

BART Station Upgrades and System Improvements ($310 M)

BART projections indicate that its system will need to carry over 700,000 daily riders by the end of this Plan period. New riders will affect the capacity of existing systems and stations, requiring focused capacity enhancements to keep the system moving as ridership increases occur.



- **The Bay Fair Connector/BART METRO project will receive $100 M** in sales tax funds for the Alameda County portion of this project which will increase capacity and operational flexibility systemwide. One goal of these improvements will be to improve connections to jobs in the southern part of the county and beyond as Santa Clara County builds its own BART extension.

- **The BART Station Modernization and Capacity Program will receive $90 M** for improvements at all BART stations in Alameda County, addressing station site, building envelope, escalator and elevator rehabilitation/replacement, circulation and wayfinding, air conditioning, lighting and ambient environment, station reliability upgrades, and other station equipment replacement/upgrades.

- **The Irvington BART Station will receive $120 M** to provide an infill station on the soon-to-open Warm Springs extension south of the existing Fremont Station, creating new accessibility to BART in the southern part of the County.

BART INVESTMENTS

A Bay Fair Connector / BART METRO

B Irvington BART Station

Not Shown:

- BART Station Modernization and Capacity Improvements
- Affordable Transit for Seniors and People with Disabilities

Commented [ACTC1]: Bottom circle: The new "B" is Irvington BART Station, and below that removal of "C"

Commented [ACTC2]: Top circle: Removal of the original "B – BART Extension to Livermore (within the I-580 corridor)"

Commented [ACTC3]: Middle circle: Change the original "C – Irvington BART Station" to a new "B"

MAJOR TRANSIT CORRIDOR AND COMMUTER RAIL IMPROVEMENTS ($~~355~~ 755 M)

Investments include maintenance and service enhancements on existing rail lines and the development of transportation investments serving the Dumbarton Corridor Area. Funds will also be allocated for preserving rail right of way for transportation purposes, ensuring that service is available for future generations. Finally, this funding category acknowledges the importance of connecting high speed rail to Alameda County and the Bay Area and seeks to prioritize targeted investments to ensure strong connections to this future service.

Dumbarton Corridor Area Transportation Improvements ($120 M)

Dumbarton Corridor Area Transportation Improvement projects will support express bus services in the Dumbarton Corridor connecting southern Alameda County and the Peninsula. The projects will also support transit oriented development and priority development areas, and improve local streets and bicycle and pedestrian infrastructure within the cities of Fremont, Newark and Union City.

Union City Intermodal Station ($75 M)

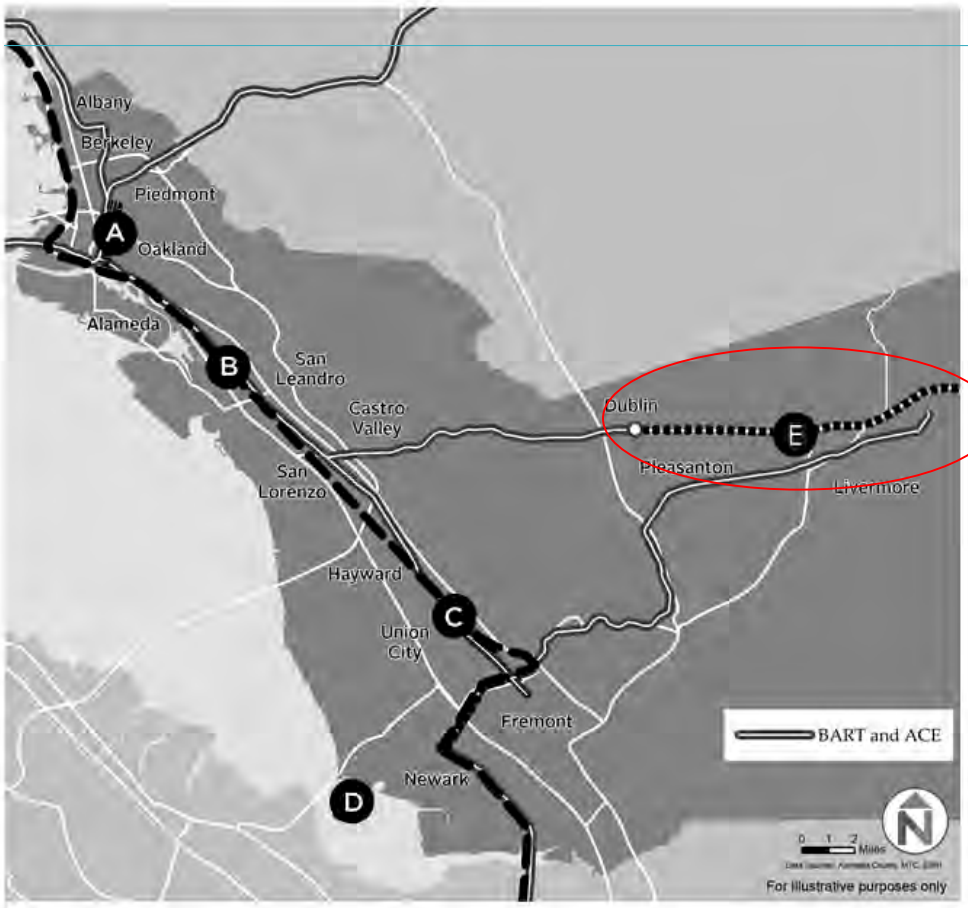
This project funds the development of a new intermodal station in Union City to serve BART, Dumbarton Corridor services, Capitol Corridor, ACE and local and regional bus passengers. The project involves construction of a two-sided rail station and bus transit facility, accessible to a 30-acre transit oriented development site. Improvements will be made to pedestrian and bicycle access, BART parking, elevators, fare gates and other passenger amenities.

Capitol Corridor Service Expansion ($40 M)

This project supports track improvements and train car procurement which will enable the trains running between Oakland and San Jose to increase daily round trips, matching frequencies between Sacramento and Oakland.

Railroad Corridor Right of Way Preservation and Track Improvements ($110 M)

Funds allocated by this project may be used to maintain and enhance existing railroad corridors for regional rail as well as to preserve the rights of way of rail corridors that could be used for other transportation purposes, such as major trails.



Oakland Broadway Corridor Transit ($10 M)

This project will link neighborhoods to transit stations along Broadway, Oakland's major transit spine, providing a frequent and reliable connection between the regional rail hub at Jack London Square, with Downtown Oakland, the Uptown Arts and Entertainment District, and adjoining neighborhoods, utilizing the most efficient and effective technology.

Valley Link Rail in Alameda County ($400 M)

This project funds the first phase of a Valley Link rail extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Valley Link

Connecting People, Housing, and Jobs

Fact Sheet

Project Overview

Connecting San Joaquin Valley to the Bay Area. Valley Link will offer a reliable and efficient commute alternative, providing San Joaquin Valley and eastern Alameda County residents with a direct connection to BART and ACE.

A Seamless Connection to BART. The first phase of service will provide a seamless and timed connection to BART, with service from North Lathrop to the Dublin/ Pleasanton BART station.

Frequent and Reliable Service. Trains will run throughout the day in both directions with the goal of matching BART frequency and hours of operation.

Initial Service Characteristics

	PEAK	OFF-PEAK
Between Dublin/ Pleasanton and Greenville	12 min (meeting every BART train)	30 min (meeting every other BART train)
Beyond Greenville	24 min (meeting every other BART train)	60 min (meeting every 4th BART train)

By the Numbers

- **9,3500 Bay Area workers** - commuting from San Joaquin Valley today
- **42 Miles** - using existing transportation corridors
- **7 Stations** – Dublin/Pleasanton, Isabel, Mountain House, Tracy, River Islands, North Lathrop
- **78 Minutes** - current average commute each way
- **28 days** – total commute time per year for average commuter
- **75% increase** - commute traffic on I-580 by 2040
- **58% increase** – truck traffic on I-580 by 2040
- **25 daily round-trips** - by Valley Link trains each day in 2040
- **28,000 riders** – estimated in 2040 for Valley Link per day
- **99.4 Million** – reduction in Vehicle Miles Traveled (VMT) per year in 2040
- **33,000 metric tons** – reduction in greenhouse gas emissions (GHG) per year
- **0 Emissions** – battery-electric and hydrogen vehicle technologies under development
- **$2.4 Billion** - cost of Valley Link Phase 1 from Dublin/ Pleasanton BART to North Lathrop, in year of expenditure
- **$628 million** - identified as available for the project:
  - **$400 million** - Measure BB funds
  - **$188 million** - Bridge Toll funds
  - **$40 million - impact fees from the City of Livermore**
- **2027 – target date for Valley Link revenue service**

Project Benefits

Valley Link aims to be a model of sustainability in the design, construction and operation of the system. It is vital to our state's economy, environment and the quality of life in our communities:

- Serves communities and households in the Northern San Joaquin Valley with some of our state's highest poverty rates;
- Promotes equity by maximizing benefits to disadvantaged communities
- Links the Northern California Megaregion's workforce to affordable housing;
- Readily connects our state's future high-speed rail system to BART;
- Provides direct and seamless service to major employment centers in all parts of the Bay Area;
- Provides opportunities for compact transit-oriented development; and
- Will have a significant impact on the reduction of VMT and greenhouse gas emissions.
- Operates on renewable energy

SUBJECT:	2020 Countywide Transportation Plan: Community-Based Transportation Plan Update

Recommendation

This item provides the Commission with an update on the Community-Based Transportation Plan (CBTP) effort that is part of the 2020 Countywide Transportation Plan (CTP). The update covers baseline conditions analysis and focused outreach conducted in Alameda County's low-income and minority communities, as defined by the Metropolitan Transportation Commission's (MTC) Communities of Concern (CoC). This informs the 2020 CTP and fulfills MTC requirements to update Alameda County's CBTPs. This item is for information only.

Summary

The CBTP program was launched in 2002 by MTC to develop strategies to improve access and mobility for low-income communities for both commute and non-commute trips. To determine where CBTPs would be conducted, MTC identified CoCs throughout the region, which are census tracts with high concentrations of disadvantaged populations[1]. Community engagement is a key component and requirement of CBTP development and informs analysis and recommendations.

The last set of CBTPs was completed between 2004 and 2009 for Alameda County's CoCs, which at the time consisted of five communities in the North and Central planning areas. Since then, MTC's definition of CoCs has evolved to better capture concentrations of low-income, minority communities using the most recent census

[1] MTC has defined CoCs as census tracts that have at least 30% of residents that are low-income and that have either ≥ 70% minority population or three or more of the following: Limited English Proficiency (12% threshold); Population over 75 (10% threshold); Zero -vehicle households (10% threshold); Single-parent households (20% threshold): Disabled population (12% threshold): Rent-burdened households (15% threshold).

data, and demographic shifts and growth have occurred throughout the county. MTC approved the current CoC definitions and boundaries in 2018.

This CBTP update will be integrated into and formalized as part of the 2020 CTP. Analysis is presented for groups of CoCs, as detailed below, which are called CBTP study areas. The CBTP effort included public outreach in all CBTP study areas, analysis of baseline conditions for these areas, and discussions with jurisdictions that have recently conducted extensive outreach and planning work within these communities.

This memo presents a summary of findings about transportation needs for the CBTP study areas and recommendations for incorporation into the 2020 CTP. The CBTP outreach and analysis supplements broader countywide analysis and outreach underway for the CTP and provides key input into project and program prioritization and strategy development. Incorporating the CBTP findings elevates feedback from disadvantaged communities and ensures the needs of these populations are adequately reflected in the CTP.

Background

MTC's CBTP Program
MTC launched the CBTP program in 2002. Its goal is twofold: to improve access and mobility for disadvantaged communities (for commute as well as non-commute trips) and to engage residents and community organizations in the process. The CBTP program historically provided input to Lifeline Program spending allocations, specifically for transportation projects that address mobility and accessibility needs in low-income communities, although in recent cycles the funding is primarily used specifically for transit operations and the direct link to CBTPs has lessened.

Since the beginning of the CBTP program, MTC has defined the disadvantaged communities that are considered CoCs. MTC periodically updates the criteria used to determine which areas are considered CoCs and uses the latest demographic data from the U.S. Census to update the CoC boundaries as part of updating the regional transportation plan. Since Plan Bay Area (2013) MTC has defined CoCs as census tracts that have at least 30% of residents that are low-income and that have either ≥ 70% minority population or three or more of the following:

1. Limited English Proficiency (12% threshold)
2. Population over 75 (10% threshold)
3. Zero -vehicle households (10% threshold)
4. Single-parent households (20% threshold)
5. Disabled population (12% threshold)
6. Rent-burdened[2] households (15% threshold)

[2] Rent-burdened is defined as paying more than 30% of household income on rent.

In spring 2018, MTC updated its CoC boundaries with American Community Survey (ACS) 2012-2016 5-year data. This recent demographic data changed the spatial distribution of CoCs within Alameda County compared to CBTPs that were developed over ten years ago. Alameda County now contains 115 census tracts that meet the CoC criteria, located in nine cities and three unincorporated areas across all four planning areas of Alameda County. This map is included in Attachment A. Approximately 85% of these census tracts qualify as CoCs based on the low-income and minority criteria alone.

Alameda County CBTP Study Areas

Alameda CTC has grouped CoC census tracts into CBTP study areas that align with Alameda County Planning Area boundaries and jurisdictional boundaries to guide this effort. For the most part, each CBTP study area is a small section of a jurisdiction, however for cities with a large number of CoC census tracts, multiple CBTP study areas were designated. The CBTP study areas are shown in Table 1.

Table 1 CBTP Study Areas by Jurisdiction

Planning Area	**CBTP Study Area**	
North County	• Alameda • Albany • Berkeley: Central, South and West	• Oakland: North, West, Central and East
Central County	• Unincorporated: Ashland, Cherryland and Castro Valley	• San Leandro • Hayward
South County	• Union City	• Newark
East County	• Livermore	

2020 CBTP Approach

The 2020 CBTP process sought to understand current transportation needs in CoCs, meet MTC's requirements for the CBTP program, and provide input into the 2020 CTP. The CBTP outreach and analysis supplements broader countywide analysis for the CTP and provides key input into project and program selection and strategy development. Incorporating the CBTP findings elevates feedback from disadvantaged communities, which are traditionally harder to reach through conventional outreach, in the broader planning context for Alameda County.

Developing the 2020 CBTP involved the following three key efforts:

- **Baseline Conditions.** Analysis of baseline conditions to understand the current transportation characteristics of the CBTP study areas. Data analysis included: demographic data, commute patterns for residents and workers, and a summary of baseline conditions of the transportation network like pavement condition, the High-injury Network for walking and biking, and presence of active transportation infrastructure, among other metrics.

- **Analysis of Past Planning Efforts.** Synthesis of recent planning and outreach activities that have been conducted in the CBTP Study Areas. Attachment B lists the plans reviewed for the 2020 CBTP update.
- **Community Engagement.** Substantial outreach to gain an understanding of issues and needs directly from the communities. This consisted of a countywide poll conducted in 2019 that was presented to Commissioners at the May retreat, intercept surveys at pop up events within CBTP study areas, and interviews with community-based organizations. Attachment C provides a summary of outreach conducted. Due to the large number of CoCs in the City of Oakland, a modified approach was used for these CBTP study areas. See detail in Attachment C for this approach.

Key Findings from the 2020 CBTP update

Based on analysis of baseline conditions, review of past planning efforts, and outreach conducted for the CBTP, the following overarching transportation needs have been identified across all CoC's in the county's planning areas:

Safe Biking and Walking. There is a need for safer walking and biking facilities. Particular concern has been raised about safely crossing roadways with high traffic volumes and high traffic speeds, indicating a need for safer crosswalks.

Pedestrian Quality and Safety There is a need for improved pedestrian infrastructure and amenities including completion of sidewalks and more street lighting to deter crime and facilitate pedestrian safety at night.

Affordable Transit Fares. Introducing affordable transportation options is noted as a key concern for residents in CoCs.

Better Access to Transit. There is a need to expand the frequent transit network to provide options for off-peak commuters and increase the frequency of transit in CoCs. Additional needs include safer access to transit stops and stations. Outside of the North planning area, improved access to reliable and frequent transit has been raised as a significant need. The major high frequent bus lines and rail stations are concentrated in North County, leaving potential transit dependent populations with limited options elsewhere in the county.

Pavement Quality in CBTP study areas. There is a need to improve pavement condition in CBTP study areas.

Detailed findings from baseline conditions, analysis of past planning efforts, and community engagement are found in Tables 2 and 3. Table 2 summarizes key findings that have emerged countywide. Table 3 provides additional context for the specific needs within each jurisdiction as provided during community engagement. Note that the findings in Table 3 are in addition to the findings and issues presented in Table 2.

Table 2 Summary of High-Level Findings of CBTP Study Areas Countywide

Mode/Issue Area	Key Findings
Safety	• Residents in CBTP study areas feel less safe walking, waiting for transit, and biking • CBTP study areas have more miles of Auto High Injury Network than non-CBTP study areas in the county
Commute Patterns	• The number of off-peak commuters within CBTP study areas have increased at a higher rate than non-CBTP study areas since 2010
Transit	• Residents in CBTP study areas use transit more frequently • Concerns around transit affordability • Concerns around transit frequency • Support for improvements to transit amenities: bus shelters and stops
Active Transportation	• Support for improved infrastructure for active transportation such as high-quality bike lanes, trails that are separate from roads, bike parking
Driving and Pavement Condition	• Residents indicate long driving travel times and high costs of driving due to traffic and long distances • CBTP study areas are twice as likely to be home to "at-risk" pavement conditions as non-CBTP study areas in the county • Improving potholes and roads is a top priority for residents in CBTP study areas

Table 3 Specific Outreach Findings for Each Jurisdiction with a CBTP Study Area

Jurisdiction	Key Findings from Community Engagement
Alameda	• Concern around transit amenities: better bus shelters and apps for smartphones, more weekend/night service • Concern for pedestrian safety due to driving behaviors
Albany	• Support for infrastructure improvements to connect residents to businesses, schools, and recreational facilities across within and near the CoC • Concerns around pavement quality for biking, lack of bike lanes • Concerns around traffic, travel time, and lack of affordable parking
Berkeley: Central, South and West	• Concern around community displacement, as well as concerns for retaining existing industries • Concerns around safety, affordability and cleanliness on BART • A desire for more reliable bus service on nights/weekends, more frequent weekday service

Jurisdiction	Key Findings from Community Engagement
Oakland: North, Central, East and West	• Focus on active transportation education programming for youth • Existing pavement in poor condition • Concern around pedestrian safety due to vehicular speed and lack of sidewalks • Significant local air pollution exposure and health impacts, particularly in West Oakland • Socioeconomic, cultural, and discriminatory barriers faced by people of color to access bicycling and public spaces more generally.
Unincorporated: Ashland, Cherryland, and Castro Valley	• Pedestrian safety, including: safer crossings, traffic calming, and better sidewalks • A desire for more frequent daytime bus service, nighttime/weekend service, and higher reliability
Hayward	• Interchanges along I-880 identified as notable barriers for walking and cycling • Concern for safe and accessible walking facilities • Need for more daytime/weekend/night bus service and affordable fares.
San Leandro	• Improve automobile and pedestrian safety outcomes on multimodal corridor • Identify strategies to improve sidewalk conditions, lighting, and bicycle infrastructure • A desire for more daytime bus and night/weekend service, fewer/shorter transfers
Newark	• Interest in investments in active transportation infrastructure • Concerns around accessing BART, cleanliness, free transfers to/from bus, more parking at stations, more night/weekend service. • Need for more night/weekend bus service, more daytime service, accessible vans/paratransit
Union City	• Interest in investments in active transportation infrastructure • Better access to transit • Transit options are not close to destinations, more frequent daytime/night/weekend service is needed • Concerns around safety and walking. Fast traffic, fear for personal safety, crime, better walking facilities are needed
Livermore	• Need for improvements to pedestrian crossings, better walking and biking facilities that are separate from road. • Concerns over high traffic speeds • Interest in better access to transit

Integration with 2020 CTP

Many of these needs are consistent with needs already identified in the 2020 CTP and the 2020 CTP will further incorporate these CBTP needs as the document is finalized in coming months. There are several specific ways that the CTP already reflects CBTP needs, most notably within the projects that will be included within a prioritized list of near-term projects and overarching strategies that the CTP will include. Projects and

strategies will be the two key discussion topics during discussions with small groups of Commissioners in May 2020.

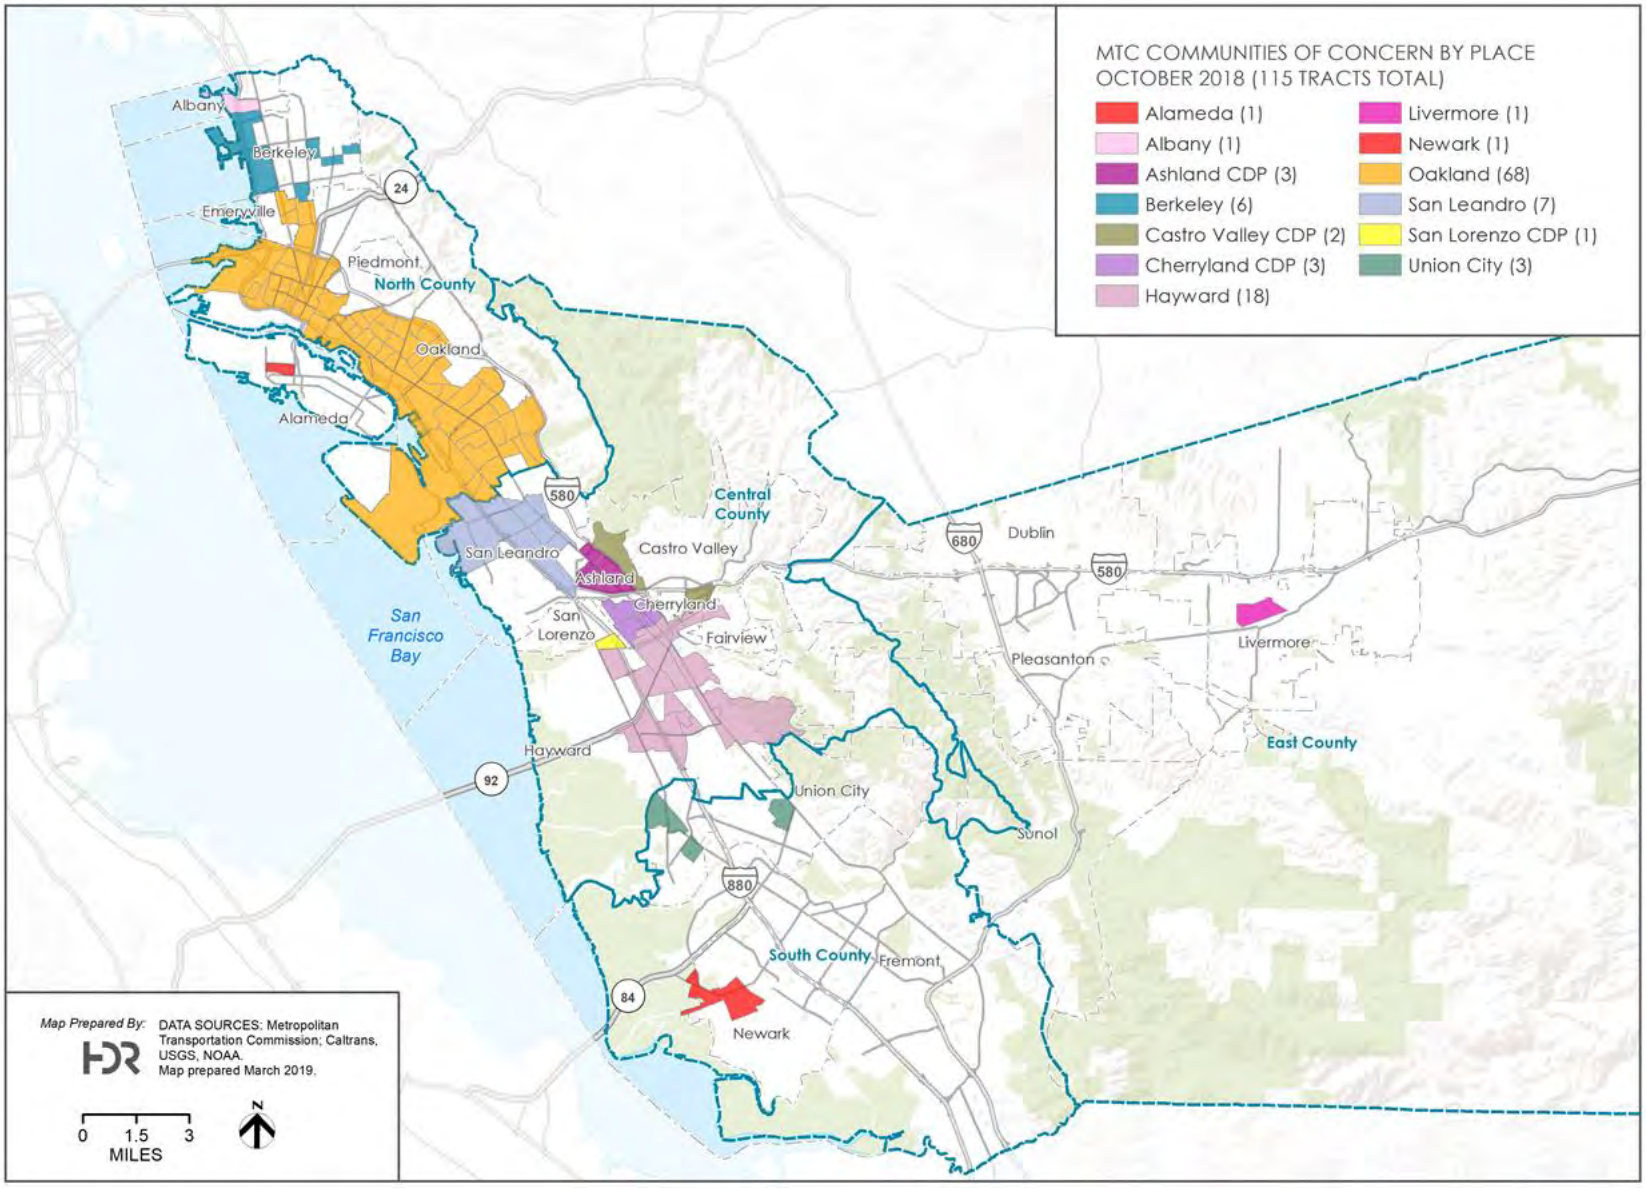
The project screening criteria included CoCs as one of the key criteria to select projects for the 10-year priority project list. Many projects that have been submitted directly respond to CBTP needs and Alameda CTC will continue to support cities to develop projects that respond to needs in CBTP study areas. For example, Alameda CTC and many cities are working on multimodal corridor projects which travel through CBTP study areas and directly address many of the needs highlighted through the outreach. In addition, Alameda CTC's ongoing programs address CoC needs, including the Access Safe Routes Program, the expansion of the Student Transit Pass Program, and the Paratransit Program.

The CTP will also include a set of strategies that are currently under development. Several of the strategies under consideration respond directly to CBTP needs, including:

- Build out the Near-Term All Ages and Abilities Walk and Biking Network
- Pilot Fare-Free Zones and Passes
- Provide Safe and Secure Access to Bus Stops
- Explore Funding Strategies to Support Increased Transit Operations
- Identify strategies to address spill over traffic in CoC communities
- Expand Safe Routes to School and Safety Education Programs
- Reduce the Countywide Impacts of Infrastructural Barriers
- Reduce Impacts of Goods Movement, including emissions, safety and truck activity impacts

Next Steps

The CBTP report document will be finalized in early summer and released with the 2020 CTP. Staff are meeting with Commissioners in small Planning Area groups in May 2020 to discuss CTP and CBTP strategies and priority projects. Alameda CTC will monitor progress towards implementing CBTP recommendations, per MTC requirements, and update needs periodically in coordination with future CTP updates.



Fiscal Impact: There is no fiscal impact for this item.

Attachment C: Outreach Summary for CBTP

Outreach and engagement for the 2020 CBTP consisted of a countywide poll conducted in 2019 that was presented to the commissioners at the May retreat, intercept surveys at pop up events within CBTP Study areas, and interviews with community-based organizations. A review of Oakland's outreach from recently completed plans that included deep engagement with their communities was also conducted.

2019 Poll

In May 2019, as part of the Commission's retreat, Alameda CTC conducted a countywide poll representative of Alameda County's diverse population across planning areas, and included a deliberate over-sample of residents in CBTP study areas. This allowed us to highlight issues for residents of CoCs in a statistically representative way. Over 15,000 invitations were sent through email and text message. Approximately 500 people completed the survey, nearly 200 of whom are residents of Alameda County CoCs. Findings from this poll were presented at the Commission's May 2019 retreat.

Intercept Surveys and Pop Up Events within CBTP Study Areas

The primary tool for outreach in the county's CoCs was the survey at community pop up events. Survey respondents were asked to identify the methods of transportation they were most likely to use in their daily routine and answer questions about their needs and priorities related to that mode. If they had more time, they were asked to identify their needs and priorities relating to safety, convenience, and accessibility for all modes of transportation. The survey and other collateral materials were made available in English, Spanish, and Chinese.

Pop-up workshops were held at high-traffic locations or events where intercept surveys were collected. A total of 423 surveys were collected at 17 pop-up events held at farmers' markets, recreational events, parks, and BART stations within the CBTP study areas. Pop-ups were held from October 2019 through February 2020.

Interviews with Community-Based Organizations

Community based organizations were interviewed to solicit additional information in the CBTP study areas over a three-week period in early 2020. Four organizations were interviewed during this timeframe to provide focused reflections on the information received from the pop-up workshop surveys. These were San Leandro Creekside Church, Union City Family Center, Larry Orozco Teen Bike Shop (San Leandro) and the Community Resources for Independent Living (Hayward).

Outreach Coordination

The City of Oakland has recently completed extensive engagement with communities in their CoCs through several recently completed and in-progress plans and studies. After consultation with the city, it was determined that outreach should not be duplicated in these areas for the 2020 CBTP update. Recent efforts include the AB 617 community process led by the Bay Area Air Quality Management District in West Oakland, which culminated in the report *Owning Our Air: The West Oakland Community Action Plan*, the Downtown Oakland Specific Plan, the East Oakland Neighborhood Initiative (EONI), a plan that focused on equity-based planning in East Oakland, and the East Oakland Mobility Action Plan which is East Oakland's Community Based Transportation Plan. Alameda CTC has provided planning funds to support the East Oakland Mobility Action Plan. Finally, the Oakland Department of Transportation conducted outreach throughout all of Oakland CoCs as a part of the 2019 Bicycle Plan update.

ALAMEDA County Transportation Commission

Connecting People, Housing, and Jobs

ALAMEDA COUNTY TRANSPORTATION COMMISSION

Valley Link: TEP Amendment

A presentation to the Planning, Policy and Legislation Committee

May 11, 2020

Overview

- Project Background
  - BART to Livermore
  - Tri-Valley San Joaquin Valley Regional Rail Authority (TVSJVRRA)
- Project Briefing – Michael Tree, Executive Director TVSJVRRA
- Draft 2014 Measure BB Amendment
  - Proposed language
  - Amendment process
- Next Steps

Today's Action

- TVSJVRRA has requested an amendment to the 2014 Measure BB Transportation Expenditure Plan
- Action item **to initiate a 45-day comment period** by jurisdictions in Alameda County on the proposed Measure BB Transportation Expenditure Plan amendment

Rail in the Tri-Valley

- Long-standing commitment to rail service and connectivity
- **Planning and policy priority:** identified in state and regional rail planning
  - Alameda CTC Countywide Transportation Plans
  - 2007 MTC Regional Rail Plan
  - 2018 California State Rail Plan
- **Local land use planning:** Isabel Neighborhood Plan completed in May 2018 for development around a new rail station

2018 California State Rail Plan

Funding for Rail in the Tri-Valley

- **Financial commitment:** Voters consistently supported funding
  - 1986 Alameda County Measure B
    - $170 million for a "Rail extension to Dublin Canyon"
  - 2000 Transportation Expenditure Plan
    - $8.7 million for I-580 Corridor/BART to Livermore Studies
  - 2014 Alameda County Measure BB
    - $400 million for BART to Livermore
  - Regional Measures (RM)
    - RM1 bridge toll funding to advance planning and environmental work
    - RM3 (2018) included $100 million for Tri-Valley Transit Access Improvements

BART to Livermore

- 1980s: BART purchased a potential sites near I-580 and Isabel Avenue and Greenville Road to preserve land for extension
- 2010: BART completed a Program EIR evaluating station sites and alignments
- 2012: BART advanced conceptual engineering and environmental review of extension to Isabel Avenue
- 2017: BART released Draft Project EIR
- 2018: BART certified Final Project EIR and directed staff to not advance an alternative

Tri-Valley San Joaquin Valley Regional Rail Authority (TVSJVRRA)

- Assembly Bill 758 created the TVSJVRRA for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and commuter rail service in the Tri-Valley and San Joaquin County
- TVSJVRRA assumed responsibility to advance rail project in 2018 when the BART Board declined to advance the project
- TVSJVRRA leveraged significant amount of previous work:
  - BART to Livermore
  - ACE*Forward* planning and environmental work

Corridor Snapshot With Proposed Stations

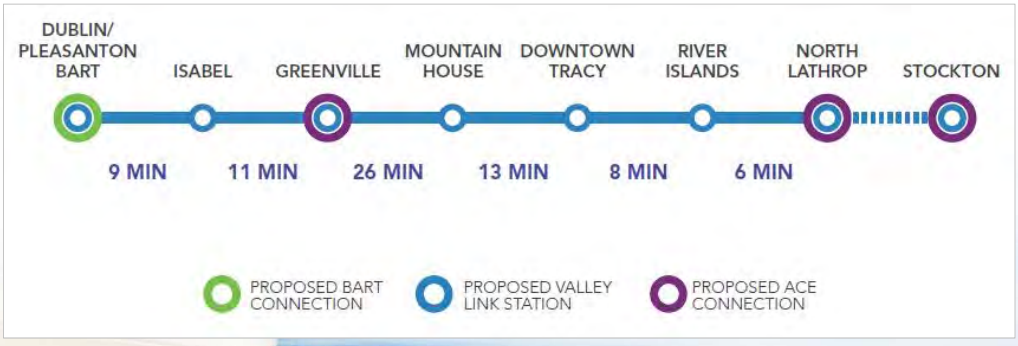
42 miles

7 stations

26,000-28,000 daily riders by 2040

33,000 metric tons of CO_2 equivalent/year reduction in Greenhouse Gas (GHG) emissions in 2040

Seamless connections to BART and ACE



Improving Statewide Connectivity

Key Policy Objective
Support the vision of California State Rail Plan to connect the Northern California Megaregion to the State rail system.

Valley Link closes critical transit gaps and improves connectivity within the Bay Area Megaregion by connecting two designated State Rail Hubs and providing a connection to High Speed Rail.

Travel Times Between Proposed Stations

Frequent and Reliable Service

	PEAK	OFF-PEAK
Between Bart Dublin/ Pleasanton and Greenville	12 min (meeting every BART train)	30 min (meeting every other BART train)
Beyond Greenville	24 min (meeting every other BART train)	60 min (meeting every 4th BART train)

Station Partnerships

Key Policy Objectives

- Work in partnership with communities to identify and incorporate high priority local goals and objectives for individual stations.
- Initiate service at earliest possible date.
- Preserve land and right-of-way to allow for the implementation of phased design and infrastructure, in support of Sustainable Community Strategies (SB375).

Typology of Stations

Transit-Oriented Development

Intermodal

Park and Ride

Transit Oriented Development Policy

ADOPTED DECEMBER 11, 2019

- Station area plans required that include zoning, design standards, parking policies and station access plans
- Station area plans that meet or exceed a corridor-level threshold of 2,200 housing units within ½ mile radius of stations

Station Access

Key Policy Objectives

- Expand and improve connectivity through improved transit and/or feeder bus services.
- Promote active transportation.
- Encourage zero emission vehicles and shared rides.

Sustainability Goal

100% Self-sufficiency

Key Policy
Be a model of sustainability in the design, construction and operation of the system.

Valley Link will strive for a system that can operate largely on its own stored and created energy.

Project Funding

Cost of Project	Funds Identified for the Project	
• $2.4 to $3.2 billion in year of expenditure	Measure BB	$400 million
	Bridge Toll	$188 million
	Impact Fees	$ 40 million
	TOTAL:	$628 million

Project Partners

- Alameda CTC: I-580 relocation of managed lanes
- Caltrans: I-580 widening
- MTC and SJCOG: Funding and project delivery
- CalSTA: Funding
- BART: Valley Link/BART connection
- SJRRC/ACE: Valley Link/ACE connections and station designs in San Joaquin Valley
- UPRR: Review for construction and operation in UPRR right-of-way in San Joaquin Valley

Project Schedule

- Completed Feasibility Report in October of 2019
- EIR to be certified and project adopted by the end of 2020
- 30% design to be completed in 2021
- Beginning of revenue service in late 2027 to early 2028

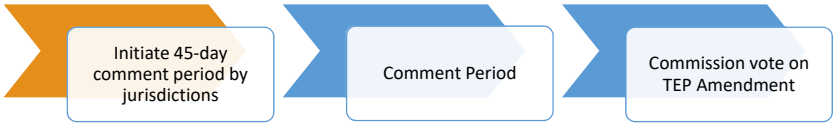
TEP Amendment Process

- TEP amendment process from the 2014 TEP
- Amendments Require 2/3rds Support: To modify and amend this Plan, an amendment must be adopted by a two-thirds vote of the Alameda CTC Commissioners
- Comment Period: All jurisdictions within the County will be given a minimum of 45 days to comment on any proposed Plan amendment
- Staff to return to Commission to report on the comments received and recommend final action by Commission

TEP Project Requirements

- All implementing guidelines will be applicable to the project and project sponsor, similar to all other TEP projects
- Strict Project Deadlines: Each project will be given a period of seven years to receive environmental clearance approvals and to have a full funding plan for each project
- Commitments from Fund Recipients: All recipients of funds allocated in this expenditure plan will be required to sign a Master Funding Agreement, which details their roles and responsibilities in spending sales tax funds, and includes local hiring requirements
- No expenditures outside of Alameda County

TVSJVRRA TEP Amendment Request



1. Acknowledge TVSJVRRA as a new agency eligible for Measure BB funds (Attachment B)
2. Removal of BART to Livermore Project as a named capital project and associated $400 million in Measure BB funding (Attachment C)
3. Addition of the Valley Link Project as a named capital project and include $400 million in Measure BB funding (Attachment C)
4. Technical adjustments such as maps and tables to reflect changes noted above (Attachment C)

Valley Link Rail

This project funds the first phase of a Valley Link Rail Extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Recommendation

- Approval of this item will initiate a 45-day comment period by jurisdictions in Alameda County on the proposed amendment, which would then return to the Committee and Commission for final action. This is an action item and requires 2/3rds approval at the Commission meeting per the Implementing Guidelines of the 2014 TEP.

Thank You

1. **Call to Order/Pledge of Allegiance**

2. **Roll Call**
   A roll call was conducted. All members were present with the exception of Commissioners Arreguin and Pilch.

   Subsequent to the roll call:
   Commissioner Pilch arrived during item 3. Commissioner Arreguin arrived during item 5.1. Commissioner Valle left during item 5.1. Commissioner Ezzy Ashcraft left after the vote on item 5.1.

3. **Public Comment**
   There were no public comments.

4. **Consent Calendar**
   - **4.1. Approve April 13, 2020 PPLC Meeting Minutes**
   - **4.2. Congestion Management Program (CMP): Summary of the Alameda CTC's Review and Comments on Environmental Documents and General Plan Amendments**

   Commissioner Haggerty *moved to approve the Consent Calendar. Commissioner Cutter seconded the motion. The motion passed with the following votes:*

Yes:	*Bauters, Carson, Cutter, Ezzy Ashcraft, Haggerty, Halliday, Kaplan, Ortiz, Pilch, Valle*
No:	*None*
Abstain:	*None*
Absent:	*Arreguin*

5. **Regular Matters**
   - **5.1. Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment**

   Tess Lengyel stated that the Tri-Valley-San Joaquin Valley Regional Rail Authority (TVSJVRRA) requested that Alameda CTC amend the 2014 Measure BB Transportation Expenditure Plan (TEP) to add Valley Link and move $400 million from the BART to Livermore TEP project to Valley Link and remove BART to Livermore. She noted that the TEP amendment process requires a 45-day comment period for all jurisdictions in Alameda County. Michael Tree, Executive Director of the TVSJVRRA, provided an overview of the project background, project description, schedule and current funding. Ms. Lengyel recommended that the Commission approve beginning the comment period for an amendment to the TEP. The TEP amendment would include four elements: 1) acknowledge TVSJVRRA as a new agency in Alameda County that can be an eligible recipient of Measure BB funds; 2) remove the BART to Livermore project and associated $400

million Measure BB funding; 3) add Valley Link in Alameda County project with $400 million in Measure BB funding; and 4) make associated technical amendments. Approval of this item will initiate a 45-day comment period by jurisdictions in Alameda County on the proposed amendment, which would then return to the Committee and Commission for final action. She stated that this is an action item and requires 2/3 approval by the full Commission according to the Implementing Guidelines of the 2014 TEP.

Public comment letters were received from the following:

- Dave Campbell on behalf of Bike East Bay – Raised questions about the lack of outreach in the City of Livermore. He mentioned concerns regarding how the financial crisis will impact the proposed project.
- Kelly Ellen Marshal on behalf of Building and Construction Trades Council of Alameda County, AFL-CIO – Support of staff's recommendation
- Livermore Chamber of Commerce – Support of staff's recommendation
- Sierra Club (San Francisco Bay Chapter) – Noted too many issues and questions that should be addressed before the recommended actions move forward; and questioned the lack of funding from San Joaquin County, consistency with SB 375, and the financial impact of COVID-19
- Tim Sibranti on behalf of Innovation Tri-Valley – Support of staff's recommendation

Commissioner Cutter asked if the right-of-way will be in the middle of the freeway. Mr. Tree said the train will be in the I-580 median until Greenville station.

Commissioner Cutter asked if this project is a way to connect to High Speed Rail. Mr. Tree said the Altamont Corridor Express has a plan to travel to Merced and will connect to High Speed Rail.

Commissioner Cutter asked if BART will be able to handle the traffic from Valley Link. Mr. Tree stated that according to BART, there will be no impact or need to increase car numbers until Valley Link passenger numbers increase in 2040.

Commissioner Cutter asked how Valley Link will guarantee a number of stations. Mr. Tree stated that the station areas under consideration are: Isabel, Downtown Tracy, River Island, Southfront, and Greenville. He noted that Livermore is very engaged in this project and has a $40 million impact fee for BART like service to Livermore.

Commissioner Pilch asked how close will the train come to Downtown Livermore and if Plan Bay Area (PBA) or the Metropolitan Transportation Commission/Association of Bay Area Governments (MTC/ABAG) have weighed in on the project. Mr. Tree stated that the station placement in the Tri-Valley will be in the I-580 median. In regards to PBA, MTC/ABAG is still developing PBA 2050 and as part of that effort has completed a project performance assessment and this project scored favorably.

Commissioner Halliday asked what the impact is of not doing this amendment. Ms. Lengyel stated that in 2018 the BART Board acted to not select a preferred

alternative from the BART to Livermore EIR. AB 758 created the TVSJVRRA to move forward with the project if BART couldn't move forward. The reason Alameda CTC is working on this now is because the TVSJVRRA requested the amendment in September 2019, and can use the commitment of funding as leverage as it seeks other regional, state, and other funding.

Commissioner Halliday asked what type of commitments San Joaquin County has made for this project. Mr. Tree noted that San Joaquin County is considering a sales tax measure in 2022. The San Joaquin Council of Governments (SJCOG) is working on congested corridor planning and have included Valley Link in its 580-corridor planning work to ensure that Valley Link can apply for funds through the California Transportation Commission. He noted that member agencies such as the Tracy City Council are considering the donation of $40 million in property toward the operation and maintenance facility. Ms. Lengyel noted that SJCOG committed funds towards early planning efforts that this project is building off of ACE Forward technical analyses.

Commissioner Halliday noted that the Sierra Club thinks this project violates SB 375. Mr. Tree stated that Valley Link is supportive of SB 375's main goal of reducing greenhouse gas emissions in the area by connecting people to jobs and housing by transit. Ms. Lengyel noted that Valley Link is an interregional rail project, and Alameda CTC currently funds interregional rail services such as ACE and the Capitol Corridor services.

Commissioner Kaplan asked what level of specificity will be in the amendment. Ms. Lengyel said the level of detail is specified on slide 28 with the proposed "Valley Link Rail" language.

Commissioner Kaplan asked about the level of Transit Oriented Development (TOD) required by the stations, and when the Commission will consider those types of questions. Ms. Lengyel said local station impacts are considered in the Environment Impact Report that Valley Link is developing now.

Commissioner Ortiz noted that she is representing AC Transit and she invited Ms. Lengyel and Mr. Tree to present to her fellow AC Transit Board members so they can provide their input to her.

Commissioner Haggerty commented that MTC is revisiting Resolution 3434. Livermore has been planning the Isabel station for quite some time and SJCOG adopted a similar resolution regarding housing near rail stations to support TOD.

Commissioner Arreguin moved to approve this item. Commissioner Haggerty seconded the motion. The motion passed with the following votes.

Yes:	*Arreguin, Bauters, Carson, Cutter, Ezzy Ashcraft, Haggerty, Halliday, Kaplan, Ortiz, Pilch*
No:	*None*
Abstain:	*None*
Absent:	*Valle*

5.2. 2020 Countywide Transportation Plan: Community-Based Transportation Plan Update
Due to the interest of time, this item was not presented.

This item is for information only.

5.3. Federal, state, regional, and local legislative activities update
Carolyn Clevenger gave an update on federal, state, regional, and local legislative activities. Ms. Clevenger noted that given the current COVID-19 circumstances we are in, bills that the Alameda CTC took positions on are now considered dead for this session. She mentioned that discussions are underway regarding a potential stimulus bill that would include funding for infrastructure, in addition to the CARES Act funding. The current federal authorization, the FAST Act, is set to expire this fall and staff is working with the Commission Chair and Vice Chair to schedule remote briefings with Alameda CTC's federal delegation in June. Ms. Clevenger noted that to prepare for the stimulus efforts, staff is working closely with local jurisdictions to identify priority projects and investments to consider should a bill develop and an updated list will be presented to the Commission in May

This item is for information only.

6. Committee Member Reports
Commissioner Kaplan wanted to check in about making BRT free to ride. Ms. Lengyel stated that staff incorporated that recommendation by adding free transit pilots to the projects submitted to MTC for PBA 2050. Alameda CTC does not currently have funding assigned to specific free transit for the East Bay BRT.

Commissioner Ortiz noted that AC Transit will provide free fares for the first 3 months once BRT starts.

Commissioner Kaplan asked when will the commission receive the next update on the impacts of COVID-19 on sales tax revenues. Ms. Lengyel said later this month the agency will see the first sales tax receipts from March.

Commissioner Halliday asked when will the Commissioners receive calendar invites for Commissioner Planning Area Briefings. Ms. Lengyel noted that Vanessa Lee will send the invites to confirm the meetings.

7. Staff Reports
There were no staff reports.

8. Adjournment/ Next Meeting
The next meeting is:

Date/Time: June 8, 2020 at 11:30 a.m.

Alameda County Transportation Commission Planning, Policy and Legislation Committee – May 11, 2020 Meeting – Agenda Item No. 5.1 Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request

Recording Name:
[Alameda CTC Remote Committee Meetings- May 11, 2020]

(Start at 01:57:38)

Ortiz: Then we move to regular matters. The first item is 501, approve Tri-Valley-San Joaquin Valley Regional Rail Authority request for a 2014 Measure BB transportation expenditure plan amendment.

Lengyel: Thank you, Madam Chair. This is Tess Lengyel. I will go ahead and start off on this presentation, and it will be shared with, uh, Carolyn Clevenger who's our Deputy Executive Director of Planning. And then we're also pleased that we have Michael Tree who's the Executive Director of the Tri-Valley-San Joaquin Valley Regional Rail Authority who can provide some detailed background information about the project. I wanted to note that this item initiates a multi-step process for the 2014 transportation expenditure plan amendment, per the implementing guidelines that are included in the transportation expenditure plan. I wanted to note that the Tri-Valley-San Joaquin Valley Regional Rail Authority which is a public transit agency created by state law in 2017 by AB 758, requested by way of an e- -- a letter back in September to, um, begin the amendment process for the, uh -- the transportation expenditure plan following their statutory authority in AB 758. Um, because the proposed project is, uh, expected to affect the I-580

express lanes in the corridor, we, uh, did our due diligence at Alameda CTC. And we, uh, held three technical engineering workshops with, um, the, uh, engineering staff and, uh -- and consultants working for the Tri-Valley-San Joaquin Valley Regional Rail Authority to, uh, share our concerns to understand what the proposed project is. It is in the very early engineering phases right now. Um, and then, uh, over the fall we assess to those, uh, impacts based on preliminary engineering. As you all know in January through March, there were changes at the, uh, Alameda CTC in terms of me as the executive director, as well as, um, changes in our leadership for the chair and the vice chair which changed some of the organizational structure of the agency. We had intended to bring this item before you in April. However, COVID hit and many items were moved into May. So here we are in May and we're intending to initiate, um, this process with this recommendation. Next slide, please. Next slide, please. The presentation is intended to provide you with some background around the BART to Livermore project which, uh, is currently listed in the 2014 transportation expenditure plan, and then to share with you, uh, the creation of the Tri-Valley-San Joaquin Valley Regional Rail Authority,

which, um, has requested a substitute rail project, um, per their authorizing legislation to fulfill the voter intent of rail in the Tri-Valley. As I mentioned, we do have Michael Tree who can give you a project briefing. And then at the end of the presentation we will go over the specific proposed amendment language for the TEP, and discuss the amendment process, uh, including the requirements for project delivery in the implementing guidelines. So today's action, next slide, please, is to bring forward the recommendation of initiating the amendment process, which, um, the approval of that would be to initiate a 45-day comment period. And this is spelled out in the implementing guidelines of the 2014 transportation expenditure plan. It would initiate a 45-day comment period, uh, for jurisdictions in Alameda County to comment on the proposed amenditure (ph) -- expenditure plan amendment. So next slide, please. What we'd like to do is share with you some background on a history of rail in the Tri-Valley. And to initiate that I'm going to ask Carolyn Clevenger, who's our Deputy Executive Director of Planning and Policy, to, uh, share with you the next few slides.

Clevenger: Great. Thank you, Tess. Good morning,

Commissioners. Rail service and connectivity in the Tri-Valley has been under discussion for a very long time. From a planning perspective, rail improvements have been identified in a series of local, regional, and state planning efforts over the years. BART to Livermore has been included in the Alameda Countywide transportation plans for a number of cycles, and the planning and environmental phase of the project is included in the current regional transportation plan. The Valley Link project is being considered for the regional transportation plan, Plan Bay Area 2050 that is currently under development. In 20 -- in 2007, MTC completed the regional rail plan, which was a major mega regional planning effort focused on passenger rail throughout northern California mega region, which envisioned BART to ACE connections in Livermore to provide a fast and reliable transit option over the Altamont Pass. And in 2018, the state deve- -- uh, the state approved the state rail plan, which included a Tri-Valley rail hub and increased frequencies connecting the Bay Area and Central Valley. In addition, cities in Alameda County and San Joaquin County have been doing local land use planning efforts, um, to focus growth around potential stations, including the City of Livermore, which

completed the Isabel neighborhood specific plan in 2018. Next slide, please. Voters have made long-standing commitments that include funding for transit in the Tri-Valley dating back to the 1986 Measure B, and the 2000 expenditure plans, which included funding for rail, to the 2014 Measure BB expenditure plan that is the focus of today's discussion, that included 400 million for BART to Livermore. In additional -- in addition, regional measures 1 and 3, which were approved by voters throughout the region, included funding, some of which BART and now the Tri-Valley-San Joaquin Valley Regional Rail Authority are using to advance the initial phases of project development. Next slide. As many of you know, BART was, for a long time, the lead on the project known as BART to Livermore. They last briefed PPLC and the Commission on the project in June of 2018. As early as the 1980s, BART purchased sites near 580 and Isabel and Greenville to preserve land for potential future extensions or facilities. Between 2010 and 2018, BART advanced a significant amount of planning and environmental work, including analysis of multiple station sites and alignments, as well as different rail technologies and express bus alternatives. That work culminated in May 2018 with the BART Board

certification of a project level EIR. After extensive discussions and debate, the BART Board finalized the EIR without selection of a preferred project to advance. Next slide, please. Um, as Tess mentioned Assembly Bill 758 was, um, approved in 2017, and that was led by Assemblymembers, um, Baker and Eggman. And AB 758 created the Tri-Valley-San Joaquin Valley Regional Rail Authority for the purposes of planning, developing, and delivering cost-effective and responsive transit connectivity in the Tri-Valley and San Joaquin County. When the BART Board voted not to advance the project, the Authority assumed responsibility to advance the project as defined in AB 758. The Authority utilized a significant amount of work that had already been completed by BART, as well as by ACE, to jumpstart their work. And I'm gonna turn over to Michael Tree, the executive director of the Authority, to provide an overview of the Valley Link project and the project's current status.

Tree: All right. Um, good afternoon. It's a pleasure to be here to talk, uh, with you about Valley Link. Um, I'm thinking if we could go to slide 9. I think that was the start of my presentation. Maybe one more. There we go. Um, you know, obviously this is the 580. And, uh, of course it's pre-COVID. But as you've been

reading in the media, including today's East Bay Times, you know, the traffic and the congestion are expected to return in the near future. And -- and perhaps even with a vengeance. Um, I think what's important to note about the congestion is that these are Bay Area workers, uh, struggling to get to work with real impacts on them as individuals, and also with their families. But this picture is also about the economy. And you'll note that the first two lanes of traffic on the right hand side of your picture are all freight movement. It's truck traffic. It's, uh, moving at a -- at a speed that's a crawl and much of it going into the, uh, Oakland Port. Next slide. On this slide, uh, which was provided by the Bay Area Council Economic Institute, you can see three primary, uh, commute sheds into the Bay Area. You note that the, uh, commute from the northern San Joaquin Valley is by far the largest. In fact, it's, uh, more than twice the volume of other commute sheds shown in the diagram. And the, uh, congestion is also growing at a higher rate. Um, an update to this slide's coming soon, and it'll show that the commute shed from the northern San Joaquin Valley is now approaching a hundred commuters a day. Next slide. Slide 11, uh, illustrates why the congestion on the 580 is so great.

You know, in short in times of prosperity, which are important to us all, uh, the Bay Area is generating a approximately eight jobs for every one housing unit constructed. And that equates to unsustainable housing costs for Bay Area workers. In fact, uh, housing prices for comparable homes are approximately three times higher in the Bay Area than in the northern San Joaquin Valley. And, of course, that's leading to an increase in commuters and congestion on the 580. Uh, in fact, uh, according to the Bay Area Council Economic Institute, traffic on the 580 will increase 75 percent before 2040. And the freight movement, which we saw in those right hand two lanes, according to Caltrans will increase 60 percent in that, uh, same time period. Next slide. As mentioned, uh, by Carolyn earlier in the presentation, AB 758 established the Tri-Valley-San Joaquin Valley Regional Rail Authority. The, uh, 15-member agency features, uh, a real effective balance of policymakers from both sides of the Altamont Corridor, uh, throughout the project area to plan and construct, uh, a passenger rail service that would connect the northern San Joaquin Valley with the BART system, including connections, uh, with ACE trains. And of course, you might recognize, uh Board -- the Board

Chair of the Valley Link Board in the pictures that you have on your screen. Uh, Scott Haggerty, uh, has been, uh, leading the organization as its chair since its creation. Next slide. Here's a great snapshot of, uh, the Valley Link passenger rail project. The first phase is from the Dublin-Pleasanton BART, uh, station to the planned ACE North Lathrop station. Uh, a second phase, which is the hashed lines, uh, features an extension of the train into Stockton. As noted on the map, Valley Link connects with BART at the Dublin-Pleasanton, uh, BART station and with the ACE trains at the Greenville station and also that planned ACE North Lathrop station. The first phase is, uh, 42 miles long, features seven stations. And for convenience you can break up the phase one into three different rights-of-way, uh, all of which are current transportation corridors and make for a cost-effective project. The first section as you're looking, uh, at the first phase, is from the Dublin-Pleasanton BART station to the Greenville station, which is just short of the Altamont Corridor. Uh, within this ele- -- 11-1/2 mile section, Valley Link travels at grade within the 580 median. The second section is the 12-1/2 mile Altamont Corridor. Uh, in this section, Valley Link operates on the former

Southern Pacific Railroad right-of-way, which interestingly, was part of the original Transcontinental Railroad, and is now owned by the County of Alameda. The third section is a 17-1/2 mile section, which goes from the Mountain House station to the planned ACE North Lathrop station. In this section, the train's traveling in the Union Pacific Railroad right-of-way. Uh, per the feasibility report, Valley Link carries between 26 and 28,000 daily riders, uh, in 2040, saving 33,000 tons of greenhouse gas emissions a year, uh, in 2040. Uh, next slide. Uh, this slide is from the state rail pr-- -- the state rail plan. Um, improving statewide connectivity with rail is a high priority of the state. And as you can see on the inset of the Bay Area that's on the slide, Valley Link closes critical transit gaps by connecting two designated state rail hubs, the Stockton Hub and the Tri-Valley Hub, located at the Dublin-Pleasanton BART station, and also provides an early connection to high-speed rail, uh, through the, uh, ACE rail network connecting with the Valley Link. Next slide. Here you can see the travel times between the seven Valley Link stations in phase one. Uh, these travel times were calculated as part of the feasibility report and are competitive with

commuter travel times, uh, currently in the 580, or should I say pre-COVID, but, uh, soon, uh, to be competitive. Um, of course is that, um, or of note is that we've been doing additional operations model -- modeling during the environmental work for Valley Link, and have bettered the travel times by 10 minutes, uh, in phase one by improving the location and the length of the passing lanes. Slide, uh, 16. Slide 16 shows the headways of Valley Link. And so in short, headways are the frequency of the trains as they arrive at stations. And you'll note in the Tri-Valley the trains would arrive, uh, or will arrive every 12 minutes in the peak and every 30 minutes in the off-peak. And, uh, that's BART-like service for residents in Livermore. And beyond Livermore the trains will arrive every 24 minutes in the peak and every 60 minutes in the off-peak. Next slide. Here's an illustration of the, uh, train technology that's been selected by the Valley Link Board. The multiple unit trains, which look similar to eBART, uh, can travel nearly a hundred miles per hour. And the Authority, uh, is working towards zero emission trains using electricity provided by catenary lines in the Altamont Corridor to power the train, and also to charge battery packs that would then power the train,

uh, in the Tri-Valley and in the northern San Joaquin Valley. Next slide. So partnering with, uh -- with the communities, uh, that are served by Valley Link is really important to the Board. Um, several of the seven stations in the phase one of the Valley Link offer excellent transit-oriented development opportunities. Um, Livermore is a great example with the Isabel neighborhood specific plan. U, nearly 4,000 homes are expected, uh, within a half-mile of that Isabel station. Um, another station in Livermore being considered in the EIR is the, uh, South Front station, which again could offer another 4,000, uh, homes within a half-mile of that station. And I think of note, these stations are in MTC's priority development areas. Um, likewise, the City of Tracy is also looking at transit-oriented development at their downtown Tracy station. Uh, the consulting team there working with the city is looking to have between, uh, 3,500 and 4,000 housing units, uh, planned within a half-mile of that station. And then similarly in River Islands, uh, the developer is working with the city to increase density around, uh, that River Islands station, uh, in a, uh -- in a, uh -- a range of 3,500 to 4,000 housing units. Uh, next slide. So speaking of, uh, TOD potential the, uh, Valley Link

Board adopted a transit-oriented development policy in December of 2019. And this policy requires station area plans, uh, include zoning, design standards, parking policies, and station access plans. Like MTC's TOD policy, the Valley Link plan holds this that stations, uh, station area plans must provide a corridor level threshold of 2,200 housing units within a half-mile radius of the stations. Next slide. Slide 20 is -- is all about stati- -- station access. In the many, uh, community outreach events that we've had with Valley Link, we've heard clearly that access to stations is really important. The Valley Link Board is working with local transit agencies to envision feeder bus service into the stations, as well as, uh, shared autonomous vehicle technology. And I think of note on this slide in the lower right is the LAVTA shared autonomous vehicle project in Dublin, uh, that Supervisor Haggerty has initiated, that is funded by the Bay Area Air Quality Management District and MTC. It just provides a really good example of the future of zero emission, uh, first last mile, uh, connections into rail stations. And, uh, of course, the Board's also, uh, planning for bike and ped access to the stations, as well as shared rides. Next slide. The Board gets excited when they talk about

sustainability. And, uh, their goal is to have a 100 percent self-sustainable project, um, with the zero emission trains that, uh, I shared a few slides back, uh, and with a -- a large solar farm that's currently being planned, uh, adjacent to the O&M facility. Uh, and also solar at individual stops. You know, the Agency is -- is well on its way to that goal. And I think with wind power supplementing the -- the solar power, uh, the Board will -- will get close to that goal, if not, uh, reach it. Next slide. With the, uh, couple of slides that I have left, uh, the first is, uh, a look at the project funding. Uh, the project cost in year of expenditure is two point four to three point two billion. Um, in current year dollars it's approximately one point eight-eight billion to two point five. Um, funding identified for the project thus far is 628 million, which you can see the largest by far is the availability of the 400 million in Measure BB. Um, also of note, you know, looking at funding, is that, uh, the Bay Area certainly has been working on FASTER, and we know that it has been moved, uh, likely 'til November of 2022. But I think it's also important to note that the San Joaquin County has also been aiming and planning and preparing for a transportation sales tax for that same

November of 2022. And so these sources, combined with the state and the federal funding sources, uh, will be used to complete the project and also provide the important O&M funding. Next slide. There's a lot going on with this slide. It -- it really it demonstrates the -- the, uh, project partners working with the Valley Link Board, the Regional Rail Authority on Valley Link. Um, you know, at the top is Alameda CTC. And, uh, it of course has been very interested in the 580 and the train going up the median, uh, and also in the, uh, relocation of the managed lanes. Uh, Caltrans, uh, has equally been, uh, a key partner and an approval agency for what's taking place in the 580. Um, and then MTC and San Joaquin COG, certainly they're partners in the funding and project delivery. I think it's important to note that to date, MTC has provided three funding allocations that have gone towards the feasibility report, the preliminary design, and the environmental work on the project. Uh, and total in-bridge toll funding to, uh, an amount of 13.7 million. And, of course, I -- I would certainly be remiss to not note that Alameda CTC is a very important funding partner on the Valley Link project as you consider the request before you today. Uh, there's certainly other

important partners. Uh, BART, which is offering design assistance with the connection at the Dublin-Pleasanton BART station. And I would also, uh, note that these partners play an important role on the Valley Link Executive Committee which meets monthly to review and offer guidance on the, uh, Valley Link project. Next slide. So my last slide today is the project schedule. And as noted the information in the presentation has come primarily through the feasibility report, which was completed and adopted by the Valley Link Board, and submitted, uh, to the state as required by AB 758. Um, the Valley Link EIR will be out for public comment in September of 2020, and is planned to be certified by the Valley Link Board by the end of 2020. NEPA and 30 percent design will be completed in 2021, which really sets up final design, uh, that will begin in either late 2021 or early 2022. And so we're working hard to begin testing of Valley Link trains in 2027, with a revenue service in late 2027 to early 2028. And so that completes, uh, my, uh, presentation on Valley Link. Uh, uh, and it's certainly been a pleasure to provide the presentation and I'm available for any questions.

Lengyel: Thank you Michael. This is Tess. I'll take the presentation from here. Vanessa, can you please go to

the next slide? So I wanted to share with the commissioners and on the committee the TEP amendment process. It has come before you today as part of the process that's laid out in the implementation guidelines in the 2014 transportation expenditure plan, which state that amendments to the expenditure plan require two-thirds support of the vote of the Alameda CTC commissioners at their full commission meeting. Um, there is a required comment period for all jurisdictions within the county to be given a minimum of 45 days to comment on any proposed plan amendment. Um, then if this item is approved and moves forward, this month staff will release that notification to the jurisdictions and will receive comments within the 45-day period and return to the Commission to report on the comments and recommend a final action after we have received those comments. Next slide, please. For any project that is included in the 2014 transportation expenditure plan, um, it would be, uh -- it would need to adhere to all of the implementing guidelines similar to all the other TEP, uh, projects that are in the expenditure plan. And there are 23 implementing guidelines in the plan and a few I'd like to call out here. Um, the implementation guidelines have strict project deadlines. And each

project that is included in the transportation expenditure plan has a period of seven years to receive the environmental clearance and a full funding, um, plan for the project. And I would like to note that per any amendments to the expenditure plan, the start date of that seven year period would begin once the Commission adopts the amendment. Um, fund recipients would have to enter into signed master funding agreements agreeing to Alameda CTC's requirements. And, uh, it -- which detailed the roles and responsibilities, um, for their participation as a recipient of Measure BB funds. And of course, no funds may be spent outside of Alameda County. Next slide, please. So the very, uh, specific request to initiate the amendment process is one, to acknowledge the Tri-Valley-San Joaquin Valley Regional Rail Authority as a new agency eligible for Measure BB funds. That is also a requirement as part of one of the implementation guidelines in the TEP. And that would be codified in a resolution which is in your packet in attachment B. The request from the Tri-Valley-San Joaquin Regional, uh, Rail Authority is to remove the BART to Livermore project and put a substitute rail project in the Tri-Valley for the Valley Link project. And that would be the

concomitant 400 million. The, um, technical amendments would be required throughout the TEP to codify the changes and reflect the changes, uh, of the amendment. And all of these changes from 2 through 4 listed on the slide can be seen in red line markups, uh, on attachment C. Next slide, please. The very specific language that is proposed as part of the, uh, amendment before you today started off with the language that, um, was in the expenditure plan for the BART to Livermore project. And there were just a few changes that were made to that language that had been previously approved by voters. The BART to Livermore language was removed and Valley Link was incorporated. Um, the additional change was that there would be a Valley Link rail extension, noting that it would be from the existing Dublin-Pleasanton BART station, uh, within the Tri-Valley and Altamont Pass in Alameda County. We removed the I-580 corridor from the previous language in the TEP. Um, clarifies, uh, that construction funds can be used for the first phase of the project in Alameda County, reaffirming that the funds are only eligible to be used in Alameda County, and that a full funding commitment have to -- have to be identified and approved for an initial operating segment that most effectively meets the adopted

project goals. And of course, the project would have to go through all of the environmental clearances and, um, be consistent with federal, state, and regional agency requirements that have jurisdiction outside of Alameda CTC for environmental and project development processes. So the recommendation, next slide, please, before you today is to approve this item to initiate a 45-day comment period by jurisdictions on the proposed amendment. As I noted we would then receive those comments and return to the Commission for final action. Um, this action would require two-thirds voter approval at the Commission meeting per the implementation guidelines. And you can see that there would -- on this flowchart we'd initiate the 45-day period. There would be a, excuse me, we'd initiate the comment period by jurisdictions. They would have 45 days. And then we'd come back to the Commission, uh, in early fall with a vote on the TEP amendment once you've had a chance to review the comments. And at that time that would require a two-thirds vote. So with that we'd be happy to answer any questions regarding this recommendation.

Ortiz: Tess, before we move, um, for comments, does the 45-day comment period starts as of this committee or as of the meeting on the 28th by the full Commission?

Lengyel: It starts by an action of the full Commission.

Ortiz: Okay. That's what I thought. Okay. Thank you. Um, I understand that we have a couple of public comments. So I ask for, uh, the liberty from the Commissioners to first listen to the public comments and then we will go into Commissioners comments.

Bauters: Thank you, Madam Chair and before we begin that portion of the, um -- the agenda item as a reminder to the public, um -- public comment is only being accepted, um, by written, um, in written format today. So if you ha- -- or a member of the public listening to this and wish to submit a public comment, Vanessa is going to, um, begin r- -- reading them, um, or summarizing those that are extensive in length. Uh, but you can also during this meeting submit a public comment by emailing her at V-L-E-E at AlamedaCTC.org. Um, so if, uh, you have a public comment or one comes up during this meeting go ahead and do that. And then Madam Chair what we would just ask is if we receive any new ones before we close the item or entertain a motion, that we just, uh, check back in in case anybody is writing theirs during this meeting. Um, but we see the Commissioner hands, um, raised to speak and we're gonna go to the public comments. So Vanessa, if you could just state who the public

comment is from and then if it's, um, an acceptable length to read, uh, go for it. If it's longer as we've discussed, please summarize.

Lee: Sure. So we've received several public comments. Um, the first public comment for this item was submitted by Tim Sbranti, um, on behalf of the Innovation Tri-Valley Leadership Group. I'm gonna summarize the comment. It reads as follows, "On behalf of the Innovation Tri-Valley Leadership Group I respectfully request for the PPLC to support the staff recommendation to amend the Measure BB transportation expenditure plan to replace the BART to Livermore project with the Valley Link project." The next comment that we have received is a multi-page letter I'm going to summarize. We received a letter from the Sierra Club SF Bay Chapter signed by Matt Williams, Dick Schneider, and Eric Parfrey raising questions about the Valley Link project and amendment, and requesting more time be taken to analyze the project. Specifically, it notes that we do not know the future of work post-pandemic and how it will affect transportation. It questions the financing of the Tri-Valley-San Joaquin Valley Regional Rail Authority and why it should be added as an eligible agency. It questions why it is proposed that BART to Livermore be

removed as a project, and whether there needs to be an amendment. And it asks where is San Joaquin Valley support. The next public comment we received, uh, is a multi-page letter I'm gonna read in summary from Dawn Argula on behalf of Livermore Valley Chamber of Commerce. "Livermore Valley Chamber of Commerce supports the above reference item advancing the efforts to close the gap in the I-580 corridor for an urgent, uh, urgently needed and long-awaited effective rail connection between Livermore and the Dublin-Pleasanton East BART station." The next item I'm gonna read in full is on behalf of Mayor David Haubert. "I urge the Committee to unanimously support the item. This item has the support of ACTC staff, as well as regional transportation agencies such as the Livermore Amador Valley Transportation Authority, or LAVTA, and all Tri-Valley cities. This item will provide much-needed rail service to Livermore and beyond into San Joaquin County. For these, and all the other reasons mentioned in the staff report, I urge the committee to support the item." The next comment I'm going to, um, summarize, it's a multi-page letter from Kelly Ellen Marshall on behalf of Building and Construction Trade Council of Alameda County. The Alameda County Building and Construction Trade Council

supports the staff recommendation for the following listed reasons which are listed in the letter. The next item I'm going to summarize, it is a letter from the City of Livermore. In summary, um, I write to support the approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority request to initiate an amendment to the 2014 Measure BB transportation expenditure plan. The next public comment is on behalf of Commissioner John Marchand. I'm going to summarize a comment. It reads as follows. Thank you for this opportunity to speak in favor of item 5.1 to approve the Tri-Valley-San Joaquin Valley Regional Rail Authority request for a 2014 Measure BB transportation expenditure plan amendment. When I first was appointed to the Commission, and we were talking about Measure BB, there was a lot of discussion around geographic equity and a rail connection from Livermore to the rest of the Bay Area. I urge the Committee to vote in favor of the staff recommendation and move it to the full Commission. Our final letter -- our final comment was received by Dave Campbell, um, on behalf of Bike East Bay. The letter -- the comment reads, "We support transit and possibly the project too, but have questions and concerns around." Um, and there are three questions

raised, uh, in the comment. One of them is the lack of public outreach in Livermore. The second question is our headway is off-peak, um, for public transit. And the last request is to hear more information about the financial crisis and how this project is affected. That is the end of all of the comments I've received.

Ortiz: Thank you, Vanessa. Then --

Bauters: Thank you, Madam -- Madam Chair before you move on I just wanna --

Ortiz: Yes.

Bauters: -- make a note for all committee members that Vanessa and Angie have emailed all the written comments in their full form to you. So, um, she has done her best to summarize. Some of those are multi-page letters. And if you'd like to review those comments in detail they've been made available to all of you. Thank you, Madam Chair.

Ortiz: Thank you.

Bauters: And, um, the first t- -- the first two hands you have up for discussion are Chair Cutter and Commissioner Pilch.

Ortiz: Okay. Uh, Chair Cutter.

Cutter: Hi. Thank you for taking my comments. I actually wanted to thank you because this is the most complete, uh, report I've ever seen of Valley Links. And I'm

trying to understand it more fully. Um, I appreciate this presentation today. Um, I do know that we are only talking about starting a comment period here. We're not, um, you know, committing funds or anything like that. But at the next meeting, um, however, I just wanna get clear on a few technical issues. And, um, so I might clear on the right of way from Alameda County part will be through the middle of the freeway or the, you know, where we currently have all the signage and so forth for our, um, lanes?

Lengyel: Madam Chair, I'd like to ask Michael Tree to respond to the very project specific, uh, (inaudible - 02:36:06).

Cutter: Thank you. And these are project specific.

Lengyel: Michael Tree.

Tree: I- -- great question. The answer is yes. Uh, the train is in the median, uh, in the 580 until Greenville Station.

Cutter: Okay. Um, and so I'm just wondering if, you know, certainly we have further work doing -- that we're doing in that median. We've set it all up and -- and it's a shame to see that work go by the wayside. I understand this is something for the greater good, um, as being proposed. But I just wanna make sure that if we are going to something like that that we're

cognizant about putting more money into that corridor. Um, the other is, um -- is this a way to connect to high-speed rail? Um, you know, I know that ACE had a plan that they were gonna go to Madera and try to, um, connect and then bring that into the Bay Area. I'm wondering if this does the same.

Tree: So ACE has plans to travel to Merced where it would, uh, connect with high-speed rail. And as it came back north from Merced it would stop at the planned ACE North Lathrop Station. And that is a connection point between ACE and Valley Link. So that would be an early connection to high-speed rail.

Cutter: Okay that's what I wanted to know. Um, I also wanna know, um, and this probably isn't your, um, question to answer because it involves BART. But, um, with this multitude of trains coming in if we're going to have all this traffic, um, they're gonna come in from the Valley, um, and go over. And I imagine this goes through the Bay Fair BART, um, system. And I'm wondering with the planning that they're doing currently to enhance that -- the rail system there, if this can accommodate this change, or if it's something that BART will have to then find more money for to make sure that they have the accommodation of these extra trains that need to come in and come through

that station. I -- that's kind of a question I don't know if anyone can answer it because we don't have technical advice from BART here. Um --

Lengyel: Michael, would you like to address your coordination with BART as part of this project?

Tree: Yeah. Um, we've been close with -- with BART. Obviously they're on the executive committee and -- and we've worked with them on design and also on impact. And, um, according to BART and, uh, the Valley Link ridership numbers, there's, uh, no impact which would require BART to add cars into the BART system, uh, until you get to the 2040 ridership, uh, numbers. So it operates for about a decade without a need for additional, uh, BART cars. Uh, at that point with the ridership, uh, some additional cars are needed. And, uh, so we have begun some initial discussions in the executive committee about that. Uh, we've also talked about, uh, you know, offline with BART. We've talked a lot about the Bay Fair connector and how that's an important piece of infrastructure funded, uh, by, uh, Measure BB which would allow, uh, riders, uh, traveling on Valley Link who continue on to BART to then travel to the South Bay or to -- into Oakland and San Francisco. So we've had lots of discussions. That kind of sums up, uh, at

least the thought process thus far.

Cutter: Okay, thank you. I'm the mayor of San Leandro. That's why I have a little bit of more interest probably in that one area. Um, yeah. I -- I am just -- I, um, basically think this is a -- a project that will help solve some of the problems. I'm curious that you are -- it won't affect us until 2040, because I thought the kind of ridership you were talking about and the expense of this, um, project, bringing a lot of riders to, um, BART and so forth, uh, would be -- we'd see changes needed before that. But, um, so I -- I'm gonna be anxious to see what those figures are projected to be, um, kind of a more concise report about that. And then my last question is, um, and -- and I -- excuse me for not knowing all the details, uh, of BART to Livermore and why it was never completed. Um, there are rumors, uh, abundant. But, um, I was assuming that it was because some of the stations weren't going to be available or, um, there may be with some local issues with where the stations were or so forth. And -- and I don't know that that's true, but I'm, um, wondering how you guaranteed that you're gonna be able to have the stations you say you are to help, you know, unload riders and so forth so they don't have to go all the way up to, um, Dublin

before they can take a bus or something back down into Livermore.

Lengyel: Michael, can you please also address the work you're doing on, um, the evaluation of the stations?

Tree: Yeah. So, um, Livermore has in -- in the EIR, uh, being studied at the project level the Isabel station, uh, which was noted in the presentation. Also an emerging station, uh, is being looked at at the project level which is in a MTC PDA area which is the, uh, South Front station. Um, and then we have the Greenville station being analyzed in the EIR. Um, you know, Livermore has been really engaged in the process thus far. In fact, they have $40 million of impact fee that is being collected to develop these stations. And, uh, there -- there's just been a solid commitment by the board to, uh, provide BART-like service to Livermore.

Cutter: Okay. Okay, great. 'Cause that -- that would be a concern. You know, I -- I can't lie that I was disappointed that BART didn't go to Livermore. And so, um, with whatever we do I think that's got to be a major, um, thing, because not only do people wanna come in from the Valley to the Bay Area but, uh, people from over the hill as I call it want to get back over and do some, you know, shopping or whatever

they wanna do on the Valley side. So it is a two-way street.

Tree: Yep.

Cutter: And again I thank you for a complete, uh, presentation. Thank you.

Bauters: Next is Commissioner Pilch.

Pilch: Uh, thank you. I've unmuted myself. Um, uh, so two questions and then I have some comments. Uh, one question is, um, uh, and I think the -- it sounded like the station, um, placement is still being analyzed to some degree. But I'm wondering how close the train would come to downtown Livermore. And second question, um, I have is, uh, and I can -- I can never keep track of where Plan Bay Area is and in their process. But, uh, has Plan Bay Area and/or MTC ABAG, um, weighed in -- in on this? Uh, if you can answer those two questions and -- and then I have some comments after that.

Lengyel: Michael, would you like to answer those questions?

Tree: Um, yes. Um, so the station placement, um, in the Tri-Valley will be in the 580 median. That's where, uh, the stations being considered in the EIR are being studied. Um, in regard to Plan Bay Area 2050, uh, MTC being on the executive committee and also being fully engaged in, uh -- in the Plan Bay Area 2050 has

provided initial ranking or scoring of projects. And in this project in particular, the Valley Link project scored, uh, very favorably for the Plan Bay Area 2050 plan.

Pilch: Okay. Thank you. Um, so I know this is early in the process but just quickly some comments. Um, I think it's -- I think it can be problematic when, uh, stations are not placed where there's already, uh, some density, uh, to create new areas, uh, I think out of, uh, what's perhaps open space is, you know, removal of the open space is one problem. And then, uh, pr- -- potential disruption of places like downtown Livermore that might -- might, uh -- might suffer from, uh, having another community come up close by. But I don't wanna speak too much to Livermore. I really don't know the area very well. But I support good rail, uh -- rail that, you know, a good rail system in the Tri-Valley and -- and the, uh, Central Valley, um, and good connections to BART there. Um, I note a couple of things that bother me. I'm a little neutral right now and on the vote for this. A couple things that bother me is that a new agency has been created. I think a new agency had to be created in this case. But that proliferates the number of transit agencies we have in the Bay Area.

And I think the number of tranget -- transit agencies is -- is problematic. They -- we should have fewer, not more. Um, but like I said there's probably nothing to be done in this case. Um, we spoke about Plan Bay Area. They gave it a higher ranking. That's good. Um, this, you know, this -- this goes to, uh, land use planning. Land use planning is very much wrapped up in -- in a project like this. So, um, where the presentation, um, emphasized that, uh, commuters -- this would be bringing commuters into the Bay Area 'cause the Bay Area is producing jobs but not producing the housing, um, that -- that rankles me a bit. Because while that might be true, I'm not sure that we want to be, uh, at least saying that what we wanna do is make sure that people can come longer distance in -- into the Bay Area on a commute. Uh, I'd rather see us also tackle that land use problem in the Bay Area. Uh, and, you know, and of course it's difficult to do so. Many of us are trying still to do that. But, um, to have the main, uh, focus of this -- this is what I heard from the presentation anyway. To have the main focus of this being bringing in commuters from farther out seems to me to be the wrong focus. If it's -- if it's -- if it's connections within, uh, connections to BART and the Bay and the

Inner Bay Area and connections within, uh, the Tri-Valley and Central Valley, I think that's great. I think we, you know, we need to build rail. I think we've lost a lot of rail unfortunately. And now we're paying the price with having -- having the construction of it be so expensive. Um, but those are some of the concerns th- -- that I have, uh, about this project. And -- and I'll leave it there. Thank you.

Bauters: Thank you. The next, uh, speaker is Commissioner Halliday.

Halliday: Can you hear me? Hello?

Ortiz: Yes.

Bauters: Yes, we can.

Ortiz: Yes.

Halliday: Okay. Thank you. Um, you know, I -- I did receive the letter from the Sierra Club ahead of time. I haven't really had a chance to look at the others that have just been sent. Um, I f- -- I guess my first question is what, um -- what if, uh, you know, what if we don't do this now? I mean $400 million sits in a fund for BART to Livermore that isn't going to happen, right? Um, so what is the impact of -- of not doing this, as --

Lengyel: Commissioner, this is Tess Lengyel. I'll, uh, aim to

answer that. There are a couple things. Um, in, uh -- - in 2018 when the BART Board acted they acted not only on not approving, uh, BART to Livermore but none of the other alternatives that were analyzed in that environmental impact report. Um, AB 758 did create the Tri-Valley-San Joaquin Valley Regional Rail Authority, and specifically included its ability to move forward with a project if BART was not able to move forward. So, uh, voters did, uh, approve a rail connection, a rail service in the Tri-Valley. And what the 400 million can do, uh, if it's approved, if the project is approved by the Commission and the 400 million is approved for construction, it serves as a leveraging opportunity for the project. As Michael Tree noted, the project has, um, over 600 million at this point in, uh, potential funds, particularly if the Commission acts ultimately on an amendment with the 400 million. But the project still needs additional funding. By way of the Commission acting now, the Tri-Valley-San Joaquin Valley Regional Rail Authority can, with assurity, talk with state and federal funders and other regional funders such as MTC, uh, to try to leverage those funds. And that's a obviously a very important aspect of trying to attract external funds to move a project such as this forward.

Halliday: And what, um -- what is the commitment from San Joaquin County? I -- I heard, um, I have to apologize. My, some, for some reason my, um -- my device conked out somewhere through the presentation. And, um, so there were things I might not have heard. But what, um, I -- I did hear that there is a plan probably for a sales tax measure in San Joaquin County in tw- -- November 2022. Um, what other commitment from a funding from San Joaquin County has there been?

Lengyel: Michael, do you wanna address that and I might follow up as well?

Tree: Uh, yeah. So you're correct, Commissioner. The, uh -- the San Joaquin Council of Governments is currently looking seriously at a transportation sales tax which would be in November of 2020. That would provide needed capital --

Halliday: Of 2020? I'm sorry.

Tree: Or 2022, I'm sorry.

Halliday: Okay. Okay.

Tree: Sorry about that. That'll provide, you know, needed capital, but also O&M dollars to operate the Valley Link in San Joaquin County. Um, they've also have been working on their congested corridor, uh, planning so that, uh, Valley Link can apply for congested corridor funds through CTC, and also for TIRCP funds,

uh, through CalSTA. So there's state funding at stake which, uh, San Joaquin is supportive of. And then, uh, finally, uh, you'll see an action member agencies themselves are supporting the Valley Link project. You'll see an action in the near future where the City Council in Tracy for example will be, uh, considering, uh, the donation of about $40 million in property towards the Valley Link project, uh, potentially for the site of the O&M facility. So that kind of a --

Lengyel: And Commissioner --

Tree: -- give you an idea.

Lengyel: -- Commissioner Halliday and Michael if I might just add in a few other items. Um, and this is in speaking with the, um, Executive Director Andy Chesley at the San Joaquin, uh, Council of Governments. Um, they did, their board did act earlier on for about 300,000 to help with, uh, planning work for the project. They had been a funder -- a big funder for ACEforward work, which was the ACE rail was looking at trying to expand its services coming over the Altamont and, uh, in through Alameda County and down to Santa Clara County. And they spent, uh, many millions on that ACEforward, uh, environmental document. And many of those technical studies have been able to be used by, uh, Valley Link. And then I did wanna note that they took

an action just in April for a regional transportation plan amendment, um, that incorporated 163.9 million, uh, in their long range, uh, countywide transportation plan. So those are just a couple of other items, uh, that Andy Chesley shared with me.

Halliday: Okay, thank you. And then the final thing that I picked up from the, um -- the Sierra Club letter, um, uh, is that this seems to be, to them, to be contrary to the intent of SB 375 in the Bay Area sustainability -- sustainable community strategy. I think, um, uh, Mayor Pilch was perhaps, um, alluding to the same thing. Uh, but, you know, I'm wondering what studies would that would probably of ridership would include ridership from say San Joaquin County into places in Alameda County that have job centers, not -- not necessarily going all the way. Everybody wouldn't be going all the way through I would assume to, you know, San Francisco or, you know, beyond Oakland. Um, but I just, uh, you know, I -- do you have any comments on the, you know, whether this violates the intent of three se- -- SB 375?

Lengyel: Michael, do you wanna take a shot at that?

Tree: Yeah. Um, you know, I think the primary focus of SB 375 is the reduction of greenhouse gas emissions. Uh, you know, you saw on the slide the 33,000, uh, tons of

greenhouse gas emission, uh, savings with the Valley link project. Additionally, you saw the adopted TOD policy with Valley Link supporting transit-oriented development, which will further reduce automobile traffic, um, at that end of the commute, cutting the GHG even more. So, you know, I see Valley Link, uh, as supportive of SB 375. It meets its main goals. And, uh, it's a helpmate for, uh, you know, it's a tool in the toolbox for the nine-county Bay Area, uh, in providing, uh, a connection between the jobs and housing.

Lengyel: And Commissioner Halliday this is Tess Lengyel. I would just note that, um, Valley Link is intended to be an inter-regional rail service. And Alameda CTC currently funds an inter-regional rail service of ACE, and has been --

Halliday: Mm-hmm.

Lengyel: -- also working on other inter-regional rail services such as the Capitol Corridor project as well.

Halliday: Yes. Okay, thank you. I didn't -- I'm just raising these questions because they were raised in the -- in the Sierra Club letter. And, you know, we're operating in a way that people can't really fully par-- -- you know, participate by, you know, testifying. So I just wanted to bring those up. I'm -- I'm -- and

I'll say I'm a member of the Sierra Club, although not active and wa- -- wasn't involved in -- in analyzing this project. And I -- I am in general very supportive of rail projects. So, and at this point we are just moving the funds from an area where they are not gonna be, um, you know, there -- th- -- that project is not going to go forward to one that has possibility. And -- and this is just the start as you've pointed out of, you know, looking at it in more detail and allowing more, you know, more comments. So, um -- so anyway, I -- I just wanted to make that clear. But I just did wanna bring those points up. Thank you.

Bauters: Okay, next is Commissioner Kaplan.

Kaplan: Hello there. Um, good afternoon. Thank you very much for this. Um, I had a question about what level of specificity for this project, uh, would be in the amendment that goes out at this time? Like, I think there's a lot of things that we are starting to discuss and that will need to be discussed that are legitimate questions about, you know, how much TOD will be at each of the stations, and how the operating funding will work to ensure that it doesn't undermine, um, the central core functioning and things like that. Um, what level of detail on that goes forward at this

time and versus what level of detail would then come back prior to the next round of approvals? And -- and how does that work procedurally?

Lengyel: Thank you, Commissioner Kaplan. Um, if I could ask Vanessa to please go back to slide 28, just one slide back. Um, this is actually the language that is proposed. And this is the level of specificity that is proposed in the transportation expenditure plan amendment. This is very similar to the level of detail of the, uh, BART to Livermore project that was in the 2014 TEP. Um, and as I said before, uh, BART to Livermore has been removed from this. But a large majority of the text you see here is what was initially approved by voters. So it is expected that because the project is in the environmental phase, um, and we don't know the full outcome of the, uh, environmental analyses yet they're certain -- they're in process right now, this would be the level of, uh, description that would be incorporated into the transportation expenditure plan if approved by the Commission. Very similar to the other level of detail in the transportation expenditure plan that was approved by voters.

Kaplan: And so the discussions about some of the specific questions and specifically, um, what level of TOD will

accompany the stations and the question about how operations funding will be handled, at what point in this sort of phase of actions would we be considering those type of questions?

Lengyel: Um, as has been described here, the, uh -- the Valley Link Board has adopted its policies for transit-oriented development, as well as sustainability. They are in the early project, uh, phases which is the environmental phase right now. And the environmental document has not been finalized nor circulated. So, uh, we could certainly, in coming back to the Commission later at the end of this month, we can try to address some of the questions that have been raised through public comment. And then we would, uh, if this is approved by the Commission at the end of the month, any other additional public comment that is received, we would aim to try to answer that as we come back with a final recommendation, uh, in the early fall for an actual plan amendment. This is just the starting process for the 45-day review period.

Kaplan: Absolutely. Yeah, no, it's okay with me if those answers aren't all at this phase, just the assurance that we then will have them at the later stage just so we know, um, you know, when to be prepared to dig into those details. Uh, that's fine. Uh, thank you very

much for this. Uh, thank you, Chair.

Bauters: Madam Chair, there are no other members with their hands, uh, raised at this time.

Ortiz: I -- thank you. I would like to --

Bauters: And so your turn to speak. Yep.

Ortiz: Thank you very much. Um, I'm gonna vote to move this issue to the full Commission where the discussion should take place. But I'm also making a request. I'm appointed, chosen by my fellow board members to represent AC Transit on this Commission. They have generally trusted me with votes on issues, um, that have come before me. But I think this is a time where my fellow board members would like to participate, um, in the discussion and make decisions regarding this amendment. So what I'm asking is for ACTC staff and Ms. -- and Mr. Tree to come before the AC Transit board meeting on Wednesday, May 27, and make a presentation so that my fellow board members can listen to it and comment, and then give me direction.

Lengyel: Uh, Chair -- Chair Ortiz, this is, uh, Tess Lengyel. And I'd be happy to come and present to the, uh, AC Transit board.

Ortiz: Thank you very much. And I hope Mr. Tree also will appear.

Tree: I'd be happy to.

Ortiz: Thank you.

Bauters: Chair Ortiz, Commissioner Haggerty has his hand raised.

Ortiz: Okay.

Bauters: Commissioner Haggerty, you can speak.

Haggerty: Uh, thank you. Um, just a -- a few questions. First of all, thank you to everybody and the questions they've been asking. Uh, some things that I think I might be able to weigh in, although I'm quite sure Commissioner Marchand would do a much better job than me. But I do wanna let people know that the Isabe --l first of all MTC is actually revisiting Resolution 3434 that talks about the, um -- the, uh, housing within a half-mile of various modes of transportation. And that action was just taken at the Commission meeting the other day. Uh, but however, Livermore has been planning the Isabel station area planning area for quite some time. This predates back to BART. And so, um, this is also, I believe, uh, a, uh, an area that Livermore has said they want to have housing. Um, also, um, the San Joaquin -- I don't think Michael talked about this. But San Joaquin has also, um, uh, said that they, and they did adopt, uh, MTC -- a similar resolution with as many housing per, um, half-mile of the station, that they too will build s- --

um, believe for this one it's like 28 housing units -- 2,800 housing units, um, within a half-mile of a station. I would like to remind everybody that there's 400 million that is being said that we're having discussions about today, when we -- when we crafted Measure BB, we all went back to our various planning agencies and said, "Here's your allotment of money. Figure out how you wanna spend it and then let us know." And for the Tri-Valley, if I remember right, they came back with two projects. One was to complete the, um, Iron Horse Trail, um, under 580, I believe. And then the other one was this 400 million for BART, uh, Livermore. So that was the planning area's decision on how they wanted to spend their money. And -- and I just think that's -- that's worth noting that, you know, all the other planning areas picked where they wanted to put their money. But, um, this is where, um, this planning area did. You know, I -- I think this is a great project. Um, it's going to move people. We're in an area of poor air quality. And when you look at almost 93,000 people coming over the Altamont daily, most of them single occupancy vehicles, if we can put them in a train that runs every 15 minutes or every 25 minutes, um, and get them out of their cars, we do a lot for air quality, which

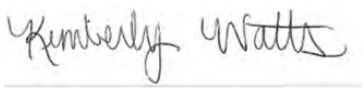
is what speaks to SB 375. And we could also do a lot for the public health of the Tri-Valley and the congestion. And I would remind you all that this affects all of this, because this is the way out for the Port of Oakland to get the containers that come in on the ships. And with con- -- with container ship, um, traffic expected to increase three times by, I believe it's 2030, if we don't get these cars off the roads, we're gonna have total gridlock and we won't be able to get the freight out of the -- out of the Port of Oakland to get out to Highway 5 and beyond to destinations beyond. So, you know, I think this is an exciting project. I think that, uh, it's certainly, um, far less than the, um -- the BART project would have been. It's probably about the same cost as the BART project, although instead of like a five mile extension, this is, uh, I think a 27 mile extension. So, uh, it's a bigger bang for the buck. And -- and to Director Pilch, I think he was the one that, uh, mentioned that forming another transit agency is a problem. I could not agree with you more. Um, I, at MTC am constantly calling for a way in which we can reduce, um, transit agencies. I think it's the biggest problem, which I think is why, um, hot lanes in the region should be merging instead of all these

different, um, hot lanes being propped up by various, um, entities. And next thing you know we're gonna have 27 -- 22nd -- 26 different hot lane, um, and, uh, managing partners in the Bay Area. But having said that, there is nothing said in, uh, that BART or ACE or somebody else won't actually be the operator of this project. So it's not that there's a new transit agency. We could very well fold if -- if once we get this project done and BART says look, I'd like to operate that or ACE says they wanna operate that. So that could happen. And, um, quite frankly that's what I hope happens. And I -- I wanna speak to the cooperation of BART. Um, Michael Tree could probably help me out a little bit better 'cause I don't remember his name offhand. But we have a gentleman that is in our office on contract from BART that is helping us get this project done, that is efficient and well-versed in getting projects done for BART. So we are collaborating with them on a daily basis. And, um, you know, I think -- I appreciate all your support on this item. And I won't belabor the discussions.

Bauters: Okay, thank you. There are no other, uh, members at this time seeking to speak, Madam Chair.

Ortiz: Okay. So, I think, um --

Bauters: Actually, um, Madam Chair, uh, Commissioner Arreguin's



hand just went up.
Ortiz: Okay. Go ahead.
Arreguin: Thank you. Um, is there a motion on the floor?
Bauters: There's not.
Ortiz: Not yet.
Haggerty: No, I'd like to make one though.
Arreguin: So, Scott, if you make the motion I'm happy to second it.
Haggerty: I -- I will make the motion that we move staff recommendation.
Arreguin: Second.
Ortiz: Okay. Roll call.
Arreguin: Th- -- thank you.
Bauters: Vanessa, you can call the roll.
Lee: Commissioner Ortiz?
Ortiz: Yes.
Lee: Commissioner Halliday?
Halliday: Yes.
Lee: Commissioner Arreguin?
Arreguin: Yes.
Lee: Commissioner Carson?
Carson: Yes.
Lee: Commissioner Ezzy Ashcraft?
Ezzy Ashcraft: Yes.
Lee: Commissioner Haggerty?

Haggerty: Yes.
Lee: Commissioner Kaplan?
Kaplan: Yes.
Lee: Commissioner Pilch?
Pilch: Yes.
Lee: Commissioner Valle? It looks like we lost Commissioner Valle on the call.
Bauters: I think he's left the meeting. Yes.
Lee: Um, Vice Chair Bauters?
Bauters: Aye.
Lee: Commission Chair Cutter?
Cutter: Aye.
Lee: The motion passes.
(End at 03:08:30)

TRANSCRIBER'S CERTIFICATE

I, Kimberly Watts, do hereby certify that I have listened to the recording of the foregoing; further that the foregoing transcript, Pages 1 through 49, was reduced to typewritten form from a digital recording of the proceedings held May 11, 2020, in this matter; and that the foregoing is an accurate record of the proceedings as above transcribed in this matter on the date set forth.

DATED this 6th day of June, 2026.

Kimberly Watts

ALAMEDA County Transportation Commission
1111 Broadway, Suite 800, Oakland, CA 94607 • 510.208.7400 • www.AlamedaCTC.org

Alameda CTC Commission Agenda
Thursday, May 28, 2020 2:00 p.m.

Due to the statewide stay at home order and the Alameda County Shelter in Place Order, and pursuant to the Executive Order issued by Governor Gavin Newsom (Executive Order N-29-20), the Commission will not be convening at its Commission Room but will instead move to a remote meeting.

Members of the public wishing to submit a public comment may do so by emailing the Clerk of the Commission at vlee@alamedactc.org by 5:00 p.m. the day before the scheduled meeting. Submitted comments will be read aloud to the Commission and those listening telephonically or electronically; if the comments are more than three minutes in length the comments will be summarized. Members of the public may also make comments during the meeting by using Zoom's "Raise Hand" feature on their phone, tablet or other device during the relevant agenda item, and waiting to be recognized by the Chair. If calling into the meeting from a telephone, you can use "Star (*) 9" to raise/ lower your hand. Comments will generally be limited to three minutes in length.

Chair:	Pauline Russo Cutter, Mayor City of San Leandro	Executive Director:	Tess Lengyel
Vice Chair:	John Bauters, Councilmember City of Emeryville	Clerk of the Commission:	Vanessa Lee

To request accommodation or assistance to participate in this meeting, please contact Vanessa Lee, the Clerk of the Commission, at least 48 hours prior to the meeting date at: vlee@alamedactc.org

Meeting Agenda

1. Call to Order

2. Roll Call

3. Public Comment

4. Chair and Vice Chair Report

5. Executive Director Report

6. Consent Calendar

Page/Action

Alameda CTC standing committees approved all action items on the consent calendar, except Item 6.1.

6.1.	Approve April 23, 2020 Commission Meeting Minutes	1	A
6.2.	FY2019-20 Third Quarter Report of Claims Acted Upon Under the Government Claims Act	5	I
6.3.	Receive 2019 Alameda CTC Annual Report	7	I
6.4.	Approve Alameda CTC Investment Policy	9	A
6.5.	Approve Alameda CTC FY2019-20 Third Quarter Consolidated Financial Report	23	A
6.6.	Approve Alameda CTC FY2019-20 Third Quarter Investment Report	29	A
6.7.	Approve an amendment to the Alameda CTC Administrative Code in order to create the Multi-Modal Committee and clarify other management and administrative items of the Commission	47	A
6.8.	Approve 2020 Comprehensive Investment Plan Update	69	A
6.9.	Approve actions necessary to facilitate project advancement into the construction phase for I-80 Gilman Interchange Improvements Project	93	A
6.10.	Approve Amendment No. 3 to Agreement 15R390000 with the California Highway Patrol for I-580 Express Lanes Enforcement Services	99	A
6.11.	Congestion Management Program (CMP): Summary of the Alameda CTC's Review and Comments on Environmental Documents and General Plan Amendments	103	I
6.12.	2020 Countywide Transportation Plan: Community-Based Transportation Plan Update	105	I

7. Finance and Administration Committee

The Finance and Administration Committee approved the following action items, unless otherwise noted in the recommendations.

7.1.	Approve the Alameda CTC FY2020-21 Proposed Budget	119	A

8. Planning, Policy and Legislation Committee

The Planning, Policy and Legislation Committee approved the following action items, unless otherwise noted in the recommendations.

8.1.	Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment	127	A
8.2.	Federal, state, regional, and local legislative activities update	169	A/I

9. Commission Member Reports

10. Adjournment

Next Meeting: June 25, 2020

Notes:

- All items on the agenda are subject to action and/or change by the Commission.
- To comment on an item not on the agenda, submit an email to the clerk or use the Raise Hand feature or if you are calling by telephone press *9 prior to or during the Public Comment section of the agenda. Generally public comments will be limited to 3 minutes.
- Call 510.208.7450 (Voice) or 1.800.855.7100 (TTY) five days in advance to request a sign-language interpreter.
- If information is needed in another language, contact 510.208.7400. Hard copies available only by request.
- Call 510.208.7400 48 hours in advance to request accommodation or assistance at this meeting.
- Meeting agendas and staff reports are available on the website calendar.

Memorandum

8.1

1111 Broadway, Suite 800, Oakland, CA 94607 • 510.208.7400 • www.AlamedaCTC.org

DATE:	May 21, 2020
TO:	Alameda County Transportation Commission
FROM:	Tess Lengyel, Executive Director Carolyn Clevenger, Deputy Executive Director of Planning and Policy
SUBJECT:	Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

Recommendation

It is recommended that the Commission approve the Tri-Valley-San Joaquin Valley Regional Rail Authority (TVSJVRRA) request (Attachment A) for an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP) to: 1) acknowledge TVSJVRRA as a new agency in Alameda County that can be an eligible recipient of Measure BB funds; 2) remove the BART to Livermore project and associated $400 million Measure BB funding; 3) add Valley Link in Alameda County project with $400 million in Measure BB funding; and 4) make associated technical amendments. Approval of this item will initiate a 45-day comment period by jurisdictions in Alameda County on the proposed amendment, which would then return to the Committee and Commission for final action. This is an action item and requires 2/3 approval at the Commission meeting per the Implementing Guidelines of the 2014 TEP.

Summary

The 2014 Measure BB TEP included $400 million for BART to Livermore. Since that time, a significant number of developments have occurred on the project and in the project area, as detailed in the Project Background section of this memo. The TVSJVRRA was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and commuter rail service in the Tri-Valley and San Joaquin County that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities.

In 2017, BART released the Draft Environmental Impact Report for BART to Livermore. In May 2018 the BART Board voted to certify the Final EIR. The Board also passed a motion directing the General Manager to not advance an alternative, effectively passing over to the TVSJVRRA the ability to plan for a connection to the Dublin/Pleasanton BART Station in July 2018. The TVSJVRRA then assumed the lead role for the project, now known as Valley Link.

The TVSJRRA has requested Alameda CTC to amend the TEP to add Valley Link and move the $400 million from the BART to Livermore TEP project to Valley Link. The TEP amendment process, as detailed later in this memo, requires a 45-day comment period by jurisdictions in Alameda County. This recommended action would authorize the initiation of the 45-day comment period. Staff will then return to PPLC and the Commission after the completion of the comment period for final action on the proposed TEP amendment. Once a final amendment is recommended to the Commission after the comment period, a 2/3 vote by the Commission is needed per the TEP Implementing Guidelines.

The proposed amendment includes the following elements, which are documented in Attachments B and C:

1) Acknowledgement of the TVSJVRRA as a new agency in Alameda County that is an eligible recipient of Measure BB funds (Attachment B, Plan Amendment Resolution).
2) Removal of the BART to Livermore Project: The amendment would remove reference to the BART to Livermore project, which was a named capital project in the BART Expansion and Maintenance program of the TEP and the associated $400 million.
3) Addition of the Valley Link project: The amendment would add the Valley Link project as a new named capital project under the Commuter Rail Improvements program of the TEP and would include $400 million in Measure BB funding.
4) Technical Adjustments: The amendment would make minor technical adjustments, such as updating maps and tables, to reflect the changes noted above (as shown in Attachment C, TEP Redline Markups).

Project Background

A BART extension to Livermore has been a longstanding project, dating back in concept to the 1960s when the BART system was originally envisioned. Over the years, there have been efforts by many residents, local elected officials, and other stakeholders to extend the BART alignment to Livermore, including planning, funding and project development efforts.

Regional and State Rail Planning

In 2007, the San Francisco Bay Area Regional Rail Plan developed by the Metropolitan Transportation Commission (MTC) identified the BART to Livermore extension as an important inter-regional rail connection. The Regional Rail Plan envisioned that BART should connect to the ACE train service in Livermore in order to provide a reliable and fast transit option for the growing congestion over the Altamont Pass and along the I-580 corridor. The importance of rail service between the Tri-Valley and San Joaquin Valley was reiterated in the 2018 California State Rail Plan, which calls for a Tri-Valley rail hub and increased rail frequencies and connectivity over the Altamont Corridor.

BART to Livermore Project

By the 1980s, the extension of BART further east in the Tri-Valley was already under serious consideration. In the mid-1980s, BART purchased a potential site for a future station near the Isabel Avenue and Interstate 580 interchange and a site in the vicinity of Greenville Road and Interstate 580 for purposes of preserving land for a potential station and yard/maintenance facility. In 1997, the Dublin/Pleasanton line was opened, with a West Dublin station added in 2011.

Numerous local and regional transportation measures have included support for BART to Livermore, starting with the 1986 Alameda County Measure B, which included $170 million for a "Rail extension to Dublin Canyon". The 2000 TEP included funding of $8.7 million for "I-580 Corridor/BART to Livermore Studies". Measure BB included $400 million in the 2014 TEP for "BART to Livermore". The project also received Regional Measure 1 bridge toll funding to advance planning and environmental work. In June 2018, Bay Area voters approved Regional Measure 3, which includes $100 million for "Tri-Valley Transit Access Improvements."

In 2010, after two years of analysis, BART completed a Program Environmental Impact Report (EIR) that evaluated the feasibility of five potential station sites and 10 different alignments for the BART to Livermore extension. In 2012, the BART Board of Directors directed its staff to advance the conceptual engineering and environmental review of a one-station extension to Isabel Avenue (Proposed Project), as well as to coordinate with the City of Livermore on the land use planning around the future station site.

In 2014, Alameda County voters approved Measure BB to fund the 2014 TEP, which includes $400 million in dedicated funding for the BART to Livermore extension. Measure BB commits funds to support construction of the extension of BART in the I-580 corridor using the most effective and efficient technology.

On July 31, 2017, BART released the Draft Project EIR evaluating the Proposed Project and alternatives. In May 2018, BART released the Final Project EIR. The BART Board certified the Final Project EIR on May 24, 2018 and directed staff to not advance a specific project.

As major transportation project planning and analysis was underway, cities also advanced land use planning around future rail service. The City of Livermore prepared the Isabel Neighborhood Plan and program-level EIR for development around a new station. The Livermore City Council adopted the Isabel Neighborhood Plan and certified the EIR for the Plan in May 2018.

ACEforward Program

The San Joaquin Regional Rail Commission (SJRRC) ACEforward program outlined a vision for a phased rail infrastructure and service improvement plan to increase frequency, increase service reliability, and enhance passenger facilities along the existing ACE service corridor from San Jose to Stockton, and to extend ACE service to Modesto and Merced. The (SJRRC) released a Draft EIR in May of 2017 that was later rescinded; however, the technical

documents developed by the SJRRC for the ACEforward Draft EIR were made available to the TVSJVRRA for advancement of the Valley Link Project Feasibility Report and Draft EIR.

Creation of TVSJVRRA

In 2017 Assemblymembers Catharine Baker and Susan Eggman authored AB 758, which created the TVSJVRRA. The TVSJVRRA is led by a 15-member governing Board comprised of representatives from the counties of Alameda and San Joaquin; the cities of Dublin, Livermore, Pleasanton, Danville, San Ramon, Tracy, Lathrop, Stockton, and Manteca; Mountain House Community Services District; the Livermore Amador Valley Transit Authority (LAVTA), BART, and the San Joaquin Regional Rail Commission (SJRRC). The goal established for the TVSJVRRA is to deliver a cost-effective connection from the San Joaquin Valley to the BART system and the ACE system that reflects regional consensus and meet the goals and objectives of the San Joaquin Valley and Tri-Valley communities, consistent with a feasibility report.

AB 758 specifically stated that the TVSJVRRA would only assume planning, development and delivery of a rail extension should the BART Board fail to adopt a preferred alternative for a BART extension by June 30, 2018. When the BART Board voted to not advance the BART to Livermore project, the TVSJVRRA assumed responsibility to advance the project per AB 758. The TVSJVRRA adopted several goals and policies to guide the development of the project.

A key requirement of AB 758 was that the TVSJVRRA Board approve a Feasibility Report for the project. The Final Feasibility Report was approved in October 2019. The TVSJVRRA has continued to work to advance the project, initiating the environmental impact analysis and preliminary design engineering work.

TVSJVRRA Adopted Project Goals:

The following goals were adopted by the TVSJVRRA to address identified regional and economic and transportation challenges:

- Improve connectivity within the Bay Area Megaregion: connecting housing, people and jobs.
- Establish rail connectivity between the Bay Area Rapid Transit District's rapid transit system and the Altamont Corridor Express commuter service.
- Pursue project implementation that is fast, cost-effective and responsive to the goals and objectives of the communities it will serve.
- Be a model of sustainability in the design, construction, and operation of the system.
- Support the vision of the California State Rail Plan to connect the Northern California Megaregion to the State rail system.

Valley Link Project Development Policies

The TVSJVRRA adopted several policies to guide the development framework of the project, including the following sustainability and transit-oriented development policies:

- Sustainability Policy: Identifies implementing strategies to achieve a zero emissions system. The adopted Sustainability Policy includes a commitment to encourage engagement in planning and decision-making for the project to ensure a meaningful level of participation from disadvantaged communities and low-income communities and households. It further directs maximizing benefits to these communities and households in the project planning and design of Valley Link. Four of the proposed stations in San Joaquin County are within disadvantaged community geographic areas and/or designated as low-income communities.
- Transit Oriented Development (TOD) Policy: Support the regional goals of both San Joaquin County and the Bay Area to support the advancement of transit-oriented development (TOD) in Valley Link station areas. The policy mirrors the TOD guidelines outlined in MTC Resolution 3434 TOD guidelines and identifies key policy objectives and strategies to:
    - Develop and implement station area plans that meet or exceed a corridor-level threshold of 2,200 housing units within a half mile radius of stations.
    - Develop station area plans that, at a minimum, define the land use plan for the area, zoning, design standards, parking policies and station access plans.

The intent of these policies is to develop strategies to create vibrant and livable station area communities within the proposed station environs. The advancement of transit-oriented development adjacent to stations aims to further reduce Vehicle Miles Traveled (VMT) and greenhouse gas emissions (GHG) for the project. Station area plans are currently under development at the Isabel, Downtown Tracy and River Islands stations. The Dublin/Pleasanton and Isabel Stations are in established MTC Priority Development Areas (PDA) and an application for a Southfront Station PDA was recently submitted by the City of Livermore to MTC/ABAG as a new PDA.

Valley Link Project Description

Valley Link is a proposed new rail service between Alameda and San Joaquin Counties that will provide passenger rail services between the existing Dublin/Pleasanton BART Station and the City of Stockton. The proposed project includes seven stations on a 42-mile alignment that is expected to run along the existing I-580 corridor (11.5 miles), through the Altamont Pass using the Alameda County-owned former Southern Pacific Railroad corridor (12.5 miles) and on existing UPRR rail corridor (17.5 miles) into San Joaquin County. Design work is currently underway as part of the EIR process and will examine detailed project right-of-way needs and potential impacts in more detail.

Attachment D includes a summary fact sheet and diagram of the proposed project.

The project costs included in the Final Feasibility Report range from a low year of expenditure cost of $2.4 billion to a high year of expenditure cost of $3.2 billion. The project is currently in the EIR process, and will begin both the Caltrans project development process and NEPA environmental clearance process in 2020 and 2021 respectively.

To date, a total of $628 million is identified by the TVSJVRRA as available for the project: $400 million in Measure BB funds (per a 2014 TEP amendment), $188 million in Bridge Toll funds (including $100 million in Regional Measure 3 funds) and $40 million in impact fees from the City of Livermore. The project is expected to compete for regional, state and federal funds to close the funding need. Other revenue measures in the Bay Area and San Joaquin County, if passed by voters, could be additional revenue sources for the project.

Other Agency Actions

Given the project traverses two counties, two Metropolitan Planning Organization regions, and affects an interstate system, Express Lanes system, and existing rail system and service providers, the TVSJVRRA established an Executive Steering Committee (ESC) comprised of MTC, the San Joaquin Council of Governments (SJCOG), SJRRC, BART, Alameda CTC and Caltrans to provide input on the development of the feasibility report and project development. Alameda CTC's executive director participates in these meetings. Several of these agencies have taken actions to support development of the project:

- MTC: In September 2018, MTC allocated $10.12 million to the TVSJVRRA for CEQA documentation and preliminary engineering on the Valley Link rail project, from the $95 million in AB1171 Bridge Tolls committed to Tri-Valley Transit Access Improvements through MTC Resolution Number 3434. In March 2020, MTC approved an additional allocation of $3 million in AB1171 Bridge Toll funds to the TVSJVRRA for the environmental phase and updates to the preliminary engineering plans.
- SJCOG: In April 2020, the SJCOG Board approved an amendment to its 2018 Regional Transportation Plan to include the Valley Link project, including identification of $163.9 million for the project in the plan from future measures and state funds.
- BART: BART has committed staff to directly lead the early development of the project due to its expertise in developing and delivering similar projects, such as the e-BART extension to Antioch.
- Alameda CTC, the SJRRC and Caltrans have provided technical reviews of preliminary design plans and documents. In addition, the TVSJRRA is in discussion with the City of Tracy regarding donation of a key 200-acre parcel under City of Tracy ownership to the project to be used for an operations and maintenance facility. The property has an estimated value of $20 million and is currently being appraised.

Project Considerations

The project construction will have significant impacts on the I-580 Express Lanes, with major impacts anticipated during construction. The TVSJVRRA staff have been working with Alameda CTC, as well as Caltrans, to identify design and construction considerations. Alameda CTC staff have held several workshops with the project design team to evaluate the preliminary design plans and will continue to be engaged through the ESC and technical groups to provide policy and technical feedback during design development to ensure minimal impacts to the I-580 Express Lanes. Alameda CTC will continue to work closely with the TVSJVRRA as the project design advances, and will also conduct financial analysis to understand potential impacts to toll revenues during construction to ensure revenue losses are addressed.

Proposed Amendments

The amendment that has been requested to be made to the 2014 TEP includes two elements as follows:

- Amend to include the new entity of the TVSJVRRA
- Amend to include the Valley Link Project for $400 million

Existing TEP Language to be Amended

The following is the current language in the 2014 TEP (page 18 of 2014 TEP):

BART Extension and System improvements ($710 M)

The capital projects funded as part of the BART System Modernization and Expansion investments include projects that increase the capacity and utility of the existing system, as well as provide local funding for a proposed BART extension in the eastern part of the county.

> BART to Livermore ($400 M)
>
> This project funds the first phase of a BART Extension within the I-580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology. Funds for construction for any element of this first phase project shall not be used until full funding commitments are identified and approved, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Proposed Changes Throughout the TEP

The 2014 TEP has many references to BART to Livermore or a BART extension and requires changes to several pages in the 2014 TEP. The proposed changes include moving the project from page 18 from the BART section of the TEP to page 20 under the section

"Major Transit Corridor and Commuter Rail Improvements", remove references to BART as the agency leading the rail extension, change references from the BART to Livermore project to Valley Link on pages 2, 3, 14, 18, 19 (map) and add Valley Link to the map on page 21 (see Attachment C).

Specific Changes to Project Description

This following description will be included on page 20 of the 2014 TEP under Major Transit Corridor and Commuter Rail Improvements as shown on Attachment C.

> Valley Link Rail in Alameda County ($400 M)
>
> This project funds the first phase of a Valley Link rail extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Implementing Guidelines Related to this TEP Amendment

Once the 2014 TEP amendments are complete, all the implementing guidelines will be applicable to the project and project sponsor similar to all other TEP projects. Specifically, for this TEP amendment, the following guidelines describe requirements for the amendment as well as the new project sponsor.

4. Amendments Require 2/3 Support: To modify and amend this Plan, an amendment must be adopted by a two-thirds vote of the Alameda CTC Commissioners. All jurisdictions within the county will be given a minimum of 45 days to comment on any proposed Plan amendment.

8. Strict Project Deadlines: To ensure that the projects promised in this plan can be completed in a timely manner, each project will be given a period of seven years from the first year of revenue collection (up to December 31, 2022) to receive environmental clearance approvals and to have a full funding plan for each project. Project sponsors may appeal to the Alameda CTC Commissioners for one-year time extensions.

Note: any new amendment that adds a project must comply with this provision and the start date of the seven years will be from the date of the adopted amendment.

11. Commitments from Fund Recipients: All recipients of funds allocated in this expenditure plan will be required to sign a Master Funding Agreement, which details their roles and responsibilities in spending sales tax funds and includes local hiring

requirements. Funding agreements will include performance and accountability measures. All funds will be allocated through open and transparent public processes. In addition, fund recipients will be required to have an annual audit conducted by an independent CPA to ensure that funds are managed and spent according to the requirements of this Plan.

14. No Expenditures Outside of Alameda County: Under no circumstances may the proceeds of this transportation sales tax be applied to any purpose other than for transportation improvements benefitting Alameda County. Under no circumstances may these funds be appropriated by the State of California or any other governmental agency, as defined in the implementation guidelines.

18. New Agencies: New cities or new entities (such as new transit agencies) that come into existence in Alameda County during the life of the Plan may be considered as eligible recipients of funds through a Plan amendment.

Planning, Policy and Legislation Committee (PPLC)

At the May PPLC meeting, Alameda CTC staff provided the Committee an overview of the amendment process and schedule, and Michael Tree, Executive Director of the TVSJVRRA gave an overview of the project. Discussion focused on questions related to the timing of the need for the amendment and clarification on the action the Commission would be voting on in May. A number of comment letters were received and summarized verbally for the Committee by the Clerk and emailed to the Committee members as received. The set of public comment letters received for the PPLC meeting is included here as Attachment E. Comment letters sent by Commissioners in their capacity as local government officials are not included but may be expressed verbally by Commissioner at the full Commission meeting. PPLC voted unanimously to advance the item to the full Commission.

Next Steps

Upon Commission approval to initiate the TEP amendment process, a 45-day comment period for jurisdictions in Alameda County will commence. Staff will return to the Commission to report on the comments received and to recommend final action by the Commission later this year.

Fiscal Impact: There is no fiscal impact for this item associated with the requested action.

Dear Chair Cutter,

This letter is intended to supersede the information in the letter written to Chair Valle on September 11, 2019 (attached) as it relates to the language to be amended in the 2014 Transportation Expenditure Plan currently found on page 18. Please use the following language for the amendment:

Valley Link Rail in Alameda County ($400 M)
This project funds the first phase of a Valley Link Rail Extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Thank you,

Alameda County Supervisor Scott Haggerty, Chair

September 11, 2019

Supervisor Richard Valle, Chair
Alameda County Transportation Commission
111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Valle,

In May of 2018 the BART Board decided not to extend conventional BART to Livermore in favor of deferring the development of a rail extension project to the newly established Tri-Valley – San Joaquin Valley Regional Rail Authority ("Authority").

In the statute that created the Authority, AB 758 (Eggman/Baker), the Legislature addressed the transfer of local funds to the Authority for the Valley Link project in Section 132658:

> "the unencumbered balance of all local funds programmed for the completion of the BART Livermore extension or that have otherwise been identified for the connectivity shall be transferred to the authority and be considered resources available to effectuate the authority's purposes pursuant to this chapter, except that local funds controlled by the Alameda County Transportation Commission to be used for completion of the BART Livermore extension or that have otherwise been identified for the connectivity shall continue to be programmed and allocated by the Alameda County Transportation Commission pursuant to measures approved by the voters of Alameda County pursuant to Division 19 (commencing with Section 1800000)."

Over the past 18 months, the Authority has been actively engaged in the planning of Valley Link, a passenger rail project that connects with the Dublin/Pleasanton BART station and travels eastward to Livermore and beyond to communities in the Northern San Joaquin Valley. A key element of the Valley Link Funding Plan for the Dublin/Pleasanton connection with BART and rail construction to Livermore is the $400 million in Measure BB that is currently listed in the Alameda County 2014 Transportation Expenditure Plan ("Plan") for the BART to Livermore project. Per the requirements of the Plan, The Tri-Valley – San Joaquin Valley Regional Rail Authority requests the following amendments:

1. The Tri-Valley – San Joaquin Valley Regional Rail Authority, established by AB 758,be included as an eligible recipient of funds.
2. That the following, specific language be amended:

   Move and amend the following language from Page 18 of the Plan to Page 20:

Tri-Valley ▲ San Joaquin Valley

Draft
ALAMEDA COUNTY TRANSPORTATION COMMISSION
Resolution No. 20-007

Resolution of the Alameda County Transportation Commission Amending the 2014 Transportation Expenditure Plan to Delete the BART to Livermore Project and add the Valley Link Project

WHEREAS, by action of the governing body ("Commission") of Alameda County Transportation Commission ("Alameda CTC") at a regular Commission meeting on January 23, 2014, Alameda CTC approved the 2014 Transportation Expenditure Plan ("2014 TEP"), and in November 2014, the voters of Alameda County approved Measure BB, a sales tax measure intended to provide funding for the 2014 TEP.

WHEREAS, the 2014 TEP allocated $400 million to a project identified as "BART to Livermore," constituting the first phase of a San Francisco Bay Area Rapid Transit District ("BART") extension within the I-580 Corridor to serve residents and businesses in that Corridor.

WHEREAS, on May 24, 2018, the BART Board certified the Final Environmental Impact Report for the BART to Livermore project, but declined to approve the project as proposed nor any alternative for the project.

WHEREAS, Assembly Bill (AB) 758, as adopted by the State legislature and signed by the Governor, created the Tri Valley San Joaquin Valley Regional Rail Authority ("TVSJVRRA"), an entity led by a 15-member governing Board comprised of representatives from the counties of Alameda and San Joaquin; the cities of Dublin, Livermore, Pleasanton, Danville, San Ramon, Tracy, Lathrop, Stockton, and Manteca; Mountain House Community Services District; the Livermore Amador Valley Transit Authority (LAVTA), BART, and the San Joaquin Regional Rail Commission (SJRRC). The goal of TVSJVRRA is to deliver a cost-effective connection from the San Joaquin Valley to the BART system and the ACE system in the Tri-Valley, to address regional economic and transportation challenges.

WHEREAS, AB 758 specifically stated that the TVSJVRRA would only assume planning, development and delivery of a rail extension should the BART Board fail to adopt a preferred alternative for a BART extension by June 30, 2018. When the BART Board voted to not advance the BART to Livermore project, the TVSJVRRA assumed responsibility to advance a rail extension in the Corridor, now identified as "Valley Link."

WHEREAS, a key requirement of AB 758 was that the TVSJVRRA Board approve a Feasibility Report for the project. The Final Feasibility Report was approved in October 2019. The TVSJVRRA has continued to work to advance the project, initiating the environmental impact analysis and preliminary design engineering work.

WHEREAS, the Valley Link project costs included in the Final Feasibility Report range from a low year of expenditure cost of $2.4 billion to a high year of expenditure cost of $3.2 billion. The project is currently in the EIR process, and will begin both the Caltrans project development process and NEPA environmental clearance process in 2020 and 2021.

To date, a total of $628 million is identified by the TVSJVRRA as available for the project: $400 million in Measure BB funds (subject to approval of this amendment to the 2014 TEP by the Commission), $188 million in Bridge Toll funds (including $100 million in Regional Measure 3 funds) and $40 million in impact fees from the City of Livermore. The project is expected to compete for regional, state and federal funds to close the funding need. Other measures in the Bay Area and San Joaquin County, if passed by voters, could be additional revenue sources for the project.

WHEREAS, given that the Valley Link project traverses two counties, two Metropolitan Planning Organization regions, and affects an interstate system, Express Lanes system, and existing rail system and service providers, the TVSJVRRA established an Executive Steering Committee (ESC) comprised of MTC, San Joaquin Council of Governments (SJCOG), San Joaquin Regional Rail Commission (SJRRC), BART, Alameda CTC, and Caltrans to provide input on the development of the feasibility report and project development. Alameda CTC's executive director participates in these meetings. Several of these agencies have taken actions to support development of the project, as outlined below:

MTC: In September 2018, MTC allocated $10.12 million to the TVSJVRRA for CEQA documentation and preliminary engineering on the Valley Link rail project, from the $95 million in AB1171 Bridge Tolls committed to Tri-Valley Transit Access Improvements through MTC Res. No. 3434. In March 2020, MTC approved an additional allocation of $3 million in AB1171 Bridge Toll funds to the TVSJVRRA for the environmental phase and updates to the preliminary engineering plans.

SJCOG: In April 2020, the SJCOG Board approved an amendment to its 2018 Regional Transportation Plan to include the Valley Link project, including identification of $163.9 million for the project in the plan from future measures and state funds.

WHEREAS, the 2014 TEP and Public Utilities Code Section 180207 together provide that the 2014 Plan may be modified if an amendment is approved by a two-thirds vote of the Commission.

NOW THEREFORE, BE IT RESOLVED that the 2014 Transportation Expenditure Plan is amended to delete the BART to Livermore Project and all references to that Project;

BE IT FURTHER RESOLVED that the Tri Valley San Joaquin Valley Regional Rail Authority be recognized as an eligible agency for recipient of funds in the 2014 TEP;

BE IT FURTHER RESOLVED that the Valley Link Rail Project in Alameda County with an allocation of $400 Million is placed in the 2014 TEP, described as follows:

This project funds the first phase of a Valley Link rail project from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

BE IT FURTHER RESOLVED that the 2014 TEP be amended to include the following specific description of the Valley Link Project:

A proposed new rail service between Alameda and San Joaquin Counties that will provide passenger rail service between the existing Dublin/Pleasanton BART Station and the City of Stockton. The proposed project includes seven stations on a 42-mile alignment that is expected to run along the existing I-580 corridor (11.5 miles), through the Altamont Pass using the Alameda County-owned former Southern Pacific Railroad corridor (12.5 miles) and on existing UPRR rail corridor (17.5 miles) into San Joaquin County. Design work is currently underway as part of the EIR process and will examine detailed project right-of-way needs and potential impacts in more detail. The project is generally shown on the diagram below:

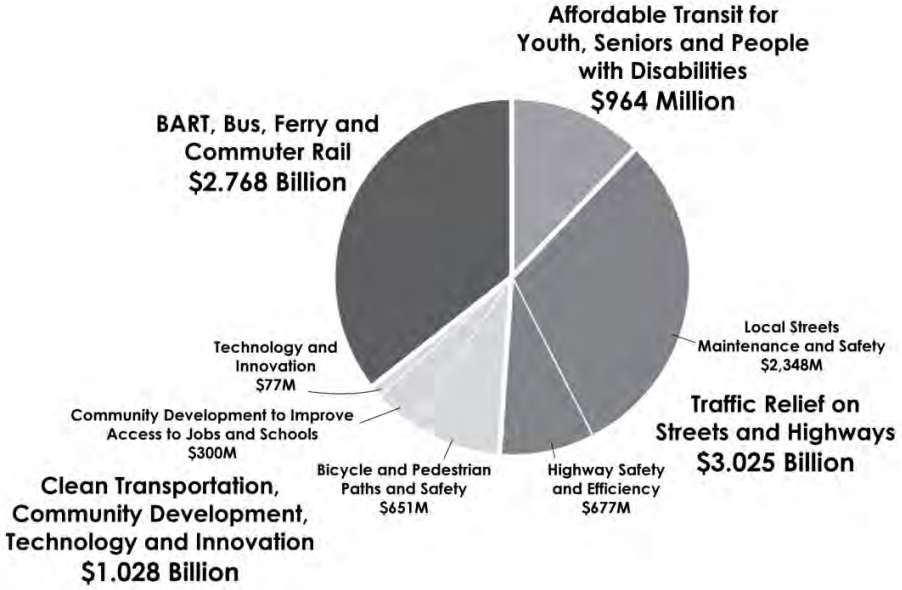
DULY PASSED AND ADOPTED by the Alameda CTC Commission at the regular Commission meeting held on Thursday, May 28, 2020 in Oakland, California, by the following vote:

AYES: NOES: ABSTAIN: ABSENT:

SIGNED: Attest:

_____ _____

Pauline Russo Cutter, Vanessa Lee,



Chair, Alameda CTC Clerk of the Commission

INTRODUCTION

Summary of Investments	FUNDS ALLOCATION* ($ x million)
BART, Bus, Ferry and Commuter Rail for Reliable, Safe and Fast Services	**$1,587**
BART Expansion and Maintenance	$349 ~~$749~~
Bus Operations, Maintenance and Rapid Bus Projects	$1,548
Commuter Rail Improvements	$832 ~~$432~~
Ferry Services in Alameda County	$39
Affordable Transit for Youth, Seniors and People with Disabilities	**$964**
Affordable Youth Transit to School and Transit Innovation	$190
Affordable Transit for Seniors and People with Disabilities	$774
Traffic Relief on Streets and Highways	**$3,025**
City and County Streets*	$2,348
Highway Safety and Efficiency	$677
Clean Transportation, Community Development, Technology and Innovation	**$1,028**
Bicycle and Pedestrian Paths and Safety Projects and Educational Programs*	$651
Community Development Projects to Improve Access to Jobs and Schools	$300
Technology and Innovation	$77
TOTAL INVESTMENTS (YEAR 2015 TO 2045)**	**$7,785**

Notes:
*15% of city and county streets funding will support bicycle and pedestrian paths and safety improvements on local streets.
**Estimated funds from 2015 to 2045 are anticipated to be almost $8 billion.

$7,785 in Total Investments Year 2015 to 2045

See Table 1 for a detailed list of transportation investments.

Table 1: List of Investments

Type	Investment Category	Project/Program	Amount ($ x millions)	% of Total Funds
 **BART, Bus, Senior, and Youth Transit (48%)**	Transit: Operations, Maintenance, and Safety Program	AC Transit	$1,455.15	18.8%
		Altamont Commuter Express	$77.40	1.0%
		BART Maintenance	$38.70	0.5%
		San Francisco Bay Area Water Emergency Transportation Authority	$38.70	0.5%
		Livermore Amador Valley Transit Authority	$38.70	0.5%
		Union City Transit	$19.35	0.25%
		Innovative grant funds, including successful student transportation programs	$174.63	2.24%
	Affordable Transit Program for Students and Youth	Affordable Student Transit Pass Program	$15.00	0.19%
		Subtotal	**$1,857.63**	**24%**
	Affordable Transit for Seniors and People with Disabilities	City-based and Locally Mandated	$232.20	3.0%
		East Bay Paratransit - AC Transit	$348.31	4.5%
		East Bay Paratransit - BART	$116.10	1.5%
		Coordination and Service Grants	$77.40	1.0%
		Subtotal	**$774.01**	**10%**
	Rapid Bus Projects	Telegraph Avenue/East 14th/ International Boulevard project	$10.0	**14%**
		Alameda to Fruitvale BART Rapid Bus	$9.0	
		Grand/MacArthur BRT	$6.0	
		College/Broadway Corridor Transit Priority	$10.0	
		Subtotal	**$35.0**	
	BART System Modernization and Expansion	Irvington BART Station	$120.0	
		Bay Fair Connector/BART METRO	$100.0	
		BART Station Modernization and Capacity Program	$90.0	
		~~BART to Livermore~~	~~$400.0~~	
		Subtotal	**$~~710.0~~310.0**	
	Major Transit Corridor Enhancements and Rail Connections	Dumbarton Corridor Area Transportation Improvements	$120.0	
		Union City Intermodal Station	$75.0	
		Railroad Corridor Right of Way Preservation and Track Improvements	$110.0	
		Oakland Broadway Corridor Transit	$10.0	
		Capitol Corridor Service Expansion	$40.0	
		Valley Link	$400.0	
		Subtotal	**$~~355.0~~755.0**	
	TOTAL		**$3,731.64**	**48%**

Notes: Priority implementation of specific investments and amounts for fully defined capital projects and phases will be determined as part of the Capital Improvement Program developed through a public process and adopted by Alameda CTC every two years and will include geographic equity provisions.
BART Maintenance funds will require an equal amount of matching funds and must be spent in Alameda County.
All recipients of sales tax funds will be required to enter into agreements which will include performance and accountability measures.

ACTC_AR0855

BART, BUS, SENIOR AND YOUTH TRANSIT

A total of 48% of net revenue will be dedicated to BART, bus, commuter rail, and senior and youth transit investments. Funds for operations and maintenance will be provided to transit operators in the county (AC Transit, BART, Union City Transit and Livermore Amador Valley Transit Authority (LAVTA)) as well as to ferries and the Altamont Commuter Express (ACE) rail service. In addition, these funds will substantially increase Alameda County's commitment to the growing transportation needs of older adults and people with disabilities, essentially doubling the funds available for targeted services for this important group. Grant funds are also available to support affordable transportation access to schools. Major capital investments include upgrades to the existing ~~BART~~ rail system and BART extensions, adding bus rapid transit routes to improve the utility and efficiency of transit, and providing funding for transit improvements serving the Dumbarton Corridor Area.

TRANSIT OPERATIONS, MAINTENANCE, AND SAFETY PROGRAM (24% OF NET REVENUE, $1,857 M)

This program provides transit operators with a consistent funding source for maintaining, restoring and improving transit services in Alameda County. Transit operators will allocate these funds in consultation with their riders and policy makers with the goal of creating a world class transit system that is an efficient, effective, safe and affordable alternative to driving.

This funding will support the following:

Transit Operations and Maintenance Program (21.55% of net revenue, estimated at $1.668 M)

Funds are disbursed to AC Transit, BART, ACE, the Water Emergency Transportation Authority (WETA), LAVTA and Union City Transit. The relative percentage of net revenue being allocated to these agencies is as follows:

Agency	% of Net Total Revenue	Total 2015-2045 (est.) $Millions
AC Transit	18.8%	$1,455
ACE	1.0%	$77
BART Maintenance	0.5%	$39
WETA (ferries)	0.5%	$39
LAVTA (WHEELS)	0.5%	$39
Union City Transit	0.25%	$19
Total Transit Operations	**21.55%**	**$1,668**

Affordable Youth Transit Pass Program ($15 million)

This program is for the purposes of funding one or more models for a student transit pass program. The program would be designed to account for geographic differences within the county. Successful models determined through periodic reviews will have the first call for funding within the innovative grant program, as described below.

Innovative Grant Program including successful student transportation programs (2.24% of net revenue, estimated at $175 M)

These grant funds, administered by Alameda CTC, will be used for the purposes of funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this category.

Funds will be periodically distributed by Alameda CTC for projects and programs with proven abilities to accomplish the goals listed below:

- Increase the use of public transit by youth riders (first priority for funding) and increase youth access to school
- Enhance the quality of service for transit riders
- Reduce costs or improve operating efficiency
- Increase transit ridership by improving the rider experience
- Enhance rider safety and security

ACTC_AR0856

BART STATION ~~EXTENSION~~ AND SYSTEM IMPROVEMENTS ($37~~7~~10 M)

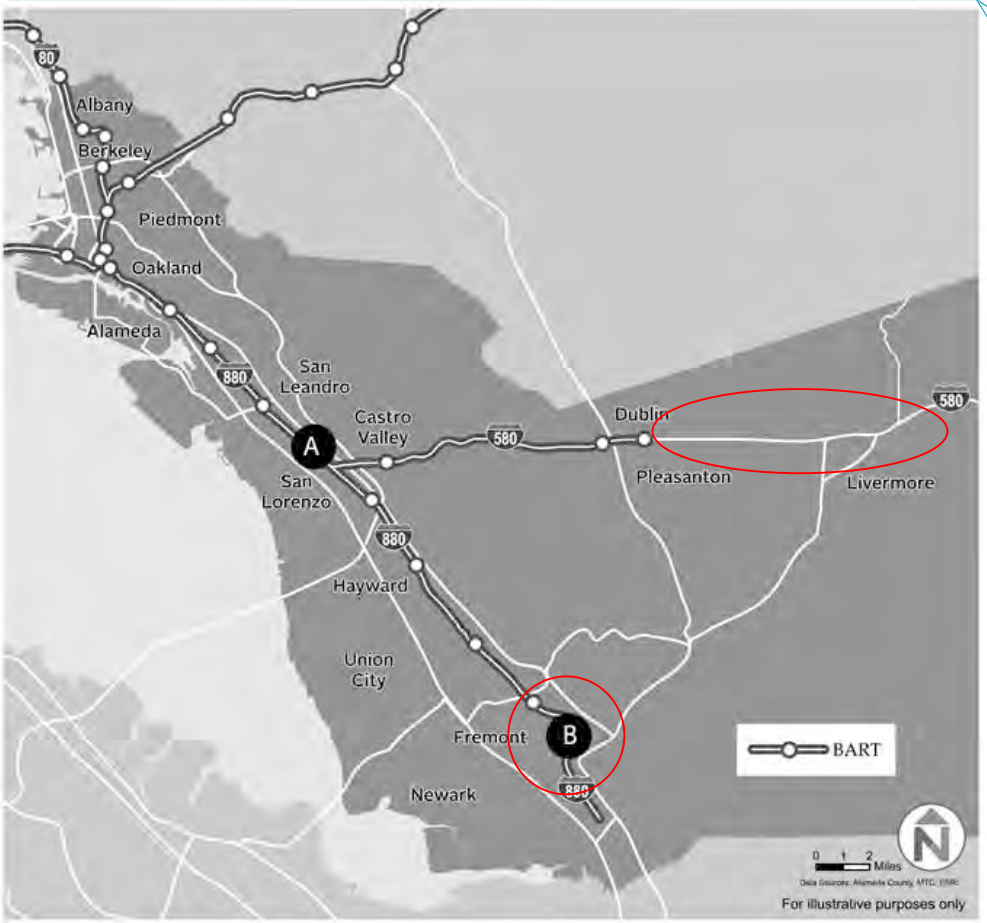
The capital projects funded as part of the BART System Modernization and Expansion investments include projects that increase the capacity and utility of the existing system~~, as well as provide local funding for a proposed BART extension in the eastern part of the county.~~

~~BART to Livermore ($400 M)~~

~~This project funds the first phase of a BART Extension within the I-580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology. Funds for construction for any element of this first phase project shall not be used until full funding commitments are identified and approved, and a project-specific environmental clearance is obtained. The project-specific environmental process will include a detailed alternative assessment of all fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.~~

BART Station Upgrades and System Improvements ($310 M)

BART projections indicate that its system will need to carry over 700,000 daily riders by the end of this Plan period. New riders will affect the capacity of existing systems and stations, requiring focused capacity enhancements to keep the system moving as ridership increases occur.



- **The Bay Fair Connector/BART METRO project will receive $100 M** in sales tax funds for the Alameda County portion of this project which will increase capacity and operational flexibility systemwide. One goal of these improvements will be to improve connections to jobs in the southern part of the county and beyond as Santa Clara County builds its own BART extension.

- **The BART Station Modernization and Capacity Program will receive $90 M** for improvements at all BART stations in Alameda County, addressing station site, building envelope, escalator and elevator rehabilitation/replacement, circulation and wayfinding, air conditioning, lighting and ambient environment, station reliability upgrades, and other station equipment replacement/upgrades.

- **The Irvington BART Station will receive $120 M** to provide an infill station on the soon-to-open Warm Springs extension south of the existing Fremont Station, creating new accessibility to BART in the southern part of the County.

- BART Station Modernization and Capacity Improvements
- Affordable Transit for Seniors and People with Disabilities

Commented [ACTC1]: Bottom circle: The new "B" is Irvington BART Station, and below that removal of "C"

Commented [ACTC2]: Top circle: Removal of the original "B – BART Extension to Livermore (within the I-580 corridor)"

Commented [ACTC3]: Middle circle: Change the original "C – Irvington BART Station" to a new "B"

MAJOR TRANSIT CORRIDOR AND COMMUTER RAIL IMPROVEMENTS ($~~355~~ 755 M)

Investments include maintenance and service enhancements on existing rail lines and the development of transportation investments serving the Dumbarton Corridor Area. Funds will also be allocated for preserving rail right of way for transportation purposes, ensuring that service is available for future generations. Finally, this funding category acknowledges the importance of connecting high speed rail to Alameda County and the Bay Area and seeks to prioritize targeted investments to ensure strong connections to this future service.

Dumbarton Corridor Area Transportation Improvements ($120 M)

Dumbarton Corridor Area Transportation Improvement projects will support express bus services in the Dumbarton Corridor connecting southern Alameda County and the Peninsula. The projects will also support transit oriented development and priority development areas, and improve local streets and bicycle and pedestrian infrastructure within the cities of Fremont, Newark and Union City.

Union City Intermodal Station ($75 M)

This project funds the development of a new intermodal station in Union City to serve BART, Dumbarton Corridor services, Capitol Corridor, ACE and local and regional bus passengers. The project involves construction of a two-sided rail station and bus transit facility, accessible to a 30-acre transit oriented development site. Improvements will be made to pedestrian and bicycle access, BART parking, elevators, fare gates and other passenger amenities.

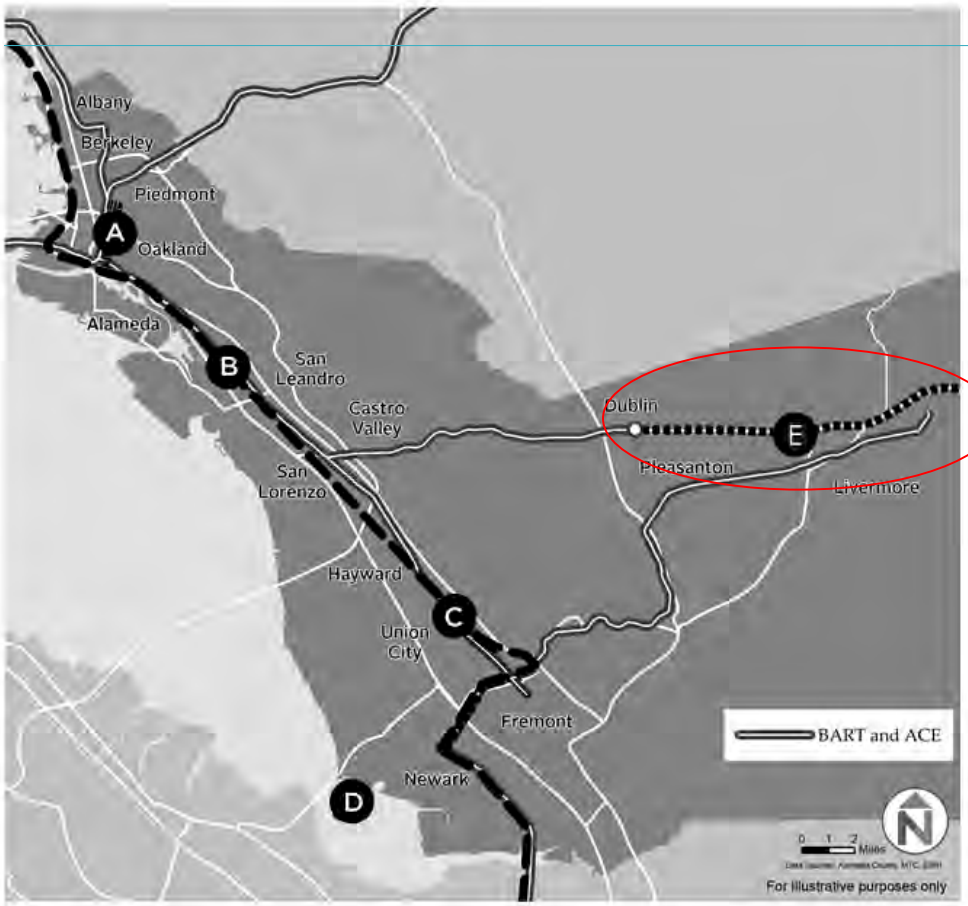
Capitol Corridor Service Expansion ($40 M)

This project supports track improvements and train car procurement which will enable the trains running between Oakland and San Jose to increase daily round trips, matching frequencies between Sacramento and Oakland.

Railroad Corridor Right of Way Preservation and Track Improvements ($110 M)

Funds allocated by this project may be used to maintain and enhance existing railroad corridors for regional rail as well as to preserve the rights of way of rail corridors that could be used for other transportation purposes, such as major trails.

Oakland Broadway Corridor Transit ($10 M)



This project will link neighborhoods to transit stations along Broadway, Oakland's major transit spine, providing a frequent and reliable connection between the regional rail hub at Jack London Square, with Downtown Oakland, the Uptown Arts and Entertainment District, and adjoining neighborhoods, utilizing the most efficient and effective technology.

Valley Link Rail in Alameda County ($400 M)

This project funds the first phase of a Valley Link rail extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology. Funds are for construction for any element of this first phase project in Alameda County and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an alternatives assessment of fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Valley Link

Connecting People, Housing, and Jobs

Fact Sheet

Project Overview

Connecting San Joaquin Valley to the Bay Area. Valley Link will offer a reliable and efficient commute alternative, providing San Joaquin Valley and eastern Alameda County residents with a direct connection to BART and ACE.

A Seamless Connection to BART. The first phase of service will provide a seamless and timed connection to BART, with service from North Lathrop to the Dublin/ Pleasanton BART station.

Frequent and Reliable Service. Trains will run throughout the day in both directions with the goal of matching BART frequency and hours of operation.

Initial Service Characteristics

	PEAK	OFF-PEAK
Between Dublin/ Pleasanton and Greenville	12 min (meeting every BART train)	30 min (meeting every other BART train)
Beyond Greenville	24 min (meeting every other BART train)	60 min (meeting every 4th BART train)

As of APRIL 2020

Tri-Valley • San Joaquin Valley REGIONAL RAIL AUTHORITY

By the Numbers

- **9,3500 Bay Area workers** - commuting from San Joaquin Valley today
- **42 Miles** - using existing transportation corridors
- **7 Stations** – Dublin/Pleasanton, Isabel, Mountain House, Tracy, River Islands, North Lathrop
- **78 Minutes** - current average commute each way
- **28 days** – total commute time per year for average commuter
- **75% increase** - commute traffic on I-580 by 2040
- **58% increase** – truck traffic on I-580 by 2040
- **25 daily round-trips** - by Valley Link trains each day in 2040
- **28,000 riders** – estimated in 2040 for Valley Link per day
- **99.4 Million** – reduction in Vehicle Miles Traveled (VMT) per year in 2040
- **33,000 metric tons** – reduction in greenhouse gas emissions (GHG) per year
- **0 Emissions** – battery-electric and hydrogen vehicle technologies under development
- **$2.4 Billion** - cost of Valley Link Phase 1 from Dublin/ Pleasanton BART to North Lathrop, in year of expenditure
- **$628 million** - identified as available for the project:
  - **$400 million** - Measure BB funds
  - **$188 million** - Bridge Toll funds
  - **$40 million - impact fees from the City of Livermore**
- **2027 – target date for Valley Link revenue service**

Project Benefits

Valley Link aims to be a model of sustainability in the design, construction and operation of the system. It is vital to our state's economy, environment and the quality of life in our communities:

- Serves communities and households in the Northern San Joaquin Valley with some of our state's highest poverty rates;
- Promotes equity by maximizing benefits to disadvantaged communities
- Links the Northern California Megaregion's workforce to affordable housing;
- Readily connects our state's future high-speed rail system to BART;
- Provides direct and seamless service to major employment centers in all parts of the Bay Area;
- Provides opportunities for compact transit-oriented development; and
- Will have a significant impact on the reduction of VMT and greenhouse gas emissions.
- Operates on renewable energy

The Alameda County Building and Construction Trades Council Supports the Staff Recommendation, under item 5.1 (Valley Link) for the following reasons:

- A BART extension to Livermore has been a longstanding project, dating back in concept to the 1960s when the BART system was originally envisioned. Over the years there have been efforts by many resident, local elected officials, and other stakeholders to extend the BART alignment to Livermore.
- After decades of planning, in May of 2018 the BART Board certified the BART to Livermore EIR but voted to not advance a specific project, opting instead to defer the planning and construction of passenger rail in the 580 corridor of the Tri-Valley to the Tri-Valley – San Joaquin Valley Regional Rail Authority.
- Created by AB758 (Baker/Eggman), the Tri-Valley – San Joaquin Valley Regional Rail Authority has since completed a Feasibility Report and selected from alternatives the Valley Link passenger rail project. Phase 1 of Valley Link is a 42 mile, seven station alignment from the Dublin/Pleasanton BART station to the North Lathrop station, with a key connection with BART at the Dublin/Pleasanton BART station and with ACE at the Greenville Station and the planned ACE North Lathrop station. The project is cost effective and efficient in that it uses currently existing transportation rights of way (580 in Tri-Valley, former So Pacific Railroad right of way now owned by County of Alameda in the Altamont and the UP right of way in the San Joaquin Valley). Valley Link will carry between 26,000 and 28,000 rides/day as a transportation option for the nearly 100,000 commuters on the highly congested 580. With congestion in the 580 due to increase 75% by 2040, transportation alternatives are a high priority that will benefit the environment, the economy and the quality of life of residents and Bay Area Workers.
- The goal of the Valley Link Board is to be 100% sustainable, with catenary/battery technology being studied and solar/wind energy being planned to power both the O&M facility and the seven stations. Additionally, the Valley Link Board has approved a Transit Oriented Development policy that mirrors MTC policy to mandate 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space and lowers VMT. Valley Link will result in a reduction of 99.4 million vehicles miles travelled per year and a reduction of 33,000 metric tons in greenhouse gas emissions annually.
- The Tri-Valley – San Joaquin Valley Regional Rail Authority will publish the draft Valley Link EIR in September and aims to certify the EIR by the end of 2020. NEPA and 30% design will be completed in 2021. Final design and construction will begin in 2022, with the project scheduled to open for passenger service in late 2027 to early 2028.
- Per a recent PGH Wong study, during construction the economic impact of Valley Link project will be 16,300 to 22,200 jobs and between $2.6 billion and $3.5 billion in revenues.
- Valley Link is a project advancing quickly and cost effectively. Amending the Measure BB Transportation Expenditure Plan to provide $400 million to the Valley Link project for construction in the Alameda County portion of the project will be extremely important at this time so that the Authority can leverage local funds with State, federal and private funding to complete.

Sincerely,

Andreas Cluver, Secretary-Treasurer

Bay Area Transportation Working Group (BATWG)

May 11, 2020

Hon. Elsa Ortiz, Chair, and Members of the Planning, Policy and Legislation Committee

Alameda County Transportation Commission (ACTC)

1111 Broadway, Suite 800 Oakland, CA 94607

Dear Commissioner Ortez:

It has come to our attention that the ACTC is thinking of reallocating the Measure BB funds set aside for the Livermore BART connection to "Valley Link". We urge you to desist.

For one thing such an action would make a mockery of what the Alameda County voters voted for in 2016. For another it would deny the people of Livermore the one good way of getting from their city to the East Dublin BART Station.

At the time the BART Board was considering whether or not to put the Measure BB $400 million toward a proposed $3.2 billion BART extension to Greenville Road, BATWG conducted an extensive investigation of the bus alternative. It was our conclusion that in terms of improving the access of the people of Livermore to BART, well-appointed buses (patterned after the privately-operated hi-tech buses) operating in bus-only lanes would be a far cheaper and better option. At the time we envisioned three separate lines originating in separate parts of Livermore all traveling out-of-traffic, at least during commute hours, to the Station.

Sincerely,

Gerald Cauthen

Commission

We support transit, and possibly this project too, but have questions and concerns around:

1. The lack of public outreach in Livermore to generate support for this project. Measure BB in Livermore did not get a ton of support and BART was controversial. RM3 get even less support in Livermore. We don't want this project to be controversial like the BART project was. The Isabel Neighborhood Plan was controversial too because of BART. Where are the residents of Livermore on this project?;
2. Hour headways off -peak is poor public transit, and is in fact commuter rail. This corridor needs good transit. What can be done to convert this project from commuter rail to good transit?
3. Can we hear more about the financial crisis and how this project is affected? It's concerning to hear a presentation that does not acknowledge the current financial crisis.

Thank you for more clarifying information.

Subject: Public Comment for item 5.1 at ACTC's PPLC meeting on Monday 5/11

Hi Vanessa-

I hope you are staying healthy and safe. Considering that I cannot attend next Monday's PPLC meeting in person due to the SIP, please make sure my comments are read into the record for Public Comment as part of agenda item 5.1. Let me know if you have any questions or need anything else. Thanks!

Tim Sbranti
(925) 858-5303

Dear Chair Ortiz and Honorable Commissioners:

On behalf of the Innovation Tri-Valley Leadership Group, I respectfully request for the PPLC to support the Staff recommendation to amend the Measure BB Transportation Expenditure Plan to replace the BART to Livermore project with the Valley Link project.

I served on ACTC's Steering Committee as Mayor of Dublin when Measure BB was drafted. Our Committee worked to ensure that the Expenditure Plan included the fulfillment of plans dating back to the 1960's which envisioned a rail connection heading east from the Dublin/Pleasanton BART Station into Livermore. This vision was part of the plan approved by the voters of Alameda County. Another element of Measure BB gave the Commission the authority to make small modifications to the Plan as the need arose and future conditions warranted it.

Four years later in May of 2018, the BART Board certified the BART to Livermore EIR but transferred the planning and construction of passenger rail in the I-580 corridor of the Tri-Valley to the Tri-Valley - San Joaquin Valley Rail Authority. The Authority has since completed a Feasibility Report for Valley Link, a project proven to be cost effective and efficient, estimated to carry between 26,000 and 28,000 riders a day in the highly congested I-580 corridor.

With congestion on I-580 due to increase 75% by 2040, transportation alternatives for the area are a high priority that will benefit the environment, the economy and the quality of life of residents and

Bay Area workers. Amending the Measure BB Transportation Expenditure Plan to provide $400 million to the Valley Link project for construction in the Alameda County portion of the project will be extremely important at this time so that the Authority can leverage local funds with State, federal and private funding to complete the project. By transferring the funding in Measure BB to Valley Link, it would also be consistent with the original intent and vision of Measure BB for rail connectivity in the Tri-Valley, and I urge the Committee to approve the item.

Re: PPLC Agenda Item 5.1 – Tri-Valley-San Joaquin Valley Regional Rail Authority Request for 2014 Measure BB Transportation Expenditure Plan Amendment – **SUPPORT**

Dear Chair Ortiz:

I am writing on behalf of the Livermore Valley Chamber of Commerce (LVCC), a business membership organization with nearly 500 members from a cross-section of private/public and non-profit industry sectors that employ nearly 20,000 workers. Ensuring that public dollars are wisely spent and that taxpayers receive a good return on their investment, while responsibly planning, funding, and maintaining and operating our transportation system is a key policy priority for LVCC.

LVCC supports the above referenced item, advancing the efforts to close the gap in the I-580 corridor for an urgently needed and long-awaited, effective rail connection between Livermore and the Dublin/Pleasanton East BART station. I reiterate the support formerly expressed by LVCC over many years for planning and funding support for such a project. LVCC appreciates the wisdom of the leaders of the Alameda County Transportation Commission in designating significant funding in Measure BB (which was supported by LVCC) to provide for a future rail connection in this corridor. In light of events that have transpired since the approval of BB, your prudent actions necessary to amend the expenditure plan to accommodate the request by the Tri-Valley-San Joaquin Valley Regional Rail Authority is welcomed and appreciated. LVCC recognizes and strongly supports the efforts of the TVSJRRA to effectively deliver a rail connection project in this corridor within the next few years.

We look forward to moving forward with this initiative and this project, and stand ready to support you in this action.

Respectfully,

RE: PP&L Agenda item #5.1 – Approve Tri-Valley- San Joaquin Valley Regional Rail Authority (TVSJVRRA, aka Valley Link) Request for a 2014 Measure BB Transportation Plan Expenditure (TEP) Amendment

Dear Chair Ortiz and Members of the PP&L Committee:

On behalf of our more than 13,500 members in Alameda County, the Sierra Club writes to respectfully express great concern about Item #5.1 on your Agenda for Monday May 11, 2020. We believe that there are far too many issues and questions that should be addressed before the recommended actions move forward.

We recognize that the proposed actions before your Committee are just the beginning of a process to reprogram the sales tax funds that were approved by voters for "BART to Livermore." But as set forth in the staff memo, the proposed actions, and their timing, would establish dangerous precedents for lack of planning and financial responsibility. There is simply no need to rush into the proposed actions, particularly in the context of the current health and financial crises being faced by the State and local communities. Why not first take time for responsible analysis and an opportunity to see if-how-and-when recovery is able to occur, before committing funds that may not materialize for years to come?

Every responsible forecast is anticipating that "the future of work" will be different, post-pandemic, than we have ever been experiencing previously. Why base such a massive investment of public funds on what is already and at best "old data?"

The first Agenda request is that the TVSJVRRA be acknowledged as a new agency in Alameda County that can be an eligible recipient of Measure BB funds. While this

2530 San Pablo Ave., Suite I, Berkeley, CA 94702 Tel. (510) 848-0800 Email: info@sfbaysc.org

should be the least controversial element of the requests, nothing in the staff memo identifies the potential magnitude of impacts on other Measure BB transit recipients. There is no operating budget provided in the Committee materials. Can taxpayers and pre-pandemic passengers be assured that this new system will not become a drain on other, voter-approved transit agencies in the County?

The second and third requests would remove "BART to Livermore" from the TEP and substitute Valley Link with no consideration of possible alternatives – why? The project list for Measure BB was the result of years of input and deliberation by Community and Technical Working Groups. Why not have a full and fair competition for alternative uses of these funds, throughout the full list of "BART, Bus, Senior, and Youth Transit" options identified as the relevant "Type" on page 3 of the TEP (page 24 of the Committee packet), especially with the enormous uncertainties facing projections for both traffic and funding revenues?

Implementing Guideline 22 of the Measure BB TEP is surprisingly omitted from the staff memo, but supports this broadened approach, stating:

> **22. Fund Allocations**: Should a planned project become undeliverable, infeasible, or unfundable due to circumstances unforeseen at the time this Plan was created, or should a project not require all funds programmed for that project or have excess funding, funding for that project will be allocated to another project or program of the same type, such as Transit, Streets, Highways, Community Development Investments, or Bicycle and Pedestrian Safety, at the discretion of Alameda CTC.

Even the language from AB 758 (Eggman/Baker, PUC section 132658) that is quoted in the "superseded" request dated September 11, 2019, recognized that there was no entitlement to the "local funds controlled by the Alameda County Transportation Commission."

It should also be noted that the proposed description and conditions regarding Valley Link delete and/or change significant descriptive and cautionary language (which was carefully negotiated and voter-approved) before funds may actually be "used." The text below sets forth full "before and after" language in a single view for the information of Commissioners and the public:

> ~~BART to Livermore ($400 M)~~
> Valley Link rail in Alameda County ($400 M)
>
> This project funds the first phase of a ~~BART Extension within the I-580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange~~ Valley Link rail extension from the existing Dublin/ Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology.

> Funds are for construction for any element of this first phase project and shall not be used until full funding commitments are identified and approved for the initial operating segment that most effectively meets the adopted project goals, and a project-specific environmental clearance is obtained. The project-specific environmental process will include an ~~detailed~~ alternative assessment of ~~all~~ fundable and feasible alternatives, and be consistent with mandates, policies and guidance of federal, state, and regional agencies that have jurisdiction over the environmental and project development process.

Why are voter and environmental protections proposed to be removed for this new project? Do Commissioners really think this is wise and appropriate? Why not, at a minimum, wait until the requisite Environmental Review is both released in draft form and then completed? – This critical document is already a year behind the previous schedule.

Where is the San Joaquin County commitment to support their own residents who are likely to be the primary beneficiaries of this project? The proposed resolution merely states that:

> SJCOG: In April 2020, the SJCOG Board approved an amendment to its 2018 Regional Transportation Plan to include the Valley Link project, including identification of $163.9 million for the project in the plan from ***future*** measures and state funds**. (emphasis added)**

Any ACTC action should be conditioned on a firm commitment of adequate funds for both capital and operations for this multi-county project. “Leveraging” of other funds should, at a minimum, be based on full and fair participation from designated “partners.”

Several places in the proposed “amendments” describe Valley link as “Commuter Rail," despite the fact that it is proposed to operate throughout the day. Subsection 49 CFR 37.3 in relevant part defines “commuter rail” as

> *Commuter rail transportation* means short-haul rail passenger service operating in metropolitan and suburban areas, whether within or across the geographical boundaries of a state, usually characterized by reduced fare, multiple ride, and commutation tickets and by morning and evening peak period operations. This term does not include light or rapid rail transportation.

Is this an attempt to obviate or avoid an obligation for ADA complementary paratransit service for passengers, or attempted passengers, who may have difficulty using the train service?

We must also ask if ACTC or Valley Link have informed MTC and ABAG that the proposed project will facilitate inter-regional commuting, contrary to the intent of SB 375 and the Bay Area's Sustainable Communities Strategy.

This message sets forth only some of the most obvious concerns about the proposed Measure BB actions. There are certain to be more, but disclosure by ACTC and Valley Link should not be delayed until the end of the requisite "public comment" period. The Sierra Club respectfully requests, and urges at a minimum, that the questions and issues noted above be addressed before any Commission action to consider Valley Link's requests. To do any less would call into question Commissioners' significant public service obligations to Alameda County voters, taxpayers, and residents. We look forward to working with you and ACTC staff to consider a full range of responsible uses of Measure BB funds. If you have any questions, or desire further information, please do not hesitate to contact Matt Williams at mwillia@mac.com.

Subject: Tri Valley $400 million
Date: Saturday, May 23, 2020 7:59:43 AM

Pauline Cutter, Chair, and ACTC Commissioners May 22, 2020
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, California 94607

via: e-mail to Clerk of the Commission

re: ACTC May 28, 2020 meeting, Agenda item 8.1, "Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment (Valley Rail)

Dear Chair Cutter:

The Alameda County Taxpayers Association (ACTA), a 501(c)(4) organization, represents the taxpayers of this County in advocating legal and productive expenditures of taxpayer funds. As such, ACTA is a statutory appointer of a member of the ACTC Independent Watchdog Committee.

Alameda County Taxpayers Association [ACTA] is troubled by plan to transfer $400 million BART funds to the Tri-Valley-San Joaquin Valley Regional Rail Authority. The Alameda County voters approved the Special Tax of Measure BB and to be dedicated for Alameda County transportation projects such as the BART to Livermore extension. The foremost consideration of ACTC must be the will of the voters. ACTC must narrowly construe the intention of the voters regarding the 'specific purposes' of the Measure BB special sales tax. The voters did not contemplate that the Measure BB taxes would single-handedly fund multi-county projects in the absence of funds contributions from other counties. When the Tri-Valley Authority has produced its share of the project funding, the ACTC can plan how to spend Tri-Valley Authority funds. ACTA will vigorously oppose any plan to divert these funds away from a voter-approved project.

For the present ACTC must demonstrate that it can plan a viable project by solving the BART to Livermore extension. This Committee must demonstrate leadership and build consensus on existing Alameda County projects, not leap ahead to the next glorious project that has not even been planned. As a first step in leadership, the committee should use its power to make the promised annual audits of Measure BB expenditures a reality.

We call on ACTC to table this action until such time as a proper study be made of this project and the logical alternatives, including a long-haul commuter express bus network for both Eastern Alameda County along the I-580 Corridor and over the hills from the Central Valley. We certainly have no objection to working jointly with Central Valley governments and other interest groups on a project of mutual benefit. However, we do not understand why ACTC is proposing that the Alameda County taxpayers be the first to transfer funds approved by the voters to benefit primarily Alameda County residents to a project that would instead primarily benefit residents of other counties – particularly since there is no commitment from those counties, or even an idea of when such a commitment might be made.

The $400 million was originally approved by the voters as part of Measure BB in 2014 for a BART extension to Livermore. The BART Board elected not to pursue this, so we agree it is proper to study other transportation improvements in this corridor – but, we believe that the first priority should be for what the voters intended, benefits for the residents and travelers along the I-580 corridor in the Eastern Tri-Valley area.

We do not object to the study of rail alternatives in this corridor and into the Central Valley, either BART or commuter/inter-city rail. But, in our role as a taxpayer advocate, we believe that it would be improper to advocate for rail unless and until a proper, unbiased study fairly considers other options, including a bus system on dedicated lanes, that could require far less taxpayer dollars and could be completed much faster. If the study shows that Valley Rail is the best option and is fair to the taxpayers and the traveling public, and is feasible, then ACTC should consider this $400 million reallocation at that time.

We do not understand the necessity nor the benefit of making this decision so early in the planning process.

I will be commenting on this matter at the Commission meeting.

Thank you for your consideration of the position of the Alameda County Taxpayers Association on this important matter before the Commission.

Respectfully submitted,

Marcus Crawley -President of

The Honorable Pauline Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Cutter:

Subject: Approval of Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

As BART Director (District 5) and representative for my constituents and taxpayers in the Tri-Valley area, I write to support the approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to initiate an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley, and particularly Livermore, to advance rail connectivity to Livermore. After many decades of study, it will assure that our residents will finally benefit from the taxes they have paid to BART for many decades. The Authority was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and the Altamont Corridor Express (ACE) commuter rail service in the Tri-Valley that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities. Valley Link will benefit the entire Tri-Valley by reducing traffic over the Altamont Pass and through the 580/680 corridor. An estimated 98,500 Bay Area workers are now living in Northern San Joaquin County, commuting daily through the Altamont in their cars. This includes those delivering our most vital services - firefighters, police, nurses and teachers, many of whom have been priced out of the communities they serve by rising housing costs – who face an average 78-minute commute each way.

An estimated 28,000 are projected to ride the system in 2040. This will result in the reduction of over 99.4 million Vehicle Miles Traveled (VMT) and the reduction of over 33,000 metric tons of greenhouse gas emissions per year. In addition, through the Board-adopted TOD Policy, Valley Link will support the advancement of transit-oriented development adjacent to its stations, which will further reduce VMT and greenhouse emissions within the station environs. The Transit Oriented Development policy mirrors the MTC policy with a corridor average threshold requirement of 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space. The proposed Isabel Neighborhood Plan is an example of how this may happen throughout the system.

I urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will ensure that this vital project moves forward and that commitments to the Tri-Valley are long last met.

Sincerely,

John McPartland

RE: Item 8.1 - Tri-Valley-San Joaquin Valley Regional Rail Authority Request

Chair Cutter:

Thank you for the opportunity to comment on the above referenced item. On behalf of the San Francisco Bay Area Rapid Transit District (BART), I would like to express support for beginning a 45-day comment period on the proposed amendment to the 2014 Measure BB funded TEP, as described in the staff memorandum.

In May 2018, the BART Board of Directors certified the Final Project EIR for the BART to Livermore extension, and directed staff not to advance a specific project in the Tri-Valley. Pursuant to AB 758 (Baker), the Tri-Valley-San Joaquin Valley Regional Rail Authority (TVSJVRRA) at that point assumed responsibility to advance a rail project in the corridor. Since then, BART staff have been engaged with the TVSJVRRA throughout project feasibility and initial design and environmental assessments of the proposed Valley Link Rail project, and this coordination continues.

Because of this, BART supports the action to begin the public comment period for the amendment to the TEP naming the TVSJVRRA as an eligible recipient of Measure BB funds and specifically naming the Valley Link project in place of BART to Livermore. It is important to hear from Alameda County residents and other stakeholders. The District anticipates submitting a more detailed set of comments during the official 45-day comment period that this action will kick-off.

Please do not hesitate to contact me or my staff with any additional questions.

Sincerely,

Robert M. Powers
General Manager

re: ACTC May 28, 2020 meeting, Agenda Item 8.1, "Approve Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment (Valley Rail)"

Dear Chair Cutter:

The Bay Area Transportation Working Group (BATWG) is an Oakland-based 501(c)(3) composed of senior transportation experts and advocates with centuries of collective experience in California, Bay Area, and Alameda County transportation issues and projects.

At BATWG's May 21, 2020 meeting there was a discussion of the proposed diversion of Alameda County Measure BB funds to Valley Rail. After the discussion the vote was unanimous; we believe this action would be inappropriate and unwise.

What Valley Rail needs most right now is a full, proper, and unbiased study of its feasibility – including projected ridership, cost-effectiveness and identified sources of funding, all in comparison with the other transportation options for the corridor and all taking the changes brought on by COVID into full account.

In 2017, when the question how to use this $400 million was before the BART Board, the BART staff recommended a significantly upgraded bus option on grounds that it would better serve the transportation needs of Pleasanton and Livermore than an expensive 10-mile extension of BART to Livermore's Greenville Road would. BATWG strongly supported the staff's recommendation and subsequently submitted a list of proposed bus system enhancements.

The original BART Extension project approved by the Alameda County voters was intended to benefit the people of Alameda County, including the residents of

Pleasanton and Livermore Area and those traveling to those cities from more westerly Alameda County locations. Obviously, this was a project that the Alameda County taxpayers were willing to support because the vast majority of the benefits would accrue to Alameda County residents and taxpayers. Valley Rail, which includes five stations in the Central Valley and only three in Alameda County, is intended to primarily benefit non-Alameda County residents.

There is no reason or justification for diverting $400 million in BB funds to Valley Rail at this time.

The Bay Area Transportation Working Group looks forward to working with the ACTC in working to improve transportation in the I-580 Corridor.

Respectfully submitted,

Gerald Cauthen PE

May 26, 2020

The Alameda County Building and Construction Trades Council Supports the Staff Recommendation, under item 5.1 (Valley Link) for the following reasons:

- A BART extension to Livermore has been a longstanding project, dating back in concept to the 1960s when the BART system was originally envisioned. Over the years there have been efforts by many resident, local elected officials, and other stakeholders to extend the BART alignment to Livermore.
- After decades of planning, in May of 2018 the BART Board certified the BART to Livermore EIR but voted to not advance a specific project, opting instead to defer the planning and construction of passenger rail in the 580 corridor of the Tri-Valley to the Tri-Valley – San Joaquin Valley Regional Rail Authority.
- Created by AB758 (Baker/Eggman), the Tri-Valley – San Joaquin Valley Regional Rail Authority has since completed a Feasibility Report and selected from alternatives the Valley Link passenger rail project. Phase 1 of Valley Link is a 42 mile, seven station alignment from the Dublin/Pleasanton BART station to the North Lathrop station, with a key connection with BART at the Dublin/Pleasanton BART station and with ACE at the Greenville Station and the planned ACE North Lathrop station. The project is cost effective and efficient in that it uses currently existing transportation rights of way (580 in Tri-Valley, former So Pacific Railroad right of way now owned by County of Alameda in the Altamont and the UP right of way in the San Joaquin Valley). Valley Link will carry between 26,000 and 28,000 rides/day as a transportation option for the nearly 100,000 commuters on the highly congested 580. With congestion in the 580 due to increase 75% by 2040, transportation alternatives are a high priority that will benefit the environment, the economy and the quality of life of residents and Bay Area Workers.
- The goal of the Valley Link Board is to be 100% sustainable, with catenary/battery technology being studied and solar/wind energy being planned to power both the O&M facility and the seven stations. Additionally, the Valley Link Board has approved a Transit Oriented Development policy that mirrors MTC policy to mandate 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space and lowers VMT. Valley Link will result in a reduction of 99.4 million vehicles miles travelled per year and a reduction of 33,000 metric tons in greenhouse gas emissions annually.
- The Tri-Valley – San Joaquin Valley Regional Rail Authority will publish the draft Valley Link EIR in September and aims to certify the EIR by the end of 2020. NEPA and 30% design will be completed in 2021. Final design and construction will begin in 2022, with the project scheduled to open for passenger service in late 2027 to early 2028.
- Per a recent PGH Wong study, during construction the economic impact of Valley Link project will be 16,300 to 22,200 jobs and between $2.6 billion and $3.5 billion in revenues.
- Valley Link is a project advancing quickly and cost effectively. Amending the Measure BB Transportation Expenditure Plan to provide $400 million to the Valley Link project for construction in the Alameda County portion of the project will be extremely important at this time so that the Authority can leverage local funds with State, federal and private funding to complete.

Sincerely,

Andreas Cluver, Secretary-Treasurer
Building & Construction Trades Council of Alameda County

May 25, 2020

The Honorable Pauline Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Cutter:

Subject: Approval of Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

I write to support the approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to initiate an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley, and particularly Livermore, to advance rail connectivity to Livermore. After many decades of study, it will assure that our residents will finally benefit from the taxes they have paid to BART for many decades.

The CLPCCD and, especially Las Positas College, as evidenced by our MOU with LAVTA, recognize the value of public transportation in meeting sustainability goals and facilitating travel to and from the college. Specifically, the largest benefactor of these two projects will be Las Positas College, and the community we serve which encompasses over 9,200 students and 500 employees. Our research shows that our public transportation usage average is 10,000 individual rides per month and nearly 500 students take the bus each business day. Of our total student population, 20% take classes at both campuses. A rail extension to Livermore would support and facilitate the needs of student populations from both the Tri-Valley and 880/580 corridors. We know there is still a great need for additional public transportation options for all of our students and employees.

CLPCCD provides educational opportunities and support for completing of students' transfer, associate degree, basic skills, career technical education, and retraining goals. We serve, annually, approximately 29,000 students. Our employees and students use public transportation to get to and from their homes to our places of work.

We urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will ensure that this vital project moves forward and that commitments to the Tri-Valley are long last met.

Sincerely,

May 28, 2020

The Honorable Pauline Russo Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Subject: Agenda Item 8.1 - Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. Position of support.

Dear Chair Cutter:

I write to support the approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to initiate an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley, and particularly Livermore, to advance rail connectivity to Livermore. After many decades of study, it will assure that our residents will finally benefit from the taxes they have paid to BART for many decades.

The Authority was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and the Altamont Corridor Express (ACE) commuter rail service in the Tri-Valley that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities. Valley Link will benefit the entire County by reducing traffic over the Altamont Pass and through the congested I-580 and I-680 corridors. An estimated 93,500 Bay Area workers are now living in Northern San Joaquin County, commuting daily through the Altamont in their cars. This includes those delivering our most vital services - firefighters, police, nurses, teachers, and people employed in manufacturing in the Tri-Valley and throughout Alameda County. Many of these Bay Area workers have been priced out of the communities they serve by rising housing costs and are suffering through an average 78-minute commute each way.

The environmental benefits of Valley Link are significant. Valley Link offers a rail alternative for those commuting by automobile. An estimated 28,000 are projected to ride the system in 2040. This will result in the reduction of over 99.4 million Vehicle Miles

Traveled (VMT) and the reduction of over 33,000 metric tons of greenhouse gas emissions per year.

Valley Link supports construction of badly needed affordable housing. Through the Board-adopted TOD Policy, Valley Link will support the advancement of transit-oriented development adjacent to its stations, which will further reduce VMT and greenhouse emissions within the station environs. The Transit Oriented Development policy mirrors the MTC policy with a corridor average threshold requirement of 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space. The Isabel Neighborhood Specific Plan, developed around the Valley Link station at Isabel Avenue, includes 4,095 new multifamily housing units with a mandatory 20% minimum affordable requirement with an overall goal for 25% affordable units in the Plan area.

We urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will help ensure that this vital project can move forward to benefit the entire County and that commitments to the Tri-Valley are finally met.

Sincerely,

John Marchand

Subject:	Public Comment for Item 8.1 at ACTC meeting on Thursday 5/28
Date:	Tuesday, May 26, 2020 11:26:55 PM

Hi Vanessa-

I hope you are doing well. Please make sure my comments are read into the record for Public Comment as part of agenda item 8.1. Let me know if you have any questions or need anything else. Thanks!

Tim Sbranti

Dear Chair Russo Cutter and Honorable Commissioners:

On behalf of the business and civic leaders who comprise the Innovation Tri-Valley Leadership Group, please support the Staff recommendation and the unanimous decision from PPLC to amend the Measure BB Transportation Expenditure Plan and replace the BART to Livermore project with the Valley Link project.

I served on ACTC's Steering Committee as Mayor of Dublin when Measure BB was drafted. As Commissioner Haggerty pointed out at the PPLC meeting, a deliberate decision was made to ensure that priorities of leaders in each of ACTC's 4 planning areas were included in the measure. The priority in 2014 remains the same as it was 50 years as it is today.....establishing a rail connection heading east from the Dublin/Pleasanton BART Station into Livermore. By transferring the funding in Measure BB to Valley Link, it would also be consistent with the original intent and vision approved by the voters of Alameda County for rail connectivity in the Tri-Valley.

Another element of Measure BB gave the Commission the authority to make small modifications to the Plan as the need arose and future conditions warranted it. Considering that the planning and construction of passenger rail in the I-580 corridor of the Tri-Valley was transferred in 2018 from BART to the Tri-Valley - San Joaquin Valley Rail Authority, now is the time to transfer the funds as well for rail in the Tri-Valley. In recent months, the Authority has completed a Feasibility Report for Valley Link, a project proven to be cost-effective and efficient, estimated to carry between 26,000 and 28,000 riders a day to relieve gridlock in the highly congested I-580 corridor. With congestion on I-580 due to increase 75% by 2040, transportation alternatives for the area are a high priority and the time to act is now.

Amending the Measure BB Transportation Expenditure Plan to provide $400 million to the Valley Link project for construction in the Alameda County portion of the project will be extremely important at this time so that the Authority can leverage local funds with state, federal and private funding to complete the much-needed project, and we hope that you will

fulfill the original vision and meet present and future needs of the County by approving the item.

Subject:	Valley Link
Date:	Tuesday, May 26, 2020 10:10:41 AM

Good morning. I am writing to you in support of the Valley Link project and the proposed funding of that project. As a representative of thousands of workers who commute from the Central Valley into the Bay Area, and as someone who does that same commute, I can attest to the importance of the Valley Link Rail System. I moved to Tracy, about 20 years ago and I have seen firsthand the increase in commuter traffic. All the experts agree that this will only continue to increase as time goes on. This will result in more time on the road, which increases the carbon footprint of each individual commuter. Valley Link provides a safe alternative from the Central Valley to the Bay Area, reducing the amount of vehicles on the road, which in turn results in lower commute times, carbon emissions, and stress levels!

Created by AB758 (Baker/Eggman), the Tri-Valley – San Joaquin Valley Regional Rail Authority has since completed a Feasibility Report and selected from alternatives the Valley Link passenger rail project. Phase 1 of Valley Link is a 42 mile, seven station alignment from the Dublin/Pleasanton BART station to the North Lathrop station, with a key connection with BART at the Dublin/Pleasanton BART station and with ACE at the Greenville Station and the planned ACE North Lathrop station. The project is cost effective and efficient in that it uses currently existing transportation rights of way (580 in Tri-Valley, former So Pacific Railroad right of way now owned by County of Alameda in the Altamont and the UP right of way in the San Joaquin Valley). Valley Link will carry between 26,000 and 28,000 rides/day as a transportation option for the nearly 100,000 commuters on the highly congested 580. With congestion in the 580 due to increase 75% by 2040, transportation alternatives are a high priority that will benefit the environment, the economy and the quality of life of residents and Bay Area Workers.

The goal of the Valley Link Board is to be 100% sustainable, with catenary/battery technology being studied and solar/wind energy being planned to power both the O&M facility and the seven stations. Additionally, the Valley Link Board has approved a Transit Oriented Development policy that mirrors MTC policy to mandate 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space and lowers VMT. Valley Link will result in a reduction of 99.4 million vehicles miles travelled per year and a reduction of 33,000 metric tons in greenhouse gas emissions annually.

For these reasons and other, I humbly ask that you consider having the Tri-Valley – San Joaquin Valley Regional Rail Authority recognized as an agency eligible for Measure BB funds (agency hadn't been created when Measure BB was approved). We are also seeking to amend the Measure BB Transportation Expenditure Plan to replace the BART to Livermore project with the Valley Link project. This will put $400 million in Measure BB funds into the control of the Valley Link Board.

I thank you for your consideration.

Livermore Amador Valley
TRANSIT AUTHORITY

May 25, 2020

The Honorable Pauline Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Cutter:

Subject: Approval of Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

I write to support the approval of the the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to initiate an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley, and particularly Livermore, to advance rail connectivity to Livermore. After many decades of study, it will assure that our residents will finally benefit from the taxes they have paid to BART for many decades.

The Authority was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and the Altamont Corridor Express (ACE) commuter rail service in the Tri-Valley that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities. Valley Link will benefit the entire Tri-Valley by reducing traffic over the Altamont Pass and through the 580/680 corridor. An estimated 98,500 Bay Area workers are now living in Northern San Joaquin County, commuting daily through the Altamont in their cars. This includes those delivering our most vital services - firefighters, police, nurses and teachers, many of whom have been priced out of the communities they serve by rising housing costs – who face an average 78-minute commute each way.

An estimated 28,000 are projected to ride the system in 2040. This will result in the reduction of over 99.4 million Vehicle Miles Traveled (VMT) and the reduction of over 33,000 metric tons of greenhouse gas emissions per year. In addition, through the Board-adopted TOD Policy, Valley Link will support the advancement of transit-oriented development adjacent to its stations, which will further reduce VMT and greenhouse emissions within the station environs. The Transit Oriented Development policy mirrors the MTC policy with a corridor average threshold requirement of 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space. The proposed Isabel Neighborhood Plan is an example of how this may happen throughout the system.

We urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will ensure that this vital project moves forward and that commitments to the Tri-Valley are long last met.

Sincerely,

David G. Hudson

PLEASANTON CHAMBER of COMMERCE

May 27, 2020

The Honorable Pauline Cutter, Chair
Alameda County Transportation Commission
1111 Broadway, Suite 800
Oakland, CA 94607

Dear Chair Cutter:

Subject: Approval of Tri-Valley-San Joaquin Valley Regional Rail Authority Request for a 2014 Measure BB Transportation Expenditure Plan Amendment

I am writing to support the approval of the Tri-Valley-San Joaquin Valley Regional Rail Authority (Authority) request to initiate an amendment to the 2014 Measure BB Transportation Expenditure Plan (TEP). The TEP amendment will acknowledge the Authority as a new agency in Alameda County that can be an eligible recipient of Measure BB funds and update the TEP by adding Valley Link for the $400 million Measure BB funding identified for the BART to Livermore project. This action will fulfill a commitment made to the Tri-Valley, and particularly Livermore, to eventually advance rail connectivity to the San Joaquin Valley. After many decades of study, it will assure that our residents will finally benefit from the taxes they have paid to BART for many decades.

The Authority was created in 2017 by Assembly Bill 758 for the purposes of planning, developing and delivering cost-effective and responsive transit connectivity between BART and the Altamont Corridor Express (ACE) commuter rail service in the Tri-Valley that reflects regional consensus and meets the goals and objectives of the San Joaquin Valley and Tri-Valley communities. Valley Link will benefit the entire Tri-Valley by reducing traffic over the Altamont Pass and through the 580/680 corridor. An estimated 98,500 Bay Area workers are now living in Northern San Joaquin County, commuting daily through the Altamont in their cars. This includes those delivering our most vital services - firefighters, police, nurses and teachers, many of whom have been priced out of the communities they serve by rising housing costs – who face an average 78-minute commute each way.

An estimated 28,000 are projected to ride the system in 2040. This will result in the reduction of over 99.4 million Vehicle Miles Traveled (VMT) and the reduction of over 33,000 metric tons of greenhouse gas emissions per year. In addition, through the Board-adopted TOD Policy, Valley Link will support the advancement of transit-oriented development adjacent to its stations, which will further reduce VMT and greenhouse emissions within the station environs. The Transit Oriented Development policy mirrors the MTC policy with a corridor average threshold requirement of 2,200 homes within a ½ mile of stations, ensuring that the transportation infrastructure is a catalyst for smart growth that protects open space. The proposed Isabel Neighborhood Plan is an example of how this may happen throughout the system.

We urge approval of the Authority's Request for a 2014 Measure BB Transportation Expenditure Plan Amendment. This action will ensure that this vital project moves forward and that commitments to the Tri-Valley are finally met.

Sincerely,

Oakland, CA 94607

Re: Agenda Item # 8.1, May 28 Meeting
Measure BB Exp. Plan Amendment

Dear Chair Cutter:

The Train Riders Association of California ("TRAC") is a statewide rail advocacy organization that has worked since 1984 to improve passenger rail service in California. TRAC has been involved in passenger rail planning for the Altamont Corridor for at least two decades. We have made presentations to the Valley Link Board and participated in their public meetings.

We write today to urge your Board to defer action on amending the Expenditure Plan for Measure BB until you receive an environmental impact report for Valley Link, which is nearing completion. The Administrative Draft was under review last October, and the Draft EIR is now scheduled for public review in September 2020. TRAC suggests the following reasons for deferral of this agenda item:

1. Without a certified EIR, there is no evidence to support the claim that the proposed Valley Link project will provide meaningful benefits to Alameda County taxpayers. The Commission has a special duty to taxpayers to make an affirmative finding of benefit, under Section 14 of the Expenditure Plan Guidelines:

> **No Expenditures Outside of Alameda County**: Under no circumstances may the proceeds of this transportation sales tax be applied to any purpose other than for transportation improvements benefitting Alameda County. (emphasis added.)

2. From its inception, this project raised serious questions as to whether BART would be able to handle the additional passengers that Valley Link would transport from the Central Valley. The EIR

should resolve that question. If Valley Link were projected to make overcrowding on BART even worse, that would have serious implications as to whether the project could reasonably be judged as benefitting Alameda County residents.

3. An EIR would determine whether Valley Link would result in the construction of any infrastructure or station that would be inconsistent with the land use-constraining provisions of Alameda County year 2000 Measure D. On a related topic, an EIR will provide information on the Valley Link project's compliance with the County's Gateway Policy.

4. As the largest single capital project in Measure BB, BART to Livermore was the marquee project. Because of that special status, it demands special treatment above and beyond the 2/3 majority required for an amendment. This is not some minor project. Amending the Plan to include this project changes the entire profile of the measure, because the voters never gave their support to the Valley Link project. There is no evidence that the voters of the Tri-Valley, which did not support Measure BB, would support Valley Link.

5. Because Measure BB resulted in financial trade-offs between the Tri-Valley and the North County cities through a reweighting of the basic allocation formula for local streets and roads, the entire Expenditure Plan would need to be reopened to assure fairness for all jurisdictions.

6. Other alternative projects, including several that TRAC has advocated for, would potentially be far more cost-effective in providing the service that Valley Link seeks to offer. In particular, the $1+ billion dollar cost of the I-580 relocation is merely a utility relocation, offering no transportation benefit to taxpayers.

Thank you for considering these comments.

Sincerely yours,

/s/ DAVID SCHONBRUNN

Re: May 28, 2020 Meeting: Agenda Item 8.1: Opposition to Measure BB TEP Amendent

To Chair Cutter and Commissioners:

This office represents Alameda County citizens opposed to a request by the Tri-Valley-San Joaquin Valley Regional Rail Authority for a 2014 Measure BB Transportation Expenditure Plan Amendment.

This $400 million revision of the Measure BB TEP would completely change the largest capital expenditure in Measure BB. It is an epic "bait-and-switch" against Alameda County voters while they are distracted by a global state of emergency.

A major amendment of a voter-passed ballot measure is a major decision that should not be made during the COVID-19 emergency. Commissioners should carefully consider the Statement on Government Coronavirus Emergency Transparency by 140-plus organizations:

> Government bodies should not opportunistically take advantage of the public's inability to attend large gatherings to make critical decisions affecting the public's interest if those decisions can reasonably be postponed. Just as citizens are being asked to defer nonessential travel and errands, so should government agencies defer noncritical policy-making decisions until full and meaningful public involvement can be guaranteed.

The voter-approved text of Measure BB Transportation Expenditure Plan (TEP) states, "BART to Livermore ($400 M) This project funds the first phase of a BART Extension within the I -580 Corridor freeway alignment to the vicinity of the I-580/Isabel Avenue interchange using the most effective and efficient technology."

This proposed amendment would substantially revise the TEP to state, "Valley Link Rail in Alameda County ($400 M) This project funds the first phase of a Valley Link rail extension from the existing Dublin/Pleasanton BART station within the Tri-Valley and Altamont Pass in Alameda County using the most effective and efficient technology."

"Valley Link Rail" to Altamont Pass is a drastically different project than BART within I-580 to western Livermore. Your Commission is constrained by this implementing guideline: "Under no

circumstances may the proceeds of this transportation sales tax be applied to any purpose other than for transportation improvements benefitting Alameda County." Alameda County receives little or no benefit by paying for a very costly rail line through Altamont Pass. Very few people live in Altamont Pass. There will be no station in Altamont Pass. A rail line funded by Alameda County taxpayers through Altamont Pass effectively is a gift of Alameda County funds to San Joaquin Valley real estate development interests. This is not what Alameda County voters contemplated in the 2014 election. Valley Link is a much different project than was sold to voters in 2014 – a BART line that ends in western Livermore. As such, it is akin to a "revision" of Measure BB, not a mere "amendment."

Moreover, this proposed $400 million amendment upsets the "overall geographic equity" consensus that underpins the Measure BB TEP. Measure BB spending on Valley Link in Altamont Pass does not "benefit" the Tri-Valley to the same extent that BART to Isabel Avenue would. Measure BB claims to distribute local street and road funding based on population and road miles, but ACTC manipulates the formula to reward certain cities and punish others based on other parts of the TEP. This $400 million amendment affects other funding formulas in the TEP and effectively revises them. The "geographic equity" is thrown off. To ensure "overall geographic equity," local street and road funding and other formulas need to be re-visited as part of this amendment process, pursuant to Implementing Guideline Nos. 12 and 13 and other authorities.

Your Commission would acting prematurely if it were to undertake this drastic revision of the Measure BB TEP today. "Valley Link" is an unproven and unknown project in many respects. Too little is known about it. A much-anticipated environmental impact report is not yet released. A 2003 Caltrans I-580 widening analysis stated that there is insufficient existing right-of-way to accommodate both a rail line and HOV lanes. Even if more freeway right-of-way were obtained, the new HOT lanes would need to be destroyed. The financing of Valley Link is questionable, which likely is why Valley Link wants to use this $400 million for construction in the Altamont Pass, which would not benefit Alameda County.

Before approving the TEP amendment, careful consideration also must be made about the impacts on BART. Before the COVID-19 emergency, the Dublin/Pleasanton BART line trains had been packed during commute hours. During the morning commute, many passengers board at West Dublin/Pleasanton, ride backwards to (East) Dublin/Pleasanton, and then jockey for space in the crowded trains.

Your Commission first should consider alternatives to Valley Link. The 2003 Caltrans I-580 widening study included an express bus alternative that deserves careful consideration. That 2003 analysis considered an express bus connection directly from I-580's HOV lanes to and from (East) Dublin/Pleasanton BART station. That likely would be the most cost-effective solution and could be implemented many years before an I-580 rail concept.

Your Commission also should re-consider the "t-BART" proposals that were much discussed in the early 2000s (sister project to "e-BART" in eastern Contra Costa County). There was a "t-BART" proposal that utilized the existing rail corridor in the Tri-Valley with a link to (East) Dublin/Pleasanton BART via Hacienda Business Park and the former Southern Pacific (Iron

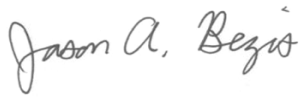
Horse Trail) corridor, with a possible extension to Bishop Ranch in San Ramon. The "t-BART" proposals could be less costly and more effective to solving Tri-Valley transportation challenges than Valley Link. Your Commission should not rush into giving $400 million to Valley Link.

Voters in the Tri-Valley communities of Livermore, Pleasanton and Dublin did not support the Measure BB sales tax increase in the November 2014. Attached please find a map generated by the County Registrar of Voters that illustrates the depth of disapproval of Measure BB in eastern and southern Alameda County. The Tri-Valley is a sea of red. Measure BB won in just one precinct in Livermore, one precinct in Pleasanton, and maybe one or two precincts in Dublin. Measure BB won just 49 percent of the vote in Livermore. One solution could be for voters in the Tri-Valley to vote on whether or not the $400 million should be reallocated.

This major $400 million revision should not be decided by "lame duck" ACTC commissioners. A new county supervisor will be elected in November in eastern Alameda County. All three Tri-Valley cities could have new mayors after November. Let this controversial issue be publicly debated during these campaigns.

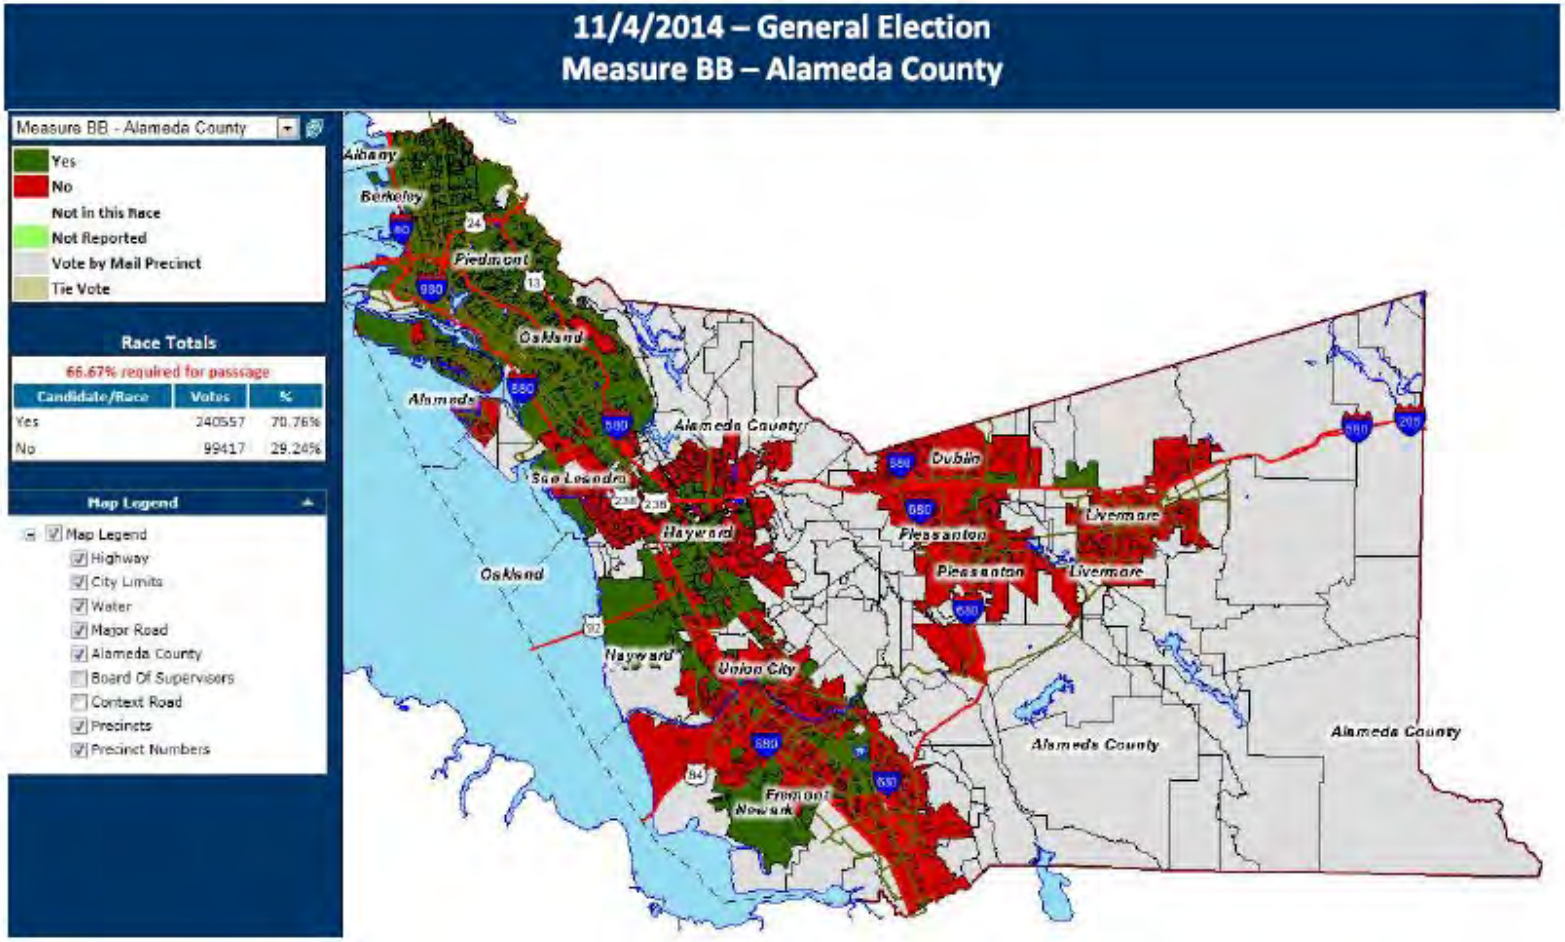
Livermore voters should feel especially betrayed. They have paid BART property taxes since circa 1962. They have paid the BART sales tax since circa 1970. They have paid a special Alameda County transportation sales tax since 1987. In 2014, after all those years of paying for BART service everywhere else, they were promised $400 million for BART to Livermore through Measure BB. Livermore got stuck with yet another ½ percent sales tax increase through Measure BB. Then ACTC manipulated the Measure BB local street and road funding formula to give Livermore much less than its "fair share" of funds based on population and road miles. Now Livermore would be stuck with higher taxes, no BART, diminished local street and road funding, and a forced subsidy of a costly and ineffective railroad through Altamont Pass.

Alameda County Transportation Commission and Measure BB beneficiaries jointly engaged in one of the most sordid political campaigns in county history to persuade voters – especially Tri-Valley voters – to support the Measure BB in 2014:



- The "Yes on BB" campaign literally was headquartered out of your general counsel's law office. ACTC more than doubled the size of your general counsel's contract after the "BB" passed.
- Another ACTC attorney was married to the Yes on BB campaign manager, who had earlier received a special ACTC consulting contract to develop Measure BB.
- Tess Lengyel, ACTC's current executive director, managed ACTC's supposedly neutral "public information" efforts concerning Measure BB. Ms. Lengyel was unavailable during the final weeks of the Measure BB campaign to fulfill her official duties. She failed to answer Public Records Act and other inquiries about Measure BB before the election. It was later revealed that Ms. Lengyel had been preoccupied with engaging in partisan, pro-BB propaganda. Video of a "Yes on BB" campaign fundraiser shows Ms. Lengyel openly participating in pro-BB election activities. The video shows Ms. Lengyel leading "Yes on BB" campaign donors in a pro-BB cheer. See: https://www.youtube.com/watch?v=GdjuU6DrURs

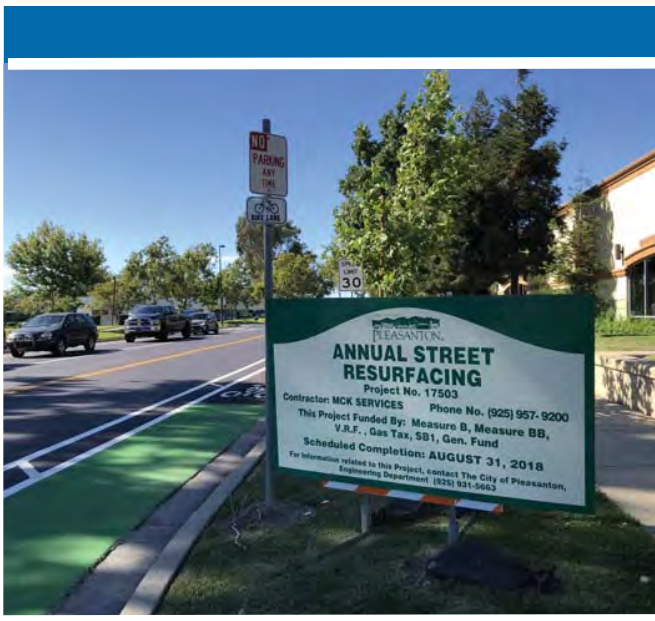
- With ACTC's legal advisors and ACTC's "Public Information" officer (Ms. Lengyel) working for the "Yes on BB" campaign, ACTC effectively (and illegally) became an arm of the "Yes on BB" campaign.
- ACTC used public funds to hire the Bay Area Council Economic Institute to conduct a supposedly "independent" economic analysis of Measure BB benefits. The Bay Area Council endorsed Measure BB.
- In August 2014, an official dedication ceremony for the ACTC Iron Horse Trail project in Pleasanton was inappropriately transformed into a "Yes on BB" campaign rally. Speeches expressly advocated for passage of Measure BB. A "Yes on BB" campaign sign was hung prominently behind the dais and at the ribbon cutting location.
- In October 2014, just a few days before the Measure BB election, ACTC's official dedication ceremony for the State Route 84 widening project in Livermore was inappropriately transformed into a "Yes on BB" campaign rally. As the ribbon was cut, the backdrop was a crowd of Building and Construction Trades union members waving "Yes on BB" campaign signs.
- Any semblance of a "firewall" between ACTC and the "Yes on BB" campaign was demolished. Just before election day, "Yes on BB" transferred thousands of dollars to arms of the Democratic Party to aid distribution of "slate cards" that not only boosted Measure BB, but also "picked winners" in mayoral and city council races around the county. This raises the concern the ACTC staff and contractors engaged in partisan political activities that altered the composition of ACTC itself.



Many of these same parties, including the Bay Area Council and Building and Construction Trades unions, are today advocating for amendment of Measure BB.

For these reasons, your Commission should not take this major action today to reallocate $400 million to a controversial, unproven project that voters have not approved.

Sincerely,



JASON A. BEZIS

SECTION 1: INTRODUCTION

The Alameda County Transportation Commission (Alameda CTC) is responsible for the planning, programming, and allocation of local, regional, State and federal funding for transportation improvements throughout Alameda County.

Alameda CTC maintains programming and allocation authority for federal, State, regional and local transportation funding programs, such as the local, voter-approved measures (Measure B, Measure BB, and Measure F Vehicle Registration Fee), Transportation Fund for Clean Air (TFCA), State Transportation Improvement Program (STIP), and federal One Bay Area Grant Program (OBAG). Since 2016, Alameda CTC consolidates the programming and allocation for the funds sources under Alameda CTC's purview ("Alameda CTC Administered Funds") into a single programming and allocation document known as the Alameda CTC Comprehensive Investment Plan (CIP).

The CIP programming and allocations recommendations, in any given CIP cycle, demonstrates Alameda CTC's investment commitment to projects and programs that maintain and enhance the countywide transportation system based the current Commission's priorities at the time of the programming and allocation action(s).

The CIP contains programming and allocation policies, guidelines and procedures that guide Alameda CTC's investment decisions, programming and allocation processes, and the subsequent funding administration.

On June 17, 2019, Alameda CTC approved the most recent version of the CIP, the 2020 CIP. As part of an effort to maintain the programming and allocation record, the CIP is updated annually to capture programming and allocations made since the last approval of the CIP, and to document programming and allocations adjustments including new programming requests, proposed adjustments by Project Sponsors, and technical adjustments as required by the CIP and funding administration policies.

The CIP contains a document structure of:

- Purpose, Background, strategic objectives, and an overview of programming principles for all programming through Alameda CTC.
- Appendices include
    - Technical summaries of adjustments to the prior programming and a summary with the final programming record.
    - Programming and Allocation Guidelines for future programming
    - Policies and Procedures for Alameda CTC's programming and funding administration

ACTC_AR0919

SECTION 2: PURPOSE OF COMPREHENSIVE INVESTMENT PLAN

The CIP is a programming and allocation document that establishes a financial investment strategy of funding under Alameda CTC's purview to deliver projects and programs ("projects") that allows the countywide transportation system to be more efficient and effective. The CIP identifies transportation funds from various sources expected to be available over a five-year programming horizon and targets them for transportation priorities in Alameda County.

The main objectives of the CIP are summarized as follows:

1. Translate long-range plans into short-range implementation
   The CIP transitions long-range plans into focused project/program delivery over a five-year programming window with a two-year allocation plan.

2. Serve as the Strategic Plan
   The CIP serves as Alameda CTC's Strategic Plan and satisfies public reporting requirements required by these funding programs.

   The revenue and expenditure assumptions for each fund source are confirmed periodically, and serve as the basis for the financial management of each funding program. Funding commitments to individual projects identified in the voter-approved transportation expenditure plans are confirmed, and current programming and allocations to these projects are documented in the CIP to satisfy annual strategic plan requirements mandated by the 1986 Measure B, 2000 Measure B and 2014 Measure BB Transportation Expenditure Plans.

3. Establish a consolidated programming and allocation plan
   The CIP is a decision-making programming document that is used to program fund sources under Alameda CTC's responsibility for capital improvements, program operations, and maintenance projects. Integrating all fund sources into one programming document permits Alameda CTC to coordinate the programming and allocation of multiple fund sources to ensure that the investments of funds from the individual sources are joined to maximize the effectiveness of the overall investments in the Alameda County transportation system.

   The CIP includes a two-year allocation plan for funds allocated by Alameda CTC. Projects included in the two-year allocation plan must be ready to begin the phase for which funds are allocated in the fiscal year indicated in the CIP. Allocated funds are made available for encumbrance in funding agreements with Project Sponsors

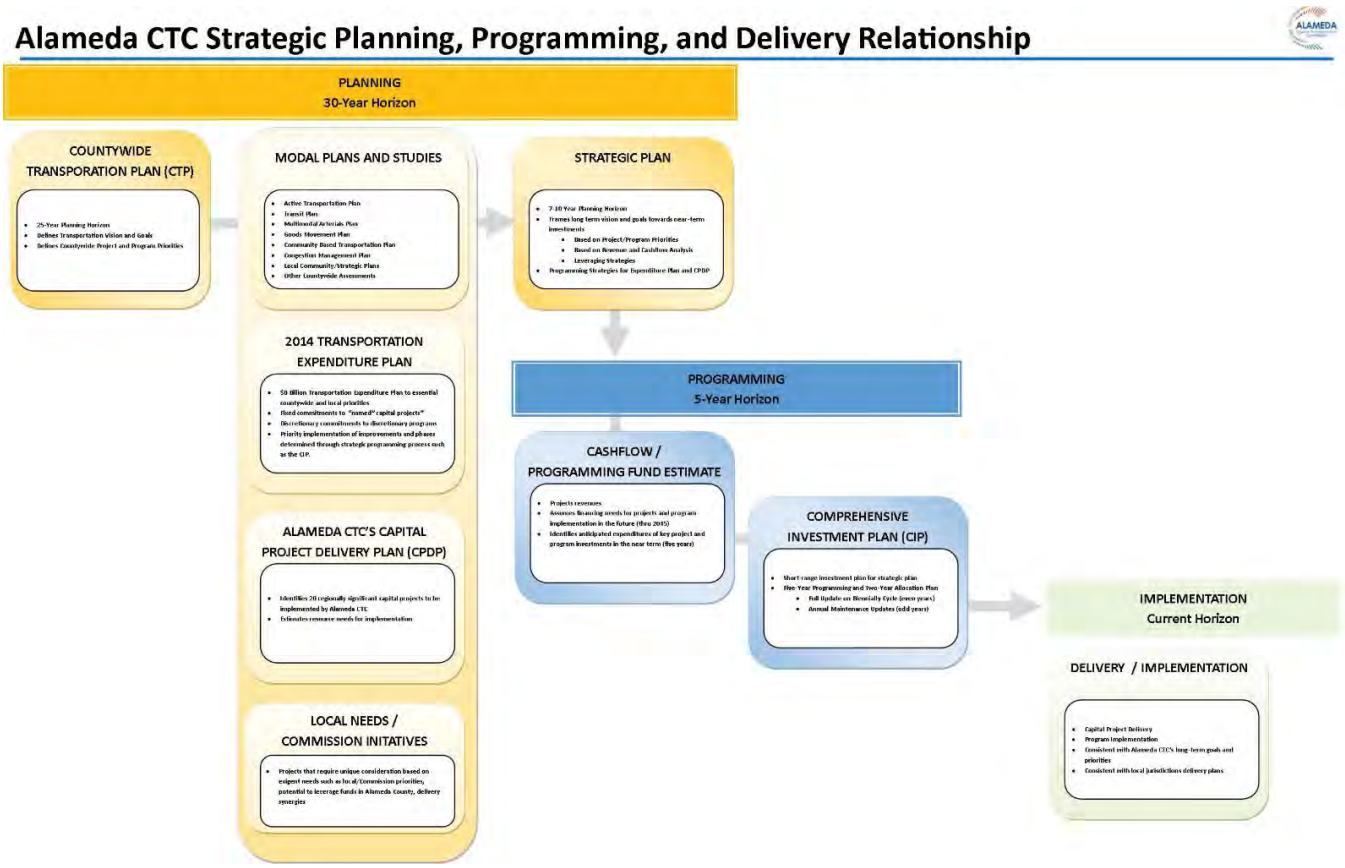
ACTC_AR0920

and implementing agencies, and for contracts and costs related to projects implemented directly by Alameda CTC.

The CIP will be updated on an annual and biennial basis, as needed, to reflect updates to Alameda CTC's programming and allocations. The annual updates are intended to include technical updates to confirm commitments and programming and allocation actions occurring outside the regular CIP process. A biennial update of the CIP will include a more robust update that shifts the five-year programming and allocation horizon, and allows for additional projects to be nominated and programmed into the CIP against the newly available programming capacity granted by the horizon shift.

The CIP guides investments to projects that provide demonstrate significant public benefit, advance project implementation, and support leveraging of local, regional, State and federal dollars for Alameda County's transportation priorities.

SECTION 3: RELATIONSHIP WITH PLANNING



The CIP's purpose is to strategically program available funds towards transportation investments that support long-range vision and goals established in Alameda CTC's Countywide Transportation Plan (CTP), multi-modal plans, and voter-approved transportation expenditure plans.

To be considered eligible to receive programming and allocation of Alameda CTC's Administered Funds, candidate projects are required to have a direct nexus to the Alameda CTC's CTP, Alameda CTC's multi-modal plans (Transit, Goods Movement, and Arterials), and other local planning efforts. This ensures candidate projects are consistent in coordination with local, countywide, and regional transportation priorities. The development of these planning documents also satisfies the public outreach requirements of the certain regional, State, and federal fund sources when they are required of by the funding programs.

For Alameda CTC implemented projects, the CIP incorporates the delivery recommendations included in the Measure BB Capital Project Delivery Plan (CPDP) as approved in March 2016. The CPDP addresses projects implemented directly by Alameda CTC and identifies projects posed for local, regional, State and Federal funding. The CIP incorporates the CPDP programming recommendations, policy and procedures, and project delivery assumptions in their entirety as it makes programming and allocation recommendations to projects contained in the CPDP.

Projects demonstrating a nexus to countywide planning efforts and transportation priorities formulate the eligible candidate pool. These projects may submit

programming and allocation applications through the Alameda CTC's Call for Projects and request for allocation processes. Project selection and prioritization for the CIP is based, in part, on priorities identified in adopted planning documents and studies, Strategic Plan Guiding Principles, but also considers other Commission approved project selection criteria.

SECTION 4: FUND SOURCES AND REVENUE ESTIMATES

Alameda CTC has programming and allocation authority for a number of transportation fund sources at the county level, and programming authority for the Alameda County shares of certain federal and State funding. Alameda CTC acts on behalf of Alameda County at the regional, State, and federal levels for matters pertaining to transportation funding from federal, State, and regional sources, including infusions of funding such as stimulus programs and proceeds from bond sales.

The CIP includes the fund sources listed below grouped according to the category federal, State, Regional and local funding.

Federal Program	
Fund Source	**Description**
Surface Transportation Program	Alameda CTC, as Alameda County's congestion management agency (CMA), is responsible for soliciting and prioritizing projects in Alameda County to receive a portion of the federal Surface Transportation Program (STP) funding. The STP is provided through funding from reauthorization of the federal funding for surface transportation by which Alameda CTC receives federal monies. The Metropolitan Transportation Commission (MTC) approves the programming of the STP funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.
Congestion Mitigation & Air Quality Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for a portion of the federal Congestion Mitigation & Air Quality Program (CMAQ) in the same fashion as the STP funding. The CMAQ is provided through funding from the reauthorization of federal funding for surface transportation by which Alameda CTC receives federal monies. The CMAQ funds are used on projects that will provide an air quality benefit. MTC approves the programming of the CMAQ funding for the nine-county Bay Area based on input by the CMA for each of the nine counties.

State and Regional Programs	
Fund Source	**Description**
State Transit Assistance	State Transit Assistance is the State's flexible transit funding program which may be used for capital or operating purposes. The statewide STA program is split equally between a Revenue-based program (Public Utilities Code 99314) and a Population-based program (Public Utilities Code 99313). Under MTC Resolution 4321, Congestion Management Agencies (CMAs) are charged with playing a coordinating role in the development of a STA Population-Based distribution program within their county. MTC Resolution 4321 replaced MTC Resolution 3837 with a new transit-focused, One Bay Area Grant (OBAG)-style STA County Block Grant for 70 percent of the STA Population-Based funds received by MTC, with the remaining 30 percent directed towards MTC's Regional STA Program. MTC Resolution 4321 includes several policy conditions for the STA County Block Grant Program.
Regional Measure 2 and Future Regional Measures	In 2004, voters passed Regional Measure 2 (RM2) raising the toll on the seven state-owned toll bridges in the San Francisco Bay Area by $1. This extra dollar funds various transportation projects within the region determined to reduce congestion or to make improvements to travel in the toll bridge corridors, as identified in Senate Bill 916 (Chapter 715, Statutes of 2004). Specifically, RM2 establishes the Regional Traffic Relief Plan and identifies specific transit operating assistance, and capital projects eligible to receive RM2 funding.
State Transportation Improvement Program	Alameda CTC, as the CMA, is responsible for soliciting and prioritizing projects in Alameda County for the Alameda County Share of the State Transportation Improvement Program (STIP). Programming for each "County Share," of the Regional Improvement Program (RIP) portion of the STIP, is recommended by the CMA for each county (i.e., by Alameda CTC for Alameda County). The STIP is updated by the California Transportation Commission (CTC) on a two-year cycle with new STIP cycles approved every even year. The CTC adopts a fund estimate for each STIP cycle during the year before the even-numbered year in which the STIP cycle is adopted. The fund estimate provides the amounts for each of the County Shares that comprise the RIP portion of the STIP cycle. The STIP programming horizon is a five-fiscal-year window with two new fiscal years added each STIP cycle. Most programming capacity added in a given STIP cycle is in the two new, outer fiscal years of the STIP programming horizon. The funds programmed in the STIP are subject to the STIP Timely Use of Funds Provisions prescribed in the STIP Guidelines typically adopted with each STIP cycle.
Transportation Fund for Clean Air Program	State law permits the Bay Area Air Quality Management District (BAAQMD) to collect a fee of $4 per vehicle per year to reduce air pollution from motor vehicles. The fee provides the revenues for the Transportation Fund for Clean Air (TFCA) which is distributed by the BAAQMD at the regional and county levels. Sixty percent of the funding is programmed by the BAAQMD at the regional level. The

ACTC_AR0923

State and Regional Programs	
	remaining 40 percent is allocated annually by the BAAQMD for programming and allocation by the Program Manager for each county. Alameda CTC is the TFCA Program Manager for Alameda County. The Alameda County Program Manager funds are split 70 percent to the cities and the County; and 30 percent to transit-related projects.

Local Programs	
Fund Source	**Description**
1986 Measure B	In November 1986, voters passed the 1986 Measure B, a 15-year measure expected to generate more than $990 million through a half-cent transportation sales tax to fund local streets and roads improvements, bus and paratransit services, and other transportation infrastructure projects. The 1986 Transportation Expenditure Plan guides the use of those funds. Sales tax collection authorized by the 1986 Measure B ended in 2002, but several projects from the 1986 Measure B Capital Program are still underway. The 1986 Measure B generated more than $353 million for transportation programs and $864 million for highway, roadway and transit improvements. The sales tax collection for the 1986 Measure B ended in 2002, and no additional revenues are assumed.
2000 Measure B	Alameda County voters approved the 2000 Measure B Transportation Expenditure Plan (2000 TEP) which authorized a 20-year half-cent sales tax to be used for the transportation purposes identified in the 2000 TEP. Alameda CTC administers the 2000 Measure B Program to deliver essential transportation improvements and services. The 2000 TEP guides the expenditures of the 2000 Measure B funds. The collection of 2000 Measure B funds began on April 1, 2002 and will continue through March 31, 2022. The 2000 Measure B funds are divided as prescribed in the 2000 TEP between funds allocated directly to the jurisdictions and transit operators, and the funding available for the programs and capital projects named in the Measure. The 2000 Measure B funds are distributed as follows: *Direct Local Distributions*: The direct local distribution (DLD) funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2000 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages of net revenues used for the distributions are prescribed in the 2000 TEP as follows: • Mass Transit Operations (21.22 percent) • Local Streets Maintenance and Safety (22.34 percent) • Bicycle and Pedestrian Safety (3.75 percent) • Special Transportation for Seniors and People with Disabilities (9.02 percent) *Discretionary Programs*: The 2000 TEP includes a number of commitments to the following discretionary programs that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2000 TEP: • Express Bus Service Countywide (0.7 percent) • Bicycle and Pedestrian Safety (1.25 percent) • Special Transportation for Seniors and People with Disabilities - Coordination and Gaps in Service Grants (1.43 percent) • Transit Center Development Funds (0.19 percent) *Capital Projects*: The 2000 TEP includes commitments to individual capital projects. Alameda CTC distributes sales tax funds for capital projects on a reimbursement basis in accordance with funding

Local Programs	
	agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
2010 Vehicle Registration Fee	Alameda County voters approved the Alameda County Vehicle Registration Fee (VRF) Program in 2010. The funds made available by the VRF are distributed as follows: *Direct Local Distributions*: The DLD portion of the VRF funding is distributed as follows: • Local Road Improvement and Repair Program (60 percent) • Local Transportation Technology (10 percent) o On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a DLD program to the Alameda CTC.. *Discretionary Programs*: A portion of the VRF funding is distributed for the following grant sub-programs on a reimbursement basis: • Transit for Congestion Relief (25 percent) • Pedestrian and Bicyclist Access and Safety Program (5 percent)
2014 Measure BB	Alameda County voters approved the 2014 Transportation Expenditure Plan (2014 TEP) as part of Measure BB in November 2014. Measure BB authorized the augmentation and continuation of the voter-approved 2000 Measure B sales tax with a second half-cent sales tax through the end of the 2000 Measure B collection period, i.e. March 31, 2022, followed by a one-cent sales tax authorizes from April 1, 2022 through March 31, 2045. The 2014 Measure BB funds are allocated as follows: *Direct Local Distributions*: The 2014 Measure BB DLD funds are distributed directly to local jurisdictions and transit operators as they are received by Alameda CTC in accordance with the provisions set forth in the 2014 TEP and the Master Program Funding Agreements between Alameda CTC and the local jurisdictions. The percentages used for the distributions are prescribed in the 2014 TEP as follows: • Transit Operations, Maintenance, and Safety Program (21.55 percent) • Local Streets Maintenance and Safety (20 percent) • Bicycle and Pedestrian Infrastructure and Safety (3 percent) • Affordable Transit for Seniors and People with Disabilities (9 percent) *Discretionary Programs*: The 2014 TEP includes a number of commitments to the following discretionary programs available that are available for program management and implementation by Alameda CTC, a Countywide Bicycle and Pedestrian Coordinator position, and discretionary projects based on the percentages or amounts specified in the 2014 TEP: • Affordable Student Transit Pass Program ($15 million) • Affordable Transit for Seniors and People with Disabilities/Coordination and Service Grants (1 percent) • Bicycle and Pedestrian Program (2 percent) • Community Investments That Improve Transit Connections to Jobs and Schools (4 percent) • Congestion Relief, Local Bridge Seismic Safety ($639 million) • Freight and Economic Development Program (1 percent) • Technology, Innovation and Development Program (1 percent) • Transit Innovation Program (2.24 percent) *Capital Projects*: The 2014 TEP includes commitments to individual capital projects and to groups, or categories, of capital projects as described in the 2014 TEP. Alameda CTC distributes sales tax funds for

ACTC_AR0925

Local Programs	
	capital projects on a reimbursement basis in accordance with funding agreements between Alameda CTC and recipient agency, or for eligible project costs incurred directly by Alameda CTC.
Local Exchange Program/CMA Transportation Improvement Program	Alameda CTC administers a local fund exchange program to exchange State and federal funds for local monies, giving Project Sponsors the flexibility to streamline and expedite project delivery. The local funds also allow agencies to begin projects earlier than would otherwise be possible due to the uncertain timing of the availability of State and federal funds in any given funding cycle. Based on State and federal economic conditions, the availability of State and federal funds is often delayed to beyond the year in which the funds were originally programmed. Such delays are unilateral from the State and/or federal levels and put a strain on timely implementation of projects. The local fund exchange program allows local monies exchanged for the State and federal funds to be available earlier, and on a more dependable timeline, than the State and federal funds in many cases. Exchanges are approved on a case-by-case basis, as opportunities present themselves.

SECTION 5: PROGRAMMING REQUIREMENTS

Projects must satisfy the following programming requirements to be considered for programming and allocation by Alameda CTC.

1. Projects must be included in, and be consistent with the most current adopted Regional Transportation Plan and Alameda CTC's Countywide Transportation Plan.
2. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.
3. Projects must be publicly accessible and provide direct benefits to public transportation infrastructure and operations.
4. Projects must meet the goals and objectives of the funding sources and programs that are ultimately recommended by Alameda CTC.
5. Projects funded with 2000 Measure B, 2014 Measure BB, and VRF must be consistent with requirements and priorities of their respective expenditure plans.

Funds are programmed from a specific fund source(s), in a given fiscal year to a specific phase(s) of a project. The expected outcome of the total project, or of implementing any phase of the project, with funds programmed in the CIP, shall be consistent with the goals and objectives of the CTP, and any applicable fund source specific requirements.

Programming and allocations requests must at minimum contain the following:

- Project scope, cost, schedule,
- Description of benefits to determine the expected outcome and whether or not the outcome is consistent with the CTP and fund source goals and objectives.
- Funding breakdown by phase. Cost estimates for all phases are required for projects requesting programming or allocations for phases beyond environmental approval.

ACTC_AR0926

SECTION 6: PROGRAMMING PRINCIPLES AND GUIDELINES

Alameda CTC's programming and allocation decisions shall be based on a project's ability to achieve the following five fundamental policy principles that serve as a guide for the CIP development and project selection.

1. Implementing Alameda County's adopted vision
   All funding decisions will support implementation of Alameda CTC's long-range transportation vision for Alameda County as adopted in its long-range Countywide Transportation Plan.

2. Balanced strategic program across project delivery phase
   Alameda CTC strategically invests financial resources to optimize transportation planning, project delivery and performance analysis. The CIP will identify investments in all stages of project development. Striking a balance between project development and capital phases is desired to support a combination of project development phases that will utilize the available programming capacity and to position the county to leverage federal, State and regional funding sources as they become available. This will include considering the delivery status of projects to optimize competitiveness for future grant opportunities.

   Alameda CTC uses the following project or program delivery phases:
   - Planning/Scoping/Conceptual Engineering
   - Preliminary Engineering/Environmental Studies
   - PS&E/Final Design
   - Right-of-Way Acquisition and Engineering
   - Construction Capital and Support
   - Equipment/Rolling Stock Acquisition
   - Operations (includes Safe Routes to School, paratransit programs, transit-related operations)
   - Post-Construction Activities
   - Project Closeout

   The CIP will also include countywide program/operational investments including, but not limited to, the Safe Routes to Schools Program, senior travel training/mobility management, and system performance-monitoring efforts.

4. Maximizing transportation investments
   Alameda CTC will work with local agencies to program funds to projects that are implementation ready, have a credible funding plan, meet the requirements of the fund source and provide transportation benefits. The CIP will examine opportunities

ACTC_AR0927

to leverage the local fund sources to the maximum extent possible. In addition, Alameda CTC will use the CIP to identify co-benefits between projects, when practical and feasible.

5. Investments in all modes and areas within Alameda County
   The CIP strives to identify investments in all modes of transportation, project phases, and geographic areas in Alameda County. The CIP is constrained to the revenue projected to be available for the five-year programming. Alameda CTC will use the CIP to monitor geographic equity and modal equity investments over time.

6. Delivering solutions while ensuring accountability
   Alameda CTC will require timely and cost-effective project delivery, and will monitor implementation to ensure Project Sponsors are accountable for their projects. The CIP will promote the timely delivery of projects, leveraging of local funds and minimizing cost increases due to delays. Projects funded through the CIP will be subject to the requirements of each fund source used to implement the project. Timely use of funds provisions will apply to all funds programmed and/or allocated in the CIP.

Programming Principles and Guidelines

Programming and allocations decisions shall be based on a CIP Programming Principles and Guidelines included in the CIP's appendices. This describes the complete framework for programming and allocation decisions made by Alameda CTC, including defining eligible projects, eligible Project Sponsors, eligible costs, funds sources, funding guidelines and requirements.

Key project merits will be considered (in no particular order) such as:

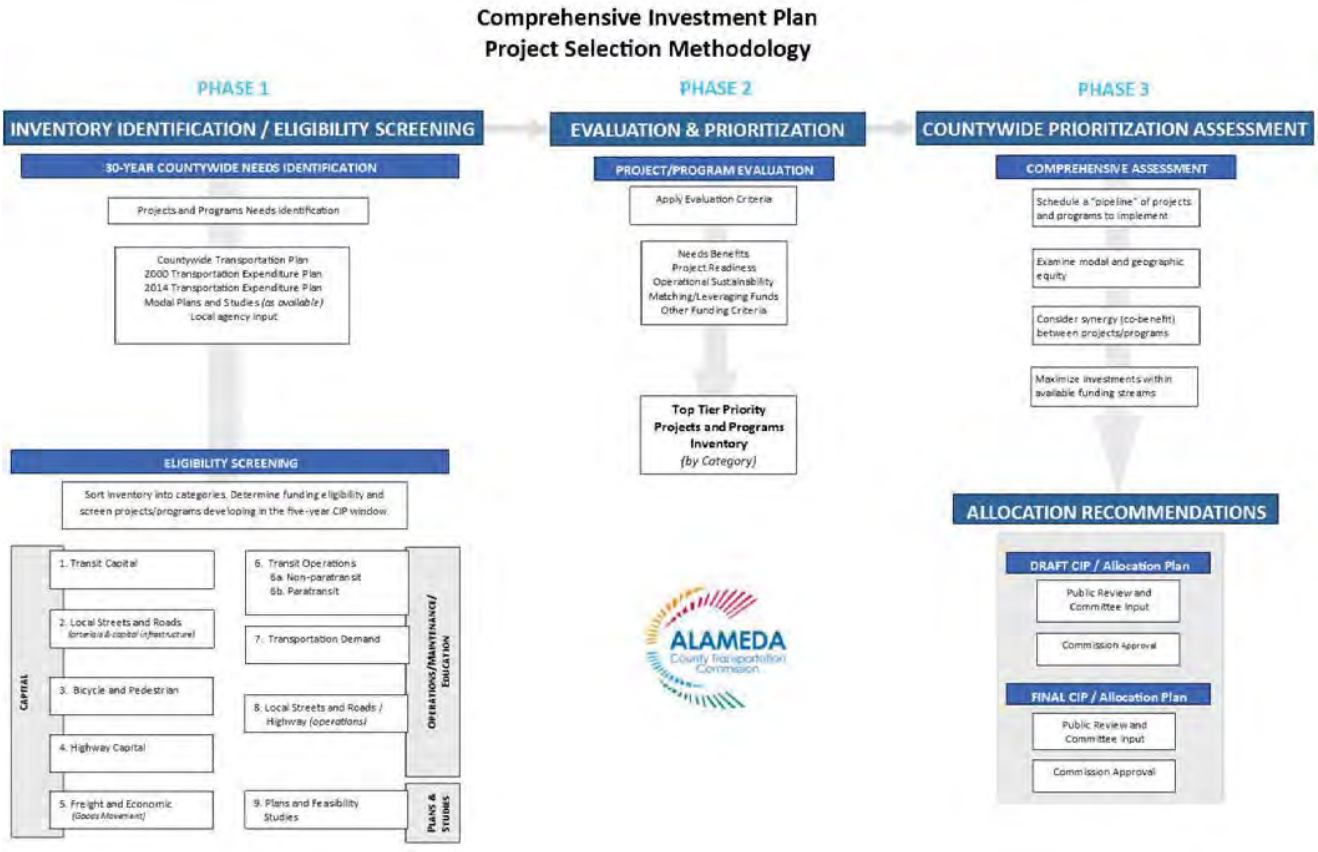
- Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.

- State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.

- Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.

- Safety and Connectivity: Project's ability to foster a safe, connected, accessible transportation system for multimodal movement of goods and people.

ACTC_AR0928



- Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to inform the uniform consolidation of historically separate programming practices, where applicable, to more effectively coordinate funding towards beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

Programming Guidelines are described in detail by program in the CIP's appendices.

SECTION 7: PROJECT SELECTION METHODOLOGY

The project selection methodology for the CIP is based on three step/phased approach as described below and illustrated in CIP Project Selection Methodology Diagram shown here.

ACTC_AR0929

Phase 1: Project Identification and Screening

Alameda CTC will identify project inventories from the CTP, countywide modal plans, short- and long-range transportation plans and other local planning documents. The inventory will be screened for eligible projects that are ready to be implemented within the five-year CIP window based on schedule, a credible funding plan and local prioritization. Alameda CTC may also initiate a Call for Project to gather updated project information to inform project selection decisions for CIP programming and allocations.

Alameda CTC will separate projects into modal categories based on the type of project (bicycle/pedestrian, roadway, etc. Projects will be assessed for eligible funding sources to ensure they meet funding requirements. The CIP Programming Principles and Guidelines located in the CIP's appendices provides a summary of the categories and sample project types included in the CIP.

The goal of Alameda CTC's funding recommendations will be to fund a project phase by phase, as applicable, so that the project can progress from development to construction and project delivery. Projects outside the five-year period will be considered for future implementation in subsequent funding cycles and CIP updates.

Phase 2: Project Evaluation

Based on the list developed in Phase 1, Alameda CTC will prioritize projects relative to each other in defined category types. Projects will be evaluated against the same category of projects (i.e., transit projects will be evaluated against transit projects, road projects against road projects, etc.). This approach will provide a balanced prioritization process that compares similar project types to one another. Projects specifically named in expenditure plans will be separated from those seeking discretionary funding and will be prioritized independent of the discretionary projects. Based on their scoring assessment, projects will be evaluated and arranged into three tiers within their respective categories (high, medium and low priority). This sorted list will then move into the third phase of evaluation.

Alameda CTC will evaluate eligible projects using the programming criteria adopted as part of the CIP, and other Commission actions, as the basis for programming and allocation decisions.

Phase 3: Countywide Prioritization Assessment

The final step in the project selection process will examine the top tiers of each category from the Phase 2 scoring, to strategically program available funding, to achieve countywide goals and priorities. Alameda CTC will perform a systematic examination across all of the categories to identify financial strategies, geographic and modal equity, and co-benefits between proposed improvements as part of the CIP update process

ACTC_AR0930

every two years, when the five-year programming window is shifted two years into the future.

Alameda CTC will examine opportunities to promote the timely delivery of projects, and leveraging of local funds. Programming recommendations will be constrained by the total available programming within the five-year CIP window, and by fund source eligibilities of projects.

Projects outside Alameda CTC's programming availability in the five-year CIP will be considered for inclusion in future funding cycles and CIP updates.

Project Selection Criteria

The CIP project selection criteria as approved and incorporated in the CIP updates, includes traditional programming criteria used previously by the Alameda CTC. The CIP uses four categories of criteria to score each project:

1. Readiness Delivery Criteria
   The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the agency has the ability to coordinate among internal and external agencies, as applicable.

2. Needs and Benefits Criteria
   The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, supporting well-maintained transportation facilities/equipment (as applicable); promotes innovation and a multimodal system; improves safety; supports a clean environment; and strengthens the economy.

3. Matching and Leveraging Funds Criteria
   The project has secured funding from other sources or demonstrates how it will leverage other funds for use on the project.

4. Other Funding Features
   As applicable, other requirements mandated by other funding sources/programs.

Alameda CTC will, to the extent possible, implement the above project selection process using the CIP programming principles identified in Section 6: Programming Principles and Guidelines for programming and allocation decisions.

ACTC_AR0931

SECTION 8: BASIS OF PROJECT COST SHARING

The investments of funding programmed in the CIP considers the overall project cost/funding picture and expected outcomes. The baseline for cost sharing is typically the proportional share of Alameda CTC Administer Funds against the total project costs at completion.

Project Sponsors are required to request Alameda CTC Administered Funds by phase and to provide matching funds to such request by phase. This ensures during any given CIP programming cycle the Commission's requirement for a minimum level of project cost sharing is achieved.

In the event, Alameda CTC funds are required in an earlier phase to increase the competitiveness of a project to leverage other funds sources, Alameda CTC, may at its discretion, make a programming recommendation to a phase without a match, that considers the project cost sharing overall.

A risk sharing arrangement shall be included in any funding agreement which obligates funding allocated by Alameda CTC in advance of its proportional share (based on the total funding) for project phases beyond environmental approval, especially for projects that do not have funding identified for all phases of implementation.

The following principles shall be the basis of cost sharing considered for programming and allocations approved by Alameda CTC:

- Complete Project Information
  Request for allocations through the CIP process and subsequent funding agreement packages shall include a summary of estimated total costs segregated by phase; a corresponding milestone schedule showing begin and end dates for each phase (and any significant delivery milestones within each phase); and the anticipated funding (all sources) for each phase segregated by source.

- Funding Agreement Requirements
  Project cost sharing shall be established in the funding agreements based on the information provided with the request for allocation and funding agreement packages. The cost sharing proportions documented in the funding agreement shall be used for risk sharing associated with the implementation of the phase(s) covered by the agreement.

ACTC_AR0932

- Local Cooperation Policy and Eligibility of Locally Incurred Costs
  Project Sponsors, and local jurisdictions whom are directly benefitting from the expected outcomes a project implemented in their locality by Alameda CTC, the Project Sponsor, or other implementing agencies, are required to be active funding partners to further the delivery of such improvement project.

  Locally incurred costs such as staff costs associated with providing technical assistance, support, or coordination to further the delivery of a project by an implementing agency can be included in the total cost and funding amounts for the purposes of cost and risk sharing at the total project level. However, the costs shall not be included in the costs eligible for reimbursement by the funds allocated by Alameda CTC stipulated in the funding agreement, unless they are specifically identified as eligible in the funding agreement.

  Jurisdictions whom are Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) Recipients are encouraged to use local funds to support matching costs. DLD recipients shall not be eligible for reimbursement for local staff costs from Alameda CTC Administered Funds allocated to the Project. Project Sponsor staff costs can be included in the total cost and other funding amounts for the purpose of meeting the cost and risk sharing provisions of Agreement, but staff costs will not be considered reimbursable costs unless the Project Sponsor is performing direct activities related to the phase of the project.

  Refer to the Local Cooperation Policy in the CIP's Policies and Procedures appendix.

SECTION 9: FUND MANAGEMENT AND CIP ADMINISTRATION

Alameda CTC is responsible for the management and administration of the various funding programs within its programming and allocation purview. The CIP provides a summary of the programmed and allocated amounts for each fund source administered by Alameda CTC, and in some cases the fund sources administered by other agencies.

The fund sources administered by Alameda CTC must be managed in accordance with applicable laws and requirements related to the individual fund sources, and with government accounting standards. The programming and allocations included in the CIP provide the basis for the financial and accounting activities performed by Alameda CTC's annual budget, programming fund estimate, and cash management analysis. In general, the financial and accounting activities performed by Alameda CTC occur in the background of the day-to-day project implementation activities, and do not typically hinder a projects ability to be delivered. The specifics related restrictions of use, or

ACTC_AR0933

timing of reimbursements for allocated fund shall be addressed in the applicable funding agreement(s).

Alameda CTC Administered funds under Alameda CTC's direct administration purview shall be encumbered into a funding agreement with the Project Sponsor. The funding agreement shall be consistent with the original request for allocation/project application that was used to inform Alameda CTC's programming and allocation decision. Alameda CTC provides for a formal and administrative amendment process to amend an executed funding agreement to adjust the scope, funding, milestones, schedules based on a Project Sponsor's request.

CIP Administration

The CIP is updated periodically, as needed, to assess programming and allocations adjustments that reflect project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments. The Commission may amend the CIP at any time if an action must be taken before the next CIP update period. The Commission must approve all project additions or deletions. The Commission authorizes the executive director or his or her designee to administratively approve the acceleration of project/program schedules, as long as they can be accomplished within the budgeted amount. This is to maintain project scheduling and coordination with any other activities that may impact or delay project implementation or development. Significant changes in the scope of work, implementation schedule or costs will be presented to the Commission for consideration.

The CIP is updated in consultation with other planning and programming efforts such as the Alameda County Congestion Management Program, the Countywide Transportation Plan and Alameda CTC's annual budget process.

Annual CIP Update

Annual updates, as needed, include modifications to financial projections and confirmation of programming and allocation commitments in association with Alameda CTC's annual budgetary processes. Additionally, annual updates will examine general strategic planning of its projects and programs, and the status of various commitments, and technical adjustments required periodically.

Biennial CIP Update

Every two years, as needed, Alameda CTC will comprehensively update the CIP to review existing CIP projects and to open a nomination window for new projects. The biennially update occurs on odd number fiscal years, and represents a shift of the programming window to add the next two fiscal years.

ACTC_AR0934

Biennial CIP updates will include review of existing projects and programs to determine whether to recommend continuing or postponing funding and delaying, removing or reincorporating projects/programs. Alameda CTC may recommend additional funding to continue existing approved projects. As part of this update, Alameda CTC will open a nomination window to consider new projects for additional capacity granted with the two-year shift of the programming horizon. Projects submitted during the nomination window that meet the Commission-adopted screening criteria will be evaluated and prioritized for funding consideration.

Periodically, Alameda CTC will reassess the CIP development process, prioritization methodology and allocation process for consistency with any updated policies and goals. Alameda CTC will update and amend the CIP accordingly to account for project changes resulting from schedule modifications, changes in priorities, new policies, regulations or laws, and funding adjustments.

CIP Amendments / Adjustments

CIP Amendments / Adjustments are considered on a case-by-case basis, and may occur in the following situations:

- Alameda CTC made a programming recommendation that received final programming actions by other agencies for federal, State or regional funds.
- Additional funding is needed to complete a CIP project.
- Commission approved programming made off-cycle of a CIP update.
- Matching funds are needed to immediately leverage non-Alameda CTC Administered funds to Alameda County.
- Project Sponsors requested a fund exchange among existing approved projects to prevent delays or cost increases to the project.
- Project Sponsors required updates to reflect additional revenue from new or existing fund sources, or updated confirmed amounts.
- Project Sponsors are unable to meet the environmental and full funding requirements as defined in the sales tax expenditure plans.
- Project Sponsors reported changes such as budget increases, schedule delays or other factors that may impede project delivery.

Adjustments to the current CIP programming and allocation record will be reflected in the next regularly scheduled CIP update.

ACTC_AR0935

SECTION 10: ALLOCATION PROCESS AND REQUIREMENTS

Alameda CTC maintains programming and allocation authority for a variety of transportation fund sources. Programming and allocations shall be approved by Alameda CTC in accordance with the requirements of the individual fund source and with the standard programming and allocation procedures and requirements further described in the CIP's Policies and Procedures appendix.

Generally, Alameda CTC allocates the funding for which it has allocation authority based on Requests for Allocations Packages in the form of separate allocation requests for named projects in the Transportation Expenditure plans or through funding applications submitted to Alameda CTC for funding consideration by Project Sponsors during a CIP call-for projects.

The Request for Allocation package shall include an overall project implementation plan which identifies anticipated costs by phase and potential funding sources for each phase throughout completion of the project. Requests for allocations for multiple phases without specifying amounts for the individual phases shall be considered on a case-by-case basis.

Generally, Requests for Allocation Packages should be submitted to Alameda CTC at least 45 days prior to the regularly scheduled Alameda CTC Commission meeting at which the request will be considered for approval. In some cases, the project activities to be funded by an allocation being requested will be performed by an implementing agency that is different than the sponsor. In such cases, the request for allocation package should be prepared by the implementing agency and submitted to Alameda CTC by the Project Sponsor.

Alameda CTC has allocation authority for funds from the following sources:

- 1986 Measure B (1986 MB);
- 2000 Measure B (2000 MB);
- 2010 Vehicle Registration Fee (VRF);
- 2014 Measure BB (2014 MBB);
- Transportation Fund for Clean Air (TFCA) Program Manager; and
- CMA Transportation Improvement Program (CMATIP).

Alameda CTC allocates to the following phases:

- Planning/Scoping/Conceptual Engineering
- Preliminary Engineering/Environmental Studies
- PS&E/Final Design

ACTC_AR0936

- Right-of-Way Acquisition and Engineering
- Construction Capital and Support
- Equipment/Rolling Stock Acquisition
- Operations and/or Maintenance

SECTION 11: APPROVAL OF ADVANCE/PAYBACK AND EXCHANGE ARRANGEMENTS

Requests for advances or exchanges of funds programmed or allocated by Alameda CTC shall be considered on a case-by-case basis and shall only be approved if Alameda CTC resources permit such advance/exchange, and if a significant benefit to the implementation of the project can be identified.
Requests for such advances or exchanges shall be submitted in writing by the Project Sponsor, and shall include, at minimum:

1. Project Status and Current Implementation Plan
2. Project delivery strategy with the funding or exchange proposal that describes the costs and fund sources to be involved in the proposed advance or exchange.
3. Timing availability of the funds for which the advance or exchange is requested
4. Repayment schedule of Alameda CTC funds that are proposed to be advance
5. Intended use of the funds freed up by the advance or exchanged

Any advance or exchange arrangement involving funds programmed or allocated by Alameda CTC must be approved prior to allocation, and shall be addressed in the applicable funding agreement.

SECTION 12: SELECTION OF PROJECTS AND PROGRAMS FOR FINANCING

Management of the accounts established for the voter-approved funding programs requires forecasts and projections of revenues and expenditures for the revenue sources and expenditure commitments included in each program. The CIP includes revenue projections for each of the funding programs administered by Alameda CTC. Alameda CTC confirms the priorities for the expenditure commitments through the programming and allocations included in the CIP.

While the cumulative committed expenditures remain less than the cumulative revenues, Alameda CTC is able to fund the investments approved in the CIP on a pay-as-you-go basis. When enough projects are approved that create a scenario where the cumulative committed expenditures exceed the cumulative revenues for any of the funding programs, program level financing will be required to make the funds committed available when needed for project implementation.

ACTC_AR0937

The type of financing will be determined by the timing of the need for funding, the current financial markets, and the type of expenditure to be financed. Certain types of financing have restrictions on the timing and the type of expenditures that can be financed. The decision to finance projects and programs requires lead time to identify the most beneficial type of financing, and to perform the activities required for the financing to be approved.

The projects to be financed will be identified when the need for program level financing is identified at the fund account level. Individual project-level finance is only made on a case-by-case basis, where program level financing is not a viable option due to extraordinary circumstances. The basis of the program wide financial models is the information gathered for the programming and allocations approved in the CIP updated to reflect current project or program status.

SECTION 13: PROJECT DELIVERY RESPONSIBILITIES

The implementation of projects in the CIP begins once Alameda CTC approves the funding for the project. The Project Sponsor is the agency that takes the overall responsibility for project delivery, advocacy and reporting for the project regardless if it not the direct implementing agency for the project, unless otherwise agreed through written agreements between the Project Sponsor and the implementing agency.

Alameda CTC acts as project cosponsor, and as implementing agency, for phases of a number of projects and programs. As implementing agency, Alameda CTC incurs eligible project costs through contracts with vendors, staff charges and other direct costs. Implementing agencies, other than Alameda CTC, receive reimbursements from Alameda CTC via funding agreements which encumber the funds allocated by Alameda CTC. Once the funding agreements are in place, implementing agencies may encumber the funds for contracts and other direct costs to deliver the project as provided for in the funding agreement. Alameda CTC monitors the performance of the projects during implementation and after implementation during operations based on information provided by the Project Sponsor.

Throughout the implementation process, Alameda CTC relies on Project Sponsors and implementing agencies to communicate regularly about project activities and status as required by the funding agreements. The regular updates from Project Sponsors support Alameda CTC's management of the overall set of projects. The information collected from Project Sponsors provides the basis of the project status information made available to the public by Alameda CTC.

ACTC_AR0938

Timely and accurate reporting is essential for early identification of potential project or program issues, and of circumstances that may adversely affect project delivery. Alameda CTC needs as much lead time as possible for approving changes to project or program funding in reaction to project risks. Project Sponsors and implementing agencies must communicate risks to Alameda CTC as soon as they are identified by the Project Sponsor or implementing agency.

If a project requires additional funding, or a change to the funding as approved in the CIP, Alameda CTC will review the funding request and consider providing more funding, or approving changes to existing funding, in future CIP update cycles. If an amendment is required prior to the next CIP update cycle to maintain the current implementation schedule, Alameda CTC may approve additional funding, or changes to previously approved funding, at any regularly scheduled Commission meeting.

The CIP document will not be updated and re-published after each off-cycle funding adjustment. Off cycle adjustments to the funding approved in the CIP will be summarized as current programming in the next CIP update cycle.

SECTION 14: PROJECT FUNDING AGREEMENTS

Allocated funds are considered available for encumbrance in funding agreements between the funding agency and the recipient agency.

A funding agreement is required between agencies to allow for reimbursements of eligible project expenditures. The funding agreements specify the financial terms of the agreement, scope of work, costs, schedules and deliverables associated with the implementation of the project. Funding agreements are based on the project information, scope of work, costs, schedules and proposed outcomes at the time of the request for allocation.

Generally, Alameda CTC initiates funding agreement development between recipient agencies immediately after the Commission approves a funding allocation. However, it is the responsibility of the recipient agency to submit a request for funding agreement to the Alameda CTC to receive funds allocated by Alameda CTC. Requests for funding agreement must in accordance with the Timely Use of Fund Policy cited in the CIP Policies and Procedures appendix.

Recipient agencies are responsible for fulfilling all requirements related to executing the funding agreements.

ACTC_AR0939

SECTION 15: PROJECTS REIMBURSEMENT PROCEDURES

Alameda CTC approves reimbursements of eligible project costs based on Request for Reimbursement (RFR) packages submitted by implementing agencies and Project Sponsors which incur reimbursable costs against Alameda CTC Administered Funds encumbered in a funding agreement.

RFR requirements are included in the applicable funding agreements, and Project Sponsor's request generally include

- Itemization of eligible costs incurred to confirm the costs are consistent with the applicable funding agreement
- Itemization of Alameda CTC costs and other sources to calculate any proportional shares and reimbursement ratios set in the funding agreement
- Supporting documentation (timesheets, vendor invoices, proof of payment) for all costs cited within an RFR regardless if costs are intended to be Alameda CTC or non-Alameda CTC funded costs.

Alameda CTC approves RFRs upon sufficient supporting documentation of costs incurred, and based on the availability of funds.

Eligible costs for reimbursements are further described in the Eligible Cost for Reimbursement Policy cited in the CIP's Policies and Procedures appendix.

SECTION 16: ALAMEDA CTC LOCAL BUSINESS CONTRACT EQUITY PROGRAM REQUIREMENTS

All locally funded contracts approved by Project Sponsor, funded wholly or in part with Measure B, Measure BB, and/or Vehicle Registration Fee funds, except for contracts that also include State and/or federal funds or contracts funding non-capital projects (e.g., transit operations), are required to comply with Alameda CTC's Local Business Contract Equity (LBCE) Program.

This includes the obligation to report Local Business Enterprise (LBE), Small Local Business Enterprise, and Very Small Local Business Enterprise participation with all reimbursement requests submitted for contracts costs partially or wholly funded by Alameda CTC, whether or not the contract requires LBE participation.

Project Sponsors receiving Measure B, Measure B, and/or Vehicle Registration Fee funds through the programming and allocation process must follow these program requirements and may be requested to document procurement processes funds to

ACTC_AR0940

verify program compliance. Non-compliance Project Sponsors may have funds subject to rescission, or marked as ineligible for reimbursement, at the discretion of the Alameda CTC.

Alameda CTC's LBCE Program and is available online on the Alameda CTC website.

SECTION 17: PROJECT CLOSEOUT

Project closeout shall be in accordance with the applicable project funding agreement(s).

At a minimum, the Project Sponsor shall provide Alameda CTC with written confirmation that the project is complete with a summary of the final costs, funding and schedule information segregated by phase. If a project will continue beyond the time during the time which Alameda CTC programmed or allocated funds are being expended, the Project Sponsor shall notify Alameda CTC in writing when the expenditure of the funding is complete, and will continue to provide project status updates as required/requested by Alameda CTC until the project is fully implemented and in public service.

Periodic information updates during operations of projects funded by Alameda CTC may be required for monitoring purposes as specified in the applicable funding agreement, and as requested by Alameda CTC.

SECTION 18: PERFORMANCE MONITORING AND REPORTING

Countywide Performance Monitoring and Implementation

Projects that received funding through the CIP have been identified through the programming and allocation process to further the Alameda CTC's Countywide Transportation Plan, modal plans, and local planning documents vision to improve the transportation network. These plans identify project and transportation system investments based on expected outcomes modeled over a up to 30-year planning horizon. As projects are implemented through the CIP programming, Project Sponsors are required to report back to Alameda CTC on the outcomes of the implemented projects, and provide feedback on the planning and investment decisions.

Project Reporting

The CIP requires that each project include performance monitoring goals/metrics to gather project specific performance indicators on individual projects. Funding agreement will include all monitoring and reporting requirements required to capture the benefits and expected outcomes of Alameda CTC's investments.

The reporting requirements include the following:

Progress Reports
The executed funding agreements require regular progress reporting, based on the reporting schedule set forth on the agreement. The progress reports include a status update made toward implementation of the project, including deliverables, commitment status of supplemental funds identified in the funding agreement and adherence to the adopted project schedule.

Corrective Plans
Once a funding agreement is executed, Project Sponsors are required to report changes to the project scope, schedule, cost and funding as soon as the required changes are identified by the Project Sponsor for the Commission's consideration. Reports of changes such as budget increases, schedule delays and other factors that may represent an impediment to successful project delivery in accordance with the agreed-on scope, schedule, cost and funding must be accompanied by a Corrective Plan detailing the Project Sponsor's strategy to deliver the project or program within the proposed new parameters. Alameda CTC must accept the plan before future programming, allocations and reimbursements will be approved.

Final Report
The Project Sponsor must submit a final project delivery report of the completed project contained in a funding agreement. The final report must describe the completed scope of work, the final budget including spend down of all identified fund sources in the funding plan and any performance outcomes included in the funding agreement.

<u>Monitoring Project Sponsor Delivery and Accountability</u>
Alameda CTC will also monitor the Project Sponsor's ability to deliver a project as proposed. Project Sponsors are required to monitor and inform Alameda CTC if there are significant changes in project or program development, implementation schedule or budget. Project Sponsor's delivery record may be considered at future programming cycles or funding requests by the Project Sponsor. Failure to monitor performance or perform required expenditure audits may affect a Project Sponsor's eligibility to receive funding in future CIP update cycles.

Audits
Alameda CTC reserves the right to perform audits to confirm whether costs submitted for reimbursement are consistent with the provisions set forth in the applicable funding agreement(s). The audit may also include a review of

ACTC_AR0942

deliverables and outcomes to determine if they are consistent with the project scope and schedule in the funding agreement. Audits must also be performed for funding sources as described in the 2000 TEP and 2014 TEP.

Alameda CTC will periodically evaluate and summarize the project performance monitoring efforts conducted through the individual project and or comprehensive program updates to the Commission. This is intended to provide feedback on Alameda CTC's investments, including how the projects provided a benefit to the transportation system.

SECTION 1
COMPREHENSIVE INVESTMENT PLAN
PROGRAMMING PRINCIPLES

---

1. PURPOSE

The purpose of the Comprehensive Investment Plan (CIP) is to facilitate strategic programming and allocation of all fund sources under Alameda CTC's programming responsibilities. This includes funding from federal, State, regional, and local fund sources such as the Surface Transportation Program (STP) / Congestion Mitigation Air Quality Program (CMAQ), Lifeline Transportation Program, Transportation Fund for Clean Air Program (TFCA), local sales tax measures and vehicle registration fee programs.

To streamline programming of these funds sources, the CIP considers all available fund sources through a consolidated funding program that prioritizes, evaluates, and recommends funding to critical transportation infrastructure and operational needs that build and maintain the county's transportation system. The coordinated programming effort is also intended to minimize the number of funding applications required from Project Sponsors and prioritize investments to projects and programs ("projects") identified through countywide transportation planning efforts.

The purpose of the CIP programming principles established herein is to provide a framework for programming and allocation decisions made by the Alameda CTC to accomplish countywide transportation goals and objectives. The following five fundamental guiding principles have been identified:

1. Implementing Alameda CTC's adopted visions and goals
2. Balance strategic investments across project delivery phases
3. Maximize transportation investments
4. Investments in all modes and areas within Alameda County
5. Deliver solutions while ensuring accountability

The CIP programming principles are not intended to replace existing programming requirements of individual fund sources. Instead, the principles are intended to create a uniform consolidation of historically separate programming goals and practices, where applicable, to more effectively coordinate funding towards highly beneficial transportation projects that address congestion, state of good repair, economic development, access, safety, and connectivity of a multimodal transportation system.

2. PROGRAMMING AND ALLOCATIONS PROCESS

The CIP includes a five-year programming window with a two-year allocation plan (i.e. the first two years of the five-year window).

ACTC_AR0989

The current programmed amount for a given project represents a commitment amount that is available for allocation when the programmed funds shift into the CIP's two-year allocation window. An allocated amount represents the amount available for encumbrance in project funding agreements and/or contracts, which are, in turn available for reimbursement of eligible costs.

All programmed funds are subject to the availability of funds, and current programming and allocation priorities.

The CIP programming and allocation process is as follows:

1. Alameda CTC will make programming and allocation recommendations to certain projects based on the available fund estimate for a given five-year CIP programming cycle.
2. Projects programmed within the first two-years of a given CIP will receive an allocation.
3. Projects with outer year programmed funds will receive an allocation in the fiscal year in which the funds were originally programmed, upon the Project Sponsor's allocation request through the CIP application process.
    - Allocation requests to advance outer programmed funds are subject to the availability of funds and Commission approval, as priority is given to projects with funds already allocated in the two-year allocation window.
4. Projects with outer year programmed funds that are not ready for an allocation may request to have the programming deferred to an outer CIP programming year by notifying Alameda CTC.

3. FUND SOURCES AND PROGRAMS

The CIP consolidates the programming and allocations of the various fund sources under Alameda CTC's purview. These sources are delineated into principle programs, where feasible, as identified on the table below. For example, 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Bicycle/Pedestrian funds are consolidated into a single Bicycle/Pedestrian Program. This provides greater coordination of similar funding types, requirements, and eligibilities to meet larger program goals and objectives. For all locally-funded programs (principle programs 1-10) a project-funding agreement between the Alameda CTC and Project Sponsor is required. For all other programs (principle programs 11- 13) Project Sponsors are required to enter into a funding agreement directly with the appropriate federal, State, or regional agency.

Principle Program	Fund Source & Investment Program
1. Bicycle/Pedestrian Program	Measure B (MB) Bike/Pedestrian Countywide Discretionary Fund Measure BB (MBB) Bike/Pedestrian Grant Program Measure BB (MBB) Three Major Trails Vehicle Registration Fee (VRF) Pedestrian-Bicycle Access and Safety Program
2. Transit Program	MB Express Bus MBB Innovative Transit Program (transit pass programs) VRF Transit for Congestion Relief Program

ACTC_AR0990

Principle Program	Fund Source & Investment Program
3. Transit Center for Development Program	MB Transit Center Development Program
4. Community Development Investment Program	MBB Community Development Investment Program
5. Paratransit Program	MB Special Transportation for Seniors and People with Disabilities "Gap Grant" Program MBB Coordination and Service Grants
6. Freight and Economic Development Program	MBB Freight and Economic Development MBB Countywide Freight Corridors
7. Technology, Innovation and Development	MBB Technology, Innovation, and Development
8. Local Streets and Roads (Arterials) Program	MBB Congestion Relief, Local Bridge, Seismic Safety
9. Highways Program	MBB Highway Capital Projects
10. Transportation Fund for Clean Air (TFCA)	TFCA Program
11. Lifeline Transportation Program (LTP)	State Transit Account (STA) Job Access Reverse Commute (JARC) and Surface Transportation Program (STP)
12. One Bay Area Grant Program (OBAG)	Surface Transportation Program (STP) and Congestion Mitigation and Air Quality (CMAQ)
13. State Transportation Improvement Program (STIP)	STIP

4. PROGRAMMING CAPACITY

Alameda CTC's programming capacity is limited to the funding anticipated to be available for projects included in the five-year programming and allocation horizon. Projects are programmed over a five-year period, with allocations to projects in the first two-years of the CIP window. Projects that exceed the five-year fiscally constrained CIP will be considered for inclusion in future CIP updates, and may receive priority consideration in the event a previously programmed commitment is unable to be delivered, or additional funding capacity is made available. Alameda CTC will provide a programming fund estimate as part of the CIP call for projects process.

5. PROGRAMMING PRIORITIES

Through the CIP, funds are prioritized to projects as follows:

a. Achieves Fundamental Programming Principles: The degree to which projects achieve the CIP's five (5) fundamental programming principles (*refer to Section 6 of CIP for details)*.
   1. Implementing Alameda CTC's adopted visions and goals
   2. Balance strategic investments across project delivery phases
   3. Maximize transportation investments
   4. Investments in all modes and areas within Alameda County
   5. Deliver solutions while ensuring accountability

b. Countywide Significance: Projects identified as a countywide priority, as an identified project, or along a transportation corridor, in Alameda CTC's Countywide Transportation Plan (CTP), Multi-modal Plans (Goods Movement, Arterial, and Transit), transportation

ACTC_AR0991

expenditure plans, and the Countywide Bicycle and Pedestrian Plans will receive higher priority consideration.

c. Readiness: Projects demonstrating higher state of construction readiness will receive higher priority consideration. Readiness includes technical and financial readiness such as completion of engineering, environmental and design studies, identification of risk-mitigation measures, secured funding towards project completion, feasible schedule, etc. Projects must be deliverable within the timeframe that funds are made available.
d. Fund Leveraging: Projects that leverage external funding commitments (such as federal and State discretionary funds) shall receive higher priority consideration.
e. Coordination and Support: The degree to which a project demonstrates coordination and support from multiple jurisdictions, agencies, and the community stakeholders throughout the planning and project implementation phases, and identification of commitments to maintain the improvements after completion.

6. ELIGIBLE APPLICANTS

a. Eligible applicants (direct recipients) of funds programmed through the CIP are limited to the following:
    1. Cities of Alameda, Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Newark, Oakland, Piedmont, Pleasanton, San Leandro, Union City
    2. County of Alameda
    3. Transit agencies Altamont Corridor Express (ACE), Alameda-Contra Costa Transit District (AC Transit), San Francisco Bay Area Rapid Transit District (BART), Livermore Valley Transportation Authority (LAVTA), Union City Transit, and San Francisco Water Emergency Transportation Authority (WETA)
    4. East Bay Regional Parks District (EBRPD)
    5. Public school districts (K-12) in Alameda County *(exclusively for student transit pass programs)*
    6. Alameda County Transportation Commission (Alameda CTC)
    7. Private, non-profit organizations *(exclusively for programs targeted towards seniors and people with disabilities)*
    8. Entities that are not identified specifically as eligible direct recipients will only be eligible to receive CIP funds as sub-recipients by partnering with an eligible direct recipient that is willing to pass through the funds to a sub-recipient. Exceptions allowing other entities to directly receive funds may be granted by Alameda CTC on a case-by-case basis.
b. Applicants must acknowledge and agree to comply with the specific requirements of the identified fund source and project funding agreement requirements prior to receiving funds programmed and allocated through the CIP.
c. Applicants must provide the expertise and staff resources necessary to successfully deliver projects within the constraints of the fund source requirements.
d. Applicants must identify and maintain a staff position that serves as the single point of contact for Alameda CTC programmed funds within that agency.

ACTC_AR0992

7. ELIGIBLE PROJECTS

Eligible CIP projects are as follows:

a. Projects must demonstrate a public benefit towards building and maintaining the transportation infrastructure in Alameda County.

b. Projects must be publicly accessible, and not only for private entity use.

c. Projects must be in and consistent with the most current adopted Regional Transportation Plan and the Alameda CTC's CTP.

d. Projects must meet the goals and objectives of the funding sources and funding programs.

- Projects funded with 2000 Measure B, 2014 Measure BB, and VRF monies must be consistent with eligible use of funds of the respective expenditure plans.
- Example requirements for federal funding include:
  - Compliance with the California Environmental Quality Act (Public Resource Code Section 21000 et seq.), the State Environmental Impact Report Guidelines (14 California Code of Regulations Section 15000 et seq.), and the National Environmental Protection Act (42 USC Section 4-1 et seq.) standards and procedures.
  - Completion of a Federal Transportation Improvement Program (FTIP) application through the Metropolitan Transportation Commission's Funding Management System.
- Potential funding eligibilities examples are identified on Exhibit A - Project Categories, Funding Eligibility, and Transportation Priorities.

e. Eligible capital infrastructure projects may include (but are not limited to):

- Local street and road improvements
- Bicycle and/or pedestrian infrastructure improvements include new facilities, parking/lockers, gap closure, and safety improvements
- Highway capital investments
- Freight, ferry, rail, and intermodal projects that facilitate the movement of goods, services, and people
- Transit infrastructure enhancements and expansion
- Safety or modernization improvements to transit centers, stations, or facilities,
- Transportation improvements that provide greater transit access for residents of low-income and disadvantaged communities
- Improvements that reduce greenhouse gas emissions
- Technology improvements such as intelligent transportation system, transit signal priority, innovative uses of technology as it pertains to improving the transportation system

f. Eligible non-infrastructure projects may include (but are not limited to):

- Bicycle and pedestrian master plans
- Feasibility or scoping only studies for capital projects
- Safe Routes to School program operations
- Crossing guard programs

ACTC_AR0993

- Safety education, training, enforcement, and promotional programs
- Transportation demand or traffic management programs
- Travel training and mobility management programs
- Transit or shuttle operations
- Transit incentive programs (including fare based)
- Bike share or rideshare programs

8. MINIMUM/ MAXIMUM AWARD AND MATCHING REQUIREMENTS

Project Type	Minimum Request	Maximum Request	Minimum Match
Capital Improvement	$250,000	$2,000,000	30% By Phase Requested
Programs and Transit/Shuttle Operations	$100,000 per year	$500,000 per year	75%
Plans/Studies	$100,000	$100,000	50%

The CIP will focus on comprehensive transportation projects that yield significant benefits to the countywide transportation system. In general, smaller projects or early project development (planning/scoping) activities that are able to be funded through local means (direct local distribution funds) will be a lesser priority for discretionary funding.

Project Sponsors shall provide the minimum match of Alameda CTC's administered funds requested by phase, unless otherwise stated by a particular program guideline.

9. MATCHING REQUIREMENTS

a. Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
b. Previously incurred costs or previously expended funds do not count towards fulling minimum matching requirement.
c. Named capital projects with identified specific funding commitments in the 2014 Measure BB Transportation Expenditure Plan are exempt from the matching requirements.
d. Projects funded with federal funds (such as STP/CMAQ) requires a non-federal local match. Non-federal sources for local match can include local sales tax, special bond measures, financial private donations, and other local revenues.
e. In-kind funding (non-cash contributions of time, goods and services, equipment, or space) will not count towards fulling the CIP matching requirement.
f. Alameda CTC may consider on a case-by-case basis exceptions to the matching requirement. Such exceptions may include exemptions for projects that provide considerable transportation benefits and/or projects that leverage significant transportation funds for the county.

ACTC_AR0994

10. ELIGIBLE PROJECT COSTS

Eligible costs for funds programmed through the CIP include

- Project development and preconstruction activities such as scoping level documents, preliminary study reports, feasibility studies, environmental documents, preliminary engineering and design work.
- Activities related to construction, rehabilitation, right-of-way acquisition, environmental mitigation, capital equipment acquisition.
- Program implementation, transit services, and shuttle operations.

All eligible costs for reimbursement must be in accordance with the policies and provisions set forth and described in detail in the "Eligible Costs for Reimbursement by Alameda CTC Policy".

Applicants are responsible for securing the necessary matching and for any additional funding needed to complete the project as a result of project cost increases, higher actual bid estimates, loss of funding, underestimated contingencies, and future maintenance costs.

11. FUNDING RESTRICTIONS

- Alameda CTC administered funds shall not supplant other committed funds.
- Alameda CTC will not be responsible to fund any cost overruns, cost increases, higher bid estimates, maintenance costs, or funding shortfalls beyond Alameda CTC's original programming and allocation commitment.
- 2000 Measure B Express Bus funds are only available to AC Transit and LAVTA.
- Programmed federal, State, and regional funds are subject to the requirements of the specific fund source, and may require Project Sponsors to enter into funding agreements directly with the authorizing agency.
- Reimbursement for eligible staff costs are limited to non-Measure B/BB/Vehicle Registration Fee Direct Local Distribution (DLD) recipients, unless otherwise agreed upon by the Alameda CTC with a project funding agreement for labor that includes direct staff implementation of a project activity. DLD recipients are expected to use DLD or other local funds to support staffing, contract management, and administrative costs associated with the project.
- Payments to fund recipients will be made on a reimbursement basis and after approval of submitted invoices. No reimbursements will be made prior to the execution of a project funding agreement with the Alameda CTC. Invoices are required to be submitted at least once every six months with required progress reports and completed task deliverables, unless otherwise authorized and approved by Alameda CTC.

12. SHUTTLE OPERATIONS FUNDING REQUIREMENTS

Funding for shuttle operations is strictly limited to shuttles which provide connections for first/last mile connections from regional transit facilities, transportation hubs, business districts, and employment centers. Paratransit services are not eligible for funding under transit eligible funding sources.

ACTC_AR0995

- Eligible applicants must be a public agency eligible to receive Alameda CTC funds.
- Shuttle service must be wholly located in Alameda County, available to general public, and serve multiple employers.
- Service routes within 0.5 mile radius from a major regional transit facility (BART station, major bus transfer station, or ferry terminal) will be given priority consideration.
- Applicants must provide a minimum match required for transit/shuttle operations.
- Service Operations Requirement
    - Shuttle service must not compete with existing fixed-route transit services provided by Alameda-Contra Costa Transit District, Livermore Amador Valley Transit Authority, or Union City Transit. A Letter of Concurrence from the appropriate transit agency, must be provided to affirm coordination with the transit agency, and acknowledge that the proposed shuttle program would not complete with existing or planned transit services.
- Funding Priority Considerations
    - Programs demonstrating long-term and local sustainability with matching funding consisting of 50 percent (50%) or more coming from private sources i.e. private business investment districts will be given priority consideration.
    - Ridership exceeding 500,000 annual boarding's, documented by existing service data or documented ridership projections will be given priority consideration.

13. FREIGHT RELATED PROJECTS FUNDING REQUIREMENTS

Funding for freight related projects is strictly limited to improvements that significantly contributes to the freight systems' economic activity or vitality; relieves congestion the freight system, improves the safety, security, or resilience of the freight system; improvements or preserves the freight system infrastructure; implements technology or innovation to improve the freight system or reduce or avoid its negative impacts; or reduces or avoids adverse community and/or environmental impacts of the freight system.

Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

14. PROJECT SELECTION CRITERIA

Project applications that meet the following screening criteria will be considered.

1. Consistency/identified within the most recently adopted Regional Transportation Plan and Countywide Transportation Plan.
2. Consistency/identified within the most recently adopted Countywide Bicycle and Pedestrian Master Plan *(applicable to bicycle/pedestrian improvements).*
3. Provide the minimum match of Alameda CTC's administered funds requested by phase.

ACTC_AR0996

The primary CIP project selection criteria are as follows:

1. Project Need and Benefits: Project clearly defines project needs and how proposed transportation improvement will benefit the intended users at a local and countywide level, and provide a usable segment (as applicable).

   Alameda CTC will consider key project merits and anticipated project performance such as (in no particular order):

   - Congestion Relief: Project's ability to enhance mobility and access by addressing existing and future congestion and travel demands.
   - State of Good Repair: Project's ability to improve the condition of existing transportation facilities or address identified issues if the system is left unimproved.
   - Transportation Significance: Project demonstrates regional or countywide significance towards improving the transportation network, economic competitiveness, and environmental conditions i.e. regional greenhouse gases.
   - Safety and Connectivity: Project's ability to foster a safe, connected, and accessible transportation system for multimodal movement of goods and people.
   - Multimodal Access: Project's ability to contribute to a multimodal transportation system that serves all users, provides transportation choices, and provides greater access to schools, jobs, homes, and transit.

2. Project Readiness: Project contains a well-defined funding plan, budget, and schedule. Project has no foreseeable implementation issues, has governing body approval, and is supported by the local community. Applicant clearly identifies the ability to coordinate among appropriate internal and external agencies, and has identified stakeholders. Project with a completed project study report or equivalent scoping document will receive a higher priority consideration for readiness.

3. Sustainability: Project application identifies funding sources and responsible agency for sustaining and maintaining the project beyond the funding period. Project is identified in a long-term development plan.

4. Matching Funds: Project has secured or committed funding from other funding sources outside of Alameda CTC's funding resources that is beyond the minimum matching requirement.

5. Other fund source specific criteria requirements: Project must meet the program requirements of specific fund sources, such as cost effectiveness calculations or proximity-connectivity to specific areas and user groups. These requirements are specific to the fund source and may change with each programming cycle.

ACTC_AR0997

Projects will be scored on a scale based on the project's expected outcomes and performance, project readiness, sustainability, and leveraging ability. Refer to Exhibit B – Project Selection Criteria for scoring weights for each project selection criteria category. Programming recommendations may not be based strictly on the scoring criteria alone. Consideration will be given towards the requirements of the various Alameda CTC administered fund sources, project delivery requirements, geographic equity, and countywide synergies of proposed improvements.

The project selection criteria will be applied by category mode (bicycle/pedestrian, transit, goods movement, highway, local streets and roads, transit operations, etc.) to provide a direct evaluation of similar investments to one another, i.e. transit projects to transit projects.

15. PERFORMANCE MEASURES AND MONITORING

Project Sponsors must identify and establish project goals, deliverables, and performance measures and intended outcomes that will measure the effectiveness of the investment. Performance measures will be established as part of a project funding agreement between Alameda CTC and the fund recipient.

a. For capital projects, performance indicators may include, but are not limited to, an evaluation of a project's ability to achieve CIP programming priorities, ability to meet specific funding program goals, and reporting on the status and implementation on the project delivery.
b. For operations, performance indicators may include the above, as well as quantifying and monitoring the number of trips, service hours, cost effectiveness, and outreach efforts.

16. POST ALLOCATION REQUIREMENTS

Project Sponsor whom are an awarded Alameda CTC Administered funding allocation are required

- Submit a governing body approval resolution that accepts Alameda CTC funds, confirms local matching commitments, project delivery strategy, and local support for the project in order to entered into a project funding agreement with Alameda CTC.
- Enter into a project funding agreement between the Alameda CTC for approved of allocations of Measure B, Measure BB, VRF, TFCA, and other funds under Alameda CTC purview. Agreements will include project scope, cost, schedule, performance measures, reporting requirements, publicity requirements, audit requirements, task deliverables, effective date of reimbursable costs, etc. The current agreement requirements are located here: https://www.alamedactc.org/app_pages/view/19025.
- Comply with Alameda CTC's Local Business Equity Program requirements: https://www.alamedactc.org/get-involved/contract-equity/

ACTC_AR0998

17. TIMELY USE OF FUNDS AND RESCISSION OF FUNDS

a. Projects must be started within a year of the schedule identified in the executed funding agreement that defines the date of eligible costs and reimbursements. Funds may be rescinded if a project is not started within the established time period.
b. Projects must be completed within three (3) years of the established initiation date, unless a different period is identified in the program guidelines or approved in advance by the Alameda CTC and incorporated into the funding agreement.
c. Projects receiving federal and State funds are to start and expend the program funds within the delivery timeframe required by federal funding requirements.
d. Projects are subject to the specific timely use of funds, policies and provisions pertaining to the specific fund sources allocated to the Project.
e. Failing to meet timely use of funds requirements, fund agreement requirements, funding commitments, project schedules, or applicable regulations could result in loss or withholding of funds. If fund awards are withdrawn, allocations may be disencumbered from a funding agreement and removed from the CIP.
f. Rescinded funds will be returned to the program to be distributed in a future CIP cycle.

18. OTHER REQUIREMENTS

a. Program specific guidelines may supersede the requirements set forth in these CIP programming guidelines.
b. Programming and allocations actions made through the CIP are subject to the current policies and guidelines, as they may be created, revised, or amended from time to time.
c. Request for fund allocations for named 2014 Measure BB capital projects must be made prior to execution a funding agreement. The request for allocation must include at minimum a summary of project costs defined by phase and fund source, and a project schedule for each phase.
d. Alameda CTC may consider on a case-by-case basis exceptions to the programming requirements of the CIP programming principles and guidelines in the event of unanticipated programming actions/funding availability, or if a proposed project has extraordinary project merit, project synergies, or project delivery circumstances that if implemented will result in a significant countywide benefit.

This page intentionally left blank.

Exhibit A

Project Categories, Funding Eligibility, and Funding Eligibility

Projects will be separated into project categories by type as part of the project selection and evaluation process to prioritize projects relative to each other. The following table identifies CIP project categories, transportation priorities, and example funding eligibility.

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
1.	Transit Capital • Capital rehabilitation • Capacity expansion, stations, capital replacement • Safety and Access improvements • Transit Signal Priority (TSP) / Communications	1. Increase transit access and ridership 2. Regional projects in the expenditure plans 3. Projects/need identified in a transit plan 4. Increase frequency or reliability of service operations 5. Facilitates express bus services	X			X	X				X	X		X	
2.	Local Streets and Roads (Arterials) • Major Arterial Performance Initiative Program • Roadway Safety/Traffic Calming • Grade separations • Traffic Signals, ITS/CCTV installations and upgrade • Signal timing and coordination • Complete Streets and Streetscape • Coordination with freeways and ramps • Roadway/Pavement Rehabilitation • Sidewalk installation	1. Regional projects in the expenditure plans. 2. Projects/need identified in Multimodal Arterials Plan 3. Enhances multimodal connectivity and reliability, of transit, bicycle and pedestrian networks. 4. Provides congestion relief and increased mobility	X	X	X	X	X				X	X	X	X	X
3.	Bicycle and Pedestrian • Bike facilities (includes Class 1,2,3, and 4 facilities) • Bike storage capital costs (racks, lockers, cages) • Safety, gap closure, infrastructure improvements • Bicycle and Pedestrian Master Plans and updates • Safe Routes to School improvements/programs	1. Identified in a Countywide Bicycle/Pedestrian Plan 2. Regional projects in the Expenditure Plans 3. Closes gaps in local and countywide bicycle/pedestrian network. 4. Improves safety and connectivity by removing known barriers to access and connections to activity centers, schools, jobs, and transit 5. Bicycle/pedestrian master plans update to improve coordination	X	X		X	X	X				X			
4.	Highway Capital • Interchange, bridge, sound wall, ramp improvements • Bridge improvements • Express lanes	1. Regional projects in the Expenditure Plans 2. Improves safety and connectivity 3. Address state of good repair of transportation system 4. Address congestion and mobility		X							X		X	X	X

ACTC_AR1001

Project Categories, Funding Eligibility, and Priority			Federal		State	Regional and Local									
#	Category and Sample Example Projects *(eligible fund sources are generally identified for the category; some example projects may not directly eligible for the fund source)*	Transportation priorities *(in no particular order)*	STP	CMAQ	STIP	TFCA	Lifeline	MB- MBB-VRF Bike/Ped	MB- MBB-VRF Transit	MB-MBB Paratransit	MBB-VRF Technology	MB-TCD	MBB-Congestion Relief	MBB-CDIP	MBB-Freight Economic
5.	Freight and Economic Development (Goods Movement) • Truck/port/freight operations and goods movement • Airport Facilities, Truck-vehicle parking • Quiet Zone Improvements *Note: Road or highway access improvements will be evaluated under local streets and roads or highway categories.*	1. Regional projects in the Expenditure Plans 2. Projects identified a Goods Movement Plan 3. Reduce conflicts 4. Improve goods mobility and economic development 5. Enhance coordination to distribution centers	X	X							X			X	X
6a.	Transit Operations (non-paratransit) • Fixed route or Shuttle operations and service expansion • Transit priority measures • Congestion Relief Programs • Transit incentive programs (including fare-based)	1. Increase reliability of service operations 2. Increase transit ridership 3. Maintains or expands express bus services 4. Demonstrates operational and funding sustainability	X	X	X	X	X		X					X	
6b.	Paratransit Capital and Operations • ADA Mandated Services • City-based, non-ADA Services • Specialized transportation programs • Capital improvements (accessible vehicles, signage) • Related assessments and plans	1. Maintains or expands existing transportation services designed for seniors and people and disabilities 2. Increases accessibility of transportation services 3. Eliminates gaps in existing services by offering transportation options for seniors and people with disabilities to important travel destinations to meet life needs.	X				X			X				X	
7.	Transportation Demand Management / Education Outreach • Fare incentives – student bus passes • Guarantee Ride Home Program • Technical Assistance • Alternative mode education and incentives • Safe Routes to School or Transit • Parking management	1. Facilitates connectivity to transit 2. Promotes multi-modal transportation and modal shifts away from single occupancy vehicle (SOV) use towards alternative modes, including bicycle/pedestrian and transit. 3. Provides a cost-effective strategy to improve and facilitate access to transit, schools, and job centers.	X	X		X	X		X					X	
8.	LSR / Highway Operations • Traffic Signal Operations, ITS, maintenance • Highway and Bridge Maintenance & Operations	1. Addresses state of good repair of transportation system 2. Addresses congestion and mobility	X	X	X						X		X		
9.	Planning / Studies • Planning studies and implementation • Feasibility or scoping only studies • Modal Plans/Studies • Bicycle and Pedestrian Master Plans	1. Defines project scopes, schedules and expected outcomes 2. Examines feasibility of improvement implementations 3. Contributes to long-rang planning of improvements for future implementation and decision making 4. Supports Transit Oriented Development (TOD) and Priority Development Areas (PDA)	X	X	X			X	X	X	X	X		X	X

ACTC_AR1002

Exhibit B

Project Selection Criteria

Proposed projects will be scored on the basis of applicant responses to the following criteria, as applicable. Additional criterion may be included within this framework based on program needs and funding requirements.

A. READINESS DELIVERY CRITERIA The project has a well-defined funding plan, budget and schedule; implementation of the project phase is feasible; governing body approval and community support are demonstrated; and the sponsor demonstrates coordination among internal and external agencies, as applicable.		
Index	*Criteria* (individual criterion evaluation scale High = 3 pts, Medium = 2 pts, and Low = 1 pt)	*Criteria Weight*
1.	Project Development Status *(not initiated, underway, complete)* • Status of planning and scoping documents • Status of environmental phase and clearances • Status of preliminary engineering & design phase • Status of right-of-way acquisitions	45
2.	Detailed Scope, Schedule, and Funding Plan • Defined project scope • Defined schedule and budget • Identified funding need to continue project development	
3.	Implementation Issues • Identified implementation issue(s) resolved or mitigated • Local community and governing body support • Coordination with partners	
	Subtotal	*45*

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
Index	*Criteria* (individual criterion evaluation scale High = 3 pts, Medium = 2 pts, and Low = 1 pt)	*Criteria Weight*
1.	Connectivity/Gap Closures • Expands the transportation system, network, or service • Enhances intermodal and multi-jurisdictional connectivity • Complements existing services (not duplicative)	45
2.	Access Improvements • Increases access to activity centers, central business districts, and employment centers • Serves transit dependent populations, communities of concerns, disadvantaged or vulnerable populations. • Improves transportation routes to schools • Serves a known or realistic level of demand in the community for transit services	
3.	State of Good Repair • Corrects a deteriorating condition/aging infrastructure • Addresses past deferred maintenance • Replaces capital assets that have exceeded their useful life	
4.	Technology and Innovation • Promotes innovative (non-traditional) elements for services	

B. NEEDS AND BENEFITS CRITERIA The project need is clearly defined and demonstrates how the transportation improvement will benefit intended users by increasing connectivity, improving access, maintaining transportation facilities/equipment (as applicable), promoting innovation, improving safety, facilitating a clean environment, and contributing to economic growth.		
	• Promotes vehicle technology or ITS coordination • Incorporates innovative design treatments to transportation projects	
5.	Multimodal Benefits • Identifies benefits to transit, bike, pedestrian, rail, and goods movement • Support multimodal transportation through coordination of improvements	
6.	Environmental Benefits • Promotes modal shifts that encourages less dependency on motorized transportation • Supports transit and/or transit access improvements • Supports housing and/or jobs adjacent to transit	
7.	Safety & Security • Identifies safety concerns • Increases public safety through a reduction of risk of accidents for vehicles, bicycles, and/or pedestrians • Identifies known safety issues with a proven countermeasure to address the conflicts	
8.	Economic Growth • Promotes job growth • Increases in economic growth as a result of improvements to freight corridors	
	Subtotal	*45*

C. MATCHING FUNDS CRITERIA Commits other funds beyond the minimum match		
Index	*Criteria* (evaluation scale 1 pt for every 5% match beyond minimum match requirement)	*Criteria Weight*
1.	Matching Funds • Commits other identified funds beyond the minimum match requirement for the phase of which funds are being requested.	10
	Subtotal	*10*

This page intentionally left blank.

SECTION 2
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
ARTERIALS PROGRAM

PROGRAM SUMMARY

The Arterials Program includes discretionary funding from the 2014 Measure BB Transportation Expenditure Plan (2014 TEP). This program aims to support the arterials in our community that serve as major commute routes for those traveling by transit, auto, bicycle, or foot, and enhance access to jobs, stores, and more through capital infrastructure investments, service operations, and innovative projects. This program focuses on improvements to major roads, bridges, freight corridors, or quiet zones.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs ("projects") that will be funded with the sales tax revenues. Ten percent (10%) of the net revenue collected is dedicated to funding congestion relief, local bridge, and seismic safety type projects benefiting arterials and roadways that improve the mobility of transit riders, motorists, bicyclists, and pedestrians, as well as the movement of goods to stores and consumers within Alameda County.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to improve accessibility, enhance operational efficiencies, increase safety, and reduce congestion. Such activities include projects that remove bottlenecks, improve safety, enhance operations, and enhance alternatives to single occupant auto travel in key commute corridors.

As identified in the 2014 TEP, examples of investments and commute corridors eligible for funding include:

- *North County Major Roadways*: Solano Avenue Pavement resurfacing and beautification; San Pablo Avenue Improvements; State Route 13/Ashby Avenue corridor; Marin Avenue local road safety; Gilman railroad crossing; Park Street, High Street and Fruitvale Bridge replacements; Powell Street Bridge widening at Christie; East 14th Street improvements and Oakland Army Base transportation infrastructure improvements.

- *Central County Major Roadways:* Crow Canyon Road safety improvements, San Leandro local road resurfacing, Lewelling Road/Hesperian Boulevard improvements and Tennyson Road grade separation.

- *South County Major Roadways:* East-west connector in North Fremont and Union City, I-680/I-880 cross connectors, Fremont Boulevard improvements, upgrades to the relinquished Route 84 in Fremont, Central Avenue Overcrossing, Thornton Avenue widening, Mowry Avenue and Newark local streets.

- *East County Major Roadways:* Greenville Road widening, El Charro Road improvements, Dougherty Road widening, Dublin Boulevard widening and Bernal Bridge construction.

- *Countywide Freight Corridors:* Outer Harbor Intermodal Terminal at the Port of Oakland, 7th Street grade separation and roadway improvement in Oakland, as well as truck routes serving the Port of Oakland.

PROGRAMMING AND ALLOCATION PRIORITIES

The Arterials Program seeks to award projects that advance goals identified in the Countywide Multimodal Arterials Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide mobility along arterials. This program recognizes that concentrating improvements in key arterial corridors will improve access and efficiencies, increase safety, and reduce congestion. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Regional projects or corridors identified in the Transportation Expenditure Plan**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans.

2. **Projects aligned with needs established in the Multimodal Arterials Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Multimodal Arterials Plan.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.
4. **Enhance multimodal connectivity**: Priority consideration is given to projects that enhance the reliability, safety, and connectivity of transit, bicycle and pedestrian networks.

5. **Congestion relief and increased mobility**: Priority consideration is given to projects identified as significantly improving congestion on major commute corridors and facilitating connectivity and travel over multiple jurisdictions.

6. **State of Good Repair**: Priority consideration is given to projects that improve the conditions of existing transportation facilities or address conditions that would otherwise deteriorate if left unimproved.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance mobility, access, safety, and convenience in Alameda County. Arterials Program funds will be available for the example projects in projects that include, but are not limited to the following:

Capital Infrastructure

- Resurfacing and beautification
- Local road safety improvements
- Intersection enhancements
- Traffic/signal operation improvements
- Grade separations and railroad crossings
- Bridge replacements
- Cross connectors
- Truck route improvements
- Quiet zone enhancements
- Education, enforcement and promotion programs

INELIGIBLE PROJECTS

- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 3
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
BICYCLE AND PEDESTRIAN DISCRETIONARY PROGRAM

PROGRAM SUMMARY

The Bicycle and Pedestrian Discretionary Program includes the combined funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) that are available to bicycle and pedestrian improvements. This program aims to support enhanced access and safety for bicyclists and pedestrians through capital infrastructure investments, safety education, outreach promotion, and planning activities.

The 2000 Measure B, 2014 Measure BB, and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports projects which improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Five percent (5%) of the net revenue collected is dedicated to bicycle and pedestrian projects. The five percent (5%) is further separated into two distribution categories:

- 75 percent (75%) of the funds are formula Direct Local Distributions to Alameda County cities and County based on population; and
- 25 percent (25%) of the funds are distributed on a discretionary basis through the Measure B Bicycle and Pedestrian Countywide Discretionary Fund.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Eight percent (8%) of the net revenue collected is dedicated to bicycle and pedestrian infrastructure and safety projects that support projects that encourage people to bike and walk, as designated below:

- Three percent (3%) or $264 M is directed towards the Completion of Three Major Trails - Iron Horse Trail, Bay Trail, and the East Bay Greenway Corridor; and

- Three percent (3%) is formula allocated as Direct Local Distributions to Alameda County cities and County based on population; and
- Two percent (2%) of the funds are distributed on a discretionary basis through the Measure BB Bicycle and Pedestrian program for regional projects and trail maintenance. Funds in this category includes use for Countywide Bicycle and Pedestrian coordination.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF program began in May 2011. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Five percent (5%) of the VRF funds are dedicated to the VRF Pedestrian and Bicycle Access and Safety Program, which goal is to improve the safety of bicycles and pedestrians by reducing conflicts with motorized vehicles, create safety access to activity centers, and improve connectivity of the transportation network.

PROGRAMMING AND ALLOCATION PRIORITIES

The Bicycle and Pedestrian Discretionary Program seeks to award projects that advance countywide bicycle and pedestrian goals as identified in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and the Measure B, Measure BB, and VRF expenditure plans. The Alameda CTC's Countywide Bicycle and Pedestrian Plans identifies a priority vision system consisting of projects, corridors, and improvement initiatives that are the most significant from a countywide perspective. This priority system will guide and focus the programming and allocations of the bicycle/pedestrian program funds.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds during a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds during a given programming cycle may be used for non-infrastructure improvements including program operations, plans, and studies.

3. **Identified in the Countywide Bicycle and Pedestrian Plans**: Priority consideration is given to bicycle and pedestrian projects identified as a countywide priority in Alameda CTC's Countywide Bicycle and Pedestrian Plans.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the Transportation Expenditure Plans. This includes projects identified in the Alameda CTC's Measure BB Capital Project Delivery Plan.

5. **Gap Closure**: Priority consideration is given to projects that close gaps in local and countywide bicycle/pedestrian network.

6. **Safety and Connectivity**: Priority consideration is given to projects that improve connections to activity centers, schools, jobs, and transit by addressing and removing known barriers to access and connecting multiple jurisdictions and/or planning areas.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance bicycle and pedestrian access, convenience, safety and usage in Alameda County.

Bicycle and Pedestrian Discretionary Program funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Sidewalks and multi-use paths
- Bikeways and pedestrian facilities
- Crossing improvements (at intersections, interchanges, railroad, freeway)
- Bicycle and pedestrian signals
- Bicycle lockers, racks and parking facilities
- Signage, lighting, railing and other accessibility improvements for bicyclists/pedestrians
- Traffic calming devices
- Bicycle/pedestrian access improvements to and from transit facilitates, and schools
- Gap closure projects that link and build upon the existing bicycle/pedestrian network
- Bicycle/pedestrian components of complete streets and streetscape improvements
- Capital maintenance such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life.

Non-infrastructure

- Bicycle and Pedestrian Master Plans
- Feasibility or scoping only studies for capital projects
- Safe routes to school program operations
- Crossing guard programs
- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Routine maintenance of roadway facilitates with bicycle/pedestrian infrastructure

- Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
- Ongoing facility operations (e.g. attended bicycle parking)

OTHER REQUIREMENTS/FUNDING RESTRICTIONS

Measure BB Funds – Completion of Three Major Trails

- Measure BB funds identified ($264 M) for the Completion of Three Major Trails Funds in the 2014 Transportation Expenditure Plan are limited to capital construction and/or capital maintenance projects that enhance the East Bay Greenway from Oakland to Fremont, Bay Trail Gap Closure and Access Projects, and Iron Horse Trail Gap Closure and Access Projects. Priority funding consideration is given to projects that directly enhance the regional bicycle/pedestrian transportation network pertinent to these three trails, and as envisioned and prioritized in the Alameda CTC's Countywide Bicycle and Pedestrian Plans, and other countywide plans.
    - Eligible projects
        - Capital infrastructure projects that address gaps and connectivity issues, safety and accessibility concerns, and capital maintenance needs such as pavement rehabilitation, infrastructure replacement or upgrades that extend or replenish a facility's useful life to and from these three major trails.
    - Ineligible projects
        - Routine maintenance of multi-use pathways and bike facilities including maintenance staff, trash cleanup, graffiti removal, vegetation removal, small pavement sealing/resurfacing, and lighting repairs.
        - Bicycle/pedestrian education, outreach, and promotional programs.

SECTION 4
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
COMMUNITY DEVELOPMENT INVESTMENT PROGRAM

PROGRAM SUMMARY

The Community Development Investment Program (CDIP) will support existing and new transportation infrastructure improvements that will enhance access and provide increased connectivity to and between job centers, schools, transportation facilities, community centers, and residential developments. Investments include capital projects, programs, plans and studies which serve to achieve the objectives of the CDIP, including but not limited to improvements to BART station facilities, bus transfer hubs, bicycle/pedestrian infrastructure, local streets and roads, and transit that facilitate transit-oriented growth.

The 2014 Measure BB funds shall be allocated and expended in accordance with the requirements of the expenditure plans.

FUND SOURCE

2014 Measure BB
Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. The 2014 TEP establishes a total of 4 percent of net sales tax revenue, for the development and implementation of the program. CDIP investments are intended to enhance access and safety around transit stations and hubs, and to support station area development and transit oriented development at the station areas listed in the 2014 TEP.

PROGRAMMING AND ALLOCATION PRIORITIES

The Community Development Investment Program seeks to award projects that advance access and connectivity to transit as identified in the Measure BB expenditure plan. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering community connectivity to transit, schools and job centers. In general, competitive projects are those that enhance connectivity from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase Access and Connectivity:** Priority consideration will be given to projects that significant improve access and connectivity to transit, jobs and schools.

4. **Leveraging Funds**: Projects that demonstrate program sustainability by leverage and secure external funding commitments beyond the minimum matching requirement.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance access and safety around transit stations, hubs, and transit oriented development.

CDIP funds will be available for projects that include, but are not limited to the following:

Capital Infrastructure

- Transit station improvements including plazas, station access, pocket parks, parking facilities
- Local streets and road improvements including streetscape projects associated with high density developments and near transit facilities with sample elements such as pedestrian street lighting, bulb outs, crosswalk and sidewalk improvements, new striping for bicycle lanes and road diets, way finding signage and bus shelters.
- Bicycle and pedestrian improvements including bikeways and bike-transit facilities, bicycle/pedestrian paths and bridges, safe routes to transit, bicycle parking.
- Park-and-ride facility improvements
- Passenger rail station access and capacity improvements
- Development and implementation of transit priority treatments on local roadways
- Equipment and rolling stock such as equipment that is attached to a facility and integral to the benefit of the facility (i.e. EV charging stations)

Non-infrastructure

- Planning studies
- Feasibility or scoping only studies for capital projects
- Transit and shuttle operations
- Transit incentive programs (including fare-based)

- Safety education, training, enforcement, and promotional programs

INELIGIBLE PROJECTS

- Vehicle purchases and vehicle maintenance
- Studies that extend beyond Alameda County other than to establish contributing impacts
- Routine maintenance of capital facilities
- Promotional program giveaways including food, etc.
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Shuttle operations will be limited to a maximum award of $500,000 per year, and will require a 75 percent (75%) match.
- Plans and Studies will be limited to a maximum award of $100,000, and will require a 50 percent (50%) match.

This page intentionally left blank.

SECTION 5
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
FREIGHT AND ECONOMIC DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Freight and Economic Development Program includes discretionary funding from the 2014 Measure BB Program, which aims to develop innovative approaches to moving goods in a safe and healthy environment in support of a robust economy.

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding improvements that support moving goods in a safe and healthy environment in support of a robust economy as part of the Traffic Relief on Highways Type (Highway Program) included in the 2014 TEP.

Funds will be periodically distributed by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Enhance the safe transport of freight by truck or rail in Alameda County, including projects that reduce conflicts between freight movement and other types of transportation
- Improve reduction of greenhouse gas production in the transport of goods
- Mitigate environmental impacts of freight movements on residential neighborhoods
- Enhance coordination between the Port of Oakland, the Oakland Airport, and local jurisdictions for the purposes of improving the efficiency, safety, and environmental impacts of freight operations

PROGRAMMING AND ALLOCATION PRIORITIES

The Freight and Economic Development Program seeks to award projects that advance freight related goals identified in the Countywide Goods Movement Plan and as identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide safety and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the Transportation Expenditure Plans. Funding from this category will be done in coordination with the Highway Program in the following section to support related transportation projects and corridor investments, where applicable.

2. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

3. **Projects aligned with needs established in the Goods Movement Plan**: Priority consideration is given to projects that align with the modal priorities and needs as established in the Countywide Goods Movement Plan.

4. **Reduce conflicts:** Priority consideration is given to projects that reduce conflicts between goods movement, passenger transportation, and local communities, and that improve safety.

5. **Improve goods mobility and economic development:** Priority consideration is given to projects that positively affect truck mobility and accessibility.

6. **Enhance coordination:** Priority consideration is given to projects that mitigate impacts on neighborhoods and enhance coordination between freight distribution centers.

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish the program's objective to improve mobility and coordination of freight and goods to and from Alameda County. Projects must directly address a specific freight coordination issue or goods movement need.

The Freight and Economic Development program will be available for projects that include, but are not limited to the following:

- Highway interchange improvements that address freight or passenger delays

ACTC_AR1020

- Technology programs that address smart operations and deliveries
- Rail infrastructure capacity improvements on freight rail lines
- Gateway infrastructure improvements
- Impact reduction programs
- Local truck route enhancements
- Goods movement planning support
- Quiet Zone Improvements
- Airport Facilities
- Truck vehicle parking
- Truck/port/freight/operations

INELIGIBLE PROJECTS

- Projects that do not directly benefit or facilitate freight and goods movement in Alameda County.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 6
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB
HIGHWAY PROGRAM

PROGRAM SUMMARY

The Highway Program seeks to implement projects as identified in the Measure BB 2014 Transportation Expenditure Plan (2014 TEP). The expenditure plan identifies specific highway and freight corridors and improvements on I-80, SR-84, I-580, I-680, and I-880 that would address infrastructure gaps and facilitate greater access, congestion relief and goods movement. The 2014 TEP identifies specific projects for each of the highway corridors in the amount of $600M, with an additional one percent (1%) of net revenue or approximately $77M specifically targeted towards improvements that improve goods movement. Projects were based on project readiness, local priority, and the ability to leverage current investment and funds. Alameda CTC aims to prioritize the specific investments that demonstrate an ability to move forward in project implementation and delivery. A number of eligible projects, or candidate projects will be selected for funding based on their contribution to maximizing the connectivity, reliability, and efficiency of the transportation system, while also providing congestion relief and facility improvements.

FUND SOURCES

2014 Measure BB

Measured BB, approved by Alameda County in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 TEP outlines projects and programs that will be funded with the sales tax revenues. The 2014 TEP identifies $600 million for specific highway capital improvements with an additional one percent (1%) of net revenue or approximately $77 million, targeted specifically for the Freight and Economic Development Program that supports goods movement related improvements.

Funds will be periodically distributed by Alameda CTC for projects that will make the existing highway system safer, more efficient, and effective by:

- Removing bottlenecks at interchanges and other hot spots
- Improving efficiency by providing HOV/HOT/Express Lanes and operational improvements, and integrating Intelligent Transportation System (ITS) strategies
- Providing connectivity/accessibility between goods, markets, and employment centers
- Complementing other modes of transportation and integrating complete street features
- Completing gaps in the system
- Improving air quality by reducing pollution and greenhouse gas emissions

The 2014 Measure BB funds shall be expended in accordance with the requirements of the expenditure plan.

PROGRAMMING AND ALLOCATION PRIORITIES

The Highway Program seeks to award projects that improve the safety and efficiency of Alameda County's highway system, as specifically identified in the 2014 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly towards addressing safety, access and infrastructure gaps, while also furthering countywide efficiencies and coordination of goods movement. In general, competitive projects are those that enhance safety and connectivity of freight services from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Projects in the Expenditure Plans:** Priority consideration is given to projects that are identified in the 2014 TEP and earmarked for certain Measure BB amounts. Priority consideration is provided to projects that are specifically named or referenced in the group category and that have already started various project development phases such as scoping, preliminary engineering, design, and environmental.

2. **Improve Safety:** Priority consideration is given to projects that improve safety among vehicles, bicycles and/or pedestrians, on major truck routes, and the safety of maintenance and operational workers.

3. **Measure BB Capital Program Delivery Plan:** Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

4. **Improve mobility and provide congestion relief:** Priority consideration is given to projects that positively affect transportation mobility and accessibility. This includes the removal of bottlenecks at the interchange locations and other hot spots identified, improving efficiency by providing additional capacity via HOV/HOT/Express and operational improvements, and reducing travel times (peak hour vehicle delays and average vehicle delays).

5. **Enhance Connectivity/Access Improvements**: Priority consideration is given to projects that provide connectivity and accessibility between goods and markets, ports, major businesses and employment centers

6. **System Reliability:** Priority consideration is given to projects that maximize connectivity, and provide congestion relief, gap closures, and contribute to improving environmental conditions i.e. air quality.

ACTC_AR1024

ELIGIBLE PROJECTS

Eligible projects include improvements that accomplish program's objectives to improve efficiency, remove bottlenecks, and increase access on the highway system to and from Alameda County. The Highway Program funds will be available for projects that include, but are not limited to the following:

- Highway projects and corridors identified in the 2014 TEP from the following investment categories:
  - I-80 Improvements
  - I-580 Improvements
  - I-680 Improvements
  - I-880 Improvements
  - I-880 Improvements
  - SR-84 Improvements
- Highway related improvements that provide congestion relief, increase safety, access, and enhances mobility of vehicles and goods movement operations.

INELIGIBLE PROJECTS

- Projects that do not directly benefit transportation in Alameda County.
- Projects that do not have a direct nexus or beneficial impact to the identified highway corridors.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall capacity to facilitate the transportation of coal in bulk.

This page intentionally left blank.

SECTION 7
PROGRAMMING/ALLOCATION GUIDELINES FOR 2000 MEASURE B AND 2014 MEASURE BB PARATRANSIT DISCRETIONARY GRANT PROGRAM

PROGRAM SUMMARY

The Paratransit Discretionary Grant Program includes the discretionary funding from the 2000 Measure B and the 2014 Measure BB paratransit programs as a unified grant program. The 2000 Measure B and 2014 Measure BB funds shall be expended in accordance with the requirements of the guiding expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that supports multiple projects and programs to improve the County's transportation system. Collections began on April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. A total of 10.45 percent (10.45%) of net MB revenue is directed towards projects intended for seniors and people with disabilities (Paratransit). The 10.45 percent (10.45%) is further split, as follows:

- 9.02 percent (9.02%) of net revenues are Direct Local Distributions (DLDs) to Alameda County cities, County and Transit Operators as follows:
    - 5.63 percent (5.63%) are DLDs directed towards the East Bay Paratransit Consortium (AC Transit and BART) for Americans with Disabilities Act (ADA) mandated paratransit services; and
    - 3.39 percent (3.39 %) are DLDs directed towards Alameda County cities and County for paratransit services based on a funding formula with population and other factors. The formula is recommended by the Alameda CTC's Paratransit Advisory and Planning Committee (PAPCO) and approved by the Commission.
- 1.43 percent (1.43%) of net revenues are distributed on a discretionary basis, based on a funding recommendation by PAPCO and approved by the Commission. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

2014 Measure BB

Measure BB, approved by Alameda County voters in 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. Ten percent (10%) of net revenue collected is dedicated to paratransit projects targeted towards seniors and people with disabilities (Paratransit), as follows:

- Six percent (6%) of net revenue is directed towards the East Bay Paratransit Consortium (AC Transit and BART) for ADA-mandated services.
- Three percent (3%) of net revenue are DLDs directed towards Alameda County cities and County for paratransit services, as follows:
    - A funding formula based on the percentage of the population over age 70 in each of four planning areas; and
    - Funds can be further allocated within each planning area to the individual cities based on a formula recommended by PAPCO and approved by the Commission.
- One percent (1%) of net Measure BB revenues are administered by the Alameda CTC and directed towards coordinating services across jurisdictional lines or filling gaps in the system to meet the mobility needs of seniors and people with disabilities. Funds in this category includes use for countywide paratransit programs administered by the Alameda CTC.

PROGRAM GOALS

Discretionary grant funding will be focused on mobility management types of activities that improve consumers' ability to access services, improve coordination between programs, and/or address gaps in the transportation system. The Program is designed to complement DLD funding which is dedicated to more traditional trip-provision services (e.g. taxi subsidies, door-to-door services, etc.). Mobility management activities aim to:

- Enhance people's travel options and access to services
- Promote awareness and education
- Effectively communicate/disseminate information to the public
- Improve coordination and partnerships
- Address critical gaps in the transportation system for seniors and people with disabilities
- Encourage seniors and people with disabilities who are able to use fixed-route public transit to do so
- Meet needs cost effectively and efficiently

Capital improvements and equipment purchases are also eligible if directly related to the implementation of mobility management and meet other criteria, e.g. transit stop improvements that support improving access to public transit for seniors and/or people with disabilities.

ACTC_AR1028

PROGRAMMING AND ALLOCATION PRIORITIES

Priority (in no particular order) is given to projects as follows:

1. **Identified in a Countywide or Regional Plan or Assessment:** Identified as a countywide and/or regional priority in a relevant plan or needs assessment such as the Alameda Countywide Transit Plan, Assessment of Mobility Needs of People with Disabilities and Seniors in Alameda County (Alameda County Needs Assessment), MTC Coordinated Public Transit-Human Services Transportation Plan (Coordinated Plan) or other relevant countywide or regional plan or needs assessment.
2. **Multi-jurisdictional Projects:** Identified projects that provide service across jurisdictional boundaries.
3. **Projects that provide critical, same-day accessible transportation service throughout Alameda County.**
4. **Other priorities** as recommended by PAPCO: PAPCO may periodically recommend other Program funding priorities.

ELIGIBLE PROJECTS

- **Mobility Management Type Programs**
  - Travel training
  - Trip planning assistance to improve access
  - One-Call/One-Click type programs
  - Volunteer driver programs
  - Coordination of service provision at the planning area level or countywide (separate from the cost of traditional trip provision, e.g. the administration costs for a planning area-wide program)
  - Transportation programs that fill unique and/or critical needs and gaps that are not filled through traditional trip-provision models

- **Capital Projects/Procurement**
  - Capital improvements and equipment purchases are eligible if directly related to the implementation of a project within an eligible category, including but not limited to:
    - Transit stop improvements that support improving access to public transit for seniors and/or people with disabilities
    - Accessible vehicle and equipment purchase
    - Capital projects to improve accessibility at shuttle stops.

This funding is not intended for ADA-mandated or City-based services that would traditionally be funded through DLD allocations. Sponsors are encouraged to submit programs that will benefit more than one city or otherwise illustrate advancement of coordination and mobility management goals.

Eligible projects must conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.

Refer to the *Implementation Guidelines for Paratransit Programs* for detailed eligibility requirements and service descriptions here: http://www.alamedactc.org/app_pages/view/19025.

INELIGIBLE PROJECTS

- Projects that do not conform to the Commission-adopted *Implementation Guidelines for Paratransit Programs funded through Measure B and Measure BB*.
- Capital projects, programs, maintenance, or operations that do not directly improve paratransit services.
- Using Program funds to replace/supplant other secured funding.

EVALUATION FRAMEWORK

PAPCO has historically supported projects and programs that:

- Demonstrate effectiveness at meeting mobility management goals
- Project sufficient demand for the program/service/project
- Are ready for implementation
- Provide service across jurisdictional boundaries
- Demonstrate coordination and collaboration with other service providers in their planning area
- Are effective, according to adopted performance measures and past performance (where applicable) or projected performance supported by substantive evidence of potential for success
- Are cost effective
- Leverage funds (including DLD reserves)
- Have been identified as a priority in relevant countywide or regional plans or needs assessments such as the Alameda Countywide Transit Plan, the Alameda County Needs Assessment, or the Coordinated Plan
- Support equitable distribution of resources throughout the County

PROGRAM REQUIREMENTS

Applicants should review requirements in the full CIP guidelines.

Maximum Grant Size

The maximum grant size is $500,000; there is no minimum grant size.

Minimum Matching Requirements

Minimum Matching requirements for applicants are as follows:

- Programs: 12% local match for DLD recipients, and 5% for non-DLD recipients.
- Plans and Studies: 50% local match
- Shuttle and transit operations: 50% local match
- “In-kind” costs are not eligible.

ACTC_AR1030

- Matching funds must be expended concurrently and proportionally to the Alameda CTC's administered funds allocated to the phase for the project.
- DLD recipients must demonstrate a commitment to using their DLD reserves and new Measure BB DLD funds.
- Matching funds contributed to a project beyond the minimum required level may increase the competitiveness of the application.

Letter(s) of Support

All applicants must work in coordination with other service providers in their planning area. To demonstrate this support:

- Applicants must describe how they are coordinating with local jurisdictions, transit agencies, and non-profit organizations to fill service gaps and complement existing services.
- Non-profit organizations are required to provide a letter(s) of support from a local agency and/or transit provider to confirm service coordination and project support.
- All applicants are encouraged to provide letters from partners to demonstrate community support and coordination.

To establish partnerships, contact information for Measure B and Measure BB recipients of paratransit Direct Local Distribution (DLD) funds can be accessed at http://accessalameda.org/category/cities/.

Monitoring and Performance Measures

- Progress reports will be required every six (6) months illustrating program/project progress and funds spent.
- Applicants must identify program/project goals, deliverables, and performance measures that will be reported on in these progress reports.

RESOURCES

Resources for the 2020 CIP call for project nominations, including a link to the online application can be accessed from the Alameda CTC's website at: http://www.alamedactc.org/app_pages/view/19025.

This page intentionally left blank.

SECTION 8
PROGRAMMING/ALLOCATION GUIDELINES FOR
2014 MEASURE BB AND VEHICLE REGISTRATION FEE
TECHNOLOGY, INNOVATION, AND DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Technology, Innovation, and Development Program includes the discretionary funding primarily from the 2014 Measure BB. However, funds identified for the Vehicle Registration Fee (VRF) Local Technology Program may be made available upon availability, at the discretion of the Alameda CTC, to meet the overall goals of the Technology, Innovation, and Development Program. Projects funded through the program shall support innovative development and application of technologies that enhance the performance of a multimodal transportation system.

The 2014 Measure BB and VRF funds shall be allocated and expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects that will be funded with the sales tax revenues. One percent (1%) of the net revenue collected is dedicated to funding innovative approaches to meet the County's transportation vision, emphasizing the use of new and emerging technologies to better manage the transportation system. Successful models will receive the first priority for funding from this category.

Funds will be distributed periodically by Alameda CTC for projects with proven abilities to accomplish the goals listed below:

- Increase utilization of non-auto types of transportation or to increase the occupancy of autos with the goal of reducing congestion, air pollution, and greenhouse gas production.
- Reduce transportation-related greenhouse gases through the utilization of a cleaner vehicle fleet including alternative fuels and/or locally produced energy.
- Use demand management strategies designed to reduce congestion, increase use of non-auto transportation, manage existing infrastructure and reduce greenhouse gas emissions.
- Inform consumers of their transportation choices and improve the efficiency or effectiveness of the county's transportation system.

- Manage parking supply to improve availability and utilization, and to reduce congestion and greenhouse gas production.
- Support environmental mitigation for transportation projects including land banking.

Grant awards will emphasize demonstrations or pilot projects which can leverage other funds.

Vehicle Registration Fee

Measure F, approved by Alameda County in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of the VRF program is to support transportation investments that maintain and improve the County's transportation network and promotes the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies.

Five percent (5%) of net VRF funds are dedicated to the VRF Local Transportation Technology Program. This program aims to improve the performance of road, transit, pedestrian and bicyclist technology applications, and would accommodate emerging vehicle technologies such as electric and plug-in-hybrid vehicles. On January 23, 2014, the Alameda CTC adopted a VRF Local Transportation Technology Program Policy to direct the administration of the Local Transportation Technology Program as a Direct Local Distribution (DLD) program to the Alameda CTC. The goal of this policy is to create a reliable source of funding to support ongoing operational requirements and cost incurred by the Alameda CTC for technology related capital investments that benefit traffic corridors in Alameda County such as the "Smart Corridors Program" and other significant countywide technology programs implemented by the Alameda CTC.

PROGRAMMING AND ALLOCATION PRIORITIES

The Technology, Innovation, and Development Program seeks to award projects that contribute significantly to furthering countywide technological advancement and innovation related enhancing the transportation system through new and emerging research, assets, capital investments, applications, and technological based transportation strategies. In general, competitive projects are those that serve more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital projects for infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements program operations, shuttle operations, plans, and studies.

ACTC_AR1034

3. **New and Innovative Approaches**: Priority consideration is given to projects and programs that employ "out-of-the box" approaches to improving the transportation infrastructure and transit services.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the transportation expenditure plans. Priority consideration is given to projects and priorities determined through the Alameda CTC Measure BB Capital Program Delivery Plan.

5. **Increase transit access and ridership**: Priority consideration is given to projects and programs that promote access, use, and connectivity to the transit system and services in Alameda County and throughout the region, by identifying mobility-enhancing practices and technologies that promote multi-modal connectivity, provide transportation options, and improve the transit user's experience.

6. **Asset Innovation and Management**: Priority consideration is given to projects and programs ("projects") that identify innovative and sustainable use of transit vehicles, transit operations, and services including the employment of new technologies or technology-based strategies and partnerships.

7. **Enhance Efficiency of moving people and goods**: Priority consideration is given to projects that create greater mobility and reliability of the transportation system through the application of innovative technologies and practices that create sustainable movement of people and goods that increase economic vitality for the county.

8. **Increase in Safety**: Priority consideration is given to projects that increase safety of the transportation system through safety-enhancing practices, technologies, and programs.

ELIGIBLE PROJECTS

Eligible projects include planning, development, implementation, and maintenance of technology that will best serve Alameda County's transportation goals

Technology, Innovation, and Development Program funds will be available for projects that include, but are not limited to the following:

- Development, installation, operations, monitoring and maintenance of local street and arterial transportation management technology such as the "Smart Corridors Program", traffic signal interconnection, transit and emergency vehicle priority, advanced traffic management systems and advanced traveler information systems
- Infrastructure for alternative vehicle fuels such as electric and plug-in-hybrid vehicle stations

- New or emerging transportation technologies that provide congestion or pollution mitigation
- Technology implementation to improve freight system infrastructure, reliability, and/or to reduce community or environmental impacts related to freight improvements.
- Advanced signal technology for walking and bicycling
- Traveler information systems
- Advanced safety systems including infrastructure improvements that support vehicle-to-vehicle and vehicle-to-infrastructure communication, technologies associated with autonomous vehicles, and other collision avoidance technologies
- Mobile applications that facilitates greater transportation access, car sharing, and user ability (enhanced information availability, connectivity to transit, user experience).
- Advanced public transportation technologies that assist public transportation operators or other shared mobility entities in managing and optimizing public transportation and mobility services. This includes remote fleet monitoring systems, coordinated communication systems, and applications that support transit connectivity, data collection, information sharing, and mobility sharing.

INELIGIBLE PROJECTS

- Projects that do not directly benefit or are inaccessible to the public.
- Projects that do not meet the goals and objectives of this program.
- Freight related projects funded by Alameda CTC must not have the direct purpose or intent to increase the overall system capacity to facilitate the transportation of coal in bulk, pursuant to Government Code Section 14525.3.

ACTC_AR1036

SECTION 9
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B, 2014 MEASURE BB, AND VEHICLE REGISTRATION FEE
TRANSIT PROGRAM

PROGRAM SUMMARY

The Transit Program includes the combined discretionary funding from the 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee (VRF) Express Bus and Transit. This program aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects. The 2000 Measure B, 2014 Measure BB, and Vehicle Registration Fee funds shall be expended in accordance with the requirements of their respective expenditure plans.

FUND SOURCES

2000 Measure B

Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple investments to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. 0.7 percent (0.7%) of the net revenue collected is dedicated to express bus service projects. The goal of the Express Bus Grant Program is to create, expand, and enhance express bus services, focusing on projects with countywide significance. Measure B funds will be available to fund eligible AC Transit and LAVTA projects only.

2014 Measure BB

Measure BB, approved by Alameda County voters in November 2014, authorizes the collection of a half-cent transportation sales tax and augments the existing 2000 Measure B sales tax program. Collection of the sales tax began on April 1, 2015 and will continue through March 30, 2045. The 2014 Transportation Expenditure Plan (2014 TEP) outlines projects ("projects") that will be funded with the sales tax revenues. 2.24 percent (2.24%) of the net revenue collected is dedicated to funding innovative and emerging transit projects, including implementing successful models aimed at increasing the use of transit among junior high and high school students, including a transit pass program for students in Alameda County. Successful models will receive the first priority for funding from this funding category.

Vehicle Registration Fee

Measure F, approved by Alameda County voters in November 2010, authorizes a ten dollar ($10) per year vehicle registration fee. Collections for the VRF Program began in May 2011. The Measure F Transportation Expenditure Plan outlines projects that will be funded with VRF receipts. The goal of

the VRF program is to support transportation investments that maintain and improve the County's transportation network and promote the reduction of vehicle-related emissions through congestion relief, alternative transportation, or innovative transportation strategies. Twenty-five percent (25%) of the VRF funds are dedicated to the VRF Transit for Congestion Relief Program. The goal of the program is to make it easier for drivers to use public transportation, make the existing transportation system more efficient and effective, improve access to schools and jobs, decrease automobile usage and air pollution, and to provide countywide congestion relief.

PROGRAMMING AND ALLOCATION PRIORITIES

The Transit Program seeks to award projects that advance transit related goals identified in the Countywide Transit Plan and as identified in the Measure B, Measure BB, and VRF expenditure plans. The programming and allocation primary priority shall be towards projects that contribute significantly to furthering countywide access to and expansion of transit services. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Capital Infrastructure**: A minimum of 70 percent (70%) of available program funds in a given programming cycle will be specifically allotted to capital infrastructure investments.

2. **Non-infrastructure**: Up to 30 percent (30%) of available program funds in a given programming cycle may be used for non-infrastructure improvements including program operations, shuttle operations, plans, and studies.

3. **Increase transit access and ridership**: Priority consideration is given to transit projects that promote access, use, and connectivity to transit services and the transit system in Alameda County and throughout the region.

4. **Regional projects in the Expenditure Plans**: Priority consideration is given to regional projects that are identified in the expenditure plans and Countywide Transit Plans (CTP).

5. **Projects aligned with needs established within the Transit Plan**: Priority consideration is given to projects that align with the goals and investment priorities within the Alameda CTC's Transit Plan or similar long-range planning studies.

6. **Reliability of Service Operations**: Priority consideration is given to projects that address regionally significant transit issues and maintain and improve reliability, frequency, and cost effectiveness of operational services.

ACTC_AR1038

7. **Express Bus Services**: Priority consideration is given to Express Bus Services that have countywide significance. In general, projects must service residents from more than one specific area or jurisdiction in Alameda County, or demonstrate how more than one area is served as a result of transit connections that go beyond one planning area.
   Express Bus Service is defined as either:
   a. Service within zones with a defined pick-up area, nonstop express bus service, and a defined drop-off zone, or
   b. Service that provides a simple route layout, has frequent service and fewer stops than regular fixed route service, and may include level boarding, bus priority at traffic signals, signature identification of rapid bus such as color coded buses, stops, and enhanced stations.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance transit access, convenience, and service operations in Alameda County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

Transit Program funds will be available for projects that include, but are not limited to the following:

- Transit service expansion and preservation to provide congestion relief, such as express bus service in a congested area
- Development and implementation of transit priority treatments on local roadways
- Student transit pass programs identified through the affordable student transit program with models benefiting junior and high school youth riders
- Investments to improve the speed and reliability of transit operations
- Park-and-ride facility improvements
- Increased usage of clean transit vehicles
- Increased usage of low-floor transit vehicles
- Passenger rail station access and capacity improvements
- Routine bus maintenance
- Feasibility or scoping only studies for capital projects
- Safe routes to school operations
- Safety education, enforcement, and promotional programs
- Transit incentive programs (including fare-based)
- Express Bus Services including capital expenses and operations. Ongoing funding for express bus service operations is limited to transit operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

INELIGIBLE PROJECTS

- Routine bus maintenance

- Funding to replace funds for existing ongoing programs or transit operations
- Transit and shuttle operations must not directly duplicate existing services, but may enhance services and should be coordinated with existing services and transit operators to the extent feasible.

OTHER REQUIREMENTS

- Ongoing funding service operations is limited to operations that would otherwise be eliminated or encounter service cuts due to severe budget shortfalls.

ACTC_AR1040

SECTION 10
PROGRAMMING/ALLOCATION GUIDELINES FOR
2000 MEASURE B
TRANSIT CENTER DEVELOPMENT PROGRAM

PROGRAM SUMMARY

The Transit Center Development Program (TCD) aims to support create, expand and enhance access to transit through capital infrastructure investments, service operations, and innovative transit projects.

Transit Center Developments refers to priority development areas (PDAs), transit villages, or transit oriented designs, a mixed-use residential or commercial area designed to maximize access to public transportation. The California Department of Transportation defines TCD or Transit Oriented Development (TOD) as "moderate to higher density development, located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping opportunities designed for pedestrians without excluding the auto. TOD can be new construction or redevelopment of one or more buildings whose design and orientation facilitates transit use." The 2000 Measure B funds shall be expended in accordance with the requirements of the expenditure plan.

FUND SOURCE

2000 Measure B
Measure B, approved by Alameda County voters in 2000, is a half-cent sales tax that that supports multiple projects to improve the County's transportation system. Collections began in April 1, 2002 and will continue through March 30, 2022. The 2000 Measure B Transportation Expenditure Plan (2000 TEP) outlines projects and programs ("projects") that will be funded with the sales tax revenues. Approximately 0.19 percent (0.19%) of the net revenue collected is dedicated to the TCD Program. The goal of the TCD Program is to encourage transportation development near transit centers to facilitate and support the growth of transit oriented developments.

PROGRAMMING AND ALLOCATION PRIORITIES

The TCD Program seeks to award projects that advance TOD projects, and as identified in the 2000 TEP. The programming and allocation primary priority shall be towards projects that contribute significantly to facilitating residential and retail development near transit centers, and PDAs. In general, competitive projects are those that serve residents from more than one specific planning area or jurisdiction in Alameda County.

Priority (in no particular order) is given to projects as follows:

1. **Support for Transit Oriented Developments or Priority Development Areas**: Priority consideration is given to activities that promote access, use and connectivity of transportation infrastructure that provides direct access to mixed use developments and housing near major transit facilitates in Alameda County.

2. **Consistent with the Expenditure Plan**: Priority consideration is given to projects that encourage the development of transit centers per the expenditure plan.

3. **Technical Assistance Program**: Priority consideration is given to a technical assistance program administered by the Alameda CTC, known as the Sustainable Communities Technical Assistance Program (SC-TAP), which supports jurisdictions in their technical planning efforts to complete studies and plans in a variety of topics that help advance TOD projects.

ELIGIBLE PROJECTS

Eligible projects include improvements that expand and enhance the development of transit centers and transit oriented communities in Alameda County. The program goal is to fund projects that will best serve the County. Alameda CTC's evaluation process will consider the balance of all project types, and prioritize improvements relative to each other (i.e. capital projects to capital projects, operations to operations, study to study), as feasible and practical.

TCD Program funds will be available for projects that include, but are not limited to the following:

- Capital infrastructure projects that support access to and from transit villages
- PDA planning and implementation of projects
- Studies and plans, including technical assistance programs that address multimodal access and complete streets implementation, streetscape and urban design work, and implementation of transit communities, priority development areas, and the associated components
- Consultant services (through a technical assistance program) to complete specific planning, environmental review, and project development tasks

INELIGIBLE PROJECTS

- Project activities that do not support the development or implementation of transit oriented developments or to priority development areas

ACTC_AR1042

SECTION 11
PROGRAMMING/ALLOCATION GUIDELINES FOR
TRANSPORTATION FUND FOR CLEAN AIR (TFCA)
COUNTY PROGRAM MANAGER FUND PROGRAM

PROGRAM SUMMARY

The Transportation Fund for Clean Air (TFCA) County Program Manager (CPM) Fund is funding made available by the Bay Area Air Quality Management District (Air District) from revenue that is generated by a regional four dollar vehicle registration fee. TFCA funded projects are to result in the reduction of motor vehicle emissions and achieve "surplus" emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations. Projects typically funded with TFCA include shuttles, bicycle lanes and lockers, signal timing and vehicle trip reduction programs.

As the designated TFCA CPM for Alameda County, the Alameda CTC is responsible for programming 40 percent (40%) of the four dollar ($4) vehicle registration fee that is collected in Alameda County for this program. TFCA funds shall be expended in accordance with the requirements of the Air District's current TFCA CPM Policies, the Air District's adopted county expenditure plans and the provisions set forth in the annual TFCA CPM Master Funding Agreement between the Alameda CTC and the Air District.

FUND SOURCE

Transportation Fund for Clean Air
Pursuant to the 1988 California Clean Air Act, the Air District is required to periodically adopt a Clean Air Plan (CAP), which describes how the region will work toward compliance with State and federal ambient air quality standards and make progress on climate protection. To reduce emissions from motor vehicles, the CAP includes transportation control measures (TCMs) and mobile source measures (MSMs). A TCM is defined as any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions. MSMs encourage the retirement of older, more polluting vehicles and the introduction of newer, less polluting motor vehicle technologies.

To fund the implementation of TCMs and MSMs, the State Legislature, through AB 434 (Sher; Statutes of 1991) and AB 414 (Sher, Statutes of 1995), authorized the Air District to collect a fee of up to four dollars ($4) per vehicle per year, for reducing air pollution from motor vehicles and for related planning and programs. This legislation requires the Air District to allocate 40 percent (40%) of the revenue to an overall program manager in each county. The overall program manager must

be designated by resolutions adopted by the county board of supervisors and the city councils of a majority of the cities representing a majority of the population.

AB 414 references the trip reduction requirements in the Congestion Management Program (CMP) legislation and states that Congestion Management Agencies (CMAs) in the Bay Area that are designated as AB 434 program managers "shall ensure that those funds are expended as part of an overall program for improving air quality and for the purposes of this chapter (the CMP Statute)." The Air District has interpreted this language to allow a wide variety of transportation control measures as now eligible for funding by program managers, including an expansion of eligible transit, rail and ferry projects.

AB 414 also adds a requirement that designated county program managers adopt criteria for the expenditure of the county subventions and to review the expenditure of the funds. The content of the criteria and the review were not specified in the bill. However, the Air District has specified that any criteria used by a Program Manager must allocate TFCA funding to projects that are: 1) eligible under the law, 2) reduce motor vehicle emissions, 3) implement the relevant TCMs and/or MSMs in the Air District's most recently approved CAP , and 4) are not planning or technical studies.

PROGRAMMING AND ALLOCATION PRIORITIES

The Air District annually adopts policies for the TFCA CPM Fund. The current Air District TFCA CPM Policies further define eligible projects and establish criteria for calculating emissions reductions (i.e., TFCA cost-effectiveness). Projects that are authorized by HSC Section 44241 and achieve TFCA cost-effectiveness, but do not fully meet the Air District's current TFCA CPM policies are subject to Air District approval on a case-by-case basis.

Only projects that result in the reduction of motor vehicle emissions are eligible for TFCA funding. Projects must achieve surplus emission reductions beyond what is currently required through regulations, ordinances, contracts, or other legally binding obligations at the time of the execution of a project-specific fund transfer agreement between the Alameda CTC and the Project Sponsor.

General Program Structure

As the designated CPM for Alameda County, the Alameda CTC is allocated 40 percent (40%) of the funds collected in Alameda County for this program. The Air District will advance these funds to the Alameda CTC in semi-annual installments each fiscal year. The Alameda CTC must fully program the TFCA revenue received each year within the Air District's allowable time period. Any unallocated funds may be reallocated by the Air District. The Alameda CTC will prepare an annual TFCA CPM Fund Estimate, as follows:

- A maximum of 6.25 percent (6.25%) of the annual revenue will be used directly by the Alameda CTC for program implementation and administration.
- The remaining 93.75 percent (93.75%) of funds will be distributed as follows:

- 70 percent (70%) of funds will be segregated into population-based shares for the cities and County:
  - A minimum of $10,000 to each jurisdiction.
  - City population will be updated annually based on the State Department of Finance (DOF) estimates.
  - The Alameda CTC may choose to roll over a city or the county's annual 70 percent (70%) allocation for programming in a future year.
  - The Alameda CTC may also borrow against the rolled over allocations in order to program all available revenues.
  - Unused funds from cancelled or completed projects are returned to the Project Sponsor's share of the fund estimate and are available for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for projects that are larger than the annual funds available.
- The remaining 30 percent (30%) of funds are to be programmed to transit-related projects on a discretionary basis:
  - Projects competing for the 30 percent (30%) discretionary funds will be evaluated based on the total emissions reductions projected as a result of the project.
  - Project prioritization may consider the TFCA cost-effectiveness evaluation, the emissions reductions per total project dollar invested for the project and the matching funds provided by the Project Sponsor.
  - Unused funds from cancelled or completed transit discretionary projects are returned to the 30 percent (30%) share of the fund estimate for reprogramming in a future cycle.
  - The Alameda CTC may also program against future TFCA revenue for transit-related projects that are larger than the annual funds available.

ELIGIBLE PROJECTS

Consistent with the project types authorized under the California Health and Safety Code (HSC) Section 44241, projects eligible for TFCA funds include:

- Implementation of rideshare programs;
- Purchase or lease of clean fuel buses for school districts and transit operators;
- Provision of local feeder bus or shuttle service to rail and ferry stations and to airports;
- Implementation and maintenance of local arterial traffic management, including, but not limited to, signal timing, transit signal preemption, bus stop relocation and "smart streets";
- Implementation of rail-bus integration and regional transit information systems;
- Implementation of demonstration projects in telecommuting and in congestion pricing of highways, bridges and public transit;

- Implementation of vehicle-based projects to reduce mobile source emissions, including, but not limited to engine repowers (subject to Air District approval on a case-by-case basis), engine retrofits, fleet modernization, alternative fuels, and advanced technology demonstrations;
- Implementation of smoking vehicles program;
- Implementation of an automobile buy-back scrappage program operated by a governmental agency;
- Implementation of bicycle facility improvement projects that are included in an adopted countywide bicycle plan or congestion management program; and
- Design and construction by local public agencies of physical improvements that support development projects that achieve motor vehicle emission reductions. The projects and the physical improvements shall be identified in an approved area-specific plan, redevelopment plan, general plan, or other similar plan.

INELIGIBLE PROJECTS

TFCA funds may not be used for:

- Planning activities that are not directly related to the implementation of a specific project;
- Routine maintenance;
- The purchase of personal computing equipment for an individual's home use;
- Projects that provide a direct or indirect financial transit or rideshare subsidy or shuttle/feeder bus service exclusively for the grantee's employees; or
- Costs of developing TFCA grant applications.

OTHER REQUIREMENTS

TFCA Cost Effectiveness

The Air District requires the evaluation of projects proposed for and completed with TFCA funding for TFCA cost-effectiveness. The Alameda CTC will measure cost-effectiveness based on the ratio of the TFCA cost divided by the sum total tons of emissions (reactive organic gases (ROG), oxides of nitrogen (NOx), and weighted particulate matter ten microns in diameter and smaller "PM10") that are estimated to be reduced by the project. For the purpose of calculating the TFCA cost-effectiveness, the TFCA project cost is the sum of the requested TFCA CPM Funds and any secured TFCA Regional Funds. Air District-generated forms are used to calculate a cost effectiveness result of $ TFCA/ton. The Alameda CTC will only approve projects with a TFCA cost effectiveness, on an individual project basis, that is equal to or less than either: 1) the standard threshold of $90,000 of TFCA funds per ton of total ROG, NOx and weighted PM10 emissions reduced ($/ton), or 2) another threshold as identified in the current Air District TFCA CPM Policies for the project type. Project Sponsors are required to provide the Alameda CTC with the data necessary to evaluate projects for TFCA cost-effectiveness. This may include, but is not

ACTC_AR1046

limited to, transit ridership, bicycle counts, verifiable survey data, vehicle data and results from comparable projects.

Attributes of Cost-Effective TFCA Projects

The following list includes the project attributes typically associated with successful candidate projects for TFCA funding:

- Project purchases or provides service using best available technology or cleanest vehicle (e.g., achieves significant petroleum reduction, utilizes vehicles that have 2010 and newer engines, is not a Family Emission Limit (FEL) engine, and/or have zero tailpipe emissions).
- Project is delivered or placed into service within one year and/or significantly in advance of regulatory changes (e.g., lower engine emission standards.).
- Project requests relatively low amount of TFCA funds; Grantee provides significant matching funds.
- Project is associated with a multi-modal transit center, supports high-density mixed-use development or communities.
- For vehicle trip reduction projects (e.g., bike facilities, shuttle/feeder bus service and ridesharing projects):
    - Project provides service to relatively large percent of riders/participants that otherwise would have driven alone over a long distance.
    - Project provides "first and last mile" connection to between employers and transit.
    - Service travels relatively short distances between start and end point/ and has relatively low mileage and a minimal amount of non-service miles. Shuttle operates on a route (service and non-service miles) that is relatively short in distance.
- For vehicle-based projects:
    - Vehicle has high operational use, annual mileage, and/or fuel consumption (e.g., taxis, transit fleets, and utility vehicles).
- For arterial management and smart growth projects:
    - Pre- and post-project counts demonstrate high usage and a potential to affect mode or behavior shift that reduces emissions.
    - Project demonstrates a strong potential to reduce motor vehicle trips by significantly improving mobility via walking, bicycling, and improving transit.
    - Project is located along high volume transit corridors and/or is near major activity centers such as schools, transit centers, civic or retail centers.

TFCA Expenditure Period

TFCA funding is subject to a TFCA expenditure period. In general, the Air District TFCA CPM Policies allow for a two-year expenditure period unless a longer expenditure period is established at the time of programming. For projects that provide a service, such as ridesharing

programs and shuttle/feeder bus projects, the TFCA grant period is limited to not more than two (2) years for operations, except for bike share (Bay Area Bike Share) projects, which have a TFCA grant period of up to five (5) years. To receive TFCA funding in subsequent funding cycles, all operations projects must be re-evaluated for TFCA cost effectiveness based on the most current project data. The Alameda CTC may approve no more than two one-year extensions to the TFCA expenditure period. Subsequent extensions are granted on a case-by-case basis by the Air District.

ACTC_AR1048

SECTION 12
PROGRAMMING/ALLOCATION GUIDELINES FOR
STP/CMAQ FUNDS
ONE BAY AREA GRANT (OBAG) CYCLE 2 PROGRAM

PROGRAM SUMMARY

The One Bay Area Grant Program Cycle 2 (OBAG 2) is the second round of the federal funding program designed to support the implementation of Plan Bay Area, the region's first Sustainable Communities Strategy (SCS). OBAG 2 covers the five-year period from FY 2017-18 to FY 2021-22.

The OBAG 2 program continues to integrate the region's federal transportation program with California's climate statutes and the SCS, and contributes to the implementation of the goals and objectives of the Regional Transportation Plan. Overall, the OBAG 2 Program goals include:

- Support the SCS by linking transportation dollars to land use decisions,
- Target transportation investments to support Priority Development Areas (PDAs), and
- Select transportation projects for funding based on Alameda County's PDA Investment and Growth Strategy.

MTC's Resolution 4202 (December 2016), the OBAG 2 project selection criteria and programming policy, identifies revenue estimates, project categories, and general and county programming policies and deadlines.

FUND SOURCES

OBAG 2 funding is based on anticipated future federal transportation program apportionments of Surface Transportation Program (STP) and Congestion Mitigation and Air Quality Improvement (CMAQ) funding from the recently passed Fixing America's Surface Transportation (FAST) Act and its predecessor, Moving Ahead for Progress in the 21st Century (MAP-21) Act. The STP and CMAQ programs are the primary federal funding sources distributed to regions for transportation and can fund a variety of project types, including public transit, bicycle and pedestrian and local road and highway projects.

PROGRAMMING AND ALLOCATION PRIORITIES

As established in MTC Resolution 4202, OBAG 2 covers the five-year period from FY 2017-18 to FY 2021-22. At least 70 percent (70%) of OBAG 2 funds is to be programmed towards eligible PDA supportive Transportation Investment Projects. The purpose of PDA supportive transportation investments is to support community based transportation projects that promote new vibrancy to downtown areas, commercial cores, high density neighborhoods, and transit corridors, enhancing

their amenities and ambiance and making them places where people want to live, work and visit. This category supports the RTP/SCS by investing in improvements and facilities that promote alternative transportation modes.

ELIGIBLE PROJECTS

OBAG 2 will be available for projects and programs that include, but are not limited to the following:

- Planning and Outreach Activities
- Local Streets and Roads Preservation
- Bicycle and Pedestrian Improvements
- Transportation for Livable Communities
- Safe Routes to School
- Priority Conservation Areas
- Federal Aid Secondary (FAS) Improvements

OTHER REQUIREMENTS

MTC Program Requirements

MTC's Resolution 4202 (December 2016) (http://mtc.ca.gov/sites/default/files/RES-4202_approved_1.pdf) include:

- OBAG 2 funding is subject to the provisions of the Regional Project Delivery Policy (MTC Resolution 3606, or its successor) including the deadlines for Request for Authorization (RFA) submittal and federal authorization/obligation.
- At least half of the OBAG 2 funds must be obligated (federal authorization/FTA transfer) by January 31, 2020. All remaining OBAG 2 funds must be obligated by January 31, 2023.
- In general, capacity in the first year is to be prioritized for on-going activities such as CMA planning, non-infrastructure projects and the Preliminary Engineering (PE) phase of projects, followed by the capital phases of projects in later years.

Alameda CTC Program Requirements

In addition to conforming to the Alameda County OBAG 2 Programming Guidelines (2018 CIP Appendix J, Section 12), the project evaluation and program development for OBAG 2 conforms to the following:

- Alameda CTC's 2018 CIP Programming Principles (2018 CIP Appendix J, Section 1),
- Overall CIP and OBAG-specific evaluation criteria (2018 CIP Appendix J, Section 1),
- Alameda County OBAG 2 Principles (July 2016) (http://www.alamedactc.org/files/managed/Document/19310/6.6_Combo.pdf) and
- Alameda CTC's PDA Investment and Growth Strategy (update scheduled for May 2017) (http://www.alamedactc.org/app_pages/view/10385)

Additional information related to the programming of OBAG 2 funds, including PDA maps, is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

SECTION 13
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSIT ASSISTANCE
PROGRAM

PROGRAM SUMMARY

State Transit Assistance (STA) funds are generated by the sales tax on diesel fuel, and the amount of money available for transit agencies varies from year to year based on the ups and downs of diesel prices. The State splits the STA program into two components:

Population-based funds: Metropolitan Transportation Commission receives STA based on our share of the population. The use of these funds is governed by MTC Resolution 4321 which established a STA County Block Grant Program whereby the nine Bay Area Congestion Management Agencies determine how to invest the funds in public transit services/projects.

Link to MTC Resolution 4321: https://mtc.ca.gov/sites/default/files/MTC_ResNo_4321_STA_Pop-Based_Funds.pdf

Operators have full discretion over the use of TDA and most of STA apportioned to them. Funds may be used by transit operators for both capital projects and transit operations. For most smaller transit agencies, TDA and STA are their main sources of operating funds.

This page intentionally left blank.

SECTION 14
PROGRAMMING/ALLOCATION GUIDELINES FOR
STATE TRANSPORTATION IMPROVEMENT PROGRAM

PROGRAM SUMMARY

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. The STIP is composed of two sub-elements: 75 percent of STIP funds go toward the Regional Transportation Improvement Program (RTIP) and 25 percent go to the Interregional Transportation Improvement Program (ITIP).

Alameda CTC adopts and forwards a program of RTIP projects to the Metropolitan Transportation Commission (MTC) for each STIP cycle. As the Regional Transportation Planning Agency for the nine-county Bay Area, MTC is responsible for developing the regional priorities for the RTIP. MTC approves the region's RTIP and submits it to the California Transportation Commission for inclusion in the STIP. The California Department of Transportation is responsible for developing the ITIP.

Principles for the Development of the Alameda County 2018 STIP Project List
(Previously approved October 26, 2017)

- It is anticipated that any new funding programmed in the 2018 STIP will be made available in FYs 2021/22 and 2022/23.
- Previously-approved commitments for STIP programming, included in the attached list, will be considered during the development of the 2018 STIP project list.
- Sponsors of currently programmed projects will be required to provide updated project scope, status, schedule, cost and funding information.
- Any project considered for funding must be consistent with the Countywide Transportation Plan and satisfy all STIP programming requirements.
- Projects recommended for STIP funding must demonstrate readiness to meet applicable STIP programming, allocation and delivery requirements and deadlines.
- Consideration of the following are proposed for the required project prioritization for the development of the 2018 STIP project list:
    - The principles and objectives set forth in the Alameda CTC Comprehensive Investment Plan;
    - Previous commitments for STIP programming approved by the Alameda CTC;
    - Projects that can leverage funds from other SB1 programs
    - The degree to which a proposed project, or other activity intended to be funded by transportation funding programmed by the Alameda CTC, achieves or

advances the goals and objectives included in the Countywide Transportation Plan;

- The degree to which a proposed project has viable project implementation strategies that are based on current project-specific project delivery information provided by applicants, including:
  - Readiness for the current/requested project delivery phase;
  - The status of environmental clearance;
  - The project cost/funding plan by phase;
  - The potential for phasing of initial segment(s) which are fully-funded and provide independent benefit; and
  - Potential impediments, i.e. risks, to successful project implementation in accordance with the proposed project delivery schedule.

Additional information related to the programming of the State Transportation Improvement Program is available on the Alameda CTC website: http://www.alamedactc.org/app_pages/view/19025.

ACTC_AR1054

SECTION 15
PROGRAMMING/ALLOCATION GUIDELINES FOR
REGIONAL MEASURE 3 PROGRAM

PROGRAM SUMMARY

To help solve the Bay Area's growing congestion problems, the Metropolitan Transportation Commission (MTC) worked with the state Legislature to authorize a ballot measure that would finance a comprehensive suite of highway and transit improvements through an increase tolls on the region's seven state-owned toll bridges. Senate Bill 595 (authored by Sen. Jim Beall of San Jose) was passed by the Legislature and signed into law by Gov. Brown in fall 2017.

Toll revenues will be used to finance a $4.45 billion slate of highway and transit improvements in the toll bridge corridors and their approach routes.
